mercaptide (mer-kap'tid) a compound derived from a mercaptan, with a metal replacing the sulfur hydrogen radical.

mercaptoethanol (mer-kap'to-eth'ah-nol) a reducing agent, $HS \cdot CH_2CH_2 \cdot OH$, that may attack disulfide bonds in proteins, reducing them to sulphydryl groups, often destroying their physiological activity; e.g., they may inhibit mitosis.

mercaptol (mer-kap'tol) a compound formed from a ketone by introducing two thio-alkyl groups in place of the bivalent oxygen.

mercaptomerin sodium (mer-kap'to-mer'in) [USP] chemical name: [3-[[[(3-carboxy-2,2,3-trimethylcyclopentyl)carbonyl]amino]-2-methoxypropyl](mercaptoacetato-S) disodium salt. An organomercurial diuretic, $C_{16}H_{25}HgNNa_2O_6S$, occurring as a white, hygroscopic powder or amorphous solid, having a characteristic honeycomb structure; used in the treatment of edema secondary to such conditions as heart disease, nephrosis, and the ascites of liver disease, administered intramuscularly and subcutaneously.

mercaptapurine (mer-kap'to-pu'rĕn) [USP] chemical name: 6H-purine-6-thione monohydrate. An analogue of hypoxanthine and adenine that is a purine (adenine) antagonist, $C_5H_4N_4S$, interfering with DNA synthesis; occurring as a yellow crystalline powder, it is used as an antineoplastic, primarily in the treatment of acute leukemia, administered orally. It also has immunosuppressive properties.

Mercier's bar (valve), catheter (mer-se-āz') [Louis Auguste Mercier, French urologist, 1811–1882] see *plica interureterica*, and under *catheter*.

mercocresols (mer'ko-kre'solz) a combination of cresol derivatives and an organic mercury, used for its germicidal, fungicidal, and bacteriostatic properties.

Mercuhydrin (mer'ku-hi'drin) trademark for preparations of meralluride.

mercupurin (mer-ku'pu-rin) former name for mercurophylline.

mercuramide (mer-kūr'ah-mid) mersalyl.

mercurammonium (mer-ku'rah-mo'ne-um) a precipitate produced when ammonium hydroxide is added to a solution of a mercuric salt. **m. chloride**, ammoniated mercury.

mercurial (mer-ku're-al) [*L. mercurialis*] 1. pertaining to mercury. 2. a preparation of mercury.

Mercurialis (mer-ku're-al'is) a genus of slender herbs of Europe. *M. an'ua* L. (Euphorbiaceae), French mercury, was formerly used as a diuretic and antisyphilitic.

mercurialism (mer-ku're-al-izm") mercury poisoning; see under *poisoning*.

mercurialization (mer-ku're-al-i-za'shun) the act or process of putting under the influence of mercury.

mercurialized (mer-ku're-al-izd) treated with mercury; containing mercury.

mercuric (mer-ku'ric) pertaining to mercury as a bivalent element. **m. benzoate**, a white, crystalline, tasteless salt, $(C_6H_5 \cdot CO \cdot O)_2Hg + H_2O$, formerly used in the treatment of syphilis. **m. chloride**, mercury bichloride. **m. cyanide**, a very poisonous salt, $Hg(CN)_2$, formerly used in the treatment of syphilis. **m. iodide**, red, mercury biniodide, HgI_2 ; formerly used as an antibacterial agent. **m. oxide**, yellow, a yellow to orange-yellow, heavy, impalpable powder, HgO , used as a local anti-infective in ophthalmology. Called also *Pagenstecher's ointment*. **m. oxycyanide**, a white crystalline powder, $Hg(CN)_2 \cdot HgO$, formerly used as an antiseptic and antisyphilitic. **m. salicylate**, a white, tasteless powder, $(OH \cdot C_6H_4 \cdot CO)_2Hg$, insoluble in water and alcohol, formerly used in the treatment of syphilis.

Mercurochrome (mer-ku'ro-krōm) trademark for preparations of merbromin.

mercurophylline (mer'ku-ro-fil'in) a mixture of the sodium salt of 3-[[[(3-hydroxymercuri)-2-methoxypropyl]-carbamoil]-1,2,2-trimethyl(±)cyclopentane carboxylic acid and theophylline in molecular proportions, used as a mercurial diuretic. Formerly called *mercupurin*.

mercurous (mer'ku-rus) pertaining to mercury as a monovalent element. **m. chloride**, calomel. **m. iodide**, yellow, a bright yellow insoluble amorphous powder, HgI ; formerly used in the treatment of syphilis.

mercury (mer'ku-re) [*L. mercurius*, or *hydrargyrum*] a metallic element, liquid at ordinary temperatures; quicksilver. Its symbol is Hg; atomic number, 80; atomic weight, 200.59; specific gravity, 13.546. It is insoluble in ordinary solvents, being only partially soluble in boiling hydrochloric acid. It may be dissolved, however, in nitric acid. Mercury forms two sets of compounds—*mercurous*, in which a single atom of mercury combines with a monovalent radical, and *mercuric*, in which a single atom of mercury combines with a bivalent radical. Mercury and its salts have been employed therapeutically as purgatives; as alternatives in chronic inflammations; as antisyphilitics, intestinal antiseptics, disinfectants, and astringents. They are absorbed by the skin and mucous membranes, causing chronic mercury poisoning (see under *poisoning*). Because of toxicity, the use of mercurials is diminishing. The mercuric salts are more soluble and irritant than the mercurous. See also under *mercuric* and *mercurous*. **ammoniated m.** [USP], a topical anti-infective, $HgNH_2Cl$, occurring in white, pulverulent pieces or as a white amorphous powder. **m. bichloride**, an extremely poisonous compound, $HgCl_2$, occurring as odorless, heavy, colorless crystals, as crystalline masses, or as a white powder; formerly used in the treatment of syphilis and now as a disinfectant. Called also *mercuric chloride*. **m. with chalk**, metallic mercury rubbed up with chalk and honey until the particles are very small; used in pediculosis pubis. **m. chloride**, mild, calomel. **French m.**, *Mercurialis annua*. **m. oleate**, a mixture of yellow mercuric oxide and oleic acid; applied locally in parasitic skin diseases. **m. perchloride**, m. bichloride. **m. salicylate**, a basic salt, $Hg \cdot C_6H_5(OH) \cdot COOH$, containing 54 to 59 per cent of mercury; formerly used in syphilis.

Mercuzanthin (mer'ku-zan'thin) trademark for a preparation of mercurophylline.

merergasia (mer-er-ga'se-ah) see *merergastic*.

merergastic (mer'er-gas'tik) [*mero* (1) + *ergon* work] Meyer's term for "part disorders," the simplest type of disorder of psychic function, characterized by emotional instability and anxiety (psychoneuroses or neuroses). Cf. *holergastic*.

merethoxylline procaine (mer'ē-thok'si-lĕn) a combination of the organomercurial merethoxylline (dehydro-2-[N-(3'-hydroxymercuri-2'-methoxyethoxy)propylcarbamy]phenoxyacetic acid) with theophylline and procaine; used in the treatment of edema secondary to such conditions as congestive heart failure and nephrotic syndrome, administered intramuscularly and subcutaneously.

meridian (mĕ-rid'e-an) an imaginary line on the surface of a spherical body; see also *meridianus*. **m. of cornea**, an imaginary line marking the intersection with its surface of an anteroposterior plane passing through the apex of the cornea. **m's of eyeball**, meridiani bulbi oculi.

meridiani (mĕ-rid'e-a'ni) [*L.*] plural of *meridianus*.

meridianus (mĕ-rid'e-a'nus), pl. *meridia'ni* [*L.*, from *medius* middle + *dies* day] an imaginary line on the surface of a spherical body, marking the intersection with the surface of a plane passing through its axis. Called also *meridian*. **meridia'ni bul'bi oc'uli** [NA], meridians of eyeball: imaginary lines encircling the eyeball, marking the intersection with its surface of planes passing through its anteroposterior axis.

meridional (mĕ-rid'e-o-nal) pertaining to a meridian or made along a meridian; as, *meridional* section.

merisis (mer'ī-sis) growth in size due to cell division.

merism (mer'izm) [*Gr. meros* a part] the repetition of parts in an organism so as to form a regular pattern.

meristem (mer'i-stem) [Gr. *merizein* to divide] the undifferentiated embryonic tissue of plants.

meristemetic (mer'i-stē-mat'ik) pertaining to or composed of meristem.

meristic (mer-is'tik) [Gr. *meristikos* fit for dividing] pertaining to or possessing merism; symmetrical; having symmetrically arranged parts.

meristoma (mer'i-sto'mah) [*meristem* + *-oma*] a tumor of meristem.

Merkel's cells (**corpuscles**, **disks**, **tactile cells**) (mer'kelz) [Friedrich Sigmund *Merkel*, German anatomist, 1845–1919] *menisci tactus*.

Merkel's filtrum, muscle (mer'kelz) [Karl Ludwig *Merkel*, German anatomist, 1812–1876] see *filtrum ventriculi* and *musculus ceratocricoides*.

Merkel-Ranvier cells (mer'kel-rah-n-ve-a') [F. S. *Merkel*; Louis Antoine *Ranvier*, French pathologist, 1835–1922] see *Merkel's cells*, under *cell*.

mermithid (mer'mi-thid) pertaining to or of the family *Mermithidae*.

Mermithidae (mer-mith'i-de) a family of nematodes of the superfamily *Mermithoidea*; the cabbage snakes.

Mermithoidea (mer'mith-oi'de-ah) a superfamily of aphasmids including the cabbage snakes (family *Mermithidae*), the larvae of which may accidentally occur in the human digestive tract as contaminants of food or water.

mero- 1. [Gr. *meros* part] a combining form meaning part. 2. [Gr. *mēros* thigh] a combining form denoting relationship to the thigh.

meroacrania (mer'o-ah-kra'ne-ah) [*mero-*(1) + *a neg.* + Gr. *kranion* skull] congenital absence of part of the cranium.

meroblastic (mer'o-blas'tik) [*mero-*(1) + Gr. *blastos* germ] undergoing cleavage in which only part of the ovum participates; partially dividing.

meroceles (me'ro-sēl) [*mero-*(2) + *kēlē* hernia] (*obs.*) femoral hernia.

merocoxalgia (me'ro-kok-sal'je-ah) [*mero-*(2) + L. *coxa* hip + *-algia*] pain in the thigh and hip.

merocrine (me'o-krin) [*mero-*(1) + Gr. *krinein* to separate] partly secreting; denoting that type of glandular secretion in which the secreting cell remains intact throughout the process of formation and discharge of the secretory products; as in the salivary and pancreatic glands. Cf. *apocrine* and *holocrine*.

merocyte (mer'o-sit) [*mero-*(1) + *-cyte*] supernumerary sperm nucleus in the ovum in cases of polyspermy.

merodiastolic (mer'o-di-ah-stol'ik) [*mero-*(1) + *diastole*] pertaining to a part of the diastole.

meroergasia (mer'o-er-ga'se-ah) see *merergastic*.

merogamy (mē-ro-g'ah-me) microgamy.

merogastrula (mer'o-gas'troo-lah) the gastrula of a meroblastic ovum.

merogenesis (mer'o-jen'ē-sis) [*mero-*(1) + Gr. *genesis* production] cleavage of an ovum.

merogenetic (mer'o-jē-net'ik) pertaining to merogenesis.

merogenic (mer'o-jen'ik) pertaining to or producing segmentation.

merogonic (mer'o-gon'ik) pertaining to or resulting from merogony.

merogony (mē-ro-g'o-ne) [*mero-*(1) + Gr. *gonos* procreation] the development of a portion only of an ovum; see *andromerogony* and *gynomerogony*. **diploid m.**, development of a portion of an ovum containing the fused male and female pronuclei. **parthenogenetic m.**, development, as a result of artificial stimulation, of a part of an ovum containing the nucleus.

merology (mē-rol'o-je) [*mero-*(1) + *-logy*] (*obs.*) that part of anatomy which deals with elementary tissues.

meromelia (mer'o-me'le-ah) [*mero-*(1) + *melos* limb + *-ia*] a general term denoting congenital absence of any part of a limb (as in *adactyly*, *hemimelia*, and *phocomelia*), as opposed to *amelia*, or absence of the entire limb.

meromicrosomia (mer'o-mi'kro-so'me-ah) [*mero-*(1) + *microsoma*] unusual smallness of some part of the body.

meromorphosis (mer'o-mor'fo'sis) [*mero-*(1) + Gr. *morphōsis* a shaping, bringing into shape] incomplete restoration or regeneration of a lost part.

meromyarial, meromyarian (mer'o-mi-a're-al; mer'o-mi-a're-an) [*mero-*(1) + Gr. *mys* muscle] designating a type of nematode musculature in which there are only a few muscle cells in a given area, the cells being platymyarial in type.

meromyosin (mer'o-mi'o-sin) a fragment of the myosin molecule isolated by treatment with proteolytic enzymes; there are two types, heavy (*H-meromyosin*) and light (*L-meromyosin*). *L-Meromyosin* makes up the major part of the rodlike backbone of the molecule; *H-meromyosin* contains the subfragment responsible for the ATP-ase activity of myosin.

meronecrobiosis (me'ro-nek'ro-bi-o'sis) meronecrosis.

meronecrosis (me'ro-nē-kro'sis) [*mero-*(1) + *necrosis*] cellular necrosis.

meropia (mē-ro'pe-ah) [*mero-*(1) + Gr. *ōps* vision + *-ia*] partial blindness.

merorachischisis (me'ro-rah-kis'ki-sis) [*mero-*(1) + Gr. *rhachis* spine + *schisis* fissure] fissure of a part of the spinal cord.

meroscope (me'ro-skōp) (*obs.*) an instrument for performing meroscopy.

meroscopy (mē-ros'ko-pe) [*mero-*(1) + Gr. *skopein* to examine] (*obs.*) fractional auscultation of the heart; dissociated auscultation of various parts of the cardiac cycle.

merosmia (mē-ros'me-ah) [*mero-*(1) + Gr. *osmē* smell + *-ia*] a disorder of the sense of smell in which certain odors are not perceived.

merostotic (mer'os-tot'ik) [*mero-*(1) + L. *os* bone] pertaining to or affecting only a part of a bone.

merotomy (mē-rot'o-me) [*mero-*(1) + Gr. *temnein* to cut] dissection into segments, especially the dissection of a cell.

merozoite (mer'o-zo'it) [*mero-*(1) + Gr. *zōon* animal] one of the organisms formed by multiple fission (schizogony) of a sporozoite within the body of the host during the asexual phase of reproduction of malarial plasmodia and other sporozoa; merozoites differentiate into male and female gametes, which fuse to form the zygote (gametogony).

merozygote (mer'o-zī'gōt) [*mero-*(1) + Gr. *zygōtos* yoked together] the partially diploid bacterial zygote that results from the transfer of a portion of the genetic information of a donor cell to the total genetic information of the recipient.

Merphenyl (mer'fen-il) trademark for preparations of phenylmercuric compounds.

mersalyl (mer'sah-lil) chemical name: [3-[[2-(carboxymethoxy)-benzoyl]amino]-2-methoxypropyl]hydroxymercury monosodium salt. A mercurial diuretic, $C_{13}H_{18}HgNNaO_6$, used in combination with theophylline in the treatment of edema secondary to such conditions as cardiorenal diseases, nephrosis, and hepatic cirrhosis, administered intramuscularly and intravenously.

Merseburg triad (mār'zeh-boorg) [*Merseburg*, a town in Germany] see under *triad*.

Merthiolate (mer-thi'o-lāt) trademark for preparations of thimerosal.

Merulius (mē-roo'le-us) a genus of fungi of the class *Basidiomycetes*, order *Polyporales*. *M. lacrymans* is the cause of "dry rot" of wood.

merycism (mer'i-sizm) [Gr. *mērykismos* chewing the cud] rumination.

merycismus (mer'i-siz'mus) merycism.

Merzbacher-Pelizaeus disease (merz'bak-er-pa'le-zī-us) [Ludwig *Merzbacher*, German physician in Buenos Aires, born 1875; Friedrich *Pelizaeus*, German neurologist, born 1850] familial centrolobar sclerosis.

mesad (me'sad) toward the median line or plane; mesial.

mesal (me'sal) [Gr. *mesos* middle] mesial.

mesangial (mes-an'je-al) of or pertaining to the mesangium.

mesangiocapillary (mes-an'je-o-kap'lar'e) pertaining to or affecting the mesangium and the associated capillaries.

mesangium (mes-an'je-um) the thin membrane which helps to support the capillary loops in a renal glomerulus.

Mesantoin (mē-san'to-in) trademark for a preparation of mephenytoin.

mesaortitis (mes'a-or-ti'tis) [*meso-* + *aortitis*] (*obs.*) inflammation of the middle coat of the aorta.

mesaraic (mes'ah-ra'ik) [*meso-* + Gr. *mesaraion* the mesentery] mesenteric.

mesarteritis (mes'ar-ter-i'tis) [*meso-* + Gr. *arteria* artery + *-itis*] inflammation of the middle coat of an artery. **Mönckeberg's m.**, see under *arteriosclerosis*.

mesaticephalic (mes-at'i-se-fal'ik) [Gr. *mesatos* medium + *kephalē* head] mesocephalic.

mesatikercic (mes-at'i-ker'kik) [Gr. *mesatos* medium + *herkis* the radius of the arm] having a radiohumeral index of 75–80.

mesatipellic (mes-at'i-pel'ik) [Gr. *mesatos* medium + *pellā* bowl] having a transverse diameter of the pelvic inlet almost the same as that of the true conjugated diameter.

mesatipelvic (mes-at'i-pel'vik) mesatipellic.

mesaxon (mes-ak'son) a pair of parallel membranes marking the line of edge-to-edge contact of the sheath cell (Schwann cell) encircling the axon.

mescal (mes-kahl') [Mex.] 1. *Lophophora williamsii* (Lemaire) Coul. (Cactaceae). 2. a liquor distilled from pulque, a fermented drink obtained from the juice of species of *Agave* in Mexico and Central America.

mescaline (mes'kah-lin) a poisonous alkaloid, 3,4,5-trimethoxyphenylethylamine, $(CH_3)_3O_3C_6H_2 \cdot CH_2 \cdot CH_2 \cdot NH_2$, in the form of a colorless alkaline oil from the flowering heads (mescal buttons) of *Lophophora williamsii* (Lemaire) Coul. (Cactaceae). It produces an intoxication with delusions of color and music.

mescalism (mes/'kah-lizm) intoxication caused by mescal but-tons or mescaline.

mesectic (mes-ek/'tik) [*mes-* + Gr. *echein* to hold] (*obs.*) taking up (by the blood) a normal amount of oxygen at a given PO_2 , i.e., having a normal dissociation curve.

mesecclazone (mē-sek/'lah-zōn) chemical name: 7-chloro-3,3a-dihydro-2-methyl-2*H*,9*H*-isoxazolo[3,2-*b*][1,3]benzoxazine-9-one; an anti-inflammatory, $C_{11}H_{10}ClNO_3$.

mesectoblast (mes-ek/'to-blast) ectomesoblast.

mesectoderm (mē-sek/'to-derm) embryonic migratory cells, derived from the neural crest of the head, that contribute to the formation of the meninges and become pigment cells.

mesencephal (mes-en/'sē-fal) mesencephalon.

mesencephalic (mes-en/'sē-fal'ik) pertaining to the mesencephalon.

mesencephalitis (mes/'en-sef/'ah-li'tis) inflammation of the mesencephalon.

mesencephalohypophyseal (mes/'en-sef/'ah-lo-hi-po-fiz'e-al) pertaining to the mesencephalon and the pituitary gland (hypophysis).

mesencephalon (mes/'en-sef/'ah-lon) [*meso-* + Gr. *enkephalos* brain] 1. [NA] the part of the brain developed from the middle of the three primary vesicles of the embryonic neural tube; it comprises the tectum and the cerebral peduncles; see Plate accompanying *brain*. See also *brain stem*, under *B*. 2. the middle of the three primary brain vesicles in the embryo, lying between the prosencephalon and the rhombencephalon. Called also *midbrain*.

mesencephalotomy (mes/'en-sef/'ah-lot'o-me) [*mesencephalon* + Gr. *tomē* a cutting] surgical production of lesions in the mid-brain, especially in the pain-conducting pathways for the relief of intractable pain.

mesenchyma (mē-seng/'ki-mah) [*meso-* + Gr. *enchyma* infusion] the meshwork of embryonic connective tissue in the mesoderm from which are formed the connective tissues of the body, and also the blood vessels and lymphatic vessels.

mesenchymal (mē-seng/'ki-mal) pertaining to the mesenchyma.

mesenchyme (mes/'eng-kim) mesenchyma.

mesenchymoma (mes/'en-ki-mo'mah) a mixed mesenchymal tumor composed of two or more cellular elements not commonly associated, not counting fibrous tissue as one of the elements. **benign m.**, a benign tumor composed of two or more clearly recognizable mesenchymal elements in addition to fibrous tissue. **malignant m.**, a sarcoma composed of two or more cellular elements (excluding fibrous tissue); a mixed cell sarcoma.

mesenterectomy (mes/'en-tē-rek'to-me) [*mesentery* + Gr. *ektomē* excision] resection of the mesentery.

mesenteric (mes/'en-ter'ik) [Gr. *mesenterikos*] pertaining to the mesentery.

mesenterium (mē-sen/'ter-i'o-lum) a small mesentery. **m. appen'dicis vermifor'mis**, **m. proces'sus vermifor'-mis**, mesoappendix.

mesenteriopexy (mes/'en-ter'e-o-pek'se) [*mesentery* + Gr. *pēxis* fixation] fixation or suspension of a torn mesentery.

mesenteriorrhaphy (mes/'en-ter'e-or'ah-fe) [*mesentery* + Gr. *rhaphe* suture] suture or repair of the mesentery.

mesenteriplication (mes/'en-ter'e-pli-ka'shun) [*mesentery* + L. *plicare* to fold] shortening the mesentery by plication.

mesenteritis (mes/'en-tē-ri'tis) inflammation of the mesentery. **retractile m.**, inflammation of the mesentery producing thickening, sclerosis, and retraction, and occasionally resulting in distortion of intestinal loops.

mesenterium (mes/'en-te're-um) [NA] the mesentery: the peritoneal fold attaching the small intestine to the posterior abdominal wall. **m. commu'ne**, **m. dorsa'le commu'ne** [NA], dorsal common mesentery: the primitive embryonic mesentery, a double-layered median partition formed by association of the splanchnic mesoderm with the entoderm, extending from the roof of the coelom toward the midventral wall, and dividing the coelom into halves; it contains the primitive gut, and encloses the heart, lungs, and liver as they develop.

mesenteron (mes-en/'ter-on) [*meso-* + Gr. *enteron* intestine] the midgut.

mesentery (mes/'en-ter'e) a membranous fold attaching various organs to the body wall. Commonly used with specific reference to the peritoneal fold attaching the small intestine to the dorsal body wall. Called also *mesenterium* [NA]. **m. of ascending part of colon**, mesocolon ascendens. **caval m.**, a ridge, at the right of the embryonic mesogastrium, in which develops a hepatic segment of the inferior vena cava. **common m.**, **common m.**, **dorsal**, mesenterium dorsale commune. **m. of descending part of colon**, mesocolon descendens. **dorsal m.**, mesenterium dorsale commune. **primitive m.**, mesenterium dorsale commune. **m. of rectum**, mesorectum. **m. of sigmoid colon**, mesocolon sigmoideum. **m. of transverse part of colon**, mesocolon transversum. **ventral m.**, the embryonic mesentery attaching the duodenal

region of the early intestine to the ventral body wall. **m. of vermiform appendix**, mesoappendix.

mesentoderm (mē-sen/'to-derm) the inner layer of an amphibian gastrula not yet separated into mesoderm and entoderm.

mesentomere (mes-en/'to-mēr) a blastomere not yet divided into mesomeres and entomeres.

mesentorrhaphy (mes/'en-tor'ah-fe) [*mesentery* + Gr. *rhaphe* suture] suture or repair of the mesentery.

mesepithelium (mes/'ep-i-the'le-um) mesothelium.

MeSH (mesh) *Medical Subject Headings*, a thesaurus published by the National Library of Medicine for use in MEDLARS.

mesiad (me/'ze-ad) toward the middle; mesad.

mesial (me/'ze-al) nearer the center line of the dental arch.

mesially (me/'ze-al'e) toward the median line.

mesien (me/'ze-en) pertaining to the mesion.

mesio Buccal (me/'ze-o-buk'kal) pertaining to or formed by the mesial and buccal surfaces of a tooth, or the mesial and buccal walls of a tooth cavity.

mesio Bucco-occlusal (me/'ze-o-buk'ko-ō-kloo'zal) pertaining to or formed by the mesial, buccal, and occlusal surfaces of a tooth.

mesio Buccopulpal (me/'ze-o-buk'ko-pul'pal) pertaining to or formed by the mesial, buccal, and pulpal walls of a tooth cavity.

mesiocervical (me/'ze-o-ser'vi-kal) 1. pertaining to the mesial surface of the neck of a tooth. 2. mesioingival.

mesioinclination (me/'ze-o-kli-na'shun) deviation of a tooth from the vertical, in the direction of the tooth next mesial (anterior) to it in the dental arch.

mesioclusion (me/'ze-o-kloo'zhun) a malrelation of the dental arches in which the mandibular arch is in an anterior position in relation to the maxillary arch (prognathism); called also *anterocclusion*.

mesiodens (me/'ze-o-denz), pl. *mesioden'tes*. A small supernumerary tooth with a cone-shaped crown and a short root, occurring singly or paired, and generally situated palatally between the maxillary central incisors.

mesiodentes (me/'ze-o-den'tēz) plural of *mesiodens*.

mesiodistal (me/'ze-o-dis'tal) pertaining to the mesial and distal surfaces of a tooth.

mesioingival (me/'ze-o-jin'ji-val) pertaining to or formed by the mesial and gingival walls of a tooth cavity.

mesioincisodistal (me/'ze-o-in-si'so-dis'tal) pertaining to the mesial, incisal, and distal surfaces of an anterior tooth.

mesiolabial (me/'ze-o-la'be-al) pertaining to or formed by the mesial and labial surfaces of a tooth, or the mesial and labial walls of a tooth cavity.

mesiolabiocincisal (me/'ze-o-la'be-o-in-si'zal) pertaining to or formed by the mesial, labial, and incisal surfaces of a tooth.

mesiolingual (me/'ze-o-ling'gw'al) pertaining to or formed by the mesial and lingual surfaces of a tooth, or the mesial and lingual walls of a tooth cavity.

mesiolinguoincinal (me/'ze-o-ling'gwo-in-si'zal) pertaining to or formed by the mesial, lingual, and incisal surfaces of a tooth.

mesiolinguo-occlusal (me/'ze-o-ling'gwo-ō-kloo'zal) pertaining to or formed by the mesial, lingual, and occlusal surfaces of a tooth.

mesiolinguopulpal (me/'ze-o-ling'gwo-pul'pal) pertaining to or formed by the mesial, lingual, and pulpal walls of a tooth cavity.

mesion (me'se-on) [Gr. *mesos* middle] the plane that divides the body into right and left symmetric halves.

mesio-occlusal (me/'ze-o-ō-kloo'zal) pertaining to or formed by the mesial and occlusal surfaces of a tooth, or the mesial and occlusal walls of a tooth cavity.

mesio-occlusion (me/'ze-o-ō-kloo'zhun) mesioclusion.

mesio-occlusodistal (me/'ze-o-ō-kloo'so-dis'tal) pertaining to the mesial, occlusal, and distal surfaces of a posterior tooth.

mesiopulpal (me/'ze-o-pul'pal) pertaining to or formed by the mesial and pulpal walls of a tooth cavity.

mesiopulpolabial (me/'ze-o-pul'po-la'be-al) pertaining to or formed by the mesial, pulpal, and labial walls of a tooth cavity.

mesiopulpolingual (me/'ze-o-pul'po-ling'gw'al) pertaining to or formed by the mesial, pulpal, and lingual walls of a tooth cavity.

mesioversion (me/'ze-o-ver'zhun) the condition of a tooth which is nearer than normal to the median line of the face along the dental arch.

mesiris (mes-i/'ris) [*meso-* + *iris*] the middle layer of the iris.

mesitylene (mes-it'i-lēn) symmetric trimethylbenzene, C_6H_3 -(CH_3)₃, from coal tar.

Mesmer (mes/'mer), Franz (Friedrick) Anton. An Austrian (1733-1815), who first demonstrated hypnotism in Vienna in about 1775. See *animal magnetism*, under *magnetism*, and see *mesmerism*.

mesmerism (mes/'mer-izm) [after Franz A. Mesmer, 1733-1815] 1. the use of animal magnetism and hypnotism as practiced by Mesmer. 2. hypnotism.

meso- [Gr. *mesos* middle] 1. a prefix signifying "middle," either situated in the middle or intermediate. 2. in chemistry, a prefix signifying inactive or without effect on polarized light.

meso-aortitis (mes''o-a''or-ti'tis) inflammation of the middle coat of the aorta. **m. syphilitica**, inflammation of the middle coat of the aorta due to syphilis.

mesoappendicitis (mes''o-ah-pen''di-si'tis) inflammation of the mesoappendix.

mesoappendix (mes''o-ah-pen''diks) [*meso-* + *appendix*] [NA] the peritoneal fold attaching the appendix to the mesentery of the ileum; called also *mesenterium processus vermiformis*.

mesoarial (mes''o-a're-al) pertaining to the mesovarium.

mesoarum (mes''o-a're-um) mesovarium.

mesobacteria (mes''o-bak-te're-ah) plural of *mesobacterium*.

mesobacterium (mes''o-bak-te're-um), pl. *mesobacteria*. A rod-shaped microorganism of medium size.

mesobilin (mes''o-bi'lin) a compound, $C_{33}H_{42}O_6N_4$, occurring in the urine as a derivative of bilirubin via enterohepatic circulation.

mesobilirubin (mes''o-bil'i-roo'bin) a compound, $C_{33}H_{44}O_6N_4$, formed by the reduction of biliirubin.

mesobilirubinogen (mes''o-bil'i-roo-bin'o-jen) a reduced form of bilirubin, formed in the intestine, which on oxidation forms stercobilin.

mesobiliviolin (mes''o-bil'i-vi'o-lin) an oxidation product of mesobilirubinogen and of stercobilinogen.

mesoblast (mes''o-blast) [*meso-* + Gr. *blastos* germ] mesoderm, especially in the early stages.

mesoblastema (mes''o-blas-te'mah) the cells composing the mesoblast.

mesoblastic (mes''o-blas'tik) pertaining to or derived from the mesoblast.

mesobronchitis (mes''o-brong-ki'tis) [*meso-* + *bronchitis*] inflammation of the middle coat of the bronchi.

mesocardia (mes''o-kar'de-ah) [*meso-* + Gr. *kardia* heart] atypical location of the heart with the apex in the middle line of the thorax.

mesocardium (mes''o-kar'de-um) [*meso-* + Gr. *kardia* heart] that part of the embryonic mesentery which connects the embryonic heart with the body wall in front and the foregut behind.

arterial m., that part of the pericardium which encloses the aorta and pulmonary artery. **dorsal m.**, the temporary dorsal mesentery of the heart in the embryo; its site is represented by the transverse sinus of the pericardium. **lateral m.**, pulmonary ridge. **venous m.**, that part of the pericardium which encloses the venae cavae and pulmonary veins. **ventral m.**, a mesentery attaching the heart to the ventral body wall; it is scarcely represented in human development.

mesocarpal (mes''o-kar'pal) midcarpal.

mesocecal (mes''o-se'kal) pertaining to the mesocecum.

mesocecum (mes''o-se'kum) [*meso-* + *cecum*] the occasionally occurring mesentery of the cecum.

mesocele (mes''o-sel) [*meso-* + Gr. *koilia* hollow] (obs.) aqueductus cerebri.

mesocephalic (mes''o-sel-fal'ik) 1. pertaining to the mesocephalon. 2. having a cephalic index between 76.0 and 80.9.

mesocephalon (mes''o-sef'ah-lon) mesencephalon.

Mesocestoides (mes''o-ses-toi'dēz) a genus of tapeworms of the family Mesocestoididae, whose larvae are often found in the coelom or peritoneum of dogs, cats, mice, snakes, and other vertebrates; the adult form is found in the intestines of carnivorous animals, including man, dogs, cats, racoons, and meat-eating birds.

Mesocestoididae (mes''o-ses-toi'di-de) a family of medium-sized to large tapeworms of the order Cyclophyllidae, subclass Cestoda, which parasitize carnivorous birds and mammals. *Mesocestoides* is the type genus.

mesochondrium (mes''o-kon'dre-um) [*meso-* + Gr. *chondros* cartilage] the matrix in which are embedded the cellular elements of hyaline cartilage.

mesochoroidea (mes''o-ko-ro'i'de-ah) the middle coat of the choroid.

mesococci (mes''o-kok'si) plural of *mesococcus*.

mesococcus (mes''o-kok'us), pl. *mesococ'ci*. A spherical microorganism of medium size.

mesocoelia (mes''o-se'le-ah) (obs.) aqueductus cerebri.

mesocolic (mes''o-kol'ik) pertaining to the mesocolon.

mesocolon (mes''o-ko'lon) [*meso-* + Gr. *kolon* colon] [NA] the process of the peritoneum by which the colon is attached to the posterior abdominal wall. It is divided into ascending, transverse, descending, and sigmoid or pelvic portions, according to the segment of the colon to which it gives attachment. **m. ascendens** [NA], **ascending m.**, the peritoneum attaching the ascending colon to the posterior abdominal wall, usually obliterated when the ascending colon becomes retroperitoneal. **m. descendens** [NA], **descending m.**, the peritoneum attaching the descending colon to the posterior abdominal wall; it is usually

absent because the descending colon is ordinarily retroperitoneal.

iliac m., m. sigmoideum. **left m.**, m. descendens. **pelvic m.**, m. sigmoideum. **right m.**, m. ascendens. **sigmoid m.**, **m. sigmoi'deum** [NA], the peritoneum attaching the sigmoid colon to the posterior abdominal wall; called also *pelvic m. transverse m.*, **m. transversum** [NA], the peritoneum attaching the transverse colon to the posterior abdominal wall.

mesocolopexy (mes''o-ko'lo-pek'se) [*mesocolon* + Gr. *pēxis* fixation] suspension or fixation of the mesocolon.

mesocoloplication (mes''o-ko'lo-pli-ka'shun) [*mesocolon* + *plication*] plication of the mesocolon to limit its mobility.

mesocord (mes''o-kord) an umbilical cord adherent to the placenta by a connecting fold of the amnion; more correctly, the connecting fold itself.

mesocornea (mes''o-kor'ne-ah) substantia propria corneae.

mesocranic (mes''o-kra'nik) having a cranial index between 75.0 and 79.9.

mesocuneiform (mes''o-ku'ne-i-form) os cuneiforme intermedium.

mesocyst (mes''o-sist) [*meso-* + Gr. *kystis* bladder] the layer of peritoneum attaching the gallbladder to the liver.

mesocytoma (mes''o-si-to'mah) [*mesocyte* + *-oma*] a connective tissue tumor.

mesoderm (mes''o-derm) [*meso-* + Gr. *derma* skin] the middle layer of the three primary germ layers of the embryo, lying between the ectoderm and the entoderm. From it are derived the connective tissue, bone and cartilage, muscle, blood and blood vessels, lymphatics and lymphoid organs, notochord, pleura, pericardium, peritoneum, kidney, and gonads. Cf. *ectoderm* and *entoderm*. **extraembryonic m.**, that located outside the embryo and belonging to fetal accessory organs. **gastral m.**, that infolded with the entoderm during gastrulation. **head m.**, loose mesoderm, cranial to the somites. **lateral m.**, the lateral sheets of mesoderm within which the embryonic coelom arises. **paraxial m.**, that lying alongside the notochord and neural tube. **peristomal m.**, that derived from the ventral lip of the blastopore or from the primitive streak. **somatic m.**, the outer of the two layers into which the embryonic mesoderm divides; associated with ectoderm to constitute the somatopleure. **splanchnic m.**, the inner of the two layers into which the embryonic mesoderm divides; associated with entoderm to constitute splanchnopleure.

mesodermal (mes''o-der'mal) pertaining to or derived from the mesoderm.

mesodermic (mes''o-der'mik) pertaining to the mesoderm.

mesodermopath (mes''o-der'mo-path) [*mesoderm* + Gr. *pathos* disease] (obs.) a person who is constitutionally susceptible to diseases of the tissues derived from embryonic mesoderm, such as heart and kidneys, arteries and veins, joints and muscles.

mesodiastolic (mes''o-di'ah-stol'ik) [*meso-* + *diastole*] pertaining to the middle of the diastole.

mesodont (mes''o-dont) [*meso-* + Gr. *odous* tooth] having a dental index between 42 and 44.

mesodontic (mes''o-don'tik) having medium sized teeth.

mesodontism (mes''o-don'tizm) the state of having medium sized teeth, or a dental index between 42 and 44.

mesoduodenal (mes''o-du'o-de'nal) pertaining to the mesoduodenum.

mesoduodenum (mes''o-du'o-de'num) [*meso-* + *duodenum*] the mesenteric fold which in early fetal life encloses the duodenum.

mesoeppididymis (mes''o-ep'i'di'di-mis) a fold of tunica vaginalis that sometimes connects the epididymis with the testicle.

mesoesophagus (mes''o-ē-sof'ah-gus) the portion of the primitive mesentery which encloses the developing esophagus.

mesogaster (mes''o-gas'ter) [*meso-* + Gr. *gastēr* belly] mesogastrium.

mesogastric (mes''o-gas'trik) pertaining to the mesogastrium.

mesogastrium (mes''o-gas'tre-um) [*meso-* + Gr. *gastēr* belly] [NA] the portion of the primitive mesentery which encloses the stomach, and from which the greater omentum is developed.

mesoglea (mes''o-gle'ah) [*meso-* + Gr. *gloia* glue] the layer between the epidermis and gastrodermis of coelenterates.

mesoglia (mē-sog'le-ah) 1. microglia. 2. oligodendroglia.

mesoglioma (mes''o-gli-o'mah) a tumor of the mesoglia; a microglioma or oligodendrogloma.

mesogluteal (mes''o-gloo'te-al) pertaining to the gluteus medius muscle.

mesogluteus (mes''o-gloo'te-us) musculus gluteus medius.

mesognathic (mes''og-na'thik) mesognathous.

mesognathous (mē-sog'nah-thus) having a gnathic index between 98 and 103.

Mesogonimus (mes''o-gon'i-mus) a former name for a genus of flukes, certain species of which are now included in the genera *Paragonimus* and *Heterophyes*. **M. heterophyes**, *Heterophyes heterophyes*.

mesohemin (mes'o-he'min) a reduced form of hemin, $C_{34}H_{36}O_4N_4FeCl$.

mesohyloma (mes'o-hi-lo'mah) [*meso-* + Gr. *hylē* matter + *-oma*] mesothelioma.

mesohypoblast (mes'o-hi'po-blast) mesentoderm.

mesoileum (mes'o-il'e-um) the mesentery of the ileum.

meso-inositol (mes'o-in-o'si-tol) inositol, def. 2.

mesojejunum (mes'o-je-ju'num) the mesentery of the jejunum.

mesolecithal (mes'o-les'i-thal) [*meso-* + Gr. *lekithos* yolk.] possessing a moderate amount of yolk.

mesology (mē-sol'o-je) ecology.

mesomelic (mes'o-mel'ik) [*meso-* + Gr. *melus* limb] pertaining to the midportion of the arm or leg.

mesomere (mes'o-mēr) [*meso-* + Gr. *meros* part] 1. a blastomere of size intermediate between a macromere and a micromere. 2. a midzone of the mesoderm between the epimere and hypomere.

mesomeric (mes'o-mer'ik) exhibiting mesomerism.

mesomerism (mē-som'er-izm) the existence of organic chemical structures differing only in the position of electrons, rather than atoms. For example, the two Kekulé structures for benzene. Such a molecule does not possess one electronic structure part of the time and another structure the rest of the time; the actual electronic state of the molecule is at all times intermediate to the two extremes.

mesometrium (mes'o-me'tre-um) [*meso-* + Gr. *mētra* uterus] 1. [NA] the portion of the broad ligament below the mesovarium, composed of the layers of peritoneum that separate to enclose the uterus. 2. the tunica muscularis uteri, or myometrium.

mesomorph (mes'o-morf) [*meso-* + Gr. *morphē* form] 1. an individual having a type of body build in which tissues derived from the mesoderm predominate. There is relative preponderance of muscle, bone, and connective tissue, usually with heavy, hard physique of rectangular outline. This somatotype is classified between the ectomorph and the endomorph. 2. a well-proportioned individual, as contrasted to a hypermorph (def. 1) and a hypomorph (def. 1).

mesomorphic (mes'o-mor'fik) pertaining to or characteristic of a mesomorph.

mesomorphy (mes'o-mor'fe) [*meso-* + Gr. *morphē* form] the condition of being a mesomorph.

mesomucinase (mes'o-mu'si-nās) a testicular mucinolytic enzyme that may play a role in fertilization.

mesomula (mē-som'u-lah) an early stage of the embryo, when it consists of an epithelial ectoderm and entoderm enclosing a mass of mesenchyma.

meson (mes'on, mē'zon) [Gr. *mesos* middle] 1. mesion. 2. a subatomic, short-lived particle of a mass less than that of a proton but more than that of an electron, carrying either a positive or a negative electric charge; called also *mesotron*.

mesonasal (mes'o-na'zal) situated in the middle of the nose.

mesonephric (mes'o-nef'rik) pertaining to the mesonephros.

mesonephroi (mes'o-nef'roi) plural of *mesonephros*.

mesonephroma (mes'o-nefro'mah) a rare malignant tumor of the female genital tract, most often the ovary, formerly considered to be derived from mesonephric rests (Schiller). Two varieties are recognized: (1) clear cell carcinoma, so called because of its histologic resemblance to renal cell carcinoma, and now considered to be of müllerian duct derivation, and (2) an embryonal tumor, variously called infantile embryonal carcinoma, endodermal sinus tumor, and yolk sac tumor, occurring chiefly in children. The latter variety may also arise in the testis.

mesonephron (mes'o-nef'ron) mesonephros.

mesonephros (mes'o-nef'ros), pl. *mesoneph'roi* [*meso-* + Gr. *nephros* kidney] [NA] the excretory organ of the embryo, arising caudad to the pronephric rudiments or the pronephros and using its duct. The mesonephros consists of a long tube in the lower part of the body cavity, running parallel with the spinal axis and joined at right angles by a row of twisting tubes. Called also *corpus Wolffii* and *wolffian body*.

meso-omentum (mes'o-o-men'tum) the fold by which the omentum is attached to the abdominal wall.

meso-ontomorph (mes'o-on'to-morf) [*meso-* + Gr. *ōn* being + *morphē* form] a person of stocky build.

mesopallium (mes'o-pal'e-um) [*meso-* + L. *pallium* cloak] paleopallium.

mesopexy (mes'o-pek'se) mesenteriopexy.

mesophile (mes'o-fil) an organism which grows best at temperatures between 20° and 45° C.

mesophilic (mes'o-fil'ik) [*meso-* + Gr. *philein* to love] fond of moderate temperature; said of bacteria which develop best at temperatures between 20° and 45° C. Cf. *psychrophilic* and *thermophilic*.

mesophlebitis (mes'o-fle-bi'tis) inflammation of the middle coat of a vein.

mesophragma (mes'o-frag'mah) [*meso-* + Gr. *phragmos* a fence-

ing in] a name given to the M band. Cf. *inophragma*, and *Z band*, under *band*.

mesophryon (mē-sōf're-on) [*meso-* + Gr. *ophrys* eyebrow] the glabella or its central point.

mesophyll (mes'o-fil) [*meso-* + Gr. *phyllon* leaf] the tissue of the inner part of a leaf.

mesopia (mes-o'pe-ah) the condition of having mesopic vision.

mesopic (mes-op'ik) [*meso-* + Gr. *ōpsis* sight] pertaining to vision at intermediate levels of illumination, e.g., at twilight.

Mesopin (mes'o-pin) trademark for a preparation of homatropine methylbromide.

mesopneumon (mes'o-nu'mon) [*meso-* + Gr. *pneumon* lung] the union of the two layers of the pleura at the hilus of the lung.

mesopneumonium (mes'o-nu-mo'ne-um) (*obs.*) mesopneumon.

mesoporphyrin (mes'o-por'fī-rin) a crystalline iron-free porphyrin, $C_{34}H_{36}O_4N_4$, from heme obtained by a process of reduction.

mesoprosopic (mes'o-pro-sop'ik) [*meso-* + Gr. *prosōpon* face] having a face of moderate width.

mesopsychic (mes'o-si'kik) pertaining to the middle period of mental development.

mesopulmonum (mes'o-pul-mo'num) the portion of the embryonic mesentery that encloses the laterally expanding lung.

mesorachischisis (mes'o-rah-kis'kī-sis) [*meso-* + *rachischisis*] partial rachischisis; partial fissure of the spinal cord.

mesorchial (mē-sor'ke-al) pertaining to the mesorchium.

mesorchium (mes-or'ke-um) [*meso-* + Gr. *orchis* testis] [NA] the portion of the primitive mesentery that encloses the fetal testis, represented in the adult by a fold between the testis and epididymis.

mesorectum (mes'o-rek'tum) [*meso-* + *rectum*] the fold of peritoneum connecting the upper portion of the rectum with the sacrum.

mesoretina (mes'o-ret'i-nah) [*meso-* + *retina*] the middle layer of the retina.

mesoridazine (mes'o-rid'ah-zēn) chemical name: 10-[2-(1-methyl-2-piperidinyl)ethyl]-2-(methylsulfinyl)-10H-phenothiazine; a metabolite of thioridazine, $C_{21}H_{26}N_2OS_2$. **m. besylate** [USP], **m. benzenesulfonate**, the besylate salt of mesoridazine, $C_{21}H_{26}N_2OS_2 \cdot C_6H_5O_3S$, occurring as a white to pale yellowish powder; an antipsychotic agent, used in the treatment of alcoholism, schizophrenia, psychoneurotic manifestations, and behavioral problems in mental deficiency and chronic brain syndrome, administered orally and intramuscularly.

mesoropter (mes'o-ropt'er) [*meso-* + Gr. *horos* boundary + Gr. *optēr* observer] the normal position of the eyes with their muscles at rest.

mesorrhaphy (mes-or'ah-fe) mesenteriorrhaphy.

mesorrhine (mes'o-rin) [*meso-* + Gr. *rhis* nose] having a nasal index between 48 and 53.

mesosalpinx (mes'o-sal'pinks) [*meso-* + Gr. *salpinx* tube] [NA] the part of the broad ligament of the uterus above the mesovarium, composed of layers that enclose the uterine tube.

mesoscapula (mes'o-skap'u-lah) spina scapula.

mesoseme (mes'o-sēm) [*meso-* + Gr. *sēma* sign] having an orbital index between 83 and 89.

mesosigmoid (mes'o-sig'moid) the peritoneal fold by which the sigmoid flexure is attached to the posterior abdominal wall.

mesosigmoiditis (mes'o-sig'moi-di'tis) inflammation of the mesosigmoid.

mesosigmoidopexy (mes'o-sig-moi'do-pek'se) [*mesosigmoid* + Gr. *pēxis* fixation] suspension or fixation of the mesosigmoid in the treatment of prolapse of the rectum.

mesoskelic (mes'o-skel'ik) [*meso-* + Gr. *skelos* leg] having legs of normal length.

mesosoma (mes'o-so'mah) [*meso-* + Gr. *sōma* body] medium stature.

mesosomatous (mes'o-so'mah-tus) having medium stature.

mesosome (mes'o-sōm) [*meso-* + Gr. *sōma* body] an invagination of the cell membrane occurring in certain bacteria. Various mesosomes are associated with DNA replication and with protein secretion.

mesostaphyline (mes'o-staf'i-lin) having a palatal index between 80.0 and 84.9.

mesostenium (mes'o-ste'ne-um) mesenterium.

mesosternum (mes'o-ster'num) [*meso-* + Gr. *sternon* sternum] the corpus sterni.

mesostroma (mes'o-stro'mah) the embryonic fibrillar tissue analogous to the vitreous, which develops into Bowman's and Descemet's membranes.

mesosyphilis (mes'o-sif'i-lis) secondary syphilis.

mesosystolic (mes'o-sis-tol'ik) [*meso-* + Gr. *systolē* systole] pertaining to the middle of the systole.

mesotarsal (mes'o-tar'sal) midtarsal.

mesotendineum (mes''o-ten-din'e-um) [NA] the delicate connective tissue sheath attaching a tendon to its fibrous sheath.

mesotendon (mes''o-ten'don) mesotendineum.

mesotenon (mes''o-ten'on) mesotendineum.

mesothelial (mes''o-the'le-al) pertaining to the mesothelium.

mesothelioma (mes''o-the'le-o'mah) a malignant tumor derived from mesothelial tissue (peritoneum, pleura, pericardium); it appears as broad sheets of cells, with some regions containing spindle-shaped, sarcoma-like cells and other regions showing adenomatous patterns. Pleural mesotheliomas have been linked to exposure to asbestos.

mesothelium (mes''o-the'le-um) [*meso-* + *epithelium*] [NA] the layer of flat cells, derived from the mesoderm, which lines the coelom or body cavity of the embryo. In the adult, it forms the simple squamous epithelium which covers all true serous membranes (peritoneum, pericardium, pleura).

mesothernar (mes-oth'e-nar) [*meso-* + Gr. *thenar* palm] musculus adductor pollicis.

mesothorium (mes''o-tho're-um) a disintegration product of thorium, intermediate between thorium and radiothorium and isotopic with radium. It has radioactive properties and has been used in the treatment of cancer.

mesotron (mes''o-tron) meson, def. 2.

mesotropic (mes''o-trop'ik) situated in the middle of a cavity, as the abdomen.

mesotympanum (mes''o-tim'pah-num) the portion of the middle ear medial to the tympanic membrane.

mesouranic (mes''o-u-ran'ik) mesuranic.

mesovarium (mes''o-va're-um) [NA] the portion of the broad ligament of the uterus between the mesometrium and mesosalpinx, which is drawn out to enclose and hold the ovary in place.

Mesozoa (mes''o-zo'ah) [*meso-* + Gr. *zōon* animal] a small group of tiny parasites whose relationships to the Protozoa and Metazoa are uncertain.

mesterolone (mes-ter'o-lōn) chemical name: 17β-hydroxy-1α-methyl-5α-androstan-3-one; an androgen, C₂₀H₃₂O₂, with actions and uses similar to those of testosterone.

Mestinon (mes'ti-non) trademark for preparations of pyridostigmine bromide.

mestranol (mes'trah-nōl) [USP] chemical name: 3-methoxy-19-nor-17α-pregna-1,3,5(10)-triene-20-yne-17α-ol. The 3-methyl ether of ethinyl estradiol, C₂₁H₂₆O₂, occurring as a white to creamy white, crystalline powder; used as the estrogen component of several progestin-estrogen oral contraceptives.

mesuprine hydrochloride (mes'ū-prēn) chemical name: 2'-hydroxy-5'-[1-hydroxy-2-[p-methoxyphenethyl]amino]propyl-methanesulfonanilide monohydrochloride; a vasodilator and smooth muscle relaxant, C₁₈H₂₄N₂O₅S·HCl.

mesuranic (mes''u-ran'ik) [*meso-* + Gr. *ouranos* palate] having a maxilloalveolar index between 110.0 and 114.9.

mesylate (mes'fī-lāt) USAN contraction for methanesulfonate.

Met methionine.

met (met) a unit of measurement of heat production by the body: the metabolic heat produced by a resting-sitting subject, being 50 kilogram calories per square meter of body surface per hour.

meta- [Gr. *meta* after, beyond, over] a prefix indicating (1) change, transformation, or exchange; (2) after or next; (3) the 1,3 position in derivatives of benzene.

meta-arthritis (met''ah-ar-thrit'ik) occurring as a consequence or result of arthritis.

metabasis (mē-tab'ah-sis) [*meta-* + Gr. *bainein* to go] 1. a change in the manifestations or course of a disease. 2. metastasis, or change in the site of a morbid process from one region of the body to another.

metabiosis (met''ah-bi-o'sis) [*meta-* + Gr. *biōsis* way of life] the dependence of one organism upon another for its existence; commensalism.

metabolic (met''ah-bol'ik) pertaining to or of the nature of metabolism.

metabolimeter (met''ah-bo-lim'ē-ter) [*metabolism* + Gr. *metron* measure] an apparatus for measuring basal metabolism.

metabolimetry (met''ah-bo-lim'ē-tre) the measurement of basal metabolism.

metabolism (mē-tab'o-lizm) [Gr. *metaballein* to turn about, change, alter] the sum of all the physical and chemical processes by which living organized substance is produced and maintained (anabolism), and also the transformation by which energy is made available for the uses of the organism (catabolism).

ammonotelic m., that in which ammonia is the final product of nitrogen metabolism. **basal m.**, the minimal energy expended for the maintenance of respiration, circulation, peristalsis, muscle tonus, body temperature, glandular activity, and the other vegetative functions of the body. The rate of basal metabolism (basal metabolic rate) is measured by means of a calorimeter, in a subject at absolute rest, 14 to 18 hours after eating, and is expressed in calories per hour per square meter of body surface.

endogenous m., metabolism of the proteins of the body tissues.

energy m., the metabolic processes by which energy is released.

excess m. of exercise, the amount by which the oxygen consumed or the carbon dioxide eliminated during exercise and recovery exceeds the corresponding amounts during sleep.

exogenous m., metabolism of ingested foodstuffs.

inborn error of m., a genetically determined biochemical disorder in which a specific enzyme defect produces a metabolic block that may have pathologic consequences at birth (e.g., phenylketonuria) or in later life (e.g., diabetes mellitus); called also *enzymopathy* and *genetotrophic disease*.

intermediary m., the various chemical reactions involved in the transformation of food molecules into essential cellular building blocks.

ureotelic m., that in which urea is the final product of nitrogen metabolism.

uricotelic m., that in which uric acid is the final product of nitrogen metabolism.

metabolite (mē-tab'o-lit) any substance produced by metabolism or by a metabolic process.

essential m., a necessary constituent of normal metabolic processes.

metabolizable (mē-tab'o-liz'ah-b'l) capable of being transformed by metabolism.

metabolon (mē-tab'o-lon) a form of matter having only a temporary existence, formed during the conversion of one material to another, as during radioactive decay.

metabromsalan (met''ah-brom'sah-lan) chemical name: 3,5-dibromo-2-hydroxy-N-phenylbenzamide. A disinfectant with antibacterial and antifungal activities, C₁₃H₉Br₂NO₂, used mainly in medicated soaps.

metabutethamine hydrochloride (met''ah-bu-teth'ah-min) chemical name: 2-[(2-methylpropyl)amino]ethanol 3-aminobenzoate(ester) monohydrochloride. A local anesthetic, C₁₃H₂₁ClN₂O₂·HCl, occurring as a white crystalline solid; used in dentistry to produce infiltration and nerve block anesthesia.

metabutoxycaine hydrochloride (met''ah-bu-tok'se-kān) chemical name: 3-amino-2-butoxybenzoic acid 2-diethylaminoethyl ester hydrochloride. A local anesthetic, C₁₇H₂₈N₂O₃·HCl, used in dentistry.

metacarpal (met''ah-kar'pal) 1. pertaining to the metacarpus. 2. a bone of the metacarpus.

metacarpectomy (met''ah-kar-pek'to-me) excision or resection of a metacarpal bone.

metacarpophalangeal (met''ah-kar'po-fah-lan'je-al) pertaining to the metacarpus and phalanges.

metacarpus (met''ah-kar'pus) [*meta-* + Gr. *karpos* wrist] [NA] the part of the hand between the wrist and the fingers, its skeleton being five cylindrical bones (metacarpals) extending from the carpus to the phalanges.

metacele (met''ah-sēl) metacoele.

metacentric (met''ah-sen'trik) having the centromere near the middle, so that the arms of the replicating chromosome are approximately equal in length. Cf. *acrocentric* and *submetacentric*.

metacercaria (met''ah-ser-ka're-ah), pl. *metacercariae*. The encysted resting or maturing stage of a trematode parasite in the tissues of an intermediate host (mollusks, aquatic arthropods, fishes, or amphibia) or on vegetation. The metacercaria may be the infective or transfer stage to man and other animals.

metacercariae (met''ah-ser-ka're-e) plural of *metacercaria*.

metachemical (met''ah-kem'fī-kal) beyond the bounds of chemistry.

metachromasia (met''ah-kro-ma'ze-ah) [*meta-* + Gr. *chrōma* color] 1. a condition in which tissues do not stain true with a given stain. 2. staining in which the same stain colors different tissues in different tints. 3. the change of color produced by staining.

metachromatic (met''ah-kro-mat'ik) [*meta-* + Gr. *chrōmatikos* relating to color] staining differently with the same dye; said of tissues in which different elements take on different colors when a certain dye is applied. By extension, said of dyes by which different tissues are stained differently.

metachromatin (met''ah-kro'mah-tin) the basophil element in chromatin.

metachromatism (met''ah-kro'mah-tizm.) metachromasia.

metachromatophil (met''ah-kro-mat'o-fil) a cell that does not stain in the usual manner with a given stain.

metachromia (met''ah-kro'me-ah) metachromasia.

metachromic (met''ah-kro'mik) metachromatic.

metachromophil (met-ah-kro'mo-fil) [*meta-* + Gr. *chrōma* color + *philein* to love] staining in an abnormal manner with a given stain.

metachromophile (met''ah-kro'mo-fil) metachromophil.

metachromosome (met''ah-kro'mo-sōm) one of two small chromosomes which conjugate only in the last phase of the spermatocyte division.

metachronous (mē-tak'ro-nus) [*meta-* + Gr. *chronos* time] occurring at different times.

metachrosis (met''ah-kro'sis) [*meta-* + Gr. *chrōsis* coloring] change of color in animals.

metachysis (mĕ-tak'î-sis) [*meta-* + Gr. *chysis* effusion] the transfusion of blood.

metacinesis (met'ah-si-ne'sis) [*meta-* + Gr. *kinēsis* motion] the separation of daughter stars (asters) from each other in mitosis.

metacoele (met'ah-sēl) [*meta-* + Gr. *koilia* hollow] 1. (obs.) that cavity of the metencephalon which, with the epicoele, makes up the fourth ventricle. 2. metacoeloma.

metacoeloma (met'ah-se-lo'mah) that part of the embryonic coelom which develops into the pleuroperitoneal cavity.

metacone (met'ah-kōn) [*meta-* + Gr. *kōnos* cone] the distobuccal cusp of an upper molar tooth.

metaconid (met'ah-kon'id) the mesiolingual cusp of a lower molar tooth.

metaconule (met'ah-kon'ul) the distal intermediate cusp of an upper molar tooth in lower animals.

metacortandracin (met'ah-kor-tan'drah-sin) prednisone.

metacortandralone (met'ah-kor-tan'drah-lōn) prednisolone.

metacresol (met'ah-kre'sol) one of the three isomeric forms of cresol, and the most strongly antiseptic of the group. **m. acetate**, a compound that has been used in fungus infections. **m. purple**, **m. sulfonphthalein**, a triphenylmethane compound which is a brilliant indicator, being red at pH 1.2, blue at pH 2.8, yellow at pH 7.4, and purple at pH 9.0.

metacyesis (met'ah-si-e'sis) [*meta-* + Gr. *kyēsis* pregnancy] extrauterine pregnancy.

metaduodenum (met'ah-du'o-de'num) the portion of the duodenum distal to the duodenal papilla, developed embryonically from the midgut.

metagaster (met'ah-gas'ter) [*meta-* + Gr. *gastēr* belly] the permanent intestinal canal of the embryo.

metagastrula (met'ah-gas'troo-lah) [*meta-* + *gastrula*] a gastrula with a cleavage differing from that of the standard type.

metagelatin (met'ah-jel'ah-tin) a substance produced by treating gelatin with oxalic acid.

metagenesis (met'ah-jen'ē-sis) [*meta-* + *genesis*] alternation of generations; alternation in regular sequence of asexual with sexual methods of reproduction in the same species, as in certain fungi.

metagglutinin (met'ah-gloo'ti-nin) partial agglutinin.

metaglobulin (met'ah-glob'u-lin) a fibrogenous substance occurring in cell protoplasm; fibrinogen.

metagonimiasis (met'ah-go'nī-mi'ah-sis) infection with *Metagonimus*.

Metagonimus (met'ah-gon'i-mus) [*meta-* + Gr. *gonimos* productive] a genus of trematodes. **M. ova'tus**, **M. yokogawai**. **M. yokoga'wai**, an intestinal trematode found in the small intestine of man and mammals in Japan, China, Indonesia, Balkans, and Israel.

metagrippal (met'ah-grip'al) occurring as a result of influenza (grippe).

metahemoglobin (met'ah-he'mo-glo'bin) methemoglobin.

metaherpes (met'ah-her'pēz) metaherpetic keratitis.

Metahydrin (met'ah-hi'drin) trademark for a preparation of trichlormethiazide.

metaicteric (met'ah-ik-ter'ik) occurring after jaundice.

metainfective (met'ah-in-fek'tiv) occurring after an infection; a term applied to a febrile state occurring during convalescence from an infectious disease.

metakinesis (met'ah-ki-ne'sis) 1. metacinesis. 2. Lloyd Morgan's term for the hypothetical property possessed by all types of life of being endowed with something which is not consciousness, but which has the potentiality of developing into consciousness. 3. metaphase.

metal (met'l) [L. *metallum*; Gr. *metallon*] any element marked by luster, malleability, ductility, and conductivity of electricity and heat and which will ionize positively in solution. **alkali m.**, one of a group of monovalent metals including lithium, sodium, potassium, rubidium, and cesium. **alkaline earth m.'s**, a group of grayish white, malleable metals that are easily oxidized in air, comprising beryllium, magnesium, calcium, strontium, barium, and radium. **Babbitt m.**, an alloy of tin, copper, and antimony; sometimes used in dentistry. **bell m.**, an alloy of copper and tin. **colloidal m.**, a colloidal solution of a metal; see *electrosol*. **fusible m.**, an alloy that melts at a relatively low temperature, as at or around the boiling point of water. Bismuth, lead, and tin are usually the principal constituents. **Melotte's m.**, a rather soft alloy consisting of bismuth, lead, and tin, sometimes used in dentistry; called also *Newton's alloy*. **Wood's m.**, a metal used in making casts of blood vessels: bismuth, 50 per cent; lead, 25 per cent; tin, 12.5 per cent; cadmium, 12.5 per cent.

metalumin (met-al-bu'min) [*meta-* + *albumin*] pseudomucin.

metaldehyde (met-al'de-hid) a crystalline body, a polymer of acetaldehyde, (CH₃·CHO)_n, formerly used as an antiseptic.

metallaxis (met'ah-lak'sis) [Gr. "exchange," "interchange"] the

transformation or building over of an organ by pathologic processes.

metallergy (met-al'er-je) a condition in which an allergic state, produced by specific sensitization, predisposes the organism to react to other antigens with the same clinical manifestations as the original reaction.

metallesthesia (met'al-es-the'ze-ah) [*metal* + Gr. *aisthēsis* perception + *-ia*] the recognition of metals by the sense of touch.

metallic (me-tal'ik) pertaining to or made of metal.

metallization (met''l-i-za'shun) impregnation with metals.

metallized (met''l-izd) treated with metals.

metallocyanide (me-tal'o-si'ah-nid) a compound of cyanogen with a metal.

metalloenzyme (mĕ-tal'o-en'zim) an enzyme containing tightly bound metal atoms as an integral part of its structure, e.g., carboxypeptidase and the cytochromes.

metalloflavoprotein (mĕ-tal'o-fla'vo-pro'te-in) any metalloprotein, e.g., xanthine oxidase, that functions as a dehydrogenase, catalyzing the oxidation of a substrate by a mechanism that involves the reduction of a prosthetic group, a derivative of riboflavin.

metalloid (met'l-oid) [*metal* + Gr. *eidos* form] 1. any element with both metallic and nonmetallic properties, as silicon, boron, or arsenic. 2. any metallic element that has not all the characters of a typical metal. 3. resembling a metal.

metallophilic (mĕ-tal'o-fil'ik) having an affinity for metal-containing stains; said of cells.

metalloplastic (me-tal'o-plas'tik) pertaining to the plastic use of metals.

metalloporphyrin (me-tal'o-por'fi-rin) a combination of a metal with porphyrin, e.g., heme (iron) and turacin (copper).

metalloscopy (met''l-os'ko-pe) [*metal* + Gr. *skopein* to examine] observation of the effects of applying metal to the body.

metallotherapy (me-tal'o-ther'ah-pe) [*metal* + Gr. *therapeuein* to heal] the treatment of disease by applying metals to the skin.

metallurgy (met''l-ur'je) [*metal* + Gr. *ergon* work] the science and art of using metals.

metal-sol (met''l-sol'') a colloidal solution of a metal.

metamer (met'ah-mer) a compound exhibiting, or capable of exhibiting, metamerism.

metamere (met'ah-mēr) [*meta-* + Gr. *meros* part] one of a series of homologous segments of the body of an animal. In genetic theory, one of a varying number of common repeating units that make up the repressor segment of a chromosomal locus, the actual number of metameres in a given locus being proportional to the degree of repression of the trait in question.

metameric (met'ah-mer'ik) pertaining to or characterized by metamerism.

metamerism (me-tam'er-ism) 1. a type of structural isomerism in which different radicals of the same chemical type are attached to the same polyvalent element and yet give rise to compounds possessing identical molecular formulas. For example, diethylamine, (C₂H₅)₂NH, and methyl propylamine, CH₃NHC₃H₇. The term metamerism is seldom used, such compounds being called simply structural isomers of the same chemical type. 2. arrangement into metameres by the serial repetition of a structural pattern. Cf. *antimere*.

Metamine (met'ah-mēn) trademark for preparations of trolnitrate phosphate.

metamorphopsia (met'ah-mor-fop'se-ah) [*meta-* + Gr. *morphē* form + *opsis* sight] a disturbance of vision in which objects are seen as distorted in shape. **m. va'rians**, metamorphopsia in which the outline of the object seems to change as it is being viewed.

metamorphosis (met'ah-mor'fo-sis) [*meta-* + Gr. *morphōsis* a shaping, bringing into shape] change of shape or structure, particularly a transition from one developmental stage to another, as from larva to adult form. **fatty m.**, any normal or pathologic transformation of fat, including fatty infiltration and fatty degeneration. **ovulation m.**, the developmental changes which occur during ovulation. **platelet m.**, viscous m. **retrograde m.**, retrogressive m., degeneration; more often a retrograde metabolic change. **revisionary m.**, cataplasia. **structural m.**, viscous m. **tissue m.**, any change in tissues, either normal or pathologic. **viscous m.**, the progressive and irreversible aggregation and fusion of blood platelets during the process of coagulation; called also *structural m.* and *platelet m.*

metamorphotic (met'ah-mor-fot'ik) pertaining to or characterized by metamorphosis.

Metamucil (met'ah-mu'sil) trademark for a preparation of psyllium hydrophilic mucilloid.

metamyelocyte (met'ah-mi'ē-lo-sīt'') a precursor in the granulocytic series, being a cell intermediate in development between a promyelocyte and the mature, segmented (polymorphonuclear), granular leukocyte, and having an indented (juvenile) nucleus. Called also *juvenile cell* or *form*, and *young form*.

Metandren (mĕ-tan'dren) trademark for preparations of methyltestosterone.

metanephric (met/'ah-nĕf'rik) of or pertaining to the metanephros.

metanephrine (met/'ah-nĕf'rin) chemical name: α -(methylaninomethyl vanillyl alcohol(3-methylepinephrine): a metabolite of epinephrine excreted in the urine and found in certain tissues.

metanephrogenic (met/'ah-nĕf''ro-jen'ik) [*meta-* + Gr. *nephros* kidney + *gennan* to produce] capable of giving rise to the metanephros.

metanephroi (met/'ah-nĕf'roi) plural of *metanephros*.

metanephron (met/'ah-nĕf'ron) metanephros.

metanephros (met/'ah-nĕf'ros), pl. *metaneph'roi* [*meta-* + Gr. *nephros*, kidney] the permanent embryonic kidney, which develops later than and caudal to the mesonephros, from the mesonephric duct and nephrogenic cord.

metaneutrophil (met/'ah-nu'tro-fil) [*meta-* + *neutrophil*] staining abnormally with neutral stains.

metanucleus (met/'ah-nu'kle-us) [*meta-* + *nucleus*] the egg nucleus during the maturative period.

metapeptone (met/'ah-pep'tōn) [*meta-* + *peptone*] a digestive product between dyspeptone and parapeptone.

metaphase (met/'ah-fāz) [*meta-* + *phase*] the second stage of cell division (mitosis or meiosis), during which the contracted chromosomes, each consisting of two chromatids, are arranged in the equatorial plane of the spindle prior to separation. See *meiosis* and *mitosis*.

Metaphedrin (met/'ah-fed'rin) trademark for a preparation of nitromersol and ephedrine.

Metaphen (met/'ah-fen) trademark for preparations of nitromersol.

metaphrenia (met/'ah-fre'ne-ah) [*meta-* + Gr. *phrēn* mind] a term introduced by Staercke for the mental condition in which the interests are withdrawn from the family or group and directed to personal gain or aggrandisement.

metaphrenon (met/'ah-fre'non) [Gr. "the part behind the midriff"] (*obs.*) the back, especially the region about the kidneys.

metaphyseal (met/'ah-fiz'e-al) pertaining to or of the nature of a metaphysis.

metaphyses (me-taff'i-sēz) plural of *metaphysis*.

metaphysial (met/'ah-fiz'e-al) metaphyseal.

metaphysis (me-taff'i-sis), pl. *metaph'yses* [*meta-* + Gr. *phyein* to grow] the wider part at the extremity of the shaft of a long bone, adjacent to the epiphyseal disk. During development it contains the growth zone and consists of spongy bone; in the adult it is continuous with the epiphysis.

metaphysitis (met/'ah-fis-i'tis) inflammation of the metaphysis of a long bone.

metaplasia (met/'ah-pla'ze-ah) [*meta-* + Gr. *plassein* to form] the change in the type of adult cells in a tissue to a form which is not normal for that tissue. **myeloid m.**, the occurrence of myeloid tissue in extramedullary sites; specifically, a syndrome characterized by splenomegaly, anemia, the presence of nucleated erythrocytes and immature granulocytes in the circulating blood, and extramedullary hematopoiesis in the liver and spleen. The primary form is also known as *agnogenic myeloid metaplasia*, *myeloclerosis*, and *myelofibrosis*. The secondary or symptomatic form may be associated with various diseases, including carcinomatosis, tuberculosis, leukemia, and polycythemia vera. **myeloid m., agnogenic**, a condition characterized by foci of extramedullary hematopoiesis, splenomegaly, immature red and white cells in the peripheral blood, and mild to moderate anemia; it is grouped by some hematologists with the myeloproliferative disorders. Called also *aleukemic* or *nonleukemic myelosis*, and *leukoerythroblastic anemia*. **pseudopyloric m.**, gastric metaplasia in which the gastric glands disappear and are replaced by tubules that closely resemble normal pyloric glands. **m. of pulp**, a state of the pulp tissue of a tooth in which it has deteriorated from its power of dentin formation to the condition of connective tissue. **squamous m.**, the transformation of pseudostratified ciliated epithelium into stratified squamous epithelium, as occurs in certain pathologic conditions or may be produced experimentally.

metaplasia (mĕ-tap'lah-sis) the stage in which the organism has attained completed growth.

metaplasma (met/'ah-plazm) [*meta-* + Gr. *plasma* something formed] deuteroplasm.

metaplastic (met/'ah-plas'tik) 1. pertaining to or characterized by metaplasia. 2. formed by or of the nature of metaplasma (deutoplasm).

metaplexus (met/'ah-plek'sus) (*obs.*) the choroid plexus of the fourth ventricle of the brain.

metapneumonic (met/'ah-nu-mon'ik) [*meta-* + *pneumonia*] succeeding or following pneumonia.

metapodialia (met/'ah-po'de-a'le-ah) [*meta-* + Gr. *pous* foot] a collective term for the bones of the metacarpus and metatarsus.

metapophysis (met/'ah-pof'i-sis) [*meta-* + *apophysis*] the

mamillary process on the superior articular or prearticular processes of certain vertebrae.

metapore (met/'ah-pōr) (*obs.*) apertura mediana ventriculi quarti.

Metaprel (met/'ah-prel) trademark for preparations of metaproterenol sulfate.

metaproterenol sulfate (met/'ah-pro-ter'ē-nōl) chemical name: 5-[1-hydroxy-2-[(1-methylethylamino)ethyl]-1,3-benzenediol sulfate (2:1) salt. A β -adrenergic, $(C_{11}H_{17}NO_3)_2 \cdot H_2SO_4$, similar in chemical structure to isoproterenol but having longer lasting effects; used as a bronchodilator in the treatment of bronchial asthma and for reversible bronchospasm associated with bronchitis and emphysema, administered orally and by inhalation.

metapsyche (met/'ah-si'ke) [*meta-* + Gr. *psychē* soul] (*obs.*) the metencephalon.

metapsychics (met/'ah-si'kiks) [*meta-* + Gr. *psychē* soul] the science which deals with psychic phenomena that are beyond the realm of consciousness; parapsychology.

metapsychology (met/'ah-si-kol'o-je) a term applied to various philosophical theories about mental functions and mental "structures" which are justifiable on logical grounds but not verifiable by experiment or observation; in psychoanalysis such theories concern the topography (id, ego, superego) and economics (quantities of psychic energy or excitation) of mental processes.

metapyrone (met-ah-pi'rōn) metyrapone.

metaraminol (met/'ah-ram'i-nol) [USP] chemical name: α -(1-aminoethyl)-3-hydroxybenzenemethanol[*R*-(*R**,*R**)]-2,3-dihydroxybutanedioate (1:1) (salt). An adrenergic with potent vasopressor activity, $C_9H_{13}NO_2 \cdot C_4H_8O_6$; used especially for the prevention and treatment of acute hypotensive states occurring with spinal anesthesia and for adjunctive therapy of hypotension due to hemorrhage, reactions to medications, surgical complication, and shock associated with brain damage due to trauma or tumor, administered intramuscularly and intravenously.

metarchon (met-ar'kon) an agent which, without being toxic, so changes the behavior of a pest that its persistence is diminished, e.g., a confusing sex attractant.

metargon (met-ar'gon) a name given an isotope of argon, atomic weight 38.

metarhodopsin (met/'ah-ro-dop'sin) an intermediate compound that is formed as rhodopsin absorbs light and eventually dissociates to opsin and *trans*-retinal; see *retinal*, def. 2.

metarteriole (met/'ar-te're-ōl) an arterial capillary.

metarubricyte (met/'ah-roo'brī-sīt) orthochromatic normoblast.

metasomatome (met/'ah-so'mah-tōm) one of the constrictions between successive protovertebrae.

metastable (met/'ah-sta'b'l) 1. a condition differing from stable in that, although the substance is stable in small perturbations, it can be transformed to a more stable condition by relatively large perturbations. 2. subject to inevitable change or destruction eventually, but apparently stable owing to slowness of change.

metastasectomy (mĕ-tas'tah-sek'to-me) surgical excision of metastases.

metastases (mĕ-tas'tah-sēz) plural of *metastasis* (def. 2).

metastasis (mĕ-tas'tah-sis) [*meta-* + Gr. *stasis* stand] 1. the transfer of disease from one organ or part to another not directly connected with it. It may be due either to the transfer of pathogenic microorganisms (e.g., tubercle bacilli) or to transfer of cells, as in malignant tumors. The capacity to metastasize is a characteristic of all malignant tumors. 2. Pl. *metastases*. A growth of pathogenic microorganisms or of abnormal cells distant from the site primarily involved by the morbid process. **biochemical m.**, the transportation from the point of production and the deposition in previously normal tissues of abnormal or pathologically produced biochemical substances which bring about immunological or other changes in the tissues. **calcareous m.**, the formation of bone salts in the kidneys and elsewhere in softening of bone. **contact m.**, transfer from one surface to another with which the former is in contact. **crossed m.**, passage of material from the venous to the arterial circulation without going through the lungs. **direct m.**, metastasis in the direction of the blood or lymph stream. **implantation m.**, metastasis brought about by transfer of tumor cells by fluid and their implantation in a distant location. **paradoxical m.**, **retrograde m.**, metastasis taking place in a direction opposite to that of the blood stream. **transplantation m.**, metastasis from one tissue to another.

metastasize (me-tas'tah-sīz) to form new foci of disease in a distant part by metastasis.

metastatic (met/'ah-stat'ik) pertaining to or of the nature of metastasis.

metasternum (met/'ah-ster'num) [*meta-* + Gr. *sternon* sternum] processus xiphoideus.

Metastrongylidae (met/'ah-stron-jil'e-de) a family of nematodes of the superfamily Strongyloidea, comprising the lung-

worms; it includes the genera *Metastrongylus* and *Angiostrongylus*.

Metastrongylus (met'ah-stron'jī-lus) a genus of parasitic nematodes of the family Metastrongylidae. *M. elongatus*, a species found in the lungs of hogs, is a host of the swine influenza virus.

metasynapsis (met'ah-sī-nap'sis) end-to-end union of the chromosomes in synapsis.

metasynchrism (met'ah-sin'kri-sis) the elimination of waste or morbid matter.

metasyndesis (met'ah-sin-de'sis) metasynapsis.

metasyphilis (met'ah-sif'ī-lis) [*meta-* + *syphilis*] 1. congenital syphilis with general degeneration but without syphilids. 2. parasyphilis.

metasyphilitic (met'ah-sif'ī-lit'ik) 1. following or resulting from syphilis. 2. pertaining to hereditary syphilis.

metatarsal (met'ah-tar'sal) 1. pertaining to the metatarsus. 2. a bone of the metatarsus.

metatarsalgia (met'ah-tar-sal'je-ah) [*meta-* + Gr. *tarsos* tarsus + *-algia*] pain and tenderness in the metatarsal region.

metatarsectomy (met'ah-tar-sek'to-me) excision or resection of the metatarsus.

metatarsophalangeal (met'ah-tar'so-fah-lan'je-al) pertaining to the metatarsus and the phalanges of the toes.

metatarsus (met'ah-tar'sus) [*meta-* + Gr. *tarsos* tarsus] [NA] the part of the foot between the tarsus and the toes, its skeleton being the five long bones (the metatarsals) extending from the tarsus to the phalanges. **m. adductovus**, a deformity of the foot in which metatarsus adductus is associated with pes cavus. **m. adductovarus**, a deformity of the foot in which metatarsus adductus is associated with metatarsus varus. **m. adductus**, a congenital deformity of the foot in which the fore part of the foot deviates toward the midline. **m. atavicus**, abnormal shortness of the first metatarsal bone. **m. brevis**, a condition in which the first metatarsal bone is shorter than normal and often abducted. **m. la'tus**, a broadened foot due to spreading of the anterior part of the foot resulting from separation of the heads of the metatarsal bones from each other; called also *broad foot* and *spread foot*. **m. pri'mus va'rus**, angulation of the first metatarsal bone toward the midline of the body, producing an angle sometimes of 20 degrees or more between its base and that of the second metatarsal bone. **m. va'rus**, a congenital deformity of the foot in which its inner border is off the ground with the sole turned inward, the patient walking on the outer border of the foot.

metathalamus (met'ah-thal'ah-mus) [NA] the part of the diencephalon composed of the medial and lateral geniculate bodies; often considered to be part of the thalamus.

Metatheria (met'ah-the'rī-ah) [*meta-* + Gr. *thērion* beast, animal] in some systems of classification, a subclass of the Mammalia and in others an infraclass of the subclass Theria, including the pouched mammals or marsupials.

metatherian (met'ah-the'ri-an) any member of the Metatheria.

metathesis (mē-tath'ē-sis) [*meta-* + Gr. *thesis* placement] 1. the artificial transfer of a morbid process. 2. a chemical reaction in which an element or radical in one compound exchanges places with another element or radical in another compound.

metathetic (met'ah-thet'ik) pertaining to or of the nature of metathesis.

metathrombin (met'ah-throm'bin) [*meta-* + *thrombin*] the inactive combination of thrombin and antithrombin.

metatroph (met'ah-trof) a metatrophic organism.

metatrophia (met-ah-tro'fe-ah) 1. atrophy from malnutrition. 2. a change in diet.

metatrophic (met-ah-trof'ik) utilizing organic matter for food. Cf. *paratrophic*.

metatroph (met-at'ro-fe) [*meta-* + Gr. *trophē* nutrition] 1. the state of being metatrophic; metatrophic nutrition. 2. metatrophia.

metatypic (met'ah-tip'ik) metatypical.

metatypical (met'ah-tip'e-kal) composed of the elements of the tissue on which it develops, but having those elements arranged in an atypical manner; said of tumors.

metavanadate (met'ah-van'ah-dāt) any salt of vanadic acid. **sodium m.**, a highly poisonous salt, $\text{NaVO}_3 \cdot 4\text{H}_2\text{O}$.

metaxalone (mē-taks'ah-lōn) chemical name: 5-[(3,5-dimethylphenoxy)methyl]-2-oxazolidinone. A smooth muscle relaxant, $\text{C}_{12}\text{H}_{15}\text{NO}_3$, used in the treatment of painful musculoskeletal conditions, administered orally.

metaxenia (met'ah-ze'ne-ah) an improper term for ectogony.

metaxeny (me-tak'sē-ne) metoxeny.

Metazoa (met'ah-zo'ah) [*meta-* + Gr. *zōon* animal] that division of the animal kingdom which embraces all multicellular animals whose cells become differentiated to form tissues. It includes all animals except Protozoa.

metazoa (met'ah-zo'ah) plural of *metazoon*.

metazoa (met'ah-zo'ah) 1. belonging to the Metazoa. 2. pertaining to or caused by metazoa.

metazoan (met'ah-zo'an) 1. pertaining to metazoa; metazoal. 2. a metazoon.

metazonal (met'ah-zo'nal) situated after or below a sclerozone.

metazoon (met'ah-zo'on), pl. *metazo'a*. An individual of the Metazoa.

Metchnikoff's law, theory (mech'nī-kof) [Elie Metchnikoff (Ilia Ilich Metchnikov), a Russian zoologist in Paris, 1845-1916; discoverer of phagocytes and phagocytosis, co-winner, with Paul Ehrlich, of the Nobel prize for medicine and physiology in 1908] see under *law* and *theory*.

metecious (me-te'shus) [*meta-* + Gr. *oikos* house] heterecious.

metencephal (met-en'se-fal) the metencephalon.

metencephalic (met-en'sē-fal'ik) pertaining to the metencephalon.

metencephalon (met'en-sef'ah-lon) [*meta-* + Gr. *enkephalos* brain] 1. [NA] the anterior portion of the rhombencephalon, comprising the cerebellum and the pons; see Plate accompanying *brain*. 2. the anterior of the two brain vesicles formed by specialization of the rhombencephalon in the developing embryo. Called also *afterbrain* and *epencephalon*.

metencephalospinal (met'en-sef'ah-lo-spi'nal) pertaining to the metencephalon (cerebellum) and the spinal cord.

meteorism (me'te-ō-rizm') [Gr. *meteōrizein* to raise up] tympanites; the presence of gas in the abdomen or intestine.

meteorology (me'te-o-rol'o-je) [Gr. *meteōros* high in the air + *-logy*] the science of the atmosphere and its phenomena; the science of the weather.

meteoropathology (me'te-ō-ro-pah-thol'o-je) the pathology of conditions caused by atmospheric conditions.

meteoropathy (me'te-ō-ro-pah-the) [Gr. *meteōros* high in the air + *pathos* disease] any disorder due to conditions of climate.

meteororesistant (me'te-ō-ro-re-zis'tant) comparatively insensitive to weather conditions.

meteorosensitive (me'te-ō-ro-sen'si-tiv) abnormally sensitive to weather conditions.

meteorotropic (me'te-ō-ro-trop'ik) responding to influence by meteorological factors; pertaining to or characterized by meteorotropism.

meteorotropism (me'te-ō-ro-trop'izm) the response to influence by meteorological factors noted in certain biological events, such as sudden death, attacks of angina, joint pain, insomnia, and traffic accidents.

metepencephalon (met'ep-en-sef'ah-lon) [*meta-* + *epi-* + Gr. *enkephalos* brain] myelencephalon.

meter (me'ter) [Gr. *metron* measure; Fr. *mètre*] 1. the basic unit of linear measure in the metric system, approximately equivalent to 39.37 inches; formerly established as the length of a bar of an alloy of platinum and iridium preserved in a vault at the International Bureau of Weights and Measures, near Paris. Although its dimension is unchanged, it is now defined in terms of the wavelength of a certain line in the spectrum of krypton. Abbreviated *m*. 2. an apparatus devised to measure the quantity of anything passing through it, such as of a gas, amperes of electric current, etc. **dosage m.**, dosimeter. **flicker m.**, flicker photometer. **light m.**, an instrument for measuring light in foot candles. **peak flow m.**, an instrument for measuring the flow of air in the early part of forced expiration. **rate m.**, a radiation detector whose output is proportional to instantaneous radiation intensity (rate of radioactive emissions).

-meter [Gr. *metron* measure] a word termination designating relationship to measurement, or denoting especially an instrument used in measuring.

metergasis (met'er-ga'sis) [*meta-* + Gr. *ergon* work] change of function.

metestrum (mē-tes'trum) metestrus.

metestrus (mē-tes'trus) [*meta-* + L. *oestrus*] the period of subsiding follicular function or rest following estrus in female mammals.

metformin (met-for'min) chemical name: 1,1-dimethylbiguanide; an oral hypoglycemic, $\text{C}_4\text{H}_{11}\text{N}_5$.

methacholine (meth'ah-ko'lēn) chemical name: 2-(acetyloxy)-*N,N,N*-trimethyl-1-propanaminium. A powerful cholinergic, $\text{C}_8\text{H}_{15}\text{NO}_2$, with actions similar to those of acetylcholine. **m. bromide**, the bromide salt of methacholine, $\text{C}_8\text{H}_{14}\text{BrNO}_2$, occurring as a white, crystalline powder, having actions and uses similar to those of the chloride salt; administered orally. **m. chloride** [USP], the chloride salt of methacholine, $\text{C}_8\text{H}_{15}\text{ClNO}_2$, occurring as colorless or white crystals or as a white, crystalline powder; used as a cholinergic, especially in the treatment of Raynaud's disease, scleroderma, vascular spasm due to cold, and chronic varicose ulcers, administered orally, subcutaneously, and by iontophoresis. Called also *acetyl-betamethylcholine chloride*.

methacrylate (meth-ak'rī-lāt') an acrylic resin widely used in denture bases and as an adhesive for joint prostheses; see also *methyl methacrylate*.

methacycline (meth'ah-si'klēn) chemical name: 4S-dimethylamino-1,4a,4aa,5a,5aa,6,11,12a-octahydro-3,5,10,12,12a-pentahydroxy-6-methylene-1,11-dioxo-2-naphthacencarboxamide. A semisynthetic broad-spectrum antibiotic of the tetracycline group, $C_{22}H_{22}N_2O_8$, derived from oxytetracycline. **m. hydrochloride** [USP], the monohydrochloride salt of methacycline, $C_{22}H_{22}N_2O_8 \cdot HCl$, occurring as a yellow to dark yellow crystalline powder; used as an antibacterial, administered orally.

methadone hydrochloride (meth'ah-dōn) [USP] chemical name: 6-(dimethylamino)-4,4-diphenyl-3-hepanone hydrochloride. A synthetic narcotic, $C_{21}H_{27}NO \cdot HCl$, occurring as colorless crystals or white, crystalline powder, possessing pharmacologic actions similar to those of morphine and heroin and almost equal addiction liability; used as an analgesic and as a narcotic abstinence syndrome suppressant in the treatment of heroin addiction (see also *narcotic blockade*, under *blockade*), administered orally, intramuscularly, and subcutaneously.

methadyl acetate (meth'ah-dil) chemical name: β -[2-(dimethylamino)propyl]- α -ethyl- β -phenylbenzeneethanol; a narcotic analgesic, $C_{23}H_{31}NO_2$. Called also *acetylmethadol*.

methallenestril (meth'al-ē-nes'tril) chemical name: β -ethyl-6-methoxy- α , α -dimethyl-2-naphthalenepropionic acid. A synthetic, nonsteroidal, orally effective, estrogenic drug, $C_{18}H_{22}O_3$, occurring as a white, crystalline powder, having uses similar to those of estrogen (q.v.).

methallibure (meth'al-i-būr) chemical name: 1-methyl-6-(1-methylallyl)-2,5-dithioburea. A substance, $C_7H_{14}N_4S_2$, used as an anterior pituitary activator in swine.

methamphetamine (meth'am-fet'ah-mēn) chemical name: (S)-N α -dimethylbenzeneethanamine. A sympathomimetic amine of the amphetamine group, $C_{10}H_{15}N$. Abuse of this drug may lead to dependence; see *amphetamine*, def. 1. **m. hydrochloride**, white crystals or white, crystalline powder, $C_{10}H_{15}N \cdot HCl$, used chiefly for its central stimulant effects in the treatment of mental depression, psychopathic states, narcolepsy, and exogenous obesity, and for its calming effects in hyperkinetic children. It also has pressor effects and is used in various hypotension states, especially in regional and spinal anesthesia and after ganglionic blockade.

methandriol (meth-an'dre-ol) chemical name: 17 α -methyl-5-androstene-3 β ,17 β -diol; an anabolic agent.

methandrostenolone (meth-an'dro-sten'o-lōn) [NF] chemical name: 17 β -hydroxy-17 α -methylandrosta-1,4-dien-3-one. An androgen, $C_{20}H_{28}O_2$, occurring as white to off-white crystals or crystalline powder; used especially in the adjunctive treatment of senile and postmenopausal osteoporosis and in selected cases of pituitary dwarfism, administered orally.

methane (meth'ān) a colorless, odorless, inflammable gas, CH_4 , produced by decomposition of organic matter, which may explode when mixed with air or oxygen; it is the first member of a homologous series of saturated hydrocarbons, including butane, ethane, hexane, pentane, and propane. Called also *marsh gas*.

Methanobacterium (meth'ah-no-bak-te're-um) a genus of microorganisms of the family Spirillaceae, suborder Pseudomonadineae, order Pseudomonadales, made up of long, slightly curved, slender rods with rounded ends, containing deeply staining granules. They are anaerobes that derive energy by reduction of CO_2 to methane. The genus includes four species, *C. flavescens*, *C. fulvus*, *C. ochraceus*, and *C. vulgaris*.

Methanococcus (meth'ah-no-kok'kus) a genus of microorganisms of the family Micrococcaceae, order Eubacteriales, made up of gram-variable spherical cells which are chemoheterotrophic and saprophytic; they are strict anaerobes that derive energy from the formation of methane from H_2 , CO_2 , and formate.

methanogen (meth'ah-no-jen') an anaerobic microorganism that grows in the presence of carbon dioxide and produces methane gas. Methanogens are found in the stomach of cows, in swamp mud, and other environments in which oxygen is not present.

methanogenic (meth'ah-no-jen'ik) producing methane.

methanol (meth'ah-nol) [USP] a clear, colorless, flammable liquid, CH_3OH , with characteristic odor, miscible with alcohol, ether, and water; used as a solvent.

methanolysis (meth'ah-nol'i-sis) alcoholysis of methyl alcohol.

Methanomnadaceae (meth'ah-no-mo'nah-da'se-e) a family of Schizomycetes (order Pseudomonadales, suborder Pseudomonadineae), found in soil and water, and deriving energy from oxidation of simple carbon compounds. It includes three genera, *Carboxydomonas*, *Hydrogenomonas*, and *Methanomonas*.

Methanomonas (meth'ah-no-mo'nas) a genus of microorganisms of the family Methanomnadaceae, suborder Pseudomonadineae, order Pseudomonadales, occurring as monotrichous cells obtaining energy from the oxidation of methane to CO_2 and H_2O . The type species is *M. methanica*.

methantheline bromide (mē-than'thē-lēn) [USP] chemical name: N,N-diethyl-N-methyl-2-[(9H-xanthene-9-ylcarbonyloxy)]ethanaminium bromide. A quaternary ammonium anticholinergic, $C_{21}H_{28}BrNO_3$, occurring as a white or nearly white powder; used in conditions requiring inhibition of gastrointestinal and genitourinary motility, in hyperhidrosis, or in control of normal

sweating. *Sterile methantheline* is prepared in conformance with USP specifications.

methapyrilene (meth'ah-pir'i-lēn) chemical name: N,N-dimethyl-N'-2-pyridinyl-N'-(2-thienylmethyl)-1,2-ethanediamine. An antihistaminic, $C_{14}H_{16}N_4S_2$, which also has moderate sedative action. **m. fumarate** [USP], the fumarate salt of methapyrilene, $(C_{14}H_{16}N_4S_2) \cdot 3C_4H_4O_4$, occurring as a white, crystalline powder, having actions and uses similar to those of the hydrochloride salt; administered orally. **m. hydrochloride** [USP], the monohydrochloride salt of methapyrilene, $C_{14}H_{18}N_4S_2 \cdot HCl$, occurring as a white, crystalline powder, having the same actions as the base; used in the treatment of allergic manifestations, nausea and vomiting of pregnancy, and insomnia, administered orally.

methaqualone (mē-thah'kwah-lōn) [USP] chemical name: 2-methyl-3-(2-methylphenyl)-4(3H)-quinazolinone. A hypnotic and sedative, $C_{16}H_{14}N_2O$, occurring as a white, crystalline powder; administered orally. **m. hydrochloride** [USP], the monohydrochloride salt of methaqualone, $C_{16}H_{14}N_2O \cdot HCl$, having the same appearance, actions, uses, and route of administration as the base.

metharbital (mē-thar'bi-tal) [USP] chemical name: 5,5-diethyl-1-methyl-2,4,6(1H,3H,5H)pyrimidinetrione. A barbitol derivative, $C_8H_{14}N_2O_3$, occurring as a white to nearly white, crystalline powder; used as an anticonvulsant for the control of grand mal, petit mal, myoclonic, and mixed types of epileptic seizures, administered orally.

methazolamide (meth'ah-zo'lah-mid) [USP] chemical name: N-[5-(aminosulfonyl)-3-methyl-1,3,4-thiadiazol-2(3H)-ylidene]acetamide. A carbonic anhydrase inhibitor, $C_8H_8N_4O_3S_2$, occurring as a white or faintly yellow, crystalline powder; used chiefly to reduce intraocular pressure in the treatment of glaucoma, administered orally.

methdilazine (meth-di'lah-zēn) [USP] chemical name: 10-[(1-methyl-3-pyrrolidinyl)methyl]-10H-phenothiazine. An antihistaminic, $C_{16}H_{20}N_2S$, occurring as a light tan, crystalline powder; used as an antipruritic in dermatoses of various origins, administered in chewable tablets. **m. hydrochloride** [USP], the monohydrochloride salt of methdilazine, $C_{16}H_{20}N_2S \cdot HCl$, having the same appearance, actions, and uses as the base; administered orally.

methectic (mē-thek'tik) [Gr. *methektikos* participating] denoting participation of the various strata of intelligence.

methemalbumin (met'hēm-al-bu'min) a brownish pigment formed by the binding of albumin with the ferric complex of protoporphyrins (heme), occurring only when the serum has been depleted of unsaturated haptoglobin; it is indicative of intravascular hemolysis. Formerly called *pseudomethemoglobin*.

methemalbuminemia (met'hēm-al-bu'min-e'me-ah) the presence of methemalbumin in the blood.

metheme (met'hēm) heme.

methemoglobin (met-he'mo-glo-bin) a compound formed from hemoglobin by oxidation of the ferrous to the ferric state with essentially ionic bonds. A small amount of methemoglobin is present in the blood normally, but injury or toxic agents convert a larger proportion of hemoglobin into methemoglobin, which does not function reversibly as an oxygen carrier.

methemoglobinemia (met'he-mo-glo'bi-ne'me-ah) [*methemoglobin* + Gr. *haima* blood + *-ia*] the presence of methemoglobin in the blood, resulting in cyanosis. It may be drug-induced or be due to a defect in the enzyme NADH methemoglobin reductase (an autosomal recessive trait) or to an abnormality in hemoglobin M (an autosomal dominant trait).

methemoglobinemic (met'he-mo-glo'bi-ne'mik) 1. pertaining to or causing methemoglobinemia. 2. an agent that causes methemoglobinemia.

methemoglobinuria (met'he-mo-glo-bi-nu're-ah) [*methemoglobin* + Gr. *ouron* urine + *-ia*] the occurrence of methemoglobin in the urine.

methenamine (meth-en'ah-mēn) [USP] chemical name: 1,3,5,7-tetraazatricyclo[3.3.1.1^{3,7}]decane. Colorless, lustrous crystals or a white crystalline powder, $C_6H_{12}N_4$, used as a urinary antibacterial, administered orally. **m. hippurate**, a compound of methenamine and hippuric acid, $C_6H_{12}N_4 \cdot C_9H_5NO_3$, used orally as a urinary antibacterial. **m. mandelate** [USP], a salt of methenamine and mandelic acid, $C_{14}H_{20}N_4O_3$, occurring as a white crystalline powder; used orally as a urinary antibacterial.

methenolone (mē-then'o-lōn) chemical name: 17 β -hydroxy-1 α -methyl-5 α -androst-1-en-3-one; an anabolic steroid, $C_{26}H_{30}O_2$. **m. acetate**, an ester of methenolone $C_{22}H_{28}O_3$; an anabolic steroid. **m. enanthate**, an ester of methenolone, $C_{27}H_{42}O_3$; an anabolic steroid.

Methergine (meth'er-jin) trademark for preparations of methylergonovine maleate.

methestrol dipropionate (meth'es-trol) promethestrol dipropionate.

methetoin (mē-thet'o-in) chemical name: 5-ethyl-1-methyl-5-phenyl-2,4-imidazolidinedione; an anticonvulsant, $C_{12}H_{14}N_2O_2$, which has been used in the treatment of epilepsy.

methexenyl (meth-ek'sē-nyl) hexobarbital.

methicillin sodium (meth'i-sil'in) [USP] chemical name: 6-(2,6-dimethoxybenzamido)-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid sodium salt. A semisynthetic penicillin, $C_{17}H_{19}N_2NaO_6S$, occurring as a fine, white, crystalline powder; used intravenously or intramuscularly as an antibacterial in resistant staphylococcal infections. Called also *dimethoxyphenyl penicillin sodium*.

methilepsia (meth'il-ep'se-ah) methomania.

methimazole (meth-im'ah-zōl) [USP] chemical name: 1,3-dihydro-1-methyl-2*H*-imidazole-2-thione. A thyroid inhibitor, $C_4H_6N_2S$, occurring as a pale buff, crystalline powder; used in the treatment of hyperthyroidism, administered orally. Called also *thiamazole*.

methiodal sodium (meth-i'o-dal) [USP] chemical name: iodomethanesulfonic acid sodium salt. An iodine containing compound, $CH_3I\cdot NaO_3S$, occurring as white, crystalline powder; used as a radiopaque medium in urography, administered intravenously.

methionine (mē-thi'o-nin) 1. a naturally occurring amino acid, $C_5H_{11}NO_2S$, which is an essential component of the diet, furnishing both methyl groups and sulfur necessary for normal metabolism. 2. racemethionine.

methisazone (mē-this'ah-zōn) chemical name: 2-(1,2-dihydro-1-methyl-2-oxo-3*H*-indol-3-ylidene)hydrazinecarbothioamide. An antiviral agent, $C_{10}H_{10}N_4OS$, which has been used to provide short-term protection against smallpox and the severe complications of vaccination.

Methium (meth'e-um) trademark for preparations of hexamethonium chloride.

methixene hydrochloride (mē-thiks'ēn) chemical name: 1-methyl-3-(9*H*-thioxanthen-9-yl-methyl)piperidine hydrochloride monohydrate. An anticholinergic, $C_{20}H_{23}NS\cdot HCl\cdot H_2O$, occurring as a white, crystalline powder, having a direct spasmolytic effect on smooth muscle; used in the treatment of gastrointestinal hypermotility and spasm associated with functional bowel disease, administered orally.

methocarbamol (meth'o-kar'bah-mol) [USP] chemical name: 3-(2-methoxyphenoxy)-1,2-propanediol 1-carbamate. A skeletal muscle relaxant, $C_{11}H_{15}NO_3$, occurring as a white powder; administered orally, intramuscularly, and intravenously.

Methocel (meth'o-sel) trademark for a preparation of methylcellulose.

method (meth'ud) [Gr. *methodos*] the manner of performing any act or operation; a procedure or technique. See also under *maneuver*, *stains*, *tests*, *treatment*, etc. **Abbe's string m.**, string method treatment. **Abbott's m.**, treatment of scoliosis by lateral pulling and counterpulling on the spinal column by means of wide bandages and pads until the deformity is overcorrected, and then applying a plaster jacket to produce pressure, counterpressure, and fixation of the spine in its corrected position. **A.B.C. (alum, blood, clay) m.**, a method of deodorizing and precipitating sludge by the addition of alum, charcoal (or some other material), and clay to the raw sewage. **absorption m.**, the separate and selective removal of agglutinins from specific immune sera by the addition of homologous particulate antigen(s) (e.g., bacterial cells or red blood cells) to the immune sera, or by the passage of specific immune sera through columns containing antigen on an insoluble support (immunosorbent) with which the homologous antibody combines and is thereby removed from the serum. **acetoacetic acid, m's for**, see *Folin and Hart's m.*, *Scott and Wilson's m.*, and *Van Slyke and Palmer's m.*, and see *acetoacetic acid test*, under *tests*. **acetone, m's for**, see *Folin's m.* (1,2), *Folin and Hart's m.*, *Messinger and Huppert's m.*, *Shaffer and Marriott's m.*, and *Scott and Wilson's m.*, and see *acetone test*, under *tests*. **Achard-Castaigne m.**, the methylene blue test. **acid hematin m.** (for hemoglobin): dilute the blood in tenth normal HCl and compare the color with a standard heme solution or glass standards. **Addis m.**, see under *count and tests*. **Adelmann's m.**, forcible flexion of an extremity to control arterial hemorrhage, a procedure used only in extreme emergencies as first aid. **adrenaline, m. for**, see *epinephrine, m. for*. **Ahlfeld's m.**, hand disinfection with hot water and alcohol. **albumin in urine, m's for**, see *Esbach's m.*, *Folin's m.* (12), *Folin and Denis' m.* (1), *Folin's gravimetric m.*, *Kwilecki's m.*, *Scherer's m.*, and *turbidity m.*, and see *albumin test*, under *tests*. **alkali reserve, m's for**, see *Fridericia's m.*, *Marriott's m.*, *Van Slyke and Cullen's m.* (1), and *Van Slyke and Fitz's m.* **allantoin, m's for**, see *Folin's m.* (15), *Plimmer and Skelton's m.*, *Wiechowski and Handorsky's m.* **Alt-mann-Gersh m.**, a method of preparing tissue for histologic study by freeze drying. **amino-acid nitrogen, m's for**, see *nitrogen, amino-acid, m's for*. **ammonia nitrogen, m's for**, see *nitrogen, ammonia, m's for*. **arch bar m.**, a method of establishing intermaxillary fixation: available teeth are ligated to arch bars and orthodontic rubber bands are used between the two arches to bring the teeth into occlusion. **Arnold and Gunning's m.** (for total nitrogen), a modified form of the Kjeldahl process for urine. **Aronson's m.**, volatilizing formaldehyde gas from the solid polymer, trioxymethylene, by heat. **Asken-**

stedt's m. (Parker's modification) (for indican): precipitate the urine with solid mercuric chloride; oxidize the indican to indigo with Obermeyer's reagent; shake out with chloroform and compare the blue color with a standard solution of indigo. **Austin and Van Slyke's m.** (for chlorides in whole blood): lake the blood with distilled water, precipitate the proteins with picric acid, and then proceed as in McLean and Van Slyke's method for chlorides in oxalated plasma. **Autenrieth and Funk's m.** (for cholesterol): boil the blood or serum to saponify the fats; extract with chloroform and evaporate the chloroform; make a Liebermann-Burchard test on the residue and compare it with a standard solution of cholesterol. **autoclave m.**, see *Clark-Collip m.* (2). **Baer's m.**, prevention of the re-forming of adhesions by the injection of sterilized oil into an ankylosed joint. **Bang's m.**, 1. estimation of the quantities of the sugar, albumin, urea, etc., in the blood by examination of a few drops only, collected on blotting paper. 2. (for dextrose): to an excess of the boiling reagent (an alkaline solution of copper thiocyanate), add the urine and titrate the excess of copper thiocyanate with hydroxylamine sulfate. 3. (a micromethod for dextrose): boil the urine with an excess of the reagent ($KHCO_3$, 160 gm.; K_2CO_3 , 100 gm.; KCl, 66 gm.; $CuSO_4\cdot 5H_2O$, 4.4 gm.; and water to 1 liter) and titrate excess of CuCl with a solution of iodine, using starch as an indicator. **Baréty's m.**, an extension method for treating hip disease and fracture of the thigh. **Barger's m.**, a method for determining osmotic pressure from vapor pressure. **Barraquer's m.**, phacoerysis. **Bence Jones protein, m. for**, see *Folin and Denis' m.* (2). **Benedict's m.**, 1. (for dextrose): titrate the sugar in the urine with the following reagent: $CuSO_4$ (crystals), 18 gm.; Na_2CO_3 (crystals), 200 gm.; sodium citrate, 200 gm.; potassium thiocyanate, 125 gm.; potassium ferrocyanide, 5 per cent solution, 5 ml.; water to make 1 liter. 2. (for total sulfur): add the reagent (crystallized copper nitrate, 200 gm.; sodium chlorate, 50 gm.; water to make 1 liter) to the urine and evaporate to dryness, ignite, take up in dilute hydrochloric acid, precipitate with $BaCl_2$, filter, dry, and weigh. 3. (for urea): the urea is hydrolyzed to ammonium carbonate by heating with $KHSO_4$ and $ZnSO_4$, made alkaline, distilled into standard sulfuric acid, and the excess acid titrated. 4. (for uric acid in blood): the same as *Benedict and Franke's m. for uric acid in urine*. **Benedict and Denis' m.** (for total sulfur): mix the urine with the reagent [$Cu(NO_3)_2$, 25 gm.; NaCl, 25 gm.; NH_4NO_3 , 10 gm.; and water 100 ml.] and evaporate to dryness, ignite, dissolve in 10 per cent hydrochloric acid, and test for inorganic sulfates by Folin's method (6) (q.v.). **Benedict and Franke's m.** (for uric acid in urine): to the diluted urine add sodium cyanide and the arsenophosphotungstic acid reagent; the blue color produced is compared with a standard uric acid solution. **Benedict and Hitchcock's m.** (for uric acid): precipitate the uric acid with an ammoniacal silver-magnesium solution (3 per cent silver lactate solution, 70 ml.; magnesium mixture, 30 ml.; concentrated ammonium hydroxide, 100 ml.). Dissolve the precipitate with potassium cyanide and add uric acid reagent (boil 100 gm. of sodium tungstate and 80 ml. of 85 per cent phosphoric acid in 750 ml. of water for two hours and make up to 1 liter) and sodium carbonate solution. Compare in colorimeter with a known uric acid standard. **Benedict and Leche's m.** (for inorganic phosphate in blood): the method is the same as that of Fiske and Subbarow except that the reducing agent is a hydroquinone-sulfite mixture instead of amino-naphthol-sulfonic acid. **Benedict and Murlin's m.** (for amino-acid nitrogen by formal titration): add phosphotungstic acid to the urine to precipitate ammonia and other basic substances, neutralize to litmus, add solution of formaldehyde, and titrate with tenth normal sodium hydroxide. **Benedict and Osterberg's m.** (for sugar in normal urine): treat the urine with picric acid, sodium carbonate, and acetone; compare the red color produced with a standard solution of sugar. **Benedict and Theis' m.**, 1. (for lipid phosphorus): oxidize the lipid phosphorus to phosphoric acid with a mixture of concentrated nitric and sulfuric acids and then proceed as with inorganic phosphates. 2. (for phenols in blood): to 10 ml. of blood filtrate add 1 ml. of 1 per cent gum acacia solution, 1 ml. of 50 per cent sodium acetate solution, 1 ml. of the diazotized nitroaniline reagent, mix and after one minute add 2 ml. of a 20 per cent sodium carbonate solution. Compare the orange color with a standard phenol solution containing 0.025 mg. of phenol in 10 ml. **Bergeim's m.** (for indole in feces): make the feces alkaline and distill off phenols. Make distillate acid with H_2SO_4 and redistill to leave NH_3 in residue. To the second distillate add beta-naphtha-quinone sodium monosulfonate and alkali. Extract the blue color with chloroform and compare it with that of a standard solution of indole similarly treated. **Berger's m.**, suture of transverse fracture of the patella. **Bergonié's m.**, see under *treatment*. **Bertrand's m.** (for glucose): boil the urine with alkaline copper sulfate solution, filter, dissolve the precipitate in an acid solution of ferric sulfate, and titrate with potassium permanganate. **beta-hydroxybutyric acid, m's for**, see *Black's m.* and *Van Slyke and Palmer's m.* **Bethea's m.**, see under *sign*. **bile pigments, m's for**, see *Meulengracht's m.*, *Wallace and Diamond's m.*, and see under *tests*. **Bivine's m.**, treatment of strychnine poisoning by administration of chloral hydrate. **Black's m.** (for beta-hydroxybutyric acid): evaporate the urine to a small volume,

acidify, add plaster of Paris to form a coarse meal, extract the beta-hydroxybutyric acid with ether in a Soxhlet apparatus, evaporate to dryness, take up in water, and determine the amount by a polariscope. **Blanchard's m.**, see under *treatment*. **Bloor's m.**, 1. (for lipid phosphorus), see *Benedict and Theis' m.* (1). 2. (for cholesterol): extract the cholesterol from whole blood with hot alcohol-ether. Dry, extract with chloroform, and determine by the Liebermann-Burchardt reaction. **Bloor, Pelkan, and Allen's m.** (for fatty acids and cholesterol): extract the lipoids by an alcohol-ether mixture, saponify, extract the cholesterol with chloroform and the soaps with hot alcohol. The cholesterol is then determined colorimetrically and the fatty acids nephelometrically. **Bock and Benedict's m.** (for total nitrogen): it is similar to Folin and Farmer's method, except that the ammonia is distilled instead of aerated over into the acid. **Bogg's m.** (for protein in milk): this is a modification of Esbach's method for protein in urine; the protein being precipitated with Bogg's reagent instead of with picric acid. **Brandt's m.** (obs.), deep massage of the fallopian tubes for expression of the pus in pyosalpinx. **Brandt-Andrews m.**, see under *maneuver*. **Brehmer's m.**, see under *treatment*. **Breslau's m.**, volatilizing formaldehyde from dilute (8 per cent) solutions to prevent polymerization. **brine flotation m.** (for concentration of ova): suspend a portion of the stool in a saturated solution of sodium chloride; let it stand for a time and collect the ova from the surface. **Brunn's m.**, see *Breslau's m.* **Brunninghausen's m.**, dilatation of the cervix for the introduction of premature labor. **calcium, m's for**, see *Clark-Collip's m.* (1), *Corley and Denis' m.*, *Kramer and Tisdall's m.* (2), *Lyman's m.*, *McCruden's m.*, and *Shohl and Pedley's m.*, and see under *tests*. **caliper m.**, a method for approximating fat content in the body by measuring the thickness of folds of the skin at stated areas of the body by means of specially designed calipers. **Callahan's m.**, a method in which the root canal of a tooth is first flooded with a chloroform-rosin solution and then gutta-percha is dissolved in this solution; called also *chloropercha m.* **carbon dioxide, m. for**, see *Fridericia's m.* and *Van Slyke and Cullen's m.* (1). **Carrel's m.**, 1. a method of end-to-end suture of blood vessels. 2. see under *treatment*. 3. a method of determining when to make secondary closure of wounds. A loop of material is taken from the wound, spread on a slide, stained, and the number of bacteria counted. **casein, m. for**, saturate the milk with magnesium sulfate, filter, wash, determine the nitrogen by the Kjeldahl method, and multiply the result by 6.37; see also *Hart's m.*, and see *casein test*, under *tests*. **Castaneda's m.** (for rickettsiae in smears): (1) a thin smear is made in a phosphate buffer (pH 7.6) and air-dried, (2) stained with methylene blue solution for 3 minutes, (3) counterstained with safranin solution, and (4) washed, blotted, and dried. Rickettsiae appear pale blue; cell nuclei and protoplasm are red. **cathartic m.**, a method of treating psychoneuroses by enabling the patient, through properly directed questions, to bring to full consciousness the vague and unformed dread from which he has been suffering. **Cathelin's m.**, introduction of anesthetics into the epidural space through the sacrococcygeal ligament. **Chandler's m.** (for fibrinogen): precipitate the fibrinogen with calcium chloride, centrifugalize, and determine the nitrogen in the clot. **Chaput's m.**, treatment of osteomyelitis by scraping the cavity and inserting fat taken from the thigh or abdomen. **Chervin's m.**, see under *treatment*. **Chick-Martin m.**, testing the germicidal value of disinfectants for water supplies; it is applied in the presence of 3 per cent of human feces and for a fixed period of thirty minutes. **chlorides, m's for**, see *Austin and Van Slyke's m.*, *Dehn and Clark's m.*, *McLean and Van Slyke's m.*, *Mohr's m.*, *Volhard and Arnold's m.*, *Volhard and Harvey's m.*, and *Whitehorn's m.* **chloropercha m.**, Callahan's m. **cholesterol, m's for**, see *Autenrieth and Funk's m.*, *Bloor's m.* (2), *Bloor, Pelkan, and Allen m.*, and *Myers and Wardell's m.*, and see under *tests*. **Ciaccio's m.**, treatment of tissue for the purpose of rendering visible the intracellular lipoids; they are fixed with acid chromate solution and stained with sudan III. **Clark-Collip m.**, 1. (for calcium in serum): dilute the serum and add ammonium oxalate; wash the precipitate, dissolve with sulfuric acid, and titrate with potassium permanganate. 2. (for urea in blood): to 5 ml. of blood filtrate add 1 ml. of NH_4Cl and heat in autoclave at 150 C. for ten minutes. Make alkaline, distil into acid, and titrate, using methyl red as indicator. **Clausen's m.**, 1. (for lactic acid in blood): remove the glucose by adding copper sulfate and calcium hydroxide, filter, and proceed with filtrate as in Clausen's method for lactic acid in urine. 2. (for lactic acid in urine): extract the lactic acid from the urine with ether, convert it into acetaldehyde by treatment with sulfuric acid, add sodium bisulfite, and titrate with standard iodine solution. **closed-plaster m.**, treatment of wounds, compound fractures, and osteomyelitis by enclosing the limb in an immobilizing plaster cast. See *Orr treatment* and *Trueta treatment*, under *treatment*. **Converse m.**, reconstruction of the ear lobe by raising a flap of skin below the auricle with a superior base about one third larger than the proposed lobe; a full-thickness skin graft covers the defect at the site of the flap except for the last third of the medial aspect of the pedicle. **Corley and Denis m.** (for calcium in tissues): if there is only a small amount of organic material, it may be

removed by washing, aided by nitric acid. With more organic material, add 5 volumes of tenth normal sodium hydroxide and heat in autoclave at 180° C. for two hours. Precipitate as oxalate, dissolve in sulfuric acid, and titrate with potassium permanganate. **Corning's m.**, spinal anesthesia, def. 1. **Corri's m.** (for lactic acid in tissues): precipitate the protein with HgCl_2 , remove the mercury from the filtrate with H_2S , and determine lactic acid by Clausen's method. **Couette m.**, a method for measuring viscosity by calculating the rate of movement of an inner cylinder separated from an outer cylinder by a thin layer of the fluid whose viscosity is being tested. **Coutard's m.**, a method of x-ray irradiation by protracted and fractionated dosage. **creatinine, m's for**, see *Folin's m.* (7,8), *Folin, Benedict, and Myers' m.*, *Folin and Wu's m.* (2), and *Meyer's m.* **creatinine, m's for**, see *Folin's m.* (9), *Folin and Wu's m.* (1,2), and *Shaffer's m.*, and see under *tests*. **Credé's m.**, 1. method of expressing the placenta by forcing the uterus down into the pelvis and at the same time squeezing the uterus from all sides so that its contents are expelled. 2. a similar method for expressing urine from the bladder, especially in paralytic bladder. 3. the placing of a drop of 2 per cent solution of silver nitrate in each eye of a newborn child for the prevention of ophthalmia neonatorum. **Cronin m.**, an operation to correct a flat nasal tip with short columella by using bilateral flaps of skin elevated in the floor of the nostrils. **crystallizing oxyhemoglobin, m. for**, see *Reichert's m.* **cubicle m.**, the treatment of patients with contagious disease by placing each patient in one of the cubicle-like compartments into which the ward is divided. **Cuignet's m.**, skiometry. **cup plate m.**, see *ring test* (def. 1), under *tests*. **Dakin-Carrel m.**, Carrel's treatment; see under *treatment*. **Defer's m.**, treatment of hydrocele by evacuation and cauterization of the sac with silver nitrate. **Dehn and Clark's m.** (for chlorides): oxidize any interfering organic matter with sodium peroxide and then proceed with Volhard and Arnold's method. **Delore's m.**, manual osteoclasia for correcting genu valgum. **Demme's m.**, treatment of hydrocele by injection of iodine. **Denis' m.** (for magnesium in serum): remove the calcium by the Clark-Collip method, precipitate as magnesium ammonium phosphate, dissolve the precipitate in tenth normal HCl, reduce it with amino-naphthol-sulfonic acid, and compare the blue color with a standard solution of ammonium magnesium phosphate in 0.1 per cent HCl. **Denis and Leche's m.** (for total sulfate): add acid and autoclave to decompose protein, then precipitate with barium chloride, dry, and weigh. **Denman's m.**, see under *evolution*. **dextrose, m's for**, see *glucose (dextrose, m's for)*. **diabetic acid, m's for**, see *acetoacetic acid, m's for*. **Dickinson m.**, a method of controlling postpartum hemorrhage: the entire uterus is grasped through the abdominal wall, lifted out of the pelvis, and compressed against the spinal column. **direct m.**, in ophthalmoscopy, that in which the ophthalmoscope is held close to the eye examined and an erect virtual image is obtained of the fundus. **direct aeration m.** (for urea in blood), see *Myers' m.* **direct centrifugal flotation m.**, Lane m. **Domagk's m.** (for demonstration of reticuloendothelial cells): a culture of gram-positive staphylococci in physiologic salt solution is injected into the femoral vein of a rat which is then killed in fifteen to thirty minutes. In formalin-fixed sections stained by cresyl violet or by Gram's stain followed by alum-carmin, Kupffer's cells and other cells of the reticuloendothelial system stand out strikingly. **Douglas' m.**, spontaneous evolution of the fetus from transverse lie: an arm prolapses, the head is arrested above the pelvic inlet and rotates to the pubis, the chest, abdomen, and breech rotate downward, and then the legs, the other arm, and lastly the head appear. **Dubois' m.**, a method of psychotherapy involving explanation to the patient of his condition and the securing of the patient's cooperation in his treatment. **Duke's m.**, see *bleeding time*, under *time*. **Duncan's m.**, autotherapy, def. 3. **Duplay's m.**, reconstruction of the glandular urethra in hypopadias by using a buried skin strip. **Eggleson's m.**, a method of administering digitalis leaf. **Eicken's m.**, examination of the hypopharynx, with the cricoid cartilage drawn forward. **Ellerman-Erlandsen m.**, tuberculin titer test. **Ellinger's m.** (for indican): precipitate the urine with basic lead acetate and filter. To the filtrate add Obermayer's reagent. Shake out the indigo with chloroform, evaporate off the chloroform, and titrate the residue with potassium permanganate. **epinephrine, m. for**, see *Folin, Cannon, and Denis' m.* See also *epinephrine test*, under *tests*. **Epstein's m.** (for dextrose): a modification of the Lewis and Benedict method, making it possible to make the test with very little blood. **Esbach's m.** (for albumin in urine): precipitate the protein with picric acid, let precipitate settle in a graduated tube, and read the result. **etheral sulfates, m's for**, see *sulfates, ethereal, m's for*. **Fahraeus m.**, a method for determining the rate of sedimentation of erythrocytes. **fatty acids, m. for**, see *Bloor, Pelkan, and Allen m.* **Faust's m.**, a method of diagnosing helminth and protozoan infections by centrifugation of washed feces with zinc sulfate of a specific gravity of 1.180, after which eggs and protozoan cysts may be removed from the supernatant layer. **fibrinogen, m. for**, see *Chandler's m.* **Fichera's m.**, see under *treatment*. **Fick m.**, see under *principle*. **Finikoff's m.** (obs.), see under *treatment*. **Fishberg's m.**, one for determining specific gravity of

the urine, which serves as a concentration test of renal function. **Fiske's m.** (for total fixed base): remove phosphates with ferric chloride, convert fixed bases into sulfates by heating in H_2SO_4 , ignite, take up in water, precipitate sulfates as benzidine sulfate, and titrate with alkali. **Fiske and Subbarow's m.**, 1. (for acid-soluble phosphorus in blood): destroy organic matter by heating with sulfuric and nitric acids, precipitate the phosphates as magnesium ammonium phosphate, and reduce the precipitate with para-amino-naphthol-sulfonic acid. Compare the blue color with a standard phosphate solution. 2. (for inorganic phosphates): the phosphates are precipitated as ammonium phosphomolybdate. This is then reduced by para-amino-naphthol-sulfonic acid and the blue color compared colorimetrically with a standard solution. **Fitz Gerald m.**, zone therapy. **fixed base, m. for**, see **Fiske's m.** **flash m.**, a method of pasteurizing milk whereby the milk is brought up to a temperature of 178°F . and chilled at once. Cf. **holding m.** **flotation m.**, any method for separating cysts and ova from the heavier component of the stool and which depends upon the use of a solution intermediate in density between the parasitic material (which floats) and the bulk of the feces (which remains as sediment after centrifugation). **Folin's m.**, 1. (for acetone): aerate the acetone from the urine over into an alkaline hypo-iodite solution of known strength. The acetone is thus changed to iodoform and the excess of iodine is titrated with a standard thiosulfate solution, using starch as an indicator. 2. (for acetone): micromethod. Aerate the acetone over into a solution of sodium bisulfite and then determine the amount of nephelometric comparison with a standard acetone solution using Scott and Wilson's reagent. 3. (for amino acids in blood): make 10 ml. of protein-free blood filtrate slightly alkaline to phenolphthalein. Add 2 ml. of beta-naphthaquinone solution and place in the dark. The next day add 2 ml. of acetic acid-acetate solution and 2 ml. of 4 per cent thiosulfate solution. Dilute to 25 ml. and compare the blue color with a standard amino-acid solution similarly treated. 4. (for amino-acid nitrogen in blood): treat the urine with permittit to remove the ammonia and then with beta-naphthaquinone sulfonic acid. The red color is compared with a standard amino acid solution. 5. (for ammonia nitrogen): sodium carbonate is added to the urine to free the ammonia, which is aerated into standard acid and titrated. 6. (for blood sugar): to 2 ml. of neutral protein-free blood filtrate, add 2 ml. of the Folin copper solution and heat in boiling water bath ten minutes. Cool and add 2 ml. of acid molybdate reagent. Dilute to 25 ml. mark and compare the blue color with a standard glucose solution similarly treated. 7. (for creatine): precipitate the proteins of the blood with picric acid and filter. To the filtrate add sodium hydroxide and compare color with a standard solution of creatine. 8. (for creatine in urine): change creatine into creatinine by heating at 90°C . for three hours in the presence of third normal HCl . Determine creatinine by picric acid and alkali and deduct the preformed creatinine. 9. (for creatinine in urine): to the urine add picric acid and sodium hydroxide and compare the red color with a half normal solution of potassium bichromate. 10. (for ethereal sulfates): remove the inorganic sulfates with barium chloride and then the conjugated sulfates after hydrolyzing with boiling dilute hydrochloric acid. 11. (for inorganic sulfates): acidify the urine with hydrochloric acid, precipitate with barium chloride, filter, dry, ignite, and weigh. 12. (for protein in urine): add acetic acid and heat, wash, dry, and weigh the precipitate. 13. (for total acidity): add potassium oxalate to the urine to precipitate the calcium which should otherwise precipitate at the neutral point, and titrate with tenth normal sodium hydroxide, using phenolphthalein as an indicator. 14. (for total sulfates): boil the urine for thirty minutes with dilute hydrochloric acid, precipitate with barium chloride, filter, dry, ignite, and weigh. 15. (for urea and allantoin): decompose the urea by heating with magnesium chloride and hydrochloric acid, distil off the ammonia, and titrate. **Folin's gravimetric m.** (for protein in urine): precipitate the protein by heat and acetic acid; centrifugalize, wash, dry, and weigh the precipitate. **Folin and Bell's m.** (for ammonia in urine), see **permittit m.** **Folin, Benedict and Myers' m.** (for creatine in urine): to 20 ml. of urine add 20 ml. of normal HCl and autoclave at 120°C . for one half hour. Neutralize, add picric acid and alkali, and compare the color with a standard solution of potassium bichromate. **Folin and Berglund's m.** (for sugar in normal urine): remove interfering substances by shaking the urine with Lloyd's alkaloidal reagent and then proceed as in the Folin-Wu method. **Folin, Cannon, and Denis' m.** (for epinephrine): add Folin's uric acid phosphotungstic reagent and sodium carbonate to the unknown and estimate amount by comparison of blue color with a standard uric acid solution similarly treated. **Folin and Denis' m.**, 1. (for albumin): precipitate the albumin with sulfosalicylic acid and compare the turbidity with that of a standard protein solution; called also **turbidity m.** 2. (for Bence Jones protein): coagulate the Bence Jones protein at 60°C ., centrifugalize, wash, precipitate with 50 per cent alcohol, dry, and weigh. 3. (for nitrogen in urine): destroy the organic matter in the diluted urine with the phosphoric-sulfuric acid-copper sulfate mixture, add Nessler's reagent, and compare it with a standard ammonia solution. 4. (for nonprotein nitrogen): it is much the same as Folin and Wu's method except that the proteins are removed with

methyl alcohol and zinc chloride. The alcohol is boiled off and the nitrogen changed into ammonia and nesslerized in the usual way. 5. (for phenols): precipitate interfering substances by adding acid silver lactate solution and colloidal iron. To 20 ml. of the filtrate add 5 ml. of the phosphotungstic phosphomolybdic acid reagent and 15 ml. of a saturated solution of sodium carbonate and compare the blue color, etc. 6. (for urea): the same as the method of Folin and Pettibone except that the urine is diluted twenty to one hundred times to prevent sugar from interfering with the test. 7. (for uric acid in blood): remove the proteins by boiling acetic acid and then proceed with Benedict and Hitchcock's method. **Folin and Farmer's m.** (for total nitrogen): a modified microchemical Kjeldahl method for urine. Decompose the nitrogenous bodies with sulfuric acid as usual, add alkali, aerate the ammonia over into standard acid, nesslerize, and compare with a standard solution of ammonium sulfate. **Folin and Flander's m.** (for hippuric acid): 100 ml. of the urine is evaporated to dryness with 10 ml. of 5 per cent sodium hydroxide. Hydrolyze the residue with nitric acid, shake out the benzoic acid with chloroform, and titrate it with tenth normal sodium alcoholate, using phenolphthalein as indicator. **Folin and Hart's m.** (for acetone and acetoacetic acid): determine the acetone by Folin's method, then heat the urine with hydrochloric acid to change acetoacetic acid to acetone, and determine again. **Folin and Macallum's m.** (for ammonia nitrogen): to the urine add potassium carbonate and potassium oxalate, aerate the ammonia over into standard acid, nesslerize, and compare with a standard solution of ammonium sulfate. **Folin, McElroy, and Peck's m.** (for dextrose in urine): mix 5 ml. of an acidified 5.9 per cent copper sulfate solution, 1 ml. of 20 per cent sodium carbonate solution and then add 4 to 5 gm. of phosphate-thiocyanate mixture. Heat and add enough urine to produce a sudden turbidity after not more than five seconds of boiling; 25 mg. of glucose will reduce the 5 ml. of copper solution. **Folin and Peck's m.** (for dextrose): to the boiling copper solution of Folin and McElroy run in urine until the color changes from green to yellow. **Folin and Pettibone's m.** (for urea): microchemical. The urea is decomposed by heating with potassium acetate and acetic acid, the ammonia is liberated by sodium hydroxide, aerated over into standard acid, and nesslerized. **Folin and Shaffer's m.** (for uric acid): phosphates and certain organic substances are first precipitated by an acetic acid solution of ammonium sulfate and uranium acetate. The uric acid is then precipitated as ammonium urate and the amount determined by titration with potassium permanganate. **Folin and Wright's m.** (for nitrogen in urine): a simplified macro-Kjeldahl method in which the digestion is brought about by a mixture of phosphoric and sulfuric acids aided by ferric chloride, and the liberated ammonia is distilled without the use of a condenser. **Folin and Wu's m.**, 1. (for creatinine): the color produced by the unknown (protein-free blood filtrate or urine) in an alkaline solution of picric acid is compared in a colorimeter with the color produced by a known solution of creatinine or with a standard solution of potassium bichromate. 2. (for creatine plus creatinine): the creatine of a protein-free blood filtrate is changed to creatinine by heating with dilute HCl in an autoclave, and the creatinine thus produced together with the preformed is determined colorimetrically after adding an alkaline picrate solution. 3. (for glucose): the protein-free blood filtrate is boiled with a dilute alkaline copper tartrate solution, the cuprous oxide is dissolved by adding a phosphomolybdic-phosphoric acid solution, and the blue color produced is compared with the color from sugar solutions of known strength. 4. (nonprotein nitrogen): the total nonprotein nitrogen in the protein-free blood filtrate is determined by setting free the nitrogen as ammonia by the Kjeldahl process, nesslerizing this ammonia, and comparing with a standard. 5. (for protein-free blood filtrate): lake the blood with distilled water, add sodium tungstate and sulfuric acid, and filter. 6. (for urea): change the urea to ammonia by means of urease, and nesslerize. 7. (for uric acid): uric acid is precipitated from the protein-free blood filtrate or from urine by silver lactate, treated with phosphotungstic acid, and the blue color compared with the color produced by known amounts of uric acid. **Folin and Youngburg's m.** (for urea in urine): the ammonia is removed from the urine by permittit, the urea is changed to ammonium carbonate by urease, and nesslerized directly. **m's for (volatilizing) formaldehyde gas**, see **Aronson's m.**, **Breslau's m.**, **lime m.**, **Schlossmann's m.**, and **Trillat's m.** **formol titration, m's of**, see **Benedict and Murlin's m.**, **Malfatti's m.**, and **Sörensen's m.** **Freiburg m.**, twilight sleep; see **under sleep**. **Freud's cathartic m.**, catharsis, def. 2. **Frey and Gigon's m.** (for amino-acid nitrogen): a modified form of Sörensen's method in that the ammonia is aspirated off after adding the barium hydroxide. **Fridericia's m.** (for alveolar carbon dioxide tension): the carbon dioxide is absorbed into a solution of potassium hydroxide and the decrease in volume read in percentage in a special apparatus. **Fülleborn's m.** (for ova in stools): grind 1 gm. of stool and mix with 20 ml. of a saturated solution of sodium chloride. Allow to stand one hour or more, then float coverglasses on the surface and transfer them, without draining, to slides. **gasometric m.** (for urea), see **Stehle's m.** **Gerota's m.**, injection of the lymphatics with a dye, such as prussian

blue, which is soluble in chloroform or ether, but not in water. **Gilmer m.** (of establishing intermaxillary fixation): a wire ligature is passed about the necks of all available teeth and twisted until the wire is tight about the teeth. The teeth are placed in occlusion and the wires are twisted, one upper to one lower wire. **Girard's m.**, see under *treatment*. **Givens' m.** (for peptic activity): varying amounts of diluted gastric juice are added to a series of tubes containing pea globulin, the mixtures are incubated, and the amount of digestion noted. **glucose (dextrose), m's for**, see *Bang's m.*, *Benedict's m.* (1), *Benedict and Osterberg's m.*, *Bertrand's m.*, *Epstein's m.*, *Folin's m.* (6), *Folin and Berglund's m.*, *Folin, McEllroy, and Peck's m.*, *Folin and Peck's m.*, *Folin and Wu's m.* (3), *Hagedorn and Jensen's m.*, *Lewis and Benedict's m.*, *Peter's m.*, *Power and Wilder's m.*, *Stammer's m.*, and *Sumner's m.* See also *dextrose test*, under *tests*. **gold number m.**, colloidal gold test. **Gram's m.**, see *Table of Stains*, under *stain*. **Greenwald's m.** (for nonprotein nitrogen): the proteins are precipitated by trichloroacetic acid, the filtrate is decomposed by sulfuric acid as in the Kjeldahl method, the ammonia is distilled off and the amount titrated with tenth normal sodium hydroxide. **Greenwald and Lewman's m.** (for titratable alkali of blood): the protein of the blood is precipitated with an excess of picric acid. Both the free and the total picric acid in the filtrate are then determined. The difference represents the picric acid which is combined with the bases of the blood. **Griffith's m.** (for hippuric acid): extract the hippuric acid with ether. Distill off the ether and destroy urea in the residue with sodium hypobromite solution. Determine the nitrogen in the residue by the Kjeldahl method. **Gross's m.** (for tryptic activity): add increasing amounts of a trypsin solution to a series of tubes of pure, fat-free casein which have been heated to 40° C. Incubate at 40° C. for fifteen minutes. Test by adding a few drops of acetic acid (dilute) to each tube. A precipitate on acidification indicates that digestion is incomplete or lacking; no precipitate indicates digestion. **Grossich's m.**, the use of tincture of iodine as an antiseptic in surgical operations. **guanidine, m's for**, see *Pfiffner and Myers' m.*, *Weber's m.* **Guinard's m.**, see under *treatment*. **Hagedorn and Jensen's m.** (for sugar in blood): precipitate the protein with zinc hydroxide. Heat the filtrate with potassium ferricyanide solution and determine the amount of ferricyanide reduced by adding an iodide solution and titrating the iodine set free with sodium thiosulfate. **Hahn's m.**, a method of performing pylorodiosis in which the anterior gastric wall is invaginated with the fingers, which are then thrust through the pyloric canal. Cf. *Loreta's m.* **Hall's m.** (for total purine nitrogen): remove phosphates by means of magnesium mixture and precipitate the purine bodies in a specially graduated tube by means of silver nitrate and ammonium hydroxide. After twenty-four hours read the volume of the purine precipitate. **Hamilton's m.** (in postpartum hemorrhage): compress the uterus between a fist in the vagina and a hand pressing down the abdominal wall. **Hammerschlag's m.** (for specific gravity of blood): prepare a mixture of benzene and chloroform of about 1.050 specific gravity. Into this let fall a drop of blood and add benzene or chloroform until the drop neither rises nor sinks. Then take the specific gravity of the mixture. **Handley's m.**, see under *lymphangioplasty*. **Hart's m.** (for casein in milk): precipitate the casein from the diluted milk, filter, wash, redissolve in excess of tenth normal potassium hydroxide, and titrate remaining alkali with tenth normal HCl. The difference is casein. **Hartel's m.**, see under *treatment*. **Heintz's m.** (for uric acid): precipitate the urine by adding hydrochloric acid, filter off the crystals, wash, dry, and weigh. **hemoglobin, m's for**, see *acid hematin m.*, *Dare's m.*, and *Sahli's m.*, and see under *tests*. **Henriques and Sørensen's m.** (for amino-acid nitrogen by solution of formaldehyde titration), see *Sørensen's m.* **Herter and Foster's m.** (for indole in feces, modified by Bergeim): make the feces alkaline and distil. Make the distillate acid and distil again. To the second distillate add beta-naphtha-quinone sodium monosulfonate and alkali. Extract the blue color with chloroform and compare it with a standard solution of indole containing 0.1 mg. of indole per milliliter. **Heublein m.**, ionizing irradiation of the whole body with low-dose increments protracted for ten to twenty hours per day over several days. **hippuric acid, m's for**, see *Folin and Flander's m.*, *Griffith's m.*, and *Roaf's m.*, and see under *tests*. **Hirschberg's m.**, measurement of the deviation of a strabismic eye by observing the reflection of a candle from the cornea. **Hodgen's m.**, treatment of traumatic tetanus by large doses of Fowler's solution. **holding m.**, a method of pasteurizing milk whereby the milk is heated to 65° C. and kept at that temperature for thirty to forty-five minutes. Cf. *flash m.* **Howard's m.** (of artificial respiration): the patient is placed on his back, hands under his head, with a cushion so placed that his head is lower than his abdomen. Manual rhythmic pressure is then applied upward and inward against the lower lateral parts of the chest. **Howell's m.** (for clotting time of blood): place 5 ml. of blood in a 21-mm. test tube with suitable precautions. Tilt the tube every two minutes and note time of clotting. **Hunt's m.** (for the activity of thyroid products): mice on a cracker diet are fed varying amounts of the thyroid product for ten days. They are then injected with 0.4 mg. of acetone nitrile per gram of body weight. If the product is active, the treated mice

usually live, whereas untreated mice are killed in two hours by 1.2 mg. per gram of body weight. **Hunter and Given's m.** (for uric acid and purine bases): precipitate and decompose the precipitate as in the Krueger-Schmidt method. Determine the uric acid in an aliquot part and in the remainder destroy the uric acid by oxidation and determine the purine bases as in the Krueger-Schmidt method. **hydrogen ion concentration, m. for**, see *Levy, Rowntree, and Marriott's m.* **indican, m's for**, see *Askenstedt's m.* and *Ellinger's m.*, and see under *tests*. **indole, m's for**, see *Bergeim's m.* and *Herter-Foster m.*, and see under *tests*. **inorganic phosphates, m. for**, see *phosphates, inorganic, m. for*. **inorganic sulfates, m's for**, see *sulfates, inorganic, m's for*. **iodine, m's for**, see specific methods, including *Kendall's m.*, *Leipert's m.* **iron, m's for**, see *Walker's m.*, *Wolter's m.*, and *Wong's m.*, and see under *tests*. **Ivy's m.**, see *bleeding time*, under *time*. **Japanese m.**, a method for fixing paraffin sections to glass slides with the use of Mayer's albumin. **Johnson's modification m.**, a modification of the Callahan method of filling root canals, in which the main canal is filled with a central core of solid gutta-percha. **Kaiserling's m.**, a procedure for preserving the natural colors in museum preparations, employing formaldehyde and potassium acetate. **Karr's m.** (for urea in blood): change the urea to ammonium carbonate by means of urease, nesslerize directly, and compare the color with that of a standard urea solution similarly treated. **Keating-Hart's m.**, see under *fulguration*. **Kendall's m.** (for iodine in thyroid tissue): oxidize the organic matter by fusion in KNO₃ and strong KOH. Acidify, oxidize with bromine, add an excess of KI, and titrate the liberated iodine with sodium thiosulfate. **Kenny's m.**, see under *treatment*. **Kety-Schmidt m.**, a method of measuring perfusion flow of blood through brain tissue. **Kirstein's m.**, inspection of the larynx without a laryngoscope by having the patient incline his head far back and depressing the tongue. **Kjeldahl's m.** (1883), a method of determining the amount of nitrogen in an organic compound. It consists in heating the material to be analyzed with strong sulfuric acid. The nitrogen is thereby converted to ammonia, which is distilled off and caught in tenth normal solution of sulfuric acid. By titration the amount of ammonia is determined, and from this the amount of nitrogen is estimated. **Klüver-Barrera m.**, a histologic staining method in which myelin sheaths are stained blue-green and the cells purple. **Koch and McMeekin's m.** (for total nitrogen): destroy organic matter with sulfuric acid and hydrogen peroxide, and nesslerize the resulting solution directly. **Korotkoff's m.**, the auscultatory method of determining blood pressure. **Kramer and Gittleman's m.** (for sodium in serum): dry and ash the serum. Take it up in 0.1 per cent HCl and make slightly alkaline with KOH. Precipitate with the pyroantimonate reagent and alcohol, dissolve precipitate in strong HCl, add potassium iodide, and titrate with sodium thiosulfate. **Kramer and Tisdall's m.**, 1. (for potassium in serum): precipitate with sodium cobaltinitrite reagent, treat precipitate with acid permanganate solution, then with sodium oxalate, and titrate with standard permanganate. 2. (for calcium in serum): precipitate the calcium as oxalate. Wash, dissolve, and titrate with potassium permanganate. **Kristeller's m.**, a method of expelling the fetus in labor. The fetal head should be in the vulva and the abdomen must be sufficiently relaxed so that the assistant may grasp the fundus. The grip on the fundus is made by the fingers of the two hands parallel behind and the thumb in front, the line of force being in the direction of the axis of the inlet. The expression should be done in one or two sustained efforts. **Krogh's m.** (for urea): the urea is oxidized by sodium hypobromite to carbon dioxide and nitrogen in an alkaline solution which absorbs the carbon dioxide. The remaining nitrogen is then measured. **Krueger and Schmidt's m.** (for uric acid and purine bases): precipitate the uric acid with copper sulfate, decompose the precipitate with sodium sulfite, acidify, concentrate, and let uric acid crystals separate. Determine the nitrogen in them by the Kjeldahl method. Reprecipitate the purine bases with copper sulfate, filter, wash, and determine the nitrogen in the precipitate by the Kjeldahl method. **Kwilecki's m.** (for albumin): 10 drops of a 10 per cent solution of ferric chloride are added to the urine before proceeding with the regular method of Esbach. **Laborde's m.**, the making of rhythmical traction movements on the tongue in order to stimulate the respiratory center in asphyxiation. **lactalbumin, m. for**, remove casein from the milk with magnesium sulfate, add Alman's reagent to the filtrate, determine the nitrogen in the precipitate with the Kjeldahl method, and multiply the result by 6.37. **lactic acid, m's for**, see specific methods, including *Clausen's m.* (1), (2), *Corri's m.*, *von Furth and Charnass' m.* See also *lactic acid test*, under *tests*. **Lamaze m.**, a psychoprophylactic method of preparing for delivery, involving education of the prospective mother in the physiology of pregnancy and parturition and in techniques (e.g., breathing exercises and bearing down) to ease delivery. **Lane m.**, a method of diagnosing hookworm infection by centrifugation of 1 ml. of washed feces mixed with brine, the tube being covered with a cover slip on which the eggs can be counted. Called also *direct centrifugal flotation method*, or *D.C.F.* **lateral condensation m.**, multiple cone m. **Leboyer m.**, a method of delivery

of the infant based upon the theory that the violence associated with birth causes emotional trauma to the infant and that this trauma will affect the child's personality and throughout his life. The concepts of this method emphasize that the delivery should be gentle and controlled, without unnecessary intervention; the infant should be handled gently, with the head, neck, and sacrum supported; the infant should not be overstimulated and be allowed to breathe spontaneously, without painful stimuli, such as spanking. Called also *Leboyer technique*. **Leipert's m.** (for iodine in blood): destroy organic matter with chromic-sulfuric acid. Reduce iodic acid to free iodine with arsenous acid, distill off the iodine, and titrate. **Levy, Rowntree, and Marriott's m.** (for hydrogen ion concentration of blood): dialyze the blood through a collodion tube against neutral physiologic salt solution; then match the color produced by phenolsulfonphthalein in the dialysate and in solution of known hydrogen ion concentration. **Lewis and Benedict's m.** (for dextrose): the proteins of the blood are precipitated by means of picric acid, sodium carbonate is added, and the color of the picramic acid solution is compared with that of a standard glucose solution. **Lewisohn's m.** (obs.), a method of indirect transfusion by adding sodium citrate to the blood. **lime m.**, a method of generating or volatilizing formaldehyde gas. Forty per cent formaldehyde, containing 10 per cent of sulfuric acid, is poured over quicklime in a suitable container; $\frac{1}{2}$ to 2 pounds of lime should be used for each pint of the solution. **Lindemann's m.** (for transfusion): one needle cannula is placed in a vein of the donor's arm and another in the arm of the patient. Syringes are filled from the donor and emptied into the recipient through the cannulas. The method is now obsolete. **Linser's m.**, treatment of varicose veins by the injection of corrosive mercuric chloride. **Loreta's m.**, pylorodiosis performed by inserting the fingers through a gastrotomy incision. Cf. *Hahn's m.* **Lorthiore's m.**, radical cure of hernia by dissection and extirpation of the sac without opening the inguinal canal. **Lovset's m.**, see under *maneuver*. **Lyman's m.** (for calcium): precipitate the calcium from the protein-free blood filtrate or from urine as calcium oxalate, redissolve in dilute acid and reprecipitate as calcium ricinate, and determine the amount nephelometrically. **Lyon's m.**, Meltzer-Lyon test; see under *tests*. **McCrudden's m.** (for calcium and magnesium): make 200 ml. of urine faintly acid to litmus, add 10 ml. of concentrated hydrochloric acid, precipitate with oxalic acid, filter, ignite, and weigh as calcium oxide, or filter and titrate the precipitate with potassium permanganate. This gives the calcium. For the magnesium, add to the filtrate from the calcium, nitric acid, evaporate to dryness, and heat until the residue fuses. Take up in water, add sodium acid phosphate and ammonia, filter, wash, ignite, and weigh as the pyrophosphate. **MacLachlan m.**, a method of conditioning liquid sludge by the application of sulfur dioxide gas. **McLean and Van Slyke's m.** (for chlorides): precipitate the chlorides from oxalated plasma with an excess of silver nitrate and titrate the excess with potassium iodide and starch. **magnesium, m's for**, see *Denis' m.* and *McCrudden's m.* **Malfatti's m.** (for ammonia nitrogen by solution of formaldehyde titration): add potassium oxalate to the urine and make neutral to phenolphthalein with tenth normal sodium hydroxide; add the neutral solution of formaldehyde and titrate again. **Marfan's m.**, epigastric puncture. **Marriott's m.** (for alkali reserve): the patient rebreathes the air in a bag until its carbon dioxide tension is virtually that of venous blood. This air is then bubbled through a standard bicarbonate solution until the solution is saturated and the color produced is compared with standard color tubes. **Marshall's m.** (for urea): the urea is changed into ammonium carbonate by the enzyme urease and the ammonia titrated with tenth normal hydrochloric acid, using methyl orange, as indicator. **Meltzer's m.**, insufflation through an endotracheal tube of air containing an anesthetic vapor; employed in thoracic surgery. **Meltzer-Lyon m.**, see *Meltzer-Lyon test*, under *tests*. **Messinger and Huppert's m.** (for acetone): the same as the method of Folin and Hart except that the acetone is distilled instead of aspirated. **Mett's m.** (for peptic activity), see *Nirenstein and Schiff's m.* **Meulengracht's m.** (for bile pigment in serum): the serum is diluted until the yellow color corresponds to that of a standard potassium bichromate solution. **Meyer's m.** (for creatine): a modification of Folin and Benedict's method in that the creatine is changed into creatinine after adding hydrochloric acid by digesting in an autoclave. **Minkowski's m.**, same as *Naunyn-Minkowski m.* **Moerner-Sjöqvist m.**, see *Sjöqvist m.* **Mohr's m.** (for chlorides): oxidize interfering organic matter by igniting with potassium nitrate. To the solution of the ash add potassium chromate, and titrate with standard silver nitrate until the red silver chromate appears. **Monias and Shapiro's m.**, convert the indican into indigolignone and compare with a standard. **Morestin's m.**, see under *operation*. **Morison's (Rutherford) m.**, an obsolete method of treating wounds by opening up and mechanical cleansing of the wound, sponging with alcohol, and the application to the raw surfaces of a thin layer of a paste consisting of 1 part of bismuth subnitrate, 2 parts of iodoform, and enough liquid paraffin to make a soft paste. This paste is known as bismuth iodoform paraffin paste or Morison's paste, or in vernacular in the British Isles as bipp or B.I.P. The wound is then

sutured without drainage. **multiple cone m.**, a method of filling root canals in which the main portion of each canal is filled with a well-fitting primary gutta-percha cone or silver point in conjunction with sealer cement or paste, and the remaining canal space is packed with auxiliary gutta-percha cones. A root canal spreader (condenser) is used to force gutta-percha into the canal laterally for condensation and to create space for auxiliary gutta-percha points. Called also *lateral condensation m.* **Murphy m.**, 1. suture of an artery by invaginating the ends over a cylinder in two pieces which can then be removed. 2. continuous proctoclysis; the continuous administration per rectum of saline solution, drop by drop, from an elevated reservoir. Called also *Murphy drip*. 3. see *Murphy treatment* (def. 2), under *treatment*. **Myers' m.** (for urea in blood): change the urea to ammonium carbonate by the action of urease, aerate off the ammonia into an acid solution, and nesslerize; called also *direct aeration m.* **Myers and Wardell's m.** (for cholesterol): dry the blood on plaster of Paris and extract the cholesterol with chloroform. Add acetic anhydride and sulfuric acid and compare the color with that of a standard solution of cholesterol similarly treated. **Nägel's m.**, see under *maneuver*. **Naunyn-Minkowski m.**, palpation of the kidney after first dilating the colon with gas. **Neumann's m.**, local anesthesia for surgery on the ear by the subperiosteal injection of a solution of cocaine and epinephrine. **Nikiforoff's m.**, a method of fixing blood films by placing them for from five to fifteen minutes in absolute alcohol, pure ether, or equal parts of alcohol and ether. **Nimeh's m.**, a method of determining the size of liver and spleen, based on measurements made on flat films of the hepatic and splenic regions taken separately without any preparation or after retroperitoneal insufflation of carbon dioxide gas. The ventricle diameter is the index of the size of the liver, the broad diameter that of the spleen. **Nirenstein and Schiff's m.** (for peptic activity): Mett's tubes are placed in the solution to be tested and incubated for twenty-four hours. The length of the column digested at each end is then determined. **nitrogen, amino acid, m's for**, see *Benedict and Murlin's m.*, *Folin's m.* (4), *Frey and Gignou's m.*, *Sörensen's m.*, *Van Slyke's m.*, and *Van Slyke and Meyer's m.* **nitrogen, ammonia, m's for**, see *Folin's m.* (5), *Folin and Macallum's m.*, *Malfatti's m.*, and *permutit m.*, and see under *tests*. **nitrogen, nonprotein, m's for**, see *Folin and Denis' m.* (4), *Folin and Wu's m.* (4), and *Greenwald's m.* **nitrogen, purine, m. for**, see *Hall's m.* **nitrogen, total, m's for**, see *Arnold and Gunning's m.*, *Bock and Benedict's m.*, *Folin and Denis' m.* (3), *Folin and Farmer's m.*, *Folin and Wright's m.*, *Koch and McMeekin's m.*, *Taylor and Hulton's m.* **Oberst's m.**, local anesthesia produced by injecting saline solution or distilled water into the subcutaneous connective tissue. **Ogata's m.**, a method of stimulating respiration by stroking the chest. **Ogino-Knaus m.**, the rhythm method of birth control. **Ombredanne m.**, a reconstruction of the urethra in hypospadias, in which a flap is raised in a direction proximal to the urethral opening and rotated distally so that its most proximal point lies at the glans. **optical density m.**, the measuring of growth rates of cells by taking the optical density or turbidity of a dense population and comparing this with optical densities of known dilutions of the sample. **Orr m.**, see under *treatment*. **Orsi-Brocco m.**, palpatory percussion of the heart. **Osborne and Folin's m.** (for total sulfur in urine): destroy the organic matter in the concentrated urine and oxidize the sulfur by fusing with sodium peroxide. Precipitate with barium chloride, wash, dry, ignite, and weigh. **ova concentration, m. for**, see *brine flotation m.* **oxalic acid, m. for**, see *Salkowski, Autenrieth, and Barth's m.* **Pajot's m.**, decapitation of the fetus with Pajot's hook. **panoptic m.**, see *Giemsa's staining method*, in Table of Stains. **Pap's silver m.**, a method for demonstrating reticulum. **Parker's m.** (for indican), see *Askenstedt's m.* **Pasteur's m.** (obs.), 1. (for *Bacillus anthracis*): a method of attenuating bacteria by growing them at a temperature higher than body temperature, usually 42° to 43° C. 2. (for the preparation of rabies vaccine): the spinal cords of rabbits infected with rabies (fixed virus) are removed aseptically, dried, and emulsified. **Pavlov's m.**, study of the changes in the salivary reflex produced by psychic influence. See also *conditioned response*, under *response*, and see *conditioning*. **Payr's m.**, the use of absorbable cylinders of magnesium for performing suture of blood vessels. **peptic activity, m's for**, see specific methods, including *Given's m.*, *Nirenstein and Schiff's m.* **permutit m.** (for ammonia in urine): add permutit to the urine and shake for five minutes. Wash the permutit ammonia compound several times, add sodium hydroxide, and nesslerize. Compare the color with a standard solution of ammonium sulfate. Called also *Folin and Bell's m.* **Peter's m.** (for dextrose): boil the unknown in an excess of the reagent, filter off the reduced copper, and titrate the filtrate with potassium iodide and standard thiosulfate solution. **Pfiffner and Myers' m.** (for guanidine in blood): a colorimetric method by the use of an alkaline nitroprusside-ferri-cyanide reagent. **phenol, m's for**, see *Benedict and Theis' m.* (2), *Folin and Denis' m.* (5), *Tisdall's m.* See also *phenol test*, under *tests*. **phosphates, inorganic, m's for**, see *Benedict and Leche's m.*, *Fiske and Subbarow's m.* (2). **phosphorus, m. for**, see *uranium acetate m.* **phosphorus, acid-solu-**

ble, m. for, see *Fiske and Subbarow's m.* (1). **phosphorus, lipid, m. for**, see *Benedict and Theis' m.* (1). **Pickrell's m.**, see under *spray*. **Plimmer and Skelton's m.** (for *allantoin*): determine the urea and allantoin by Folin's method (15), and the urea alone by Marshall's urease method. The difference is allantoin. **point source m.**, a method of intracavitary irradiation of the bladder wall utilizing a small point source of radiation at the center of a Foley catheter bag inflated with a radiopaque solution containing methylene blue or indigo carmine. **potassium, m. for**, see *Kramer and Tisdall's m.* (1). **Power and Wilder's m.** (for *glucose in urine*): remove interfering substances with mercuric sulfate. To the filtrate add alkaline ferricyanide; heat for ten minutes, cool, and add KI and an acid zinc sulfate solution. Titrate the liberated iodine with standard thiosulfate solution. **Price-Jones m.**, see under *curve*. **probit m.**, a method of calculating a 50 per cent end-point by interpolation, as in plotting the probit of percentage death against the logarithm of the dose to determine the median lethal dose. **Prochownick's m.**, artificial respiration for asphyxia of the newborn by compression of the child's chest while his head is allowed to hang backward. **protein in milk, m. for**, see *Bogg's m.* **protein in urine, m's for**, see *albumin in urine, m's for*. **protein-free blood filtrate, m's for**, see *Folin's m.* (6), *Folin and Denis' m.* (5), and *Folin and Wu's m.* (5). **Purdy's m.**, the use of the centrifuge for the determination of the quantity of albumin, chlorides, sulfates, etc. **purine bodies, m's for**, see *Hunter and Given's m.*, *Krueger and Schmidt's m.*, *Salkowski's m.*, *Salkowski and Arnstein's m.*, and *Welker's m.*, and see under *tests*. **purine, nitrogen, m. for**, see *nitrogen, purine, m. for*. **Purmann's m.**, extirpation of the aneurysmal sac in aneurysm. **radioactive balloon m.**, a method of intracavitary irradiation of the bladder wall utilizing a Foley catheter bag filled with a radioactive solution. **Raiziss and Dubin's m.** (for *ethereal and inorganic sulfates*): oxidize the urine by Benedict's method, precipitate the sulfate with benzidine hydrochloride, as in the method of Rosenheim and Drummond, and titrate with tenth normal potassium permanganate. **Reed and Muench m.**, a method of calculating a 50 per cent end-point by interpolation, as in plotting the logarithm of the dose against the logarithm of accumulated deaths to determine the median lethal dose. **Rehfuß's m.**, see under *tests*. **ret-rofilling m.**, a method of filling the root canal of a tooth, particularly the apical portion, from the apex of the root, which has been surgically exposed. **Reverdin's m.**, epidermic graft. **rhythm m.**, a method of preventing conception by restricting coitus to the so-called safe period, avoiding the days just before and after the expected time of ovulation. **Ritchie's formal-ether m.**, a method whereby feces, fixed in a formal-saline solution, is extracted with ether to remove fatty materials, and the washed sediment examined for protozoan cysts and helminth ova. **Ritgen's m.**, see under *maneuver*. **Roaf's m.** (for *the preparation of hippuric acid*): add 125 gm. of ammonium sulfate and 7.5 gm. of concentrated sulfuric acid to 500 ml. of urine of a horse. Hippuric acid will crystallize out. **Romanovsky's (Romanowsky's) m.**, see *Table of Stains*. **Rosenheim and Drummond's m.** (for *ethereal and inorganic sulfates*): precipitate the sulfates with benzidine hydrochloride and titrate the acid in the benzidine sulfate with tenth normal potassium hydroxide. **Ruhemann's uricometer m.** (for *uric acid*): urine is added in a specially graduated tube to a mixture of carbon bisulfide and iodine solution until the carbon bisulfide is decolorized. **Sahli's m.** (for *estimation of hemoglobin*): convert the hemoglobin into acid hematin by adding HCl and compare the color with a standard color scale. **Salkowski's m.** (for *purine bodies and uric acid*): precipitate as silver magnesium salts, decompose the precipitate with hydrogen sulfide, precipitate uric acid by means of sulfuric acid, and the purine bodies as silver salts. **Salkowski and Arnstein's m.** (for *purines*): precipitate the urine with magnesia mixture and to the filtrate add 3 per cent ammoniacal silver nitrate solution. Wash the precipitate and determine the nitrogen in it by the Kjeldahl method. The uric acid nitrogen is separately determined and deducted. **Salkowski, Autenrieth and Barth's m.** (for *oxalic acid*): precipitate the oxalic acid by means of calcium chloride. Dissolve the precipitate in hydrochloric acid, extract the oxalic acid with ether, and reprecipitate it as calcium oxalate. **Satterthwaite's m.**, artificial respiration produced by alternating pressure and relaxation upon the abdomen. **Scherer's m.** (for *proteins*): precipitate the protein by boiling with dilute acetic acid, wash, dry, and weigh. **Schlösser's m.**, see *Schlösser's treatment*, under *treatment*. **Schlossmann's m.**, to prevent polymerization, 10 per cent of glycerin is added to formaldehyde before it is volatilized by heat. **Schüller's m.**, a method of performing artificial respiration by rhythmic raisings of the thorax by means of the fingers hooked under the ribs. **Schweninger's m.**, reduction of obesity by the restriction of fluids in the diet. **Scott and Wilson's m.** (for *acetone and acetoacetic acid*): distill the acetone into an alkaline solution of basic mercuric cyanide, filter, and titrate the precipitate with potassium thiocyanate. **sectional m.**, a method of filling root canals of teeth in which preselected gutta-percha cones are cut into 2 to 3 mm. segments and the canal is filled with these segments in sequential order. **Shaffer's**

m. (for *creatinine*): Folin's method (9), adapted to very dilute solutions. **Shaffer-Hartmann m.**, a chemical method for determining glucose levels in the blood, utilizing a cupric reagent incorporating potassium iodate and iodide and based on the amount of iodate reduced by the cuprous oxide to iodide, and thus on the amount of reducing sugars present. **Shaffer and Marriott's m.** (for *acetone bodies*): precipitate the urine with basic lead acetate and ammonia. Distill off the acetone (acetone and diacetic acid). Oxidize the residue with potassium bichromate and distill again (beta-hydroxybutyric acid). Titrate the distillates with standard iodine and thiosulfate solutions. **Shohl and Pedley's m.** (for *calcium in urine*): oxidize the urine with ammonium persulfate, precipitate the calcium as oxalate, add H_2SO_4 to the precipitate, and titrate with potassium permanganate. **Siffert m.**, a method for computing the volume of the gallbladder by tracing the gallbladder shadow on transparent paper and comparing it with a standard. **single cone m.**, a method of filling the root canal of a tooth with a single, well-fitting gutta-percha cone or silver point in conjunction with a sealer cement or paste. **Sippy m.**, see under *treatment*. **Sjöqvist's m.**, quantitative estimation of the urea in the urine by means of a baryta mixture. **Sluder's m.**, see under *operation*. **Smellie's m.**, delivery of the after-coming head with the body of the child resting on the forearm of the obstetrician. **sodium, m. for**, see *Kramer and Gittleman's m.* **Somogyi m.**, 1. (for *blood glucose*): a modification of the Shaffer-Hartmann method in which the cuprous oxide reduces an arsenomolybdate reagent, yielding a more stable end product. 2. (for *amylase activity*): a method based on the disappearance of the blue color given by iodine and amylose (linear fraction of starch) after amylase in serum, urine, etc., is allowed to act on starch. **Sørensen's m.** (for *amino acids by solution of formaldehyde titration*): titrate the urine for total acidity using phenolphthalein as indicator, add fresh solution of formaldehyde (15 ml. of formalin, 30 ml. of water, and sufficient sodium to make it faintly alkaline to phenolphthalein), and titrate again. **Souligoux-Morestin m.**, the use of ether lavage of the peritoneal cavity in acute infections of the abdominal and pelvic viscera. **specific gravity, m. for**, see *Hammerschlag's m.* and *Fishberg's m.*, and see under *tests*. **split cast m.**, 1. a procedure for placing indexed casts on a dental articulator to facilitate their removal and replacement on the instrument. 2. the procedure of checking the ability of a dental articulator to receive or be adjusted to a maxillomandibular relation record. **Stammer's m.** (for *glucose in blood*): precipitate blood proteins by boiling with acid sodium sulfate and treatment with dialyzed iron. In a test tube place 20 ml. of blood filtrate, 2 drops of a 20 per cent solution of sodium hydroxide and 1 ml. of a 0.0075 per cent solution of methylene blue. Boil until the blue color is discharged. The length of time required indicates the amount of sugar present. Time is counted from the beginning of vigorous boiling: thirty-seven seconds indicates 0.3 per cent sugar; sixty seconds, 0.225 per cent; one minute twenty-five seconds, 0.175 per cent; one minute fifty-five seconds, 0.125 per cent; and two minutes forty-five seconds, 0.075 per cent. **Stas-Otto m.**, a method of separating alkaloids and similar amino compounds. **Stehle's m.** (for *urea*): decompose the urea in a Van Slyke pipet by sodium hypobromite and measure the nitrogen; called also *gastrometric m.* **Steinach's m.**, see *Steinach's operation*, under *operation*. **Stockholm and Koch's m.** (for *total sulfur in biological material*): the material is disintegrated by heating in strong sodium hydroxide, then oxidized with 30 per cent H_2O_2 , and then with nitric acid, and bromine. Precipitate the sulfuric acid with barium, wash, dry, ignite, and weigh. **sugar, m's for**, see *glucose (dextrose), m's for*. **sulfates, ethereal, m's for**, see *Folin's m.* (10), *Raiziss and Dubin's m.*, and *Rosenheim and Drummond's m.* **sulfates, inorganic, m's for**, see *Folin's m.* (11), *Raiziss and Dubin's m.*, and *Rosenheim and Drummond's m.* **sulfur, total, m's for**, see *Benedict's m.* (2), *Benedict and Denis' m.*, *Denis and Leche's m.*, *Folin's m.* (14), *Osborne and Folin's m.*, and *Stockholm and Koch's m.* **Sumner's m.** (for *sugar in urine*): heat 1 ml. of urine and 3 ml. of Sumner's dinitrosalicylic acid reagent, dilute to 25 ml. and compare the color with that of a standard sugar solution similarly treated. **suspension m.**, a method of intracavitary irradiation of the bladder wall by instilling a radioactive solution or suspension directly into the bladder by means of a catheter. **Taylor and Hulton's m.** (for *total nitrogen*): similar to Folin and Farmer's method except that small amounts of sulfuric acid are used and the ammonia is nesslerized in the original tube without being aerated over into acid. **Thane's m.**, a method of locating the fissure of Rolando. Its upper end is about one-half inch behind the middle of a line uniting theinion and the glabella, and its lower end about one-quarter inch above and one and one-quarter inches behind the external angular process of the frontal bone. **Thézac-Porsmeur m.**, heliotherapy of suppurating wounds by concentrating the sun's rays on the part by means of a large double convex lens mounted on a cylinder of canvas three feet long. **thyroid activity, m. for**, see *Hunt's m.*, and see *thyroid function tests*, under *tests*. **Tisdall's m.** (for *phenols in urine*): extract the phenolic substances from the urine with ether and then shake them from the ether with 10 per cent NaOH. Neutralize and proceed as in the Folin and Denis method (5). **total acidity,**

m. for, see *Folin's m.* (13). **total fixed base, m. for**, see *Fiske's m.* **total nitrogen, m. for**, see *nitrogen, total, m. for*. **total sulfur, m. for**, see *sulfur, total, m. for*. **Tracy and Welker's m.** (for deproteinizing urine): a method depending on the use of aluminum hydroxide cream. **Trillat's m.**, volatilization of formaldehyde in an autoclave under pressure to prevent polymerization. **Trueta m.**, see under *treatment*. **tryptic activity, m. for**, see *Gross's m.* **Tswett's m.**, chromatography. **Tuffier's m.** (obs.), see *spinal anesthesia* (def. 1), under *anesthesia*. **turbidity m.** (for albumin), see *Folin and Denis' m.* (1). **uranium acetate m.** (for phosphorus): add sodium acetate and acetic acid to the urine, heat to boiling, and titrate with a special uranium acetate solution. **urea, m's for**, see *Benedict's m.* (3), *Clark and Collip's m.* (2), *Folin's m.* (15), *Folin and Denis' m.* (6), *Folin and Pettibone's m.*, *Folin and Wu's m.* (6), *Folin and Youngsberg's m.*, *Karr's m.*, *Krogh's m.*, *Marshall's m.*, *Myers' m.*, *Sjöqvist's m.*, *Stehle's m.*, and *Van Slyke and Cullen's m.* (2). See also *urea test*, under *tests*. **urease m's**, see *Marshall's m.* and *Van Slyke and Cullen's m.* (2), and see under *tests*. **uric acid, m's for**, see *Benedict and Franke's m.*, *Benedict and Hitchcock's m.*, *Folin and Denis' m.* (7), *Folin and Shaffer's m.*, *Folin and Wu's m.* (7), *Heintz's m.*, *Hunter and Given's m.*, *Krueger and Schmidt's m.*, *Ruhemann's m.*, and *Salkowski's m.* See also *uric acid test*, under *tests*. **urobilinogen, m. for**, see *Wallace and Diamond's m.*, and see *urobilin test*, under *tests*. **van Gehuchten's m.**, fixing of a histologic tissue in a mixture of glacial acetic acid 10 parts, chloroform 30 parts, and alcohol 60 parts. **Van Slyke's m.** (for amino-nitrogen): the unknown is treated with nitrous acid in a special apparatus and the nitrogen liberated is measured. **Van Slyke and Cullen's m.**, 1. (for the carbon dioxide in blood, or for the alkali reserve of blood): freshly prepared oxalated plasma is brought into equilibrium with the carbon dioxide of expired air, acid is then added to a measured amount of the blood, the carbon dioxide is pumped out and measured. 2. (for urea): the urea is changed into ammonium carbonate by means of the enzyme urease, the ammonia is aerated over into standard acid, and the excess titrated. **Van Slyke and Fitz's m.** (for alkali reserve): collect the urine for a two-hour period between meals; note amount and determine the ammonia and the titratable acid by Folin's methods. The plasma carbon dioxide capacity (C) may be calculated from the formula $C = 80 - 5\sqrt{D} \div W$, where D = rate of excretion per twenty-four hours, and W = body weight in kilograms. **Van Slyke and Meyer's m.** (for amino-acid nitrogen): precipitate the proteins of the blood by means of alcohol and then proceed by Van Slyke's nitrous acid method. **Van Slyke and Palmer's m.** (for organic acids in urine): remove carbonates and phosphates and titrate with acid from the turning point for phenolphthalein to the turning point for tropeolin OO. **Volhard and Arnold's m.** (for chlorides): acidify the urine with nitric acid and add a known amount of silver nitrate. Titrate excess of silver nitrate with ammonium sulfocyanate, using ferric thiocyanate as indicator. **Volhard and Harvey's m.** (for chlorides): similar to the method of Volhard and Arnold except that the silver chloride is not filtered out, the excess of silver nitrate being titrated in the original mixture. **von Fürth and Charnass' m.** (for lactic acid in blood): remove the glucose and convert the lactic acid into acetaldehyde by permanganate. Combine the aldehyde with sodium bisulfite and determine the bound sulfite iodometrically. **Walker's m.** (for iron in foods): ignite sample, cool, and dissolve in dilute HNO_3 . Filter, oxidize, filtrate with H_2O_2 , add potassium thiocyanate, and compare color with standard iron solution, similarly treated. **Wallace and Diamond's m.** (for urobilinogen): add Ehrlich's aldehyde reagent to a series of dilutions of the urine, note the highest dilution which shows a faint pink coloration, and express the result in terms of this dilution. **Wallhauser and Whitehead's m.**, the use of autogenous gland filtrate in the treatment of Hodgkin's disease. **Wardill four-flap m.**, a method of cleft palate repair using four flaps. **Waring's m.**, a method of sewage disposal by subsurface irrigation; called also *Waring's system*. **Watson's m.** (for the induction of labor): the successive administration of castor oil, quinine, and pituitrin. **Weber's m.** (for guanidine): a colorimetric method based on the reaction of guanidine with an alkaline nitro-prusside-ferricyanide reagent. **Welcker's m.**, determination of the total blood volume by bleeding and then washing out the blood vessels. **Welker's m.** (for purine bodies): remove the phosphates with magnesia mixture, then precipitate the purine bodies with silver nitrate and ammonium hydroxide. Determine nitrogen in the precipitate by Kjeldahl's method. **Welker and Marsh's m.** (for clarifying milk): a method using aluminum hydroxide. **Westergren m.** (for erythrocyte sedimentation rate): 4.5 ml. of venous blood is mixed thoroughly with 0.5 ml. of a 3.8 per cent solution of sodium citrate; a narrow-bore (2.5 mm.) tube calibrated downward from zero to 200 is then filled with the mixture to the zero mark and placed securely in a rack in an exactly vertical position. The level of red cells is read in millimeters in exactly 60 minutes. **Whipple's m.**, the use of liver in pernicious anemia. **Whitehorn's m.** (for chlorides in blood): to the protein-free blood filtrate add nitric acid, then heat, and add an excess of silver nitrate. Titrate excess silver with thiocyanate, using ferric ammonium sulfate as indicator. **Wiechowski**

and Handorsky's m. (for allantoin): precipitate the urine with phosphotungstic acid, with lead acetate, and with silver acetate to remove chlorides, ammonia, and basic substances. Then add sodium acetate and 0.5 per cent mercuric acetate to precipitate the allantoin, which may be weighed, submitted to a Kjeldahl, or titrated with ammonium thiocyanate. **Wintrobe and Landsberg's m.** (for the sedimentation rate of red blood cells): determine the amount of sedimentation after one hour, then centrifuge and measure the volume of the packed red cells. Correct the first reading by the second by means of a table. **Wolter's m.** (for iron): add nitric acid to urine, evaporate to dryness, ignite, oxidize the iron with hydrogen peroxide, add potassium iodide and starch, and titrate excess of iodine with one-hundredth normal thiosulfate. **Wright's m.**, treatment of wounds by irrigating first with hypertonic salt solution and then with isotonic salt solution. Vaccines may be used as adjuvants. Finally the wound is closed. **Wynn m.**, a procedure for repair of bilateral cleft lips by means of a long, narrow triangular flap. **Ziehl-Neelsen's m.**, see *acid-fast stain* in *Table of Stains*. **Zsigmondy's gold number m.**, colloidal gold test.

methodism (meth'ō-dizm) the system of the Methodist school of medicine.

Methodist (meth'ō-dist) 1. an ancient sect or school, which based the practice of medicine on a few simple rules and theories. This school, influenced by Asclepiades, was founded (c. 50 B.C.) by Themison of Laodicea. The Methodists believed that disease is caused either by a narrowing of the internal pores of the body (*status strictus*) or by their excessive relaxation (*status laxus*). Such extreme simplification of the nature of disease is discernible as late as the 18th century, for example, in the so-called Brunonian system (John Brown, 1735-1788). 2. A believer in or practitioner of the Methodist theory of medicine.

methodology (meth'ō-dol'ō-je) the science of method; the science which deals with the principles of procedure in research and study.

methohexital (meth'ō-hek'sī-tal) [USP] chemical name: (+)-1-methyl-5-(1-methyl-2-pentynyl)-5-(2-propenyl)-2, 4, 6(1H, 3H, 5H)-pyrimidinetrione. An ultrashort-acting barbiturate, $\text{C}_{14}\text{H}_{18}\text{N}_2\text{O}_5$, occurring as a white to faintly yellowish white, crystalline powder; used as a pharmaceutical necessary in the preparation of the sodium salt for injection. **m. sodium** [USP], the monosodium salt of methohexital, $\text{C}_{14}\text{H}_{17}\text{N}_2\text{NaO}_5$, occurring as a white to off-white hygroscopic powder; used as a general anesthetic, administered intravenously.

methomania (meth'ō-ma'ne-ah) [Gr. *methē* drunkenness + *mania* madness] morbid desire for alcoholic beverages.

methopholine (meth'ō-fō'lēn) chemical name: 1-(p-chlorophenethyl)-1,2,3,4-tetrahydro-6,7-dimethoxy-2-methylisoquinoline; an analgesic, $\text{C}_{20}\text{H}_{24}\text{ClNO}_2$.

methopromazine maleate (meth'ō-pro'mah-zēn) methoxy-promazine maleate.

methotrexate (meth'ō-trek'sāt) [USP] chemical name: N-[4-[(2,4-diamino-6-pteridyl)methyl]methylamino]benzoyl]-L-glutamic acid. A folic acid antagonist, $\text{C}_{20}\text{H}_{22}\text{N}_8\text{O}_5$, occurring as an orange-brown, crystalline powder; used as an antineoplastic agent in the treatment of acute and subacute lymphocytic and meningeal leukemia, gestational choriocarcinoma, choriadenoma destruens, hydatidiform mole, and advanced stages of lymphosarcoma, and as an antipsoriatic agent, administered orally and intramuscularly. It has also been used as an immunosuppressive agent in immunologically mediated disorders.

methotrimeprazine (meth'ō-tri-mep'rah-zēn) [USP] chemical name: (-)-2-methoxy-N,Nβ-trimethyl-10H-phenothiazine-10-propanamine. An analgesic, $\text{C}_{19}\text{H}_{24}\text{N}_2\text{OS}$, occurring as a fine, white, crystalline powder; administered intramuscularly. Called also *levomepromazine*.

methoxamine hydrochloride (mē-thok'sah-mēn) chemical name: α-(1-aminoethyl)-2,5-dimethoxybenzenemethanol hydrochloride. An adrenergic, $\text{C}_{11}\text{H}_{17}\text{NO}_3 \cdot \text{HCl}$, occurring as colorless or white, platelike crystals or white, crystalline powder; used for its vasopressor effect to support, restore, or maintain blood pressure during anesthesia and in the treatment of paroxysmal supraventricular tachycardia, administered intramuscularly and intravenously.

methoxsalen (mē-thok'sah-len) [USP] chemical name: 9-methoxy-7H-furo[3,2-g][1]benzopyran-7-one. A psoralen found in *Amni majus* and other plants, $\text{C}_{12}\text{H}_8\text{O}_4$, occurring as white to cream-colored fluffy, needle-like crystals; used orally and topically in conjunction with exposure to ultraviolet light to facilitate repigmentation in idiopathic vitiligo, and to produce a phototoxic reaction in psoriasis. It is also used as a suntan accelerator and sun protectant.

methoxychlor (mē-thok'se-klor) chemical name: 1,1'-(2,2,2-trichloroethylidene)bis[4-methoxybenzene]. A chlorinated hydrocarbon insecticide, $\text{C}_{16}\text{H}_{15}\text{Cl}_3\text{O}_2$, effective against mosquito larvae and houseflies.

methoxyflurane (mē-thok'se-floo'rān) [USP] chemical name: 2,2-dichloro-1,1-difluoro-1-methoxyethane. A general anesthetic with analgesic action, $\text{C}_3\text{H}_4\text{Cl}_2\text{F}_2\text{O}$, occurring as a clear, colorless, mobile liquid; administered by inhalation.

methoxyl (mě-thok'sil) the chemical group, $\text{CH}_3\cdot\text{O}-$.

methoxyphenamine hydrochloride (mě-thok'se-fen'ah-mēn) [USP] chemical name: 2-methoxy-*N*, α -dimethylbenzeneethanamine hydrochloride. An adrenergic, $\text{C}_{11}\text{H}_{17}\text{NO}\cdot\text{HCl}$, occurring as a white to off-white, crystalline powder; used mainly as a bronchodilator in the treatment of bronchial asthma, administered orally.

methoxypromazine maleate (mě-thók'se-pro'mah-zēn) chemical name: 2-methoxy-*N*,*N*-dimethyl-10*H*-phenothiazine-10-propanamine maleate; a central depressant, $\text{C}_{22}\text{H}_{26}\text{N}_2\text{O}_5\text{S}$. Called also *methopromazine maleate*.

8-methoxypsoralen (mě-thok'se-sor'ah-len) methoxsalen.

methphenoxydiol (meth'fen-ok'si-di'ol) guaifenesin.

methscopolamine bromide (meth'sko-pol'ah-mēn) [USP] chemical name: [7(*S*)-1 α ,2 β ,4 β ,5 α ,7 β]-7-(3-hydroxy-1-oxo-2-phenylpropoxy)-9,9-dimethyl-3-oxa-9-azoniatricyclo[3.3.1.0^{2,4}]nonane bromide. An anticholinergic, the quaternary ammonium derivative of scopolamine hydrobromide, $\text{C}_{18}\text{H}_{24}\text{BrNO}_4$, occurring as white crystals or as a white, crystalline powder, it has an inhibitory effect on gastric secretion and gastrointestinal motility and is used as an adjunct for the treatment of peptic ulcer and gastric disorders associated with spasm, hyperacidity, and hypermotility, administered orally, subcutaneously, and intramuscularly. Called also *scopolamine methylbromide*.

methsuximide (meth-suk'si-mid) [USP] chemical name: 1,3-dimethyl-3-phenyl-2,5-pyrrolidinedione. An anticonvulsant, $\text{C}_{12}\text{H}_{13}\text{NO}_2$, occurring as a white to grayish white, crystalline powder; used in the treatment of petit mal and psychomotor epilepsy, administered orally.

methyclothiazide (meth'i-klo-thi'ah-zid) [USP] chemical name: 6-chloro-3-(chloromethyl)-3,4-dihydro-2-methyl-2*H*-1,2,4-benzothiadiazine-7-sulfonamide 1,1-dioxide. An orally effective diuretic and antihypertensive drug, $\text{C}_9\text{H}_{11}\text{Cl}_2\text{N}_3\text{O}_4\text{S}_2$, occurring as a white or practically white, crystalline powder; used in the treatment of hypertension and in edema associated with congestive heart failure, hepatic cirrhosis, chronic renal disease, pregnancy, premenstrual syndrome, obesity, and corticosteroid and estrogen therapy.

methyl (meth'il) [Gr. *methy* wine + *hylē* wood] the chemical group or radical CH_3- , sometimes abbreviated Me. **m. amylketone**, a volatile oil, $\text{C}_9\text{H}_{11}\cdot\text{CO}\cdot\text{CH}_3$, found in oil of cloves. **m. anthranilate**, chemical name: methyl 2-aminobenzoate. A volatile oil $\text{NH}_2\cdot\text{C}_6\text{H}_4\cdot\text{CO}\cdot\text{O}\cdot\text{CH}_3$, the odoriferous constituent or neroli oil, bergamot, jasmine, and other essential oils. **m. benzene**, toluene. **m. chloride**, the hydrochloric acid ester of methyl alcohol, CH_3Cl . When converted by pressure from gas into liquid, it can be used in spray form as a local anesthetic. **m. cyanide**, acetonitrile. **m. ethyl-maleicimid**, a substituted pyrrole, $\text{C}_2\text{H}_5(\text{C}\cdot\text{CO}\cdot\text{NH}\cdot\text{CO})\text{CCH}_3$, obtained from hemoglobin and from chlorophyll. **m. ethyl-pyrrole**, a substituted pyrrole, $\text{CH}_3(\text{C}\cdot\text{CH}\cdot\text{NH}\cdot\text{CH}\cdot\text{C})_2\text{H}_5$, obtained from, and probably a constituent of, bilirubin. **m. eugenol**, a volatile oil, $\text{C}_9\text{H}_9\cdot\text{C}_6\text{H}_5(\text{OCH}_3)_2$, found in oil of bay. **m. heptenone**, a volatile oil, $\text{C}_9\text{H}_{16}\text{O}$, found in lemon-grass oil. **m. hydride**, methane. **m. hydroxy-furfural**, the furfural, $\text{CH}_2\cdot\text{C}\cdot\text{CH}(\text{COH})\cdot\text{C}\cdot\text{CHO}$, produced from the hexose in Molisch's test and which produces the color. **m. iodide**, a colorless or brownish liquid, CH_3I , used as a local anesthetic and formerly as a vesicant. **m. isobutyl ketone** [NF], chemical name: 4-methyl-2-pentanone. A transparent, colorless, mobile, volatile liquid, $\text{C}_6\text{H}_{12}\text{O}$; used as an alcohol denaturant in pharmaceutical preparations. **m. methacrylate**, a plastic material, a resin, $\text{C}_6\text{H}_8\text{O}_2$, used in dentistry and as the basis for an acrylic bone cement in orthopedic surgery, as in total hip replacement. **m. salicylate** [NF], chemical name: 2-hydroxybenzoic acid methyl ester. A colorless, yellowish, or reddish liquid, $\text{C}_8\text{H}_8\text{O}_3$, produced synthetically or obtained by maceration and subsequent distillation with steam from the leaves of *Gaultheria procumbens* or from the bark of *Betula lenta*; used as a flavor in pharmaceutical preparations, and topically in liniments, ointments, and lotions as a counterirritant to relieve pain in rheumatic conditions, lumbago, and sciatica. It is a common cause of salicylate poisoning in children. Called also *betula oil*, *gaultheria oil*, *sweet birch oil*, and *wintergreen oil*. **m. sulfonate**, a crystalline, noncaustic, and nonpoisonous antiseptic. **m. telluride**, a gas, $(\text{CH}_3)_2\text{Te}$, of penetrating odor found in excreta of animals after feeding with telluric and telluric acids.

methylal (meth'i-lal) a colorless liquid, $\text{CH}_3(\text{OCH}_3)_2$, used as a hypnotic and anesthetic and like formaldehyde in certain chemical reactions.

methylamine (meth'il-am'in) a gaseous ptomaine CH_3NH_2 , from decaying fish and from comma-bacillus cultures.

methylarsinate (meth'il-ar'si-nāt) a salt of methylarsinic acid.

methylate (meth'i-lāt) 1. a compound of methyl alcohol and a base. 2. to add a methyl group to a substance.

methylated (meth'i-lāt-ed) containing or combined with a methyl group.

methylation (meth'i-la'shun) treatment with reagent to add a methyl group to a compound.

methylatropine nitrate (meth'il-at'ro-pēn) chemical name: *endo*-(+)-3-(3-hydroxy-1-oxo-2-phenylpropoxy)-8,8-dimethyl-8-azoniabicyclo[3.2.1]octane nitrate (salt). A quaternary ammonium derivative of atropine, $\text{C}_{18}\text{H}_{26}\text{N}_2\text{O}_6$, having the same actions and uses as atropine (q.v.), but with much less effect on the central nervous system and with strong ganglionic blocking activity. Called also *atropine methonitrate* and *atropine methylnitrate*.

methylaurin (meth'il-aw'rin) a substance, $\text{C}_{22}\text{H}_{16}\text{O}_3$, derivable from aurin.

methylbenzethonium chloride (meth'il-ben'zē-tho'ne-um) [USP] chemical name: *N*,*N*-dimethyl-*N*-[2-[2-[methyl-4-(1,1,3,3-tetramethylbutyl)phenoxy]ethoxy]ethyl]benzenemethanaminium chloride monohydrate. A disinfectant quaternary compound, $\text{C}_{28}\text{H}_{44}\text{ClNO}_2\cdot\text{H}_2\text{O}$, occurring as white crystals, which is bacteriostatic for urea-splitting organisms that may cause ammonia dermatitis. It is applied topically to areas of the skin coming in contact with urine, feces, or perspiration, and is used in a rinse for diapers, bed linen, and undergarments of incontinent adults and children.

methylcellulose (meth'il-sel'u-lōs) [USP] a methyl ether of cellulose, occurring as a white, fibrous powder or granules, supplied in differing degrees of viscosity; used as a suspending and viscosity-increasing agent and tablet excipient in pharmaceutical preparations, administered orally as a cathartic, and applied topically to the conjunctiva to protect the cornea during certain ophthalmic procedures and to lubricate the cornea. **hydroxypropyl m.**, see under *H*.

methylchloroformate (meth'il-klo'ro-for'māt) a lacrimatory gas, ClCOOCH_3 , used as a warning agent in fumigations with hydrocyanic acid.

methylcholanthrene (meth'il-ko-lan'thrēn) a carcinogenic hydrocarbon, $\text{C}_{21}\text{H}_{18}$, from deoxycholic acid, cholic acid, and cholesterol.

methylcreosol (meth'il-kre'o-sol) a phenol, $\text{C}_9\text{H}_{12}\text{O}_2$, obtainable from wood tar creosote.

methylcytosine (meth'il-si'to-sin) a pyrimidine occurring in deoxyribonucleic acid.

methyldichlorarsin (meth'il-di'klor-ar'sin) a lethal and vesicating war gas, CH_3AsCl_2 .

methyldihydromorphinone (meth'il-di-hi'dro-mor'fi-nōn) metopon (def. 2).

methyldopa (meth'il-do'pah) [USP] chemical name: 3-hydroxy- α -methyl-L-tyrosine. An orally effective antihypertensive, $\text{C}_{10}\text{H}_{13}\text{NO}_4\frac{1}{2}\text{H}_2\text{O}$, occurring as a white to yellowish white, fine powder.

methyldopate hydrochloride (meth'il-do'pāt) [USP] chemical name: 3-hydroxy- α -methyl-L-tyrosine ethyl ester hydrochloride. The ethyl ester hydrochloride of methyldopa, $\text{C}_{12}\text{H}_{17}\text{NO}_4\cdot\text{HCl}$, occurring as a white to practically white, crystalline powder; used as an antihypertensive, administered by intravenous infusion.

methylene (meth'i-lēn) the bivalent hydrocarbon radical, CH_2 . **m. bichloride**, 1. see *m. chloride*. 2. a mixture of methyl alcohol and chloroform formerly used as an anesthetic agent. **m. blue**, see under *blue*. **m. chloride**, **m. dichloride**, a volatile anesthetic liquid, CH_2Cl_2 , resembling chloroform, formerly used as an anesthetic in minor operations.

methylenophil (meth'i-len'o-fil) 1. an element easily stainable with methylene blue. 2. methylenophilous.

methylenophilous (meth'il-en-ōf'i-lus) [*methylene* + Gr. *philein* to love] stainable with methylene blue.

methylergonovine maleate (meth'il-er'go-no'vēn) [USP] chemical name: 9,10-didehydro-*N*-[1-(hydroxymethyl)propyl]-6-methylergoline-8 β (*S*)-carboxamide (Z)-2-butenedioate (1:1) (salt). An oxytocic, $\text{C}_{20}\text{H}_{25}\text{N}_3\text{O}_2\cdot\text{C}_4\text{H}_4\text{O}_4$, occurring as a white to pinkish tan, microcrystalline powder; used especially to prevent or combat postpartum hemorrhage and atony, administered orally, intramuscularly, and intravenously.

methylglucamine (meth'il-gloo'kah-mīn) 1. a compound prepared from D-glucose and methylamine, used in the synthesis of pharmaceuticals. 2. meglumine.

methylglyoxalase (meth'il-gli-oks'ah-lās) an enzyme that catalyzes the change of methylglyoxal to lactic acid.

methylglyoxalidin (meth'il-gli'oks-al'i-din) lysidin.

methylguanidine (meth'il-gwan'i-din) a poisonous ptomaine, $\text{NH}\cdot\text{CNH}_2\cdot\text{NH}\cdot\text{CH}_3$, from spoiled fish, etc.

methylhexamine (meth'il-heks'ah-mēn) methylhexaneamine.

methylhexaneamine (meth'il-hek-sān'ah-mīn) chemical name: 1,3-dimethylamylamine. A colorless to pale yellow liquid, $\text{C}_7\text{H}_{17}\text{N}$, readily soluble in alcohol, used for its sympathomimetic action in nasal congestion. Called also *methylhexamine*.

methylhydantoin (meth'il-hi-dan'to-in) a crystalline compound, $\text{CH}_3\cdot\text{N}\cdot\text{CO}\cdot\text{NH}\cdot\text{CO}\cdot\text{CH}_2$, found in fresh meat, and formed

by the decomposition of creatine.

methylic (mě-thil'ik) containing methyl.

methylindol (meth''il-in'döl) skatole.

methylmelubrin (meth''il-mel'u-brin) dipyrone.

methylmercaptan (meth''il-mer-kap'tan) a gas, methyl hydrosulfide, $\text{CH}_3\cdot\text{SH}$, formed in the intestines by the decomposition of proteins; said to impart to the urine the odor noticed after eating asparagus, and to the breath the characteristic odor of fetor hepatis.

methylmorphine (meth''il-mor'fēn) codeine.

methylparaben (meth''il-par'ah-ben) [NF] chemical name: 4-hydroxybenzoic acid methyl ester. An antifungal agent, $\text{C}_8\text{H}_8\text{O}_3$, occurring as small, colorless crystals, or white, crystalline powder; used as a preservative in pharmaceutical preparations.

methylparafynol (meth''il-par'ah-fi'nol) meparfynol.

methylpentynol (meth''il-pen'ti-nol) meparfynol.

methylphenidate hydrochloride (meth''il-fen'i-dāt) [USP] chemical name: $(R^*, R^*)-(+)-\alpha$ -phenyl-2-piperidineacetic acid methyl ester hydrochloride. A central stimulant, $\text{C}_{14}\text{H}_{19}\text{NO}_2\cdot\text{HCl}$, occurring as a white, fine, crystalline powder; used in the treatment of hyperkinetic children, various types of depression, and narcolepsy, administered orally.

methylphenyl levulosazone (meth''il-fen'il lev'u-lo'sa-zōn) the methyl-phenyl-osazone of levulose, $\text{CH}_2\text{OH}(\text{CHOH})_4\text{C}[\text{N}\cdot\text{N}(\text{CH}_3)_2\cdot\text{C}_6\text{H}_5]\cdot\text{CHCH}\cdot\text{NHN}(\text{CH}_3)_2\cdot\text{C}_6\text{H}_5$; homologous with glucosazone.

methylphenylhydrazine (meth''il-fe'nil-hi'drah-zin) a reagent, $\text{C}_6\text{H}_5\text{N}(\text{CH}_3)\text{NH}_2$, by which ketoses can be distinguished from aldoses, as the former yield osazones, the latter, hydrazones.

methylprednisolone (meth''il-pred'ni-so-lōn) [USP] chemical name: 11 β ,17, 21-trihydroxy-6 α -methylpregna-1,4-diene. A synthetic glucocorticoid derived from prednisolone, $\text{C}_{22}\text{H}_{30}\text{O}_5$, with slightly greater anti-inflammatory activity and slightly less sodium-retaining activity than prednisolone; occurring as a white to practically white, crystalline powder, it is administered orally in the treatment of various conditions responsive to the anti-inflammatory actions of glucocorticoids, including rheumatoid arthritis and other collagen diseases, allergic conditions, and certain inflammatory eye diseases, and in acquired hemolytic anemias, lymphoma, and leukemia. **m. acetate** [USP], the 21-acetate ester of methylprednisolone, $\text{C}_{24}\text{H}_{32}\text{O}_6$, occurring as a white or practically white, crystalline powder, having actions and uses similar to those of the base; administered by enema, intra-articular, intramuscular, intralesional, or intracutaneous injection, and applied topically. **m. hemisuccinate** [USP], the hemisuccinate salt of methylprednisolone, $\text{C}_{22}\text{H}_{34}\text{O}_8$, occurring as a white or nearly white hygroscopic solid, having actions and uses similar to those of the base. **m. sodium phosphate**, the 21-phosphate disodium salt of methylprednisolone, $\text{C}_{22}\text{H}_{29}\text{Na}_2\text{O}_8\text{P}$, having actions similar to those of the base. **m. sodium succinate** [USP], the 21-succinate sodium salt of methylprednisolone, $\text{C}_{26}\text{H}_{33}\text{NaO}_8$, occurring as a white or nearly white, amorphous solid, having actions and uses similar to those of the base; used chiefly for short-term emergency treatment, administered by intramuscular or intravenous injection.

methylpurine (meth''il-pu'rin) see under *purine*.

methylpyrapone (meth''il-pi'rah-pōn) metyrapone.

methylpyridine (meth''il-pi'ri-din) a basic substance, $\text{C}_5\text{H}_4(\text{CH}_3)\text{N}$, oxidized in the body to pyridine-carboxylic acid.

methylquinoline (meth''il-kwin'o-lin) an oily basic substance, $\text{C}_9\text{H}_8\text{N}\cdot\text{CH}_3$, from the secretion of the skunk.

methylrosaniline chloride (meth''il-ro-zan'i-lin) gentian violet; see under *violet*.

methyltestosterone (meth''il-tes-tos'ter-ōn) [USP] chemical name: 17 β -hydroxy-17 α -methylandro-4-en-3-one. A synthetic androgen derived from cholesterol, $\text{C}_{26}\text{H}_{36}\text{O}_2$, occurring as white or creamy white crystals or crystalline powder, having actions similar to those of testosterone (q.v.); used as replacement therapy for androgen deficiency in males, in the palliation of certain inoperable mammary cancers, and to prevent postpartum breast pain and engorgement in the non-nursing mother, administered orally or sublingually.

methyltheobromine (meth''il-the'o-bro'mēn) caffeine.

methylthionine chloride (meth''il-thi'o-nin) methylene blue.

methylthiouracil (meth''il-thi'o-u'rah-sil) [USP] chemical name: 2,3-dihydro-6-methyl-2-thioxo-4(1*H*)-pyrimidinone. A thyroid suppressant, $\text{C}_5\text{H}_6\text{N}_2\text{OS}$, occurring as a white, crystalline powder; used in the treatment of hyperthyroidism, especially to prepare patients for thyroid surgery and to maintain those who are poor surgical risks, administered orally. Abbreviated MTU.

methyltransferase (meth''il-trans'fer-ās) any enzyme that catalyzes transmethylation, for example, the transfer of methyl groups from methionine (*S*-adenosylmethionine) to nicotinamide to form *N*-methylnicotinamide, to guanidinooacetic acid to form creatine, or to methylated bases of nucleic acids. Called also *transmethylase*.

methyluramine (meth''il-u-ram'in) methylguanidine.

methylxanthine (meth''il-zan'thin) any of the methylated de-

rivatives of xanthine, including caffeine, theobromine, and theophylline and their derivatives.

methynodiol diacetate (mē-thin'o-di'ōl) chemical name: 11 β -methyl-19-norpregn-4-en-20-yne-3 β ,17 α -diol; a progestin, $\text{C}_{25}\text{H}_{34}\text{O}_4$.

methylprylon (meth''i-pri'lōn) [USP] chemical name: 3,3-diethyl-5-methyl-2,4-piperidinedione. A hypnotic, $\text{C}_{10}\text{H}_{17}\text{NO}_2$, occurring as a white, or nearly white, crystalline powder; administered orally.

methylsergide (meth''i-ser'jīd) chemical name: 9,10-didehydro-*N*-[1-(hydroxymethyl)propyl]-1,6-dimethylergoline-8- β -carboxamide. A potent serotonin antagonist, $\text{C}_{21}\text{H}_{27}\text{N}_3\text{O}_2$, having direct vasoconstrictor effects. **m. maleate** [USP], the maleate salt of methylsergide, $\text{C}_{21}\text{H}_{27}\text{N}_3\text{O}_2\cdot\text{C}_4\text{H}_4\text{O}_4$, occurring as a white to yellowish white or reddish white, crystalline powder, having the same actions as the base; used as an analgesic in the treatment of vascular (migraine) headache in certain patients, administered orally.

metiamide (mē-ti'ah-mīd) chemical name: *N*-methyl-*N'*-(2-[(5-methyl-1*H*-imidazol-4-yl)methyl]thio)ethylthiourea; a histamine H_2 -antagonist, $\text{C}_9\text{H}_{16}\text{N}_4\text{S}_2$.

metiapine (mē-ti'ah-pēn) chemical name: 2-methyl-11-(4-methyl-1-piperazinyl)dibenzo[*b,f*][1,4]thiazepine; a tranquilizer, $\text{C}_{19}\text{H}_{21}\text{N}_3\text{S}$, which has been used in the treatment of schizophrenia.

Meticortelone (met''i-kor'tē-lōn) trademark for preparations of prednisolone.

Meticorten (met''i-kor'ten) trademark for a preparation of prednisone.

metizoline hydrochloride (mē-tiz'o-lēn) chemical name: 4,5-dihydro-2-[(2-methylbenzo[*b*]thien-3-yl)methyl]-1*H*-imidazole monohydrochloride; an adrenergic with vasoconstrictor effects, $\text{C}_{13}\text{H}_{14}\text{N}_2\text{S}\cdot\text{HCl}$.

metmyoglobin (met-mi'o-glo'bin) a compound formed from myoglobin by oxidation of the ferrous to the ferric state.

metoclopramide hydrochloride (met'o-klo'prah-mīd) chemical name: 4-amino-5-chloro-*N*-[2-(diethylamino)ethyl]-*o*-anisamide monohydrochloride; an antiemetic, $\text{C}_{14}\text{H}_{22}\text{ClN}_3\text{O}_2\cdot\text{HCl}$.

metocurine iodide (met'o-ku'rēn) [USP] chemical name: 6,6',12'-tetramethoxy-2,2',2'-tetramethyltubocurarium diiodide. A skeletal muscle relaxant, $\text{C}_{21}\text{H}_{27}\text{NO}_4\text{S}$, occurring as a white or nearly white, crystalline powder; administered intravenously. Called also *dimethyl tubocurarine iodide*.

metoestrum (met-es'trum) metestrus.

metoestrus (met-es'trus) metestrus.

metogest (met'o-jest) chemical name: 17 β -hydroxy-16,16-dimethylestr-4-en-3-one; a hormone, $\text{C}_{20}\text{H}_{30}\text{O}_2$.

Metol (me'tol) trademark for a photographic developer, *N*-methyl-*p*-aminophenol sulfate, $\text{CH}_3\text{NHC}_6\text{H}_4\text{OH}\cdot\text{H}_2\text{SO}_4$, which sometimes is the cause of a dermatitis in those who use it.

metolazone (mē-tōl'ah-zōn) chemical name: 7-chloro-1,2,3,4-tetrahydro-2-methyl-3-(2-methylphenyl)-4-oxo-6-quinazoline-sulfonamide. A diuretic, saluretic, and antihypertensive, $\text{C}_{18}\text{H}_{18}\text{ClN}_2\text{O}_3\text{S}$, used in the treatment of mild to moderate hypertension and edema associated with congestive heart failure and renal disease, administered orally.

metonymy (mē-ton'i-me) [*meta* + Gr. *onyma* name] disorder of thinking in which the patient uses, instead of the correct term, a poor approximation to it.

metopagus (mē-top'ah-gus) metopopagus.

metopic (me-top'ik) pertaining to the forehead; frontal.

metopimazine (met'o-pim'ah-zēn) chemical name: 1-[3-[2-(methylsulfonyl)phenothiazin-10-yl]propyl]isonipicotamide; an antiemetic, $\text{C}_{22}\text{H}_{27}\text{N}_3\text{O}_3\text{S}_2$.

metopion (mē-to'pe-on) glabella.

Metopirone (met'o-pi'rōn) trademark for preparations of metyrapone.

metopism (met'o-pizm) the persistence of the frontal suture.

metopo- [Gr. *metōpon* forehead] a combining form denoting relationship to the forehead.

metopodynia (met'o-po-din'e-ah) [*metopo* + Gr. *odynē* pain] frontal headache.

metopon (mē-to'pon) 1. [Gr. *metōpon* forehead] (*obs.*) the anterior portion of the frontal lobe of the brain. 2. a morphine derivative, methyl dihydromorphinone hydrochloride, used to relieve pain.

metopopagus (met'o-pop'ah-gus) [*metopo* + Gr. *pagos* thing fixed] a craniopagus in which the fusion is in the region of the forehead.

metoposcopy (met'o-pos'ko-pe) [*metopo* + Gr. *skopein* to examine] the analysis of character based on shape of the forehead.

metoprine (met'o-prēn) chemical name: 5-(3,4-dichlorophenyl)-6-methyl-2,4-pyrimidinediamine; an antineoplastic, $\text{C}_{11}\text{H}_{10}\text{Cl}_2\text{N}_4$.

metoprolol (mē-to'pro-lōl) chemical name: 1-[4-(2-methoxyethyl)phenyl]-3-[(1-methylethyl)amino]-2-propanol; an antidi-

ergic, $C_{15}H_{25}NO_3$, which is chiefly a beta₁ blocker. Used orally in the treatment of hypertension.

Metorchis (met-or'kis) [*meta-* + Gr. *orchis* testicle] *Pseudamphistomum*.

metoserpate hydrochloride (met'o-ser'pāt) chemical name: methyl 11,17α,18α-trimethoxy-3β,20α-yohimban-16β-carboxylate monohydrochloride; a veterinary sedative, $C_{24}H_{32}N_2O_8 \cdot HCl$.

metoxenous (mē-tok'sē-nus) [*meta-* + Gr. *xenos* host] requiring two hosts for the full cycle of existence; said of certain parasites.

metoxeny (mē-tok'sē-ne) the condition of being metoxenous.

metra (me'trah) [Gr. *metra* womb] the uterus, or womb.

metra- see *metro-*.

metralgia (mē-tral'je-ah) [*metra-* + *-algia*] pain in the uterus; metrodynia.

metraterm (me'trah-term) [*metra-* + L. *terminus* boundary] the external opening of the uterus in some tapeworms (Diphylobothriidae).

metratonia (me'trah-to'ne-ah) [*metra-* + Gr. *atonia* atony] uterine atony.

metratrophia (me'trah-tro'fe-ah) [*metra-* + Gr. *atrophia* atrophy] uterine atrophy.

Metrazol (met'rah-zol) trademark for preparations of pentylenetetrazol. See also under therapy.

metre (me'ter) meter.

metrechoscopy (met'rē-kos'ko-pe) [Gr. *metron* measure + *ēchō* sound + *skopein* to examine] combined mensuration, auscultation, and inspection.

metrectasia (me'trek-ta'se-ah) [*metra-* + Gr. *ektasis* extension] dilatation of the nonpregnant uterus.

metrectomy (mē-trek'to-me) [*metra-* + Gr. *ektomē* excision] hysterectomy.

metrectopia (me'trek-to'pe-ah) [*metra-* + Gr. *ektos* displaced + *-ia*] uterine displacement.

Metreton (met'rē-ton) trademark for a preparation of prednisolone sodium phosphate.

metreurynter (me'troo-rin'ter) [*metra-* + Gr. *eurynē* to stretch] an inflatable bag for dilating the cervical canal of the uterus.

metreurytis (me'troo'ri-sis) dilatation of the uterine cervix with the metreurynter.

metria (me'tre-ah) any inflammatory condition of the uterus during the puerperium.

metric (met'rik) [Gr. *metron* measure] 1. pertaining to measures based on the meter; see *Table of Weights and Measures*. 2. having the meter as a basis.

metrifonate (met'rī-fo'nāt) chemical name: (2,2,2-trichloro-1-hydroxyethyl)phosphoric acid dimethyl ester. An organophosphorus insecticide, $C_4H_9Cl_3O_4P$, used externally as a topical ectoparasiticide and internally as a veterinary anthelmintic. Called also *trichlorfon*.

metrioccephalic (met're-o-sē-fal'ik) [Gr. *metrios* moderate + *kephalē* head] having a skull with a vertical index between 72 and 77.

metriphonate (met'rī-fo'nāt) metrifonate.

metritis (mē-tri'tis) [*metra-* + *-itis*] inflammation of the uterus. Several varieties are named, according to the part of the organ affected—cervical, corporeal, interstitial, and parenchymatous. **m. dis/secans, dissecting m.**, metritis characterized by the

passage of fragments or large masses of the necrotic uterine wall. **puerperal m.**, infection of the uterus of the puerperal woman.

metrizamide (mē-triz'ah-mid) chemical name: 2-[[3-(acetyl-amino)-5-(acetylmethylamino)-2,4,6-triiodobenzoyl]amino]-2-deoxy-D-glucose. A radiopaque medium, $C_{18}H_{22}I_3N_3O_8$, used in lumbar myelography; it is water-soluble and is absorbed into the blood stream from the cerebrospinal fluid.

metrizoate sodium (met-rī-zo'āt) chemical name: 3-acet-amido-2,4,6-triiodo-5-(N-methylacetamido)benzoate; a diagnostic radiopaque medium, $C_{12}H_{10}I_3N_2NaO_4$.

metro-, metra- [Gr. *metra* uterus] a combining form denoting relationship to the uterus. See also *hystero-*, and words beginning thus.

metrocarcinoma (me'tro-kar'si-no'mah) endometrial carcinoma.

metrocele (me'tro-sēl) [*metro-* + Gr. *kēlē* hernia] hernia of the uterus; hysterocoele.

metrocopocoele (me'tro-kol'po-sēl) [*metro-* + Gr. *kolpos* vagina + *kēlē* hernia] hernia of the uterus and the vagina.

metrocystosis (me'tro-sis-to'sis) formation of cysts in the uterus.

metrocyte (me'tro-sit) [Gr. *mētēr* mother + *-cyte*] a mother cell.

metrodynia (me'tro-din'e-ah) [*metro-* + Gr. *odynē* pain] pain in the uterus; metralgia.

metroendometritis (me'tro-en'do-me-tri'tis) combined inflammation of the uterus and its mucous membranes.

metrofibroma (me'tro-fi-bro'mah) [*metro-* + *fibroma*] leiomyoma of the uterus.

metrogenous (mē-troj'ē-nus) derived from the uterus.

metrography (mē-trog'rah-fe) hysterography.

metroleukorrhoea (me'tro-lu'ko-rē'ah) leukorrhoea of uterine origin.

metrology (mē-trol'o-je) [Gr. *metron* measure + *-logy*] the science which deals with measurement.

metrolymphangitis (me'tro-limf'an-ji'tis) inflammation of the uterine lymphatic vessels.

metromalacia (me'tro-mah-la'she-ah) [*metro-* + Gr. *malakia* softness] abnormal softening of the uterus.

metromalacoma (me'tro-mal-ah-ko'mah) metromalacia.

metromenorrhagia (me'tro-men'o-ra'je-ah) metrorrhagia combined with menorrhagia.

metronidazole (me'tro-ni'dah-zōl) [USP] chemical name: 2-methyl-5-nitro-1H-imidazole-1-ethanol. An antitrichomonal and antiamebic, $C_6H_9N_3O_3$, occurring as white to pale yellow crystals or crystalline powder; administered orally and intravaginally in *Trichomonas vaginalis* infection in females and orally in male trichomoniasis, and administered orally in intestinal and extraintestinal amebiasis. It is also effective against infections with *Giardia lamblia* and obligate anaerobic bacteria.

metronoscope (mē-tron'o-skōp) an instrument for giving exercises in rhythmic reading to correct poorly coordinated ocular movements.

metroparalysis (me'tro-pah-ral'i-sis) paralysis of the uterus.

metropathia (me'tro-path'e-ah) metropathy. **m. hemorrhagica**, essential uterine hemorrhage.

MULTIPLES AND SUBMULTIPLES OF THE METRIC SYSTEM

MULTIPLES AND SUBMULTIPLES	PREFIX	PRONUNCIATION	SYMBOL
1,000,000,000,000 = 10 ¹²	tera	ter'a	T
1,000,000,000 = 10 ⁹	giga	ji'ga	G
1,000,000 = 10 ⁶	mega	meg'a	M
1,000 = 10 ³	kilo	kil'o	k
100 = 10 ²	hecto	hek'to	h
10 = 10	deka	dek'a	dk
[The unit = one]			
0.1 = 10 ⁻¹	deci	des'i	d
0.01 = 10 ⁻²	centi	sen'ti	c
0.001 = 10 ⁻³	milli	mil'i	m
0.000 001 = 10 ⁻⁶	micro	mi'kro	μ
0.000 000 001 = 10 ⁻⁹	nano	nan'o	n
0.000 000 000 001 = 10 ⁻¹²	pico	pe'co	p
0.000 000 000 000 001 = 10 ⁻¹⁵	femto	fem'to	f
0.000 000 000 000 000 001 = 10 ⁻¹⁸	atto	at'to	a

metropathic (me'tro-path'ik) pertaining to or characterized by uterine disorder.

metropathy (mē-trop'ah-the) [*metro-* + Gr. *pathos* suffering] any uterine disease or disorder. **syncytiotrophoblastic m.**, syncytial endometritis.

metroperitoneal (me'tro-per'i-to-ne'al) pertaining to the uterus and peritoneum, or communicating with the uterine and peritoneal cavities, as a metroperitoneal fistula.

metroperitonitis (me'tro-per'i-to-ni'tis) [*metro-* + *peritonitis*] inflammation of the peritoneum about the uterus, or peritonitis resulting from infection after metritis.

metrophlebitis (me'tro-fle-bi'tis) [*metro-* + Gr. *phleps* vein + *-itis*] inflammation of the veins of the uterus.

Metopine (met'ro-pin) trademark for preparations of methyldopamine nitrate.

metroplasty (me'tro-plas'te) reconstructive surgery on the uterus.

metropolis (me-trop'o-lis) [Gr. *mētropolis* mother-state, as opposed to her colonies] the area in which a particular species of organisms commonly occurs.

metroptosis (me'tro-to'sis) [*metro-* + Gr. *ptōsis* falling] downward displacement, or prolapse of the uterus.

metrorrhagia (me'tro-ra'je-ah) [*metro-* + Gr. *rhēgnynai* to burst out] uterine bleeding, usually of normal amount, occurring at completely irregular intervals, the period of flow sometimes being prolonged. **m. myopathica**, uterine hemorrhage due to insufficient contraction of uterine muscles after parturition.

metrorrhea (me'tro-re'ah) [*metro-* + Gr. *rhoia* flow] a free or abnormal uterine discharge.

metrorrhexis (me'tro-rek'sis) [*metro-* + Gr. *rhēxis* rupture] rupture of the uterus.

metrosalpingitis (me'tro-sal'pin-ji'tis) [*metro-* + Gr. *salpinx* tube + *-itis*] inflammation of the uterus and oviducts.

metrosalpingography (me'tro-sal'ping-gog'rah-fe) hysterosalpingography.

metroscope (me'tro-skōp) hysteroscope.

metrostasis (mē-tros'tah-sis) [Gr. *metron* measure + *stasis* a setting] a state in which the length of a muscle fiber is relatively fixed, and at which length it contracts and relaxes.

metrostaxis (me'tro-stak'sis) [*metro-* + Gr. *staxis* a dripping] a slight but persistent escape of blood from the uterus.

metrostenosis (me'tro-ste-no'sis) [*metro-* + Gr. *stenosis* contraction] contraction or stenosis of the cavity of the uterus, as in Asherman's syndrome.

metrotherapy (met'ro-ther'ah-pe) [Gr. *metron* measure + *therapeia* treatment] treatment by measurement, i.e., by demonstrating to the patient his improvement by means of accurate measurements of the increase in the voluntary movements of an impaired joint.

metrotomy (mē-trot'o-me) (*obs.*) hysterotomy.

metrotoxin (me'tro-tok'sin) a substance from the pregnant uterus which is thought to exert an inhibitory action on ovarian function.

metrotubography (me'tro-tu-bog'rah-fe) hysterosalpingography.

-metry [Gr. *metrein* to measure] a word termination meaning the act of measuring, or the measurement of, the object measured being indicated by the stem to which it is affixed, as *hemoglobinometry*.

M. et sig. abbreviation for L. *mi'sce et sig'na*, mix and write a label.

Mett's method, test tubes (mets) [Emil Ludwig Paul *Mett*, German physician of the 19th century] see *Nirenstein and Schiff's method*, under *method*, and see under *tests*, and *tube*.

Metubine (mē-tu'bin) trademark for a preparation of metocurine iodide.

meturedopa (met'ūr-ē-dē'pah) chemical name: ethyl[bis(2,2-dimethyl-1-aziridinyl)phosphinyl]carbamate; an antineoplastic, C₁₁H₂₂N₃O₃P.

Metycaine (met'ī-kān) trademark for preparations of piperocaine.

metypapone (mē-tēr'ah-pōn) [USP] chemical name: 2-methyl-1,2-di-3-pyridyl-1-propanone. A synthetic compound, C₁₄H₁₄N₂O, that selectively inhibits the enzyme (steroid 11β-hydroxylase) involved in the biosynthesis of corticosteroids, particularly cortisol; occurring as a white to light amber, fine, crystalline powder, it is used as a diagnostic aid for determination of hypothyroidism; also a diagnostic aid for determination of hypothyroidism. Called also *metyrapone*, *metapyrone*, and *methylpyrapone*. **m. tartrate**, the tartrate salt of metypapone, C₁₄H₁₄N₂O·2C₄H₆O₆, used for the same purpose as the base; administered by intravenous infusion.

metytrosine (mē-ti'ro-sēn) chemical name: (-)-α-methyl-L-tyrosine; an antihypertensive, C₁₀H₁₃NO₃.

Meulengracht's diet, method (moi'len-grakts) [Einar *Meulen-*

gracht, Danish internist, born 1887] see under *diet* and *method*.

Mev. million electron volts; the equivalent of 3.82×10^{-14} small calories, or 1.6×10^{-6} ergs.

mevalonate (mē-val'o-nāt) a salt or dissociated form of mevalonic acid, a precursor of squalene, cholesterol, and coenzyme Q in plants and animals and of carotenoids and rubber in plants.

mexrenoate potassium (meks-ren'o-āt) chemical name: 17-hydroxy-3-oxo-17α-pregn-4-ene-7α,21-dicarboxylic acid 7-methyl ester monopotassium salt dihydrate; an aldosterone antagonist, C₂₄H₃₃KO₆·2H₂O.

Meyer's disease (mi'erz) [Hans Wilhelm *Meyer*, Danish physiologist, 1824-1895] see under *disease*.

Meyer's line, organ, sinus (mi'erz) [Georg Hermann von *Meyer*, anatomist in Zürich, 1815-1892] see under *line*, *organ*, and *sinus*.

Meyerhof (mi'er-hof'), Otto Fritz. German physiologist, 1884-1951, noted for his work on the metabolism of muscles; co-winner, with Archibald Vivian Hill, of the Nobel prize for medicine and physiology in 1922.

Meynert's bundle, etc. (mi'nerts) [Theodor Herman *Meynert*, professor of neurology and psychiatry at Vienna, 1833-1892] see under *bundle*, *cell*, *commissure*, *fasciculus*, and *tract*.

Meynet's nodes (ma-nāz') [Paul Claude Hyacinthe *Meynet*, French physician, 1831-1892] see under *node*.

mezereon (me-ze're-on) mezereum.

mezereum (me-ze're-um) [L.] the dried bark of *Daphne mezereum* L. (Thymelaeaceae), a shrub of Europe; formerly used as a diaphoretic, diuretic, and stimulant. It has long been recognized as a poisonous plant, particularly through ingestion of its berries. The plant parts are acrid and produce vesication when rubbed on the skin.

mezlocillin (mez'lo-sil'in) an antibiotic of unspecified action, C₂₁H₂₅N₅O₈S₂.

μf. microfarad.

M.F.D. minimum fatal dose.

M. flac. abbreviation for L. *membra'na flac'cida* (pars flaccida membranae tympani) [NA].

M. ft. abbreviation for L. *mistu'ra fi'at*, let a mixture be made.

Mg chemical symbol for *magnesium*.

mg. milligram.

my milligramma (millimicrogram, micromilligram, or nanogram).

μg. microgram.

μγ microgamma (micromicrogram, or picogram).

MgCl₂ magnesium chloride.

mgm abbreviation for milligram.

MgO magnesium oxide.

MgSO₄ magnesium sulfate.

MHC major histocompatibility complex.

M.H.D. minimum hemolytic dose.

mHg millimeters of mercury.

mho (mo) [*ohm* spelled backwards] siemens.

miana (mi-an'ah) a relapsing fever found throughout Iran, and apparently in Syria, Cyprus, Libya, Israel, and Jordan.

Mianeh bug [the city of *Mianeh*, Iran] see under *bug*.

mianserin hydrochloride (me-an'ser-in) chemical name: 1,2,3,4,10,14b-hexahydro-2-methyldibenzo[c,f]pyrazino[1,2-a]azepine monohydrochloride; a serotonin inhibitor and antihistaminic, C₁₈H₂₀N₂·HCl.

miasm (mi'azm) *miasma*.

miasma (mi-az'mah) [Gr. "defilement, pollution"] a supposed noxious emanation from the soil or earth, alleged to be the cause of diseases endemic in certain areas, such as malaria, before the true cause became known. See *tellurism*.

miasmatic (mi'az-mat'ik) pertaining to or caused by *miasma*.

Mibelli's porokeratosis (me-bel'ez) [Vittorio *Mibelli*, Italian dermatologist, 1860-1910] porokeratosis.

mibolone (mi-bōl'er-ōn) chemical name: 17β-hydroxy-7α,17-dimethylester-4-en-3-one; an androgenic and anabolic agent, C₂₀H₃₀O₂.

mica (mi'kah) [L.] 1. a crumb or grain; a small particle. 2. a group of complex aluminum silicate compounds, some of which can produce pulmonary fibrosis if inhaled in finely divided form in high concentrations over a prolonged period.

micaceous (mi-ka'shus) pertaining to or resembling mica; occurring in silvery gray flakes.

MicaTin (mi'kah-tin) trademark for preparations of miconazole nitrate.

mication (mi-ka'shun) any quick motion, such as winking.

micatosis (mi'kah-to'sis) pneumoconiosis due to inhalation of and tissue reaction to mica particles.

micella (mi-sel'ah) see *micelle*.

micelle (mi-sel') a colloid particle formed by an aggregation of small molecules.

Michaelis's rhomboid (me-ka'lēz) [Gustav Adolf *Michaelis*, Kiel gynecologist, 1798-1848] see under *rhomboid*.

miconazole nitrate (mī-kon'ah-zōl) chemical name: 1-[2-(2,4-dichlorophenyl)-2-[(2,4-dichlorophenyl) methoxy] ethyl]-1*H*-imidazole mononitrate. A synthetic antifungal agent, C₁₈H₁₄Cl₂N₂O·HNO₃, used topically in the treatment of tinea pedis, tinea cruris, and tinea corpora due to *Trichophyton rubrum*, *T. mentagrophytes*, and *Epidermophyton floccosum*; of cutaneous candidiasis, and of tinea versicolor; and intravaginally in the treatment of vulvovaginal candidiasis.

micr- see *micro-*.

micra (mī'krah) plural of *micron*.

micranatomy (mī'kran-at'o-me) [*micro-* + *anatomy*] microscopical anatomy; histology.

micrangiopathy (mī'kran-je-op'ah-the) (*obs.*) microangiopathy.

micrangium (mī-kran'je-um) a capillary.

micranthine (mī-kran'thin) a crystalline alkaloid, C₃₄H₃₂N₂O₆, from bark of the tree *Daphnandra micrantha* (Tul.) Benth. (Monimiaceae).

micrencephalia (mī'kren-sē-fa'le-ah) micrencephaly.

micrencephalon (mī'kren-sef'ah-lon) [*micr-* + Gr. *enkephalos* brain] 1. a small brain. 2. (*obs.*) the cerebellum.

micrencephalous (mī'kren-sef'ah-lus) having a small brain.

micrencephaly (mī'kren-sef'ah-le) [*micr-* + Gr. *enkephalos* brain] abnormal smallness of the brain.

micrergy (mī'krer-je) micrurgy.

micro-, micr- [Gr. *mikros* small] combining form designating small size; used in naming units of measurement to indicate one-millionth (10⁻⁶) of the unit designated by the root with which it is combined.

microabscess (mī'kro-ab'ses) a very small, localized collection of pus. **Munro m.**, a minute collection of neutrophilic polymorphonuclear leukocytes lying immediately below the horny layer or just within the upper portion of the malpighian layer of the epidermis; seen in psoriasis. **Pautrier m.**, a collection of hyperchromatic mononuclear cells within the epidermis, characterizing malignant lymphoma of the skin, particularly mycosis fungoides.

microadenoma (mī'kro-ad'ē-no'mah) an adenoma, as of the anterior pituitary gland, less than 10 mm. in diameter.

microadenopathy (mī'kro-ad'ē-nop'ah-the) [*micro-* + Gr. *adēn* gland + *pathos* disease] disease of the small lymphatics.

microaerophile (mī'kro-a'er-o-fil) a microaerophilic microorganism.

microaerophilic (mī'kro-a'er-o-fil'ik) [*micro-* + *aero-* + Gr. *philein* to love] requiring oxygen for growth but at lower concentration than is present in the atmosphere; said of bacteria.

microaerophilous (mī'kro-a'er-of'i-lus) microaerophilic.

microaerotonometer (mī'kro-a'er-o-to-nom'ē-ter) an instrument for measuring the volume of gases in the blood.

microaggregate (mī'kro-ag'rē-gat) a microscopic collection of particles, as of platelets, leukocytes, and fibrin that occurs in stored blood.

microaleuriospore (mī'kro-ah-lu're-o-spōr) a small aleuriospore; sometimes used interchangeably with microcondium.

microammeter (mī'kro-am'ē-ter) an instrument for measuring currents in the microampere range.

microanalysis (mī'kro-ah-nal'i-sis) [*micro-* + *analysis*] the chemical analysis of minute quantities of material.

microanastomosis (mī'kro-an-as'to-mo'sis) anastomosis between very small tubular structures.

microanatomy (mī'kro-ah-nat'o-me) histology, especially organology.

microaneurysm (mī'kro-an'ū-rizm) a microscopic aneurysm, a characteristic feature of thrombotic purpura.

microangiopathic (mī'kro-an'je-o-path'ik) pertaining to or characterized by microangiopathy.

microangiopathy (mī'kro-an'je-op'ah-the) [*micro-* + Gr. *angion* vessel + *pathos* disease] disease of the small blood vessels. **diabetic m.**, the presence of generalized basement membrane thickening of capillaries throughout many vascular beds, occurring in diabetics. **thrombotic m.**, the formation of thrombi in the arterioles and capillaries; see *thrombotic thrombocytopenic purpura*, under *purpura*.

microangiосcopy (mī'kro-an'je-os'ko-pe) capillaroscopy.

microbacteria (mī'kro-bak-te're-ah) [L.] plural of *microbacterium*.

Microbacterium (mī'kro-bak-te're-um) a genus of microorganisms of the family Corynebacteriaceae, order Eubacteriales, made up of gram-positive rods found in dairy products and characterized by relatively high resistance to heat. **M. flavum**, an aerobic species occurring predominantly in dairy products and producing lactic acid without gas in carbohydrate

fermentation. **M. lac'ticum**, an aerobic species occurring in the intestinal tract and producing lactic acid without gas in carbohydrate fermentation.

microbacterium (mī'kro-bak-te're-um), pl. *microbacteria* [L.] 1. an organism belonging to the genus *Microbacterium*. 2. a microorganism.

microbalance (mī'kro-bal'ans) a balance for measuring minute changes in weight.

microbar (mī'kro-bahr) a unit of pressure, being one-millionth (10⁻⁶) bar.

microbe (mī'krōb) [*micro-* + Gr. *bios* life] a minute living organism, a microphyte or microzoon; applied especially to those minute forms of life which are capable of causing disease in animals, including bacteria, protozoa, and fungi.

microbemia (mī'kro-be'me-ah) (*obs.*) microbiemia.

microbial (mī-kro'be-al) of or pertaining to or caused by microbes.

microbian (mī-kro'be-an) 1. pertaining to or of the nature of a microbe. 2. a microbe.

microbic (mī-kro'bik) microbial.

microbicidal (mī-kro'bi-si'dal) [*microbe* + L. *caedere* to kill] destructive to microbes.

microbicide (mī-kro'bī-sid) [*microbe* + L. *caedere* to kill] an agent that destroys microbes.

microbid (mī'kro-bid) (*obs.*) any skin lesion due to allergy to a microorganism or its products.

microbiemia (mī'kro-bi-e'me-ah) (*obs.*) the presence of microbes in the blood; bacillema; septicemia.

microbioassay (mī'kro-bi'o-as'a) determination of the active power of a nutrient or other factor by noting its effect upon the growth of a microorganism, as compared with the effect of a standard preparation.

microbiological (mī'kro-bi'o-loj'i-kal) pertaining to microbiology.

microbiologist (mī'kro-bi-ol'o-jist) one specializing in microbiology.

microbiology (mī'kro-bi-ol'o-je) [*micro-* + Gr. *bios* life + *-logy*] the science which deals with the study of microorganisms, including bacteria, fungi, viruses, and pathogenic protozoa.

microbiophotometer (mī'kro-bi'o-fotom'ē-ter) an instrument for measuring the growth of bacterial cultures by the turbidity of the medium.

microbiota (mī'kro-bi-o'tah) the microscopic living organisms of a region; the combined microflora and microfauna of a region.

microbiotic (mī'kro-bi-ot'ik) pertaining to the microbiota, or to microscopic living organisms.

microblast (mī'kro-blast) [*micro-* + Gr. *blastos* germ] an erythroblast of small size, i.e., 5μ or less in diameter.

microblepharia (mī'kro-blē-fa're-ah) [*micro-* + Gr. *blepharon* eyelid + *-ia*] a developmental anomaly characterized by abnormal shortness of the vertical dimensions of the eyelids.

microblepharism (mī'kro-blef'ah-rizm) microblepharia.

microblepharon (mī'kro-blef'ah-ron) an abnormally small eyelid.

microblephary (mī'kro-blef'ah-re) microblepharia.

microbody (mī'kro-bod'e) 1. any of the membrane-bound, ovoid or spherical, granular cytoplasmic particles containing enzymes and other substances, which originate in the endoplasmic reticulum of vertebrate liver and kidney cells and other cells, and in protozoa, yeast, and many cell types of higher plants. Two types of microbodies are *peroxisomes* (found in vertebrates) and *glyoxysomes* (found in plants and microorganisms). 2. peroxisome.

microbrachia (mī'kro-bra'ke-ah) [*micro-* + Gr. *brachion* arm] abnormal smallness of the arms.

microbrachius (mī'kro-bra'ke-us) [*micro-* + Gr. *brachion* arm] a fetus with prenatally small arms.

microbrenner (mī'kro-bren'er) [*micro-* + Ger. *Brenner* burner] a needle-pointed electric cautery.

microburet (mī'kro-bu-ret') a buret with a capacity of the order of 0.1 to 10 ml., with graduated intervals of 0.001 to 0.02 ml.

microcalix (mī'kro-kal'iks) a very small renal calix arising by caliceal branching, usually at the side of a calix of normal size. Written also *microcalyx*.

microcalorie (mī'kro-kal'o-re) the heat required to raise 1 ml. of distilled water from 0 to 1° C.

microcalory (mī'kro-kal'o-re) microcalorie.

microcalyx (mī'kro-kal'iks) microcalix.

microcardia (mī'kro-kar'de-ah) [*micro-* + Gr. *kardia* heart] smallness of the heart.

microcaulia (mī'kro-kaw'le-ah) [*micro-* + Gr. *kaulos* penis] abnormal smallness of the penis.

microcentrum (mī'kro-sen'trum) [*micro-* + Gr. *kentron* center] centrosome.

microcephalia (mī'kro-sē-fa'le-ah) microcephaly.

microcephalic (mi''kro-sē-fal'ik) pertaining to or exhibiting microcephaly.

microcephalism (mi''kro-sef'ah-lizm) microcephaly.

microcephalous (mi''kro-sef'ah-lus) microcephalic.

microcephalus (mi''kro-sef'ah-lus) an individual with a very small head.

microcephaly (mi''kro-sef'ah-le) [*micro-* + Gr. *kephalē* head] abnormal smallness of the head, usually associated with mental retardation.

microcheilia (mi''kro-ki'le-ah) [*micro-* + Gr. *cheilos* lip] abnormal smallness of the lips.

microcheiria (mi''kro-ki're-ah) [*micro-* + Gr. *cheir* hand + *-ia*] abnormal smallness of the hands, as a result of hypoplasia of all the skeletal elements.

microchemical (mi''kro-kem'i-kal) pertaining to microchemistry.

microchemistry (mi''kro-kem'is-tre) [*micro-* + *chemistry*] the study of chemical reactions using quantities invisible to the naked eye; chemistry which deals with minute quantities (a few milligrams) of substances, using apparatus of small size. Cf. *macrochemistry*.

microcinematography (mi''kro-sin'ē-mah-tog'rah-fe) the making of moving picture photographs of microscopic subjects.

microcirculation (mi''kro-sir'ku-la'shun) the flow of blood in the entire system of finer vessels (100 microns or less in diameter) of the body (the microvasculature).

microclimate (mi''kro-kli'mit) the immediate climatic environment, as that of a vector insect.

microclyster (mi''kro-kli'ster) [*micro-* + *clyster*] a rectal injection of a small amount of substance.

microcnemia (mi''kro-ne'me-ah) [*micro-* + Gr. *knēmē* tibia] abnormal shortness of the lower leg.

Micrococcaceae (mi''kro-kok-ka'se-e) [*micro-* + Gr. *kokkos* berry] in some systems of classification, a family of gram-positive, aerobic or facultatively anaerobic bacteria of the order Eubacteriales, made up of spherical cells dividing primarily in two or three planes, and sometimes remaining in contact after division, and including the genera *Gaffkya*, *Methanococcus*, *Micrococcus*, *Peptococcus*, *Sarcina*, and *Staphylococcus*. In other systems of classification, it includes the genera *Micrococcus*, *Planococcus*, and *Staphylococcus*.

micrococci (mi''kro-kok'si) plural of *micrococcus*.

Micrococcus (mi''kro-kok'us) a genus of microorganisms of the family Micrococcaceae, order Eubacteriales, spherical, gram-positive cells, usually occurring in irregular masses, saprophytic and nonpathogenic forms found in soil, water, etc. Sixteen species have been recognized.

micrococcus (mi''kro-kok'us) 1. an organism of the genus *Micrococcus*. 2. a spherical microorganism of extremely small size.

microcolon (mi''kro-ko'lon) an abnormally small colon.

microcolony (mi''kro-kol'o-ne) a microscopical colony of bacteria.

microconcentration (mi''kro-kon'-sentra'shun) a minute amount of solute, less than 0.05 per cent of the solution.

microconidia (mi''kro-ko-nid'e-ah) plural of *microconidium*.

microconidium (mi''kro-ko-nid'e-um), pl. *microconidia*. a small, usually single-celled conidium or exospore; sometimes used interchangeably with microaleuriospore; see *spore*.

microcoria (mi''kro-ko're-ah) [*micro-* + Gr. *korē* pupil] smallness of the pupil.

microcornea (mi''kro-kor'ne-ah) [*micro-* + *cornea*] a usually bilateral developmental anomaly, in which the cornea is unusually small (less than 11 mm. after one year of age), due to arrest of development. It may be associated with other ocular abnormalities, such as microphthalmia, hydrophthalmia, multiple defects of the anterior chamber, cataract, and glaucoma, and may be inherited as an X-linked recessive or as an autosomal dominant trait.

microcoulomb (mi''kro-koo'lom) a unit of quantity of current electricity, being one one-millionth (10^{-6}) of a coulomb. Abbreviated μCoul .

microcrania (mi''kro-kra'ne-ah) abnormal smallness of the skull, the cranial cavity being reduced in all diameters, and the facial area being disproportionately large in comparison.

microcrith (mi''kro-krith) [*micro-* + *crith*] (*obs.*) the weight of one atom of hydrogen.

microcrystal (mi''kro-kris'tal) an extremely minute crystal.

microcrystalline (mi''kro-kris'tal-in) [*micro-* + *crystalline*] made up of minute crystals.

microcurie (mi''kro-ku're) a unit of radioactivity, being one one-millionth (10^{-6}) curie, or the quantity of radioactive material in which the number of nuclear disintegrations is 3.7×10^4 per second. Abbreviated μC .

microcurie-hour (mi''kro-ku're-owr') a unit of exposure equivalent to that obtained by exposure for one hour to radioactive

material disintegrating at the rate of 3.7×10^4 atoms per second. Abbreviated $\mu\text{C hr}$.

Microcycylus (mi''kro-si'klus) a genus of microorganisms of the family Spirillaceae, suborder Pseudomonadineae, order Pseudomonadales, made up of nonmotile, small, slightly curved rods which during growth form a closed ring. The type species is *M. aquaticus*.

microcyst (mi''kro-sist) [*micro-* + Gr. *kystis* sac, bladder] a very small cyst.

microcystometer (mi''kro-sis-tom'ē-ter) a small portable cystometer.

microcytase (mi''kro-si'tās) a cytase formed by microphages and capable of dissolving bacteria.

microcyte (mi''kro-sit) [*micro-* + *-cyte*] an abnormally small erythrocyte, i.e., one 5 microns or less in diameter.

microcythemia (mi''kro-si-the'me-ah) [*microcyte* + Gr. *haima* blood + *-ia*] a condition in which the erythrocytes are smaller than normal.

microcytosis (mi''kro-si-to'sis) microcythemia.

microcytotoxicity (mi''kro-si'to-tok-sis'i-te) the capability of lysing or damaging cells as detected in procedures (e.g., lymphocytotoxicity procedures) using extremely minute amounts of material, viz., target cells, antibody, and complement.

microdactylia (mi''kro-dak-til'e-ah) microdactyly.

microdactyly (mi''kro-dak'ti-le) [*micro-* + Gr. *daktylos* finger] abnormal smallness of the digits.

microdensitometer (mi''kro-dens'i-tom'ē-ter) an instrument used in spectroscopy to measure lines in a spectrum by light transmission measurement.

microdentism (mi''kro-den'tizm) microdontia.

microdermatome (mi''kro-der'mah-tōm) an instrument for cutting very thin skin sections.

microdetermination (mi''kro-de-ter'mī-na'shun) a chemical examination in which minute quantities of the substance to be examined are used.

microdissection (mi''kro-di-sek'shun) dissection of tissue or cells under the microscope.

microdont (mi''kro-dont) [*micro-* + Gr. *odous* tooth] having a dental index below 42.

microdontia (mi''kro-don'she-ah) abnormal smallness of the teeth; it may affect a single tooth, or all of them (*generalized m.*), and be true or only relative.

microdontic (mi''kro-don'tik) pertaining to or characterized by microdontia.

microdontism (mi''kro-don'tizm) microdontia.

microdosage (mi''kro-do'sij) dosage in small quantities.

microdose (mi''kro-dōs) a very small dose.

microdrepanocytic (mi''kro-drep'ah-no-sit'ik) containing microcytic and drepanocytic elements, as in sickle cell-thalassemia disease.

microdrepanocytosis (mi''kro-drep'ah-no-si-to'sis) sickle cell-thalassemia disease.

microecology (mi''kro-ē-kol'o-je) the branch of ecology of parasites concerned with the relationships of the organisms and the environment provided by the hosts.

microecosystem (mi''kro-e'ko-sis'tem) a miniature ecological system, occurring naturally or produced in the laboratory for experimental purposes.

microelectrophoresis (mi''kro-e-lek'tro-fo-re'sis) electrophoresis in which migrating particles are observed by light microscopy; submicroscopic particles such as viruses are made visible by aggregation or are adsorbed onto carriers such as collodion particles or finely ground glass.

microelectrophoretic (mi''kro-ē-lek'tro-fo-ret'ik) pertaining to microelectrophoresis.

microembolus (mi''kro-em'bo-lus), pl. *microemboli*. an embolus of microscopic size.

microencephaly (mi''kro-en-sef'ah-le) micrencephaly.

microenvironment (mi''kro-en-vi'ron-ment) the environment at the microscopical or cellular level.

microerythrocyte (mi''kro-ē-rith-ro-sit) microcyte.

microestimation (mi''kro-es'ti-ma'shun) microdetermination.

microfarad (mi''kro-far'ad) a unit of electrical capacity, being one one-millionth of a farad (10^{-6} f.); abbreviated μf .

microfauna (mi''kro-faw'nah) the animal life, visible only under the microscope, which is present in or characteristic of a special location.

microfibril (mi''kro-fi'bril) an extremely small fibril.

microfilament (mi''kro-fil'ah-ment) any of the submicroscopic filaments composed chiefly of actin, found in the cytoplasmic matrix of almost all cells, often in close association with the microtubules; they are believed by some to have a supportive and cytoskeletal function and/or to mediate movement of the cell and of the organelles within it.

microfilaremia (mi''kro-fil''ah-re'me-ah) the presence of microfilariæ in the circulating blood.

microfilaria (mi''kro-fi-la're-ah) the prelarval stage of Filarioidea in the blood of man and in the tissues of the vector. This term is sometimes incorrectly used as a genus name and is then spelled

Microfilariae of (A) *Wuchereria bancrofti*, 270 × 8.5 μ; (B) *Brugia malayi*, 200 × 6 μ; (C) *Loa loa*, 275 × 7 μ; (D) *Acanthocheilonema perstans*, 200 × 4.5 μ; (E) *Mansonella ozzardi*, 205 × 5 μ; (F) *Onchocerca volvulus*, 320 × 7.5 μ; (G) *Dirofilaria immitis*, 300 × 6 μ. A, B, and C have sheaths covering the body. (Cheng.)

with a capital M. **m. bancrof'ti**, the microfilaria of *Wuchereria bancrofti*. **m. diur'na**, the microfilaria of *Loa loa*. **m. lo'a**, the microfilaria of *Loa loa*. **m. streptocer'ca**, the microfilaria of *Dipetalonema streptocerca*, found in the subcutaneous tissues. **m. vol'vulus**, the prelarval form of *Onchocerca volvulus*, found in skin snips taken from infected persons.

microfilm (mi''kro-film) 1. a trade term for 16- or 35-millimeter film to be used in high-speed automatic machines for the photographic reproduction, in greatly reduced size, of books, documents, forms, or other record files. 2. to photographically reproduce, in greatly reduced size, on film specially designed for the purpose.

microflora (mi''kro-flo'rah) the plant life, visible only under the microscope, which is present in or characteristic of a special location.

microfluorometry (mi''kro-floo'or-om'ē-tre) cytophotometry.

microgamete (mi''kro-gam'ēt) [*micro-* + Gr. *gametēs* spouse] the smaller, actively motile male gamete which fertilizes the macrogamete in anisogamy.

microgametocyte (mi''kro-gah-me'to-sīt) [*micro-* + Gr. *gametēs* spouse + *-cyte*] 1. a cell that produces microgametes. 2. the male gametocyte of certain Sporozoa, such as malarial plasmodia.

microgametophyte (mi''kro-gah-me'to-fit) [*micro-* + Gr. *gametēs* husband + *phyton* plant] the male gametophyte in heterosporous plants, developed from the microspore.

microgamma (mi''kro-gam'mah) picogram.

microgamy (mi-krog'ah-me) conjugation or fusion when the gametes are smaller than the somatic cells.

microgastria (mi''kro-gas'tre-ah) [*micro-* + Gr. *gastēr* stomach + *-ia*] congenital smallness of the stomach.

microgenesis (mi''kro-jen'ē-sis) [*micro-* + Gr. *genesis* production] abnormally small development of a part.

microgenia (mi''kro-jen'e-ah) [*micro-* + Gr. *genys* jaw] underdevelopment of the mental symphysis of the mandible, resulting in an extremely small chin; a similar appearance is caused by malocclusion with excessive prominence of the alveolar structures.

microgenitalism (mi''kro-jen'i-tal-izm) [*micro-* + *genitalism*] smallness of the external genitals.

microglia (mi-krog'le-ah) the small, non-neural, interstitial cells of mesodermal origin that form part of the supporting structure of the central nervous system. They are of various forms and may have slender branched processes. They are migratory and act as phagocytes to waste products of nerve tissue. Called also *Hortega cells*, *gitter cells*, *mesoglia*, and *microgliocytes*.

microgliacyte (mi-krog'le-ah-sīt) microgliocyte.

microglial (mi-krog'le-al) of or pertaining to the microglia.

microgliocyte (mi-krog'le-o-sīt) [*microglia* + *-cyte*] the early cell which develops into a microglial cell.

microglioma (mi''kro-gli-o'mah) a tumor composed of microglial cells.

microgliomatosis (mi''kro-gli'o-mah-to'sis) a condition characterized by the formation of tumors containing microglia; called also *reticulum cell sarcoma of the brain*.

microglobulin (mi''kro-glob'u-lin) any globulin, or any fragment of a globulin, of low molecular weight.

microglossia (mi''kro-glos'e-ah) [*micro-* + Gr. *glōssa* tongue + *-ia*] undersize of the tongue.

micrognathia (mi''kro-na'the-ah) [*micro-* + Gr. *gnathos* jaw + *-ia*] unusual or undue smallness of the jaws.

microgonioscope (mi''kro-go'ne-o-skōp) [*micro-* + Gr. *gōnia* angle + *skopein* to examine] an instrument for observing and measuring the angles of the anterior chamber of the eye; used in examining the eye in glaucoma.

microgram (mi''kro-gram) a unit of mass (weight) of the metric system, being one-millionth of a gram (10⁻⁶ gm.), or one one-thousandth of a milligram (10⁻³ mg.). Abbreviated μg. or mcg. Symbol γ.

micrograph (mi''kro-graf) 1. an instrument for recording extremely minute movements. It acts by making a greatly magnified record on a photographic film of the minute motions of a diaphragm. 2. the photograph of a minute object or specimen (tissue, etc.) as seen through a microscope. **electron m.**, the photograph of an object through an electron microscope.

micrography (mi-krog'rah-fe) [*micro-* + Gr. *graphein* to write] 1. an account of microscopic objects. 2. examination with the microscope.

microgyri (mi''kro-ji'ri) plural of *microgyrus*.

microgyria (mi''kro-ji'r'e-ah) [*micro-* + Gr. *gyros* + *-ia*] polymicrogyria.

microgyrus (mi''kro-ji'rus), pl. *microgy'ri* [*micro-* + *gyrus*] an abnormally small, malformed convolution of the brain.

microhematocrit (mi''kro-he-mat'o-krit) the rapid determination of packed cell volume of erythrocytes of an extremely small quantity of blood, by use of a capillary tube and a high speed centrifuge.

microhepatia (mi''kro-he-pat'e-ah) [*micro-* + Gr. *hēpar* liver] smallness of the liver.

microhistology (mi''kro-his-tol'o-je) [*micro-* + *histology*] microscopical histology.

microhm (mi''krōm) [*micro-* + *ohm*] one-millionth part of an ohm.

microincineration (mi''kro-in-sin'er-a'shun) the incineration of minute specimens of tissue or other substance, for identification from the ash of the elements composing it.

microinfarct (mi''kro-in'farkt) a very small infarct due to obstruction of circulation in capillaries, arterioles, or small arteries.

microinjector (mi''kro-in-jek'tor) an instrument for infusion of very small amounts of fluids or drugs into animals or humans.

microinvasion (mi''kro-in-va'zhun) microscopic extension of malignant cells into adjacent tissue in carcinoma in situ.

microinvasive (mi''kro-in-va'siv) exhibiting or pertaining to microinvasion.

microkinematography (mi''kro-kin'ē-mah-tog'rah-fe) [*micro-* + Gr. *kinēma* movement + *graphein* to write] the making of moving pictures of microscopic objects.

microlecithal (mi''kro-les'i-thal) [*micro-* + Gr. *lekithos* yolk] containing little yolk.

microlentia (mi''kro-len'she-ah) microphakia.

microlesion (mi''kro-le'zhun) a minute lesion.

microleukoblast (mi''kro-lu'ko-blast) myeloblast.

microliter (mi''kro-le'ter) [Fr. *microlitre*; *micro-* + *liter*] a thousandth part of a milliliter or a millionth part of a liter. Usually abbreviated μl.

microlith (mi''kro-lith) [*micro-* + Gr. *lithos* stone] a minute concretion or calculus.

microlithiasis (mi''kro-li-thi'ah-sis) [*micro-* + *lithiasis*] the formation of minute concretions in an organ. **m. alveola'ris pulmo'num**, **pulmonary alveolar m.**, a condition caused by deposition in the alveoli of the lungs of minute calculi, which appear roentgenographically as fine, sandlike mottling.

microlymphoidocyte (mi''kro-lim-foi'do-sīt) a small, non-granular, immature lymphoidocyte.

micromandible (mi''kro-man'di-b'l) extreme smallness of the mandible.

micromanipulation (mi''kro-mah-nip'u-la'shun) the performance of surgery, injections, dissections, etc., by means of micromanipulators.

micromanipulator (mi''kro-mah-nip'u-la'tor) an attachment to a microscope for manipulating tiny instruments used in examination and dissection of minute objects under the microscope.

micromanometer (mi''kro-man-om'ē-ter) an apparatus for indicating gas or vapor pressure from a very small sample, as of blood, fluid, etc.

micromanometric (mi''kro-man'o-met'rik) relating to gas or vapor pressure from very small samples, as of blood, fluid, etc.

- micromastia** (mi''kro-mas'te-ah) abnormal smallness of the mamma.
- micromaxilla** (mi''kro-mak-sil'ah) extreme smallness of the maxilla.
- micromazia** (mi''kro-ma'ze-ah) [*micro-* + Gr. *mazos* breast] micromastia.
- micromegalopsia** (mi''kro-meg'ah-lop'se-ah) [*micro-* + Gr. *megas* large + *opsis* vision] the condition in which objects appear too small or too large or too small and too large by turns.
- micromelia** (mi''kro-me'le-ah) [*micro-* + Gr. *melos* limb + *-ia*] a developmental anomaly characterized by abnormal smallness or shortness of the limbs.
- micromelus** (mi-krom'e-lus) an individual exhibiting micromelia.
- micromere** (mi''kro-mēr) [*micro-* + Gr. *meros* part] one of the small blastomeres formed by unequal cleavage of a fertilized ovum, located in the animal hemisphere and dividing more rapidly than the macromeres of the vegetal hemisphere.
- micrometabolism** (mi''kro-mē-tab'o-lizm) metabolism as studied by micromethods.
- micrometastasis** (mi''kro-mētas'tah-sis) the spread of cancer cells from the primary tumor to distant sites, where they form microscopic secondary tumors.
- micrometeorology** (mi''kro-me'te-er-ol'o-je) that branch of meteorology dealing with the effects on living organisms of the extra-organic aspects of the physical environment within a few inches of the surface of the earth.
- micrometer**¹ (mi-krom'ē-ter) [*micro-* + Gr. *metron* measure] an instrument for measuring objects seen through the microscope. **diffraction m.**, halometer. **eyepiece m.**, a micrometer that is used in connection with the eyepiece of a microscope. **filar m.**, an eyepiece micrometer in which the micrometer screw acts upon a slide carrying a movable wire: one revolution of the screw moves the wire 1 mm. across the field. **ocular m.**, eyepiece m. **stage m.**, a micrometer fastened to the stage of a microscope.
- micrometer**² (mi''kro-me'ter) one-millionth (10⁻⁶) of a meter; abbreviated μ m. Called also *micron*.
- micromethod** (mi''kro-meth'od) any technique involving use of exceedingly small quantities of material. Cf. *macromethod*.
- micrometry** (mi-krom'e-tre) the measurement of microscopic objects.
- micromicro-** a prefix used in naming units of measurement to indicate one-millionth of one-millionth (10⁻¹²) of the unit designated by the root with which it is combined. Now supplanted by the prefix *pico-*.
- micromicrocurie** (mi''kro-mi''kro-ku're) one-millionth (10⁻⁶) microcurie, or 10⁻¹² curie. Abbreviated μ μC. Called also *picocurie*.
- micromicrogram** (mi''kro-mi''kro-gram) one-millionth (10⁻⁶) microgram, or 10⁻¹² gram. Abbreviated μ μg. Called also *picogram*.
- micromicron** (mi''kro-mi''kron) a unit of linear measure in the metric system, being 10⁻⁶ micron, 10⁻⁹ millimeter, or 10⁻¹² meter. Abbreviated μ μ.
- micromilligram** (mi''kro-mil'i-gram) a unit of mass (weight) in the metric system, being 10⁻⁶ milligram, or 10⁻⁹ gram. Abbreviated μ mg. Called also *nanogram*.
- micromillimeter** (mi''kro-mil'i-me'ter) a unit of linear measure in the metric system, being 10⁻⁶ millimeter. Abbreviated μ mm. Called also *nanometer*.
- micromolecular** (mi''kro-mo-lek'u-lar) composed of small molecules.
- Micromonospora** (mi''kro-mo-nos'po-rah) [*micro-* + Gr. *monos* single + *sporos* seed] a genus of microorganisms of the family Streptomycetaceae, order Actinomycetales, made up of saprophytic forms occurring in soil and water.
- micromonosporin** (mi''kro-mo-nos'po-rin) an antibiotic substance produced by cultures of *Micromonospora*, which is active against gram-positive bacteria.
- Micromyces** (mi-krom'i-sēz) [*micro-* + Gr. *mykēs* fungus] *Streptothrix*.
- micromyelina** (mi''kro-mi-e'le-ah) [*micro-* + Gr. *myelos* marrow + *-ia*] abnormal smallness of the spinal cord.
- micromyeloblast** (mi''kro-mi'ē-lo-blast) a small, immature myelocyte, observed in micromyeloblastic leukemia.
- micromyelolymphocyte** (mi''kro-mi'ē-lo-lim'fo-sit) micromyeloblast.
- micron** (mi''kron), pl. *microns*, *mi'cra* [Gr. *mikros* small] a unit of linear measure in the metric system, being 10⁻³ millimeter, or 10⁻⁶ meter. Abbreviated μ .
- microneedle** (mi''kro-ne'd'l) a fine glass needle for use in micrurgy.
- microneurosurgery** (mi''kro-nu'ro-ser'jer-e) surgery conducted under high magnification with miniaturized instruments on microscopic vessels and structures of the nervous system.
- micronize** (mi''kro-niz) [Gr. *micron* a small thing] to reduce to a fine powder; to reduce to particles a micron in diameter.
- micronodular** (mi''kro-nod'u-lar) marked by the presence of small nodules.
- micronormoblast** (mi''kro-nor'mo-blast) an abnormal red cell precursor in which there has been defective hemoglobin synthesis, characterized by a narrow rim of cytoplasm and a rather overdeveloped, pyknotic nucleus.
- micronucleus** (mi''kro-nu'kle-us) [*micro-* + *nucleus*] 1. in ciliate protozoa, the smaller of two types of nucleus in each cell, which functions in sexual reproduction. Cf. *macronucleus*. 2. a small nucleus. 3. the nucleolus.
- micronutrient** (mi''kro-nu'tre-ent) any essential dietary element required only in small quantities, e.g., trace minerals.
- micronychia** (mi''kro-nik'e-ah) [*micr-* + Gr. *onyx* nail] abnormal smallness of the nails of fingers or toes.
- micronychosis** (mi''kro-nik-o'sis) micronychia.
- micro-orchidia** (mi''kro-or-kid'e-ah) microorchidia.
- microorganic** (mi''kro-or-gan'ik) pertaining to a microorganism.
- microorganism** (mi''kro-or'gan-izm) [*micro-* + *organism*] a minute living organism, usually microscopic. Those of medical interest are bacteria, rickettsiae, viruses, molds, yeasts, and protozoa.
- microorganismal** (mi''kro-or'gan-iz'mal) pertaining to microorganisms.
- microparasite** (mi''kro-par'ah-sit) a parasitic microorganism.
- micropathology** (mi''kro-pah-thol'o-je) [*micro-* + *pathology*] 1. the sum of what is known regarding minute pathologic changes. 2. the pathology of diseases caused by microorganisms.
- micropenis** (mi''kro-pe'nis) microphallus.
- micropfusion** (mi''kro-per-fu'zhun) perfusion of a minute amount of a substance.
- microphage** (mi''kro-fā) [*micro-* + Gr. *phagein* to eat] a phagocyte of small size; an actively motile, neutrophilic leukocyte capable of phagocytosis.
- microphagocyte** (mi''kro-fag'o-sit) [*micro-* + *phagocyte*] microphage.
- microphakia** (mi''kro-fa'ke-ah) [*micro-* + Gr. *phakos* lens + *-ia*] abnormal smallness of the crystalline lens.
- microphallus** (mi''kro-fal'us) [*micro-* + Gr. *phallos* penis] abnormal smallness of the penis.
- microphone** (mi''kro-fōn) a device for converting an acoustic signal into an electric signal for purposes of amplification or transmission. **cardiac catheter-m.**, phonocatheter.
- microphonic** (mi''kro-fon'ik) 1. serving to amplify sound. 2. cochlear m. **cochlear m's**, the electrical potentials generated in the hair cells of the organ of Corti in response to acoustic stimulation; called also *cochlear potentials*.
- microphotograph** (mi''kro-fo'to-graf) [*micro-* + *photograph*] a photograph of small size. Cf. *photomicrograph*.
- microphthalmia** (mi''krof-thal'me-ah) [*micro-* + Gr. *ophthalmos* eye + *-ia*] microphthalmos.
- microphthalmos** (mi''krof-thal'mus) [*micro-* + Gr. *ophthalmos* eye] abnormal smallness in all dimensions of one or both eyes; in the absence of other ocular defects, it is called *pure microphthalmos* or *nanophthalmos*.
- microphthalmoscope** (mi''krof-thal'mo-skōp) an instrument for performing fundus microscopy.
- microphthalmus** (mi''krof-thal'mus) 1. microphthalmos. 2. a person affected with microphthalmos.
- microphysics** (mi''kro-fiz'iks) [*micro-* + *physics*] the science which deals with the ultimate structure of matter, i.e., with molecules, atoms, and electrons.
- microphyte** (mi''kro-fit) [*micro-* + Gr. *phyton* plant] a microscopic vegetable organism. Cf. *microzoon*.
- microphytic** (mi''kro-fit'ik) (*obs.*) pertaining to or caused by microphytes.
- micropia** (mi-kro'pe-ah) micropsia.
- micropinocytosis** (mi''kro-pi'no-si-to'sis) the taking up into a cell of specific macromolecules by invagination of the plasma membrane which is then pinched off, resulting in small vesicles in the cytoplasm.
- micropipet** (mi''kro-pi-pet') a pipet for handling small quantities of liquids (up to 1 ml.).
- micropituicyte** (mi''kro-pi-tu'i-sit) see *pituicyte*.
- microplasia** (mi''kro-pla'ze-ah) [*micro-* + Gr. *plassein* to form] dwarfism.
- microplating** (mi''kro-plāt') the use of minute amounts of material in the plating of microorganisms.
- microplethysmography** (mi''kro-pleth'is-mog'rah-fe) [*micro-* + Gr. *plēthysmos* increase + *graphein* to record] the recording of minute changes in the size of a part as produced by the circulation of blood in it.
- micropodia** (mi''kro-po'de-ah) [*micro-* + Gr. *pous* foot] abnormal smallness of the feet.

micropolariscope (mi''kro-po-lar'i-skōp) a microscope with a polariscope attached.

micropolygyria (mi''kro-pol''e-ji're-ah) polymicrogyria.

microprecipitation (mi''kro-pre-sip''i-ta'shun) precipitation with a minute amount ($\frac{1}{2}$ to 1 drop or less) of reagent observed under the microscope.

micropredation (mi''kro-pre-da'shun) the derivation by an organism of elements essential for its existence from larger organisms of other species which it does not destroy.

micropredator (mi''kro-pred'ah-tor) [*micro-* + L. *praedator* a plunderer, pillager] an organism, e.g., the mosquito, that derives elements essential for its existence from other species of organisms, larger than itself, without causing their destruction.

microprobe (mi''kro-prōb) a minute probe, as one used in microsurgery. **laser m.**, a laser beam utilized to vaporize a minute area of tissue, as in a biopsy specimen, which is then subjected to emission spectrography.

microprojection (mi''kro-pro-jek'shun) [*micro-* + *projection*] the throwing of the image of a microscopic object on a screen.

microprojector (mi''kro-pro-jek'tor) a projector that fits the viewing stage of a microscope and enlarges the image on an illuminated viewing screen.

microprosopus (mi''kro-pro-so'pus) [*micro-* + Gr. *prosōpon* face] a fetus with a small or undeveloped face.

micropsia (mi-krop'se-ah) [*micro-* + Gr. *opsis* vision + *-ia*] a condition in which objects are seen as smaller than they actually are.

microptic (mi-krop'tik) pertaining to or affected with micropsia.

micropuncture (mi''kro-punk'chur) the creation of minute openings by piercing.

micropus (mi-kro'pus) [*micro-* + Gr. *pous* foot] a person with abnormally small feet.

micropyle (mi''kro-pīl) [*micro-* + Gr. *pylē* gate] 1. an opening through which the spermatozoon enters the ovum of certain animals, including some sporozoa and arthropods. 2. a minute opening at the base of the ovule of a seed plant through which the pollen grains enter.

microradiogram (mi''kro-ra'de-o-gram) a picture produced by microradiography.

microradiography (mi''kro-ra'de-og'rah-fe) [*micro-* + *radiography*] a process by which an x-ray shadow image (radiograph) of a small or very thin object is produced on fine-grained photographic film under conditions which permit subsequent microscopic examination or enlargement of the radiograph at linear magnifications of up to several hundred and with a resolution approaching the resolving power of the photographic emulsion (about 1000 lines per millimeter).

microrchidia (mi''kro-rkid'e-ah) [*micro-* + Gr. *orchis* testicle + *-ia*] abnormal smallness of the testicle.

microrefractometer (mi''kro-re'frak-tom'ē-ter) a refractometer for the discovery of variations in the minute structures, e.g., in blood corpuscles.

microrespirometer (mi''kro-res'pī-rom'ē-ter) an apparatus for investigating the oxygen utilization of isolated tissues.

microrhinia (mi''kro-rin'e-ah) [*micro-* + Gr. *rhis* nose] abnormal smallness of the nose.

microroentgen (mi''kro-rent'gen) [*micro-* + *roentgen*] one millionth of a roentgen; abbreviated μ R.

microscelous (mi-kros'kē-lus) [*micro-* + Gr. *skelos* leg] short-legged.

Microscilla (mi''kro-sil'ah) a genus of schizomycetes of the family Vitreoscillaceae.

microscler (mi''kro-sklēr) dolichomorphic.

microscope (mi''kro-skōp) [*micro-* + Gr. *skopein* to view] an instrument used to obtain an enlarged image of small objects and reveal details of structure not otherwise distinguishable.

acoustic m., one in which very high frequency sound waves (close to one billion cycles per second [one gigahertz]) are focused on the object and the reflected beam is processed electronically and stored for display on a television screen. **beta ray m.**, one which reveals emission of beta particles from a microscopic specimen by means of a scintillator. **binocular m.**, a microscope which has two eyepieces, making possible simultaneous viewing with both eyes. **capillary m.**, an instrument for giving an enlarged image of capillaries, often used for viewing the capillaries of the nail bed. **centrifuge m.**, a microscope built into a high-speed centrifuge, by which a magnified image of a specimen undergoing centrifugal force may be produced. **comparison m.**, an instrument which permits simultaneous viewing of parts of images of two separate specimens, involving two microscopes bridged together with a comparison eyepiece, or one microscope with two body tubes and lens systems. **compound m.**, one that consists of two lens systems, one above the other, in which the image formed by the system nearer the object (objective) is further magnified by the system nearer the eye (eyepiece). **corneal m.**, a specially designed instrument with lens of high magnifying power, for observing minute changes in

the cornea and iris. **darkfield m.**, one with a central stop in the condenser, permitting diversion of the light rays and illumination of the object from the side, so that the details appear light against a dark background. See also *ultramicroscope*. **electron m.**, one in which an electron beam, instead of light, forms an image for viewing on a fluorescent screen, or for photography. **epic m.**, see *epimicroscope*. **fluorescence m.**, one used for the examination of specimens stained with fluorochromes or fluorochrome complexes, e.g., a fluorescein-labeled antibody, which fluoresces in ultraviolet light. **Greenough m. (obs.)**, a binocular, biobjective, stereoscopic instrument giving a low-power erect image. **hypodermic m.**, a combination of a fiberoptic probe (housed in a hypodermic needle) and a microscope for examining cell structure in tissue and muscle without a cutaneous incision. **infrared m.**, one in which radiation of 800 μ m or longer wavelength is used as the image-forming energy. **integrating m.**, one in which a special mechanical stage permits recording of the sizes of the components of the specimen. **interference m.**, a microscope for observing the same kind of refractile detail as that observed with the phase microscope, but utilizing two separate beams of light which are sent through the specimen and combined with each other in the image plane. **ion m.**, an electron microscope modified to use ions (e.g., of lithium), instead of electrons. **laser m.**, see *laser microprobe*. **light m.**, one in which the specimen is viewed under visible light. **opaque m.**, one with vertical illumination or with the condenser built around the objective (epimicroscope) for viewing opaque specimens. **operating m.**, a specially designed instrument employed in the performance of delicate surgical procedures, as in operations on the middle ear, on small blood vessels, or in some operations on a vocal cord. **Oto-m.**, see *Oto-microscope*. **phase m.**, **phase-contrast m.**, a microscope which alters the phase relationships of the light passing through and that passing around the object, the contrast permitting visualization of the object without the necessity for staining or other special preparation. **polarizing m.**, one equipped with a polarizer, analyzer, and means for measurement of the alteration of the polarized light by the specimen. **polarizing m., rectified**, a polarizing microscope corrected for depolarization from curved lens surfaces so that full apertures can be used. **projection x-ray m.**, a microscope using soft x-radiation for high resolution; the images may be photographed or observed directly on a fluorescent viewing screen. **reflecting m.**, one which utilizes mirrors instead of lenses to form the image. **Rheinberg m.**, a darkfield microscope in which the condenser is modified by having a colored instead of an opaque stop, with the annulus in a complementary color. **scanning m., scanning electron m.**, an electron microscope in which a beam of electrons scans over a specimen point by point and builds up an image on the fluorescent screen of a cathode ray tube. **schlieren m.**, one in which light is deviated by the insertion of one or two diaphragms in the optical system, to reveal differences in refractive index in a specimen. **simple m.**, one which consists of a single lens; a magnifying glass. **slit lamp m.**, a corneal microscope with a special attachment that permits examination of the endothelium on the posterior surface of the cornea. **stereoscopic m.**, a binocular biobjective microscope, or a binocular monobjective microscope modified to give a three-dimensional view of the specimen. **stroboscopic m.**, one which utilizes flashing illumination, permitting analysis of motion in the specimen. **trinocular m.**, a binocular microscope with a third eyepiece tube for photomicrography or other use. **ultra-m.**, see *ultramicroscope*. **ultrasonic m.**, one which utilizes the reflection of ultrasonic or mechanical vibration to reveal the detail of the specimen. **ultraviolet m.**, a microscope which utilizes reflecting optics or quartz and other ultraviolet-transmitting lenses, with radiation of less than 400 μ m wavelength as the image-forming energy. **x-ray m.**, one in which a beam of x-rays is used instead of light, the image usually being reproduced on film.

microscopic (mi''kro-skop'ik) of extremely small size; visible only by the aid of the microscope.

microscopical (mi''kro-skop'e-k'l) 1. pertaining to microscopy. 2. microscopic.

microscopist (mi-kros'ko-pist) a person skilled in using the microscope.

microscopy (mi-kros'ko-pe) [*micro-* + Gr. *skopein* to examine] examination under or observation by means of the microscope. **clinical m.**, employment of the microscope in making clinical diagnoses. **electron m.**, examination by means of the electron microscope. **fluorescence m.**, microscopy of natural fluorescent materials or of specimens stained with fluorochromes, which emit light when exposed to blue or ultraviolet light. **fundus m.**, examination of the fundus of the eye with an instrument which combines a corneal microscope with an ophthalmoscope. **immunofluorescent m.**, fluorescent microscopy in which antigens are identified by exposing them to homologous antibodies labeled with a fluorescent tracer. **television m.**, projection on a television screen of the image obtained by use of a flying spot, or scanning, microscope, or by use of a television camera over a microscope.

microsecond (mi/'kro-sek''und) one-millionth of a second; abbreviated μ sec.

microsection (mi/'kro-sek''shun) an extremely thin section for examination with the microscope.

microseme (mi/'kro-sēm) [*micro-* + Gr. *sēma* sign] having an orbital index of 83 or less.

Microsiphonales (mi/'kro-si''fo-na'lēz) see *Trichomycetes*.

microslide (mi/'kro-slid) the slide on which objects for microscopical examination are mounted.

microsmatic (mi/'kros-mat''ik) [*micro-* + Gr. *osmasthanai* to smell] having the sense of smell, but of relatively feeble development, as in man.

microsoma (mi/'kro-so'mah) [*micro-* + Gr. *sōma* body] a very short but not dwarfish stature.

microsomal (mi/'kro-so'mal) of or pertaining to microsomes.

microsomatias (mi/'kro-so-ma'she-ah) microsomia.

microsome (mi/'kro-sōm) [*micro-* + Gr. *sōma* body] any of the vesicular fragments of endoplasmic reticulum formed after disruption and centrifugation of cells.

microsomia (mi/'kro-so'me-ah) [*micro-* + Gr. *sōma* body + *-ia*] an undersized state of the body. **m. feta'lis**, abnormally small size of the fetus.

microspectrophotometer (mi/'kro-spek''tro-fo-tom'ē-ter) a system combining a microscope with a spectrophotometer.

microspectroscope (mi/'kro-spek''tro-skōp) [*micro-* + *spectro-* scope] a spectroscopy to be used in connection with a microscope for the examination of the spectra of microscopic objects.

microsphere (mi-'kro-sfēr') centrosome.

microspherocyte (mi/'kro-sfē'ro-sit) spherocyte.

microspherocytosis (mi/'kro-sfē'ro-si-to'sis) spherocytosis.

microspherolith (mi/'kro-sfēr'o-lith) a particle resembling a miniature gallstone in the bile.

microsphygmia (mi-'kro-sfig'me-ah) [*micro-* + Gr. *sphygmos* pulse + *-ia*] a pulse that is difficult to perceive by the finger.

microsphygmy (mi/'kro-sfig'me) microsphygmia.

microsphyxia (mi/'kro-sfik'se-ah) (*obs.*) microsphygmia.

Microspira (mi/'kro-spi'trah) [*micro-* + Gr. *speira* coil] a genus name used in early classifications for a group of small, spiral-shaped microorganisms.

Microspironema (mi/'kro-spi''ro-ne'mah) [*micro-* + Gr. *speira* coil + *nema* thread] a genus name once proposed for organisms now included in the genus *Treponema*.

microsplanchnic (mi/'kro-splank'nik) having the abdominal portion of the body relatively smaller than the thoracic; a term applied to a type of bodily constitution in which the vertical diameters are excessively developed as compared with the horizontal ones. Cf. *macroplanchnic* and *pyknic*.

microsplanchnous (mi/'kro-splank'nus) microsplanchnic.

microsplenia (mi/'kro-splē'ne-ah) [*micro-* + Gr. *splēn* spleen + *-ia*] smallness of the spleen.

microsplenic (mi/'kro-splē'nik) marked by smallness of the spleen.

microsporangia (mi/'kro-spo-ran'je-ah) plural of microsporangium.

microsporangium (mi/'kro-spo-ran'je-um), pl. *microsporangia* [*micro-* + Gr. *sporos* seed + *angeion* vessel] the sporangium in which microspores develop.

microspore (mi/'kro-spōr) [*micro-* + Gr. *sporos* seed] 1. the smaller spore form when spores of two sizes are present, as in certain fungi and protozoa. 2. in heterogenous plants, one of four haploid spores, usually smaller than the megaspore, formed in the microspangium from a microspore mother cell, and from which the microgametophyte, or male gametophyte, develops. See also *pollen*.

microsporid (mi-'kros-po-rid) a secondary skin eruption which is an expression of hypersensitivity to *Microsporum* infection, and occurring in an area remote from the site of infection.

Microsporidia (mi/'kro-spo-rid'e-a) [*micro-* + *sporidium*] an order of sporozoa having small spores and usually one polar capsule, generally found as parasites of arthropods and fishes but also found in other hosts. It includes the genus *Nosema*.

microsporidian (mi/'kro-spo-rid'e-an) any protozoan of the order Microsporidia.

Microsporon (mi-'kros-po-ron) *Microsporum*.

microsporosis (mi/'kro-spo-ro'sis) a ringworm infection caused by one of the fungi of the genus *Microsporum*.

Microsporum (mi-'kros-po-rum) [*micro-* + Gr. *sporos* seed] a genus of small-spored ectothrix ringworm fungi (dermatophytes) of the Fungi Imperfecti, order Moniliales, family Moniliaceae, which cause various diseases of the skin and hair. As the perfect (sexual) stages are identified, they are classified in the genus *Nannizzia*. Called also *Microsporon*. Besides the species listed below, *M. cook'ei*, *M. distortum*, and *M. na'num* are pathogenic but have been isolated from man only rarely. **M. audou'ni**, the most common cause of prepubertal tinea capitis in Europe and of about half the cases in the United States. **M. ca'nis**, a

common cause of ringworm in cats and dogs; often transmitted to children, in whom it causes tinea capitis and tinea corporis. It is also probably the cause of a dermatomycosis in horses. **M. feli'neum**, *M. canis*. **M. ful'vum**, a geophilic species sometimes contracted from soil, which causes tinea corporis or tinea capitis. **M. fur'fur**, *Pityrosporon orbiculare*. **M. gyp'seum**, a species commonly found in soil; it is a common cause of tinea capitis and tinea corporis in South America, and less frequently in other parts of the world. **M. lano'sum**, *M. canis*.

microstat (mi/'kro-stat) the stage and finder of a microscope.

microsthenic (mi/'kro-sthen'ik) [*micro-* + Gr. *sthenos* strength] having feeble muscular power.

Microstix-3 (mi/'kro-stiks) trademark for a reagent strip with a chemical test area for recognition of nitrite in urine, which turns pink on contact with nitrite, and two culture areas for semiquantification of bacterial growth after 18–24 hours of incubation; one culture area supports both gram-negative and gram-positive organisms, the other, only gram-negative organisms.

microstomia (mi/'kro-sto'me-ah) [*micro-* + Gr. *stoma* mouth + *-ia*] a congenital defect in which the mouth is unusually small.

microstrabismus (mi/'kro-strah-biz'mus) [*micro-* + Gr. *strabismos* a squinting] strabismus of such slight degree that the deviation is undetectable by the usual methods.

microsurgery (mi/'kro-ser''jer-e) dissection of minute structures under the microscope by means of instruments held in the hand, as in microsurgery of the ear and larynx.

microsyringe (mi/'kro-sēr'inj) a syringe fitted with a screw-thread micrometer head for the accurate control of minute measurements.

Microtatiobites (mi/'kro-ta''to-bi-o'tēz) [Gr. *mikrotatos* smallest + *biōtes* one must live] a proposed taxonomic class comprising the orders Rickettsiales and Virales.

microtechnic (mi/'kro-tek'nik) micrology.

microthelia (mi/'kro-the'le-ah) [*micro-* + Gr. *thelē* nipple + *-ia*] unusual smallness of the nipples.

microthrombosis (mi/'kro-throm-bo'sis) presence of many small thrombi in the capillaries and other small blood vessels of various organs of the body.

microthrombus (mi/'kro-throm'bus), pl. *microthrom'bi* [*micro-* + Gr. *thrombos* clot] a small thrombus located in a capillary or other small blood vessel.

microtia (mi-'kro-she-ah) [*micro-* + Gr. *ous* ear + *-ia*] gross hypoplasia or aplasia of the pinna of the ear, with a blind or absent external auditory meatus.

microtiter (mi/'kro-ti'ter) a titer of minute quantity.

microtome (mi/'kro-tōm) [*micro-* + Gr. *tomē* a cut] an instrument for cutting thin slices of tissue for microscopical study. **freezing m.**, a microtome for cutting frozen sections. **rocking m.**, a microtome in which the specimen is held in the end of a lever which passes up and down over a stationary knife. **rotary m.**, one in which a wheel action is translated into a back-and-forth movement of the specimen being sectioned. **sliding m.**, one in which the specimen being sectioned is made to slide on a tract.

microtomy (mi-'krot'o-me) [*micro-* + Gr. *temnein* to cut] the cutting of thin sections; called also *histotomy*.

microtonometer (mi/'kro-to-nom'ē-ter) a small tonometer for measuring the oxygen and carbon dioxide tension in arterial blood.

microtransfusion (mi/'kro-trans-fu'zhun) introduction into the circulation of a small quantity of blood of another individual, as sometimes occurs with transplacental passage of a small amount of fetal blood into the maternal circulation.

microtrauma (mi/'kro-traw'mah) a slight trauma or lesion; a microscopic lesion.

Microtombidium akamushi (mi/'kro-trom-bid'e-um ak''-ah-moo'she) *Trombicula akamushi*.

microtropia (mi/'kro-tro'pe-ah) microstrabismus.

microtubule (mi/'kro-tu'būl) any of the slender, tubular structures composed chiefly of tubulin, found in the cytoplasmic ground substance of nearly all cells; they are involved in maintenance of cell shape and in the movements of organelles and inclusions, and form the spindle fibers of mitosis. In cilia and flagella, they are constantly arranged with two single microtubules in the center and nine pairs of doublets arrayed around the central two.

Microtus (mi-'kro'tus) [*micro-* + Gr. *ous*, *ōtos*, ear] a genus of small rodents distributed throughout the Arctic land areas, commonly called voles or meadow mice. **M. montebel'li**, the field vole, which is probably the host of *Leptospira hebdomidis*, the etiologic agent of nanukayami.

microtus (mi-'kro'tus) an individual exhibiting microtia.

microunit (mi/'kro-u'nit) one-millionth (10^{-6}) of a standard unit; abbreviated μ U.

microvascular (mi/'kro-vas'ku-lar) pertaining to the microvasculature.

microvasculature (mi/'kro-vas'ku-lah-tūr) the portion of the

vasculature of the body comprising the finer vessels, sometimes described as including all vessels with an internal diameter of 100 microns or less.

microvilli (mi/'kro-vil'i) [pl. of L. *microvillus* a tuft of hair] minute cylindrical processes on the free surface of a cell, especially cells of the proximal convolution in a renal tubule and of the intestinal epithelium, which increase the surface size of the cell; see also *brush border*, under *border*.

microvillus (mi/'kro-vil'us) a minute process or protrusion from the free surface of a cell; see *microvilli*.

microviscosimeter (mi/'kro-vis/'ko-sim/'ē-ter) a viscosimeter for measuring the viscosity of blood plasma, using a small quantity of blood.

microvivisection (mi/'kro-viv/'i-sek/'shun) microdissection.

microvolt (mi/'kro-volt) [*micro-* + *volt*] one-millionth of a volt. Abbreviated μ v.

microvoltmeter (mi/'kro-vōl-tom/'ē-ter) an instrument for detecting minute changes of electric potential in the body.

microwatt (mi/'kro-wat) [*micro-* + *watt*] one-millionth of a watt; abbreviated μ w.

microwave (mi/'kro-wāv) a wave typical of electromagnetic radiation between far infrared and radio waves, generally regarded as extending from 300,000 to 100 megacycles (wavelength of 1 mm. to 30 cm.).

microxycyte (mi-krok/'sī-sīt) [*micro-* + Gr. *oxys* sharp, acid + *-cyte*] any finely granular oxyphil cell.

microxyphil (mi-krok/'sī-fil) microxycyte.

microzoa (mi/'kro-zo'ah) plural of *microzoön*.

microzoaria (mi/'kro-zo-a're-ah) [*micro-* + Gr. *zōon* animal] a general term for all microorganisms.

microzoön (mi/'kro-zo'on), pl. *microzo'a* [*micro-* + Gr. *zōon* animal] a microscopic animal organism. Cf. *microphyte*.

micrurgic (mi-krur/'jik) pertaining to micrurgy.

micrurgy (mi/'krur-je) [*micro-* + Gr. *ergon* work] micro-manipulative technic in the field of a microscope. See *micromanipulator*.

Micrurus (mi-kroo/'rus) a genus of venomous elapid snakes. *M. fulvius* is the coral, or harlequin, snake. Called also *Elaps*. See table accompanying *snake*.

miction (mik/'shun) urination.

micturate (mik/'tu-rāt) urinate.

micturition (mik/'tu-rish'un) [L. *micturare* to urinate] the passage of urine; urination.

M.I.D. minimum infective dose.

midafur (mi/'dah-floor) chemical name: 4-amino-2,2,5,5-tetrakis(trifluoromethyl)-3-imidazoline; a sedative, $C_7H_5F_{12}N_3$.

midaxilla (mid/'ak-sil'ah) the center of the axilla.

midbody (mid/'bod-e) 1. a body or a mass of granules developed in the equatorial region of the spindle during the anaphase of mitosis. 2. the middle region of the trunk.

midbrain (mid/'brān) mesencephalon.

midcarpal (mid-'kar'pal) between the two rows of bones of the carpus.

Middeldorp's triangle (splint) (mid/'l-dorps) [Albrecht Theodor Middeldorp, Breslau surgeon, 1824-1868] see under *triangle*.

middlepiece (mid/'l-pēs) the portion of a spermatozoon between its head and flagellum.

midfoot (mid/'foot) the middle portion of the foot, comprising the region of the navicular, cuboid, and cuneiform bones.

midfrontal (mid-'fron'tal) pertaining to the middle of the forehead.

midge (mij) a small dipterous insect of the family Chironomidae; many species give painful bites, and some are vectors of *Mansonella ozzardi* and *Dipetalonema perstans*. **owl m.**, *Phlebotomus*.

midget (mij/'et) a normal dwarf; an individual who is undersized but perfectly formed.

midgetism (mij/'ē-tizm) the condition of being a midget.

midgut (mid/'gut) the region of the embryonic digestive tube into which the yolk sac opens; ahead of it is the foregut and caudal to it is the hindgut.

Midicel (mid/'i-sel) trademark for a preparation of sulfamethoxyypyridazine.

midoccipital (mid/'ok-sip'i-tal) pertaining to or located in the middle of the occiput.

midpain (mid/'pān) intermenstrual pain.

midperiphery (mid/'pē-rif'er-e) the middle zone of the fundus.

midpiece (mid/'pēs) in early immunological theory, the euglobulin fraction of guinea pig serum, which corresponded to component C1 of complement.

midplane (mid/'plān) the median plane of a bilateral structure.

midriff (mid/'rif) the diaphragm (diaphragma [NA]); the middle

region of the torso; the region between the lower border of the breast and the waistline.

midsection (mid-'sek'shun) a cut through the middle of any organ or part.

midsternum (mid-'ster'num) mesosternum.

midtarsal (mid-'tar'sal) between the two rows of bones of the tarsus.

midtegmentum (mid/'teg-men'tum) the median or central part of the tegmentum.

midwife (mid/'wif) an individual who practices midwifery; see *nurse-midwife*.

midwifery (mid/'wi-fer-e) the practice of assisting in childbirth. See *nurse-midwife* and *obstetrics*.

Mierzejewski effect (mēr/'ze-yef'ske) [Jan Lucian Mierzejewski, Polish neurologist and psychiatrist, 1839-1908] see under *effect*.

Miescher's corpuscles, tubules (tubes) (me'sherz) [Johann Friedrich Miescher, Swiss pathologist, 1811-1887] see *Rainey's corpuscles*, under *corpuscle*, and see under *tubule*.

Miescheria (me-she're-ah) [J. F. Miescher] *Sarcocystis*.

MIF melanocyte-stimulating hormone inhibiting factor; migration inhibiting factor. See under *factor*.

migraine (mi/'grān, me/'grān) [Fr., from Gr. *hemikrania* an affection of half of the head] an often familial symptom complex of periodic attacks of vascular headache, usually temporal and unilateral in onset, commonly associated with irritability, nausea, vomiting, constipation or diarrhea, and often photophobia; attacks are preceded by constriction of the cranial arteries, usually with resultant prodromal sensory (especially ocular) symptoms, and commence with the vasodilation that follows. **abdominal m.**, migraine in which abdominal symptoms (nausea and vomiting) are prominent. **acute confusional m.**, a rare variant of classical migraine occurring in children, marked by attacks of confusion and disorientation, with agitation manifested as a mixture of apprehension and combativeness; headache may not appear at first but always develops eventually. **fulgurating m.**, violent migraine developing abruptly. **hemiplegic m.**, migraine associated with varying degrees of transient hemiplegia or hemiparesis. **ophthalmic m.**, migraine accompanied by amblyopia or other visual disturbance. **ophthalmoplegic m.**, periodic migraine accompanied by ophthalmoplegia.

migraineur (me/'grān-er') [Fr.] a person who suffers from migraine.

migrainoid (mi/'grah-noid) [*migraine* + Gr. *eidos* form] resembling migraine.

migrainous (mi/'gra-nus) resembling, or of the nature of migraine.

migrateur (me/'grah-ter') [Fr.] a person with an obsession to wander.

migration (mi-'gra'shun) [L. *migratio*] 1. an apparently spontaneous change of place, as of symptoms. 2. the movement of leukocytes through the walls of the vessels; diapedesis. **anodic m.**, the migration of a negatively charged particle toward the positive pole in an electrical field. **cathodic m.**, the migration of a positively charged particle toward the negative pole in an electric field. **external m.**, the passage of an ovum from the ovary to the oviduct of the opposite side without passing through the uterus. **internal m.**, the passing of an ovum from an ovary into the uterus in the normal way, followed by its entry into the opposite oviduct or, in animals with separate uterine horns, into the opposite horn. **m. of leukocytes**, the passage of white corpuscles through the wall of a vessel; diapedesis. **m. of ovum**, 1. the passage of the ovum into the uterine tube after its discharge from the ovary. 2. the passage of the ovum through the reproductive tract and through the uterine epithelium into the stroma. **retrograde m.**, the passage into the upper urinary tract of foreign bodies introduced through the urethra. **tooth m.**, the normal physiological drift of a tooth. **transperitoneal m.**, external migration.

Migula's classification (me/'goo-lahz) [Walter Migula, German naturalist, born 1863] see under *classification*.

Mikedimide (mi-'ked'i-mid) trademark for a preparation of bemegride.

mikro- for words beginning thus, see those beginning *micro-*.

Mikulicz's cells, etc. (mik/'u-lich'ez) [Johann von Mikulicz-Radecki, Polish surgeon, 1850-1905] see under *angle*, *cell*, *clump*, *disease*, *drain*, *pad*, *pyloroplasty*, and *syndrome*.

mil (mil) contraction of *milliliter*.

milammeter (mil-am/'ē-ter) milliammeter.

mildew (mil/'du) vernacular term for any fungus growing on vegetable or other material; also the condition caused by such a fungus. *Downy* or *powdery mildew* refers to ascomycetous fungi of the *Erysiphe* (order Erysiphales) that cause disease of grapes and other plants.

milenperone (mī-len/'pē-rōn) chemical name: 5-chloro-1-[3-[4-(4-fluorobenzoyl)-1-piperidinyl]propyl]-1,3-dihydro-2H-benzimidazol-2-one; a tranquilizer, $C_{22}H_{23}ClFN_3O_2$.

Miles' operation (milz) [William Ernest *Miles*, British surgeon, 1869–1947] see under *operation*.

milfoil (mil'foil) see *Achillea*.

milia (mil'e-ah) [L.] plural of *miliolum*. **m. neonato'rum**, white, evanescent, pinhead-sized papules which occur on the face and less often the trunk of the newborn infant and disappear within a few weeks; they are keratin cysts filled with keratinous debris, located superficially in the pilosebaceous follicles.

Milian's erythema, sign (mēl-yahz') [Gaston Auguste *Milian*, French dermatologist, 1871–1945] see under *erythema* and *sign*.

miliaria (mil'e-a're-ah) [L. *miliolum* millet] a syndrome of cutaneous changes associated with sweat retention and extravasation of sweat occurring at different levels in the skin; when used alone, it refers to *m. rubra*. **m. al'ba**, *m. crystallina*. **m. crystal-li'na**, miliaria in which the sweat escapes in or just beneath the stratum corneum, producing noninflammatory vesicles which, because of the thinness of the layer covering them, have the appearance of clear droplets. Called also *m. alba* and *sudamina*. **m. profun'da**, miliaria in which the sweat escapes into the middermis, producing nonpruritic, inflammatory papules which change in size with the sweating response of the patient; usually occurring only as a late sequel to recurrent severe generalized miliaria rubra, and, when extensive, leading to heat intolerance, as in tropical anhidrotic asthenia. Called also *mamillaria*. **m. ru'bra**, a condition resulting from obstruction to the ducts of the sweat glands, probably caused in part by prolonged maceration of the skin surface; the sweat escapes into the epidermis, producing pruritic erythematous papulovesicles. The severity of the symptoms fluctuates with the heat load of the individual. Called also *prickly heat*.

miliary (mil'e-a-re) [L. *miliaris* like a millet seed] 1. resembling a millet seed. 2. characterized by the formation of lesions resembling millet seeds, as in miliary tuberculosis.

Milibis (mil'i-bis) trademark for preparations of glycobarsol.

milibis (me-lyuh') [Fr.] surroundings; environment. **m. exté-rieur** (me-lyuh' eks-ta're-ur'), the external environment. **m. inté-rieur** (me-lyuh' an-ta're-ur') [Fr. "interior environment"], Claude Bernard's term for the blood and lymph which bathe the cells of the body.

milipertine (mil-i-per'tēn) chemical name: 5, 6-dimethoxy-3-[2-[4-(*o*-methoxyphenyl)-1-piperazinyl]ethyl]-2-methylindole; a tranquilizer, C₂₄H₃₁N₅O₃.

miliolum (mil'e-um), pl. *mil'ia* [L. "millet seed"] a tiny, spheroidal, white epithelial cyst lying superficially within the skin, usually of the face, containing lamellated keratin and often associated with vellus hair follicles; milia commonly occur in large numbers and are found especially over the eyelids, cheeks, and forehead. Popularly called *whitehead*. **colloid m.**, a small, firm, translucent, yellowish papule in the corium which is the seat of colloid degeneration. The papules develop gradually and spread over the skin, usually of the face and back of the hands, most often in persons long exposed to strong sunlight. Called also *colloid pseudomiliolum*, *hyaloma*, and *Wagner's disease*.

milk (milk) [L. *lac*] 1. the fluid secretion of the mammary gland forming the natural food of young mammals. 2. any whitish milklike substance, e.g., coconut milk or plant latex. 3. a liquid (emulsion or suspension) resembling the secretion of the mammary gland. **acidophilus m.**, milk fermented with cultures of *Lactobacillus acidophilus*; used in gastrointestinal disorders in attempts to modify the bacterial flora of the intestinal tract. **adapted m.**, milk especially modified so as to adapt it to the child's digestive capacity. **after-m.**, the stripping, or last, milk taken at any one milking. **albumin m.**, specially prepared milk, poor in lactose and salts and rich in casein and fat. **m. of bismuth** [USP], a suspension of bismuth hydroxide and bismuth subcarbonate in water, yielding between 5.2 and 5.8 per cent of bismuth trioxide; used as an astringent and antacid. Called also *bismuth magma*. **bitter m.**, milk that is bitter in taste when first drawn because of bitter herbs in the feed or that later becomes bitter from the growth of certain microorganisms. **blue m.**, milk made blue in color by the action of bacteria, usually *Pseudomonas syncyanea*. **Budd m.**, **buddeized m.** (obs.), milk sterilized by adding hydrogen dioxide and heating, so as to decompose the dioxide and liberate the oxygen. **Bulgarian m.**, **bulgaricus m.**, milk fermented with cultures of *Lactobacillus bulgaricus*. **cancer m.**, a viscid opaque granular fluid which may be scraped from the surface of a carcinoma which has undergone fatty degeneration. **casein m.**, a prepared milk containing very little salts and sugars and a large amount of fat and casein. **certified m.**, milk whose purity is certified by a committee of physicians or a medical milk commission. **citric acid m.**, milk prepared by adding 4 gm. of dehydrated citric acid to a quart of milk. **condensed m.**, milk which has been partly evaporated and sweetened with sugar. **diabetic m.**, milk containing a small percentage of lactose. **dialyzed m.**, milk from which the sugar has been abstracted by being passed by dialysis through a parchment membrane. **evaporated m.**, milk prepared by evaporation of half its water content. **fat m.**, modified milk that contains as much or more fat than human

milk. **fore-m.**, 1. the first milk taken at any one milking. 2. colostrum. **fortified m.**, milk made more nutritious by the addition of cream or white of egg; also vitamin D m. **grade A m.**, milk which may contain not more than 30,000 bacteria per milliliter as delivered. **grade B m.**, milk which may contain not more than 100,000 bacteria per milliliter. **homogenized m.**, milk so treated that the fats become intimately combined with the general body of the milk, the emulsified particles of fat being made so minute that the cream does not separate. **hydrochloric acid m.**, acid milk prepared by adding 5 ml. of tenth normal hydrochloric acid to 100 ml. of cow's milk. **laboratory m.**, milk prepared according to a special formula. **lemon juice m.**, acid milk prepared by adding $\frac{1}{2}$ oz. (22 ml.) of lemon juice to 1 quart of cow's milk. **litmus m.**, a bacterial culture medium consisting of milk and litmus as an indicator, used for the culture of lactic-acid bacteria and *Clostridium*. **m. of magnesia** [USP], a suspension of 7.0 to 8.5 per cent of magnesium hydroxide used as an antacid and cathartic; called also *magnesia magma*. **metallized m.**, milk in which metals (copper, iron, magnesium) are dissolved; used to produce regeneration of hemoglobin. **modified m.**, milk in which the constituents have been made to correspond in amount to the composition of human milk. **perhydrazide m.**, milk to which hydrogen dioxide has been added. **protein m.**, a modified milk preparation having a relatively low content of carbohydrate and fat and a relatively high protein content. **purple m.**, a culture medium consisting of skim milk and bromocresol purple, used like litmus milk for the culture of bacteria to determine acid production, and coagulation and proteolysis of casein. **red m.**, milk made red by blood, eating of madder root, or the growth of *Erythrobacillus prodigiosus* or other microorganisms. **ropy m.**, milk which has become viscid so that it can be drawn out into threads. It is usually caused by the growth of *Alcaligenes viscolactis* and is eaten as a delicacy in Norway. **Schloss m.**, a modified milk containing the same proportion of salts and fat as human milk. **skimmed m.**, milk from which the cream has been removed. **soft curd m.**, milk the curd of which has been rendered soft and homogeneous by boiling, by the addition of cream or by the addition of sodium citrate. **sour m.**, milk containing lactic acid, produced by the action of lactic acid bacteria. **m. of sulfur**, precipitated sulfur. **uterine m.**, a white milky substance in the gravid uterus of some species, presumably for nourishment of the embryo. **uvioi m.**, milk sterilized by the action of ultraviolet rays. **vegetable m.**, synthetic milk made out of vegetables. **vinegar m.**, acid milk prepared by adding vinegar to cow's milk. **virgin's m.**, *lac virginale*. **vitamin D m.**, cow's milk to which vitamin D has been added either by direct addition, by exposure to ultraviolet light, or by feeding irradiated yeast to the cows. **witch's m.**, milk secreted in the breast of the newborn child; hexenmilch. **yeast m.**, milk from cows which have been fed on irradiated yeast; it has antirachitic potency.

milking (milk'ing) the pressing out of the contents of a tubular part, such as the urethra, by running the finger along it.

milk-leg (milk'leg) postpartum iliofemoral thrombophlebitis.

Milkman's syndrome (milk'manz) [Louis Arthur *Milkman*, American roentgenologist, 1895–1951] see under *syndrome*.

milkpox (milk'poks) variola minor.

milk sick (milk'sik) poisoning by white snake root, *Eupatorium urticaefolium*.

Millar's asthma (mil'arz) [John *Millar*, British physician, 1733–1805] laryngismus stridulus.

Millard's test (mil'ards) [Henry B. *Millard*, American physician, 1832–1893] see under *tests*.

Millard-Gubler syndrome (paralysis) (me-yar'-goob'ler) [Auguste L. J. *Millard*, French physician, 1830–1915; Adolphe Marie *Gubler*, French physician, 1821–1879] see under *syn-drome*.

Miller-Abbott tube [T. Grier *Miller*, Philadelphia physician, born 1886; William Osler *Abbott*, Philadelphia physician, 1902–1943] see under *tube*.

milli- [L. *mille* thousand] a prefix used in naming units of measurement to indicate one one-thousandth (10⁻³) of the unit designated by the root with which it is combined.

milliammeter (mil'e-am'ē-ter) an ammeter which registers a current in milliamperes.

milliampere (mil'e-am'pēr) [Fr.] one-thousandth of an ampere; abbreviated ma.

milliampere-minute (mil'e-am'pēr-min'ut) a unit of electrical quantity equivalent to that delivered by one milliampere in one minute.

milliamperemeter (mil'e-am-pēr'me-ter) milliammeter.

millibar (mil'i-bar) one-thousandth part of a bar.

millicoulomb (mil'i-koo'lom) a unit of quantity of current electricity, being one one-thousandth (10⁻³) of a coulomb; abbreviated m coul.

millicurie (mil'i-ku're) a unit of radioactivity, being one one-thousandth (10⁻³) curie, or the quantity of radioactive material in

which the number of nuclear disintegrations is 3.7×10^7 per second; abbreviated mc.

millicurie-hour (mil'fī-ku're-owr') a unit of dose equivalent to that obtained by exposure for one hour to radioactive material disintegrating at the rate of 3.7×10^7 atoms per second; abbreviated mc.h.

milliequivalent (mil'fī-e-kwiv'ah-lent) the number of grams of a solute contained in one milliliter of a normal solution; abbreviated mEq.

milligram (mil'fī-gram) [milli- + gram] a unit of mass (weight) in the metric system, being 10^{-3} gram, or the equivalent of 0.015432 grains; abbreviated mg.

Millikan rays (mil'fī-kan) [Robert Andrews Millikan, American physicist, 1868–1953] cosmic rays.

millilambert (mil'fī-lam'bert) one-thousandth of a lambert.

milliliter (mil'fī-le'ter) [milli- + liter] a unit of volume in the metric system, being one one-thousandth (10^{-3}) liter, or the equivalent of 0.033815 of a fluid ounce; abbreviated ml.

millimeter (mil'fī-me-ter) a unit of linear measure of the metric system, being one one-thousandth (10^{-3}) meter, or about 0.03937 inch; abbreviated mm.

millimicro- a prefix used in naming units of measurement to indicate one-thousandth of one-millionth (10^{-9}) of the unit designated by the root with which it is combined; now supplanted by the prefix *nano-*.

millimicrocurie (mil'fī-mi'kro-ku're) one-thousandth (10^{-3}) microcurie, or 10^{-9} curie; abbreviated mμc. Called also *nanocurie*.

millimicrogram (mil'fī-mi'kro-gram) one-thousandth (10^{-3}) microgram, or 10^{-9} gram; abbreviated mμg. Called also *nanogram*.

millimicrometer (mil'fī-mi-krom'fē-ter) nanoliter.

millimicron (mil'fī-mi'kron) a unit of linear measure in the metric system, being 10^{-3} micron, 10^{-6} millimeter, or 10^{-9} meter; abbreviated mμ.

millimole (mil'fī-mōl) one-thousandth part of a mole (def. 3); abbreviated mM.

millimu (mil'fī-mu) millimicron.

milling-in (mil'ing-in) the correction of disharmonies of occlusion of natural or artificial teeth by modification of their occlusal surfaces by abrasives while they are rubbed together in the mouth or on the articulator.

millinormal (mil'fī-nor'mal) having a concentration one-thousandth of normal; abbreviated mN.

millions (mil'yonz) a name applied to various small fish that devour mosquito larvae; see *Lebistes reticulatus*.

milliosmol, milliosmole (mil'fī-os'mōl) one-thousandth of an osmol; the unit of osmotic pressure equal to one-thousandth gram molecular weight of a substance divided by the number of particles or ions into which a substance dissociates in one liter of solution. Abbreviated mOsm.

millipede (mil'fī-pēd) a more or less cylindrical arthropod of the order Chilognatha, class Diplopoda, characterized by having two pairs of short legs on most of its body segments; millipedes may have from 13 to almost 200 pairs of legs.

milliphot (mil'fē-fot) the practical unit of illumination being 0.001 phot and approximately one foot candle.

millirad (mil'fī-rad) a unit of absorbed radiation dose, 10^{-3} rad; abbreviated mrad.

milliroentgen (mil'fī-rent'gen) a unit of dose equal to one-thousandth (10^{-3}) roentgen; abbreviated mr.

millisecond (mil'fī-sek'ond) one-thousandth of a second; abbreviated msec.

milliunit (mil'fī-u'nit) one-thousandth (10^{-3}) of a standard unit; abbreviated mU.

millivolt (mil'fī-vōlt) one-thousandth of a volt; abbreviated mv.

Millon's test (reaction, reagent) (mil'onz) [Auguste N. E. Millon, French chemist, 1812–1867] see under *tests*.

Mills' disease (milz) [Charles Karsner Mills, Philadelphia neurologist, 1845–1931] ascending hemiplegia.

Mills-Reincke phenomenon (milz-rin'kē) [Hiram F. Mills, American engineer; J. J. Reincke, German physician] see under *phenomenon*.

Milontin (mi-lon'tin) trademark for preparations of phensuximide.

Milpath (mil'path) trademark for a preparation of meprobamate and tridihexethyl chloride.

milphae (mil'fē) [Gr. *milphai*] the falling out of the hair of the eyelids.

milphosis (mil-fo'sis) [Gr. *milphōsis*] milphae.

Milroy's disease (edema) (mil'roys) [William Forsyth Milroy, American physician, 1855–1942] see under *disease*.

Milton's edema (mil'tonz) [John Laws Milton, dermatologist in London, 1820–1898] angioneurotic edema.

Miltown (mil'town) trademark for a preparation of meprobamate.

milzbrand (milts'brahnt) [Ger.] anthrax.

Mima (me'mah) a genus of nonmotile, paired, gram-negative, enteric bacilli, causing a variety of nosocomial infections, including meningitis, pneumonia, urinary tract infections, etc. Called also *Acinetobacter lwoffi*.

minbane hydrochloride (mim'bān) chemical name: 1-methyl-yohimbane monohydrochloride; an analgesic, $C_{20}H_{26}H_2 \cdot HCl$.

mimesis (mi-me'sis) [Gr. *mimēsis* imitation] the simulation of one disease or bodily process by another.

mimetic (mi-met'ik) [Gr. *mimētikos*] marked by simulation of another bodily process or disease. Also used as a word termination indicating simulation of a function, process, etc., designated by the root to which it is affixed, as *sympathomimetic*.

mimic (mim'ik) mimetic. **genetic m.**, genocopy.

mimicry (mim'ik-re') [Gr. *mimos* to imitate] an adaptation for survival in which an organism takes on a resemblance to some other organism or a nonliving object.

mimmaton (mi-ma'shun) the habitual insertion of the "m" sound in speech in places where it does not belong.

mimosis (mi-mo'sis) mimesis.

min. abbreviation for *L. minimum*, a minim.

Minamata disease (min'ah-mah'tah) [Minamata Bay, Japan] see under *disease*.

Mincard (min'kard) trademark for a preparation of aminometradine.

mind (mīnd) [L. *mens*; Gr. *psychē*] the faculty, or function of the brain, by which an individual becomes aware of his surroundings and of their distribution in space and time, and by which he experiences feelings, emotions, and desires, and is able to attend, to remember, to reason, and to decide.

Mindererus, spirit of (min-der-e'rus) [Raymund Minderer, German physician, 1570(?)–1621] ammonium acetate solution.

mineral (min'er-al) [L. *mineralē*] a nonorganic homogeneous solid substance, usually a constituent of the earth's crust.

mineralocorticoid (min'er-al-o-kor'ti-koid) 1. any of the group of corticosteroids, principally aldosterone, predominantly involved in the regulation of electrolyte and water balance through their effect on ion transport in epithelial cells of the renal tubules, resulting in retention of sodium and loss of potassium; some also possess varying degrees of glucocorticoid activity. Cf. *glucocorticoid*. 2. of, pertaining to, or resembling a mineralocorticoid.

mingin (min'jin) a nitrogenous compound, $C_{13}H_{18}N_2O_2$, found in small amounts in the urine.

mini- [miniature] a combining form denoting something smaller than the usual thing of its kind.

minify (min'fī-fi) [L. *minus* less] to render less; to diminish. The opposite of magnify.

minilaparotomy (min'e-lap'ah-rot'o-me) [*mini-* + *laparotomy*] a small (about 5 mm.) upper abdominal incision for liver biopsy or open transhepatic cholangiography, or a small (1 to 4 cm.) incision just above the pubic hairline for sterilization by tubal occlusion, the uterine tubes being brought into the operative field by a uterine manipulator.

Mini-Lix (min'fī-lik) trademark for a preparation of aminophylline.

minim (min'im) [L. *minimum* least] a unit of capacity (liquid measure), being one-sixtieth part of a fluid dram, or the equivalent of 0.0616 milliliter.

minima (min'fī-mah) [L.] plural of *minimum*.

minimal (min'fī-mal) [L. *minus* least] smallest or least; the smallest possible.

minimum (min'fī-mum), pl. *min'ima* [L. "smallest"] the smallest amount or lowest limit. **m. audib'ile**, auditory threshold.

m. cognoscib'ile, the threshold of visual recognition of complicated shapes or contours. **m. legib'ile**, the threshold of visible recognition of form, as of test letters or numbers. **light m.**, the minimum intensity of light which is visually perceptible in completely darkened surroundings; called also *liminal value*. **m. sensib'ile**, threshold of consciousness. **m. separab'ile**, the least distance that two objects may be apart and still be distinguished as two. **m. visib'ile**, light m.

Minin light (min'in) [A. V. Minin, Russian surgeon] see under *light*.

minium (min'e-um) [L.] lead tetroxide.

Minkowski's figure, method (min-kov'skēz) [Oskar Minkowski, Lithuanian physician in Wiesbaden, 1858–1931] see under *figure*, and see *Naunyn-Minkowski method*, under *method*.

Minkowski-Chauffard syndrome (min-kov'ske-sho-far') [Oskar Minkowski; Anatole-Marie-Emile Chauffard, French physician, 1855–1932] hereditary spherocytosis.

Minocin (mī-no'sin) trademark for preparations of minocycline hydrochloride.

minocycline (mī-no-si'klēn) chemical name: 4S,7-bis(dimethylamino)-1,4a,4aa,5,5aa,6,11,12aa-octahydro-3,10,12,12a-tetrahydroxy-1,11-dioxo-2-naphthacene-carboxamide; a semisynthetic

broad-spectrum antibiotic of the tetracycline group, $C_{23}H_{27}N_3O_7$. **m. hydrochloride** [USP], the monohydrochloride salt of minocycline, $C_{23}H_{27}N_3O_7 \cdot HCl$, occurring as a yellow, crystalline powder; used in the treatment of a wide variety of infections due to tetracycline-susceptible bacteria and to some tetracycline-resistant organisms, especially staphylococci, administered orally and intravenously.

Minor's disease, sign (me'norzh) [Lazar Salomonovich Minor, Russian neurologist, 1855–1942] see under *disease* and *sign*.

Minot-Murphy diet, treatment (mi'nut-mur'fe) [George Richards Minot, American physician, 1885–1950, and William Parry Murphy, American physician, born 1892, co-winners, with George Hoyt Whipple, of the Nobel prize for medicine and physiology in 1934, for their work on pernicious anemia] see under *treatment*.

minoxidil (mi-noks'i-dil) chemical name: 6-(1-piperidinyl)-2,4-pyrimidinediamine 3-oxide; a potent, long-acting orally effective vasodilator, $C_9H_{11}N_5O$, acting primarily on arterioles, used as an antihypertensive.

mint (mint) see *Mentha*. **mountain m.**, a plant of the genus *Pycnanthemum*. **wild m.**, a fragrant North American plant, *Mentha canadensis*, L. (Labiatae), resembling pennyroyal in its odor and other properties. It is the source of an essential oil with a lemon-like odor used in perfumery.

Mintezol (min'tē-zol) trademark for a preparation of thiabendazole.

minuthesis (min-u'thē-sis) [Gr. *minuthēsis* a wasting] a decrease in the psychophysical sensitivity of a sense organ due to continuous stimulation of that organ; fatigue.

M.I.O. minimal identifiable odor.

mio- [Gr. *meiōn* smaller] a combining form meaning less; see also words beginning *meio-*.

miocardia (mi'o-kar'de-ah) [*mio-* + Gr. *kardia* heart] the contraction of the heart; systole.

Miochol (mi'o-kol) trademark for a preparation of acetylcholine chloride.

miodidymus (mi'o-did'i-mus) [*mio-* + Gr. *didymos* twin] a fetus with two heads joined at the occiputs.

mioleithal (mi'o-les'i-thal) [*mio-* + Gr. *lekithos* yolk] containing little yolk.

mionectic (mi'o-nek'tik) [Gr. *meioneiktikos* disposed to take too little] (*obs*) taking up (by the blood) less than a normal amount of oxygen at a given PO_2 , i.e., the dissociation curve shifts to the right. Cf. *mesectic* and *pleonectic*.

miophone (mi'o-fōn) [*mio-* + Gr. *phōnē* sound] a microphone for testing the muscles.

miopragia (mi'o-pra'je-ah) [*mio-* + Gr. *prassein* to perform] decreased functional activity.

miopus (mi'o-pus) [*mio-* + Gr. *ōps* face] a monster with two fused heads, one face being rudimentary.

miosis (mi-o'sis) [Gr. *meiōsis* diminution] 1. contraction of the pupil. 2. meiosis. 3. that stage of disease during which the intensity of the symptoms diminishes. **irritative m.**, spastic miosis. **paralytic m.**, miosis due to paralysis of the dilator of the iris. **spastic m.**, miosis due to spasm of the sphincter pupillae. **spinal m.**, miosis occurring in spinal diseases.

miostagmin (mi'o-stag'min) [*mio-* + Gr. *stagma* drop] a hypothetical substance in the blood serum of infected animals which combines with antigen to lower the surface tension of the mixture.

miotic (mi-ot'ik) 1. pertaining to, characterized by, or producing miosis (def. 1). 2. an agent that causes the pupil to contract. 3. meiotic.

miracidia (mi-rah-sid'e-ah) plural of *miracidium*.

miracidium (mi-rah-sid'e-um), pl. *miracid'ia* [Gr. *meirakidion* a boy, lad, stripling] the first stage larva of a trematode which undergoes further development in the body of a snail.

miraculin (mir-ak'u-lin) a glycoprotein from the fruit of the tropical plant *Synsepalum dulcificum* which, after it is tasted, is able to change the perception of the taste of acids from sour to sweet.

Miradon (mir'ah-don) trademark for a preparation of anisindione.

mire (mēr) [Fr.; L. *mirari* to look at] one of the figures on the arm of an ophthalmometer whose images are reflected on the cornea. The measurement of their variations measures the amount of corneal astigmatism.

mirincamycin hydrochloride (mir-in'kah-mi'sin) chemical name: methyl 7-chloro-6,7,8-trideoxy-6-[[4-pentyl-2-pyrrolidinyl]-carbonyl]amino]-1-thio- α -threo- α -D-galacto-octapyranoside (2*S*, 3*S*)-mixture with methyl 7-chloro-6,7,8-trideoxy-6-[[*trans*-4-pentyl-2(*S*)-pyrrolidinyl]carbonyl]amino]-1-thio-L-threo- α -D-galacto-octapyranoside monohydrochloride; an antibacterial and antimalarial, $C_{19}H_{35}ClN_2O_8 \cdot HCl$.

mirror (mir'or) [Fr. *miroir*] a polished surface that reflects sufficient light to yield images of objects in front of it. **concave m.**, one with a concave reflecting surface. **convex m.**, one with a convex reflecting surface. **dental m.**, mouth m.

frontal m., head m., a circular mirror strapped to the head of the examiner, used to reflect light into a cavity, especially in connection with nasal, pharyngeal, and laryngeal examinations and to some extent in surgery of these organs. **Glatzel m.**, a flat plate of cold metal held horizontally below and in front of the nose. The patch of moisture deposited on its polished surface indicates the relative functional patency of the two sides of the nose. **mouth m.**, a small mirror attached at an angle to a handle, for use in dentistry. **nasographic m.**, Glatzel m. **plane m.**, one with a flat reflecting surface. **van Helmont's m.**, centrum tendineum.

miryachit (mir-e'ah-chit) [Russ.] a variety of saltatory spasm, or jumping disease, prevalent in Siberia.

mis-action (mis-ak'shun) any accidental act, lapse of memory, or slip of the tongue, attributed to lack of normal repression of the ego, as in sleep or fatigue.

misanthropia, misanthropy (mis'an-thro'pe-ah; mis-an'-thro-pe) [*miso-* + Gr. *anthrōpos* man + *-ia*] hatred of mankind.

miscarriage (mis-kar'i-j) loss of the products of conception from the uterus before the fetus is viable; spontaneous abortion.

misce (mis'e) [L.] mix.

miscegenation (mis'ē-jē-na'shun) [L. *miscere* to mix + *genus* race] the intermarriage or cohabitation of persons of different races, or the interbreeding of races.

miscible (mis'i-b'l) susceptible of being mixed.

miserere mei (miz'er-a're ma'e) [L. "have mercy on me"] 1. volvulus. 2. intestinal colic.

miso- (mis'o) [Gr. *misos* hatred felt against] a combining form meaning hatred of.

misogamy (mi-sog'ah-me) [*miso-* + Gr. *gamos* marriage] morbid aversion to marriage.

misogyny (mi-soj'i-ne) [*miso-* + Gr. *gynē* woman] aversion to women.

misonidazole (mi'so-nid'ah-zōl) chemical name: α -(methoxymethyl)-2-nitro-1*H*-imidazole-1-ethanol; an antitrichomonal antiprotozoal, $C_7H_{11}N_3O_4$.

missexual (mis-seks'u-al) pertaining to an abnormal sexual balance, on the theory that every person is a mixture of male and female elements in varying degrees.

mist, abbreviation for *L. mistu'ra*, a mixture.

mistletoe (mis'l-to) any of several related parasitic shrubs of the family Loranthaceae that grow on various trees, such as the apple and other deciduous trees, including *Viscum album* L. (*European m.*) and *Phoradendron flavescens* (Pursh.) Nutt. (*American m.*), preparations of which were formerly used for their oxytocic, emmenagogic, cardiac stimulant, and vasodilator properties. Toxic principles in mistletoe include pressor amines, beta-phenylethylamine, and tyramine, and it is the source of the glutinous principle viscin.

mistura (mis-tu'rah) [L.] mixture. **m. cre'tae**, chalk mixture. **m. glycyrrhi'zae compos'ita**, brown mixture. **m. oleobalsam'ica**, oleobalsamic mixture: alcoholic solution of balsam of Peru with aromatic oils and flavoring; used as a skin stimulant. **m. pectora'lis**, expectorant or pectoral mixture: ammonium carbonate 1.75 per cent, fluid extract of senega and squill each 3.5 per cent, camphorated tincture of opium 17.5 per cent, water, and syrup of tolu.

MIT moniodotyrosine.

Mit. abbreviation for *L. mit'te*, send.

mitapsis (mit-ap'sis) [*mito-* + Gr. *hapsis* joining] the fusion of the chromatin granules in the final stage of cell conjugation.

Mitchell's disease, treatment (mich'elz) [Silas Weir Mitchell, Philadelphia neurologist, 1829–1914] see *erythromelalgia*, and see *Weir Mitchell's treatment*, under *treatment*.

mittella (mich-el'ah) [John Mitchell, American botanist, 18th century] a creeping perennial herb, *Mitchella repens*, L. (Rubiaceae), squaw vine, partridge berry, deerberry, of the U.S. and Canada; used for its diuretic, astringent, and antidiarrheal properties, and formerly as a uterine tonic.

mite (mit) any arthropod of the order Acarina except the ticks. The mites are minute animals, related to the spiders, usually having transparent or semitransparent bodies; they may be parasitic on man and domestic animals, producing various irritations of the skin (acariasis). Mites important to human and veterinary medicine are *Acarapis*, *Acarus*, *Allodermanyssus*, *Chorioptes*, *Demodex*, *Dermanyssus*, *Eutrombicula*, *Glycyphagus*, *Knemidokoptes*, *Neoschoengastia*, *Notodres*, *Ornithonyssus*, *Otodectes*, *Pediculoides*, *Pneumonyssus*, *Psoroptes*, *Rhizoglyphus*, *Sarcoptes*, *Tetranychus*, *Trombicula*, *Tyrophagus*. **auricular m.**, see *Otodectes*. **beetle m.**, see *Gamasidae*. **bird m.**, **chicken m.**, *Dermanyssus gallinae*. **burrowing m.** see *Sarcoptes*. **cheese m.**, *Tyrophagus longior*. **clover m.**, *Bryobia praetiosa*. **coolie-itch m.**, *Rhizoglyphus parasiticus*. **copra m.**, *Tyrophagus castellani*. **depluming m.**, *Knemidokoptes gallinae*. **face m.**, *Demodex folliculorum*. **flour m.**, *Tyrophagus farinae*. **follicle m.**, see *Demodex*. **food m.**, *Glycyphagus domesticus*. **fowl m.**, see *Dermanyssus*. **hair follicle m.**, *Demodex folliculorum*. **harvest m.**, see *chigger*.

house dust m., *Dermatophagoides pteronyssinus*. **itch m.**, see *Notoedres* and *Sarcoptes*. **kedani m.**, *Trombicula akamushi*. **louse m.**, *Pyemotes*. **mange m.**, see *Sarcoptes scabiei* and *mange*. **meal m.**, *Tyrophagus*. **mouse m.**, *Allodermanyssus sanguineus*. **mower's m.**, see *chigger*. **Northern fowl m.**, *Ornithonyssus sylviarum*. **onion m.**, *Acarus rhyzoglyphicus hyacinthi*. **poultry m.**, *Dermanyssus gallinae*. **rat m.**, see *Ornithonyssus*. **red m.**, see *chigger*. **scab m.**, see *Psoroptes*. **spider m.**, see *Gamasidae*. **spinning m.**, *Bryobia praetiosa*. **straw m.**, *Pyemotes*. **tropical fowl m.**, *Ornithonyssus bursa*. **tropical rat m.**, *Ornithonyssus bacoti*.

mitella (mi-tel'ah) [L.] an arm sling.

Mithracin (mith'rah-sin) trademark for a preparation of mithramycin.

mithramycin (mith'rah-mi'sin) [USP] an antineoplastic antibiotic, $C_{22}H_{22}O_{24}$, produced by *Streptomyces argillaceus*, *S. tanashiensis*, and *S. plicatus*, occurring as a yellow, crystalline powder; used in the treatment of certain inoperable testicular malignancies, administered by intravenous infusion. It has also been used in the symptomatic treatment of hypercalcemia and hypercalciuria associated with various advanced neoplasms.

mithridatism (mith'rī-da'tizm) [after *Mithridates*, died 63 B.C., king of Pontus, who reportedly took poisons so as to become immunized against them] the acquisition of immunity to the effects of a poison by ingestion of gradually increasing amounts of it.

miticidal (mi'tī-si'dal) destructive to mites.

miticide (mi'tī-sid) an agent that is destructive to mites.

mitigate (mit'ī-gāt) [L. *mitigara* to soften] to moderate; to render milder.

mitis (mi'tis) [L.] mild.

mito- [Gr. *mitos* thread] a combining form meaning threadlike, or denoting relationship to a thread.

mitocarcin (mi'to-kar'sin) an antineoplastic antibiotic derived from *Streptomyces* species.

mitochondria (mi'to-kon'dre-ah, mit'o-kon'dre-ah), pl. of *mitochondrion* [mito- + Gr. *chondrion* granule] small spherical to rod-shaped components (organelles) found in the cytoplasm of cells, enclosed in a double membrane, with an internal membrane space between the two units, the inner one infolded into the interior of the organelle as a series of projections (cristae). They are the principal sites of the generation of energy (in the form of ion gradients and adenosine triphosphate [ATP] synthesis) resulting from the oxidation of foodstuffs, and they contain the enzymes of the Krebs and fatty acid cycles and the respiratory pathway. Mitochondria also contain RNA and DNA, by means of which they can independently replicate and code for the synthesis of some of their proteins. Called also *chondriosomes*.

mitochondrial (mi'to-kon'dre-al) of or pertaining to mitochondria.

mitochondrion (mi'to-kon'dre-on) singular of *mitochondria*.

mitocromin (mi'to-kro'min) an antineoplastic antibiotic produced by *Streptomyces viridochromogenes*.

mitogen (mi'to-jen) a substance that induces mitosis and cell transformation, especially lymphocyte transformation (q.v.). See also *lymphocyte transforming factor*, under *factor*.

mitogenesis (mit'o-jē-ne'se-ah) mitogenesis.

mitogenesis (mi'to-jen'ē-sis) [mitosis + Gr. *genesis* production] the production, or causation, of mitosis in or transformation of a cell.

mitogenetic (mi'to-jē-net'ik) pertaining to, inducing, or characterized by mitogenesis.

mitogenic (mi'to-jen'ik) causing or inducing mitosis or cell transformation.

mitokinetic (mit'o-ki-net'ik) [mito- + Gr. *kinēsis* motion] a term applied to the force existing in the kinoplasm of a cell which produces the achromatic spindle in karyokinesis.

mitomalcin (mi'to-mal'sin) an antineoplastic antibiotic produced by *Streptomyces malayensis*.

mitome (mi'tōm) a thready network of the protoplasm of a cell; the more solid portion of cell protoplasm.

mitomycin (mi'to-mi'sin) 1. any of a complex of three chemically related antineoplastic antibiotics with antitumor activity (designated A, B, and C), isolated from cultures of the soil bacterium *Streptomyces caespitosus*, which interfere with DNA synthesis (and thus with mitosis) by cross-linking, without markedly affecting RNA synthesis or protein synthesis. The C component is the most potent member of the complex (see def. 2). 2. [USP] mitomycin C: chemical name: 6-amino-8-[[[aminocarbonyl]oxy]methyl]-1aR-(1aα,8β,8aα,8bα)-hexahydro-8a-methoxy-5-methylazirino[2',3':3,4]pyrrolo[1,2-a]indole-4,7-dione. The component of the mitomycin complex with the most potent and effective antitumor activity, $C_{15}H_{18}N_4O_8$; used as adjunct therapy in adenocarcinoma of the stomach and pancreas, administered intravenously.

mitoplasm (mit'o-plazm) [mito- + Gr. *plassein* to form] the chromatic substance of a cell nucleus.

mitoschisis (mī-tos'kī-sis) [mito- + Gr. *schisis* split] karyokinesis.

mitoses (mī-to'sēz) plural of *mitosis*.

mitosin (mit'o-sin) a hormone producing mitosis or follicular maturation.

mitosis (mī-to'sis), pl. *mitoses* [mito- + -osis] a method of indirect division of a cell, consisting of a complex of various processes, by means of which the two daughter nuclei normally receive identical complements of the number of chromosomes characteristic of the somatic cells of the species. Mitosis, the process by which the body grows and replaces cells, is divided into four phases. 1. *Prophase*: Formation of paired chromosomes; disappearance of nuclear membrane; appearance of the achromatic spindle; formation of polar bodies. 2. *Metaphase*: Arrangement of chromosomes in the equatorial plane of the central spindle to form the monaster. Chromosomes separate into exactly similar halves. 3. *Anaphase*: The two groups of daughter chromosomes separate and move along the fibers of the central spindle, each toward one of the

Mitosis shown as occurring in a cell of a hypothetical animal with a diploid chromosome number of six (haploid number three); one pair of chromosomes is short, one pair is long and hooked, and one pair is long and knobbed. 1. Resting stage. 2. Early prophase: centriole divided and chromosomes appearing. 3. Later prophase: centrioles at poles, chromosomes shortened and visibly doubled. 4. Metaphase: chromosomes arranged on equator of spindle. 5. Anaphase: chromosomes migrating toward poles. 6. Telophase: nuclear membranes formed; chromosomes elongating; cytoplasmic divisions beginning. 7. Daughter cells: resting phase. (Vilee.)

asters, forming the diaster. 4. *Telophase*: The daughter chromosomes resolve themselves into a reticulum and the daughter nuclei are formed; the cytoplasm divides, forming two complete daughter cells. NOTE: The term *mitosis* is used interchangeably with cell division, but strictly speaking it refers to nuclear division, whereas *cytokinesis* refers to division of the cytoplasm. In some cells, as in many fungi and the fertilized eggs of many insects, nuclear division occurs within the cell unaccompanied by division of the cytoplasm and formation of daughter cells. Cf. *meiosis*. **heterotypic m.**, mitosis in which the halves of bivalent chromosomes move away from each other toward the poles, as occurs in the first, or reductional, division of meiosis. **homeotypic m.**, the ordinary type of cell division in mitosis, as occurs also in the second, or equational, division of meiosis. **multicentric m.**, pluripolar m. **pathologic m.**, atypical, asymmetrical mitosis indica-

tive of malignancy. **pluripolar m.**, cell division that results in the formation of more than two daughter cells.

mitosome (mit'o-sōm) [*mito-* + Gr. *sōma* body] a body formed from the spindle fibers of the preceding mitosis; a spindle remnant.

mitosper (mi'to-sper) an antineoplastic substance derived from *Aspergillus glaucus*.

mitospore (mi'to-spōr) an asexual spore, so called because it is produced by mitosis; when motile it is called a *zoospore*.

mitotane (mi'to-tān) [USP] chemical name: 1-chloro-2-[2,2-dichloro-1-(4-chlorophenyl)ethyl]benzene. An antineoplastic, $C_{14}H_{10}Cl_4$, occurring as a white crystalline powder; used for the treatment of inoperable adrenocortical carcinoma of both functional and nonfunctional types, administered orally.

mitotic (mi-tot'ik) pertaining to mitosis.

mitral (mi'tral) 1. shaped somewhat like a miter. 2. pertaining to the mitral or bicuspid valve.

mitralism (mi'tral-izm) a tendency toward the development of mitral lesions in the heart.

mitralization (mi'tral-i-za'shun) straightening of the left border and prominence of the pulmonary salient of the cardiac shadow, a configuration commonly seen roentgenographically in mitral stenosis.

Mitsuda antigen, reaction, test (mit'su-dah) [Kensuke Mitsuda, Japanese physician, born 1876] see *lepromin*, see under *reaction*, and see *lepromin test*, under *tests*.

mittelschmerz (mit'el-shmārtz) [Ger. *mittel* mid, middle, + *schmerz* pain, suffering] intermenstrual pain.

mittor (mit'or) [L. *mittere* to send] any one of the terminals of a neuron which gives off an impulse or stimulus to the ceptors of an adjoining neuron; see *neuromittor*.

mixed (mikst) affecting various parts at once; showing two or more different characteristics.

mixidine (mik'si-dēn) chemical name: 3,4-dimethoxy-*N*-(1-methyl-2-pyrrolidinylidene)benzeneethanamine; a coronary vasodilator, $C_{15}H_{22}N_2O_2$.

mixoscopia (miks'o-sko'pe-ah) [Gr. *mixis* intercourse + *skopein* to examine] sexual perversion in which gratification is obtained by the sight of others engaged in sexual intercourse.

mixoscopy (miks-os'ko-pe) mixoscopia.

mixotrophic (mik'so-trof'ik) having the nutritional characters of both animals and plants.

mixture (miks'tūr) [L. *mixtura*, *mistura*] a combination of different drugs or ingredients, as a fluid resulting from mixing a fluid with other fluids, or with solids, or a suspension of a solid in a liquid. See also under *mistura*. **A.C.E. m.**, a mixture of alcohol, chloroform, and ether. **Agazotti's m.**, a mixture of oxygen and carbon dioxide, formerly used for aviation sickness. **Aldrich m.**, a 1 per cent aqueous solution of gentian violet for the treatment of burns. **Bagot's m.**, a local anesthetic mixture of cocaine hydrochloride and spartein sulfate, in boiled water. **Biedert's cream m.**, a food for young infants, containing cream, water, and milk sugar. **brown m.**, a mixture containing glycyrrhiza fluidextract, antimony potassium tartrate, paregoric, alcohol, glycerin, and purified water; used as an expectorant. Formerly called *compound opium* and *glycyrrhiza mixture*. **Castellani's m.**, a mixture for treating yaws, containing tartar emetic, sodium salicylate, potassium iodide, sodium bicarbonate, and water. **Chabaud's m.**, a fixative mixture containing alcohol, phenol, formalin, and acetic acid. **chalk m.**, prepared chalk, with bentonite magma, cinnamon water, and saccharin sodium; used as an antacid. **expectorant m.**, see *mistura pectoralis*. **Gregory's m.**, compound powder of rhubarb; see under *powder*. **Gunning's m.**, a mixture used in estimating the nitrogen in the urine, consisting of 15 ml. of concentrated sulfuric acid, 10 gm. of potassium sulfate, and 0.5 gm. of copper sulfate. **kaolin m. with pectin** [NF], a preparation containing kaolin, pectin, powdered tragacanth, benzoic acid, saccharin sodium, glycerin, and peppermint oil in purified water; used as an adsorbent and demulcent. **Mayer's glycerin-albumin m.**, a mixture of equal parts of white of egg and glycerin, with a little camphor or phenol, for affixing paraffin sections to slides. **oleobalsamic m.**, see *mistura oleobalsamica*. **opium and glycyrrhiza m.**, compound, former name for *brown mixture*. **pectoral m.**, *mistura pectoralis*. **racemic m.**, racemate. **Ringer's m.**, see under *irrigation*. **T.-A. m.**, see *toxin-antitoxin*. **Tellyesniczky's m.**, see under *fluid*. **toxin-antitoxin m.**, see *toxin-antitoxin*. **triple dye-soap m.**, equal parts of triple dye and soap solution (sapo molis diluted with three parts of water), used as a pliable coagulum for burns. **Vincent's m.**, a powder composed of an intimate mixture of sodium hypochlorite and boric acid; used as a wound dressing.

Miyagawanella (mi'yah-ga'wah-nel'ah) [Yoneji Miyagawa, Japanese bacteriologist, born 1885] a former genus of organisms now assigned to the genus *Chlamydia*. The species making up the genus (and the diseases associated with them) are now assigned as follows: *M. lymphogranulomato'sis* (lymphogranuloma venereum) and *M. bronchopneumo'niae* (mouse pneumonitis) are assigned to *Chlamydia trachomatis*. And the species *M. bo'vis* (calf enteritis), *M. felis* (feline pneumonitis), *M. illi'nii* (pneumonitis), *M. louisia'nae* (Louisiana pneumonitis), *M. opos'sumi* (opossum encephalitis), *M. ornitho'sis* (ornithosis), *M. o'vis* (enzootic abortion of ewes), *M. pe'coris* (sporadic bovine encephalomyelitis), *M. pneumo'niae* (human pneumonitis), and *M. psit'taci* (psittacosis) are assigned to the single species *Chlamydia psittaci*.

MK monkey lung (cell culture).

M.K.S. abbreviation for *meter-kilogram-second* system, a system of measurements in which the units are based on the meter as the unit of length, the kilogram as the unit of mass, and the second as the unit of time.

M.L. Licentiate in Medicine.

ml. milliliter.

M.L.A. abbreviation for *L. mento-laeva anterior* (left mentoanterior, a position of the fetus), and for *Medical Library Association*.

M.L.D. 1. median lethal dose. 2. minimum lethal dose.

M.L.P. abbreviation for *L. mento-laeva posterior* (left mentoposterior, a position of the fetus).

M.L.T. abbreviation for *L. mento-laeva transversa* (left mento-transverse, a position of the fetus).

M.M. mucous membranes.

mM. millimole.

mm. millimeter; muscles.

MMPI Minnesota Multiphasic Personality Inventory.

mm.p.p. millimeters partial pressure (partial pressure expressed in millimeters of mercury).

mμ millimicron.

mμc. millimicrocurie (nanocurie).

mμg. millimicrogram (nanogram).

μl. microliter.

μmg. micromilligram.

μmm. micromillimeter.

μμ micromicron.

μμc. micromicrocurie (picocurie).

μμg. micromicrogram (picogram).

Mn chemical symbol for *manganese*.

mN millinormal.

M'Naghten (McNaughten) rule (mik-naw'ten) [from *M'Naghten*, a person who in 1843 was acquitted by a British court of murder on the ground of insanity] see under *rule*.

mnemic (ne'mik) mnemonic.

mnemism (ne'mizm) mnemonic theory.

mnemonic (ne-mon'ik) [Gr. *mnēmonikos* pertaining to memory] pertaining to, characterized by, or promoting recollection, or memory.

mnemonics (ne-mon'iks) the cultivation or improvement of memory by special methods or techniques.

mnemotechnics (ne'mo-tek'niks) mnemonics.

M.O. Medical Officer.

Mo chemical symbol for *molybdenum*.

Moban (mo'ban) trademark for a preparation of molindone hydrochloride.

mobility (mo-bil'i-te) [L. *mobilitas*] 1. capability of movement, of being moved, or of flowing freely. 2. rate of movement of a charged particle in an applied electric field. **electrophoretic m.**, the velocity of a charged particle per unit of potential gradient in electrophoresis.

mobilization (mo'bi-li-za'shun) the process of making a fixed or ankylosed part movable. **stapes m.**, surgical correction of immobility of the stapes, in treatment of deafness.

mobilometer (mo'bil-om'ē-ter) an instrument for measuring the consistency of liquids such as oil, cream, liquid foods, etc.

Möbius' disease, sign, syndrome (me'be-us) [Paul Julius Möbius, German neurologist, 1853-1907] see under *disease, sign, and syndrome*.

moccasin (mok'ah-sin) a common name applied to several species of snakes, but usually denoting the venomous semiaquatic pit viper *Agkistrodon piscivorus*, or water moccasin, less frequently *A. contortrix*, or Highland moccasin. See table accompanying *snake*.

mocezuelo (mo'se-zwa'lo) [Mexican] trismus neonatorum.

mock-up (mok'up) a full-sized model of an apparatus or other equipment constructed out of substitute materials, used in instruction or for study and improvement of design.

modality (mo-dal'i-te) 1. a homeopathic term signifying a condition which modifies drug action; a condition under which symptoms develop, becoming better or worse. 2. a method of application of, or the employment of, any therapeutic agent; limited usually to physical agents. 3. a specific sensory entity, such as taste.

mode (mōd) in statistics, the value or item in a variations curve which shows the maximum frequency of occurrence.

model (mod'el) something that represents something else, as a model for diagnostic or anatomical study. In dentistry, a cast. **animal m.**, any condition found in an animal that is of value in

studying a biological phenomenon, e.g., a pathological mechanism of an animal disorder useful in studying human disease.

moderator (mod'er-a-tor) in nuclear chemistry and physics, a substance, such as graphite or beryllium, used to cut down the flux of subatomic particles or radiation by absorption of the same.

Modéril (mod'er-il) trademark for a preparation of rescinamine.

modification (mod'i-fi-ka'shun) the process or result of changing the form or characteristics of an object or substance. **behavior m.**, see under *therapy*. **racemic m.**, see *racemate*.

modifier (mod'i-fi-er) something that alters or changes; in the plural, modifying factors (polygenes).

modioliform (mo'de-o'li-form) shaped like the hub of a wheel.

modiolus (mo-di'o-lus) [L. "nave," "hub"] [NA] the central pillar or columella of the cochlea; called also *columella cochleae*.

Mod. praesc. abbreviation for L. *mo'do praescip'to*, in the way directed.

modulating (mod'u-lāt'ing) in psychology, a form of facial deceit in which an individual modifies his facial expressions so as to show more or less of an emotion than is being experienced.

modulation (mod'u-la'shun) [L. *modulare* to measure] the normal capacity of cell adaptability to its environment. **antigenic m.**, the alteration of antigenic determinants in a living cell surface membrane following interaction with antibody.

modulator (mod'u-la'tor) a specific inductor that brings out characteristics peculiar to a definite region.

Moe plate (mo) [John H. Moe, American surgeon, born 1905] see under *plate*.

Moebius see *Möbius*.

Moeller's glossitis (me'lerz) [Julius Otto Ludwig Moeller, German surgeon, 1819-1887] see under *glossitis*.

Moeller's reaction (me'lerz) [Alfred Moeller, German bacteriologist, born 1868] rhinoreaction.

Moeller-Barlow disease (me'ler-bar'lo) [J. O. L. Moeller; Sir Thomas Barlow, London physician, 1845-1945] see under *disease*.

Moенckeberg (menk'ē-berg) see *Mönckeberg*.

Moentjang tina the Malay term in Indonesia for intoxication caused by the use in food of oil obtained from the fruit of the tropical tree *Hernandia sonora* L. (Hernandiaceae). Ordinarily the oil is used only in lamps.

Moerner-Sjöqvist method, test (mer'ner-syek'vist) [Carl Thore Moerner, Swedish physician, 1864-1917; John August Sjöqvist, Swedish physician, 1863-1934] see *Sjöqvist method*, under *method*.

mogi- [Gr. *mogis* with difficulty] a combining form meaning difficult, or with difficulty.

mogiathria (moj-e-ar'thre-ah) [*mogi-* + Gr. *arthron* to utter distinctly + *-ia*] a form of dysarthria in which there is defective coordination of the muscles involved.

mogilalia (moj-e-la'le-ah) [*mogi-* + *lalia* chatter] difficulty in speech; stuttering.

mogiphonia (moj-e-fo'ne-ah) [*mogi-* + Gr. *phōnē* voice] difficulty in making vocal sounds.

M.O.H. Medical Officer of Health.

Mohr's test (mōrz) [Francis Mohr, American pharmaceutical chemist] see under *tests*.

Mohrenheim's fossa (mo'ren-himz) [Baron Joseph Jacob Freiherr von Mohrenheim, Austrian surgeon, died 1799] trigonum deltoideopectorale.

moiety (moi'ē-te) [Fr. *moitié*, from L. *medietas*, *medius*, middle] any equal part; a half; also any part or portion. **carbohydrate m.**, a carbohydrate-derived portion of the structure of a molecule. **corrin m.**, a complex ring system in the vitamin B₁₂ molecule, closely related to the porphyrins of the cytochromes.

moist (moist) somewhat wet; damp.

mol (mol) mole, def. 3.

molal (mo'lal) containing one mole of solute per kilogram of solvent. NOTE: *molal* refers to the weight of the solvent, *molar* to the volume of solvent.

molality (mo-lal'i-te) the number of moles of a solute per kilogram of pure solvent. NOTE: *Molality* refers to the weight of the solvent, *molarity* to the volume of the solvent.

molar (mo'lar) 1. [L. *moles* mass] pertaining to a mass; not molecular. 2. [L. *molaris* to do with grinding] adapted for grinding; see under *tooth*. 3. a posterior tooth which is used for grinding food and which acts as a major jaw support in the dental arch; see under *tooth*. 4. containing one mole of solute per liter of solution; cf. *molal*. **impacted m.**, a molar tooth that is prevented from erupting, or from taking its place in normal occlusion. **Moon's m's**, see under *tooth*. **mulberry m.**, a malformed first molar tooth with irregular crown, the enamel apparently consisting of an agglomerate mass of globules; usually seen in congenital syphilis. **sixth-year m.**, one of the permanent first molar teeth, so called because it usually erupts at the age of 6 years immediately posterior to the last molar of the deciduous

dentition. **third m.**, dens serotinus. **twelfth-year m.**, one of the permanent second molar teeth, so called because it usually erupts at the age of 12 years.

molariform (mo-lar'i-form) shaped like a molar tooth.

molarity (mo-lar'i-te) the number of moles of a solute per liter of solution. Cf. *molality*.

molasses (mo-las'ez) [L. *mellaceus* like honey] a thick, sweet syrup, the residue left after crystallization of sugar; treacle.

sugar-house m., that which is left after the refining of sugar.

West India m., a variety obtained in making raw sugar.

molc. molar concentration.

mold (mōld) 1. any of a large group of parasitic and saprophytic fungi that cause mold or moldiness and that exist as multicellular filamentous colonies; also, the deposit or growth produced by such fungi. The dimorphic fungi exist, according to environmental conditions, as molds or unicellular (yeast) forms. The common molds are *Mucor*, *Penicillium*, *Rhizopus*, and *Aspergillus*. See accompanying Plate XXVIII. 2. a form in which an object is given shape, or cast. 3. a term used in dentistry to specify the shape of an artificial tooth. **slime m.**, a fungus-like microorganism considered by some to be a protozoan and by others to be a fungus; see *Mycetozoida*. Called also *slime animal*. **white m.**, white or slightly woolly patches which form on the surface of meat in cold storage and other products due to the growth of various species of fungi.

molding (mōld'ing) 1. the creation of shape, or fashioning of an object. 2. the shaping of the fetal head in adjustment to the size and shape of the birth canal. **border m.**, the shaping of dental impression material by the manipulation or action of the tissues and structures adjacent to the borders of an impression. **compression m.**, the pressing or squeezing together of a plastic dental material to form a shape in a mold. **injection m.**, the fashioning of an object by forcing a plastic material into a closed mold through appropriate openings. **tissue m.**, border m.

mole (mōl) [L. *moles* a shapeless mass] 1. a fleshy mass or tumor formed in the uterus by the degeneration or abortive development of an ovum. 2. a nevocytic nevus; the term is also used to designate a pigmented fleshy growth, and is applied loosely to any blemish of the skin. 3. that amount of a substance (in a system) that contains as many elementary entities (atoms, ions, molecules, or radicals) as there are carbon atoms in 12 grams of carbon-12 (¹²C), or that amount of a chemical compound whose mass in grams is equivalent to its formula mass (see *gram-molecule*, and see *gram-molecular weight*, under *weight*). A mole is considered to be equal to 6.023×10^{23} (Avogadro's number) elementary entities. Abbreviated mol. **blood m.**, a mass in the uterus made up of blood clots, the placenta, and fetal membranes retained after fetal death. **Breus' m.**, a malformation of the ovum consisting of tuberosus subchorionic hematoma of the decidua; called also *hematomole*. **cystic m.**, hydatidiform m. **false m.**, an intrauterine mass formed from a polyp or neoplasm. **fleshy m.**, 1. a blood mole which has assumed a fleshlike appearance. 2. one formed by a dead ovum in the uterus. **gram m.**, mole, def. 3. **hairy m.**, hairy nevus. **hydatid m.**, hydatidiform m., an abnormal pregnancy resulting from a pathologic ovum, with proliferation of the epithelial covering of the chorionic villi and dissolution and cystic cavitation of the avascular stroma of the villi. It results in a mass of cysts resembling a bunch of grapes. Called also *cystic* or *vesicular m.* **invasive m.**, malignant m., metastasizing m., chorioadenoma destruens. **pigmented m.**, see under *nevus*. **stone m.**, a mole which has undergone a calcareous degeneration. **true m.**, a mole which represents the degenerated ovum itself. **tubal m.**, the mass of blood clot and chorionic villi found after death of the conceptus in a tubal pregnancy. **vesicular m.**, hydatidiform m.

molecular (mo-lek'u-lar) of, pertaining to, or composed of molecules.

molecule (mol'ē-kūl) [L. *molecula* little mass] a very small mass of matter; the smallest amount of a substance which can exist alone; an aggregation of atoms; specifically, a chemical combination of two or more atoms which form a specific chemical substance. To break up the molecule into its constituent atoms is to change its character. The number and kind of atoms in a molecule vary with the compound. **diatomic m.**, one containing two atoms. **hexatomic m.**, one containing six atoms. **monatomic m.**, one which consists of a single atom. **non-polar m.**, a molecule in which the electrical potential is symmetrically distributed over the molecule. **polar m.**, a molecule in which the electrical potential is not symmetrically distributed. **tetratomic m.**, a molecule made up of four atoms. **triatomic m.**, one composed of three atoms.

molilalia (mol'i-la'le-ah) mogilalia.

molimen (mo-li'men), pl. *molim'ina* [L. "effort"] a laborious effort made for the performance of any normal body function, especially that manifested by a variety of mild but unpleasant symptoms preceding or accompanying the menstrual period; when such symptoms are severe, the condition is known as premenstrual tension.

molimina (mo-lim'i-nah) plural of *molimen*.

molindone hydrochloride (mo-lin'dōn) chemical name: 3-

ethyl-1,5,6,7-tetrahydro-2-methyl-5-(4-morpholinylmethyl)-4H-indol-4-one monohydrochloride. A sedative and tranquilizer, $C_{16}H_{24}N_2O_2 \cdot HCl$, occurring as a white, crystalline powder; used in the management of schizophrenia, administered orally.

Mol-Iron (möl-i'ron) trademark for preparations of ferrous sulfate.

Molisch's test (reaction) (mol'ish-ez) [Hans Molisch, chemist in Vienna, 1856-1937] see under *tests*.

Moll's glands (molz) [Jacob Antonius Moll, Dutch ophthalmologist, 1832-1914] glandulae ciliaris conjunctivales.

mollescuse (mol-les'küs) [L. *mollis* soft] softening.

Mollicutes (mol'i-ku'téz) [L. *mollis* soft + *cutis* skin] in some systems of classification, a class of microorganisms of the kingdom Prokaryotae that includes prokaryotes lacking a true cell wall, therefore they are considered to be unrelated to the bacteria (see *Bacteria*). The class comprises the smallest living organisms, the members occurring as pleomorphic, coccoid, or filamentous cells with a tendency to produce myceloid structures, which are bounded by a triple-layered pliable membrane. It consists of a single order, the Mycoplasmatales.

mollin (mol'in) a glycerinated soft soap with excess of fats, used as a vehicle for medicines to be applied externally.

mollities (mo-lish'e-éz) [L.] softness; abnormal softening. **m. os'sium**, osteomalacia. **m. un'guium** (obs.), abnormal softness of the nails.

mollusc (mol'usk) mollusk.

Mollusca (mō-lus'kah) [L. *molluscus* soft] a phylum of animals containing snails, slugs, mussels, oysters, clams, octopuses, nautilus, squids, cuttlefish, etc.

molluscacidal (mō-lusk'ah-si'dal) destructive to snails and other mollusks.

molluscicide (mō-lusk'ah-sid) an agent that will destroy snails and other mollusks.

molluscicide (mō-lus'si-sid) molluscicide.

molluscous (mō-lus'kus) pertaining to molluscum.

molluscum (mō-lus'kum) [L. *molluscus* soft] the name given to various skin diseases characterized by the formation of soft rounded cutaneous tumors; when used alone it refers to *m. contagiosum*. **m. contagio'sum**, a skin disease caused by a virus and marked by the formation of firm, rounded, translucent, crateriform papules containing caseous matter and peculiar capsulated bodies (molluscous bodies). The papules are very chronic in their course, and are without general symptoms.

mollusk (mol'usk) any member of the phylum Mollusca.

Moloney test (mo-lo'ne) [Peter J. Moloney, Canadian immunologist, born 1891] see under *tests*.

molting (mōlt'ing) ecdysis.

molugram (mol'u-gram) a gram-molecule.

Mol. wt. molecular weight.

molybdate (mo-lib'dāt) any salt of molybdic acid; some are used as tests, especially for the detection of heavy metal ions.

molybdenosis (mo-lib'dē-no'sis) chronic molybdenum poisoning; see under *poisoning*.

molybdenum (mo-lib'dē-num) [Gr. *molybdos* lead] a hard, silvery-white, metallic element; symbol, Mo; atomic number, 42; atomic weight, 95.94; specific gravity, 10.2. It is an essential trace element, being a component of the enzymes xanthine oxidase, aldehyde oxidase, and nitrate reductase. See also under *poisoning*.

molybdic (mo-lib'dik) containing molybdenum as a hexavalent element.

molybdoprotein (mo-lib'do-pro'te-in) an enzyme containing molybdenum (q.v.).

molybdous (mo-lib'dus) containing molybdenum as a tetravalent element.

momentum (mo-men'tum) [L.] the quantity of motion; the product of mass by velocity.

monacid (mon-as'id) containing one atom of hydrogen that is replaceable by a base; said of a salt or of an alcohol.

monad (mon'ad) [Gr. *monas* a unit] 1. a single-celled protozoan or a single-celled coccus. 2. a univalent radical or element. 3. in meiosis, one member of a tetrad.

Monadidae (mon-ad'i-de) an order of protozoa of the class Zoomastigophora, subphylum Mastigophora, including the genus *Monas*.

monadin (mon'ah-din) any microorganism or species belonging to the Monadina.

Monadina (mon'ah-di'nah) in former classifications, a group of organisms including the orders Phytomonadina and Protomonadina.

Monakow's syndrome, theory, tract (bundle, fasciculus) (mon-ah'kovz) [Constantin von Monakow, neurologist in Zurich, 1853-1930] see under *syndrome*, and see *diaschisis* and *tractus rubrospinalis*.

Monaldi's drainage (mo-nal'dēz) [V. Monaldi, Italian physician] see under *drainage*.

monamide (mon-am'id) monoamide.

monamine (mon-am'in) monoamine.

monaminergic (mon-am'in-er'jik) monoaminergic.

monangle (mon'ang-g'l) having only one angle; Black's term for a dental instrument having only one angulation in the shank connecting the handle, or shaft, with the working portion of the instrument, known as the blade, or nib.

Monarda (mo-nar'dah) American horsemint; wildbergamot. The leaves of *Monarda punctata* L. (Labiateae). A herbaceous plant found throughout the midwest and northeast United States and formerly used for its carminative and aromatic stimulant properties.

monarthric (mon-ar'thrik) pertaining to or affecting a single joint.

monarthrititis (mon'ar-thri'tis) [*mono-* + *arthrititis*] inflammation of a single joint. **m. defor'mans**, arthritis deformans of a single joint.

monarticular (mon'ar-tik'u-lar) monarthric.

Monas (mo'nas) [Gr. *monas* monad] a genus of minute, solitary, free-swimming, flagellate protozoa of the family Monadidae, order Protomonadina.

monaster (mon-as'ter) [*mono-* + Gr. *astēr* star] the single star-shaped figure at the end of the prophase in mitosis.

monathetosis (mon'ath-ē-to'sis) [*mono-* + *athetosis*] athetosis of one limb.

monatomic (mon'ah-tom'ik) [*mono-* + Gr. *atomos* indivisible] 1. univalent. 2. monobasic. 3. consisting of monatomic molecules.

monauchenos (mon-awk'ē-nus) a dicephalic monster with one neck.

monaural (mon-aw'ral) pertaining to one ear.

monavalent (mon-av'ah-lent) monovalent.

monavitaminosis (mon'ah-vi'tah-min-o'sis) a deficiency disease in which only one vitamin is lacking in the diet.

monaxon (mon-ak'son) [*mono-* + Gr. *axōn* axis] a neuron possessing only one axon.

monaxonic (mon'ak-son'ik) having one axon.

Mönckeberg's arteriosclerosis, calcification, degeneration, mesarteritis, sclerosis (menk'e-bergz) [Johann Georg Mönckeberg, pathologist at Bonn, 1877-1925] see under *arteriosclerosis*.

Mondeville (mon'dē-ve'yuh), Henri de (1260-1320) a distinguished French surgeon—surgeon to Philip the Fair and Louis X—who wrote a surgical text (the first French one) containing many observations (e.g., on wound healing) that were far ahead of the times.

Mondonesi reflex (mon'do-na'ze) [Filippo Mondonesi, Italian physician] bulbomimic reflex.

Mondor's disease (mon'dorz) [Henri Mondor, French surgeon, 1885-1962] see under *disease*.

monecious (mon-e'shus) monoeceous.

monensin (mo-nen'sin) an antibacterial, antifungal, and antiprotozoal antibiotic, $C_{36}H_{62}O_{11}$, produced by *Streptomyces cinamonensis*, which has been used in veterinary medicine.

moner (mo'ner) a non-nucleated mass of protoplasm.

Monera (mo-ne'rah) [Gr. *monērēs* single] in some classifications, a kingdom comprising the unicellular prokaryotes, i.e., bacteria and blue-green algae, (see also *Prokaryotae*), and in other classifications, also including viruses and rickettsiae.

monerula (mo-ner'u-lah), pl. *moner'ulae* [Gr. *monērēs* single] an impregnated ovum with as yet no cleavage nucleus.

monesia (mo-ne'ze-ah) [L.] an extract from monesia bark, the product of *Chrysophyllum glycyphloeum*, Casar. (Sapotaceae), a tree of Brazil; it is astringent and stomachic, and contains saponins, tannins, and glycyrrhizin.

monesthetic (mon'es-thet'ik) [Gr. *monos* single + *aisthēsis* perception] pertaining to or affecting a single sense or sensation.

monestrous (mon-es'trus) completing only one estrous cycle in each sexual season.

Monge's (mon'gez) [Carlos Monge, pathologist in Lima, Peru, born 1884] chronic mountain sickness.

mongolian (mon-go'le-an) [see *mongolism*] pertaining to, resembling, or belonging to the Mongols; a term formerly applied to defects characteristic of Down's syndrome.

mongolism (mon'go-lizm) [*Mongol*, a member of one of the chief ethnological divisions of Asiatic peoples] Down's syndrome; so called because of facial characteristics typical of this condition. **translocation m.**, mongolism in which, although there are the normal 46 chromosomes, the genetic material of chromosome 21 is triplicated within each somatic cell instead of duplicated, as is normal.

mongoloid (mon'go-loid) [see *mongolism*] 1. pertaining to or resembling the Mongols. 2. an individual with Down's syndrome.

Moniezia (mon'i-e'ze-ah) a genus (family Anoplocephalidae) of tapeworms of cattle, goats, and sheep.

Fruiting bodies of *Rhizopus* (A) and *Aspergillus* (B). (Carpenter: Microbiology.)

Drawing of *Penicillium*, showing the brushlike appearance of the parallel chains of conidia characteristic of this genus. (Carpenter: Microbiology.)

Photomicrograph of a *Penicillium*, showing twisted, branching hyphae and a few chains of conidia. (Courtesy of The Abbott Laboratories, North Chicago, Ill.)

CHARACTERISTIC STRUCTURES OF COMMON MOLDS

monilated (mon'il-āt'ed) moniliform.

monilethrix (mo-nil'e-thriks) [L. *monile* necklace + Gr. *thrix* hair] a disease condition, inherited as an autosomal dominant trait, in which the hairs exhibit marked multiple constrictions, with a beading effect, and are very brittle, rarely reaching an inch in length before breaking.

Monilia (mo-nil'e-ah) [L. *monile* necklace] 1. a former name for a genus of fungi now called *Candida*. 2. a genus of imperfect fungi of the family Moniliaceae, order Moniliales; its perfect (sexual) stage is *Sclerotinia*.

Moniliaceae (mo-nil'e-a'se-e) a family of colorless or light-colored imperfect fungi of the order Moniliales, which includes the genera *Histoplasma*, *Blastomyces*, *Sporothrix*, *Trichophyton*, *Coccidioides*, *Aspergillus*, *Trichoderma*, *Verticillium*, *Trichothecium* and *Penicillium*.

monilial (mo-nil'e-al) pertaining to or caused by *Monilia*.

Moniliales (mo-nil'e-a'lēz) an order of imperfect fungi whose conidia are usually borne directly on undifferentiated mycelia, and including the families Cryptococcaceae, Moniliaceae, Dematiaceae, and Tuberculariaceae. Formerly called *Conidiosporales*.

moniliasis (mon-i-li'ah-sis) an infection caused by *Monilia*. See *candidiasis*.

moniliform (mo-nil'i-form) [L. *monile* necklace + *forma* form] shaped like a necklace or string of beads.

Moniliformis (mo-nil'i-for'mis) a genus of acanthocephalans. *M. moniliformis* (formerly *Echinorhynchus moniliformis*) is a parasite of rats, mice, and dogs, and a facultative parasite in man.

moniliid (mo-nil'e-id) candidid.

moniliosis (mo-nil'e-o'sis) candidiosis.

Monistat (mo'ni-stat) trademark for a preparation of miconazole nitrate.

monitor (mon'i-tor) [L. "one who reminds," from *monere* to remind, admonish] 1. to check constantly on a state or condition, as on the vital signs of a patient under anesthesia and undergoing surgery, or to determine the amount of exposure to radiation. 2. an apparatus used to observe or record such physiological signs as respiration, pulse, and blood pressure in an anesthetized patient or one undergoing surgical or other procedures.

monium (mo'ne-um) [Gr. *monos* single] (*obs.*) a name given an earth metal discovered in 1898, later found to be a mixture of rare earth metals.

Moniz (mo'nēz), Antonio Egas. Portuguese neurosurgeon 1874–1955, noted for the development of cerebral angiography and the introduction of prefrontal lobotomy; co-winner, with Walter Rudolf Hess, of the Nobel prize for medicine and physiology in 1949.

monkey paw (mon'ke-paw) a condition in which the thumb lies in adduction and extension and cannot be opposed so as to touch the tips of the other fingers, owing to weakness of the opposing muscles of the thumb, as in lesion of the median nerve.

monkeypox (mon'ke-poks) a mild disease resembling smallpox, occurring in laboratory monkeys, and caused by a virus related to the smallpox virus. Several human cases have been reported in West Africa.

Monneret's pulse (mon-rāz') [Jules Auguste Edward *Monneret*, physician in Paris, 1810–1868] see under *pulse*.

mono- [Gr. *monos* single] a combining form denoting one or single; limited to one part; in chemistry, combined with one atom.

monoamide (mōn'o-am'id) an amide containing one amide group.

monoamine (mon'o-am'ēn) an amine molecule containing one amino group, e.g., serotonin, dopamine, and norepinephrine.

monoaminergic (mon'o-am'in-er'jik) of or pertaining to neurons that secrete the monoamine neurotransmitters dopamine, norepinephrine, and serotonin.

monoaminodiphosphatide (mon'o-am'i-no-di-fos'fah-tid) a phosphatide containing 1 atom of nitrogen and 2 of phosphorus to the molecule.

monoaminomonophosphatide (mon'o-am'i-no-mon'o-fos'fah-tid) a phosphatide containing 1 atom of nitrogen and 1 of phosphorus to the molecule.

monoamniotic (mon'o-am'ne-ot'ik) having or developing within a single amniotic cavity; said of monozygotic twins.

monoanesthesia (mon'o-an'es-the'ze-ah) [*mono-* + *anesthesia*] anesthesia of a single part or organ.

monoarticular (mon'o-ar-tik'u-lar) monarthric.

monobacillary (mon'o-bas'i-lār'e) caused by or containing a single species of bacillus.

monobacterial (mon'o-bak-te're-al) monobacillary.

monobasic (mon'o-ba'sik) [*mono-* + Gr. *basis* base] having but one base; a term applied to an acid having only one replaceable atom of hydrogen and therefore yielding only one series of salts, as HCl.

monobenzene (mon'o-ben'zōn) [USP] chemical name: 4-(phenylmethoxy)phenol. A melanin-inhibiting agent, C₁₃H₁₂O₂, occur-

ring as a white, crystalline powder; used as a depigmenting agent, applied topically to the skin.

monoblast (mon'o-blast) [*mono-* + Gr. *blastos* germ] the earliest precursor in the monocytic series, which matures to develop into the promonocyte; monoblasts have a fine chromatin structure and nucleoli are usually visible. They are not normally seen in the bone marrow or peripheral blood, but may be seen in monocytic anemia.

monoblastoma (mon'o-blas-to'mah) a neoplasm containing monoblasts and monocytes.

monoblepsia (mon'o-blep'se-ah) [*mono-* + Gr. *blepsissight* + *-ia*] 1. a condition of the vision in which it is more distinct when only one eye is used. 2. a variety of color blindness in which only one color is perceived.

monobrachia (mon'o-bra'ke-ah) [*mono-* + Gr. *brachion* arm + *-ia*] a developmental anomaly characterized by the presence of a single arm.

monobranchius (mon'o-bra'ke-us) an individual exhibiting monobrachia.

monobromated (mon'o-bro'māt-ed) [L. *monobromatus*] having a single atom of bromine in each molecule.

monobromophenol (mon'o-bro'mo-fe'no) a violet-colored liquid, OH·C₆H₄Br, of penetrating odor, soluble in water, alcohol, and ether, formerly used as an external antiseptic.

monocalcic (mon'o-kal'sik) containing one atom of calcium in the molecule.

monocardian (mon-o-kar'de-an) [*mono-* + Gr. *kardia* heart] possessing a heart with a single atrium and ventricle, as that of a shark.

monocelled (mon'o-seld) [*mono-* + *cell*] unicellular; consisting of a single cell.

monocellular (mon'o-sel'u-lar) unicellular.

monocephalus (mon'o-sef'ah-lus) [*mono-* + Gr. *kephalē* head] a monster with one head but with some duplication of its parts.

m. tet'rapus dibra'chius, a monster with one head, two arms, and partial or complete duplication of the pelvis, with four legs, the pair belonging to one member often being fused in a single limb. **m. tri'pus dibra'chius**, a monster with one head, two arms, and partial duplication of the pelvis, with a median third leg or leg rudiment.

monochlorothymol (mon'o-klo'ro-thi'mol) chlorothymol.

monochord (mon'o-kord) [*mono-* + Gr. *chordē* cord] (*obs.*) an instrument for testing upper tone audition. It consists of a long steel or silver wire fastened at the ends and having an intermediate movable clamp. The tone is produced by longitudinal friction. Called also *Schultze's monochord*.

monochorea (mon'o-ko-re'ah) [*mono-* + *chorea*] chorea affecting but one limb.

monochorial (mon'o-ko're-al) monochorionic.

monochorionic (mon'o-ko're-on'ik) [*mono-* + *chorionic*] having or developing in a common chorionic sac; said of monozygotic twins.

monochrome (mon'o-kro'ik) [*mono-* + Gr. *chroa* color] having only one color; monochromatic.

monochromasy (mon'o-kro'mah-se) blindness to all colors but one: color blindness, in which all colors are seen as one color.

monochromat (mon'o-kro'mat) a person affected by monochromatism; called also *achromat*.

monochromatic (mon'o-kro-mat'ik) [*mono-* + Gr. *chrōma* color] 1. existing in or having only one color. 2. pertaining to or affected by monochromatism. 3. staining with only one dye at a time. Cf. *polychromatic*.

monochromatism (mon'o-kro'mah-tizm) complete color blindness; inability to discriminate hues, all colors of the spectrum appearing as neutral grays with varying shades of light and dark. Called also *achromatism*, *achromatopia*, and *achromatopsia*.

cone m., that in which there is some cone function and normal visual acuity and which is not associated with nystagmus and photophobia. **rod m.**, that in which there is complete absence of cone function and which is accompanied by poor vision, photophobia, and nystagmus.

monochromatophil (mon'o-kro-mat'o-fil) [*mono-* + Gr. *chrōma* color + *philein* to love] 1. stainable with only one kind of stain. 2. any cell or other element that will take only one stain.

monochromophilic (mon'o-kro'mo-fil'ik) stainable with only one kind of stain.

monoclinic (mon'o-klin'ik) [*mono-* + Gr. *klinein* to incline] a term applied to crystals in which the vertical axis is inclined to one lateral axis, but is at right angles to the other.

monoclonal (mon'o-klōn'al) derived from a single cell; pertaining to a single clone.

monocontaminated (mon'o-kon-tam'i-nāt'ed) infected by a single species of microorganism, or by a single type of contaminating agent; see *monoxenic*.

monocontamination (mon'o-kon-tam'i-na'shun) experimental infection of a previously germ-free animal by a single infectious agent.

monocorditis (mon'o-kör-di'tis) inflammation of one vocal cord.

monocranium (mon'o-kra'ne-us) [*mono-* + Gr. *kranion* cranium] monocephalus.

monocrotic (mon'o-krot'ik) characterized by monocrotism.

monocrotism (mo-nok'ro-tizm) [*mono-* + Gr. *krotos* beat] a simple pulse wave contour having neither an anacrotic nor a dicrotic notch.

monocular (mon-ok'u-lar) [*mono-* + L. *oculus* eye] 1. pertaining to or having but one eye. 2. having but one eyepiece, as in a microscope.

monoculus (mon-ok'u-lus) [*mono-* + L. *oculus* eye] 1. a bandage for covering one eye. 2. a cyclops.

monocyclic (mon'o-si'klik) pertaining to one cycle. In chemistry, having a molecular structure containing only one ring.

monocyesis (mon'o-si-e'sis) [*mono-* + Gr. *kyēsis* pregnancy] pregnancy with a single fetus.

Monocystis (mon'o-sis'tis) [*mono-* + Gr. *kystis* sac, bladder] a genus of sporozoa of the order Gregarinidia, species of which are parasitic in the seminal vesicles of the earthworm.

monocyte (mon'o-sit) [*mono-* + *-cyte*] a mononuclear phagocytic leukocyte, 13 μ to 25 μ in diameter, with an ovoid or kidney-shaped nucleus, containing lacey, linear chromatin, and abundant gray-blue cytoplasm filled with fine, reddish and azurophilic granules. Formed in the bone marrow from the promonocyte, monocytes are transported to tissues, as of the lung and liver, where they develop into macrophages. Formerly called *large mononuclear leukocyte*, and *hyaline* or *transitional leukocyte*. See also *monocytic series*, under *series*.

monocytic (mon'o-sit'ik) 1. pertaining to, characterized by, or of the nature of monocytes. 2. pertaining to the monocytic series; see under *series*.

monocytoid (mon'o-sit'oid) resembling a monocyte.

monocytopenia (mon'o-si'to-pe'ne-ah) [*monocyte* + Gr. *penia* poverty] abnormal decrease in the proportion of monocytes in the blood.

monocytopenia (mon'o-si'to-pe'ne-ah) [*monocyte* + Gr. *poiein* to make] the formation of monocytes.

monocytosis (mon'o-si-to'sis) increase in the proportion of monocytes in the blood.

Monod (mō-no'), Jacques Lucien. French biochemist, born 1910; co-winner with François Jacob and André Michael Lwoff, of the Nobel prize in medicine and physiology for 1965, for discoveries concerning the genetic control of enzymes and virus synthesis.

monodactylia (mon'o-dak-til'e-ah) monodactyly.

monodactylism (mon-o-dak'til-izm) monodactyly.

monodactyly (mon'o-dak'ti-le) [*mono-* + Gr. *daktylos* finger] a developmental anomaly characterized by the presence of only one digit on a hand or foot.

monodal (mon-o'dal) [*mono-* + Gr. *hodos* road] having connection with one terminal of a resonator or of a grounded solenoid, so that the patient is a capacitor for entrance and exit of high frequency currents.

monodermoma (mon'o-der-mo'mah) a tumor that has developed from one germinal layer.

monodiplopia (mon'o-di-plo'pe-ah) [*mono-* + Gr. *diploos* double + *ops* eye + *-ia*] double vision in one eye only.

Monodontus (mon'o-don'tus) *Bunostomum*.

Monodral bromide (mon'o-dral) trademark for preparations of penthienate bromide.

monoecious (mon-e'shus) [*mono-* + Gr. *oikos* house] having reproductive organs typical of both sexes in a single individual.

monoethanolamine (mon'o-eth'ah-nōl'ah-mēn) chemical name: 2-aminoethanol. An amino alcohol, C₂H₇NO, found in cephalins and phospholipids, and derived metabolically by decarboxylation of serine. The official preparation [NF], occurring as a clear, colorless, moderately viscous liquid, is used as a surfactant in pharmaceutical preparations. A combination of monoethanolamine and oleic acid (known as *ethanolamine oleate*) has been used as a sclerosing agent in the injection treatment of varicose veins. Called also *colamine* and *ethanolamine*.

monofilm (mon'o-film) a monomolecular layer transferred to a prepared plate.

monogametic (mon'o-gah-met'ik) [*mono-* + *gamete*] having only one kind of gamete with respect to the sex chromosomes, as the human female.

monogamy (mo-nog'ah-me) [*mono-* + Gr. *gamos* marriage] marriage to a single spouse.

monoganglial (mon'o-gang'gle-al) affecting a single ganglion.

monogastric (mon'o-gas'trik) [*mono-* + Gr. *gastēr* stomach] having but one belly or stomach.

monogen (mon'o-jen) 1. a univalent chemical element which combines in only one proportion. 2. an antiserum produced by the use of one antigen (i.e., immunogen).

monogenesis (mon'o-jen'e-sis) [*mono-* + Gr. *genesis* production]

1. the production of only male or female offspring. 2. the theory that all things develop from a single cell.

monogenic (mon-o-jen'ik) pertaining to or influenced by a single gene.

monogerminal (mon'o-ger'mi-nal) monozygotic.

monoglyceride (mon'o-glis'er-id) a compound consisting of one molecule of fatty acid esterified to glycerol.

monogonia (mon'o-go'ne-ah) plural of *monogonium*.

monogonium (mon'o-go'ne-um), pl. *monogo'nia*. (obs.) any of the asexual forms of the malarial parasite as it occurs in the blood; these forms produce the febrile attacks. Cf. *schizont*.

monograph (mon'o-graf) [*mono-* + Gr. *graphein* to write] an essay or treatise on one subject.

monohybrid (mon'o-hi'brid) the offspring of parents differing in one character.

monohydrated (mon'o-hi'drāt-ed) united with a single molecule of water or a single hydroxyl group.

monohydric (mon'o-hi'drik) containing one atom of replaceable hydrogen.

monoinfection (mon'o-in-fek'shun) infection with a single kind of organism.

moniodotyrosine (mon'o-i-o'do-ti'ro-sēn) an iodinated amino acid that is an intermediate in the synthesis of thyroxine and triiodothyronine. Abbreviated MIT.

monokaryon (mon'o-ka're-on) [*mono-* + Gr. *karyon* kernel] a growth stage in the mycelium of fungi, especially Basidiomycetes, in which each cell has one haploid nucleus.

monokaryote (mon'o-kar'e-ōt) a cell having one haploid nucleus.

monokaryotic (mon'o-kar'e-ōt'ik) pertaining to the monokaryon or to a monokaryote.

monoketohexose (mon'o-ke'to-hep'tōs) a natural sugar, CH₂OH·CO(CHOH)₄·CH₂OH, found in the avocado, *Persea gratissima*.

monolayer (mon'o-la'er) pertaining to or consisting of a single layer, such as a monolayer sheet of cells in cultures used in studies of viruses.

monolene (mon'o-lēn) a clear white, oily hydrocarbon.

monolepsis (mon'o-lep'sis) [*mono-* + Gr. *lēpsis* a taking] the transmission to the offspring of the characters of one parent, to the exclusion of those of the other.

monolocular (mon'o-lok'u-lar) [*mono-* + L. *loculus* cell] having but one cavity or compartment, as a cyst.

monomania (mon'o-ma'ne-ah) [*mono-* + Gr. *mania* madness] psychosis on a single subject or class of subjects. **emotional m.**, monomania with respect to one or a few related emotions. **intellectual m.**, a monomania with respect to one or a few related delusions.

monomaxillary (mon'o-mak'si-ler'e) affecting one jaw.

monomelic (mon'o-mel'ik) [*mono-* + Gr. *melos* limb] affecting one limb.

monomer (mon'o-mer) a simple molecule of a compound of relatively low molecular weight; a substance consisting of simple unrepeatable structural units, but capable of reaction to form a dimer, trimer, polymer, etc. **fibrin m.**, the material resulting from the highly specific and orderly cleavage of fibrinogen by thrombin; through polymerization, these monomers form macromolecular fibrin.

monomeric (mon'o-mer'ik) [*mono-* + Gr. *meros* part] pertaining to, made up of, or affecting a single segment, as distinguished from dimeric, polymeric, etc. In genetics, determined by a gene or genes at a single locus either in the heterozygous or homozygous state.

monometallic (mon'o-mē-tal'ik) having one atom of a metal in the molecule.

monomicrobic (mon'o-mi-kro'bik) characterized by the presence of a single species of microbe.

monomolecular (mon'o-mo-lek'u-lar) pertaining to or involving one molecule.

monomoria (mon'o-mo're-ah) [*mono-* + Gr. *mōria* silliness, folly] monomania.

monomorphic (mon'o-mor'fik) [*mono-* + Gr. *morphē* form] existing in only one form; maintaining the same form throughout all stages of development.

monomorphism (mon'o-mor'fizm) the quality or condition of being monomorphic.

monomorphous (mon'o-mor'fus) composed of lesions all of the same age, form, and shape, as a monomorphous eruption, such as variola.

monomphalus (mon-om'fah-lus) [*mono-* + Gr. *omphalos* navel] a double monster joined at the navel.

monomyoplegia (mon'o-mi'o-ple'je-ah) [*mono-* + Gr. *mys* muscle + *plēgē* stroke] paralysis restricted to a single muscle.

monomyositis (mon'o-mi'o-si'tis) [*mono-* + *myositis*] a myositis of the biceps muscle occurring periodically.

Mononchus (mon-ong/kus) a genus of nematodes living in fresh water or moist soil, reportedly found in human urine, probably representing a case of spurious parasitosis.

mononephrous (mon''o-nef''rus) [*mono-* + Gr. *nephros* kidney] affecting one kidney only.

mononeural (mon''o-nu''ral) pertaining to or receiving branches from a single nerve.

mononeuric (mon''o-nu''rik) [*mono-* + Gr. *neuron* nerve] having only one neuron.

mononeuritis (mon''o-nu''ri'tis) [*mono-* + Gr. *neuron* nerve + *-itis*] disease of a single nerve. **m. mul'tiplex**, simultaneous disease of several peripheral nerves.

mononeuropathy (mon''o-nu''rop'ah-thē) disease affecting a single nerve. **cranial m.**, disease of one of the cranial nerves, as the seventh cranial nerve in Bell's palsy.

mononeoa (mon''o-ne'ah) [*mono-* + Gr. *nous* mind] mental concentration on a single subject.

monont (mon'ont) (obs.) schizont.

mononuclear (mon''o-nu''kle-ar) [*mono-* + *nucleus*] 1. having but one nucleus; mononucleate; uninucleated. 2. a cell having a single nucleus, especially a monocyte of the blood or tissues.

mononucleate (mon''o-nu''kle-āt) having a single nucleus; mononuclear.

mononucleosis (mon''o-nu''kle-o'sis) the presence of an abnormally large number of mononuclear leukocytes (monocytes) in the blood. **cytomegalovirus (CMV) m.**, see *infectious m. infectious m.*, an acute infectious disease caused by the Epstein-Barr virus, and characterized by fever, malaise, sore throat, hepatic dysfunction, lymphadenopathy, hepatosplenomegaly, atypical lymphocytes (resembling monocytes) in the peripheral blood, and high titers of agglutinins against sheep cells (heterophile titer). A marked asthenia persists throughout the course of the disease and the convalescent period. A similar syndrome has been associated with primary cytomegalovirus infection. Called also *glandular fever*, *acute benign lymphoblastosis*, *acute epidemic lymphadenosis*, *monocytic angina*, and *acute infectious adenitis*.

post-transfusion m., postperfusion syndrome.

mononucleotide (mon''o-nu''kle-o-tid') a product obtained by the digestion or hydrolytic decomposition of nucleic acid. It is a compound of phosphoric acid and a pentoside. The latter is a combination of a pentose (ribose or 2-deoxyribose) with one of the following bases: guanine, adenine, cytosine, uracil, or thymine.

mono-osteitic (mon''o-os''te-it'ik) denoting a type of osteitis which affects a single bone.

mono-ovular (mon''o-ov'u-lar) monovular.

monoparesis (mon''o-pah-re'sis) [*mono-* + Gr. *paresis* slackening of strength, paralysis] paresis of a single limb.

monoparesthesia (mon''o-par'es-the'ze-ah) [*mono-* + *paresthesia*] paresthesia of a single limb.

monopathy (mo-nop'ah-the) [*mono-* + Gr. *pathos* disease] a disease affecting a single part.

monopenia (mon''o-pe'ne-ah) monocytopenia.

monophagia (mon''o-fa'je-ah) [*mono-* + Gr. *phagein* to eat + *-ia*] 1. desire for one kind of food only. 2. the eating of only one meal a day.

monophagism (mo-nof'ah-jizm) monophagia.

monophasia (mon''o-fa'ze-ah) [*mono-* + Gr. *phasis* speaking] aphasia with ability to utter but one word or phrase.

monophasic (mon''o-fa'zik) exhibiting only one phase or variation. Cf. *diphasic*, *triphasic*.

monophosphate (mon''o-fos'fāt) a salt containing a single phosphate radical.

monophthalmus (mon''of-thal'mus) [*mono-* + Gr. *ophthalmos* eye] a cyclops.

monophyletic (mon''o-fi-let'ik) [*mono-* + Gr. *phylē* tribe] arising or descended from a single cell type.

monophyletism (mon''o-fi-lē-tizm) monophyletic theory; see under *theory*.

monophyletist (mon''o-fi-lē-tist) an adherent of the monophyletic theory, as in blood origin.

monophyodont (mon''o-fi'o-dont) [*mono-* + Gr. *phyein* to grow + *odont* tooth] having only one set of teeth, and those permanent.

monopia (mon-o'pe-ah) [*mono-* + Gr. *ops* eye + *-ia*] cyclopia.

monoplasmatic (mon''o-plaz-mat'ik) [*mono-* + Gr. *plasma* plasm] made up of a single substance.

monoplast (mon'o-plast) [*mono-* + Gr. *plastos* formed] a single constituent cell.

monoplegia (mon''o-ple'je-ah) [*mono-* + Gr. *plēgē* stroke] paralysis of a limb.

monoplegic (mon''o-ple'jik) pertaining to or characterized by monoplegia.

monopodia (mon''o-po'de-ah) [*mono-* + Gr. *pous* foot + *-ia*] a type of symmelia characterized by the presence of one median foot.

monopodial (mon''o-po'de-al) pertaining to or characterized by monopodia; having a single median foot.

monopoiesis (mon''o-poi-e'sis) the development of monocytes.

monopolar (mon'o-po'lar) monoterminal.

monops (mon'ops) [*mono-* + Gr. *ōps* eye] cyclops.

monopsychosis (mon''o-si-ko'sis) monomania.

Monopsyllus (mon''o-sil'us) [*mono-* + Gr. *psylla* flea] a genus of fleas. **M. ani'sus**, the common rat flea of Japan and North China.

monoptychial (mon''o-ti'ke-al) [*mono-* + Gr. *ptychē* fold] arranged in a single layer; said of glands whose cells are arranged on the basement membrane in a single layer. Cf. *polyptychial*.

monopus (mon'o-pus) [*mono-* + Gr. *pous* foot] a fetus having but a single foot or leg.

monorchia (mon-or'ke-ah) monorchism.

monorchid (mon-or'kid) an individual exhibiting monorchism.

monorchidic (mon''or-kid'ik) [*mono-* + Gr. *orchis* testicle] pertaining to or characterized by monorchism; having but one descended testicle.

monorchidism (mon-or'kid-izm) monorchism.

monorchis (mon-or'kis) monorchid.

monorchism (mon''or-kizm) the condition of having only one testis in the scrotum.

Monorchotrema (mon-or''ko-tre'mah) [*mono-* + Gr. *orchis* testicle + *trēma* aperture] a genus of heterophyid flukes found in birds and mammals in the Middle East and Taiwan, and characterized by having only a single testis. They have as invertebrate host an operculate snail, and as first vertebrate host an edible fish.

monorecidive (mon''o-res''t-dēv') chancre redux.

monorhinic (mon''o-rin'ik) pertaining to or possessing one nasal cavity.

monosaccharide (mon''o-sak'ah-rīd) a simple sugar; a carbohydrate which cannot be decomposed by hydrolysis. The monosaccharides are colorless crystalline substances, with a sweet taste and have the same general formula CH_2O . They are classified according to the number of carbon atoms in the chain into diose ($C_2H_4O_2$), triose ($C_3H_6O_3$), tetrose ($C_4H_8O_4$), pentose ($C_5H_{10}O_5$), hexose ($C_6H_{12}O_6$), and heptose ($C_7H_{14}O_7$). Those containing an aldehyde group are termed *aldoses*; those with a ketone group *ketoses*.

monosaccharose (mon''o-sak'ah-rōs) monosaccharide.

monose (mon'o's) monosaccharide.

monosexual (mon''o-sek'su-al) showing the traits of one sex only.

monosodium glutamate (mon''o-so'de-um glu'tah-māt) sodium glutamate.

monosome (mon''o-sōm) 1. the unpaired sex chromosome; called also *unpaired allosome*. 2. the single chromosome present in monosomy.

monosomic (mon''o-so'mik) pertaining to or characterized by monosomy.

monosomy (mon''o-so'me) the absence of one chromosome of a homologous pair in the complement of an otherwise diploid cell ($2n-1$), as seen in the XO aberration in Turner's syndrome.

monospasm (mon''o-spazm) [*mono-* + *spasm*] spasm of a single limb or part. Different varieties are distinguished according to the part affected or to the site of the causal lesion; as, brachial, facial, lateral, peripheral, etc.

monospecific (mon''o-spē-sif'ik) having an effect only on a particular kind of cell or tissue, or reacting with a single antigen, as a monospecific antiserum.

monospermy (mon''o-sper'me) [*mono-* + Gr. *sperma* seed] fertilization in which only one spermatozoon enters the ovum.

Monosporium (mon''o-spo're-um) a genus of imperfect fungi, family Moniliaceae, order Moniliales; its perfect (sexual) stage is *Allescheria*. **M. apiospermum**, one of the causative organisms of maduromycosis; its perfect stage is *Allescheria boydii*.

Monostoma (mon''o-sto'mah) [Gr. *monos* single + *stoma* mouth] *Paramphistomum*.

Monostomum (mon''o-sto'mum) *Paramphistomum*.

monostotic (mon''os-tot'ik) [*mono-* + Gr. *osteon* bone] pertaining to or affecting a single bone.

monostratal (mon''o-strat'al) pertaining to a single layer or stratum.

monostratified (mon''o-strat'i-fid) disposed in a single layer or stratum.

monosubstituted (mon''o-sub'stī-tūt'ed) having only one atom in the molecule replaced.

monosymptom (mon''o-simp'tom) [*mono-* + *symptom*] a symptom occurring singly.

monosymptomatic (mon''o-simp'to-mat'ik) expressed by a single symptom.

monosynaptic (mon''o-sī-nap'tik) pertaining to or relayed through only one synapse.

monosyphilid, monosyphilide (mon''o-sif'i-lid) [*mono-* + *syphilid*] showing only a single syphilitic lesion.

monoterminal (mon''o-ter'mī-nal) the use of one terminal

only in giving treatments, the ground acting as the second terminal.

monothermia (mon'o-ther'me-ah) [*mono-* + Gr. *thermē* heat] a condition in which the temperature of the body remains the same throughout the day.

monothetic (mon'o-thet'ik) [*mono-* + Gr. *thetikos* fit for placing] denoting a taxonomic group classified on the basis of a single character, as opposed to polythetic.

monothioglycerol (mon'o-thi'o glis'er-ol) [NF] chemical name: 3-mercapto-1,2-propanediol. A clear, colorless, moderately viscous liquid, C_3H_7NO , used as a preservative in pharmaceutical preparations.

monotic (mon-o'tik) [*mono-* + Gr. *ous* ear] affecting, pertaining to, or possessing a single ear.

monotocous (mo-not'o-kus) [*mono-* + Gr. *tokos* birth] giving birth to but one offspring at a time.

Monotremata (mon'o-tre'mah-tah) the lowest order of mammals, including animals which lay eggs similar to those of reptiles, and nourish their young by a mammary gland which has no nipple, in a shallow pouch developed only during lactation. The only living representatives are the spiny anteater and duck-billed platypus. In some systems of classification, considered to be an order of subclass Prototheria, class Mammalia.

monotreme (mon'o-trēm) a member of the order Monotremata.

Monotricha (mo-not'rī-kah) a group of bacteria including those forms which have one polar flagellum.

monotrichic (mon'o-trik'ik) monotrichous.

monotrichous (mon-ot'rī-kus) [*mono-* + Gr. *thrix* hair] having a single polar flagellum; said of a bacterial cell. See *flagellum*.

monotropic (mon'o-trop'ik) [*mono-* + Gr. *tropos* a turning] affecting only one particular species of bacterium or one variety of tissue. Cf. *polytropic*.

monoureide (mon'o-u're-id) see *ureide*.

monovalent (mon'o-va'lent) 1. having a valency or potency of one. 2. denoting an antibody capable of combining with only one antigenic specificity, or an antigen capable of combining with only one antibody specificity.

monovular (mon-ov'u-lar) pertaining to or derived from a single ovum.

monovulatory (mon-ov'u-lah-to're) ordinarily discharging only one ovum in one ovarian cycle.

monoxenic (mon'o-zen'ik) [*mono-* + Gr. *xenos* a guest-friend, stranger] associated with a single species of microorganisms; said of otherwise germ-free animals contaminated by a single type of organism.

monoxenous (mo-nok'sē-nus) requiring only one host in order to complete the life cycle; said of certain parasitic organisms. Cf. *heteroxenous*.

monoxeny (mo-nok'sē-ne) [*mono-* + Gr. *xenos* host] the quality or condition of being monoxenous.

monoxide (mon-ok'sid) an oxide containing but one atom of oxygen; vernacularly applied to carbon monoxide.

monooxygenase (mon-ok's'i-jen-ās) an oxidative enzyme that transfers only one atom of oxygen to each substrate molecule.

monozygosity (mon'o-zi-gos'i-te) the state of developing from one zygote.

monozygotic (mon'o-zi-got'ik) pertaining to or derived from one fertilized ovum (zygote), as identical twins.

monozygous (mon'o-zi'gus) monozygotic.

Monro's bursa, foramen, line, sulcus (fissure) (mon-roz') [Alexander Monro (Secundus), Scottish anatomist and surgeon, 1733-1817] see *bursa intratendinea*, *foramen interventriculare*, and *sulcus hypothalamicus*, and see under *line*.

Monro-Richter line (mon-ro' rik'ter) [Alexander Monro; August Gottlieb Richter, surgeon in Göttingen, 1742-1812] see under *line*.

mons (monz), pl. *mon'tes* [L. "mountain"] [NA] a general term for an elevation, or eminence. **m. pu'bis** [NA], the rounded fleshy prominence over the symphysis pubis. **m. ure'teris**, a papilla-like elevation of the mucosa of the bladder at its junction with the ureter. **m. ven'eris**, m. pubis.

Monsonia (mon-so'ne-ah) a genus of African and Asiatic geraniaceous plants. Some of the species are used in medicine as astringents and for dysentery.

monster (mon'ster) [L. *monstrum*] a fetus or infant with such pronounced developmental anomalies as to be grotesque and usually nonviable. Called also *teras*. **acardiac m.**, acardius. **acraniate m.**, a fetus lacking cranium and a brain as such. **autositic m.**, one capable of independent life, the circulation of which supplies nutrition to a parasitic monster. **celosomian m.**, a celosomus. **compound m.**, one which shows some duplication of body parts. **cyclopic m.**, a cyclops. **di axial m.**, one which shows duplication of the body axis. **double m.**, one arising from a single ovum but with duplication or doubling of head, trunk, or limbs; see *anadidymus*, *anakatadidymus*, and *katadidymus*. **emmenic m.**, an infant that menstruates.

endocymic m., one which is retained in the uterus and forms the basis of a dermoid tumor. **Gila m.**, a venomous lizard, *Heloderma suspectum*, found especially in Arizona and New Mexico.

hair m., one with a heavy hair-coat. **monoaxial m.**, a monster which has a single body axis. **parasitic m.**, an imperfect fetus unable to exist alone and attached to or deriving its nutrition from the circulation of another, more perfectly developed fetus.

polysomatous m., a monster consisting of multiple components, each of which shows some of the characteristics of a separate individual. **single m.**, one with a single body but with a defect, malformation, or displacement, or an enlargement or duplication of an organ; see *monstrum*.

sirenoform m., a sirenomelus. **triplet m.**, a monster with triplication of body parts. **twin m.**, double m.

monstra (mon'strah) [L.] plural of *monstrum*.

monstricide (mon'stri-sid) [*monster* + L. *caedere* to kill] destruction of a fetal monster.

monstrosity (mon-stros'i-te) [L. *monstrositas*] 1. great congenital deformity. 2. a monster or teratism.

monstrum (mon'strum), pl. *mon'stra* [L.] a monster. **m. abun'dans**, m. per excessum. **m. defic'iens**, m. per defectum. **m. per defec'tum**, a single monster in which all or part of an organ is missing. **m. per exces'sum**, a single monster in which an organ is enlarged or duplicated. **m. per fab'ricam alie'nam**, a single monster in which an organ is wrongly formed or displaced. **m. sirenofor'me**, a sirenomelus.

Monteggia's dislocation, fracture (mon-tej'ahz) [Giovanni Battista Monteggia, Italian surgeon, 1762-1815] see under *dislocation* and *fracture*.

Montgomery's cups, follicles, glands, tubercles (mont-gom'er-ēz) [William Fetherstone Montgomery, Irish obstetrician, 1797-1859] see under *cup* and *tubercle*, and see *Naboth's follicle*, under *follicle*, and *glandulae areolares*.

monticulus (mon-tik'u-lus), pl. *montic'uli* [L.] a small eminence. **m. cerebel'li**, the projecting or central part of the superior vermis.

mood (mōōd) the emotional state of an individual, e.g., elation or depression. **pure m.**, a mood which is not directed toward an object, such as anxiety, depression, or happiness.

Moon's teeth (molars) (mōōnz) [Henry Moon, 19th century English surgeon] see under *tooth*.

Moore's fracture (moorz) [Edward Mott Moore, American surgeon, 1814-1902] see under *fracture*.

Moore's syndrome (moorz) [Matthew T. Moore, American neuropsychiatrist, born 1901] abdominal epilepsy.

Moore's test (moorz) [John Moore, English physician of the 19th century] see under *tests*.

Mooren's ulcer (moor'eniz) [Albert Mooren, German oculist, 1828-1899] see under *ulcer*.

Moorhead foreign body locator (moor'hed) [John J. Moorhead, New York surgeon, born 1874] Berman-Moorhead locator.

Moots-McKesson ratio (moots'mak-ke'son) [Charles W. Moots, American physician, 1869-1933; Elmer Isaac McKesson, American physician, 1881-1935] see under *ratio*.

MOPP a regimen of mechlorethamine, Oncovin (vincristine), procarbazine, and prednisone, used in cancer chemotherapy.

morament (mōr-am'ent) (*obs.*) a feeble-minded person without moral sense.

moramentia (mōr'ah-men'she-ah) (*obs.*) the condition of being feeble-minded and without moral sense.

Morand's foot, foramen, spur (mor-ahnz') [Sauveur François Morand, French surgeon, 1697-1773] see under *foot*, and see *foramen cecum* and *calcar avis*.

morantel tartrate (mo-ran'tel) chemical name: (*E*)-1,4,5,6-tetrahydro-1-methyl-2-[2-(3-methyl-2-thienyl)ethenyl]pyrimidine [*R*-(*R**,*R*')]-2,3-dihydroxybutanedioate (1:1); an anthelmintic, $C_{12}H_{16}N_2S \cdot C_4H_6O_6$, which has been used in veterinary medicine.

Morax-Axenfeld conjunctivitis, diplococcus (bacillus, hemophilus) (mōr'aks ak'sen-felt') [Victor Morax, ophthalmologist in Paris, 1866-1935; Theodor Axenfeld, German ophthalmologist, 1867-1930] see under *conjunctivitis*, and see *Hemophilus duplex*.

Moraxella (mō'rak-sel'ah) [Victor Morax] in some classifications, a genus of microorganisms of the family Brucellaceae, order Eubacteriales, made up of gram-negative, nonmotile, short, rod-shaped cells occasionally occurring singly, and found as parasites and pathogens in warm-blooded animals. **M. bo'vis**, the etiologic agent of epizootic keratoconjunctivitis in cattle; called also *Hemophilus bovis*. **M. lacuna'ta**, the etiologic agent of a chronic or acute blepharoconjunctivitis in man; called also *Hemophilus duplex*. **M. liquefa'ciens**, a strain of *M. lacunata* found in association with conjunctivitis in man. Classified as *M. lacunata* subsp. *liquefaciens*.

morbid (mōr'bid) [L. *morbidus* sick] 1. pertaining to, affected with, or inducing disease; diseased. 2. unhealthy or unwholesome, as a morbid desire or fear.

morbidity (mor-bid'i-te) 1. the condition of being diseased or morbid. 2. the sick rate; the ratio of sick to well persons in a community.

morbidosstatic (mor'bi-do-stat'ik) checking morbidity; inhibiting the progression of morbid changes, or disease.

morbific (mor-bif'ik) [L. *morbificus*; *morbus* sickness + *facere* to make] causing disease.

morbigenous (mor-bij'ē-nus) producing disease.

morbilli (mor-bil'i) [L.] measles.

morbilliform (mor-bil'i-form) [L. *morbilli* measles + *forma* shape] like measles; resembling the eruption of measles.

morbilious (mor-bil'us) pertaining to measles.

morbus (mor'bus) [L.] disease. **m. addiso'nii**, Addison's disease. **m. apoplecticor'mis**, Meniere's disease. **m. cadu'cus**, epilepsy. **m. caeru'leus**, the cyanotic group of congenital heart disease, with venous-arterial shunt. **m. comitia'lis**, epilepsy. **m. cox'ae seni'lis**, hip-joint disease of aged people. **m. coxa'rius**, hip-joint disease. **m. divin'us**, epilepsy. **m. dormiti'vus**, African trypanosomiasis. **m. ele'phas**, elephantiasis. **m. gal'licus**, syphilis. **m. hercu'leus**, epilepsy. **m. mise'riae**, any disease due to want and neglect. **m. mor'sus mu'ris**, rat-bite fever. **m. nau'ticus**, **m. navit'icus**, seasickness. **m. pediculo'sus**, infestation with lice. **m. sa'cer**, epilepsy. **m. seni'lis**, rheumatoid arthritis. **m. strangulato'rius**, diphtheria. **m. vagabon'dus**, vagabond's disease. **m. virgin'eus**, chlorosis. **m. werlho'fii** [Werlhof's disease], (*obs.*) idiopathic thrombocytopenic purpura.

M.O.R.C. Medical Officers Reserve Corps.

morcellation (mor'sel-a'shun) [Fr. *morcellement*] the division of solid tissue (as a tumor) into pieces, followed by its removal piecemeal.

morcellement (mor'sel-maw') morcellation.

mordant (mor'dant) [L. *mordere* to bite] 1. a substance capable of intensifying or deepening the reaction of a specimen to a stain; the chief mordants are alum, aniline, oil, and phenol. 2. to subject to the action of a mordant preliminary to staining.

Mor. dict. abbreviation for L. *mo're dic'to*, in the manner directed.

Morel ear, syndrome (mo'rel) [Benoît Augustin Morel, French alienist, 1809–1873] see under *ear*, and see *hyperostosis frontalis interna*.

Morel-Kraepelin disease (mo-rel' kra'pē-lin) [B. A. Morel; Emil Kraepelin, German psychiatrist, 1856–1926] schizophrenia.

Morelli's test (reaction) (mo-rel'ēz) [F. Morelli, Italian physician, died 1918] see under *tests*.

mores (mo'rēz) [L., pl. of *mos*, "manners"] the traditions and habits which are generally regarded as conducive to social welfare.

Moreschi's phenomenon (mo-res'kēz) [Carlo Moreschi, Italian pathologist, 1876–1921] fixation of complement; see under *fixation*.

Morestin's operation (method) (mor'es-taz') [Hippolyte Morestin, French surgeon, 1869–1919] see under *operation*.

Moretti's test (mo-ret'ēz) [E. Moretti, physician in Milan] see under *tests*.

Morgagni's appendix, etc. (mor-gahn'yēz) [Giovanni Battista Morgagni, Italian anatomist and pathologist, 1682–1771; professor at Padua, and the founder of pathological anatomy, whose superb clinicopathological reports were published in 1761 under the title *De sedibus et causis morborum* ("The Seats and Causes of Disease")] see under *appendix*, *caruncle*, *column*, *crypt*, etc.

Morgagni-Adams-Stokes syndrome [Giovanni Battista Morgagni; Robert Adams, Irish physician, 1791–1875; William Stokes, Irish physician, 1804–1878] Adams-Stokes disease.

Morgan (mor'gan), Thomas Hunt. American biologist, 1866–1945, noted for his discoveries concerning the hereditary functions of the chromosomes; winner of the Nobel prize for medicine in 1933.

morgan [from T. H. Morgan] a unit of map distance on a chromosome in which the mean number of recombinations is unity. In a centimorgan the probability of recombination is 1 per cent.

Morgan's bacillus (mor'ganz) [Harry de Reimer Morgan, British physician, died 1931] *Proteus morgani*.

morgue (morg) [Fr.] a place where dead bodies may be temporarily kept, for identification or until claimed for burial.

moria (mo're-ah) [Gr. *mōria* folly] dementia or fatuity. In psychiatry, a morbid tendency to joke.

moribund (mor'i-bund) [L. *moribundus*] in a dying state.

Moringa (mo-rin'gah) a genus of plants. **M. pterygosper'ma**, an East Indian plant, the sajina or horseradish tree, the nuts of which yield an oil that was once used in the treatment of rheumatism and dyspepsia. It is the source of pterygospermin, an antibiotic.

Morison's method (paste), pouch (mor'i-sunz) [James Ruth-erford Morison, British surgeon, 1853–1939] see under *method* and *pouch*.

Morita therapy (mio-re'tah) [Shomei Morita, Japanese physician] see under *therapy*.

Moritz reaction, test (mo'rits) [Friedrich Heinrich Ludwig Moritz, German physician, 1861–1938] Rivalta's reaction.

Mörner's body, reagent, test (mer'nerz) [Carl Axel Hampus Möner, Stockholm chemist, 1854–1917] see under *reagent* and *tests*, and see *nucleoalbumin*, and *nitroprusside test* (def. 1), under *tests*.

Mornidine (mor'nī-dēn) trademark for preparations of pipamazine.

Moro's reaction (test), embrace reflex (mo'rōz) [Ernst Moro, pediatricist in Heidelberg, 1874–1951] see under *reaction* and *reflex*.

moron (mo'ron) [Gr. *mōros* stupid] in a former classification, a mentally retarded person with an IQ of 50 to 69. See *mental retardation*. Cf. *idiot* and *imbecile*.

moronism (mo'ron-izm) moronity.

moronity (mo-ron'i-te) the condition of being a moron.

morosis (mo-ro'sis) moronity.

-morph [Gr. *morphē* form] a word termination denoting relationship to form or shape, such as an individual possessing a certain form, indicated by the preceding root, as *mesomorph*.

morphallactic (mor'fah-lak'tik) pertaining to or characterized by morphallaxis.

morphallaxis (mor'fah-lak'sis) [Gr. *morphē* form + *allaxis* exchange] the renewal of lost tissue or a part by reorganization of the remaining part of the body of an animal.

morphea (mor-fe'ah) [Gr. *morphē* form] a condition in which there is connective tissue replacement of the skin and sometimes of the subcutaneous tissues, marked by the formation of ivory white or pinkish patches, bands, or lines that are sometimes bordered by a purplish areola. The lesions are firm, but not hard, and are usually depressed; they may remain localized or may involute, leaving atrophy and scarring. Called also *circumscribed* or *localized scleroderma*. Cf. *systemic scleroderma*. **m. gut-ta'ta, guttate m.**, a form marked by the formation of multiple, white, shiny, beadlike spots, which may be surrounded by a thin pinkish or purplish border; called also *white-spot disease*. **lin-ear m.**, **m. linea'ris**, see under *scleroderma*.

morpheme (mor'fēm) a meaningful unit of sound.

morphia (mor'fe-ah) morphine.

morphina, pl. and gen. *morphi'nae* [L.] morphine.

morphine (mor'fēn) [L. *morphina*, *morphinum*] chemical name: 7,8-didehydro-4,5-epoxy-17-methylmorphinan-3,6-diol. The principal and most active narcotic alkaloid of opium (q.v.), $C_{17}H_{19}NO_3$, occurring as a white, crystalline powder or as white, acicular crystals, and having powerful analgesic action and some central stimulant action. In the United States, it is usually used in the form of the sulfate salt, while in Germany and Great Britain, the hydrochloride salt is usually preferred. Abuse of morphine and its salts leads to dependence. **dimethyl m.**, thebaine. **m. hy-drochloride**, the trihydrate hydrochloride salt of morphine, $C_{17}H_{19}NO_3 \cdot HCl \cdot 3H_2O$, occurring as colorless, silky crystals or crystalline powder, having the same actions as the base; used as a narcotic analgesic, usually administered orally. It is the form usually preferred in Germany and Great Britain. **m. sulfate** [USP], the pentahydrate sulfate salt of morphine, $(C_{17}H_{19}NO_3)_2 \cdot H_2SO_4 \cdot 5H_2O$, occurring as white, feathery, silky crystals, cubical masses or crystals, or white, crystalline powder, and having the same actions as the base; used as a narcotic analgesic, administered parenterally. It is the form usually preferred in the United States.

morphinic (mor-fin'ik) pertaining to morphine.

morphinism (mor'fin-izm) a morbid state due to the habitual misuses of morphine; also morphine addiction.

morphinist (mor'fin-ist) a morphine addict.

morphinistic (mor'fi-nis'tik) pertaining to or characteristic of morphinism.

morphinium (mor-fin'e-um) [L.] morphine. **m. sulfate**, morphine sulfate.

morphinization (mor'fin-i-za'shun) subjection to the influence of morphine.

morphinomania (mor'fin-o-ma'ne-ah) 1. morphine addiction. 2. psychosis due to the misuse of morphine.

morphiomania (mor'fe-o-ma'ne-ah) morphinomania.

morphium (mor'fe-um) morphine.

morpho- [Gr. *morphē* form] a combining form denoting relationship to form.

morphodifferentiation (mor'fo-dif'er-en'she-a'shun) the arrangement of formative cells in the development of tissues or organs, which leads to production of the ultimate shape of the structure.

morphoea (mor-fe'ah) morphea.

morphogen (mor'fo-jen) a diffusible substance in embryonic tissue postulated to form a concentration gradient that influences morphogenesis.

morphogenesis (mor'fo-jē-ne'se-ah) morphogenesis.

morphogenesis (mor'fo-jen'ē-sis) [Gr. *morphē* form + *gennan* to produce] the evolution and development of form, as the development of the shape of a particular organ or part of the body, or the development undergone by individuals who attain the type to which the majority of the individuals of the species approximate.

morphogenetic (mor'fo-jē-net'ik) producing growth; producing form or shape.

morphogeny (mor-foj'ē-ne) morphogenesis.

morphography (mor-fog'rah-fe) [morpho- + Gr. *graphein* to write] a description of organized beings, with special reference to their forms and structure.

morphological (mor'fo-loj'i-kal) pertaining to morphology.

morphology (mor-fol'o-je) [morpho- + -logy] the science of the forms and structure of organisms; the form and structure of a particular organism, organ, or part.

morpholysis (mor-fol'i-sis) [morpho- + Gr. *lysis* dissolution] destruction of form.

morphometry (mor-fom'ē-tre) [morpho- + Gr. *metron* measure] the measurement of the forms of organisms.

morphon (mor'fon) [Gr. *morphōn* forming] an individual organism or structural unit.

morphophyly (mor-fof'i-le) [morpho- + Gr. *phylon* tribe] the branch of phylogenesis dealing with the evolutionary development of form.

morphophysics (mor'fo-fiz'iks) the study of the physical and chemical causes of development.

morphoplasm (mor'fo-plazm) [morpho- + Gr. *plasma* anything formed] the substance of the cellular reticulum.

morphosis (mor-fo'sis) [Gr. *morphōsis* a shaping, bringing into shape] the process of formation of a part or organ.

morphotic (mor-fot'ik) pertaining to morphosis or formation; concerned in a formative process.

-morphous [Gr. *morphē* form, shape] a word termination indicating the manner of shape or form.

morpio, morpion (mor'pe-o, mor'pe-on), pl. *morpiones* [L.] the crab louse, *Phthirus pubis*.

Morquio's syndrome (disease) (mor-ke'ōz) [Louis Morquio, pediatrician in Montevideo, 1867-1935] see under *syndrome*.

Morquio-Ullrich disease (mor-ke'o-ool'rik) [Louis Morquio; Otto Ullrich, German physician, 1894-1957] Morquio's syndrome.

morrhua (mor'u-ah) [L.] the codfish, *Gadus morrhua*, which furnishes cod liver oil.

morrhuate (mor'u-āt) a salt of morrhuaic acid. **m. sodium** [NF], the sodium salts of the fatty acids of cod liver oil; used as a sclerosing agent, especially for the treatment of varicose veins and hemorrhoids, injected in solution into varicosities.

morrhuin (mor'u-in) [L. *morrhua* codfish] a thick oily ptomaine, C₁₉H₂₇N₃, from some samples of cod liver oil.

mors (morz) [L.] death. **m. thymica**, sudden death allegedly occurring in thymic asthma and lymphatism (def. 2).

morsal (mor'sal) [L. *morsus* bite] taking part in mastication; a term applied to the masticating surface of a bicuspid or molar.

Mor. sol. abbreviation for L. *mo're sol'ito*, in the usual way.

morsulus (mor'su-lus) [L., dim. of *morsus* bite] a troche.

morsus (mor'sus) [L.] bite; sting. **m. diab'oli**, the fimbriae at the ovarian extremity of an oviduct. **m. huma'nus**, a bite by a human being.

mortal (mor'tal) [L. *mortalis*] 1. subject to death, or destined to die. 2. fatal; causing or terminating in death.

mortality (mor-tal'i-te) 1. the quality of being mortal. 2. the death rate; see under *rate*. 3. in life insurance, the ratio of deaths that take place to expected deaths. **actual m.**, the number of deaths in 1,000,000 insured lives, over a period of 100 years. **annual actual m.**, the number of deaths per 100 insured lives. **perinatal m.**, the death rate of infants about the time of birth, often considered as including stillbirths and deaths in the first week of life. **tabular m.**, the expected death rate per 1000 insured persons as shown in the mortality table.

mortalogram (mor-tal'o-gram) a graphic presentation, in grid form, of crude and age-standardized mortality rates and the numerical distribution of deaths for a given cause according to the time period, age, and sex, and the median age at death.

mortar (mor'tar) [L. *mortarium*] a bell-shaped or urn-shaped vessel of glass, iron, porcelain, or other material, in which drugs are beaten, crushed, or ground with a pestle.

mortician (mor-tish'an) [L. *mors* death] an undertaker; a person trained to care for the dead.

Mortierella (mor-te-ah-rel'ah) a genus of phycomycetous fungi of the order Mucorales, family Mucoraceae, species of which have been isolated from lesions of mucormycosis.

mortification (mor'ti-fi-ka'shun) gangrene or sphacelus; molar death.

mortinatality (mor'ti-na-tal'i-te) [L. *mors* death + *natus* birth] natimortality.

mortisemblant (mor'ti-sem'blant) apparently dead.

Morton's cough (mor'tunz) [Richard Morton, English physician, 1637-1698] see under *cough*.

Morton's current (mor'tunz) [William James Morton, American neurologist, 1846-1920] see under *current*.

Morton's toe (disease, foot, neuralgia), test (mor'tunz) [Thomas George Morton, Philadelphia surgeon, 1835-1903] see under *toe* and *tests*.

mortuary (mor'tu-a're) [L. *mortuarius* tomb] 1. pertaining to death. 2. a place where dead bodies are kept until burial or cremation.

morula (mor'u-lah) [L. *morus* mulberry] the solid mass of blastomeres formed by cleavage of a fertilized ovum.

molar (mor'u-lar) 1. pertaining to a morula. 2. resembling a mulberry.

morulation (mor'u-la'shun) the process of formation of the morula.

moruloid (mor'u-loid) [L. *morus* mulberry + Gr. *eidōs* form] 1. shaped like a mulberry. 2. a bacterial colony in the form of a mulberry-like mass.

Morvan's chorea, disease, syndrome (mor'vanz) [Augustin Marie Morvan, French physician, 1819-1897] see under *chorea*, *disease*, and *syndrome*.

mosaic (mo-za'ik) [Gr. *mouseion*; L. *opus musivum*] a pattern made of numerous small pieces fitted together. (1) *Genetics*: an individual having two or more cell lines that are karyotypically or genotypically distinct and are derived from a single zygote. Cf. *chimera*. (2) *Embryology*: the condition in the fertilized eggs of some species, such as the sea urchin, whereby the cells of early stages have developed cytoplasm which determines the parts that are to develop. (3) *Plant pathology*: a viral disease characterized by mottling of the foliage.

mosaicism (mo-za'i-sizm) in genetics, the presence in an individual of two or more cell lines that are karyotypically or genotypically distinct and are derived from a single zygote. Cf. *chimerism*. **erythrocyte m.**, the mixture of two blood types in each of nonidentical twins as a result of anastomosis of placental blood vessels. **gonadal m.**, mosaicism that results from mutation early in embryogenesis so that some of the germ cells are mutants. Offspring of a gonadal mosaic for a dominant trait can show the trait although it is not manifested in the parent.

Moschcowitz's disease, test (sign) (mos'ko-witz) [Eli Moschcowitz, American physician, born 1879] see *febrile pleiochromic anemia*, under *anemia*, and *thrombotic thrombopenic purpura*, under *purpura*, and see under *tests*.

Moschcowitz's operation (mos'ko-witz) [Alexis Victor Moschcowitz, American surgeon, 1865-1933] see under *operation*.

Mosenthal's test (mo'zen-thalz) [Herman Otto Mosenthal, American physician, 1878-1954] see under *tests*.

Moser's serum (mo'zerz) [Paul Moser, pediatrician in Vienna, 1865-1924] see under *serum*.

Mosetig-Moorhof bone wax (filling) (mös-et'ig-mör'hof) [Albert von Mosetig-Moorhof, German surgeon, 1838-1907] see under *wax*.

Mosler's diabetes (mos'lerz) [Karl Friedrich Mosler, German physician, 1831-1911] see under *diabetes*.

mOsm milliosmol.

mosquito (mos-ke'to), pl. *mosquitoes* [Sp. "little fly"] a popular name for gnatlike, bloodsucking and venomous insects of the family Culicidae and of various genera, chiefly *Culex*, *Aedes*, *Anopheles*, *Mansonia*, *Haemagogus*, *Psorophora*, *Theobaldia* and *Chagasia*. **anautogenous m.**, a mosquito that requires a blood meal in the adult stage for the production of viable eggs. **aryamous m.**, a mosquito that requires large or outdoor spaces for breeding. **autogenous m.**, a mosquito that can produce viable eggs without a blood meal. **house m.**, see *Culex pipiens* and *C. quinquefasciatus*. **steyogamous m.**, a mosquito that can breed in captivity in limited spaces. **tiger m.**, *Aedes aegypti*.

mosquitocidal (mos-ke'to-si'dal) destructive to mosquitoes.

mosquitocide (mos-ke'to-sid) [*mosquito* + L. *caedere* to kill] an agent that is destructive to mosquitoes.

moss (mos). 1. any plant or species of the cryptogamic class *Musci*. 2. material composed of or derived from a plant of the cryptogamic class *Musci*. **Ceylon m.**, a red seaweed, *Gracilaria lichenoides* (L.) Harv. (Gracilariaceae); one of the sources of agar, and also used for food. In China, it is considered to be a pectoral and antidiarrhetic. **Iceland m.**, *Cetraria*, def. 2. **Irish m.**, *juniper m.*, *Polytrichum juniperinum*. **pearl m.**, **salt rock m.**, *chondrus*.

Moss' classification (mos'ez) [William Lorenzo Moss, American physician, born 1876] see under *classification*.

Mosse's syndrome (mos'ez) [Max Mosse, Berlin physician, born 1873] see under *syndrome*.

Mosso's ergograph, sphygmomanometer (mos'ōz) [Angelo Mosso, Italian physiologist, 1846-1910] see under *ergograph* and *sphygmomanometer*.

Motais' operation (mo-tāz') [Ernest Motais, French ophthalmologist, 1845-1913] see under *operation*.

moth (mawth) a lepidopterous insect. **brown-tail m.**, *Euproctis chrysorrhoea*. **flannel m.**, see *Megalopyge*. **io m.**, *Automeris io*. **meal m.**, *Asopia farinalis*. **tussock m.**, *Hemerocampa leucostigma*.

mother (muth'er) [L. *mater*] the female parent. Also, something from which another thing is derived, as a *mother cell*. **Colles' m.**, the apparently normal mother of a syphilitic child. **m. of vinegar**, *Acetobacter aceti*.

motile (mo'til; möt'l; mo'til) having spontaneous but not conscious or volitional movement.

motilin (mo-til'in) a polypeptide hormone (2700 daltons, 22 amino acids) secreted by the enterochromaffin cells of the gut; it causes increased motility of several portions of the gut and stimulates pepsin secretion. In human beings, its release is stimulated by the presence of acid and fat in the duodenum; the physiologic role of the hormone in gastrointestinal function is not yet known.

motility (mo-til'i-te) the ability to move spontaneously.

motivation (mo'ti-vā'shun) in psychology, any of the forces that regulate behavior directed toward satisfying needs or achieving goals.

motive (mo'tiv) in psychology, any state that affects an individual's goal-directed behavior. **achievement m.**, the desire to achieve for the sake of achievement per se. **aroused m.**, one that is actively influencing behavior, or that can be inferred from actual behavior.

motorceptor (mo'to-sep'tor) any muscle sense receptor.

motofacient (mo'to-fa'shent) producing motion; a term applied to that phase of muscular activity by which the muscle produces actual motion, in contradistinction to the *nonmotofacient* phase in which the muscle is contracting without producing motion.

motoneuron (mo'to-nu'ron) motor neuron; a neuron possessing a motor function; an efferent neuron conveying motor impulses. **alpha m's**, neurons of the anterior spinal cord that give rise to the alpha fibers which innervate the skeletal muscle fibers. **gamma m's**, neurons of the anterior spinal cord that give rise to the gamma (fusimotor) fibers which innervate intrafusal fibers of the muscle spindle. **heteronymous m's**, those supplying muscles other than the one from which the afferent impulses originate. **homonymous m's**, those supplying the muscle from which the afferent impulses originate. **lower m's**, peripheral neurons whose cell bodies lie in the ventral gray columns of the spinal cord and whose terminations are in skeletal muscles. **peripheral m's**, neurons in a peripheral reflex arc that receive impulses from interneurons and transmit them to voluntary muscles. **upper m's**, neurons in the cerebral cortex that conduct impulses from the motor cortex to motor nuclei of the cerebral nerves or to the ventral gray columns of the spinal cord.

motor (mo'tor) [L.] 1. a muscle, nerve, or center that effects or produces movement. 2. producing or subserving motion. **m. oc'uli** (*obs.*), the third cranial nerve (*nervus oculomotorius* [NA]). **plastic m.**, the tissues of an amputation stump used to secure motion in an artificial limb.

motorgraphic (mo'tor-graf'ik) kinetographic.

motorial (mo'to're-al) pertaining to motion or to a motorium.

motoricity (mo'tor-is'i-te) the faculty of performing movement; power of movement.

motorium (mo'to're-um) [L.] 1. a motor center. 2. the motor apparatus of the body. 3. in psychology, the mental functions that direct purposeful activities.

motorius (mo'to're-us) [L.] a motor nerve.

motorogermative (mo'tor-o-je'r'mī-na-tiv) developing into the muscles; said of portions of the mesoderm.

motorpathy (mo-tor'pah-the) [*motor* + Gr. *pathos* disease] treatment of disease by gymnastics.

Motrin (mo'trin) trademark for a preparation of ibuprofen.

Mott's law of anticipation (mottz) [Sir Fredrick Walker Mott, English neurologist, 1853-1926] see under *law*.

motting (mot'ling) a condition of spotting with patches of color.

mouche (mōōsh), pl. *mouches* [Fr.] a speck, or fly. **mouches volantes** (mōōsh vo-lahnt'), muscae volitantes.

moulage (moo-lahzh') [Fr. "molding"] the making of molds or models in wax or plaster, as of a structure or a lesion; also such a mold or model.

mould (mōld) see *mold*.

moulding (mōld'ing) molding.

mounting (mownd'ing) the rising in a lump of a wasting muscle when struck; called also *myoedema*.

mount (mownt) to prepare specimens and slides for study.

mountant (mownt'ant) a medium, such as natural resins, polymers, or glycerol, in which objects are embedded for study, especially with the microscope; called also *mounting medium*.

mounting (mownt'ing) 1. the preparation of specimens and slides for study. The chief media used in mounting large specimens are alcohol and glycerin jelly; for microscopic objects on a slide, Canada balsam and glycerin. 2. attachment, in the laboratory, of the maxillary and/or mandibular cast to an articulator. **split cast m.**, 1. a dental cast with key grooves on its base, mounted on an articulator for the purpose of easy removal and accurate replacement. Split remounting metal plates may be used instead of grooves in casts. 2. a means for testing the accuracy of articulator adjustment.

mouse (mows) 1. a small rodent belonging to the genus *Mus*, frequently used as an experimental animal. 2. a small weight, or movable structure. **C.F.W. m.** (cancer-free white mouse), one of a strain of mice bred for use in cancer research laboratories. **joint m.**, one of the portions of the fringes in the synovial membrane of joints in osteoarthritis which are changed into cartilage and become free in the joints. Cf. *arthrolith* and *arthrophyte*. **nude m.**, **nu nu m.**, a mouse with congenital absence of the thymus, associated with a striking deficiency of T-lymphocytes and with hairlessness. **NZB (New Zealand black) m.**, an inbred mouse that develops an autoimmune disease that closely resembles systemic lupus erythematosus in man. **peritoneal m.**, a free body in the peritoneal cavity, probably representing a small mass of omentum or epiploic appendage which has twisted off and become coated with fibrin, and sometimes appearing as a soft density on the roentgenogram. **pleural m.**, a fibrinous body sometimes seen by x-ray of the chest in the pleural space.

mousepox (mows'poks) infectious ectromelia.

mouth (mowth) [L. *os*, *oris*] an opening or aperture. Specifically, the anterior or proximal opening of the alimentary canal, which is bounded anteriorly by the lips and which contains the tongue and teeth. Called also *os* [NA]. **Ceylon sore m.**, tropical sprue. **denture sore m.**, trauma or inflammation of the oral mucous membranes caused by ill-fitting dentures, hypersensitivity to the chemical components of dentures, and/or proliferation of microorganisms with subsequent infection. **dry m.**, xerostomia. **glass-blowers' m.**, swelling of the parotid gland in glass-blowers, a parotid pneumatocele. **parrot m.**, retraction of the lower jaw in the horse. **rubber sore m.** (*obs.*), denture sore m. **tapir m.**, a condition in which the mouth has something of the appearance of that of a tapir, the orbicular oris muscle being atrophied, and the lips thickened and separated; seen in Landouzy-Dejerine dystrophy. **trench m.**, necrotizing ulcerative gingivitis. **white m.**, thrush, def. 1.

mouthwash (mowth'wosh) a solution for rinsing the mouth, e.g., the official [NF] preparation of potassium bicarbonate, sodium borate, thymol, eucalyptol, methyl salicylate, amaranth sodium, alcohol, glycerin, and purified water.

movement (mōōv'ment) 1. an act of moving; motion. 2. an act of defecation. **active m.**, voluntary movement produced by the person's own muscles, as opposed to passive m. **ameboid m.**, the movement of an ameba or leukocyte by virtue of the flow of cytoplasm, resulting in the protrusion of a pseudopodium, or a movement similar to it. **angular m.**, a movement which changes the angle between two bones. **associated m.**, a movement of parts which act together, as of the eyes. **automatic m.**, a movement originating within the organism, but not by an act of the will. **Bennett m.**, the lateral shift of the mandibular condyles and articular disks in the direction of the working bite as the lower jaw swings in preparation for mastication. **border m.**, any extreme compass of mandibular movement limited by bone, ligaments, or soft tissues; usually applied to horizontal mandibular movements. **border tissue m's**, movements produced by action of the muscles and other tissues adjoining the borders of a denture. **brownian m.**, **Brownian-Zsigmondy m.**, **brunonian m.**, the dancing motion of minute particles suspended in a liquid, due to thermal agitation. **choreic m's**, **choreiform m's**, irregular, jerky movements of muscles or groups of muscles. **ciliary m.**, the lashing motion of cilia occurring in certain of the tissues. **circus m.**, 1. a peculiar circular gait; an involuntary rolling or tumbling movement, the result of lesions of the brain and basal nerve centers. 2. a re-entrant mechanism of the excitatory wave in the atrium of the heart; a "circular" path characterized by a gap between the excitatory and refractory tissue, usually resulting in conduction to the ventricle of only a fraction of the impulses. A circus movement is one mechanism of atrial flutter. See also *re-entry*. **contralateral associated m.**, a movement on the paralyzed side in hemiplegia associated with active movement of the corresponding part on the unaffected side. **dystonic m.**, a large slow, amplified athetoid movement. **euglenoid m.**, a wormlike writhing movement resulting from local expansion and contraction of the body, seen in flagellates with thin pellicles and very plastic bodies, as in some species of the genus *Euglena* and other protozoa. **excessive m.**, hyperkinesia. **excursive m's**, those movements performed by the mandible in mastication; see *lateral*, *protrusive*, and *retrusive excursion*, under *excursion*. **fetal m.**, that of a fetus in the uterus usually observable at about 18 weeks in a primigravida and at about 16 weeks in a multipara. **forced m.**, a movement caused by an injury to a motor center or a conducting path. **Frenkel's m's**, a series of movements of

precision to be performed by ataxic patients for the purpose of restoring lost coordination. **hinge m.**, movement occurring in a single plane, as that occurring in opening or closing of the mouth. **index m.**, a movement of the cephalic part of a body about the fixed caudal part. **intermediary m's**, all movements of which the mandible is capable between the extreme lateral, protrusive, and retrusive positions. **jaw m.**, mandibular m. **Magnan's m.**, forward and backward movement of the tongue when it is drawn out; observed in dementia paralytica. Called also *trombone tremor of tongue*. **mandibular m.**, any movement of which the mandible is capable. **mandibular m., free**, any unhampered movement of the mandible. **mandibular m's, functional**, those movements of the mandible which occur in the performance of some function, as mastication, swallowing, articulation of vocal sounds, and yawning. **masticatory m's**, those movements of the mandible occurring in the mastication of food. **molecular m.**, brownian m. **morphogenetic m.**, a flowing of cell groups concerned with the formation of germ layers or of organ primordia. **nastic m.**, a response of a plant to external stimuli that is independent of the direction from which the stimuli come; some of the so-called sleep movements are nastic movements. **nucleopetal m.**, the movement of a male pronucleus toward the female pronucleus in the fertilized ovum. **opening m.**, that movement of the mandible by which the distance between the anterior teeth of the mandible and maxilla is increased. **opening m., posterior**, the opening movement of the mandible about the terminal hinge axis. **passive m.**, any movement of the body effected by a force entirely outside of the organism; see *passive exercise*. **pendular m.**, one of the movements of the small intestine in digestion, consisting of a gentle swinging to and fro of the different loops; these movements are ascribed to rhythmical contractions of the longitudinal muscles. See also *segmentation m.* **rapid eye m. (REM)**, see *REM sleep*, under *sleep*. **reflex m.**, an involuntary stereotyped movement provoked by a remote external stimulus acting through a nerve center. **rolling m.**, the rolling of an animal on its long axis. **saccadic m.**, the quick movement of the eye in going from one fixation point to another. **scissors m.**, a movement of the pupillary reflex seen with a retinoscope, resembling the opening and shutting of scissors; it is indicative of irregular astigmatism. **segmentation m.**, one of the movements of the small intestine in digestion, consisting of small, irregular or rhythmic, circular contractions that segment a portion of the intestine into evenly spaced parts somewhat resembling a string of sausages; see also *pendular m.* **sleep m.**, a type of nastic movement in which leaves or plant parts change their position in the late afternoon or evening and return to their original position in the morning. Sleep movement is in no way related to animal sleep. **spontaneous m.**, one originated within the organism. **Swedish m.**, see under *gymnastics*. **synergistic m's**, minor, unconscious movements that accompany major voluntary movements, such as the facial contortions in severe exertion. **vermicular m's**, the worm-like movements of the intestines in peristalsis.

moxa (mok'sah) [Japanese] a tuft of soft, combustible substance to be burned upon the skin, popularly used in the Orient as a cautery.

moxazocine (mok-sa'zo-sēn) chemical name: [2*R*-(2*a*,6*a*,11*R**)]-3-(cyclopropylmethyl)-1,2,3,4,5,6-hexahydro-11-methoxy-6-methyl-2,6-methano-3-benzazocin-8-ol; an analgesic and antitussive, $C_{18}H_{25}NO_2$.

moxibustion (mok'si-bus'chun) cauterization by the burning of moxa upon the skin.

moxnidazole (moks-nid'ah-zōl) chemical name: 3-[[1-methyl-5-nitro-1*H*-imidazol-2-yl)methylene]amino]-5-(4-morpholinylmethyl)-2-oxazolidinone; an antiprotozoal, $C_{13}H_{18}N_6O_5$, effective against *Trichomonas*.

moyamoya (moi'ah-moi'ah) [Japanese] the arteriographic appearance of a filmy network of small vessels (resembling a puff of smoke) replacing the normal vascular pattern at the termination of the internal carotid artery; seen in patients with sudden cerebrovascular insufficiency.

Moynihan's cream, test (moin'yanz) [Berkeley George Andrew Moynihan (Lord Moynihan), British surgeon, 1865-1936] see under *cream* and *tests*.

6-MP 6-mercaptapurine.

mp. melting point.

M.P.D. maximum permissible dose; see under *dose*.

M.P.H. Master of Public Health.

M. Phys. A. Member of the Physiotherapists' Association (British).

M.P.U. Medical Practitioners Union (British).

mR milliroentgen.

μR microroentgen.

μR microroentgen.

M.R.A. Medical Record Administrator.

M.R.A.C.P. Member of Royal Australasian College of Physicians.

mrads millirad.

M.R.C. Medical Reserve Corps.

M.R.C.P. Member of the Royal College of Physicians.

M.R.C.P.E. Member of the Royal College of Physicians of Edinburgh.

M.R.C.P. (Glasg.) Member of the Royal College of Physicians and Surgeons of Glasgow *qua* Physician.

M.R.C.P.I. Member of the Royal College of Physicians of Ireland.

M.R.C.S. Member of the Royal College of Surgeons.

M.R.C.S.E. Member of the Royal College of Surgeons of Edinburgh.

M.R.C.S.I. Member of the Royal College of Surgeons of Ireland.

M.R.C.V.S. Member of the Royal College of Veterinary Surgeons.

M.R.D. minimum reacting dose.

MRF melanocyte-stimulating hormone releasing factor.

M.R.L. Medical Record Librarian; now called Medical Record Administrator.

mRNA messenger RNA; see *ribonucleic acid*, under *acid*.

MS multiple sclerosis.

M.S. Master of Surgery.

msec. millisecond.

μsec. microsecond.

MSH melanocyte-stimulating hormone (see under *hormone*); it occurs in two forms, α -MSH and β -MSH.

MSH-IF melanocyte-stimulating hormone inhibiting factor; see under *factor*.

M.S.L. midsternal line.

M.T. Medical Technologist; membrana tympani.

MTU methylthiouracil.

M.u. Mache unit.

mU. milliunit.

m.u. mouse unit.

μU. microunit.

mu (mu) the twelfth letter of the Greek alphabet, μ . In micrometry, a micron.

Muc. abbreviation for *L. mucila'go*, mucilage.

mucase (mu'kās) an enzyme that catalyzes the hydrolysis of mucin; a mucopolysaccharidase.

Much's granules, reaction (mooks) [Hans Christian R. Much, German physician, 1880-1932] see under *granule* and *reaction*.

Much-Holzmann reaction (mook-holts'man) [Hans Much; V. Holzmann, German physician] Much's reaction.

mucicarmine (mu'si-kar'min) a specific stain for mucin consisting of carmine, aluminum chloride, and distilled water.

muciferous (mu-sif'er-us) [*mucus* + *L. ferre* to bear] secreting mucus.

mucification (mu'si-fi-ka'shun) the mucus producing changes in the vaginal epithelium of laboratory animals during the pregestational stage of the ovarian cycle.

muciform (mu'si-form) [*mucus* + *L. forma* form] resembling mucus.

mucigen (mu'si-jen) [*mucus* + *Gr. gennan* to produce] the substance from which mucin is derived.

mucigenous (mu-sij'ē-nus) producing mucus.

mucigogue (mu'si-gog) [*mucus* + *Gr. agōgos* leading] 1. stimulating the secretion of mucus. 2. an agent that stimulates the secretion of mucus.

mucilage (mu'si-lij) [*L. mucilago*] 1. an artificial viscid paste of gum or dextrin used in pharmacy as a vehicle or excipient, or in therapy as a demulcent. 2. a naturally formed viscid principle in a plant, consisting of a gum dissolved in the juices of the plant. **acacia m.**, a preparation of acacia and benzoic acid in purified water, used as a suspending agent for drugs. **tragacanth m.** [NF], a preparation of tragacanth, benzoic acid, and glycerin in distilled water, used as a protective.

mucilaginous (mu'si-laj'i-nus) of the nature of mucilage; slimy and adhesive.

mucilago (mu'si-lah'go) [*L.*] mucilage. **m. aca'ciae**, acacia mucilage. **m. tragacan'thae**, tragacanth mucilage.

mucilloid (mu'sil-loid) a preparation of a mucilaginous substance. **psyllium hydrophilic m.**, a powdered preparation of the mucilaginous portion of blond psyllium (*Plantago ovata*) seeds used in treatment of simple constipation resulting from lack of bulk.

mucin (mu'sin) a mucopolysaccharide or glycoprotein, the chief constituent of mucus. **gastric m.**, a substance derived from the lining of hog stomachs; formerly used for its protective and lubricating action in the treatment of peptic ulcer.

mucinase (mu'si-nās) any enzyme which acts upon mucin.

mucinoblast (mu-sin'o-blast) [*mucin* + *Gr. blastos* germ] the progenitor of a mucous cell.

mucinogen (mu-sin'o-jen) [*mucin* + Gr. *gennan* to produce] a precursor of mucin.

mucinoid (mu'si-noid) [*mucin* + Gr. *eidos* form] 1. resembling mucin. 2. mucoid, def. 2.

mucinolytic (mu'si-no-lit'ik) [*mucin* + Gr. *lysis* dissolution] dissolving or splitting up mucin.

mucinosi (mu'si-no'sis) a condition characterized by abnormal deposits of mucopolysaccharides (mucins) in the skin. The mucinoses have been classified as metabolic (myxedema, diffuse or pretibial; lichen myxedematosus; and gargylism), secondary or catabolic (degeneration in a variety of neoplasms), and localized (follicular, papular, plaquelike, focal, and the myxoid [synovial] cyst). **follicular m.**, a disease of unknown cause, characterized clinically by plaques of folliculopapules and histologically by deposition of acid mucopolysaccharides in the sebaceous glands and outer root sheath of the pilosebaceous unit; alopecia (*alopecia mucinosa*) is usually evident if lesions occur among terminal hairs. Extensive and persistent lesions in patients over thirty years of age are associated with reticulosis in perhaps 20 per cent of cases. **papular m.**, lichen myxedematosus.

mucinous (mu'si-nus) resembling or marked by the formation of mucin.

mucinuria (mu'sin-u're-ah) [*mucin* + Gr. *ouron* urine + *-ia*] the occurrence of mucin in the urine; it may suggest vaginal contamination.

muciparous (mu-sip'ah-rus) [*mucus* + L. *parere* to produce] secreting mucus.

mucitis (mu-si'tis) inflammation of the mucous membrane.

muco- [L. *mucus*] a combining form denoting relationship to mucus.

mucocarcinoma (mu'ko-an'ti-ti-bod-e) a local concentration of antibody (usually IgA) admixed with mucus at mucous surfaces.

mucocartilag (mu'ko-kar'ti-lij) a soft cartilage the cells of which are in a mucus-like matrix.

mucocoele (mu'ko-sel) [*mucus* + Gr. *kēlē* tumor] 1. dilatation of a cavity with accumulated mucous secretion. 2. a mucous polyp.

suppurating m., a mucocoele whose contents are purulent.

mucoclasia (mu-kok'lah-sis) [*mucus* + Gr. *klasis* a breaking] surgical destruction of the mucous lining of any organ, as of the gallbladder mucosa with the thermo- or electrocautery.

mucocolitis (mu'ko-ko-li'tis) mucous colitis.

mucocolpos (mu'ko-kol'pos) [*mucus* + Gr. *kolpos* vagina] accumulation of mucus in the vaginal canal.

mucocutaneous (mu'ko-ku-ta'ne-us) [*mucus* + *cutaneous*] pertaining to or affecting the mucous membrane and the skin.

mucocyte (mu'ko-sit) an oligodendroglial cell whose cytoplasm has undergone mucoid degeneration.

mucoderm (mu'ko-derm) lamina propria mucosae.

mucodermal (mu'ko-der'mal) pertaining to mucoderm.

mucocenteritis (mu'ko-en-ter-i'tis) mucous colitis.

mucopidermoid (mu'ko-ep'i-der'moid) composed of mucus-producing and epithelial cells; see under *carcinoma*.

mucofibrous (mu'ko-fi'brus) composed of mucus and fibrous tissue.

mucoflocculent (mu'ko-flok'u-lent) containing threads of mucus.

mucoglobulin (mu'ko-glob'u-lin) one of the class of glycoproteins.

mucoid (mu'koid) 1. mucinoid. 2. any one of a group of mucus-like conjugated proteins of animal origin. The mucoids differ from mucins in solubility. They are precipitated by acetic acid. They include colloid and ovomucoid. Called also *mucinoid*.

mucosin sulfate (mu'ko-tin) a sulfur-containing polysaccharide from gastric mucin and from the cornea of the eye.

mucocyst (mu'ko-lem'ah) mucin coat, a noncellular envelope secreted around the rabbit egg and its oolemma by the oviduct; formerly called *albumen layer*.

mucolipid (mu'ko-lip'id) any sphingolipid, such as ganglioside, containing sialic acid (*N*-acetylneuraminic acid).

mucolipidoses (mu'ko-lip'i-do'sez) plural of *mucolipidosis*.

mucolipidosis (mu'ko-lip'i-do'sis) any of a group of genetic disorders in which both mucopolysaccharides and lipids accumulate in tissues but without excess of mucopolysaccharides in the urine. **m. I**, a hereditary congenital disorder characterized by mild Hurler-like manifestations with moderate mental retardation, peculiar inclusions in the fibroblasts, and no excess mucopolysacchariduria. Called also *lipomucopolysaccharidosis*. **m. II**, a rapidly progressing disease of young children, characterized histologically by abnormal fibroblasts containing a large number of dark inclusions which fill the central part of the cytoplasm except for the juxtonuclear zone (I-cells), and clinically by severe growth impairment, minimal hepatomegaly, extreme mental and motor retardation, and clear corneas; inherited as an autosomal recessive trait, it is due to deficiency of multiple acid hydrolases. Called also *I-cell disease*. **m. III**, a disorder similar to but milder than mucolipidosis II and thought to be due to the same enzyme deficiency but to a lesser extent. Called also

pseudo-Hurler polydystrophy. **m. IV**, a form marked by early corneal clouding, psychomotor retardation, and the presence of lysosomal storage bodies; thought to be transmitted as an autosomal recessive trait.

mucolytic (mu'ko-lit'ik) destroying or dissolving mucus; an agent that so acts.

mucocyst (mu'ko-mem'brah-nus) pertaining to or composed of mucous membrane.

Mucormyst (mu'ko-mist) trademark for a preparation of acetylcysteine.

mucoperichondrial (mu'ko-per'e-kon'dre-al) pertaining to the mucoperichondrium.

mucoperichondrium (mu'ko-per'e-kon'dre-um) perichondrium having a mucosal surface, as that of the nasal septum.

mucoperiosteal (mu'ko-per'e-os'te-al) consisting of mucous membrane and periosteum.

mucoperiosteum (mu'ko-per'e-os'te-um) periosteum having a mucous surface, as in parts of the auditory apparatus.

mucopolysaccharidase (mu'ko-pol'e-sak'ah-ri-dās) an enzyme that catalyzes the hydrolysis of mucopolysaccharides.

mucopolysaccharide (mu'ko-pol'e-sak'ah-rid) a group of polysaccharides which contain hexosamine, which may or may not be combined with protein and which, dispersed in water, form many of the mucins. The major mucopolysaccharides include chondroitin and its sulfate forms (A, B, and C), heparin, and hyaluronic acid. Called also *glycosaminoglycan*.

mucopolysaccharidoses (mu'ko-pol'e-sak'ah-ri-do'sēz) plural of *mucopolysaccharidosis*.

mucopolysaccharidosis (mu'ko-pol'e-sak'ah-ri-do'sis) any of a group of closely related genetically determined disorders caused by a defect in mucopolysaccharide metabolism and characterized by skeletal changes, mental retardation, visceral involvement, and corneal clouding, with widespread tissue deposits and excessive urinary secretion of mucopolysaccharides. Hurler's syndrome is the prototype of this disorder. **m. I**, originally, Hurler's syndrome; it now encompasses any of the forms due to deficiency of α -L-iduronidase; see *m. I-H*, *m. I-H/S*, and *m. I-S*. **m. I-H**, Hurler's syndrome. **m. I-H/S, a form intermediate between the Hurler and Scheie syndromes, with all the findings of Hurler's syndrome but in a milder and slowly progressive form; it is postulated to be due to heterozygosity for each of the two genes affecting α -L-iduronidase activity. Called also *Hurler-Scheie compound*. **m. I-S**, Scheie's syndrome. **m. II**, Hunter's syndrome. **m. III**, Sanfilippo's syndrome. **m. IV**, Morquio's syndrome. **m. V**, former name for Scheie's syndrome, now classified as *m. I-S*. **m. VI**, Maroteaux-Lamy syndrome. **m. VII**, a form resembling a mild form of Hurler's syndrome, but with pectus carinatum, short stature, moderate mental retardation, and striking granulocyte inclusion. It is due to deficiency of β -glucuronidase and is transmitted as an autosomal recessive trait.**

mucopolysacchariduria (mu'ko-pol'e-sak'ah-ri-du're-ah) an excess of mucopolysaccharides in the urine.

mucoprotein (mu'ko-pro'te-in) a compound present in all connective and supporting tissues, containing mucopolysaccharides as prosthetic groups; they are relatively resistant to denaturation.

mucopurulent (mu'ko-pu'roo-lent) containing both mucus and pus.

mucopus (mu'ko-pus) [*mucus* + *pus*] mucus which has the appearance of pus on account of the presence of leukocytes.

Mucor (mu'kor) [L.] a genus of fungi of the family *Mucoraceae*, order *Mucorales*, which form delicate, white tubular filaments and spherical, black sporangia. See *mucormycosis*. **M. corymbifer**, a species of soil saprophytes frequently found growing on moldy bread and rotting potatoes, and on occasion isolated from otomycosis. **M. mucedo**, a species of common soil saprophytes causing rot of fruit, baked goods, and insects; it is sometimes isolated as a contaminant of the feet and skin, but has not been determined to be pathogenic in humans. **M. pusillus**, a species resembling *M. mucedo*, from moist bread. It is pathogenic for rabbits and is occasionally found in cases of otomycosis in man. **M. racemosus**, a mold from soil and diseased fruits; it has occasionally been isolated from otomycosis. **M. ramosus**, *Abidia ramosa*. **M. rhizopodiformis**, *Abidia corymbifera*.

Mucoraceae (mu'ko-ra'se-e) a family of phycmycetes of the order *Mucorales*, subclass *Zygomycetes*, in which the thallus is not segmented and ramified; it includes the genera *Abidia*, *Rhizopus*, *Mucor*, and *Thamnidium*.

mucoraceous (mu'ko-ra'shus) pertaining to fungi of the order *Mucorales*.

Mucorales (Mu'kor-a'lēz) an order of phycmycetous fungi of the subclass *Zygomycetes* made up of bread molds and related fungi, the majority of which are saprophytic; it includes the family *Mucoraceae*.

mucorin (mu'ko-rin) an albuminous substance prepared from mucoraceous fungi.

mucormycosis (mu'kor-mi-ko'sis) a mycosis due to fungi of

the order Mucorales, including species of *Mucor*, *Absidia*, and especially *Rhizopus*. It usually occurs as a complication of a chronic debilitating disease, particularly uncontrolled diabetes, most often beginning in the upper respiratory tract or lungs, in which spores germinate and from which mycelial growths metastasize to other organs.

mucosa (mu-ko'sah) [L. "mucus"] a mucous membrane, or tunica mucosa.

mucosal (mu-ko'sal) pertaining to the mucous membrane.

mucosanguineous (mu''ko-sang-gwin'e-us) composed of mucus and blood.

mucosedative (mu''ko-sed'ah-tiv) soothing to the mucous surfaces.

mucoserous (mu''ko-se'rus) pertaining to or producing both mucus and serum.

mucosin (mu-ko'sin) a form of mucin peculiar to the more tenacious varieties of mucus, as that of the nasal and uterine cavities.

mucositis (mu''ko-si'tis) inflammation of a mucous membrane. **m. necroticans agranulocyt'ica**, necrotic inflammation of mucous membranes associated with agranulocytosis.

mucoscutaneous (mu-ko'so-ku-ta'ne-us) pertaining to a mucous membrane and the skin.

mucostatic (mu''ko-stat'ik) 1. arresting the secretion of mucus. 2. denoting the normal relaxed condition of the tissues of the mucosa of the jaws.

mucotome (mu''ko-tōm) a dermatome for removing mucous membrane for transplantation; see *Castroviejo electric dermatome*, under *dermatome*.

mucous (mu'kus) [L. *mucosus*] pertaining to or resembling mucus; also secreting mucus.

mucoviscidosis (mu''ko-vis'i'do'sis) cystic fibrosis of the pancreas (q.v. under *fibrosis*); so called because of the abnormally viscous mucoid secretions observed in the disease.

mucro (mu'kro), pl. *mucro'nes* [L. "a sharp point"], the pointed end of a part or organ. **m. ba'seos cartilag'inis arytaenoi'deae**, processus vocales. **m. cor'dis**, the apex of the heart. **m. ster'ni**, processus xiphoideus.

mucronate (mu'kro-nāt) [L. *mucro* a sharp point] having a spinelike tip or end.

mucroniform (mu-kron'i-form) spinelike.

Mucuna (mu-ku'nah) [Brazilian] a genus of leguminous plants. The pods of *M. pruriens*, cowitch or cowage, bear easily detached hairs which may cause unbearable itching; the seeds contain L-dopa.

mucus (mu'kus) [L.] the free slime of the mucous membranes, composed of secretion of the glands, along with various inorganic salts, desquamated cells, and leukocytes.

muffle (mu'f'l) a part of a furnace, usually removable or replaceable, in which material may be placed for processing, without exposing it to the direct action of the fire.

muguet (moo-gwa') [Fr.] thrush (1st def.).

Muirhead's treatment (mūr'hedz) [Archibald Laurence Muirhead, Omaha pharmacologist, 1863-1921] see under *treatment*.

mular (mu'lar) [L. *mulus* mule] pertaining to mules. The term has been applied to certain lesions of verruga peruana in man which resemble the characteristic lesions of this disease in mules.

mulberry (mul'ber-e) any tree of the genus *Morus*. From the juice of the edible fruit a syrup is made which is used as a drink in fevers. The leaves serve as food for the silkworm. See also under *molar*.

Mulder's angle (mul'derz) [Johannes Mulder, Dutch anatomist, 1769-1810] see under *angle*.

Mulder's test (mul'derz) [Gerardus Johann Mulder, Dutch chemist, 1802-1880] see under *tests*.

Mules' operation (mūlz) [Philip Henry Mules, English ophthalmologist, 1843-1905] see under *operation*.

muliebria (mu''le-eb're-ah) [L.] the female genitalia.

muliebrity (mu''le-eb'ri-te) [L. *muliebritas*] 1. womanly quality; the sum of the characteristics typical of the female sex. 2. the assumption of female qualities by the male.

mull (mul) a variety of thin, soft muslin formerly used in surgery. **plaster m.**, a sheet of mull coated with gutta-percha.

Muller (mul'er), Hermann Joseph. American biologist, 1890-1967, noted for his research on genes; winner of the Nobel prize for physiology in 1946.

Müller (mil'er), Paul Herrmann. Swiss chemist, 1890-1965, noted for synthesis of D.D.T. and discovery of its insecticidal properties; winner of the Nobel prize for medicine in 1948.

Müller's capsule, duct (canal), maneuver (experiment), tubercle, etc. (mil'erz) [Johannes Peter Müller, German physiologist, 1801-1858; one of the most distinguished physiologists of Germany and the founder of scientific medicine in Germany] see *capsula glomeruli* and *ductus paramesonephricus*, and see under *maneuver* and *tubercle*.

Müller's fibers (cells, radial cells), muscle (mil'erz) [Heinrich Müller, German anatomist, 1820-1864] see under *fiber* and *muscle*.

Müller's fluid (liquid) (mil'erz) [Hermann Franz Müller, German histologist, 1866-1898] see under *fluid*.

Müller's sign (Friedrich von Müller, Munich physician, 1858-1941] see under *sign*.

Müller's test [Edward Müller, German physician, 1876-1928] see under *tests* (1) and (2).

Müller's test (reaction) [Rudolf Müller, Vienna dermatologist, 1877-1934] see under *tests* (3).

Müller-Haeckel law (mil'er hek'l) [Fritz Müller, German naturalist, 1821-1997; Ernst Heinrich Haeckel, German biologist, 1834-1919] biogenetic law; see under *law*.

Müller-Jochmann test (mil'er-yōk-man) [Edward Müller; George Jochmann, Berlin physician, 1874-1915] see under *tests*.

muller (mul'er) a kind of pestle, flat at the bottom, used for grinding drugs upon a slab of similar material.

müllerian (mil-e're-an) named for Johannes Peter Müller, as müllerian duct.

müllerianoma (mil-e're-ah-no'mah) a tumor of müllerian duct origin.

Müllerius (mil-ler'e-us) a genus of nematode lungworms. **M. capilla'ris**, a species of lungworms that is parasitic in sheep and goats.

multangular (mul-tang'gu-lar) having many angles or corners.

multi- [L. *multus* many, much] a combining form signifying many or much.

multiallelic (mul'te-ah-lel'ik) pertaining to or occupied by many different genes affecting the same or different hereditary characters.

multiarticular (mul'te-ar-tik'u-lar) pertaining to or affecting many joints.

multibacillary (mul'ti-bas'i-la're) pertaining to or made up of a number of bacilli.

multicapsular (mul'ti-kap'su-lar) having many capsules, as a lamellar (pacinian) corpuscle.

multicell (mul'ti-sel) any organ made up of many cells; any group of functionally active cells.

multicellular (mul'ti-sel'u-lar) [*multi-* + L. *cellula* cell] 1. composed of many cells. 2. containing many hollow spaces.

multicellularity (mul'ti-sel'u-lar'i-te) the state of being composed of many cells; the state of being multicellular.

multicentric (mul'ti-sen'trik) [*multi-* + *center*] polycentric.

multicentricity (mul'ti-sen-tris'i-te) polycentricity.

Multiceps (mul'ti-seps) a genus of tapeworms (family Taeniidae), the bladder worms of which are found in herbivorous animals and the adult forms in carnivorous animals. **M. multiceps**, a species which in the adult stage is parasitic in dogs. Its larval stage (*Coenurus cerebralis*) usually develops in the central nervous system, but sometimes in other organs or tissues, of goats and sheep and occasionally in man, and is productive of gid in sheep. **M. seria'lis**, a species parasitic in dogs, its larval stage developing in rabbits, squirrels, and other rodents; the larvae have rarely been reported from man, generally developing, as in its other intermediate hosts, in the connective tissues.

multicontaminated (mul'ti-kon-tam'i-nāt'ed) infected by several different species of microorganisms, or by several different contaminating agents.

multicuspidate (mul'ti-kus'pī-dāt) [*multi-* + L. *cuspis* point] having many cusps.

multicystic (mul'ti-sis'tik) polycystic.

multidentate (mul'ti-den'tāt) having many teeth or many indentations.

multifactorial (mul'ti-fak-to're-al) 1. of or pertaining to, or arising through the action of many factors. 2. in genetics, arising as the result of the interaction of several genes and usually, to some extent, of nongenetic factors. Cf. *polygenic*.

multifamilial (mul'ti-fah-mil'e-al) affecting several successive generations of a family.

multifid (mul'ti-fid) cleft into many parts.

multifidus (mul-tif'i-dus) [L. from *multus* many + *findereto* to split] cleft into many parts, as the musculus multifidus.

multifocal (mul'ti-fō'kal) arising from or pertaining to many foci.

multiform (mul'ti-form) occurring in several forms; polymorphic.

multiganglionic (mul'ti-gang'gle-on'ik) pertaining to, affecting, or possessing many ganglia.

multigesta (mul'ti-jes'tah) multigravida.

multiglandular (mul'ti-glan'du-lar) pluriglandular.

multigravida (mul'ti-grav'i-dah) [*multi-* + L. *gravid* pregnant] a woman who has been pregnant several times. Also written

gravid II, III, etc., according to the number of pregnancies. **grand m.**, a woman who has had six or more previous pregnancies.

multihallucalism (mul'ti-hal'ü-kal-izm) [*multi* + L. *hallux*, *hallucis*, great toe + *-ism*] a developmental anomaly characterized by the presence of more than one great toe on one foot.

multihallucism (mul'ti-hal'ü-sizm) multihallucalism.

multi-infection (mul'ti-in-fek'shun) infection with several varieties of organisms.

multilobar (mul'ti-lo'bar) having numerous lobes.

multilobular (mul'ti-lob'u-lar) [*multi* + L. *lobulus* lobule] having many lobules.

multilocular (mul'ti-lok'u-lar) [*multi* + L. *loculus* cell] having many cells or compartments, as a multilocular cyst.

multimammæ (mul'ti-mam'e) [*multi* + L. *mamma* breast] the condition of having more than two breasts.

multinodular (mul'ti-nod'u-lar) composed of many nodules.

multinucleate (mul'ti-nu'kle-ät) [*multi* + *nucleus*] having several nuclei; said of cells.

multipara (mul-tip'ah-rah) [*multi* + L. *parere* to bring forth, produce] a woman who has had two or more pregnancies which resulted in viable fetuses, whether or not the offspring were alive at birth. Also written para II, III, IV, etc., according to the number of offspring. **grand m.**, a woman who has had six or more pregnancies which resulted in viable fetuses.

multiparity (mul'ti-par'i-te) 1. the condition of being a multipara. 2. the production of several offspring in one gestation.

multiparous (mul-tip'ah-rus) 1. having had two or more pregnancies which resulted in viable fetuses. 2. producing several ova or offspring at one time.

multipartial (mul'ti-par'shal) made from cultures of several strains of the same microorganism rather than from one culture only; said of sera.

multiple (mul'ti-p'l) [L. *multiplex*] manifold; occurring in or affecting various parts of the body at once.

multiplicitas (mul'ti-plis'i-tas) a multiplication; a developmental anomaly characterized by the presence of an abnormal multiplicity of organs, or of a specific organ. **m. cor'dis**, a developmental anomaly characterized by the presence of a number of separate hearts.

multipolar (mul'ti-po'lar) [*multi* + L. *polus* pole] having more than two poles or processes.

multipollicism (mul'ti-pol'i-kal-izm) [*multi* + L. *pollex*, *pollicis* thumb + *-ism*] a developmental anomaly characterized by the presence of more than one thumb on one hand.

multirooted (mul'ti-rööt'ed) having many roots; said of molar teeth.

multisensitivity (mul'ti-sen'si-tiv'i-te) the condition of being sensitive (allergic) to more than one antigen (allergen).

multisynaptic (mul'te-si-nap'tik) polysynaptic.

multiterminal (mul'ti-ter'mi-nal) having several sets of terminals so that several electrodes may be used.

multituberculate (mul'ti-tu-ber'ku-lät) having many tubercles.

multivalent (mul'ti-val'ent) [*multi* + L. *valere* to have value] 1. having the power of combining with three or more univalent atoms. 2. active against several strains of an organism.

mummification (mum'i-fi-ka'shun) conversion into a state resembling that of a mummy, such as occurs in dry gangrene, or the shriveling and drying up of a dead fetus.

mummying (mum'e-ing) former term for a form of physical restraint in which the entire body is enclosed in a sheet or blanket, leaving only the head exposed; application of a wet-sheet pack.

mumps (mumps) a contagious paramyxovirus disease occurring mainly in children and conferring a resultant persisting immunity. It is acquired by aspiration, the heaviest inoculation of virus being in the salivary glands, the parotids more so than submandibular or sublingual. The incubation period is 18 to 22 days. Infection is symptomatic in approximately 75 per cent of cases. In these, parotitis occurs in 70 per cent, and meningitis in 10-15 per cent (with asymptomatic pleocytosis in half of these). Epididymo-orchitis develops in 20 per cent of postpubertal males, but subsequent sterility is rare. Other manifestations are less common and consist of pancreatitis, arthritis, myocarditis, oophoritis, thyroiditis, and mastitis. Fever and painful inflammation of the involved part are most pronounced during the first two days and subside slowly over the next four or five. More than one area may be involved simultaneously; occasionally the involvement is sequential, the entire disease lasting for two or three weeks. Meningoencephalitis with attendant lasting neurological injury is rare. Called also *epidemic parotitis*. **iodine m.**, swelling of the salivary and lacrimal glands as a toxic reaction to iodine therapy. **m. meningoencephalitis**, see under *meningoencephalitis*. **metastatic m.**, involvement of other glands or organs of the body occurring in association with mumps.

mu-mu (mu'mu) a condition characterized by swelling and edema of the spermatic cord, and sometimes swelling of the

*scrotum, epididymis, and testicle, and by the appearance of a hydrocele; probably an allergic manifestation developing after inoculation by filaria.

Münchhausen's syndrome (men-chow'zenz) [named after Baron von *Münchhausen*, a reputed teller of exaggerated tales] see under *syndrome*.

Münchmeyer's disease (minch'mi-erz) [Ernst *Münchmeyer*, German physician, 1846-1880] see under *disease*.

Mundinus (mun-di'nus) [It. *Mondino* de Luzzi] (?1275-1326) an Italian physician and anatomist—"the restorer of anatomy." His *Anothomia* (1316) was the first text devoted to human anatomy and, although not illustrated, it was greatly esteemed for some two hundred years.

munity (mu'ni-te) the state of being susceptible to infection.

Munk's disease (munks) [Fritz *Munk*, Berlin internist, born 1879] lipid nephrosis.

Munro's point (mun-röz') [John Cummings *Munro*, Boston surgeon, 1858-1910] see under *point*.

mural (mu'ral) [L. *muralis*, from *muris* wall] pertaining to or occurring in the wall of a cavity.

muramidase (mu-ram'i-däs) lysozyme.

Murchison-Pel-Ebstein fever (mur'chison-pel-eb'st'in) [Charles *Murchison*, British physician, 1830-1879; Pieter Klaases *Pel*, Dutch physician, 1852-1919; Wilhelm *Ebstein*, German physician, 1836-1912] Pel-Ebstein fever.

Murel (mu'rel) trademark for preparations of valetamine bromide.

Murex (mu'reks) a genus of mollusks. **M. purpu'rea**, a gastropod mollusk of the Mediterranean from which murexine is obtained.

murexide (mu-rek'sid) [L. *murex* purple sea snail] ammonium purpurate, $C_8H_4O_6N_5 \cdot NH_4 \cdot H_2O$, a substance formed in Weidel's test for uric acid; a purple color is produced when uric acid is present. Formerly used as a dye. See also *Weidel's test* (1), under *tests*.

murexine (mu-rek'sin) [L. *murex*, *muricis* the purple fish or pointed rock + *-ine*, suffix for chemical compounds] chemical name: β -[imidazolyl-(4)]-acrylcholine. A neurotoxic substance derived from the median zone of the hypobranchial gland of gastropods of the genus *Murex* and related species; the substance is called *purpurine* when derived from snails of the genus *Purpura*.

muriate (mu're-ät) [L. *muria* brine] an obsolete synonym of chloride.

muriatric (mu're-at'ik) [L. *muriatricus*; *muria* brine] derived from common salt. See also under *acid*.

Murimycetes (mu'ri-mi'sēz) a name once proposed for the pleuropneumonia-like organisms, now called *Mycoplasma*.

murine (mu'rin) [L. *mus*, *muris* mouse] pertaining to or affecting mice or rats.

murivirus (mu'ri-vi'rus) [from mild upper respiratory illness + *virus*] former name for rhinovirus.

murmur (mur'mur) [L.] an auscultatory sound, benign or pathologic, particularly a periodic sound of short duration of cardiac or vascular origin. **accidental m.**, a cardiac murmur due to some temporary and unimportant circumstance. **amphoric m.**, a respiratory murmur having a blowing musical character. **anemic m.**, a cardiac murmur heard in anemic patients. **aneurysmal m.**, a vascular murmur heard over an aneurysm. **aortic m.**, a sound generated by blood flowing through a diseased aorta or aortic valve. **apex m.**, one heard at the apex of the heart. **apical diastolic m's**, murmurs at the apex of the heart indicative of mitral stenosis and consisting essentially of low-frequency vibrations, which account for their rumble quality. **arterial m.**, a murmur (bruit) over an artery, sometimes aneurysmal and sometimes constricted. **attrition m.**, the sound produced by the friction of the pericardial surfaces in some cases of pericarditis. **Austin Flint m.**, a presystolic murmur at the apex in aortic regurgitation. **basal diastolic m's**, diastolic murmurs at the base of the heart, due to aortic or pulmonic insufficiency. **bellows m.**, to-and-fro sound. **blood m.**, one due to an abnormal, and commonly an anemic, condition of the blood. **brain m.**, a systolic murmur chiefly heard in the temporal region, and principally in cases of rickets. **bronchial m.**, one heard over the large bronchi resembling a laryngeal respiratory murmur. **cardiac m.**, a sound of finite length generated by blood flow through the heart. **cardiopulmonary m.**, **cardiorespiratory m.**, a sound generated within lung tissue and related to movement of the heart. **Carey-Coombs m.**, a rumbling mid-diastolic prediastolic apical cardiac murmur occurring in the early stages of rheumatic fever and disappearing after the rheumatic attack abates. **continuous m.**, a humming cardiac murmur extending throughout systole into late diastole or to the end of diastole, and occurring in patent ductus arteriosus, arteriovenous fistulas, rupture of a syphilitic aortic aneurysm into the pulmonary artery, aorticopulmonary septal defect, bronchial artery anastomosis in pulmonary atresia, angioma of lung, and stenosis of a branch of the pulmonary artery. **cooing m.**, musical m. **crescendo m.**, a murmur marked by progressively increasing loudness, e.g., the late diastolic

A TABLE OF ENDOCARDIAL MURMURS

TIME OF OCCURRENCE	SITE OF GREATEST INTENSITY	DIRECTION OF TRANSMISSION	SEAT OF LESION	NATURE OF LESION
Systolic.	At cardiac apex.	Along left fifth and sixth ribs—in left axilla—in the back, at inferior angle of left scapula.	Mitral orifice.	Incompetency—Regurgitation.
Systolic.	At junction of right second costal cartilage with sternum.	To junction of right clavicle with sternum—in course of right carotid.	Aortic orifice.	Narrowing—Obstruction.
Systolic.	At ensiform cartilage.	Feebly transmitted.	Tricuspid orifice.	Incompetency—Regurgitation.
Systolic.	At left second intercostal space, close to sternum.	Feebly transmitted.	Pulmonary orifice.	Narrowing—Obstruction.
Diastolic.	At junction of right second costal cartilage with sternum.	To midsternum—in course of sternum.	Aortic orifice.	Incompetency—Regurgitation.
Diastolic.	At left second intercostal space, close to sternum.	In course of sternum.	Pulmonary orifice.	Incompetency—Regurgitation.
(Diastolic) presystolic.	Over body of heart.	To apex of heart.	Mitral orifice.	Narrowing—Obstruction.
(Diastolic) presystolic.	At ensiform cartilage.	Feebly transmitted.	Tricuspid orifice.	Narrowing—Obstruction.

murmur in mitral stenosis with sinus rhythm. **Cruveilhier-Baumgarten m.**, a venous murmur heard at the abdominal wall over veins connecting the portal and caval system. **deglutition m.**, one heard over the esophagus during the act of swallowing. **diamond-shaped m.**, the systolic murmur of aortic stenosis, named for its recorded shape on the phonocardiogram. **diastolic m.**, one occurring during diastole, i.e., after the second sound of the heart. Heard at the apex, it is a sign of mitral obstruction; at the base of the heart, it is due to aortic regurgitation; more rarely to pulmonary regurgitation. **direct m. (obs.)**, the sound made by the forward flow of blood related to cardiac obstruction. **Duroziez's m.**, a double murmur over the femoral or other large peripheral artery, due to aortic insufficiency. **ejection m.**, systolic murmurs which occur predominantly in midsystole when ejection volume and velocity of blood flow are at their maximum; heard in aortic or pulmonary stenosis. **Flint's m.**, Austin Flint m. **friction m.**, see under *rub*. **functional m.**, a cardiac murmur generated within a structurally normal heart. **Gibson m.**, a long rumbling sound occupying most of systole and diastole, usually localized in the second left interspace near the sternum, and usually indicative of patent ductus arteriosus. **Graham Steell's m.**, one caused by pulmonary regurgitation in patients with pulmonary hypertension and mitral stenosis; it is a murmur heard in the third left intercostal space near the border of the sternum and thence propagated down the sternum. **Hamman's m.**, a crunching sound heard over the precordium synchronous with the heart beat; a sign of mediastinal emphysema, it is noted particularly in persons with pneumopericardium and is attributed to agitation of air bubbles by heart action. **heart m.**, cardiac m. **hemic m.**, blood m. **holosystolic m.**, pansystolic m. **hour-glass m.**, a cardiac murmur characterized by two periods of maximum loudness joined by a period of decreased loudness. **humming-top m.**, venous hum. **incidental m.**, accidental m. **indirect m. (obs.)**, the sound made by the backward flow of blood related to valvular regurgitation. **innocent m.**, functional m. **inorganic m. (obs.)**, any cardiac murmur not due to a valvular or other lesion. **machinery m.**, Gibson m. **mitral m.**, cardiac murmur due to disease of the mitral valve. **muscle m.**, one heard over a muscle in a state of contraction. **musical m.**, a cardiac murmur, usually systolic, resulting when the responsible vibrations have a periodic harmonic pattern. **obstructive m.**, direct m. **organic m.**, one due to a structural change in the heart, in a vessel, or in the lung substance. **pansystolic m.**, a cardiac murmur that extends through systole; called also *holosystolic m.* **pericardial m.**, see *pericardial (friction) rub*, under *rub*. **pleuropericardial m.**, a pleural friction sound heard in the pericardial region and resembling a pericardial rub. **prediastolic m.**, one occurring just before and with the diastole. Heard at the apex, it is due to mitral obstruction; at the base of the heart, to aortic regurgitation; more rarely, to pulmonary regurgitation. **presystolic m.**, one occurring shortly before the onset of ventricular ejection, usually attributed to atrial contraction and the acceleration of blood flow through a narrowed atrial ventricular valve. **pulmonic m.**, one due to disease of the valves of the pulmonary artery. **regurgitant m.**, a murmur due to regurgitation of blood through a diseased valvular orifice. **Roger's m.**, bruit de Roger. **sea-gull m.**, a raucous murmur with musical qualities resembling the call of a sea gull, heard occasionally in aortic insufficiency, and attributed specifically to eversion or retroversion of the right anterior aortic cusp. **seesaw m.**, to-and-fro sound. **Steell's m.**, Graham Steell's m. **stenosal m.**, a sound produced in an artery by artificial pressure or by a stenosis. **Still's m.**, a functional cardiac murmur of childhood, occurring

in midsystole and usually of maximal intensity at the lower left sternal border. **subclavicular m.**, a sound sometimes produced in the subclavian artery during systole, and due to a stenosis. **systolic m.**, one during systole; usually due to mitral or tricuspid regurgitation, or to aortic or pulmonary obstruction. **to-and-fro m.**, see under *sound*. **Traube's m.**, gallop rhythm. **tricuspid m.**, a murmur caused by disease of the tricuspid valves. **vascular m.**, a murmur heard over a blood vessel. **venous m.**, a murmur heard over a vein. **vesicular m.**, the normal breath sounds over the lungs.

Murphy (mur'fe), William Parry. American physician, born in 1892, co-winner with George Richards Minot and George Hoyt Whipple, of the Nobel prize for medicine and physiology in 1934, for their work on anemia.

Murphy button, etc. (mur'fe) [John Benjamin Murphy, Chicago surgeon, 1857–1916] see under *button*, *method*, *percussion*, *sign*, *tests*, and *treatment*.

Murri's disease (moor'ēz) [Augusto Murri, Italian clinician, 1841–1932] intermittent hemoglobinuria.

murrina (moo-re'nah) a form of trypanosomiasis among mules and horses in Panama, marked by fever, anemia, icterus, weakness, emaciation and edema, conjunctivitis, and posterior paralysis. It is caused by *Trypanosoma hippicum* (now considered to be identical with *T. evansi*), which is transmitted by flies of the genus *Glossina* and by vampire bats (*Desmodus rotundus*). Called also *derrengadera*.

Mus (mus) [L. "mouse"] a genus of mice. **M. alexandri'nus**, *Rattus rattus alexandrinus*, the Egyptian or roof rat. **M. decumanus**, *Rattus norvegicus*, the brown rat. **M. musculus**, the common house mouse. **M. norvegicus**, *Rattus norvegicus*, the brown rat. **M. rat'tus rat'tus**, the black rat.

Musca (mus'kah) [L. "fly"] a genus of flies of the family Muscidae which have their mouth parts adapted for suction only. **M. autumnalis**, the face fly, a species commonly found in Europe, parts of Asia and Africa, and America. **M. domestica**, the common house fly. It may act as a mechanical carrier of the microorganisms of typhoid fever, cholera, dysentery, plague, anthrax, tetanus, trachoma, leprosy, and encephalitis, and

Musca domestica: A, fly; B, larva; C, pupa.

of pyogenic bacteria, cysts of some protozoa, and helminth ova. The larvae may cause myiasis. **M. domestica nebulosa**, a subspecies of *M. domestica* found in India. **M. domestica vici'na**, a subspecies of *M. domestica* common in Egypt and India. **M. luteola**, see *Auchmeromyia*. **M. sorbens**, a species of Indonesia, Ethiopia, and Oriental areas, believed to transmit conjunctivitis, trachoma, and other infections. **M. vomitoria**, *Calliphora vomitoria*.

musca (mus'kah), pl. *mus'cae* [L.] a fly. **mus'cae hispanicae**, cantharides. **mus'cae volitan'tes** [L. "flitting flies"], specks seen floating before the eyes; see *floaters*.

muscacide (mus'kah-sid) [L. *musca* fly + *caedere* to kill] 1. destructive to flies. 2. any agent that destroys flies.

muscae (mus'e) [L.] plural of *musca*.

muscardine (mus/'kar-din) a disease of silkworms caused by *Beauveria bassiana*.

muscarine (mus/'kah-rin) [L. *muscarius* pertaining to flies] an active alkaloid, $C_8H_{12}O_2N$, obtained from the red variety of the mushroom *Amanita muscaria* (L.) Pers. (Agaricaceae). It produces a characteristic toxic syndrome in man when the fungus is ingested (see *mushroom poisoning*, under *poisoning*). Muscarine is used in pharmacologic and physiologic studies because it mimics the action of acetylcholine (see *muscarinic*).

muscarinic (mus/'kah-rin'ik) denoting the acetylcholine-like (parasympathomimetic) effects of muscarine on postganglionic parasympathetic neural impulses, including decrease in heart rate and contractility, bronchoconstriction, dilatation of arterioles, increase in motility, tone, and secretion of stomach and intestine, and stimulation of salivary and lacrimal glands.

muscarinism (mus/'kar-in-izm) poisoning by muscarine.

muscegenetic (mus/'e-jē-net'ik) giving rise to muscae volitan-tes.

muscid (mus/'i-sid) muscade.

Muscidae (mus/'i-de) a family of flies of the order Diptera. It includes the genera *Fannia*, *Haematobia*, *Glossina*, *Musca*, *Muscina*, and *Stomoxys*.

Muscina (mū-'si-'nah) the nonbiting stable flies, a genus of the family Muscidae which breeds in dung. It is closely related to the housefly and it also frequents dwellings.

muscle (mus'el) an organ which by contraction produces the movements of an animal organism. Called also *musculus* [NA]. Muscles are of two varieties: *striated*, or *striped*, including all the muscles in which contraction is voluntary and the heart muscle; *unstriated*, *nonstriated*, *smooth*, or *organic*, including all the involuntary muscles except the heart, such as the muscular layer of the intestines, bladder, blood vessels, etc. Striated muscles are covered with a thin layer of connective tissue (*epimysium*) from which septa (*perimysium*) pass, dividing the muscle into bundles of fibers, or *fasciculi*. Each fasciculus contains a number of parallel fibers separated by connective tissue septa (*endomysium*). Each fiber consists of sarcoplasm which is cross-striated or composed of alternate light and dark portions (whence the name *striated muscle*); each contains embedded in it the *myofibrils* and each is surrounded by *sarcolemma*. Smooth muscles are composed of elongated, spindle-shaped, nucleated cells arranged parallel to one another and to the long axis of the muscle, and these cells are often grouped into bundles of varying size. The muscles, bundles, and cells are enclosed in an indifferent connective tissue material much as is found in striated muscles. **abductor m. of great toe**, *musculus abductor hallucis*. **abductor m. of little finger**, *musculus abductor digiti minimi manus*. **abductor m. of little toe**, *musculus abductor digiti minimi pedis*. **abductor m. of thumb, long**, *musculus abductor pollicis longus*. **abductor m. of thumb, short**, *musculus abductor pollicis brevis*. **adductor m., great**, *musculus adductor magnus*. **adductor m., long**, *musculus adductor longus*. **adductor m., short**, *musculus adductor brevis*. **adductor m., smallest**, *musculus adductor minimus*. **adductor m. of great toe**, *musculus adductor hallucis*. **adductor m. of thumb**, *musculus adductor pollicis*. **Aeby's m.**, *musculus depressor labii inferioris*. **agonistic m.**, a muscle opposed in action by another muscle, called the antagonist. **Albinus' m.**, 1. *musculus risorius*. 2. *musculus scalenus medius*. **anconeus m.**, *musculus anconeus*. **anconeus m., lateral**, *caput laterale musculi tricipitis brachii*. **anconeus m., medial**, *caput mediale musculi tricipitis brachii*. **anconeus m., short**, *caput laterale musculi tricipitis brachii*. **antagonistic m.**, a muscle that counteracts the action of another muscle, called the agonist. **antigravity m's**, those muscles that by their tone resist the constant pull of gravity in the maintenance of normal posture. **m. of antitragus**, *musculus antitragicus*. **appendicular m's**, the muscles of a limb. **arrector m's of hair**, *musculi arrectores pilorum*. **articular m.**, a muscle that has one end attached to the capsule of a joint; called also *musculus articularis*. **articular m. of elbow**, *musculus articularis cubiti*. **articular m. of knee**, *musculus articularis genuis*. **aryepiglottic m.**, *musculus aryepiglotticus*. **arytenoid m., oblique**, *musculus arytenoideus obliquus*. **arytenoid m., transverse**, *musculus arytenoideus transversus*. **m's of auditory ossicles**, *musculi ossiculorum auditus*. **auricular m., anterior**, *musculus auricularis anterior*. **auricular m., posterior**, *musculus auricularis posterior*. **auricular m., superior**, *musculus auricularis superior*. **Bell's m.**, the muscular strands between the ureteric orifices and the uvula vesicae, bounding the trigone of the urinary bladder. Called also *ureteric bridge*. **biceps m. of arm**, *musculus biceps brachii*. **biceps m. of thigh**, *musculus biceps femoris*. **bipennate m.**, *musculus bipennatus*. **Bowman's m.**, *musculus ciliaris*. **brachial m.**, *musculus brachialis*. **brachioradial m.**, *musculus brachioradialis*. **bronchoesophageal m.**, *musculus bronchoesophageus*. **Brücke's m.**, the longitudinal fibers of the ciliary muscle. **buccinator m.**, *musculus buccinator*. **buccopharyngeal m.**, *pars buccopharyngea musculi constrictoris pharyngis superioris*. **bulbocavernosus m.**, *musculus*

bulbospongiosus. **canine m.**, *musculus levator anguli oris*. **cardiac m.**, the muscle of the heart, composed of striated muscle fibers. **Casser's m.**, *casserian m.*, *ligamentum mallei anterioris*. **ceratocricoid m.**, *musculus ceratocricoides*. **ceratopharyngeal m.**, *pars ceratopharyngea musculi constrictoris pharyngis medii*. **Chassaignac's axillary m.**, an occasional muscle bundle extending from the lower edge of the latissimus dorsi across the hollow of the axilla to the brachial fascia or to the lower border of the pectoralis minor. **chondroglossus m.**, *musculus chondroglossus*. **chondropharyngeal m.**, *pars chondropharyngea musculi constrictoris pharyngis medii*. **ciliary m.**, *musculus ciliaris*. **coccygeal m's**, those connected with the coccyx, including the *musculus coccygeus*, *musculus sacrococcygeus dorsalis*, and *musculus sacrococcygeus ventralis*; called also *musculi coccygei* [NA]. **coccygeal m.**, *musculus coccygeus*. **compressor m. of naris**, *pars transversa musculi nasalis*. **congenerous m's**, muscles having a common action or function. **constrictor m. of pharynx, inferior**, *musculus constrictor pharyngis inferior*. **constrictor m. of pharynx, middle**, *musculus constrictor pharyngis medius*. **constrictor m. of pharynx, superior**, *musculus constrictor pharyngis superior*. **coracobrachial m.**, *musculus coracobrachialis*. **Crampton's m.**, the anterior portion of the ciliary muscle in birds. **cremaster m.**, *musculus cremaster*. **cricoarytenoid m., lateral**, *musculus cricoarytenoideus lateralis*. **cricoarytenoid m., posterior**, *musculus cricoarytenoideus posterior*. **cricopharyngeal m.**, *pars cricopharyngea musculi constrictoris pharyngis inferioris*. **cricothyroid m.**, *musculus cricothyroideus*. **cutaneous m.**, striated muscle that inserts into the skin; called also *musculus cutaneus*. **dartos m. of scrotum**, *tunica dartos*. **deltoid m.**, *musculus deltoideus*. **depressor m.**, *superciliary*, *musculus depressor supercilli*. **depressor m. of angle of mouth**, *musculus depressor anguli oris*. **depressor m. of lower lip**, *musculus depressor labii inferioris*. **depressor m. of septum of nose**, *musculus depressor septi nasi*. **detrusor m.**, *detrusor urinae*. **diaphragmatic m.**, *diaphragm*. **digastric m.**, *musculus digastricus*. **dilator m. of nose**, *pars alaris musculi nasalis*. **dilator m. of pupil**, *musculus dilator pupillae*. **emergency m's**, muscles which ordinarily are not required in the performance of an act but which assist the prime movers when an act is performed with great force. **epicranial m.**, *musculus epicranius*. **epimeric m.**, a muscle derived from an epimere and innervated by a posterior ramus of a spinal nerve. **epitrochleoanconeus m.**, *musculus epitrochleoanconeus*. **erector m. of penis**, *musculus ischio-cavernosus*. **erector m. of spine**, *musculus erector spinae*. **eustachian m.**, *musculus tensor tympani*. **extensor m. of digits, common**, *extensor m. of fingers*, *musculus extensor digitorum*. **extensor m. of fifth digit, proper**, *musculus extensor digiti minimi*. **extensor m. of great toe, long**, *musculus extensor hallucis longus*. **extensor m. of great toe, short**, *musculus extensor hallucis brevis*. **extensor m. of index finger**, *musculus extensor indicis*. **extensor m. of little finger**, *musculus extensor digiti minimi*. **extensor m. of thumb, long**, *musculus extensor pollicis longus*. **extensor m. of thumb, short**, *musculus extensor pollicis brevis*. **extensor m. of toes, long**, *musculus extensor digitorum longus*. **extensor m. of toes, short**, *musculus extensor digitorum brevis*. **extraocular m's**, *musculi bulbi*. **extrinsic m.**, a muscle that does not originate in the same limb or part in which it is inserted. **m's of eye**, *musculi bulbi*. **fast m.**, white m. **m's of fauces**, *musculi palati et faucium*. **femoral m.**, *musculus vastus intermedius*. **fibular m., long**, *musculus peroneus longus*. **fibular m., short**, *musculus peroneus brevis*. **fibular m., third**, *musculus peroneus tertius*. **fixation m's**, *fixator m's*, accessory muscles that serve to steady a part. **fixator m. of base of stapes**, *musculus fixator baseos stapedis*. **flexor m., accessory**, *musculus quadratus plantae*. **flexor m. of fingers, deep**, *musculus flexor digitorum profundus*. **flexor m. of fingers, superficial**, *musculus flexor digitorum superficialis*. **flexor m. of great toe, long**, *musculus flexor hallucis longus*. **flexor m. of great toe, short**, *musculus flexor hallucis brevis*. **flexor m. of little finger, short**, *musculus flexor digiti minimi brevis manus*. **flexor m. of little toe, short**, *musculus flexor digiti minimi brevis pedis*. **flexor m. of thumb, long**, *musculus flexor pollicis longus*. **flexor m. of thumb, short**, *musculus flexor pollicis brevis*. **flexor m. of toes, long**, *musculus flexor digitorum longus*. **flexor m. of toes, short**, *musculus flexor digitorum brevis*. **Folius' m.**, *ligamentum mallei laterale*. **frontal m.**, *venter frontalis musculi occipitofrontalis*. **fusiform m.**, a spindle-shaped muscle; see *musculus fusiformis*. **gastrocnemius m.**, *musculus gastrocnemius*. **gastrocnemius m., lateral**, *caput laterale musculi gastrocnemii*. **gastrocnemius m., medial**, *caput mediale musculi gastrocnemii*. **Gavard's m.**, the oblique muscular elements of the stomach wall. **gemellus m., inferior**, *musculus gemellus inferior*. **gemellus m., superior**, *musculus gemellus superior*. **genioglossus m.**, *musculus genio-glossus*. **geniohyoid m.**, *musculus geniohyoideus*. **glossopalatine m.**, *musculus palatoglossus*. **glossopharyngeal**

m., pars glossopharyngea muscoli constrictoris pharyngis superioris. **gluteal m.**, **least**, musculus gluteus minimus. **gracilis m.**, musculus gracilis. **Guthrie's m.**, musculus sphincter urethrae. **hamstring m's**, the muscles of the back of the thigh, including the biceps femoris, the semitendinosus, and the semimembranosus. **Hilton's m.**, musculus aryepiglotticus. **Horner's m.**, pars lacrimalis muscoli orbicularis oculi. **Houston's m.**, fibers of the bulbocavernosus muscle compressing the dorsal vein of the penis. **hyoglossal m.**, **hyoglossus m.**, musculus hyoglossus. **m's of hyoid bone**, see *musculi infrahyoidei* and *musculi suprahyoidei*. **hypaxial m's**, musculus longus capitis, musculus longus colli, the vertebral portion of the diaphragm, and musculus sacrococcygeus anterior; called also *subvertebral m's*. **hypomeric m.**, a muscle derived from a hypomere and innervated by an anterior ramus of a spinal nerve. **iliac m.**, musculus iliacus. **iliococcygeal m.**, musculus iliococcygeus. **iliocostal m's**, see entries beginning *musculus iliocostalis*. **iliopsoas m.**, musculus iliopsoas. **incisive m's of inferior lip**, musculus incisivi labii inferioris. **incisive m's of lower lip**, musculus incisivi labii inferioris. **incisive m's of superior lip**, musculus incisivi labii superioris. **incisive m's of upper lip**, musculus incisivi labii superioris. **infrahyoid m's**, musculus infrahyoidei. **infraspinal m.**, musculus infraspinalis. **inspiratory m's**, the muscles that act in inspiration, such as the diaphragm, and the intercostal and pectoral muscles. **intercostal m's, external**, musculus intercostales externi. **intercostal m's, innermost**, musculus intercostales intimi. **intercostal m's, internal**, musculus intercostales interni. **interfoveolar m.**, ligamentum interfoveolare. **interosseous m's, palmar**, musculus interossei palmares. **interosseous m's, plantar**, musculus interossei plantares. **interosseous m's, volar**, musculus interossei palmares. **interosseous m's of foot, dorsal**, musculus interossei dorsales pedis. **interosseous m's of hand, dorsal**, musculus interossei dorsales manus. **interspinal m's**, musculus interspinales. **interspinal muscles of thorax**, musculus interspinales thoracis. **intertransverse m's**, musculus intertransversarii. **intertransverse m's, anterior**, musculus intertransversarii thoracis. **intertransverse m's of neck, anterior**, musculus intertransversarii anteriores cervicis. **intertransverse m's of neck, posterior**, musculus intertransversarii posteriores cervicis. **intertransverse m's of thorax**, musculus intertransversarii thoracis. **intraauricular m's**, the stapedius and tensor tympani muscles. **intraocular m's**, the intrinsic muscles of the eyeball. **intrinsic m.**, a muscle whose origin and insertion are both in the same limb or part. **involuntary m.**, a muscle that is not under the control of the will; such muscles are, for the most part, composed of nonstriated fibers. **iridic m's**, the muscles controlling the iris. **ischiocavernous m.**, musculus ischiocavernosus. **Jarjavay's m.**, a muscle arising from the ramus of the ischium and inserting in the constrictor muscle of the vagina, which acts to depress the urethra. **Jung's m.**, musculus pyramidalis auriculæ. **Koyter's m.**, musculus corrugator supercilii. **Landström's m.**, minute muscle fibers in the fascia around and behind the eyeball, attached in front to the anterior orbital fascia and eyelids. **Langer's m.**, muscular fibers from the insertion of the pectoralis major muscle over the bicipital groove to the insertion of the latissimus dorsi. **latissimus dorsi m.**, musculus latissimus dorsi. **levator m. of angle of mouth**, musculus levator anguli oris. **levator ani m.**, musculus levator ani. **levator m. of prostate**, musculus levator prostatae. **levator m's of ribs**, musculus levatores costarum. **levator m's of ribs, long**, musculus levatores costarum longi. **levator m's of ribs, short**, musculus levatores costarum breves. **levator m. of scapula**, musculus levator scapulae. **levator m. of thyroid gland**, musculus levator glandulae thyroideae. **levator m. of upper eyelid**, musculus levator palpebrae superioris. **levator m. of upper lip**, musculus levator labii superioris. **levator m. of upper lip and ala of nose**, musculus levator labii superioris alaeque nasi. **levator muscle of velum palatini**, musculus levator velum palatini. **longissimus m.**, musculus longissimus. **longissimus m. of back**, musculus longissimus thoracis. **longissimus m. of head**, musculus longissimus capitis. **longissimus m. of neck**, musculus longissimus cervicis. **longissimus m. of thorax**, musculus longissimus thoracis. **longitudinal m. of tongue, inferior**, musculus longitudinalis inferior linguae. **longitudinal m. of tongue, superior**, musculus longitudinalis superior linguae. **lumbrical m's of foot**, musculus lumbricales pedis. **lumbrical m's of hand**, musculus lumbricales manus. **Luschka's m's**, the uterosacral ligaments, which contain muscular tissue. **masseter m.**, musculus masseter. **Merkel's m.**, musculus ceratocricoides. **mesothernar m.**, musculus adductor pollicis. **Müller's m.**, 1. fibrae circulares musculi ciliaris. 2. musculus orbitalis. **multifidus m's**, musculus multifidi. **mylohyoid m.**, musculus mylohyoideus. **mylopharyngeal m.**, pars mylopharyngea muscoli constrictoris pharyngis superioris. **nasal m.**, musculus nasalis. **m's of neck**, musculi colli. **nonstriated m.**, a type of muscle without transverse striations upon its constituent fibers; such muscles are almost always involuntary. Called also *smooth m.*

oblique m. of abdomen, external, musculus obliquus externus abdominis. **oblique m. of abdomen, internal**, musculus obliquus internus abdominis. **oblique m. of auricle**, musculus obliquus auriculæ. **oblique m. of eyeball, inferior**, musculus obliquus inferior bulbi. **oblique m. of eyeball, superior**, musculus obliquus superior bulbi. **obturator m., external**, musculus obturatorius externus. **obturator m., internal**, musculus obturatorius internus. **occipital m.**, venter occipitalis musculi occipitofrontalis. **occipitofrontal m.**, musculus occipitofrontalis. **Ochsner's m.**, an inconstant muscular thickening of the duodenal muscle just distal to the opening of the common bile duct. **ocular m's**, musculi bulbi. **Oddi's m.**, musculus sphincter ductus choledochi, or the combination of this with musculus sphincter ampullae hepatopancreaticae when the ampulla is present. **omohyoid m.**, musculus omohyoideus. **opposing m. of little finger**, musculus opponens digiti minimi. **opposing m. of thumb**, musculus opponens pollicis. **orbicular m.**, a muscle that encircles a body opening, such as the eye or mouth; called also *musculus orbicularis* [NA]. **orbicular m. of eye**, musculus orbicularis oculi. **orbicular m. of mouth**, musculus orbicularis oris. **orbital m.**, musculus orbitalis. **organic m.**, visceral m. **m's of palate and fauces**, musculi palati et faucium. **palatoglossus m.**, musculus palatoglossus. **palatopharyngeal m.**, musculus palatopharyngeus. **palmar m., long**, musculus palmaris longus. **palmar m., short**, musculus palmaris brevis. **papillary m's**, musculi papillares. **papillary m. of left ventricle, anterior**, musculus papillaris anterior ventriculi sinistri. **papillary m. of left ventricle, posterior**, musculus papillaris posterior ventriculi sinistri. **papillary m. of right ventricle, anterior**, musculus papillaris anterior ventriculi dextri. **papillary m. of right ventricle, posterior**, musculus papillaris posterior ventriculi dextri. **papillary m's of right ventricle, septal**, musculi papillares septales ventriculi dextri. **pectinate m's**, musculi pectinati. **pectineal m.**, musculus pectineus. **pectoral m., greater**, musculus pectoralis major. **pectoral m., smaller**, musculus pectoralis minor. **penniform m.**, musculus unipennatus. **m's of perineum**, musculi perinei. **peroneal m., long**, musculus peroneus longus. **peroneal m., short**, musculus peroneus brevis. **peroneal m., third**, musculus peroneus tertius. **pharyngopalatine m.**, musculus palatopharyngeus. **Phillips' m.**, a muscular slip from the radial collateral ligament of the wrist and the styloid process of the radius to the phalanges. **piriform m.**, musculus piriformis. **plantar m.**, musculus plantaris. **platysma m.**, see *platysma*. **pleuroesophageal m.**, musculus pleuroesophageus. **popliteal m.**, musculus popliteus. **postaxial m.**, a muscle on the dorsal side of a limb. **preaxial m.**, a muscle on the ventral side of a limb. **procerus m.**, musculus procerus. **pronator m., quadrate**, musculus pronator quadratus. **pronator m., round**, musculus pronator teres. **psaos m., greater**, musculus psoas major. **psaos m., smaller**, musculus psoas minor. **pterygoid m., external**, musculus pterygoideus lateralis. **pterygoid m., internal**, musculus pterygoideus medialis. **pterygoid m., lateral**, musculus pterygoideus lateralis. **pterygoid m., medial**, musculus pterygoideus medialis. **pterygopharyngeal m.**, pars pterygopharyngea muscoli constrictoris pharyngis superioris. **pubicoperitoneal m.**, ligamentum interfoveolare. **pubococcygeal m.**, musculus pubococcygeus. **puboprostatic m.**, musculus puboprostaticus. **puborectal m.**, musculus puborectalis. **pubovaginal m.**, musculus pubovaginalis. **pubovesical m.**, musculus pubovesicalis. **pyramidal m.**, musculus pyramidalis. **pyramidal m. of auricle**, musculus pyramidalis auriculæ. **quadrate m. of lower lip**, musculus depressor labii inferioris. **quadrate m. of sole**, musculus quadratus plantae. **quadrate m. of thigh**, musculus quadratus femoris. **quadrate m. of upper lip**, musculus levator labii superioris. **quadriceps m. of thigh**, musculus quadriceps femoris. **rectococcygeus m.**, musculus rectococcygeus. **rectourethral m.**, musculus rectourethralis. **rectouterine m.**, musculus rectouterinus. **rectovesical m.**, musculus rectovesicalis. **red m.**, the darker-colored muscle tissue of some mammals, composed of small dark fibers rich in mitochondria, myoglobin, and sarcoplasm but with only faint cross-stripping; red muscle is designed for slow but repetitive contraction for long periods of time. Called also *slow*, or *tonic*, *m.* Cf. *white m.* **Reisseisen's m's**, the smooth muscle fibers of the smallest bronchi. **rhomboid m., greater**, musculus rhomboideus major. **rhomboid m., lesser**, musculus rhomboideus minor. **ribbon m's**, musculi infrahyoidei. **rider's m's**, the adductor muscles of the thigh. **Riolan's m.**, 1. ciliary bundle of pars palpebralis musculi orbicularis oculi. 2. musculus cremaster. **risorius m.**, musculus risorius. **rotator m's**, musculi rotatores. **rotator m's, long**, musculi rotatores longi. **rotator m's, short**, musculi rotatores breves. **rotator m's of neck**, musculi rotatores cervicis. **rotator m's of thorax**, musculi rotatores thoracis. **Rouget's m.**, the circular portion of the ciliary muscle. **Ruysch's m.**, the muscular tissue of the fundus uteri. **sacrococcygeal m., anterior**, musculus sacrococcygeus ventralis. **sacrococcyg-**

MUSCLES OF THE HEAD AND FACE

A, muscles of face and scalp, showing insertion of platysma; B, buccinator and orbicularis oris; C, pterygoid muscles. (Jones and Shepard.)

MUSCLES OF TRUNK, ANTERIOR VIEW

The left sternocleidomastoid, pectoralis major, external oblique, and a portion of the deltoid have been removed to show underlying muscles. A portion of the rectus abdominis has been cut away to expose the posterior part of its sheath. (Jones and Shepard.)

MUSCLES OF TRUNK, POSTERIOR VIEW

The latissimus dorsi and trapezius on the right side have been cut away to expose the underlying muscles.
(Jones and Shepard.)

SUPERFICIAL MUSCLES OF RIGHT UPPER EXTREMITY

(Jones and Shepard)

SUPERFICIAL MUSCLES OF RIGHT LOWER EXTREMITY

(Jones and Shepard)

eal m., dorsal, musculus sacrococcygeus dorsalis. **sacro-coccygeal m., posterior**, musculus sacrococcygeus dorsalis. **sacrococcygeal m., ventral**, musculus sacrococcygeus ventralis. **sacrospinal m.**, musculus erector spinae. **salpingopharyngeal m.**, musculus salpingopharyngeus. **Santorini's m.**, musculus risorius. **Santorini's m's, circular**, the nonstriated fibers that encircle the urethra beneath the sphincter urethrae. **sartorius m.**, musculus sartorius. **scalene m., anterior**, musculus scalenus anterior. **scalene m., middle**, musculus scalenus medius. **scalene m., posterior**, musculus scalenus posterior. **scalene m., smallest**, musculus scalenus minimus. **semimembranous m.**, musculus semimembranosus. **semispinal m.**, musculus semispinalis. **semispinal m. of head**, musculus semispinalis capitis. **semispinal m. of neck**, musculus semispinalis cervicis. **semispinal m. of thorax**, musculus semispinalis thoracis. **semitendinous m.**, musculus semitendinosus. **serratus m., anterior**, musculus serratus anterior. **serratus m., posterior, inferior**, musculus serratus posterior inferior. **serratus m., posterior, superior**, musculus serratus posterior superior. **skeletal m's**, striated muscles that are attached to bones and typically cross at least one joint; called also *musculi skeleti*. **slow m.**, red m. **smooth m.**, nonstriated, involuntary muscle. **soleus m.**, musculus soleus. **somatic m's**, musculi skeleti. **sphincter m.**, musculus sphincter. **sphincter m. of anus, external**, musculus sphincter ani externus. **sphincter m. of anus, internal**, musculus sphincter ani internus. **sphincter m. of bile duct**, musculus sphincter ductus choledochi. **sphincter m. of hepatopancreatic ampulla**, musculus sphincter ampullae hepatopancreaticae. **sphincter m. of membranous urethra**, musculus sphincter urethrae. **sphincter m. of pupil**, musculus sphincter pupillae. **sphincter m. of pylorus**, musculus sphincter pylori. **sphincter m. of urethra**, musculus sphincter urethrae. **sphincter m. of urinary bladder**, musculus sphincter vesicae urinariae. **spinal m.**, see *musculus spinalis*. **splenius m. of head**, musculus splenius capitis. **splenius m. of neck**, musculus splenius cervicis. **stapedius m.**, musculus stapedius. **sternal m.**, musculus sternalis. **sternocleidomastoid m.**, musculus sternocleidomastoideus. **sternohyoid m.**, musculus sternohyoideus. **sternomastoid m.**, musculus sternocleidomastoideus. **sternothyroid m.**, musculus sternothyroideus. **strap m's**, muscles of the neck, particularly those of the thyroid cartilage and hyoid bone. **striated m., striped m.**, any muscle whose fibers are divided by transverse bands into striations; such muscles are voluntary. See *muscle*. **styloglossus m.**, musculus styloglossus. **stylohyoid m.**, musculus stylohyoideus. **stylopharyngeus m.**, musculus stylopharyngeus. **subclavius m.**, musculus subclavius. **subcostal m's**, musculi subcostales. **subscapular m.**, musculus subscapularis. **subvertebral m's**, hypaxial m's. **supinator m.**, musculus supinator. **suprahyoid m's**, musculi suprahyoidei. **supraspinous m.**, musculus supraspinatus. **suspensory m. of duodenum**, musculus suspensorius duodeni. **synergic m's**, synergistic m's, muscles that assist one another in action. **tarsal m., inferior**, musculus tarsalis inferior. **tarsal m., superior**, musculus tarsalis superior. **temporal m.**, musculus temporalis. **temporoparietal m.**, musculus temporoparietalis. **tensor m. of fascia lata**, musculus tensor fasciae latae. **tensor m. of tympanic membrane**, **tensor m. of tympanum**, musculus tensor tympani. **tensor m. of velum palatini**, musculus tensor veli palatini. **teres major m.**, musculus teres major. **teres minor m.**, musculus teres minor. **thenar m's**, the abductor and flexor muscles of the thumb. **thyroarytenoid m.**, musculus thyroarytenoideus. **thyroepiglottic m.**, musculus thyroepiglotticus. **thyrohyoid m.**, musculus thyrohyoideus. **thyropharyngeal m.**, pars thyropharyngea musculi constrictoris pharyngis inferioris. **tibial m., anterior**, musculus tibialis anterior. **tibial m., posterior**, musculus tibialis posterior. **tonic m.**, red m. **tracheal m.**, musculus trachealis. **trachelomastoid m.**, musculus longissimus capitis. **m. of tragus**, musculus tragus. **transverse m. of abdomen**, musculus transversus abdominis. **transverse m. of auricle**, musculus transversus auriculae. **transverse m. of chin**, musculus transversus menti. **transverse m. of nape**, musculus transversus nuchae. **transverse m. of perineum, deep**, musculus transversus perinei profundus. **transverse m. of perineum, superficial**, musculus transversus perinei superficialis. **transverse m. of thorax**, musculus transversus thoracis.

transverse m. of tongue, musculus transversus linguae. **transversospinal m.**, musculus transversospinalis. **trapezius m.**, musculus trapezius. **m. of Treitz**, musculus suspensorius duodeni. **triangular m.**, musculus depressor anguli oris. **triceps m. of arm**, musculus triceps brachii. **triceps m. of calf**, musculus triceps surae. **twitch m.**, white m. **unipennate m.**, musculus unipennatus. **unstriated m.**, nonstriated m. **m. of uvula**, musculus uvulae. **vertical m. of tongue**, musculus verticalis linguae. **vestigial m.**, a muscle that was once well developed but through evolution has become rudimentary. **visceral m.**, muscle fibers associated chiefly with the hollow viscera and largely of splanchnic mesodermal origin; except for the striated fibers in the wall of the heart, they are smooth-muscle fibers bound together by reticular fibers. **vocal m.**, musculus vocalis. **voluntary m.**, any muscle that normally is under the control of the will; such muscles are nearly always composed of striated fibers. **white m.**, the paler-colored muscle tissue of some mammals, composed of fibers with little sarcoplasm and prominent cross-stripping and which are paler and of larger diameter than the fibers of red muscle. Called also *fast*, or *twitch*, *m. Cf. red m.* **Wilson's m.**, musculus sphincter urethrae. **yoked m's**, muscles that normally act simultaneously and equally, as in moving the eyes. **zygomatic m., zygomatic m., greater**, musculus zygomaticus major. **zygomatic m., lesser**, musculus zygomaticus minor.

musculamine (mus'ku-lam'in) a base isolated from hydrolyzed calf's muscle; it is the same as spermine.

muscular (mus'ku-lar) [L. *muscularis*] 1. pertaining to or composing muscle. 2. having a well-developed musculature.

muscularis (mus'ku-la'ris) [L.] relating to muscles, specifically a muscular coat; see *tunica muscularis*.

muscularity (mus'ku-lar'i-te) the condition or quality of being muscular.

muscularize (mus'ku-lar-iz) to change into muscle tissue.

muscultation (mus'ku-la'shun) 1. the muscular system or apparatus. 2. the muscular activity or work.

musculature (mus'ku-lah-chur) the muscular apparatus of the body, or of any part of it.

musculi (mus'ku-li) [L.] plural of *musculus*.

musculoaponeurotic (mus'ku-lo-ap'o-nu-rot'ik) pertaining to a muscle and its aponeurosis.

musculocutaneous (mus'ku-lo-ku-ta'ne-us) pertaining to or supplying both muscles and skin.

musculodermic (mus'ku-lo-der'mik) musculocutaneous.

musculoelastic (mus'ku-lo-e-las'tik) composed of muscular and elastic tissue.

musculointestinal (mus'ku-lo-in-tes'ti-nal) pertaining to the muscles and the intestines.

musculomembranous (mus'ku-lo-mem'brah-nus) [L. *musculus* muscle + *membrana* membrane] both muscular and membranous.

Musculomyces (mus'ku-lo-mi'sēz) a name proposed for the pleuropneumonia-like bacteria found in mice.

musculophrenic (mus'ku-lo-fren'ik) [*muscular* + *phrenic*] pertaining to or supplying both the diaphragm and the adjoining muscles.

musculoprecipitin (mus'ku-lo-pre-sip'i-tin) any one of a series of precipitins used in distinguishing various kinds of meat.

musculoskeletal (mus'ku-lo-skel'e-tal) pertaining to or comprising the skeleton and the muscles, as musculoskeletal system.

musculospiral (mus'ku-lo-spi'ral) [L. *musculus* muscle + *spira* coil] pertaining to muscles and having a spiral direction, as the nervus radialis.

musculospiralis (mus'ku-lo-spi-ra'lis) nervus radialis.

musculotendinous (mus'ku-lo-ten'di-nus) pertaining to or composed of muscle and tendon.

musculotonic (mus'ku-lo-ton'ik) pertaining to muscular contractility.

musculotropic (mus'ku-lo-trop'ik) having a special affinity for or exerting its principal effect upon muscular tissue.

musculus (mus'ku-lus), pl. *musculi* [L., dim. of *mus* mouse, because of a fancied resemblance to a mouse of a muscle moving under the skin] [NA] an organ which by its contraction and relaxation produces movements of certain organs or of the entire animal organism. See *muscle*. For names and description of specific muscles see *Table of Musculi*.

TABLE OF MUSCULI

Descriptions of muscles are given on NA terms, and include anglicized names of specific muscles.

mus'culi abdo'minis [NA], the muscles of the abdomen.
m. abduc'tor dig'iti min'imi ma'nus [NA], abductor muscle of little finger: *origin*, pisiform bone, flexor carpi ulnaris tendon;

insertion, medial surface of base of proximal phalanx of little finger; *innervation*, ulnar; *action*, abducts little finger.

m. abduc'tor dig'iti min'imi pe'dis [NA], abductor muscle

TABLE OF MUSCULI (Continued)

of little toe: *origin*, medial and lateral tubercles of calcaneus, plantar fascia; *insertion*, lateral surface of base of proximal phalanx of little toe; *innervation*, superficial branch of lateral plantar; *action*, abducts little toe.

m. abduc'tor dig'iti quin'ti ma'nus, m. abductor digiti minimi manus.

m. abduc'tor dig'iti quin'ti pe'dis, m. abductor digiti minimi pedis.

m. abduc'tor hal'lucis [NA], abductor muscle of great toe: *origin*, medial tubercle of calcaneus, plantar fascia; *insertion*, medial surface of base of proximal phalanx of great toe; *innervation*, medial plantar; *action*, abducts, flexes great toe.

m. abduc'tor pol'licis bre'vis [NA], short abductor muscle of thumb: *origin*, scaphoid, ridge of trapezium, transverse carpal ligament; *insertion*, lateral surface of base of proximal phalanx of thumb; *innervation*, median; *action*, abducts thumb.

m. abduc'tor pol'licis lon'gus [NA], long abductor muscle of thumb: *origin*, posterior surfaces of radius and ulna; *insertion*, radial side of base of first metacarpal bone; *innervation*, posterior interosseous; *action*, abducts, extends thumb.

m. adduc'tor bre'vis [NA], short adductor muscle: *origin*, outer surface of inferior ramus of pubis; *insertion*, upper part of linea aspera of femur; *innervation*, obturator; *action*, adducts, rotates, flexes thigh.

m. adduc'tor hal'lucis [NA], adductor muscle of great toe (2 heads): *origin*, CAPUT OBLIQUUM—bases of second, third, and fourth metatarsals, and sheath of peroneus longus, CAPUT TRANSVERSUM—capsules of metatarsophalangeal joints of three lateral toes; *insertion*, lateral side of base of proximal phalanx of great toe; *innervation*, lateral plantar; *action*, adducts great toe.

m. adduc'tor lon'gus [NA], long adductor muscle: *origin*, crest and symphysis of pubis; *insertion*, linea aspera of femur; *innervation*, obturator; *action*, adducts, rotates, flexes thigh.

m. adduc'tor mag'nus [NA], great adductor muscle (2 parts): *origin*, DEEP PART—inferior ramus of pubis, ramus of ischium, SUPERFICIAL PART—ischial tuberosity; *insertion*, DEEP PART—linea aspera of femur, SUPERFICIAL PART—adductor tubercle of femur; *innervation*, DEEP PART—obturator, SUPERFICIAL PART—sciatic; *action*, DEEP PART—adducts thigh, SUPERFICIAL PART—extends thigh.

m. adduc'tor min'imus, smallest adductor muscle: a name given the anterior portion of the adductor magnus muscle; *insertion*, ischium, body and ramus of pubis; *innervation*, obturator and sciatic; *action*, adducts thigh.

m. adduc'tor pol'licis [NA], adductor muscle of thumb (2 heads): *origin*, CAPUT OBLIQUUM—sheath of flexor carpi radialis, anterior carpal ligament, capitate bone, and bases of second and third metacarpals, CAPUT TRANSVERSUM—lower two-thirds of anterior surface of third metacarpal; *insertion*, medial surface of base of proximal phalanx of thumb; *innervation*, ulnar; *action*, adducts, opposes thumb.

m. ancone'us [NA], anconeus muscle: *origin*, back of lateral epicondyle of humerus; *insertion*, olecranon and posterior surface of ulna; *innervation*, radial; *action*, extends forearm.

m. antitrag'icus [NA], antitragus muscle: *origin*, outer part of antitragus; *insertion*, caudate process of helix and anthelix; *innervation*, temporal and posterior auricular.

mus'culi arrecto'res pilo'rum [NA], arrector muscles of hair: *origin*, papillary layer of skin; *insertion*, hair follicles; *innervation*, sympathetic; *action*, elevate hairs of skin.

m. articula'ris [NA], articular muscle: a muscle that is attached at one end to the synovial capsule of a joint.

m. articula'ris cu'biti [NA], articular muscle of elbow: a few fibers of the deep surface of the triceps brachii that insert into the posterior ligament and synovial membrane of the elbow joint.

m. articula'ris ge'nu, m. articularis genus.

m. articula'ris ge'nus [NA], articular muscle of knee: *origin*, distal fourth of anterior surface of shaft of femur; *insertion*, synovial membrane of knee joint; *innervation*, femoral; *action*, lifts capsule of knee joint.

m. aryepigl'oticus [NA], aryepiglottic muscle: a name given to an inconstant fascicle of the oblique arytenoid muscle, originating from the apex of the arytenoid cartilage and inserting on the lateral margin of the epiglottis.

m. arytaenoi'deus obli'quus, m. arytenoideus obliquus.

m. arytaenoi'deus transver'sus, m. arytenoideus transversus.

m. arytenoi'deus obli'quus [NA], oblique arytenoid muscle: *origin*, dorsal aspect of muscular process of arytenoid cartilage; *insertion*, apex of opposite arytenoid cartilage; *innervation*, recurrent laryngeal; *action*, closes inlet of larynx.

m. arytenoi'deus transver'sus [NA], transverse arytenoid muscle: *origin*, dorsal aspect of muscular process of arytenoid cartilage; *insertion*, continuous with thyroarytenoid, apex of opposite cartilage; *innervation*, recurrent laryngeal; *action*, approximates arytenoid cartilages.

m. auricula'ris ante'rior [NA], anterior auricular muscle: *origin*, superficial temporal fascia; *insertion*, cartilage of ear; *innervation*, facial; *action*, draws the auricle forward.

m. auricula'ris poste'rior [NA], posterior auricular muscle: *origin*, mastoid process; *insertion*, cartilage of ear; *innervation*, facial; *action*, draws auricle backward.

m. auricula'ris supe'rior [NA], superior auricular muscle: *origin*, galea aponeurotica; *insertion*, cartilage of ear; *innervation*, facial; *action*, raises auricle.

m. bi'ceps bra'chii [NA], biceps muscle of arm (2 heads): *origin*, CAPUT LONGUM—upper border of glenoid cavity, CAPUT BREVE—apex of coracoid process; *insertion*, radial tuberosity and fascia of forearm; *innervation*, musculocutaneous; *action*, flexes forearm, supinates hand.

m. bi'ceps fem'oris [NA], biceps muscle of thigh (2 heads): *origin*, CAPUT LONGUM—ischial tuberosity, CAPUT BREVE—linea aspera of femur; *insertion*, head of fibula, lateral condyle of tibia; *innervation*, CAPUT LONGUM—tibial, CAPUT BREVE—peroneal, popliteal; *action*, flexes leg, extends thigh.

m. bipenna'tus [NA], bipennate muscle: a muscle in which the fibers approach the tendon of insertion from a wide area and are inserted through a large segment of its circumference.

m. brachia'lis [NA], brachial muscle: *origin*, anterior surface of humerus; *insertion*, coronoid process of ulna; *innervation*, radial, musculocutaneous; *action*, flexes forearm.

m. brachioradia'lis [NA], brachioradial muscle: *origin*, lateral supracondylar ridge of humerus; *insertion*, lower end of radius; *innervation*, radial; *action*, flexes forearm.

m. bronchoesopha'geus [NA], bronchoesophageal muscle: a name given muscular fasciculi arising from the wall of the left bronchus, reinforcing muscles of the esophagus.

m. bronchoesopha'geus, m. bronchoesophageus.

m. buccina'tor [NA], buccinator muscle: *origin*, buccinator ridge of mandible, alveolar process of maxilla, pterygomandibular ligament; *insertion*, orbicularis oris at angle of mouth; *innervation*, buccal branch of facial; *action*, compresses cheek and retracts angle of the mouth.

m. buccopharyn'geus, pars buccopharyngea musculi constrictoris pharyngis superioris.

mus'culi bul'bi [NA], extraocular muscles: the six voluntary muscles that move the eyeball, including the superior, inferior, middle, and lateral recti, and the superior and inferior oblique muscles.

m. bulbo caverno'sus, m. bulbospongiosus.

m. bulbospongio'sus [NA], bulbocavernous muscle: *origin*, central point of perineum, median raphe of bulb; *insertion*, fascia of penis (clitoris); *innervation*, pudendal; *action*, constricts bulbous urethra (urethra).

m. cani'nus, m. levator anguli oris.

mus'culi cap'itis [NA], the muscles of the head.

m. ceratocricoi'deus [NA], ceratocricoid muscle: a name given a muscular fasciculus arising from the cricoid cartilage and inserted on the inferior cornu of the thyroid cartilage.

m. ceratopharyn'geus, pars ceratopharyngea musculi constrictoris pharyngis medii.

m. chondroglos'sus [NA], chondroglossus muscle: *origin*, medial side and base of lesser cornu of hyoid bone; *insertion*, substance of tongue; *innervation*, hypoglossal; *action*, depresses, retracts tongue.

m. chondropharyn'geus, pars chondropharyngea musculi constrictoris pharyngis medii.

m. cilia'ris [NA], ciliary muscle: *origin*, LONGITUDINAL DIVISION (Brücke's muscles)—junction of cornea and sclera, CIRCULAR DIVISION (Müller's muscle)—sphincter of ciliary body; *insertion*, outer layers of choroid and ciliary processes; *innervation*, short ciliary; *action*, affects shape of lens in visual accommodation.

mus'culi coccyg'ei [NA], coccygeal muscles: the muscles acting upon the coccyx, including the coccygeal and the dorsal and ventral sacrococcygeal muscles.

m. coccyg'us [NA], coccygeal muscle: *origin*, ischial spine; *insertion*, lateral border of lower part of sacrum, upper coccyx; *innervation*, third and fourth sacral; *action*, supports and raises coccyx.

mus'culi col'li [NA], the muscles of the neck, including the sternocleidomastoid and the longus colli, and the suprahyoid, infrahyoid, and scalene muscles.

m. compres'sor na'ris, pars transversa musculi nasalis.

m. constrict'or pharyn'gis infe'rior [NA], inferior constrictor muscle of pharynx: *origin*, under surfaces of cricoid and thyroid cartilages; *insertion*, median raphe of posterior wall of pharynx; *innervation*, glossopharyngeal, pharyngeal plexus, and external and recurrent laryngeal; *action*, constricts pharynx.

m. constrict'or pharyn'gis me'dius [NA], middle constrictor muscle of pharynx: *origin*, cornua of hyoid and stylohyoid ligament; *insertion*, median raphe of posterior wall of pharynx; *innervation*, pharyngeal plexus of vagus and glossopharyngeal; *action*, constricts pharynx.

m. constrict'or pharyn'gis supe'rior [NA], superior constrictor muscle of pharynx: *origin*, medial pterygoid plate, pterygomandibular raphe, mylohyoid ridge of mandible, and mucous membrane of floor of mouth; *insertion*, median raphe of posterior wall of pharynx; *innervation*, pharyngeal plexus of vagus; *action*, constricts pharynx.

m. coracobrachia'lis [NA], coracobrachial muscle: *origin*, coracoid process of scapula; *insertion*, medial surface of shaft of humerus; *innervation*, musculocutaneous; *action*, flexes, adducts arm.

m. corruga'tor supercil'ii [NA], *origin*, medial end of super-

ciliary arch; *insertion*, skin of eyebrow; *innervation*, facial; *action*, draws eyebrow downward and medially.

m. cremas/ter [NA], cremaster muscle: *origin*, inferior margin of internal oblique muscle of abdomen; *insertion*, pubic tubercle; *innervation*, genital branch of genitofemoral; *action*, elevates testis.

m. cricoarytenoi/deus latera/lis, m. cricoarytenoideus lateralis.

m. cricoarytenoi/deus poste/rior, m. cricoarytenoideus posterior.

m. cricoarytenoi/deus latera/lis [NA], lateral cricoarytenoid muscle: *origin*, lateral surface of cricoid cartilage; *insertion*, muscular process of arytenoid cartilage; *innervation*, recurrent laryngeal; *action*, approximates vocal folds.

m. cricoarytenoi/deus poste/rior [NA], posterior cricoarytenoid muscle: *origin*, back of cricoid cartilage; *insertion*, muscular process of arytenoid cartilage; *innervation*, recurrent laryngeal; *action*, separates vocal folds.

m. cricopharyngeus, pars cricopharyngea musculus constrictoris pharyngis inferioris.

m. cricothyreo/deus, m. cricothyroideus.

m. cricothyro/deus [NA], cricothyroid muscle: *origin*, front and side of cricoid cartilage; *insertion*, lamina of thyroid cartilage; *innervation*, superior laryngeal; *action*, tenses vocal folds.

m. cuta/neus [NA], cutaneous muscle: striated muscle that inserts into the skin.

m. deltoi/deus [NA], deltoid muscle: *origin*, clavicle, acromion, spine of scapula; *insertion*, deltoid tuberosity of humerus; *innervation*, axillary; *action*, abducts, flexes, extends arm.

m. depres/sor an/guli o/ris [NA], depressor muscle of angle of mouth: *origin*, lower border of mandible; *insertion*, angle of mouth; *innervation*, facial; *action*, pulls down angle of mouth.

m. depres/sor la/bii inferio/ris [NA], depressor muscle of lower lip: *origin*, anterior portion of lower border of mandible; *insertion*, orbicularis oris and skin of lower lip; *innervation*, facial; *action*, depresses lower lip.

m. depres/sor sep/ti na/si [NA], depressor muscle of nasal septum: *origin*, incisor fossa of maxilla; *insertion*, ala and septum of nose; *innervation*, facial; *action*, contracts nostril and depresses ala.

m. depres/sor supercil/ii [NA], superciliary depressor muscle: a name given a few fibers of the orbital part of the orbicularis oculi muscle that are inserted in the eyebrow, which they depress.

m. digas/tricus [NA], digastric muscle: *origin*, VENTER ANTERIOR—digastric fossa on deep surface of lower border of mandible near symphysis, VENTER POSTERIOR—mastoid notch of temporal bone; *insertion*, intermediate tendon on hyoid bone; *innervation*, VENTER ANTERIOR—mylohyoid, VENTER POSTERIOR—digastric branch of facial; *action*, elevates hyoid bone, lowers jaw.

m. dila/tor na/ris, pars alaris musculus nasalis.

m. dila/tor pupi/lae [NA], dilator muscle of pupil: a name given fibers extending radially from the sphincter pupillae to the ciliary margin; *innervation*, sympathetic; *action*, dilates iris.

m. mus/culi dor/si [NA], dorsal muscles: the muscles of the back.

m. epicra/nus [NA], epicranial muscle: a name given the muscular covering of the scalp, including the occipitofrontalis and temporoparietalis muscles, and the galea aponeurotica.

m. epitrochleoanconae/us, epitrochleoanconeus muscle: an occasional band of fibers originating at the back of the medial condyle of the humerus and inserting on the medial side of the olecranon process, innervated by a branch of the ulnar nerve.

m. erec/tor spi/nae [NA], erector muscle of spine: a name given the fibers of the more superficial of the deep muscles of the back, originating from the sacrum, spines of the lumbar and the eleventh and twelfth thoracic vertebrae, and the iliac crest, which split and insert as the iliocostalis, longissimus, and spinalis muscles (q.v.).

m. exten/sor car/pi radia/lis bre/vis [NA], short radial extensor muscle of wrist: *origin*, lateral epicondyle of humerus, *insertion*, base of third metacarpal bone; *innervation*, radial; *action*, extends and abducts wrist joint.

m. exten/sor car/pi radia/lis lon/gus [NA], long radial extensor muscle of wrist: *origin*, lateral supracondylar ridge of humerus; *insertion*, base of second metacarpal bone; *innervation*, radial; *action*, extends and abducts wrist joint.

m. exten/sor car/pi ulna/ris [NA], ulnar extensor muscle of wrist (2 heads): *origin*, CAPUT HUMERALE—lateral epicondyle of humerus, CAPUT ULNARE—dorsal border of ulna; *insertion*, base of fifth metacarpal bone; *innervation*, deep radial; *action*, extends and adducts wrist joint.

m. exten/sor dig/iti min/imi [NA], extensor muscle of little finger: *origin*, common extensor tendon; *insertion*, tendon of extensor digitorum to little finger; *innervation*, deep radial; *action*, extends little finger.

m. exten/sor dig/iti quin/ti pro/prius, m. extensor digiti minimi.

m. exten/sor digito/rum [NA], extensor muscle of fingers: *origin*, lateral epicondyle of humerus; *insertion*, common extensor tendon of each finger; *innervation*, deep radial; *action*, extends wrist joint and phalanges.

m. exten/sor digito/rum bre/vis [NA], short extensor muscle of toes: *origin*, dorsal surface of calcaneus; *insertion*, extensor tendons of first, second, third, fourth toes; *innervation*, deep peroneal; *action*, extends toes.

m. exten/sor digito/rum commu/nis, m. extensor digitorum.

m. exten/sor digito/rum lon/gus [NA], long extensor muscle of toes: *origin*, anterior surface of fibula, lateral condyle of tibia, interosseous membrane; *insertion*, common extensor tendon of four lateral toes; *innervation*, deep peroneal; *action*, extends toes.

m. exten/sor hal/lucis bre/vis [NA], short extensor muscle of great toe: a name given the portion of the extensor digitorum brevis muscle that goes to the great toe.

m. exten/sor hal/lucis lon/gus [NA], long extensor muscle of great toe: *origin*, front of fibula and interosseous membrane; *insertion*, dorsal surface of base of distal phalanx of great toe; *innervation*, deep peroneal; *action*, dorsiflexes ankle joint, extends great toe.

m. exten/sor in/dicis [NA], extensor muscle of index finger: *origin*, dorsal surface of body of ulna, interosseous membrane; *insertion*, common extensor tendon of index finger; *innervation*, deep radial; *action*, extends index finger.

m. exten/sor in/dicis pro/prius, m. extensor indicis.

m. exten/sor pol/lucis bre/vis [NA], short extensor muscle of thumb: *origin*, dorsal surface of radius and interosseous membrane; *insertion*, dorsal surface of proximal phalanx of thumb; *innervation*, deep radial; *action*, extends thumb.

m. exten/sor pol/lucis lon/gus [NA], long extensor muscle of thumb: *origin*, dorsal surface of ulna and interosseous membrane; *insertion*, dorsal surface of distal phalanx of thumb; *innervation*, deep radial; *action*, extends, abducts thumb.

mus/culi extremita/tis inferio/ris, musculus membri inferioris.

mus/culi extremita/tis superio/ris, musculus membri superioris.

m. fibula/ris bre/vis, NA alternative for *m. peroneus brevis*.

m. fibula/ris lon/gus, NA alternative for *m. peroneus longus*.

m. fibula/ris ter/tius, NA alternative for *m. peroneus tertius*.

m. fixa/tor ba/seos stape/dis, fixator muscle of base of stapes: fibers attaching to the base of the stapes.

m. flex/or accesso/rus, NA alternative for *m. quadratus plantae*.

m. flex/or car/pi radia/lis [NA], radial flexor muscle of wrist: *origin*, medial epicondyle of humerus; *insertion*, base of second metacarpal; *innervation*, median; *action*, flexes and abducts wrist joint.

m. flex/or car/pi ulna/ris [NA], ulnar flexor muscle of wrist (2 heads): *origin*, CAPUT HUMERALE—medial epicondyle of humerus, CAPUT ULNARE—olecranon, ulna, intermuscular septum; *insertion*, pisiform, hook of hamate, proximal end of fifth metacarpal; *innervation*, ulnar; *action*, flexes and adducts wrist joint.

m. flex/or dig/iti min/imi bre/vis ma/nus [NA], short flexor muscle of little finger: *origin*, hook of hamate bone, transverse carpal ligament; *insertion*, medial side of proximal phalanx of little finger; *innervation*, ulnar; *action*, flexes little finger.

m. flex/or dig/iti min/imi bre/vis pe/dis [NA], short flexor muscle of little toe: *origin*, base of fifth metatarsal, plantar fascia; *insertion*, lateral surface of base of proximal phalanx of little toe; *innervation*, lateral plantar; *action*, flexes little toe.

m. flex/or dig/iti quin/ti bre/vis ma/nus, m. flexor digiti minimi brevis manus.

m. flex/or dig/iti quin/ti bre/vis pe/dis, m. flexor digiti minimi brevis pedis.

m. flex/or digito/rum bre/vis [NA], short flexor muscle of toes: *origin*, medial tuberosity of calcaneus, plantar fascia; *insertion*, middle phalanges of four lateral toes; *innervation*, medial plantar; *action*, flexes toes.

m. flex/or digito/rum lon/gus [NA], long flexor muscle of toes: *origin*, posterior surface of shaft of tibia; *insertion*, distal phalanges of four lateral toes; *innervation*, posterior tibial; *action*, flexes toes and extends foot.

m. flex/or digito/rum profun/dus [NA], deep flexor muscle of fingers: *origin*, shaft of ulna, coronoid process; *insertion*, distal phalanges of fingers; *innervation*, ulnar and anterior interosseous; *action*, flexes distal phalanges.

m. flex/or digito/rum subli/mis, m. flexor digitorum superficialis.

m. flex/or digito/rum superficialis [NA], superficial flexor muscle of fingers (2 heads): *origin*, CAPUT HUMEROU LNARE—medial epicondyle of humerus, coronoid process of ulna, CAPUT RADIALE—oblique line of radius, anterior border; *insertion*, middle phalanges of fingers; *innervation*, median; *action*, flexes middle phalanges.

m. flex/or hal/lucis bre/vis [NA], short flexor muscle of great toe: *origin*, under surface of cuboid, lateral cuneiform; *insertion*, base of proximal phalanx of great toe; *innervation*, lateral and medial plantar; *action*, flexes great toe.

m. flex/or hal/lucis lon/gus [NA], long flexor muscle of great toe: *origin*, posterior surface of fibula; *insertion*, base of distal phalanx of great toe; *innervation*, posterior tibial; *action*, flexes great toe.

m. flex/or pol/lucis bre/vis [NA], short flexor muscle of thumb: *origin*, transverse carpal ligament, ridge of trapezium; *insertion*, base of proximal phalanx of thumb; *innervation*, median, ulnar; *action*, flexes and adducts thumb.

m. flex/or pol/lucis lon/gus [NA], long flexor muscle of thumb: *origin*, anterior surface of radius and coronoid process of

TABLE OF MUSCULI (Continued)

ulna; *insertion*, base of distal phalanx of thumb; *innervation*, anterior interosseous; *action*, flexes thumb.

m. frontalis, venter frontalis musculus occipitofrontalis.

m. fusiformis [NA], fusiform muscle: a spindle-shaped muscle in which the fibers are approximately parallel to the long axis of the muscle but converge upon a tendon at either end.

m. gastrocnemius [NA], gastrocnemius muscle (2 heads): *origin*, CAPUT MEDIALE—popliteal surface of femur, upper part of medial condyle, and capsule of knee; *insertion*, aponeurosis unites with tendon of soleus to form calcaneal tendon (Achilles tendon); *innervation*, tibial; *action*, plantar flexes ankle joint, flexes knee joint.

m. gemellus inferior [NA], inferior gemellus muscle: *origin*, tuberosity of ischium; *insertion*, greater trochanter of femur; *innervation*, sacral plexus; *action*, rotates thigh laterally.

m. gemellus superior [NA], superior gemellus muscle: *origin*, spine of ischium; *insertion*, greater trochanter of femur; *innervation*, sacral plexus; *action*, rotates thigh laterally.

m. genioglossus [NA], genioglossus muscle: *origin*, mental spine of mandible; *insertion*, hyoid bone and under surface of tongue; *innervation*, hypoglossal; *action*, protrudes and depresses tongue.

m. geniohyoid [NA], geniohyoid muscle: *origin*, mental spine of mandible; *insertion*, body of hyoid bone; *innervation*, a branch of first cervical nerve through hypoglossal; *action*, elevates, draws hyoid forward.

m. glossopalatinus, m. palatoglossus.

m. glossopharyngeus, pars glossopharyngea musculus constrictoris pharyngis superioris.

m. gluteus maximus [NA], greatest gluteal muscle: *origin*, lateral surface of ilium, dorsal surface of sacrum and coccyx, sacrotuberous ligament; *insertion*, iliotibial tract of fascia lata, gluteal tuberosity of femur; *innervation*, inferior gluteal; *action*, extends, abducts, and rotates thigh laterally.

m. gluteus medius [NA], middle gluteal muscle: *origin*, lateral surface of ilium between anterior and posterior gluteal lines; *insertion*, greater trochanter of femur; *innervation*, superior gluteal; *action*, abducts thigh.

m. gluteus minimus [NA], least gluteal muscle: *origin*, lateral surface of ilium between anterior and inferior gluteal lines; *insertion*, greater trochanter of femur; *innervation*, superior gluteal; *action*, abducts, rotates thigh medially.

m. gracilis [NA], gracilis muscle: *origin*, inferior ramus of pubis; *insertion*, medial surface of shaft of tibia; *innervation*, obturator; *action*, adducts thigh, flexes knee joint.

m. helix major [NA], *origin*, spine of helix; *insertion*, anterior border of helix; *innervation*, auriculotemporal and posterior auricular; *action*, tenses skin of auditory canal.

m. helix minor [NA], *origin*, anterior rim of helix; *insertion*, concha; *innervation*, temporal, posterior auricular.

m. hyoglossus [NA], hyoglossal muscle: *origin*, body and greater cornu of hyoid bone; *insertion*, side of tongue; *innervation*, hypoglossal; *action*, depresses and retracts tongue.

m. iliacus [NA], iliac muscle: *origin*, iliac fossa and base of sacrum; *insertion*, lesser trochanter of femur; *innervation*, femoral; *action*, flexes thigh, trunk on limb.

m. iliococcygeus [NA], iliococcygeal muscle: a name given the posterior portion of the levator ani which originates as far forward as the obturator canal and inserts on the side of the coccyx and the anococcygeal body; *innervation*, third and fourth sacral; *action*, helps to support pelvic viscera and resist increases in intra-abdominal pressure.

m. iliocostalis [NA], iliocostal muscle: the lateral division of m. erector spinae, which includes the m. iliocostalis cervicis, m. iliocostalis thoracis, and m. iliocostalis lumborum.

m. iliocostalis cervicis [NA], iliocostal muscle of neck: *origin*, angles of third, fourth, fifth, and sixth ribs; *insertion*, transverse processes of fourth, fifth, and sixth cervical vertebrae; *innervation*, branches of cervical; *action*, extends cervical spine.

m. iliocostalis dorsalis, m. iliocostalis thoracis.

m. iliocostalis lumborum [NA], iliocostal muscle of loins: *origin*, iliac crest; *insertion*, angles of lower six or seven ribs; *innervation*, branches of thoracic and lumbar; *action*, extends lumbar spine.

m. iliocostalis thoracis [NA], iliocostal muscle of thorax: *origin*, upper borders of angles of six lower ribs; *insertion*, angles of six upper ribs and transverse process of seventh cervical vertebra; *innervation*, branches of thoracic; *action*, keeps thoracic spine erect.

m. iliopsoas [NA], iliopsoas muscle: a compound muscle consisting of iliacus and psoas major.

musculi incisivi labiales inferiores, incisive muscles of inferior lip: small bundles of muscle fibers, one arising from the incisive fossa of the mandible on each side and passing laterally to the angle of the mouth.

musculi incisivi labiales superiores, incisive muscles of superior lip: small bundles of muscle fibers, one arising from the incisive fossa of the maxilla on each side and passing laterally to the angle of the mouth.

m. incisurae helices [NA], an inconstant muscular slip continuing forward from the m. tragus to bridge the incisurae of the cartilaginous meatus.

m. incisurae helices [Santorini], m. incisurae helices.

musculi infrahyoidei [NA], infrahyoid muscles: the muscles

that anchor the hyoid bone to the sternum, clavicle, and scapula, including the sternohyoid, omohyoid, sternothyroid, and thyrohyoid muscles.

m. infraspinatus [NA], infraspinous muscle: *origin*, infraspinous fossa of scapula; *insertion*, greater tubercle of humerus; *innervation*, suprascapular; *action*, rotates humerus laterally.

musculi intercostales externi [NA], external intercostal muscles (11 on each side): *origin*, inferior border of rib; *insertion*, superior border of rib below; *innervation*, intercostal; *action*, draw ribs together in respiration and expulsive movements.

musculi intercostales interni [NA], internal intercostal muscles (11 on each side): *origin*, inferior border of rib and costal cartilage; *insertion*, superior border of rib and costal cartilage below; *innervation*, intercostal; *action*, draw ribs together in respiration and expulsive movements.

musculi intercostales intimi [NA], innermost intercostal muscles: the layer of muscle fibers separated from the internal intercostal muscles by the intercostal nerves.

musculi interossei dorsales manus [NA], dorsal interosseous muscles of hand (4): *origin*, by two heads from adjacent sides of metacarpal bones; *insertion*, extensor tendons of second, third, and fourth fingers; *innervation*, ulnar; *action*, abduct, flex proximal phalanges.

musculi interossei dorsales pedis [NA], dorsal interosseous muscles of foot (4): *origin*, surfaces of adjacent metatarsal bones; *insertion*, extensor tendons of second, third, and fourth toes; *innervation*, lateral plantar; *action*, abduct, flex toes.

musculi interossei palmares [NA], palmar interosseous muscles (3): *origin*, sides of second, fourth, and fifth metacarpal bones; *insertion*, extensor tendons of second, fourth, and fifth fingers; *innervation*, ulnar; *action*, adduct, flex proximal phalanges.

musculi interossei plantares [NA], plantar interosseous muscles (3): *origin*, medial surface of third, fourth, and fifth metatarsal bones; *insertion*, extensor tendons of third, fourth, and fifth toes; *innervation*, lateral plantar; *action*, adduct, flex toes.

musculi interossei volares, musculi interossei palmares.

musculi interspinales [NA], interspinal muscles: short bands of muscle fibers between spinous processes of contiguous vertebrae, including the musculi interspinales cervicis, musculi interspinales thoracis, and musculi interspinales lumborum.

musculi interspinales cervicis [NA], interspinal muscles of neck: paired bands of muscle fibers extending between spinous processes of contiguous cervical vertebrae, innervated by spinal nerves, and acting to extend the vertebral column.

musculi interspinales lumborum [NA], interspinal muscles of loins: paired bands of muscle fibers extending between spinous processes of contiguous lumbar vertebrae, innervated by spinal nerves, and acting to extend the vertebral column.

musculi interspinales thoracis [NA], interspinal muscles of thorax: paired bands of muscle fibers extending between spinous processes of contiguous thoracic vertebrae, innervated by spinal nerves, and acting to extend the vertebral column.

musculi intertransversarii [NA], intertransverse muscles: small muscles passing between the transverse processes of contiguous vertebrae, including the lateral and medial intertransverse muscles of the loins, the intertransverse muscles of the thorax, and the anterior and posterior intertransverse muscles of the neck.

musculi intertransversarii anteriores, musculi intertransversarii thoracis.

musculi intertransversarii anteriores cervicis [NA], anterior intertransverse muscles of neck: small muscles passing between the anterior tubercles of adjacent cervical vertebrae, innervated by spinal nerves, and acting to bend the vertebral column laterally.

musculi intertransversarii laterales, musculi intertransversarii laterales lumborum.

musculi intertransversarii laterales lumborum [NA], small muscles passing between the transverse processes of adjacent lumbar vertebrae, innervated by spinal nerves, and acting to bend the vertebral column laterally.

musculi intertransversarii mediales, musculi intertransversarii mediales lumborum.

musculi intertransversarii mediales lumborum [NA], small muscles passing from the accessory process of one lumbar vertebra to the mamillary process of the contiguous lumbar vertebra, innervated by spinal nerves, and acting to bend the vertebral column laterally.

musculi intertransversarii posteriores, musculi intertransversarii posteriores cervicis.

musculi intertransversarii posteriores cervicis [NA], posterior intertransverse muscles of neck: small muscles, divided into medial and lateral parts, passing between the posterior tubercles of adjacent cervical vertebrae, innervated by spinal nerves, and acting to bend the vertebral column laterally.

musculi intertransversarii thoracis [NA], intertransverse muscles of thorax: poorly developed muscle bundles extending between the anterior tubercles of adjacent thoracic vertebrae, innervated by spinal nerves, and acting to bend the vertebral column laterally.

m. ischiocavernosus [NA], ischiocavernous muscle: *origin*, ramus of ischium; *insertion*, crus penis (crus clitoridis); *innervation*, perineal; *action*, maintains erection of penis (clitoris).

TABLE OF MUSCULI (Continued)

mus'culi laryn'gis [NA], the intrinsic and extrinsic muscles of the larynx.

m. latis'simus dor'si [NA], *origin*, spines of thoracic and lumbar vertebrae, thoracolumbar fascia, iliac crest, lower ribs, inferior angle of scapula; *insertion*, crest of intertubercular sulcus of humerus; *innervation*, thoracodorsal; *action*, adducts, extends, and rotates humerus medially.

m. leva'tor an'guli o'ris [NA], levator muscle of angle of mouth: *origin*, canine fossa of maxilla; *insertion*, orbicularis oris and skin at angle of mouth; *innervation*, facial; *action*, raises angle of mouth.

m. leva'tor a'ni [NA], levator ani muscle: a name applied collectively to important muscular components of the pelvic diaphragm, including the pubococcygeus (levator prostatae and pubovaginalis), the puborectalis, and the iliococcygeus muscles.

mus'culi levato'res costa'rum [NA], levator muscles of ribs (12 on each side): originating from the transverse processes of the seventh cervical and first to eleventh thoracic vertebrae and inserting medial to the angle of a lower rib (see *musculi levatores costarum breves* and *musculi levatores costarum longi*); innervated by intercostal nerves and aiding in elevation of the ribs in respiration.

mus'culi levato'res costa'rum bre'ves [NA], short levator muscles of ribs: the levatores costarum muscles of each side that insert medial to the angle of the rib next below the vertebra of origin.

mus'culi levato'res costa'rum lon'gi [NA], long levator muscles of ribs: the lower levatores costarum muscles of each side, which have fascicles extending down to the second rib below the vertebra of origin.

m. leva'tor glan'dulae thyreoi'deae, m. levator glandulae thyroideae.

m. leva'tor glan'dulae thyroi'deae [NA], levator muscle of thyroid gland: an inconstant muscle originating on the isthmus or pyramid of the thyroid gland and inserting on the body of the hyoid bone.

m. leva'tor la'bii superio'ris [NA], levator muscle of upper lip: *origin*, lower orbital margin; *insertion*, muscle of upper lip; *innervation*, facial nerve; *action*, raises upper lip.

m. leva'tor la'bii superio'ris alae'que na'si [NA], levator muscle of upper lip and ala of nose: *origin*, nasal process of maxilla; *insertion*, cartilage of ala nasi and upper lip; *innervation*, infraorbital branch of facial; *action*, raises upper lip and dilates nostril.

m. leva'tor pal'pebrae superio'ris [NA], levator muscle of upper eyelid: *origin*, upper border of optic foramen; *insertion*, tarsal plate of upper eyelid; *innervation*, oculomotor; *action*, raises upper lid.

m. leva'tor prosta'tae [NA], levator muscle of prostate: a name applied to a part of the anterior portion of the pubococcygeus muscle, which is inserted in the prostate and the tendinous center of the perineum; innervated by sacral and pudendal nerves, it supports and compresses the prostate and is involved in control of micturition.

m. leva'tor scap'ulae [NA], levator muscle of scapula: *origin*, transverse processes of four upper cervical vertebrae; *insertion*, medial border of scapula; *innervation*, third and fourth cervical; *action*, raises scapula.

m. leva'tor ve'li palati'ni [NA], *origin*, apex of petrous portion of temporal bone and cartilaginous part of auditory tube; *insertion*, aponeurosis of soft palate; *innervation*, pharyngeal plexus of vagus; *action*, raises soft palate.

mus'culi lin'guae [NA], muscles of tongue: the extrinsic and intrinsic muscles that move the tongue.

m. longis'simus [NA], longissimus muscle: the largest element of the m. erector spinae, which includes the *m. longissimus capitis*, *m. longissimus cervicis*, and *m. longissimus thoracis*.

m. longis'simus cap'itis [NA], longissimus muscle of head: *origin*, transverse processes of four or five upper thoracic vertebrae, articular processes of three or four lower cervical vertebrae; *insertion*, mastoid process of temporal bone; *innervation*, branches of cervical; *action*, draws head backward, rotates head.

m. longis'simus cer'vicis [NA], longissimus muscle of neck: *origin*, transverse processes of four or five upper thoracic vertebrae; *insertion*, transverse processes of second to sixth cervical vertebrae; *innervation*, lower cervical and upper thoracic; *action*, extends cervical vertebrae.

m. longis'simus dor'si, m. longissimus thoracis.

m. longis'simus thora'cis [NA], longissimus muscle of thorax: *origin*, transverse and articular processes of lumbar vertebrae and thoracolumbar fascia; *insertion*, transverse processes of all thoracic vertebrae, nine or ten lower ribs; *innervation*, lumbar and thoracic; *action*, extends thoracic vertebrae.

m. longitudina'lis infe'rior lin'guae [NA], inferior longitudinal muscle of tongue: *origin*, under surface of tongue at base; *insertion*, tip of tongue; *innervation*, hypoglossal; *action*, changes shape of tongue in mastication and deglutition.

m. longitudina'lis supe'rior lin'guae [NA], superior longitudinal muscle of tongue: *origin*, submucosa and septum of tongue; *insertion*, margins of tongue; *innervation*, hypoglossal; *action*, changes shape of tongue in mastication and deglutition.

m. lon'gus cap'itis [NA], long muscle of head: *origin*, transverse processes of third to sixth cervical vertebrae; *insertion*, basal portion of occipital bone; *innervation*, branches from first, second, and third cervical; *action*, flexes head.

m. lon'gus col'li [NA], long muscle of neck: *origin*, SUPERIOR OBLIQUE PORTION—transverse processes of third to fifth cervical vertebrae, INFERIOR OBLIQUE PORTION—bodies of first to third thoracic vertebrae, VERTICAL PORTION—bodies of three upper thoracic and three lower cervical vertebrae; *insertion*, SUPERIOR OBLIQUE PORTION—tubercle of anterior arch of atlas, INFERIOR OBLIQUE PORTION—transverse processes of fifth and sixth cervical vertebrae, VERTICAL PORTION—bodies of second to fourth cervical vertebrae; *innervation*, anterior cervical; *action*, flexes and supports cervical vertebrae.

mus'culi lumbrica'les ma'nus [NA], lumbrical muscles of hand: *origin*, tendons of flexor digitorum profundus; *insertion*, extensor tendons of four lateral fingers; *innervation*, median and ulnar; *action*, flex metacarpophalangeal joint and extend middle and distal phalanges.

mus'culi lumbrica'les pe'dis [NA], lumbrical muscles of foot: *origin*, tendons of flexor digitorum longus; *insertion*, extensor tendons of four lateral toes; *innervation*, medial and lateral plantar; *action*, flex proximal phalanges.

m. masse'ter [NA], masseter muscle: *origin*, PARS SUPERFICIALIS—zygomatic process of maxilla and lower border of zygomatic arch, PARS PROFUNDA—lower border and medial surface of zygomatic arch; *insertion*, PARS SUPERFICIALIS—angle and ramus of mandible, PARS PROFUNDA—upper half of ramus and lateral surface of coronoid process of mandible; *innervation*, mandibular division of trigeminal; *action*, raises mandible, closes jaws.

mus'culi mem'bri infe'rio'ris [NA], the muscles acting on the thigh, leg, and foot.

mus'culi mem'bri superio'ris [NA], the muscles acting on the arm, forearm, and hand.

m. menta'lis [NA], *origin*, incisive fossa of mandible; *insertion*, skin of chin; *innervation*, facial; *action*, wrinkles skin of chin.

musculi multif'idi [NA], *origin*, sacrum, sacroiliac ligament, mamillary processes of lumbar, transverse processes of thoracic, and articular processes of cervical vertebrae; *insertion*, spines of contiguous vertebrae above; *innervation*, dorsal branches of spinal nerves; *action*, extends, rotates vertebral column.

m. mylohyoi'deus [NA], mylohyoid muscle: *origin*, mylohyoid line of mandible; *insertion*, body of hyoid bone and median raphe; *innervation*, mylohyoid branch of trigeminal; *action*, elevates hyoid bone, supports floor of mouth.

m. mylopharyn'geus, pars mylopharyngea musculi constrictoris pharyngis superioris.

m. nasa'lis [NA], nasal muscle: *origin*, maxilla; *insertion*, PARS ALARIS—ala of nose, PARS TRANSVERSA—by aponeurotic expansion with fellow of opposite side; *innervation*, facial; *action*, PARS ALARIS—aids in widening nostril, PARS TRANSVERSA—depresses cartilage of nose.

m. obli'quus auric'ulae [NA], oblique muscle of auricle: *origin*, cranial surface of concha; *insertion*, cranial surface of auricle above concha; *innervation*, posterior auricular and temporal.

m. obli'quus cap'itis infe'rior [NA], inferior oblique muscle of head: *origin*, spinous process of axis; *insertion*, transverse process of atlas; *innervation*, dorsal branches of spinal nerves; *action*, rotates atlas and head.

m. obli'quus cap'itis supe'rior [NA], superior oblique muscle of head: *origin*, transverse process of atlas; *insertion*, occipital bone; *innervation*, dorsal branches of spinal nerves; *action*, extends and moves head laterally.

m. obli'quus exter'nus abdom'inis [NA], external oblique muscle of abdomen: *origin*, lower eight ribs at costal cartilages; *insertion*, crest of ilium, linea alba through rectus sheath; *innervation*, lower intercostal; *action*, flexes and rotates vertebral column, compresses abdominal viscera.

m. obli'quus infe'rior bul'bi [NA], inferior oblique muscle of eyeball: *origin*, orbital plate of maxilla; *insertion*, sclera; *innervation*, oculomotor; *action*, rotates eyeball upward and outward.

m. obli'quus infe'rior oc'uli, m. obliquus inferior bulbi.

m. obli'quus inter'nus abdom'inis [NA], internal oblique muscle of abdomen: *origin*, inguinal ligament, iliac crest, lumbar aponeurosis; *insertion*, lower three or four costal cartilages, linea alba, conjoined tendon to pubis; *innervation*, lower intercostal; *action*, flexes and rotates vertebral column, compresses abdominal viscera.

m. obli'quus supe'rior bul'bi [NA], superior oblique muscle of eyeball: *origin*, lesser wing of sphenoid above optic foramen; *insertion*, sclera; *innervation*, trochlear; *action*, rotates eyeball downward and outward.

m. obli'quus supe'rior oc'uli, m. obliquus superior bulbi.

m. obtura'tor exter'nus, m. obturatorius externus.

m. obtura'tor inter'nus, m. obturatorius internus.

m. obturato'rius exter'nus [NA], external obturator muscle: *origin*, pubis, ischium, and superficial surface of obturator membrane; *insertion*, trochanteric fossa of femur; *innervation*, obturator; *action*, rotates thigh laterally.

m. obturato'rius inter'nus [NA], internal obturator muscle: *origin*, pelvic surface of hip bone, margin of obturator foramen, ramus of ischium, inferior ramus of pubis, internal surface of obturator membrane; *insertion*, greater trochanter of femur; *innervation*, first, second, and third sacral; *action*, rotates thigh laterally.

m. occipita'lis, venter occipitalis musculi occipitofrontalis.

m. occipitofronta'lis [NA], occipitofrontal muscle: *origin*, VENTER FRONTALIS—galea aponeurotica, VENTER OCCIPITALIS—highest nu-

TABLE OF MUSCULI (Continued)

chal line of occipital bone; *insertion*, VENTER FRONTALIS—skin of eyebrows and root of nose, VENTER OCCIPITALIS—galea aponeurotica; *innervation*, VENTER FRONTALIS—temporal branch of facial, VENTER OCCIPITALIS—posterior auricular branch of facial; *action*, VENTER FRONTALIS—raises eyebrows, VENTER OCCIPITALIS—draws scalp backward.

mus'culi oc'uli, musculi bulbi.

m. omohyoi'deus [NA], omohyoid muscle, comprising two bellies (superior and inferior) connected by a central tendon that is bound to the clavicle by a fibrous expansion of the cervical fascia; *origin*, superior border of scapula; *insertion*, lateral border of hyoid bone; *innervation*, upper cervical through ansa cervicalis; *action*, depresses hyoid bone.

m. oppo'nens dig'iti min'imi [NA], opposing muscle of little finger: *origin*, hook of hamate bone, transverse carpal ligament; *insertion*, medial aspect of fifth metacarpal; *innervation*, eighth cervical through ulnar; *action*, rotates, abducts fifth metacarpal.

m. oppo'nens dig'iti quin'ti ma'nus, m. opponens digiti minimi.

m. oppo'nens pol'licis [NA], opposing muscle of thumb: *origin*, ridge of trapezium, transverse carpal ligament; *insertion*, radial side of first metacarpal; *innervation*, sixth and seventh cervical through median; *action*, flexes and opposes thumb.

m. orbicula'ris [NA], orbicular muscle: a muscle that encircles a body opening, such as the eye or mouth.

m. orbicula'ris oc'uli [NA], orbicular muscle of eye; the oval sphincter muscle surrounding the eyelids, consisting of three parts: *origin*, PARS ORBITALIS—medial margin of orbit, including frontal process of maxilla, PARS PALPEBRALIS—medial canthus, medial palpebral ligament, PARS LACRIMALIS—posterior lacrimal crest; *insertion*, PARS ORBITALIS—near origin after encircling orbit, PARS PALPEBRALIS—lateral canthus, PARS LACRIMALIS—joins palpebral portion; *innervation*, facial; *action*, closes eyelids, wrinkles forehead, compresses lacrimal sac.

m. orbicula'ris o'ris [NA], orbicular muscle of mouth, comprising a *pars labialis*, fibers restricted to the lips, and a *pars marginalis*, fibers blending with those of adjacent muscles; *innervation*, facial; *action*, closes and protrudes lips.

m. orbita'lis [NA], orbital muscle: *origin*, orbital periosteum; *insertion*, fascia of inferior orbital fissure; *innervation*, sympathetic fibers; *action*, protrudes eye.

mus'culi ossic'ulum audi'tus [NA], muscles of auditory ossicles: the two muscles of the middle ear, the tensor tympani and the stapedius.

mus'culi os'sis hyoi'dei, muscles of the hyoid bone; see *musculi infrahyoidei* and *musculi suprahyoidei*.

mus'culi pala'ti et fau'cium [NA], muscles of palate and fauces: the intrinsic and extrinsic muscles that act upon the soft palate and the adjacent pharyngeal wall.

m. palatoglossus [NA], palatoglossus muscle: *origin*, under surface of soft palate; *insertion*, side of tongue; *innervation*, pharyngeal plexus of vagus; *action*, elevates tongue, constricts fauces.

m. palatopharyn'geus [NA], palatopharyngeal muscle: *origin*, soft palate; *insertion*, aponeurosis of pharynx, dorsal border of thyroid cartilage; *innervation*, pharyngeal plexus of vagus; *action*, aids in deglutition.

m. palma'ris bre'vis [NA], short palmar muscle: *origin*, palmar aponeurosis; *insertion*, skin of medial border of hand; *innervation*, ulnar; *action*, tenses palm of hand.

m. palma'ris lon'gus [NA], long palmar muscle: *origin*, medial epicondyle of humerus; *insertion*, transverse carpal ligament, palmar aponeurosis; *innervation*, median; *action*, flexes wrist joint.

mus'culi papilla'res [NA], papillary muscles: conical muscular projections from the walls of the cardiac ventricles, attached to the cusps of the atrioventricular valves by the chordae tendineae. There is an anterior and a posterior papillary muscle in each ventricle, as well as a group of small papillary muscles on the septum in the right ventricle.

m. papilla'ris ante'rior ventric'uli dex'tri [NA], anterior papillary muscle of right ventricle: the papillary muscle arising from the sternocostal wall of the right ventricle.

m. papilla'ris ante'rior ventric'uli sinis'tri [NA], anterior papillary muscle of left ventricle: the papillary muscle arising from the anterior wall of the left ventricle.

m. papilla'ris poste'rior ventric'uli dex'tri [NA], posterior papillary muscle of right ventricle: the papillary muscle arising from the diaphragmatic wall of the right ventricle.

m. papilla'ris poste'rior ventric'uli sinis'tri [NA], posterior papillary muscle of left ventricle: the papillary muscle arising from the posterior wall of the left ventricle.

mus'culi papilla'res septa'les ventric'uli dex'tri [NA], septal papillary muscles of right ventricle: several small papillary muscles in the right ventricle of the heart, arising from the interventricular septum.

mus'culi pectina'ti [NA], pectinate muscles: small ridges of muscle fibers projecting from the inner walls of the auricles of the heart and extending in the right atrium from the auricle to the crista terminalis.

m. pectin'eus [NA], pectineal muscle: *origin*, iliopectineal line, spine of pubis; *insertion*, femur distal to lesser trochanter; *innervation*, obturator and femoral; *action*, flexes, adducts thigh.

m. pectora'lis ma'ior [NA], greater pectoral muscle: *origin*, clavicle, sternum, six upper ribs, aponeurosis of obliquus externus

abdominis. These origins are reflected in the subdivision of the muscle into clavicular, sternocostal, and abdominal parts; *insertion*, crest of intertubercular groove of humerus; *innervation*, anterior thoracic; *action*, adducts, flexes, rotates arm medially.

m. pectora'lis mi'nor [NA], smaller pectoral muscle: *origin*, third, fourth, and fifth ribs; *insertion*, coracoid process of scapula; *innervation*, anterior thoracic; *action*, draws shoulder forward and downward.

mus'culi perine'i [NA], the muscles participating in formation of the perineum.

m. perone'us bre'vis [NA], short peroneal muscle: *origin*, lateral surface of fibula; *insertion*, base of fifth metatarsal bone; *innervation*, superficial peroneal; *action*, abducts, plantar flexes foot. Called also *m. fibularis brevis* [NA alternative] or *short fibular muscle*.

m. perone'us lon'gus [NA], long peroneal muscle: *origin*, lateral condyle of tibia, lateral surface of fibula; *insertion*, medial cuneiform, first metatarsal; *innervation*, superficial peroneal; *action*, abducts, everts, plantar flexes foot. Called also *m. fibularis longus* [NA alternative] or *long fibular muscle*.

m. perone'us ter'tius [NA], third peroneal muscle: *origin*, medial surface of fibula; *insertion*, fifth metatarsal; *innervation*, deep peroneal; *action*, everts, dorsiflexes foot. Called also *m. fibularis tertius* [NA alternative] or *third fibular muscle*.

m. pharyngopalati'nus, m. palatopharyngeus.

m. pirifor'mis [NA], piriform muscle: *origin*, ilium, second to fourth sacral vertebrae; *insertion*, upper border of greater trochanter; *innervation*, first and second sacral; *action*, rotates thigh laterally.

m. planta'ris [NA], plantar muscle: *origin*, lateral condyle of femur; *insertion*, posterior part of calcaneus; *innervation*, tibial; *action*, plantar flexes foot.

m. pleuroesopha'geus [NA], pleuroesophageal muscle: a bundle of smooth muscle usually connecting the esophagus with the left mediastinal pleura.

m. pleuroesopha'geus, m. pleuroesophageus.

m. poplite'us [NA], popliteal muscle: *origin*, lateral condyle of femur; *insertion*, posterior surface of tibia; *innervation*, fourth and fifth lumbar and first sacral; *action*, flexes leg, rotates leg medially.

m. proce'rus [NA], procerus muscle: *origin*, skin over nose; *insertion*, skin of forehead; *innervation*, facial; *action*, draws eyebrows down.

m. prona'tor quadra'tus [NA], *origin*, anterior surface and border of distal third or fourth of ulna; *insertion*, distal fourth of shaft of radius; *innervation*, anterior interosseous; *action*, pronates hand.

m. prona'tor te'res [NA], (2 heads): *origin*, CAPUT HUMERALE—medial epicondyle of humerus, CAPUT ULNARE—coronoid process of ulna; *insertion*, lateral surface of radius; *innervation*, median; *action*, pronates hand.

m. prostat'icus, substantia muscularis prostatae.

m. pso'as ma'ior [NA], greater psoas muscle: *origin*, lumbar vertebrae and fascia; *insertion*, lesser trochanter of femur; *innervation*, second and third lumbar; *action*, flexes trunk, flexes and rotates thigh medially.

m. pso'as mi'nor [NA], smaller psoas muscle: *origin*, last thoracic and first lumbar vertebrae; *insertion*, iliopectineal eminence; *innervation*, first lumbar; *action*, flexes trunk on pelvis.

m. pterygoi'deus exter'nus, m. pterygoideus lateralis.

m. pterygoi'deus inter'nus, m. pterygoideus medialis.

m. pterygoi'deus latera'lis [NA], lateral pterygoid muscle (2 heads): *origin*, UPPER HEAD—lateral surface of greater wing of sphenoid and infratemporal crest; LOWER HEAD—lateral surface of lateral pterygoid plate; *insertion*, neck of condyle of mandible, temporomandibular joint capsule; *innervation*, mandibular division of trigeminal; *action*, protrudes mandible, opens jaws, moves mandible from side to side.

m. pterygoi'deus media'lis [NA], medial pterygoid muscle: *origin*, lateral pterygoid plate, tuberosity of maxilla; *insertion*, medial surface of ramus and angle of mandible; *innervation*, mandibular division of trigeminal; *action*, closes jaws.

m. pterygopharyn'geus, pars pterygopharyngea musculi constrictoris pharyngis superioris.

m. pubococcyg'eus [NA], pubococcygeal muscle: a name applied to the anterior portion of the levator ani, originating in front of the obturator canal; *insertion*, anococcygeal ligament and side of coccyx; *innervation*, third and fourth sacral; *action*, helps support pelvic viscera and resist increases in intraabdominal pressure.

m. puboprostat'icus [NA], puboprosthetic muscle: a name applied to smooth muscle fibers contained within the medial puboprosthetic ligament, which pass from the prostate anteriorly to the pubis.

m. puborecta'lis [NA], puborectal muscle: a name applied to a portion of the levator ani having a more lateral origin from the pubic bone, and continuous posteriorly with the corresponding muscle of the opposite side; *innervation*, third and fourth sacral; *action*, helps support pelvic viscera and resist increases in intraabdominal pressure.

m. pubovagina'lis [NA], pubovaginal muscle: a name applied to a part of the anterior portion of the pubococcygeus muscle, which is inserted into the urethra and vagina; innervated by the sacral and pudendal nerves, it is involved in control of micturition.

m. pubovesica'lis [NA], pubovesical muscle: a name applied to

TABLE OF MUSCULI (Continued)

smooth muscle fibers extending from the neck of the urinary bladder to the pubis.

m. pyramida'lis [NA], pyramidal muscle: *origin*, front of pubis, anterior pubic ligament; *insertion*, linea alba; *innervation*, last thoracic; *action*, tenses abdominal wall.

m. pyramida'lis auric'ulae [NA], pyramidal muscle of auricle: a prolongation of the fibers of the tragus to the spina helix.

m. quadra'tus fem'oris [NA], quadrate muscle of thigh: *origin*, upper part of lateral border of tuberosity of ischium; *insertion*, quadrate tubercle of femur; *innervation*, last lumbar and first sacral; *action*, adducts, rotates thigh laterally.

m. quadra'tus la'bii inferio'ris, m. depressor labii inferioris.

m. quadra'tus la'bii superio'ris, m. levator labii superioris.

m. quadra'tus lumbo'rum [NA], *origin*, crest of ilium, thoracolumbar fascia, lumbar vertebrae; *insertion*, twelfth rib, transverse processes of four upper lumbar vertebrae; *innervation*, first and second lumbar and twelfth thoracic; *action*, flexes lumbar vertebrae laterally.

m. quadra'tus plan'tae [NA], quadrate muscle of sole: *origin*, calcaneus and plantar fascia; *insertion*, tendons of flexor digitorum longus; *innervation*, lateral plantar; *action*, aids in flexing toes. Called also *m. flexor accessorius* [NA alternative] or *accessory flexor muscle*.

m. quad'riceps fem'oris [NA], quadriceps muscle of thigh: a name applied collectively to the rectus femoris, vastus intermedius, vastus lateralis, and vastus medialis, inserting by a common tendon that surrounds the patella and ends on the tuberosity of the tibia, and acting to extend the leg upon the thigh. See individual components.

m. rectococcyg'eus [NA], rectococcygeal muscle: smooth muscle fibers originating on the anterior surface of the second and third coccygeal vertebrae and inserting on the posterior surface of the rectum, innervated by autonomic nerves, and acting to retract and elevate the rectum.

m. rectourethra'lis [NA], rectourethral muscle: a band of smooth muscle fibers extending from the perineal flexure of the rectum to the membranous urethra in the male.

m. rectouteri'nus [NA], rectouterine muscle: a band of fibers running between the cervix of the uterus and the rectum, in the rectouterine fold.

m. rectovesica'lis [NA], rectovesical muscle: a band of fibers in the male, connecting the longitudinal musculature of the rectum with the external muscular coat of the bladder.

m. rec'tus abdom'inis [NA], *origin*, pubis; *insertion*, xiphoid process, cartilages of fifth, sixth, and seventh ribs; *innervation*, branches of lower thoracic; *action*, flexes lumbar vertebrae, supports abdomen.

m. rec'tus cap'itis ante'rior [NA], *origin*, lateral mass of atlas; *insertion*, basilar process of occipital bone; *innervation*, first and second cervical; *action*, flexes, supports head.

m. rec'tus cap'itis latera'lis [NA], *origin*, upper surface of transverse process of atlas; *insertion*, jugular process of occipital bone; *innervation*, first and second cervical; *action*, flexes, supports head.

m. rec'tus cap'itis poste'rior ma'jor [NA], *origin*, spinous process of axis; *insertion*, occipital bone; *innervation*, suboccipital and greater occipital; *action*, extends head.

m. rec'tus cap'itis poste'rior mi'nor [NA], *origin*, tubercle on dorsal arch of atlas; *insertion*, occipital bone; *innervation*, suboccipital and greater occipital; *action*, extends head.

m. rec'tus fem'oris [NA], *origin*, anterior inferior iliac spine, rim of acetabulum; *insertion*, patella, tubercle of tibia; *innervation*, femoral; *action*, extends leg, flexes thigh.

m. rec'tus infe'rior bul'bi [NA], *origin*, circumference of optic foramen; *insertion*, under side of sclera; *innervation*, oculomotor; *action*, adducts, rotates eyeball downward and medially.

m. rec'tus infe'rior oc'uli, m. rectus inferior bulbi.

m. rec'tus latera'lis bul'bi [NA], *origin*, lateral margin of optic foramen, margin of superior orbital fissure; *insertion*, lateral side of sclera; *innervation*, abducens; *action*, abducts eyeball.

m. rec'tus latera'lis oc'uli, m. rectus lateralis bulbi.

m. rec'tus media'lis bul'bi [NA], *origin*, circumference of optic foramen; *insertion*, medial side of sclera; *innervation*, oculomotor; *action*, adducts eyeball.

m. rec'tus media'lis oc'uli, m. rectus medialis bulbi.

m. rec'tus supe'rior bul'bi [NA], *origin*, upper border of optic foramen; *insertion*, upper aspect of sclera; *innervation*, oculomotor; *action*, adducts, rotates eyeball upward and medially.

m. rec'tus supe'rior oc'uli, m. rectus superior bulbi.

m. rhomboid'eus ma'jor [NA], greater rhomboid muscle: *origin*, spinous processes of second, third, fourth, and fifth thoracic vertebrae; *insertion*, medial margin of scapula; *innervation*, dorsal scapular; *action*, retracts, elevates scapula.

m. rhomboid'eus mi'nor [NA], lesser rhomboid muscle: *origin*, spinous processes of seventh cervical to first thoracic vertebrae, lower part of ligamentum nuchae; *insertion*, medial margin of scapula at root of the spine; *innervation*, dorsal scapular; *action*, adducts, elevates scapula.

m. riso'rius [NA], risorius muscle: *origin*, fascia over masseter; *insertion*, skin at angle of mouth; *innervation*, buccal branch of facial; *action*, draws angle of mouth laterally.

mus'culi rotato'res [NA], rotator muscles: a series of small muscles deep in the groove between the spinous and transverse processes of the vertebrae, including the *musculi rotatores cervicis*, *musculi rotatores thoracis*, and *musculi rotatores lumborum*.

mus'culi rotato'res bre'ves, short rotator muscles: a name given the musculi rotatores that insert on the lamina of the vertebra next above the vertebra of origin.

mus'culi rotato'res cer'vicis [NA], rotator muscles of neck: *origin*, transverse processes of cervical vertebrae; *insertion*, base of spinous process of suprajacent vertebrae; *innervation*, spinal nerves; *action*, extend vertebral column and rotate it toward the opposite side.

mus'culi rotato'res lon'gi, long rotator muscles: a name given the musculi rotatores that cross one or two segments of the vertebral column and insert into the spine of the vertebra next above.

mus'culi rotato'res lumbo'rum [NA], *origin*, transverse processes of lumbar vertebrae; *insertion*, base of spinous process of suprajacent vertebrae; *innervation*, spinal nerves; *action*, extend vertebral column and rotate it toward the opposite side.

mus'culi rotato'res thora'cis [NA], rotator muscles of thorax: *origin*, transverse processes of thoracic vertebrae; *insertion*, base of spinous process of suprajacent vertebrae; *innervation*, spinal nerves; *action*, extend vertebral column and rotate it toward the opposite side.

m. sacrococcyg'eus ante'rior, m. sacrococcygeus ventralis.

m. sacrococcyg'eus dorsa'lis [NA], dorsal sacrococcygeal muscle: a muscular slip passing from the dorsal aspect of the sacrum to the coccyx.

m. sacrococcyg'eus poste'rior, m. sacrococcygeus dorsalis.

m. sacrococcyg'eus ventra'lis [NA], ventral sacrococcygeal muscle: a musculotendinous slip passing from the lower sacral vertebrae to the coccyx.

m. sacrospina'lis, m. erector spinae.

m. salpingopharyn'geus [NA], salpingopharyngeal muscle: *origin*, auditory tube near its orifice; *insertion*, posterior part of palatopharyngeus; *innervation*, pharyngeal plexus of vagus; *action*, raises nasopharynx.

m. sarto'rius [NA], sartorius muscle: *origin*, anterior superior iliac spine; *insertion*, medial side of proximal end of tibia; *innervation*, femoral; *action*, flexes thigh and leg.

m. scale'nus ante'rior [NA], anterior scalene muscle: *origin*, transverse processes of third to sixth cervical vertebrae; *insertion*, tubercle of first rib; *innervation*, second to seventh cervical; *action*, raises first rib. Called also *m. scalenus anticus*.

m. scale'nus me'dius [NA], middle scalene muscle: *origin*, transverse processes of second to sixth cervical vertebrae; *insertion*, first rib; *innervation*, second to seventh cervical; *action*, raises first rib.

m. scale'nus min'imus [NA], smallest scalene muscle: a band occasionally found between the m. scalenus anterior and the m. scalenus medius.

m. scale'nus poste'rior [NA], posterior scalene muscle: *origin*, tubercles of fourth to sixth cervical vertebrae; *insertion*, second rib; *innervation*, second to seventh cervical; *action*, raises first and second ribs.

m. semimembrano'sus [NA], semimembranous muscle: *origin*, tuberosity of ischium; *insertion*, medial condyle of tibia; *innervation*, tibial; *action*, flexes leg, extends thigh.

m. semispina'lis [NA], a muscle composed of fibers extending obliquely from the transverse processes of the vertebrae to the spines, except for the semispinalis capitis; it includes the *m. semispinalis capitis*, *m. semispinalis cervicis*, and *m. semispinalis thoracis*.

m. semispina'lis cap'itis [NA], *origin*, transverse processes of five or six upper thoracic and four lower cervical vertebrae; *insertion*, occipital bone; *innervation*, suboccipital, greater occipital, and branches of cervical; *action*, extends head.

m. semispina'lis cer'vicis [NA], *origin*, transverse processes of five or six upper thoracic vertebrae; *insertion*, spinous processes of second to fifth cervical vertebrae; *innervation*, branches of cervical; *action*, extends, rotates vertebral column.

m. semispina'lis dor'si, m. semispinalis thoracis.

m. semispina'lis thora'cis [NA], *origin*, transverse processes of sixth to tenth thoracic vertebrae; *insertion*, spinous processes of two lower cervical and four upper thoracic vertebrae; *innervation*, spinal nerves; *action*, extends, rotates vertebral column.

m. semitendino'sus [NA], semitendinous muscle: *origin*, tuberosity of ischium; *insertion*, upper part of medial surface of tibia; *innervation*, tibial; *action*, flexes leg, extends thigh.

m. serra'tus ante'rior [NA], *origin*, eight or nine upper ribs; *insertion*, medial border of scapula; *innervation*, long thoracic; *action*, draws scapula forward; rotates scapula to raise shoulder in abduction of arm.

m. serra'tus poste'rior infe'rior [NA], *origin*, spines of two lower thoracic and two or three upper lumbar vertebrae; *insertion*, inferior border of four lower ribs; *innervation*, ninth to twelfth thoracic; *action*, lowers ribs in expiration.

m. serra'tus poste'rior supe'rior [NA], *origin*, ligamentum nuchae, spinous processes of upper thoracic vertebrae; *insertion*, second, third, fourth, and fifth ribs; *innervation*, upper four intercostal; *action*, raises ribs in inspiration.

TABLE OF MUSCULI (Continued)

mus'culi skel'eti [NA], skeletal muscles: striated muscles that are attached to bones and typically cross at least one joint.

m. so'leus [NA], soleus muscle: *origin*, fibula, popliteal fascia, tibia; *insertion*, calcaneus by tendo calcaneus; *innervation*, tibial; *action*, plantar flexes ankle joint.

m. sphinc'ter [NA], sphincter muscle: a ringlike muscle that closes a natural orifice; called also *sphincter*.

m. sphinc'ter ampul'lae hepatopancreat'icae [NA], muscle fibers investing the hepatopancreatic ampulla.

m. sphinc'ter a'ni exter'nus [NA], external sphincter muscle of anus: *origin*, tip of coccyx and surrounding fascia; *insertion*, tendinous center of perineum; *innervation*, inferior rectal and fourth sacral; *action*, closes anus.

m. sphinc'ter a'ni inter'nus [NA], internal sphincter muscle of anus: a thickening of the circular lamina of the tunica muscularis at the caudal end of the rectum.

m. sphinc'ter duc'tus chole'dochi [NA], an annular sheath of muscle that invests the bile duct within the wall of the duodenum.

m. sphinc'ter pupil'lae [NA], sphincter muscle of pupil: circular fibers of the iris, innervated by the oculomotor nerve (parasympathetic), and acting to contract the pupil.

m. sphinc'ter pylo'ri [NA], sphincter muscle of stomach: a thickening of the circular muscle of the stomach around its opening into the duodenum; called also *pyloric sphincter*.

m. sphinc'ter ure'thrae [NA], sphincter muscle of urethra: *origin*, ramus of pubis; *insertion*, median raphe behind and in front of urethra; *innervation*, pudendal; *action*, compresses urethra.

m. sphinc'ter ure'thrae membrana'ceae, m. sphincter urethrae.

m. sphinc'ter vesi'cae urina'riae, sphincter muscle of urinary bladder: a circular layer of fibers surrounding the internal urethral orifice, innervated by the vesical nerve, and acting to close the internal orifice of the urethra.

m. spina'lis [NA], the medial division of the erector spinae, including the *m. spinalis capitis*, *m. spinalis cervicis*, and *m. spinalis thoracis*.

m. spina'lis cap'itis [NA], *origin*, spines of upper thoracic and lower cervical vertebrae; *insertion*, occipital bone; *innervation*, spinal nerves; *action*, extends head.

m. spina'lis cer'vicis [NA], *origin*, spinous processes of fifth, sixth, and seventh cervical and two upper thoracic vertebrae; *insertion*, spinous processes of axis and sometimes of second to fourth cervical vertebrae; *innervation*, branches of cervical; *action*, extends vertebral column.

m. spina'lis dor'si, m. spinalis thoracis.

m. spina'lis thora'cis [NA], *origin*, spinous processes of two upper lumbar and two lower thoracic; *insertion*, spines of upper thoracic vertebrae; *innervation*, branches of spinal nerves; *action*, extends vertebral column.

m. sple'nus cap'itis [NA], *origin*, lower half of ligamentum nuchae, spines of seventh cervical and three upper thoracic vertebrae; *insertion*, occipital bone; *innervation*, middle and lower cervical; *action*, extends, rotates head.

m. sple'nus cer'vicis [NA], *origin*, spinous processes of third to sixth thoracic vertebrae; *insertion*, transverse processes of two or three upper cervical vertebrae; *innervation*, dorsal branches of lower cervical; *action*, extends, rotates head and neck.

m. stape'dius [NA], stapedius muscle: *origin*, interior of pyramid of tympanic cavity; *insertion*, posterior surface of neck of stapes; *innervation*, stapodial branch of facial; *action*, dampens stapodial movement.

m. sterna'lis [NA], sternal muscle: a band occasionally found parallel to the sternum on the sternocostal origin of the pectoralis major.

m. sternocleidomastoi'deus [NA], sternocleidomastoid muscle (2 heads): *origin*, sternum and clavicle; *insertion*, mastoid process and superior nuchal line of occipital bone; *innervation*, accessory nerve and cervical plexus; *action*, flexes vertebral column, rotates head.

m. sternohyoi'deus [NA], sternohyoid muscle: *origin*, manubrium sterni; *insertion*, body of hyoid bone; *innervation*, upper cervical; *action*, depresses hyoid bone and larynx.

m. sternothyreo'i'deus, m. sternothyroideus.

m. sternothyroi'deus [NA], sternothyroid muscle: *origin*, manubrium sterni; *insertion*, thyroid cartilage; *innervation*, upper cervical; *action*, depresses thyroid cartilage.

m. styloglos'sus [NA], styloglossus muscle: *origin*, styloid process; *insertion*, margin of tongue; *innervation*, hypoglossal; *action*, raises and retracts tongue.

m. stylohyoi'deus [NA], stylohyoid muscle: *origin*, styloid process; *insertion*, body of hyoid bone; *innervation*, facial; *action*, draws hyoid and tongue upward.

m. stylopharyngeus [NA], stylopharyngeal muscle: *origin*, styloid process; *insertion*, thyroid cartilage and pharyngeal constrictors; *innervation*, pharyngeal plexus, glossopharyngeal; *action*, raises and dilates pharynx.

m. subcla'vius [NA], subclavius muscle: *origin*, first rib and its cartilage; *insertion*, lower surface of clavicle; *innervation*, fifth and sixth cervical; *action*, depresses lateral end of clavicle.

mus'culi subcosta'les [NA], subcostal muscles: *origin*, inner surface of ribs; *insertion*, inner surface of first, second, third rib below; *innervation*, intercostal; *action*, raise ribs in inspiration.

m. subscapula'ris [NA], subscapular muscle: *origin*, subscapular fossa of scapula; *insertion*, lesser tubercle of humerus; *innervation*, subscapular; *action*, rotates humerus medially.

m. supina'tor [NA], supinator muscle: *origin*, lateral epicondyle of humerus, ulna, elbow joint fascia; *insertion*, radius; *innervation*, deep radial; *action*, supinates hand.

mus'culi suprahyoi'dei [NA], suprahyoid muscles: the muscles that attach the hyoid bone to the skull, including the digastric, stylohyoid, mylohyoid, and geniohyoid muscles.

m. supraspina'tus [NA], supraspinous muscle: *origin*, supraspinous fossa of scapula; *insertion*, greater tubercle of humerus; *innervation*, suprascapular; *action*, abducts humerus.

m. suspensoi'rius duode'ni [NA], suspensory muscle of duodenum: a flat band of smooth muscle originating from the left crus of the diaphragm, and continuous with the muscular coat of the duodenum at its junction with the jejunum.

m. tarsi'lis infe'rior [NA], inferior tarsal muscle: *origin*, inferior rectus muscle; *insertion*, tarsal plate of lower eyelid; *innervation*, sympathetic; *action*, widens palpebral fissure.

m. tarsi'lis supe'rior [NA], superior tarsal muscle: *origin*, m. levator palpebrae superioris; *insertion*, tarsal plate of upper eyelid; *innervation*, sympathetic; *action*, widens palpebral fissure.

m. tempora'lis [NA], temporal muscle: *origin*, temporal fossa and fascia; *insertion*, coronoid process of mandible; *innervation*, mandibular division of trigeminal; *action*, closes jaws.

m. temporoparieta'lis [NA], temporoparietal muscle: *origin*, temporal fascia above ear; *insertion*, galea aponeurotica; *innervation*, temporal branches of facial; *action*, tightens scalp.

m. ten'sor fas'ciae la'tae [NA], tensor muscle of fascia lata: *origin*, iliac crest; *insertion*, iliotibial band of fascia lata; *innervation*, superior gluteal; *action*, flexes, rotates thigh medially.

m. ten'sor tym'pani [NA], tensor muscle of tympanic membrane: *origin*, cartilaginous portion of auditory tube; *insertion*, manubrium of malleus; *innervation*, mandibular division of trigeminal; *action*, tenses tympanic membrane.

m. ten'sor ve'li palati'ni [NA], *origin*, scaphoid fossa of sphenoid, wall of auditory tube; *insertion*, aponeurosis of soft palate, horizontal part of palatine bone; *innervation*, mandibular division of trigeminal; *action*, tenses soft palate, opens auditory tube.

m. te'res ma'jor [NA], teres major muscle: *origin*, inferior angle of scapula; *insertion*, crest of intertubercular sulcus of humerus; *innervation*, subscapular; *action*, adducts, extends, rotates arm medially.

m. te'res mi'nor [NA], teres minor muscle: *origin*, lateral margin of scapula; *insertion*, greater tuberosity of humerus; *innervation*, axillary; *action*, rotates arm laterally.

mus'culi thora'cis [NA], the muscles of the thorax.

m. thyreoarytaenoi'deus [exter'nus], m. thyroarytenoid-deus.

m. thyreoepiglott'icus, m. thyroepiglotticus.

m. thyreohyoi'deus, m. thyrohyoideus.

m. thyreopharyngeus, pars thyropharyngea musculi constrictoris pharyngis inferioris.

m. thyroarytenoi'deus [NA], thyroarytenoid muscle: *origin*, lamina of thyroid cartilage; *insertion*, muscular process of arytenoid cartilage; *innervation*, recurrent laryngeal; *action*, relaxes, shortens vocal folds.

m. thyroepiglott'icus [NA], thyroepiglottic muscle: *origin*, lamina of thyroid cartilage; *insertion*, epiglottis; *innervation*, recurrent laryngeal; *action*, closes inlet to larynx.

m. thyrohyoi'deus [NA], thyrohyoid muscle: *origin*, thyroid cartilage; *insertion*, greater cornu of hyoid bone; *innervation*, upper cervical; *action*, raises and changes form of larynx.

m. tibia'lis ante'rior [NA], anterior tibial muscle: *origin*, tibia, interosseous membrane; *insertion*, medial cuneiform and first metatarsal; *innervation*, deep peroneal; *action*, dorsiflexes and inverts foot.

m. tibia'lis poste'rior [NA], posterior tibial muscle: *origin*, tibia, fibula, interosseous membrane; *insertion*, bases of metatarsals and tarsals, except talus; *innervation*, posterior tibial; *action*, plantar flexes and inverts foot.

m. trachea'lis [NA], tracheal muscle: a transverse layer of smooth fibers in the dorsal portion of the trachea; *insertion*, tracheal cartilages; *innervation*, autonomic fibers; *action*, lessens caliber of trachea.

m. trag'icus [NA], muscle of tragus: a short, flattened vertical band on the lateral surface of the tragus, innervated by the auriculotemporal and posterior auricular nerves.

m. transversospina'lis [NA], a general term including the semispinalis and multifidus muscles and the rotatores.

m. transver'sus abdom'inis [NA], transverse muscle of abdomen: *origin*, cartilages of six lower ribs, thoracolumbar fascia, iliac crest, inguinal ligament; *insertion*, linea alba through rectus sheath, conjoined tendon to pubis; *innervation*, lower intercostals, iliohypogastric, ilioinguinal; *action*, compresses abdominal viscera.

m. transver'sus auric'ulae [NA], transverse muscle of auricle: *origin*, cranial surface of auricle; *insertion*, circumference of auricle; *innervation*, great auricular and posterior auricular; *action*, retracts helix.

m. transver'sus lin'guae [NA], transverse muscle of tongue: *origin*, median septum of tongue; *insertion*, dorsum and margins of

TABLE OF MUSCULI (Concluded)

tongue; *innervation*, hypoglossal; *action*, changes shape of tongue in mastication and deglutition.

m. transversus menti [NA], transverse muscle of chin: superficial fibers of the depressor anguli oris which turn back and cross to the opposite side.

m. transversus nucae [NA], transverse muscle of nape: a small muscle often present, passing from the occipital protuberance to the posterior auricular muscle; it may be either superficial or deep to the trapezius.

m. transversus perinei profundus [NA], deep transverse muscle of perineum: *origin*, inferior ramus of ischium; *insertion*, median raphe of perineum; *innervation*, pudendal; *action*, draws back central point of perineum.

m. transversus perinei superficialis [NA], superficial transverse muscle of perineum: *origin*, tuberosity of ischium; *insertion*, central tendon of perineum; *innervation*, perineal branch of pudendal; *action*, tenses central point of perineum.

m. transversus thoracis [NA], transverse muscle of thorax: *origin*, mediastinal surface of sternum and of xiphoid process; *insertion*, cartilages of second to sixth ribs; *innervation*, intercostal; *action*, narrows chest.

m. trapezius [NA], trapezius muscle: *origin*, occipital bone, ligamentum nuchae, spinous processes of seventh cervical and all thoracic vertebrae; *insertion*, clavicle, acromion, spine of scapula; *innervation*, accessory nerve and cervical plexus; *action*, rotates scapula to raise shoulder in abduction of arm, draws scapula backward.

m. triangulus, m. depressor anguli oris.

m. triceps brachii [NA], triceps muscle of arm (3 heads): *origin*, CAPUT LONGUM—infraglenoid tubercle of scapula, CAPUT LATERALE—posterior surface of humerus, lateral border of humerus, lateral intermuscular septum, CAPUT MEDIALE—posterior surface of humerus below radial groove, medial border of humerus, medial intermuscular septa; *insertion*, olecranon of ulna; *innervation*, radial; *action*, extends forearm, adducts and extends arm.

mushbite (mush'bit) the making simultaneously of an impression of both upper and lower teeth and/or associated structures by having the subject bite on a mass of plastic material placed between the jaws; no longer a generally accepted prosthodontic procedure. See *wax bite*, under *bite*.

mushroom (mush'room) the fruiting body of any of a variety of basidiomycetous, fleshy fungi of the order Agaricales, especially one that is edible; poisonous species are popularly called *toadstools*. Called also *basidiocarp*. See also *agaric*.

musicogenic (mu'zi-ko-jen'ik) caused or produced by musical sounds.

musicotherapy (mu'zi-ko-ther'ah-pe) [Gr. *mousikē* music + *therapeia* treatment] the treatment of disease by music.

Musset's sign (mu-sāz') [Louis Charles Alfred de Musset, French poet, 1810–1857, who died of aortic insufficiency] see under *sign*.

mussitation (mus'i-ta'shun) [L. *mussitare* to mutter] the moving of the lips with no utterance of articulate sounds.

Mussy see *Guéneau de Mussy*.

must (must) [L. *mustum*] the unfermented juice of grapes and other fruit.

mustard (mus'tard) [L. *sinapis*] 1. a plant of the genus *Brassica*. 2. the ripe seeds of *Brassica nigra* (L.) Koch (Cruciferae) (black mustard) and of *B. alba* (L.) Rabenh. (Cruciferae) (white mustard). When mustard seeds are crushed and moistened, volatile oils are liberated. These oils give mustard its counterirritant, stimulant, and emetic properties. **black m., brown m., Brassica nigra** (L.) Koch, a source of mustard oil and allyl isothiocyanate, and used internally as an emetic and externally as a counterirritant. See *mustard plaster*, under *plaster*. **nitrogen m.,** mechlorethamine hydrochloride; see also *nitrogen m's*. **nitrogen m's,** a group of toxic, blistering alkylating agents (q.v.) homologous with dichlorodiethyl sulfide (mustard gas), some of which have been used as antineoplastics. The group includes nitrogen mustard itself (mechlorethamine hydrochloride), triethylenemelamine, cyclophosphamide, thiotepa, chlorambucil, and melphalan. **uracil m.** [USP], chemical name: 5-[bis(2-chloroethyl) amino]-2,4(1*H*,3*H*)-pyrimidinedione. An analogue of nitrogen mustard, C₄H₄Cl₂N₂O₂, occurring as an off-white, crystalline powder, which acts as an alkylating agent on proliferating cells; used orally as an antineoplastic, especially for palliative treatment in chronic lymphocytic leukemia and malignant lymphomas. **white m., yellow m., Brassica alba** (L.) Rabenh.; it is a source of mustard oil and acrylnyl isothiocyanate, and used the same as black mustard (q.v.).

Mustargen (mus'tar-jen) trademark for a preparation of mechlorethamine hydrochloride.

mutacism (mu'tah-sizm) 1. the improper pronunciation of the sounds of mute letters. 2. mytacism.

m. triiceps su'rae [NA], the gastrocnemius and soleus considered together.

m. unipenna'tus [NA], unipennate muscle: a muscle in which the fiber bundles approach the tendon of insertion from only one direction and are inserted through only a small segment of its circumference.

m. uvulae [NA], muscle of uvula: *origin*, posterior nasal spine of palatine bone and aponeurosis of soft palate; *insertion*, uvula; *innervation*, pharyngeal plexus of vagus; *action*, raises uvula.

m. vas'tus interme'dius [NA], *origin*, anterior and lateral surfaces of femur; *insertion*, patella, common tendon of quadriceps femoris; *innervation*, femoral; *action*, extends leg.

m. vas'tus latera'lis [NA], *origin*, capsule of hip joint, lateral aspect of femur; *insertion*, patella, common tendon of quadriceps femoris; *innervation*, femoral; *action*, extends leg.

m. vas'tus media'lis [NA], *origin*, medial aspect of femur; *insertion*, patella, common tendon of quadriceps femoris; *innervation*, femoral; *action*, extends leg.

m. ventricula'ris, a name applied to fibers of the thyroarytenoid muscle running into the vestibular folds.

m. vertica'lis lin'guae [NA], vertical muscle of tongue: *origin*, dorsal fascia of tongue; *insertion*, sides and base of tongue; *innervation*, hypoglossal; *action*, changes shape of tongue in mastication and deglutition.

m. vis'cerum, a term applied to muscle of a body organ.

m. voca'lis [NA], vocal muscle: *origin*, thyroid cartilage; *insertion*, vocal process of arytenoid cartilage; *innervation*, recurrent laryngeal; *action*, shortens vocal folds.

m. zygoma'ticus, m. zygomaticus major.

m. zygoma'ticus ma'jor [NA], greater zygomatic muscle: *origin*, zygomatic bone in front of temporal process; *insertion*, angle of mouth; *innervation*, facial; *action*, draws angle of mouth backward and upward.

m. zygoma'ticus mi'nor [NA], lesser zygomatic muscle: *origin*, zygomatic bone near maxillary suture; *insertion*, orbicularis oris and levator labii superioris; *innervation*, facial; *action*, draws upper lip upward and laterally.

mutafacient (mu'tah-fa'shent) mutagenic.

mutagen (mu'tah-jen) [mutation + genesis] a chemical or physical agent that induces genetic mutations.

mutagenesis (mu'tah-jen'ē-sis) [mutation + genesis] 1. the production of change. 2. the induction of genetic mutation.

mutagenic (mu'tah-jen'ik) 1. causing change. 2. inducing genetic mutation.

mutagenicity (mu'tah-jē-nis'i-te) the property of being able to induce genetic mutation.

Mutamycin (mu'tah-mi'sin) trademark for a preparation of mitomycin.

mutant (mu'tant) [L. *mutare* to change] 1. an organism that has undergone genetic mutation. 2. produced by mutation.

mutarotase (mu'tah-ro'tās) aldose 1-epimerase.

mutarotation (mu'tah-ro-ta'shun) a special type of tautomerism involving either (a) the transformation of one optical isomer into another, or (b) the transformation of one structural isomer into another (both possessing asymmetric centers and optical activity). With each type the rotatory power of a freshly prepared solution of the compound will change, under a variety of conditions, until an equilibrium value is set up which (unlike in racemization) will not be zero.

mutase (mu'tās) [L. *mutare* to change + -ase] a group of enzymes (transferases) that catalyze the intermolecular shifting of a chemical group (acyl, phospho, amino, or other group) from one position to another. **aldehyde m.,** an enzyme that catalyzes the Cannizzaro reaction. **methylaspartate m.,** an enzyme that catalyzes the conversion of L-threo-3 methylaspartate to L-glutamate. **methylmalonyl-CoA m.,** an enzyme that catalyzes the conversion of methylmalonyl-CoA to succinyl-CoA.

mutation (mu-ta'shun) [L. *mutatio*, from *mutare* to change] 1. a change in form, quality, or some other characteristic. 2. in genetics, a permanent transmissible change in the genetic material, usually in a single gene; the change may be in the form of a loss (deletion), gain (translocation), or exchange (transduction) of genetic material. Also, an individual exhibiting such a change. Called also (in classical genetics) a *sport*. **genomic m.,** a mutation which alters the normal number of chromosomes of an individual; if the result is a whole multiple of the haploid set of the chromosomes, it is a ploidic mutation. **induced m.,** a genetic mutation caused by external factors which are experimentally or accidentally produced. **missense m.,** one that changes a codon so that it codes for a different amino acid. **natural m.,** a genetic mutation occurring without the intervention of any known external factors. **nonsense m.,** a mutation in which a codon for a particular amino acid is so changed that it no longer encodes any amino acid. **ploidic m.,** see *genomic m.* **point m.,** a mutation resulting from a change in a single base pair in the DNA molecule. **somatic m.,** a genetic mutation occurring in a so-

matic cell, providing the basis for a mosaic condition. **suppressor m.**, the correction of the effect of a mutation in one gene by a mutation in a different gene.

mutational (mu-ta'shun-al) pertaining to mutation.

mute (müt) [L. *mutus*] 1. unable to speak. 2. one who cannot speak. **deaf m.**, see *deaf-mute*.

mutain (mu'te-in) [from *mutant-protein*] a name suggested for a protein arising as a result of a mutation; it is analogous to the wild-type protein but does not necessarily have the same enzymological, immunological, or physicochemical properties.

mutilation (mu'ti-la'shun) [L. *mutilatio*] the act of depriving an individual of a limb, member, or other important part; deprivation of an organ; castration.

Mutisia (mu-tiz'e-ah) a genus of plants. **M. viciaefolia**, a composite-flowered plant of South America, used there as a sedative and in various diseases of the heart, respiratory organs, and nervous system.

mutism (mu'tizm) [L. *mutus* unable to speak, inarticulate] inability or refusal to speak. **akinetic m.**, a state in which the individual makes no spontaneous movement or sound. **deaf m.**, inability to speak as a result of deafness and never having heard spoken words. **hysterical m.**, hysterical inability to utter words.

muton (mu'ton) [*mutation* + Gr. *on* neuter ending] in molecular genetics, the smallest element of DNA whose alteration can give rise to a mutant form of organism, possibly as small as one nucleotide base. Cf. *cistron* and *recon*.

mutualism (mu'tu-al-izm) symbiosis in which both populations (or individuals) gain from the association and are unable to survive without it.

mutualist (mu'tu-al-ist) any organism or species associated with another in a relationship which is beneficial to both.

muzolimine (mu-zo'li-mēn) chemical name: 5-amino-2-[1-(3,4-dichlorophenyl)ethyl]-2,4-dihydro-3H-pyrazol-3-one; a diuretic and antihypertensive, C₁₁H₁₁Cl₂N₃O.

M.V. abbreviation for L. *Medicus Veterinarius*, veterinary physician.

Mv chemical symbol for *mendelevium*.

mv. millivolt.

μv. microvolt.

μw. microwatt.

Mx Medex.

My. myopia.

my. mayer.

my- see *myo-*.

Mya's disease (me-āz') [Giuseppe Mya, Italian physician, 1857-1911] see under *disease*.

myalgia (mi-al'je-ah) [*my-* + *algia*] pain in a muscle or muscles. **m. abdominis**, pain in the abdominal wall. **m. capitis**, pain in the scalp muscles; cephalalgia or headache. **m. cervicallis**, torticollis. **epidemic m.**, epidemic pleurodynia. **lumbar m.**, lumbago.

Myambutol (mi-am'bu-tol) trademark for a preparation of ethambutol hydrochloride.

Myanesin (mi-an'ē-sin) trademark for a preparation of mephensin.

myasis (mi-a'sis) myiasis.

myasthenia (mi'as-the'ne-ah) [*my-* + Gr. *astheneia* weakness] muscular debility; any constitutional anomaly of muscle. **angiosclerotic m.**, intermittent claudication. **m. gastrica**, weakness and loss of tone in the muscular coats of the stomach; atony of the stomach. **m. gra'vis**, **m. gra'vis pseudoparalytica**, a disorder of neuromuscular function thought to be due to the presence of antibodies to acetylcholine receptors at the neuromuscular junction; clinically there is fatigue and exhaustion of the muscular system with a tendency to fluctuate in severity and without sensory disturbance or atrophy. The disorder may be restricted to a muscle group or become generalized with severe weakness and, in some cases, ventilatory insufficiency. It may affect any muscle of the body, but especially those of the eye, face, lips, tongue, throat, and neck. **m. laryngis**, disability of the phonatory laryngeal muscles from overuse, debilitating conditions, or age. **neonatal m.**, a transient (a week to a month) myasthenia affecting offspring of myasthenic women, characteristically marked by difficulty in sucking and swallowing.

myasthenic (mi'as-then'ik) pertaining to or characterized by muscular weakness.

myatonia (mi'ah-to'ne-ah) [*my-* + a neg. + Gr. *tonos* tension] amyotonia. **m. congenita**, amyotonia congenita.

myatony (mi-at'o-ne) myatonia.

myatrophy (mi-at'ro-fe) [*my-* + *atrophy*] atrophy of a muscle; muscular atrophy.

myautonomy (mi'aw-ton'o-me) [*my-* + Gr. *autos* self + *nomos* law] a condition in which muscular contraction aroused by

stimulation is so long delayed that it appears to occur independently of the stimulation.

myc- see *myco-*.

mycelial (mi-se'le-al) pertaining to a mycelium.

mycelian (mi-se'le-an) mycelial.

mycelioid (mi-se'le-oid) having the radiate filamentous appearance of mold colonies.

mycelium (mi-se'le-um), pl. *mycelia* [*myc-* + Gr. *hēlos* nail] the mass of threadlike processes (hyphae) constituting the fungal thallus.

mycete (mi'sēt) [Gr. *mykēs* fungus] a fungus, def. 1.

mycethemia (mi'sē-the'me-ah) [*myceto-* + Gr. *haima* blood + *-ia*] the presence of fungi in the blood.

mycetism (mi'sē-tizm) mycetism.

mycetismus (mi'sē-tiz'mus) poisoning caused by a fungus, as that resulting from ingestion of poisonous mushrooms. **m. cer'ebris**, a hallucinogenic intoxication following the ingestion of any of several species of mushrooms. **m. cholericifor'mis**, a serious and often fatal intoxication caused by ingestion of *Amanita phalloides*, *A. verna*, and probably other *Amanita* species which produce phalloidin; it is characterized by abdominal pain, vomiting, diarrhea, bloody stools, protein and casts in the urine, malaise, and cyanosis. **m. gastrointestinalis**, a mild form of mycotoxicosis marked by nausea which may be followed by vomiting and diarrhea; it is caused by the ingestion of the orange jack-o-lantern mushroom (*Clitocybe illudens*) and many other species. **m. nervosus**, mushroom poisoning caused by ingestion of *Amanita patherina* and *A. muscaria*, which elaborate muscarine, a parasympathetic stimulant; it is marked by such symptoms as tearing, sweating, salivation, persistent peristalsis, retching and vomiting, contraction of the pupil and ciliary muscles, acute excitement, delirium, and coma. **m. sanguinari'us**, mushroom poisoning marked by hemoglobinuria, abdominal distress, and jaundice, caused by ingestion of *Helvella esculenta* and other *Helvella* species.

myceto- see *myco-*.

mycetogenic, mycetogenous (mi'sē-to-jen'ik; mi'sē-toj'ē-nus) [*myceto-* + Gr. *gennan* to produce] caused by fungous growths.

mycetoma (mi'sē-to'mah) [*myceto-* + *-oma*] 1. maduromycosis. 2. a tumor-like tangled mass of fungal mycelia. **white m.**, maduromycosis in which the granules are white, such as that caused by *Streptomyces madurae*, *Allescheria boydii*, or *Cephalosporium falciforme*.

Mycetozoa (mi-se'to-zo'ah) [*myceto-* + Gr. *zōon* animal] Mycetozoida.

Mycetozoida (mi'se-to-zoi'dah) a group of fungus-like microorganisms occurring as a mass of multinucleate protoplasm, frequently known as "slime molds" or "slime animals." Most forms are free-living and are found on the bark of trees, dead wood, and decaying vegetation, but some are intracellular parasites of plants. They have been classified by some as an order of amebae (Mycetozoa), by others as lower fungi (Myxomycetes).

mycid (mi'sid) dermatophytid.

Mycifradin (mi-sif'rah-din) trademark for preparations of neomycin sulfate.

myco-, myc-, mycet- [Gr. *mykēs* fungus] a combining form denoting relationship to fungus.

mycoagglutinin (mi'ko-ah-gloo'ti-nin) an agglutinin which has the power of agglutinating fungi.

mycobacteria (mi'ko-bak-te're-ah) plural of *mycobacterium*.

Mycobacteriaceae (mi'ko-bak-te're-a'se-e) a family of Schizomycetes, order Actinomycetales, made up of spherical to rod-shaped, gram-positive, aerobic, mesophilic cells showing no branching on ordinary media, found in soil and dairy products and occurring as parasites in man and other animals. It includes two genera, *Mycobacterium* and *Mycococcus*.

mycobacteriosis (mi'ko-bak-te're-o'sis) any tuberculosis-like disease caused by mycobacteria other than *Mycobacterium tuberculosis*; these include Group I-IV mycobacteria. Called also *atypical tuberculosis*.

Mycobacterium (mi'ko-bak-te're-um) a genus of microorganisms of the family Mycobacteriaceae, order Actinomycetales, occurring as gram-positive slender rods and distinguished by acid-fast staining. **M. avium**, the avian type of tubercle bacillus, commonly producing disease in chickens and swine, and only rarely infecting man; called also *M. tuberculosis* var. *avium*. **M. bal'nei**, the causative organism of swimming-pool granuloma; called also *M. marinum*. **M. bo'vis**, the bovine variety of tubercle bacillus, most commonly infecting cattle and acquired by man usually by infected milk, more commonly found in children and producing a hilar pulmonary infection, or a tracheobronchial lymphatic or mesenteric lymphatic infection with tendency to generalization. Called also *M. tuberculosis* var. *bovis*. **M. butyr'icum**, a saprophytic form found in milk and butter. **M. fortu'itum**, a species found naturally in soil but also associated with infection in man and other animals. **M. intracel'lularis**, a group III anonymous mycobacterium associated with chronic pulmonary infection in man. **M. kansas'ii**, a photo-

chromogenic species which is the etiologic agent of a tuberculo-sis-like disease in man; see also *photochromogen*. **M. lep'rae**, a species found in enormous numbers in typical aggregates of parallel cells in nasal smears and other pathologic material from human leprosy; considered to be the etiologic agent of leprosy, although it has not been cultivated in vitro nor has the disease been reproduced experimentally. Called also *Hansen's bacillus*. **M. lep'rae bubalo'rum**, the causative agent of leprosy of water buffaloes. **M. lepraemurium**, the causative agent of murine leprosy (q.v. under *leprosy*). **M. lucifla'vum**, *M. kansasii*. **M. mari'num**, *M. balnei*. **M. micro'ti**, an organism infecting voles but not rabbits or fowls; nonpathogenic for man, and used for the preparation of experimental vaccines. **M. paratuberculo'sis**, the causative agent of Johne's disease, a chronic enteritis of cattle; nonpathogenic for man. Called also *Johne's bacillus*. **M. phle'i**, a saprophytic form found on grasses and in soil and water. **M. scrofula'ceum**, an anonymous scotochromogenic mycobacterium, apparently nonpathogenic. **M. smeg'matis**, a species found in human smegma, closely resembling *M. tuberculosis*; called also *smegma bacillus*. **M. tuberculo'sis**, the causative agent of tuberculosis, most commonly pulmonary, in man; called also *M. tuberculosis* var. *hominis*, and *tubercle bacillus*. **M. tuberculo'sis** var. *avium*, see *M. avium*. **M. tuberculo'sis** var. *bo'vis*, see *M. bovis*. **M. tuberculo'sis** var. *homi'nis*, see *M. tuberculosis*. **M. tuberculo'sis** var. *mu'ris*, *M. microti*. **M. ul'cerans**, the causative agent of Buruli ulcer.

mycobacterium (mi'ko-bak-te're-um), pl. *mycobacte'ria*. 1. an organism of the genus *Mycobacterium*. 2. a slender, acid-fast microorganism resembling the bacillus which causes tuberculosis. **anonymous mycobacteria**, **atypical mycobacteria**, **acid-fast bacteria** resembling the tubercle bacilli, found in pulmonary infections, usually of a chronic nature, in man, for which species names have not been established. They are divided into the chromogens and nonchromogens, the former including photochromogens (Group I), which produce yellow pigment in the presence of light, and scotochromogens (Group II), which produce orange pigment independent of light. The nonchromogens are subdivided into filamentous forms (Group III) and rapid growers (Group IV). **Group I-IV mycobacteria**, see *anonymous m.*

Mycocandida (mi'ko-kan'di-dah) *Candida*.

mycoidin (mi'ko-si'din) an antibiotic substance extracted from a mold (Aspergillaceae); active in vivo against *Mycobacterium tuberculosis*.

Mycococcus (mi'ko-kok'us) a genus of microorganisms of the family Mycobacteriaceae, order Actinomycetales, made up of non-acid-fast, gram-positive, saprophytic rod-shaped microorganisms producing pigments and resembling actinomycetes in mode of reproduction; found in soil and water.

Mycoderma (mi'ko-der'mah) [*myco-* + Gr. *derma* skin] a former genus of imperfect fungi of the order Moniliales, family Moniliaceae, most species of which are now included in the genus *Candida*. **M. ace'ti**, a name formerly given a combination of yeasts, which together with bacteria, such as *Acetobacter aceti*, grow on the surface of fermenting fluids and produce acetic acid from fermentation of alcohol. **M. dermati'tidis**, *Blastomyces dermatitidis*. **M. immi'te**, *Coccidioides immitis*.

mycoderma (mi'ko-der'mah) [Gr. *mykos* mucus + *derma* skin] mucous membrane (tunica mucosa [NA]).

mycordermatitis (mi'ko-der'mah-ti'tis) candidiasis.

mycordermomycosis (mi'ko-der'mo-mi-ko'sis) candidiasis.

mycoflora (mi'ko-flo'rah) the number and varieties of fungi present in or characteristic of a specific location.

mycohemia (mi'ko-he'me-ah) [*myco-* + Gr. *haima* blood + *-ia*] the presence of fungi in the blood.

mycologist (mi-kol'o-jist) a person specializing in mycology; a student of mycology.

mycology (mi-kol'o-je) [*myco-* + *-logy*] the science and study of fungi.

mycomyringitis (mi'ko-mir'in-jit'is) [*myco-* + L. *myringa* membrana tympani + *-itis*] myringomycosis.

Myconostoc (mi'ko-nos'tok) a genus of microorganisms of the family Spirillaceae, suborder Pseudomonadineae, order Pseudomonadales, made up of curved cells occurring singly or in spiral or curved chains and in small gelatinous masses. The type species is *M. gregarium*.

mycopathology (mi'ko-pah-thol'o-je) the scientific study of the pathologic changes caused by fungi.

mycophage (mi'ko-faj) [*myco-* + Gr. *phagein* to eat] a virus that infects fungi and may cause their lysis.

mycophagy (mi-kol'ah-je) ingestion of mushrooms and other fungi.

Mycoplana (mi'ko-pla'nah) a genus of microorganisms of the family Pseudomonadaceae, suborder Pseudomonadineae, order Pseudomonadales, occurring as branching cells in soil. It includes two species, *M. bulla'ta* and *M. dimor'pha*.

Mycoplasma (mi'ko-plaz'mah) [*myco-* + Gr. *plasma* anything formed or molded] a taxonomic name given a genus (family Mycoplasmataceae) of highly pleomorphic, gram-negative, aerobic

to facultatively anaerobic microorganisms differing from bacteria in that they lack a cell wall and are bounded by a triple-layered membrane. The smallest known free-living organisms, they include the pleuropneumonia-like organisms (PPLO), and are separated into species on the basis of source, glucose fermentation, and growth on agar media. **M. fermentans**, a species found in the genitourinary tract. **M. gallisepticum**, the causative agent of infectious arthritis in chickens and turkeys. **M. granula'rum**, a causative agent of swine arthritis. **m. hom'inis**, a species found in association with nongonococcal urethritis; it has been reported to cause mild pharyngitis in human volunteers. **M. hyoarthrino'sa**, a causative agent of swine arthritis distinct from *M. granularum* although their growth and morphological properties and the arthritis caused by them are similar. **M. hyorhi'nis**, a causative agent of swine arthritis; commonly a secondary invader in pneumonia in swine. **M. mycoi'des**, the type species of *Mycoplasma*, which is the etiologic agent of pleuropneumonia (def. 2); called also *Asterococcus mycoides* and *Bovimycetes pleuropneumoniae*. **M. ora'le**, a species found in the upper respiratory tract; called also *M. pharyngis*. **M. pharyngis**, *M. orale*. **M. pneumo'niae**, an etiologic agent of primary atypical pneumonia; called also *Eaton agent*. **M. saliva'rium**, a species found in the upper respiratory tract.

mycoplasma (mi'ko-plaz'mah), pl. *mycoplas'mas*, *mycoplas'mata*. Any member of the genus *Mycoplasma*. **T m.**, varieties isolated from the urogenital tract which form small colonies (T for tiny) and are otherwise poorly characterized.

mycoplasmal (mi'ko-plaz'mal) of, pertaining to, or caused by *Mycoplasma*.

Mycoplasmataceae (mi'ko-plaz'mah-ta'se-e) a family of the order Mycoplasmatales, which includes the genus *Mycoplasma*.

Mycoplasmatales (mi'ko-plaz'mah-ta'les) an order of bacteria, the members of which lack a true cell wall and are highly pleomorphic organisms reproducing, according to some investigators, by breaking of the filaments into coccoid elementary bodies. It includes a single family, Mycoplasmataceae. In some systems of classification, because of their unusual physical structure, the organisms in this order are considered different from bacteria and have been assigned to a separate class—the Mollicutes.

mycoplasmosis (mi'ko-plaz-mo'sis) infection with *Mycoplasma*.

mycoprecipitin (mi'ko-pre-sip'i-tin) [*myco-* + *precipitin*] a precipitin which will precipitate extracts of yeast and fungi.

mycoproteination (mi'ko-pro'te-in-a'shun) inoculation with dead bacterial cells or fungi, or protein derived from them.

mycopus (mi'ko-pus) mucus containing pus.

mycorrhiza (mi'ko-ri'zah) [*myco-* + Gr. *rhiza* root] a growth occurring as a result of the symbiotic relationship between certain fungi and the roots of plants and trees; it is most frequently found in poor soil, and is associated with the absorption of minerals and nitrogenous material.

mycose (mi'kōs) [*myc-* + *-ose*] a sugar from ergot and also from trehalumanna, $C_{12}H_{22}O_{11}$ + $2H_2O$; trehalose.

mycoside (mi'ko-sid) a type-specific glycolipid of mycobacterial origin.

mycosis (mi-ko'sis) [*myco-* + *-osis*] any disease caused by a fungus. **cutaneous m.**, dermatomycosis. **m. framboesioides** (*obs.*), yaws. **m. fungoi'des**, a rare, chronic, malignant, lymphoreticular neoplasm of the skin and, in the late stages, the lymph nodes and viscera, marked by the development of large, firm, reddish, painful tumors that ulcerate. The disease usually ends fatally after continuing a number of years. **m. fungoi'des d'emblée**, the tumor stage of mycosis fungoides unheralded by prodromal symptoms. **m. fungoi'des en plaques**, the infiltrative stage of mycosis fungoides. **Gilchrist's m.**, North American blastomycosis. **m. intestinalis**, anthrax intestinalis. **m. leptoth'rica**, a benign condition of the tonsil and pharynx produced by *Leptotrichia buccalis*. **Posada m.**, coccidioidomycosis. **splenic m.**, siderotic splenomegaly.

mycostasis (mi-kos'tah-sis) [*myco-* + Gr. *stasis* stoppage] prevention of the growth or multiplication of fungi.

mycostat (mi'ko-stat) an agent that inhibits the growth of fungi.

Mycostatin (mi'ko-stat'in) trademark for a preparation of nystatin.

mycosterol (mi-kos'ter-ol) zymosterol.

mycotic (mi-kot'ik) pertaining to a mycosis; caused by fungi.

mycoticopeptic (mi-kot'ik-pep'tik) (*obs.*) both mycotic and peptic.

Mycotoruloides (mi'ko-tor'u-loi'déz) *Candida*.

mycototoxicosis (mi'ko-tok'si-ko'sis) 1. poisoning caused by a fungal or bacterial toxin. 2. poisoning resulting from ingestion of fungi, such as that caused by the fungus *Claviceps purpurea* (ergotism).

mycotoxin (mi'ko-tok'sin) a fungal toxin.

mycotoxinization (mi''ko-tok'sin-i-za'shun) inoculation with a fungal toxin.

mycterix (mik-ter'ik) [Gr. *myktēr* nostril] pertaining to the nasal cavities.

mycteroxerosis (mik'ter-o-ze-ro'sis) [Gr. *myktēr* nostril + *xēros* dry] dryness of the nostrils.

mydaleine (mi-da'le-in) [Gr. *mydaleos* damp, mouldy] a poisonous ptomaine from putrefied viscera. Poisoning by it is attended with salivation, dilatation of the pupils, rise of temperature followed by a fall, and arrest of the heart in diastole.

mydatoxine (mi'dah-tok'sin) [Gr. *mydan* to be damp + *toxin*] a deadly ptomaine, $C_6H_{13}NO_2$, from decaying flesh; also obtained from human intestines kept for a long time at a low temperature.

Mydriacyl (mi-dri'ah-sil) trademark for a preparation of tropicamide.

mydriasis (mī-dri'ah-sis) [Gr.] extreme or morbid dilatation of the pupil; dilatation of the pupil as the effect of a drug. **alternating m.**, varying inequality of the pupils, mydriasis occurring first on one side, then on the other; called also **bounding** or **springing m.** **bounding m.**, alternating mydriasis. **paralytic m.**, that caused by paralysis of the oculomotor nerve. **spasmodic m.**, **spastic m.**, that due to spasm of the dilator of the iris or to overaction of the sympathetic. **spinal m.**, that due to lesion of the ciliospinal center of the spinal cord. **springing m.**, alternating m.

mydriatic (mid're-at'ik) 1. dilating the pupil. 2. any drug that dilates the pupil.

myectomy (mi-ek'to-me) [*my-* + Gr. *ektomē* excision] excision of a portion of muscle.

myectopia (mi-ek-to'pe-ah) [Gr. *mys* muscle + *ektos* displaced + *-ia*] displacement of a muscle.

myectomy (mi-ek'to-pe) myectopia.

myel- see *myelo-*.

myelacephalus (mi'el-ah-sel'ah-lus) [*myel-* + *a* neg. + Gr. *kephalē* head] the lowest grade of acephalous monster, being only slightly above a fetus amorphus.

myelalgia (mi'el-lal'je-ah) [*myel-* + *-algia*] pain in the spinal cord.

myelanalosis (mi'el-an'ah-lo'sis) [*myel-* + Gr. *analiskein* to spend, waste + *-osis*] wasting of the spinal marrow; tabes dorsalis.

myelapoplexy (mi'el-ap'o-plek-se) [*myel-* + *apoplexy*] hematomyelia.

myelasthenia (mi'el-as-the'ne-ah) [*myel-* + *asthenia*] neurasthenia due to some cause which affects the spinal cord.

myelatelial (mi'el-ah-te'le-ah) [*myel-* + Gr. *ateleia* imperfection] imperfect development of the spinal cord.

myelatrophy (mi'el-at'ro-fe) [*myel-* + *atrophy*] atrophy of the spinal cord.

myelauze (mi'el-awks'e) [*myel-* + Gr. *auxē* increase] morbid increase in size of the spinal cord.

myelema (mi'el-me-ah) [*myel-* + Gr. *haima* blood + *-ia*] myelocytosis.

myelencephalitis (mi'el-len-sef'ah-li'tis) inflammation of the brain and spinal cord.

myelencephalon (mi'el-len-sef'ah-lon) [*myel-* + Gr. *enkephalos* brain] 1. [NA] the posterior portion of the rhombencephalon, including the medulla oblongata and the lower part of the fourth ventricle; see Plate accompanying *brain*. 2. the posterior of the two brain vesicles formed by specialization of the rhombencephalon in the developing embryo.

myelencephalospinal (mi'el-len-sef'ah-lo-spi'nal) pertaining to the myelencephalon and spinal cord.

myeletterosis (mi'el-et'er-o'sis) [*myel-* + Gr. *heterōsis* alteration] morbid alteration of the spinal cord.

myelin (mi'el-lin) [Gr. *myelos* marrow] 1. the substance of the cell membrane of Schwann's cells that coils to form the myelin sheath (see under *sheath*); it has a high proportion of lipid to protein and serves as an electrical insulator. Called also *white substance of Schwann*. 2. any one of a certain group of lipid substances found in various normal and pathologic tissues and differing from fats in being doubly refractive. 3. a monoamino-monophosphatide found in small quantities in the brain.

myelinated (mi'el-lī-nāt'ed) having a myelin sheath.

myelination (mi'el-lī-na'shun) myelinization.

myelinic (mi'el-lin'ik) pertaining to or of the nature of myelin.

myelinization (mi'e-lī-ni-za'shun) the act of furnishing with or taking on myelin.

myelinoclasia (mi'el-lin-ok'lah-sis) [*myelin* + Gr. *klasis* a breaking] destruction of myelin; demyelination. **acute perivascular m.**, postinfection encephalitis. **central pontine m.**, central pontine myelinolysis. **postinfection perivenous m.**, postinfection encephalomyelopathy.

myelinogenesis (mi'el-lin'o-jen'ē-sis) myelinization.

myelinogenetic (mi'el-lin'o-jē-net'ik) producing myelin; producing myelinization.

myelinogeny (mi'el-lī-noj'ē-ne) [*myelin* + Gr. *gennan* to produce] the development of the myelin of nerve fibers; the myelinization of nerve fibers.

myelinolysin (mi'el-lī-nol'i-sin) [*myelin* + *lysin*] a lytic substance present in the serum of patients with multiple sclerosis which destroys myelin.

myelinolysis (mi'el-lī-nol'i-sis) destruction of myelin; demyelination. **central pontine m.**, a rare form of massive demyelination of the pons occurring in alcoholics; called also **central pontine myelinoclasia**.

myelinopathy (mi'el-lī-nop'ah-the) any disease of the myelin; degeneration of the white matter of the brain.

myelinosis (mi'el-lī-no'sis) a form of fatty necrosis in which myelin is formed.

myelinotoxic (mi'el-lin-o-tok'sik) having a deleterious effect on myelin; causing demyelination.

myelinotoxicity (mi'el-lin-o-tok-sis'i-te) the property of being myelinotoxic.

myelitic (mi'el-lit'ik) pertaining to myelitis.

myelitis (mi'el-li'tis) [Gr. *myelos* marrow + *-itis*] 1. inflammation of the spinal cord (see *leukomyelitis*, *poliomyelitis*). The symptoms of myelitis vary with the location of the lesion, and include pain in the back, girdle sensation, hyperesthesia, formication, anesthesia, motor disturbances, paralysis, increase of the reflexes, paralysis of the sphincters, decubitus ulcers, and, in later stages, spasmodic contractions of the paralyzed limbs. In practice, the term is also used to denote noninflammatory lesions of the spinal cord; see *myelopathy*. 2. inflammation of the bone marrow; see *osteomyelitis*. **acute m.**, any inflammatory disease of the spinal cord. **apoptiform m.**, see under *myelopathy*. **ascending m.**, see under *myelopathy*. **bulbar m.**, that which involves the medulla oblongata. **cavitary m.**, syringomyelitis. **central m.**, inflammation affecting chiefly the gray substance of the spinal cord. **chronic m.**, a slowly progressing inflammation of the spinal cord. **compression m.**, see under *myelopathy*. **concussion m.**, see under *myelopathy*. **cornual m.**, that which affects the horns of gray matter of the spinal cord. **descending m.**, see under *myelopathy*. **diffuse m.**, inflammation involving large and variously placed sections of the spinal cord. **disseminated m.**, a form with several distinct foci in the spinal cord. **focal m.**, see under *myelopathy*. **foudroyant m.**, central m. **funicular m.**, see under *myelopathy*. **hemorrhagic m.**, see under *myelopathy*. **interstitial m.**, sclerosing myelopathy. **neuro-optic m.**, neuromyelitis optica. **parenchymatous m.**, see under *myelopathy*. **peripendymal m.**, myelitis surrounding the central canal of the spinal cord. **sclerosing m.**, see under *myelopathy*. **systemic m.**, see under *myelopathy*. **transverse m.**, see under *myelopathy*. **traumatic m.**, see under *myelopathy*. **m. vaccinia**, that which sometimes follows vaccination.

myelo-, myel- [Gr. *myelos* marrow] a combining form denoting relationship to marrow, often used in specific reference to the spinal cord.

myeloarchitecture (mi'el-lo-ar'ki-tek'tūr) 1. the arrangement of nerve fibers in the cerebral and cerebellar cortices. 2. the organization of the nerve tracts in the spinal cord and brain stem.

myeloblast (mi'el-lo-blast'') [*myelo-* + Gr. *blastos* germ] an immature cell found in the bone marrow and not normally in the peripheral blood; it is the most primitive precursor in the granulocytic series, which matures to develop into the promyelocyte and eventually the granular leukocyte. Myeloblasts have fine, evenly distributed chromatin, several nucleoli, and a nongranular basophilic cytoplasm. Called also *granuloblast*.

myeloblastemia (mi'el-lo-blas-te'me-ah) [*myeloblast* + Gr. *haima* blood + *-ia*] presence of myeloblasts in the blood.

myeloblastoma (mi'el-lo-blas-to'mah) [*myeloblast* + *-oma*] a focal malignant tumor, observed in acute myelogenous leukemia, composed of myeloblasts and lacking green coloration.

myeloblastomatosis (mi'el-lo-blas'to-mah-to'sis) the presence of multiple myeloblastomas.

myeloblastosis (mi'el-lo-blas-to'sis) the presence of an excess of myeloblasts in the blood.

myelocoele (mi'el-lo-sēl) [*myelo-* + Gr. *kēlē* hernia] protrusion of the substance of the spinal cord through a defect in the bony spinal canal.

myeloclast (mi'el-lo-klast) [*myelo-* + Gr. *klan* to break] a cell which splits up myelin sheaths.

myelocoele (mi-el'o-sēl) [*myelo-* + Gr. *koilia* cavity] (*obs.*) the central canal of the spinal cord.

myelocone (mi'el-lo-kōn) [*myelo-* + Gr. *konis* dust] a fatty matter from the brain.

myelocyst (mi'el-lo-sist) [*myelo-* + *cyst*] a benign cyst developed from rudimentary medullary canals.

myelocystic (mi'el-lo-sis'tik) both myeloid and cystic in structure.

myelocystocele (mi'el-lo-sis'to-sēl) [*myelo-* + Gr. *kēlē* hernia] myelomeningocele.

Myelocele in cross-section (after Netter, from Ciba Collection).

myelocystomeningocele (mi''ē-lo-sis''to-mē-ning'go-sēl) myelomeningocele.

myelocyte (mi''ē-lo-sit) [*myelo-* + *-cyte*] 1. a precursor in the granulocytic series, being a cell intermediate in development between a promyelocyte and a metamyelocyte; in this stage, differentiation into specific cytoplasmic granules has begun. 2. any cell of the gray matter of the nervous system.

myelocythemia (mi''ē-lo-si-the'me-ah) [*myelocyte* + Gr. *haima* blood + *-ia*] excess of myelocytes in the blood.

myelocytic (mi''ē-lo-sit'ik) relating to or of the nature of myelocytes.

myelocytoma (mi''ē-lo-si-to'mah) chronic myelocytic leukemia; myeloma, def. 1.

myelocytomatosis (mi''ē-lo-si''to-mah-to'sis) 1. (*obs*) a form of leukosis in which the myelocytes are chiefly involved. 2. a disease of fowl that is included in the avian leukosis complex, marked by the presence of tumors composed of myeloid cells. There may also be an increase of immature myeloid cells in the circulating blood.

myelocytosis (mi''ē-lo-si-to'sis) the presence of an excessive number of myelocytes in the blood; myelosis.

myelodysplasia (mi''ē-lo-dis-pla'se-ah) [*myelo-* + *dys-* + Gr. *plassein* to form] defective development of any part (especially the lower segments) of the spinal cord.

myeloencephalic (mi''ē-lo-en'sē-fal'ik) pertaining to the spinal cord and the brain.

myeloencephalitis (mi''ē-lo-en-sef'ah-li'tis) [*myelo-* + Gr. *enkephalos* brain + *-itis*] inflammation of the spinal cord and brain. **epidemic m.**, epidemic polioencephalitis.

myelofibrosis (mi''ē-lo-fi-bro'sis) replacement of the bone marrow by fibrous tissue, occurring in association with a myeloproliferative disorder or secondary to another, unrelated condition; called also *myelosclerosis*. See also *myeloid metaplasia*, under *metaplasia*. **osteosclerosis m.**, myelosclerosis, def. 2.

myelofugal (mi''ē-lof'u-gal) [*myelo-* + L. *fugare* to flee] moving away from the spinal cord.

myelogenesis (mi''ē-lo-jen'ē-sis) 1. the development of the nervous system, especially of the brain and spinal cord. 2. the deposition of myelin around the axon.

myelogenic (mi''ē-lo-jen'ik) myelogenous.

myelogenous (mi''ē-loj'ē-nus) [*myelo-* + Gr. *gennan* to produce] produced in the bone marrow.

myelogeny (mi''ē-loj'ē-ne) the maturation of the myelin sheaths of nerve fibers in the development of the central nervous system.

myelogone (mi''ē-lo-gōn'') a white blood cell of the myeloid series having a reticulate violaceous nucleus, well-stained nucleolus, and a deep blue rim of cytoplasm.

myelogenic (mi''ē-lo-go'nik) characterized by the presence of myelogenes.

myelogonium (mi''ē-lo-go'ne-um) myelogone.

myelogram (mi''ē-lo-gram) 1. a roentgenogram of the spinal cord. 2. a graphic representation of the differential count of cells found in a stained preparation of bone marrow.

myelography (mi''ē-log'rah-fe) [*myelo-* + Gr. *graphein* to write] roentgenography of the spinal cord after injection of a contrast

medium into the subarachnoid space. **oxygen m.**, myelography in which oxygen is used as the contrast medium.

myeloid (mi''ē-loid) [*myelo-* + Gr. *eidos* form] 1. pertaining to, derived from, or resembling bone marrow. 2. pertaining to the spinal cord. 3. having the appearance of myelocytes, but not derived from bone marrow.

myeloidin (mi''ē-loi'din) [*myelin* + Gr. *eidos* form] a substance resembling myelin, occurring in the pigmented cells of the retina.

myeloidosis (mi''ē-loi-do'sis) the development of myeloid tissue, especially hyperplastic development of such tissue.

myelokentric (mi''ē-lo-ken'trik) [*myeloid* + Gr. *kentron* stimulus] stimulating the formation of myeloid cells. Cf. *lymphokentric*.

myelolipoma (mi''ē-lo-lī-po'mah) a rare benign tumor of the adrenal gland, several centimeters in diameter, composed in varying proportions of adipose tissue, lymphocytes, and primitive myeloid cell, probably a developmental abnormality.

myelolymphangioma (mi''ē-lo-lim-fan''je-o'mah) elephantiasis.

myelolysis (mi''ē-lol'i-sis) [*myelin* + Gr. *lysis* dissolution] the dissolution of myelin.

myelolytic (mi''ē-lo-lit'ik) pertaining to, characterized by, or causing myelolysis.

myeloma (mi''ē-lo'mah) [*myelo-* + *-oma*] a tumor composed of cells of the type normally found in the bone marrow; see *multiple m.* **endothelial m.**, Ewing's tumor. **extramedullary m.**, a plasmacytoma (plasma cell tumor) occurring outside the bone marrow. **giant cell m.**, giant cell tumor of bone. **multiple m.**, a malignant neoplasm of plasma cells usually arising in the bone marrow and manifested by skeletal destruction, pathologic fractures, and bone pain, and by the presence of anomalous circulating immunoglobulins (paraproteins), Bence-Jones proteinuria, and anemia; it is the most common form of monoclonal gammopathy. Called also *plasma cell m.* See also *plasmacytoma*. **osteosclerotic m.**, multiple myeloma associated with osteosclerosis (rather than bone destruction) and often with peripheral neuropathy. **plasma cell m.**, multiple m. **plasma cell m., peripheral**, plasmacytoma.

myelomalacia (mi''ē-lo-mah-la'she-ah) [*myelo-* + Gr. *malakia* softening] morbid softening of the spinal cord.

myelomatoid (mi''ē-lo'mah-toid) resembling myeloma.

myelomatosis (mi''ē-lo-mah-to'sis) multiple myeloma.

myelomenia (mi''ē-lo-me'ne-ah) [*myelo-* + Gr. *mēn* month] menstrual hemorrhage into the spinal cord, associated with plaques of endometriosis in the spinal canal.

myelomeningitis (mi''ē-lo-men'in-jit'is) [*myelo-* + *meningitis*] inflammation of the spinal cord and its membranes.

myelomeningocele (mi''ē-lo-mē-ning'go-sēl) [*myelo-* + *meningocele*] hernial protrusion of the cord and its meninges through a defect in the vertebral canal.

myelomere (mi''ē-lo-mēr) [*myelo-* + Gr. *meros* part] one of the segments of the developing brain and spinal cord.

myelomyces (mi''ē-lom'i-sēz) [*myelo-* + Gr. *mykēs* fungus] medullary carcinoma.

myelon (mi''ē-lon) [Gr. *myelos* marrow] (*obs.*) the spinal cord (medulla spinalis [NA]).

myeloneuritis (mi''ē-lo-nu-ri'tis) inflammation of both spinal cord and peripheral nerves.

myelonic (mi''ē-lon'ik) pertaining to the myelon; myeloid.

myelo-optic neuropathy (mi''ē-lo-op'ti-ko-nu-rop'ah-the) a disorder affecting the spinal cord and optic nerve. **subacute m.**, a clinical syndrome reported from Japan affecting the spinal cord, optic nerve, and peripheral nerves, preceded by diarrhea. Symptoms include paresthesia in both lower limbs, gait disturbances, visual disturbances, abnormalities of deep tendon reflexes, and psychic disorders. The hydroxyquinolones (especially clioquinol), taken for gastrointestinal disorders, have been implicated as an etiologic factor. Abbreviated SMON.

myelopathic (mi''ē-lo-path'ik) pertaining to or characterized by myelopathy.

myelopathy (mi''ē-lo-path'ah-the) [*myelo-* + Gr. *pathos* disease] 1. a general term denoting functional disturbances and/or pathological changes in the spinal cord; the term is often used to designate nonspecific lesions, in contrast to inflammatory lesions (myelitis). 2. pathological changes in the bone marrow. **apoplectic form m.**, myelopathy in which paralysis comes on suddenly. **ascending m.**, myelopathy that progresses cephalad along the spinal cord. **compression m.**, myelopathy due to pressure on the spinal cord, as from a tumor. **concussion m.**, myelopathy due to spinal concussion. **descending m.**, myelopathy that progresses caudad along the spinal cord. **focal m.**, myelopathy affecting a small area only, or several small areas. **funicular m.**, myelopathy involving the white matter of the spinal cord, especially the posterior funiculus; it is characteristic of pernicious anemia. **hemorrhagic m.**, myelopathy associated with hemorrhage. **interstitial m.**, sclerosing m. **parenchymatous m.**, myelopathy in which the proper nerve substance of the spinal cord is chiefly affected. **sclerosing m.**, myelopathy marked by hardening of the spinal cord and over-

growth of the glia; called also *interstitial m.* **spondylotic cervical m.**, myelopathy secondary to encroachment of cervical spondylosis upon a congenitally small cervical spinal canal. **systemic m.**, myelopathy which affects distinct tracts or systems in the spinal cord. **transverse m.**, myelopathy which extends across the spinal cord. **traumatic m.**, myelopathy which follows injury to the spinal cord.

myeloperoxidase (mi''ē-lo-per-ok'si-das) a hemoprotein which has peroxidase activity, occurring in the primary granules of promyelocytes, myelocytes, and neutrophils, and which exhibits bactericidal, fungicidal, and viricidal properties.

myelopetal (mi''ē-lo-pē-tal) [*myelo-* + *L. petere* to seek for] moving toward the spinal cord.

myelophage (mi''ē-lo-fāj'') [*myelo-* + *Gr. phagein* to eat] a macrophage which digests or breaks down myelin.

myelophthisis (mi''ē-lof'thi-sis) [*myelo-* + *Gr. phthisis* wasting] 1. wasting of the spinal cord. 2. reduction of the cell-forming functions of the bone marrow; see *aleukia haemorrhagica*.

myeloplague (mi-el'o-plak) myeloplax.

myeloplast (mi''ē-lo-plast'') [*myelo-* + *Gr. plastos* formed] any leukocyte of the bone marrow.

myeloplax (mi-el'o-plaks'') [*myelo-* + *Gr. plax* plate] any multinuclear giant cell of the bone marrow.

myeloplegia (mi''ē-lo-ple'je-ah) [*myelo-* + *Gr. plēgē* stroke] spinal paralysis.

myelopoiesis (mi''ē-lo-poi-e'sis) [*myelo-* + *Gr. poiein* to form] the formation of bone marrow or the cells that arise from it. **ectopic m.**, **extramedullary m.**, the formation of myeloid tissue outside the bone marrow.

myelopore (mi''ē-lo-pōr) [*myelo-* + *Gr. poros* opening] a canal or opening in the spinal cord.

myeloproliferative (mi''ē-lo-pro-lif'er-a'tiv) pertaining to or characterized by medullary and extramedullary proliferation of bone marrow constituents; see *myeloproliferative syndrome*.

myeloradiculitis (mi''ē-lo-rah-dik'u-li'tis) [*myelo-* + *L. radculus* rootlet + *-itis*] inflammation of the spinal cord and the posterior nerve roots.

myeloradiculodysplasia (mi''ē-lo-rah-dik'u-lo-dis-pla'ze-ah) developmental abnormality of the spinal cord and spinal nerve roots.

myeloradiculopathy (mi''ē-lo-rah-dik'u-lo-p'ah-the) disease of the spinal cord and spinal nerve roots.

myelorrhagia (mi''ē-lo-ra'je-ah) [*myelo-* + *Gr. rhēgnynai* to burst forth] hematomyelia.

myelosarcoma (mi''ē-lo-sar-ko'mah) a sarcomatous growth made up of myeloid tissue or bone marrow cells.

myelosarcomatosis (mi''ē-lo-sar-ko'mah-to'sis) myelomatosis.

myeloschisis (mi''ē-lo-s'ki-sis) [*myelo-* + *Gr. schisis* cleft] a developmental anomaly characterized by a cleft spinal cord, owing to failure of the neural plate to form a complete tube or to rupture of the neural tube after closure.

myeloscintogram (mi''ē-lo-sin'to-gram) the graphic record of particles counted by a scintillation counter after injection into the subarachnoid space of a solution containing a radioactive isotope.

myelosclerosis (mi''ē-lo-skle-ro'sis) 1. sclerosis of the spinal cord. 2. a condition characterized by obliteration of the normal marrow cavity by the formation of small spicules of bone, the pathogenesis possibly being similar to that of myelofibrosis; called also *osteosclerosis myelofibrosis*. 3. myelofibrosis.

myelosis (mi''ē-lo'sis) 1. the proliferation of marrow tissue which produces the blood changes of myelocytic leukemia; myelocytosis. 2. the formation of a tumor of the spinal cord. **aleukemic m.**, agnogenic myeloid metaplasia; see also *pseudoleukemia*. **chronic nonleukemic m.**, agnogenic myeloid metaplasia. **erythremic m.**, a malignant blood dyscrasia regarded as one of the myeloproliferative disorders and characterized by progressive anemia, megaloblastic erythroid hyperplasia, myeloid dysplasia, hepatosplenomegaly, and hemorrhagic phenomena. Called also *Di Guglielmo's disease* or *syndrome*. Cf. *erythroleukemia*. **funicular m.**, myelosis marked by degenerative foci in the white substance of the spinal cord. **nonleukemic m.**, agnogenic myeloid metaplasia.

myelospasm (mi''ē-lo-spazm) [*myelo-* + *spasm*] (obs.) spasm due to disease of the spinal cord.

myelospongium (mi''ē-lo-spon'je-um) [*myelo-* + *Gr. spongos* sponge] the network from which the neuroglial tissue is developed: it pervades the embryonic neural tube, and is composed of the spongioblasts and their branching processes.

myelosuppressive (mi''ē-lo-sū-pres'iv) 1. inhibiting bone marrow activity, resulting in decreased production of blood cells and platelets. 2. an agent having such properties.

myelosophilis (mi''ē-lo-sif'i-lis) syphilis of the spinal cord.

myelosophilosis (mi''ē-lo-sif'i-lo'sis) any syphilitic affection of the spinal cord.

myelosyringosis (mi''ē-lo-sir'ing-go'sis) [*myelo-* + *Gr. syrinx* pipe] syringomyelia.

myelotherapy (mi''ē-lo-ther'ah-pe) [*myelo-* + *therapy*] the therapeutic use of bone marrow.

myelotome (mi-el'o-tōm) [*myelo-* + *Gr. tomē* a cut] 1. an instrument for making sections of the spinal cord. 2. an instrument used for cutting the spinal cord squarely across in removing the brain in postmortem examinations.

myelotomy (mi''ē-lo-tō-me) the operation of severing tracts in the spinal cord. **commissural m.**, longitudinal division of the spinal cord, to sever crossing sensory fibers and produce localized analgesia.

myelotoxic (mi''ē-lo-tok'sik) [*myelo-* + *Gr. toxikon* poison] 1. destructive to bone marrow. 2. arising from diseased bone marrow.

myelotoxicity (mi''ē-lo-toks-is'i-te) the quality of being myelotoxic.

myelotoxin (mi''ē-lo-tok'sin) a cytotoxin which causes destruction of the bone marrow cells.

myenteric (mi''en-ter'ik) pertaining to the myenteron; see also under *plexus* and *reflex*.

myenteron (mi-en'ter-on) [*my-* + *Gr. enteron* intestine] the muscular coat of the intestine.

myesthesia (mi''es-the'ze-ah) [*my-* + *Gr. aisthēsis* perception] muscle sensibility; sensibility to impressions coming from the muscles.

myiasis (mi'yah-sis) [*Gr. myia* fly + *-iasis*] a condition caused by infestation of the body by fly maggots. **creeping m.**, larva migrans caused by fly larvae. **cutaneous m.**, see *larva migrans*. **dermal m.**, see *larva migrans*. **m. dermatosa**, infection of the skin with the larvae of flies. **intestinal m.**, the presence of living fly larvae in the intestines. **m. linearis**, larva migrans caused by fly larvae. **nasal m.**, myiasis produced by living fly larvae in the nasal passages. **traumatic m.**, maggot infestation of wounds or ulcers.

myiocephalon (mi'yo-sef'ah-lon) [*Gr. myia* fly + *kephalē* head] projection of the iris through a rent in the cornea.

myiocephalum (mi'yo-sef'ah-lum) myiocephalon.

myiodesopsia (mi'yo-des-op'se-ah) [*Gr. myiōdes* flylike + *opsis* vision + *-ia*] the appearance of muscae volitantes.

myiosis (mi-yo'sis) myiasis.

myitis (mi-i'tis) [*my-* + *-itis*] inflammation of a muscle; myositis.

myko- for words beginning thus, see those beginning *myco-*.

Mylaxen (mi-lak'sin) trademark for a preparation of hexafluorenum bromide.

Myleran (mil'er-an) trademark for a preparation of busulfan.

Mylicon (mi'li-kon) trademark for preparations of simethicone.

myo-, my- [*Gr. mys* muscle] a combining form denoting relationship to muscle.

myoalbumin (mi'o-al-bu'min) an albumin constituting about one per cent of the protein of muscle.

myoarchitectonic (mi'o-ar'ke-tek-ton'ik) [*myo-* + *architectonic*] pertaining to the structure of muscle.

myoasthenia (mi'o-as-the'ne-ah) amyosthenia.

myoatrophy (mi'o-at'ro-fe) myatrophy.

myoblast (mi'o-blast) [*myo-* + *Gr. blastos* germ] an embryonic cell which becomes a cell of the muscle fiber.

myoblastic (mi'o-blas'tik) pertaining to a myoblast.

myoblastoma (mi'o-blas-to'mah) a benign circumscribed tumor-like lesion of soft tissue; see *granular cell tumor*, under *tumor*. **granular cell m.**, see under *tumor*.

myoblastomyoma (mi'o-blas'to-mi-o'mah) myoblastoma.

myobradia (mi'o-bra'de-ah) [*myo-* + *Gr. bradys* slow + *-ia*] a slow, sluggish reaction of muscle to electric stimulation.

myocardiac (mi'o-kar'de-ak) myocardial.

myocardial (mi'o-kar'de-al) pertaining to the muscular tissue of the heart; see also under *infarction*.

myocardiogram (mi'o-kar'de-o-gram) a tracing made by the myocardiograph.

myocardiograph (mi'o-kar'de-o-graf'') [*myo-* + *Gr. kardia* heart + *graphein* to record] an instrument for making a tracing of the movements of the heart muscles.

myocardiolysis (mi'o-kar'de-ol'i-sis) local necrosis of the myocardial fibers due to arterial obstruction, in which the fibers are replaced by scar tissue and often, especially when complicated by thrombosis, leading to gross infarction.

myocardiopathy (mi'o-kar'de-op'ah-the) any noninflammatory disease of the muscular walls (myocardium) of the heart. **alcoholic m.**, a form attributed to ingestion of large amounts of alcohol over an extended period of time, characterized chiefly by enlargement of the heart and myocardial degenerative changes, particularly evident on electron microscopy. **chagasic m.**, myocardiopathy with saccular apical ventricular aneurysm associated with Chagas' disease.

myocardiorrhaphy (mi'o-kar'de-or'ah-fe) suture of wounds of the myocardium.

myocardiosis (mi''o-kar''de-o'sis) myocardiosis.

myocarditic (mi''o-kar-dit'ik) pertaining to myocarditis.

myocarditis (mi''o-kar-di'tis) [*myo* + Gr. *kardia* heart + *-itis*] inflammation of the myocardium; inflammation of the muscular walls of the heart. **acute bacterial m.**, acute myocarditis due to bacterial infection. **acute isolated m.**, acute interstitial myocarditis of unknown etiology, marked by sudden onset, absence of endocarditis or pericarditis, and frequently by a fatal outcome; called also *Fiedler's m.* and *idiopathic m.* **chronic m.**, chronic myocardial inflammatory disease; often used loosely to indicate any myocardial deficiency. **diphtheritic m.**, acute myocarditis leaving no permanent damage, occurring in diphtheria. **fibrous m.**, chronic interstitial m. **Fiedler's m.**, acute isolated m. **fragmentation m.**, fragmentation of the myocardium. **giant cell m.**, a granulomatous form of myocarditis in which large discrete foci form, each containing many lymphocytes and macrophages, and sometimes multinucleate giant cells not unlike those found in tuberculosis; called also *tuberculoïd myocarditis*. **idiopathic m.**, acute isolated m. **interstitial m.**, myocarditis affecting chiefly the interstitial fibrous tissue. **parenchymatous m.**, myocarditis affecting chiefly the muscle substance itself. **rheumatic m.**, a common sequela of rheumatic fever characterized histologically by perivascular granulomata known as Aschoff bodies or nodules. **toxic m.**, myocarditis due to poisoning by drug or to toxins of infecting organisms reaching the heart through the blood stream, as in diphtheria. **tuberculoïd m.**, giant cell m. **tuberculous m.**, tuberculosis of the myocardium.

myocardium (mi''o-kar''de-um) [*myo* + Gr. *kardia* heart] [NA] the middle and thickest layer of the heart wall, composed of cardiac muscle.

myocardosis (mi''o-kar-do'sis) a general term for disorders of the myocardium which are not inflammatory, but which may result from hypertension, coronary sclerosis, and hyperthyroidism.

myoceles (mi'o-sēl) [*myo* + Gr. *kēlē* hernia] hernia of muscle; protrusion of a muscle through its ruptured sheath.

myocelialgia (mi'o-se''le-al''je-ah) [*myo* + Gr. *koilia* belly + *-algia*] pain in the abdominal muscles.

myocelitis (mi'o-se-li'tis) [*myo* + Gr. *koilia* belly + *-itis*] inflammation of the muscles of the abdomen.

myocellulitis (mi''o-sel''u-li'tis) myositis conjoined with cellulitis.

myoceptor (mi'o-sep''tor) [*myo* + L. *capere* to take] end-plate.

myocerosis (mi''o-se-ro'sis) [*myo* + Gr. *kēros* wax] waxy degeneration of muscle.

myochorditis (mi''o-kor-di'tis) [*myo* + Gr. *chordē* cord + *-itis*] inflammation of the muscles of the vocal cords.

myochrome (mi'o-krōm) [*myo* + Gr. *chrōma* color] any member of a group of muscle pigments; see *cytochrome* (def. 1) and *myohematin*.

Myochrysin (mi''o-kri'sin) trademark for a preparation of gold sodium thiomalate.

myocinesimeter (mi''o-sin''ē-sim'ē-ter) myokinesimeter.

myoclonia (mi''o-klo'ne-ah) any disorder characterized by myoclonus. **m. epilep'tica**, myoclonus epilepsy. **m. fibrilla'ris multiplex**, myokymia. **fibrillary m.**, the twitching of the fibrils of a muscle; see *fibrillation*, def. 2. **pseudoglottic m.**, hiccup.

myoclonic (mi''o-klon'ik) relating to or marked by myoclonus.

myoclonus (mi-ok''lo-nus) [*myo* + Gr. *klonos* turmoil] shock-like contractions of a portion of a muscle, an entire muscle, or a group of muscles, restricted to one area of the body or appearing synchronously or asynchronously in several areas. **m. multiplex**, paramyoclonus multiplex. **palatal m.**, a condition characterized by a rapid rhythmic, up-and-down movement of one or both sides of the palate, often accompanied by ipsilateral synchronous clonic movements of muscles of the face, tongue, pharynx, and diaphragm. Called also *palatal nystagmus*.

myocele (mi'o-sēl) [*myo* + Gr. *koilia* cavity] the cavity within a myotome (def. 2).

myocolpitis (mi''o-kol-pi'tis) [*myo* + Gr. *kolpos* vagina + *-itis*] inflammation of the muscular layers of the vaginal wall.

myocoma (mi''o-kom'ah) [*myo* + Gr. *komma* cut] 1. a myotome or muscle segment, as in a fish. 2. the septum between two adjacent myotomes.

myocrismus (mi''o-kris'mus) [*myo* + Gr. *krizein* to creak] a sound heard on auscultation over a contracting muscle.

myoctonine (mi-ok''to-nin) [*myo* + Gr. *kteinēin* to kill] a poisonous alkaloid, C₃₆H₄₂N₂O₁₀, from *Aconitum lycoctonum*.

myoculator (mi-ok''u-la''tor) [*myo* + L. *oculus* eye] an ocular instrument, on the principle of the orthoptoscope, which allows fusion and movement laterally, vertically, and in rotation.

myocyte (mi''o-sit) [*myo* + *-cyte*] 1. a cell of the muscular tissue. 2. the innermost layer of myonemes in the ectoplasm of certain gregarine protozoans. **Anichkov's m.**, a myocyte found in Aschoff's bodies, having a serrated bar of chromatin in its nucleus; called also *cardiac histiocyte*.

myocytolysis (mi''o-si-to'l'i-sis) disintegration of muscle fibers. **focal m. of heart**, a miliary lesion characterized by loss of muscular syncytium, preservation of stroma, absence of inflammatory reaction, and eventual necrosis.

myocytoma (mi''o-si-to'mah) a tumor made up of myocytes or muscle cells.

myodegeneration (mi''o-de-jen''er-a'shun) [*myo* + *degenera-tion*] degeneration of muscle.

myodemia (mi''o-de'me-ah) [*myo* + Gr. *dēmos* fat] fatty degeneration of muscle.

myodesopsia (mi''o-des-op'se-ah) myiodesopsia.

myodiastasis (mi''o-di-as'tah-sis) [*myo* + Gr. *diastasis* separation] separation of a muscle.

myodioter (mi''o-di-op'ter) the force of ciliary muscle contraction necessary to raise the refraction of the emmetropic eye by 1 diopter from a state of rest.

myodynamic (mi''o-di-nam'ik) relating to muscular force.

myodynamics (mi''o-di-nam'iks) the physiology of muscular action.

myodynamometer (mi''o-di''nah-mom'ē-ter) [*myo* + Gr. *dynamis* power + *metron* measure] a device for testing the power of the muscles.

myodynia (mi''o-din'e-ah) [*myo* + Gr. *odynē* pain] pains in a muscle; myalgia. **hysterical m.**, muscular pain or tenderness, generally in the ovarian region, in hysteria.

myodystonia (mi''o-dis-to'ne-ah) [*myo* + *dys* + Gr. *tonostension* + *-ia*] disorder of muscular tone.

myodystony (mi''o-dis'to-ne) myodystonia.

myodystrophia (mi''o-dis-tro'fe-ah) muscular dystrophy; myotonia atrophica. **m. feta'lis**, amyoplasia congenita.

myodystrophy (mi''o-dis'tro-fe) myodystrophia.

myoedema (mi''o-ē-de'mah) [*myo* + Gr. *oidēma* swelling] 1. edema of a muscle. 2. mounding.

myoelastic (mi''o-e-las'tik) composed of elastic fibers associated with smooth muscle cells.

myoelectric, myoelectrical (mi''o-e-lek'trik; mi''o-e-lek'tri-kal) pertaining to the electric or electromotive properties of muscle.

myoendocarditis (mi''o-en''do-kar-di'tis) combined myocarditis and endocarditis.

myoepithelial (mi''o-ep'i-the'le-al) pertaining to or composed of myoepithelium.

myoepithelioma (mi''o-ep'i-the'le-o'mah) a tumor composed of outgrowths of myoepithelial cells from the acini or, occasionally, the ducts of a sweat gland; it is usually well delineated by a condensation of connective tissue around it.

myoepithelium (mi''o-ep'i-the'le-um) [*myo* + *epithelium*] tissue made up of contractile epithelial cells.

myofascitis (mi''o-fah-si'tis) [*myo* + *fascitis*] inflammation of a muscle and its fascia, particularly of the fascial insertion of muscle to bone.

myofibril (mi''o-fi'bril) a muscle fibril, one of the slender threads which can be rendered visible in a muscle fiber by maceration in certain acids. They run parallel with the long axis of the fiber, and are composed of numerous myofilaments (q.v.).

myofibrilla (mi''o-fi-bril'ah), pl. *myofibril'lae*. A myofibril.

myofibrillae (mi''o-fi-bril'e) plural of *myofibrilla*.

myofibrillar (mi''o-fi'bril-ar) relating to a myofibril.

myofibroblast (mi''o-fi'bro-blast) an atypical fibroblast combining the ultrastructural features of a fibroblast and a smooth muscle cell; it has a highly irregular nucleus, a large amount of rough endoplasmic reticulum, and a dense collection of myofilaments.

myofibroma (mi''o-fi-bro'mah) a tumor containing both muscular and fibrous elements; fibroid leiomyoma.

myofibrosis (mi''o-fi-bro'sis) [*myo* + L. *fibra* fiber] replacement of muscle tissue by fibrous tissue. **m. cor'dis**, myofibrosis of the heart.

myofibrositis (mi''o-fi'bro-si'tis) inflammation of the perimysium; perimysitis.

myofilament (mi''o-fil'ah-ment) [*myo* + *filament*] any of the numerous ultramicroscopic threadlike structures occurring in bundles in the myofibrils of striated muscle fibers. The thick filaments are composed of myosin, the thin ones of actin; together they are responsible for the contractile properties of muscle.

myofunctional (mi''o-funk'shun-al) pertaining to muscular function: a term applied to various exercises prescribed to eliminate abnormal perioral muscle function associated with various types of malocclusion.

myogelosis (mi''o-jē-lo'sis) [*myo* + L. *gelare* to freeze] an area of hardening in a muscle, especially in the gluteus muscle.

myogen (mi''o-jen) [*myo* + Gr. *gennan* to produce] an albumin-like protein, constituting 10 per cent of the protein of muscle; it is spontaneously coagulable, passing first into soluble myogen fibrin, and then into myosin fibrin. Cf. *myosin*.

myogenesis (mi'ō-jen'ē-sis) the development of muscle tissue, especially its embryonic development.

myogenetic (mi'ō-jē-net'ik) pertaining to myogenesis.

myogenic (mi'ō-jen'ik) giving rise to or forming muscle tissue.

myogenous (mi-ōj'ē-nus) originating in muscle tissue.

myoglia (mi-og'le-ah) [*myo-* + Gr. *glia* glue] a fibrillar substance formed by muscle cells, and present only during early embryogenesis of muscle fibers; called also *border fibrils*.

myoglobin (mi'ō-glo'bin) the oxygen-transporting pigment of muscle, a conjugated protein resembling a single subunit of hemoglobin, being composed of one globin polypeptide chain and one heme group (containing one iron atom); it combines with oxygen released by erythrocytes, stores it, and transports it to the mitochondria of muscle cells, where it generates energy by combustion of glucose to carbon dioxide and water.

myoglobinuria (mi'ō-glo'bin-u're-ah) the presence of myoglobin in the urine, as in deficiency of muscle phosphorylase, in crush injuries, and after vigorous and prolonged exercise in susceptible persons. **idiopathic m.**, Meyer-Betz disease. **spontaneous m.**, Meyer-Betz disease.

myoglobulin (mi'ō-glob'u-lin) [*myo-* + *globulin*] a globulin found in muscle serum.

myoglobulinuria (mi'ō-glob'u-lin-u're-ah) the presence of myoglobulin in the urine.

myognathus (mi-og'nah-thus) [*myo-* + Gr. *gnathos* jaw] a monster with a supernumerary lower jaw attached to the normally placed lower jaw.

myogram (mi'ō-gram) [*myo-* + Gr. *gramma* writing] the record or tracing made by a myograph.

myograph (mi'ō-graf) [*myo-* + Gr. *graphein* to record] an apparatus for recording the effects of a muscular contraction.

myographic (mi'ō-graf'ik) pertaining to a myograph or to myography.

myography (mi-og'rah-fe) [*myo-* + Gr. *graphein* to record] 1. the use of the myograph. 2. a description of the muscles. 3. roentgenography of muscle tissue after injection of an opaque medium.

myohematin (mi'ō-hem'ah-tin) [*myo-* + *hematin*] MacMunn's name for the cytochrome of muscle tissue, an iron-containing catalyst of tissue oxidation; see *cytochrome*, def. 1.

myohemoglobin (mi'ō-he'mo-glo'bin) myoglobin.

myohypertrophy (mi'ō-hi'per-tro'fe-ah) muscular hypertrophy. **m. kymoparalytica**, a muscular dystrophy, with paralysis, described by Oppenheim (1914).

myoid (mi'oid) [*myo-* + Gr. *eidos* form] 1. resembling or like a muscle. 2. a substance resembling muscle. **cone m.**, the contractile portion of the inner member of the visual cones. **rod m.**, the contractile portion of the inner member of the visual rods.

myoidem (mi-oi'dem) myoedema.

myoidema (mi'oi-de'mah) myoedema.

myoideum (mi-oi'de-um) myoid tissue.

myoidism (mi-oi-id'izm) [*myo-* + Gr. *idios* own] idiomuscular contraction.

myo-inositol (mi'ō-in-ō'sī-tol) inositol, def. 2.

myoischemia (mi'ō-is-ke'me-ah) [*myo-* + *ischemia*] local deficiency of blood supply in muscle.

myokerosis (mi'ō-ke-ro'sis) [*myo-* + Gr. *kēros* wax] myocerosis.

myokinase (mi'ō-kin'ās) adenylate kinase.

myokinesimeter (mi'ō-kin'ē-sim'ē-ter) [*myokinesis* + Gr. *metron* measure] an apparatus for measuring muscular contraction aroused by stimulation by an electric current.

myokinesis (mi'ō-ki-ne'sis) [*myo-* + Gr. *kinēsis* motion] movement of muscles, especially displacement of muscle fibers in operation.

myokinetic (mi'ō-ki-net'ik) 1. pertaining to or characterized by myokinesis. 2. pertaining to the motion or kinetic function of muscle, as contrasted with the myotonic or tonic function.

myokinin (mi'ō-kin'in) a base, C₁₁H₂₈N₂O₃, found in muscle.

myokymia (mi'ō-kim'e-ah) [*myo-* + Gr. *kyma* wave] a benign condition marked by brief spontaneous tetanic contractions of motor units or groups of muscle fibers, usually adjacent groups of fibers contracting alternately. Called also *myoclonia fibrillaris multiplex*.

myolemma (mi'ō-lem'ah) [*myo-* + Gr. *lemma* sheath] the sarcolemma.

myolin (mi'ō-lin) the supposed material of the muscular fibrils.

myolipoma (mi'ō-li-po'mah) [*myo-* + Gr. *lipos* fat + *-oma*] myoma (leiomyoma) containing fatty or lipomatous elements; called also *benign mesenchymoma*.

myologia (mi'ō-lo'je-ah) myology; in NA terminology, *myologia* encompasses the nomenclature relating to the muscles and to the bursae and synovial sheaths.

myology (mi-ol'o-je) [*myo-* + Gr. *logos* treatise] the scientific study of muscles, and the body of knowledge relating thereto.

myolysis (mi-ol'i-sis) [*myo-* + Gr. *lysis* dissolution] disintegration or degeneration of muscle tissue. **m. cardiotoxica**, degeneration of the heart muscle due to systemic intoxication, as in infectious diseases. **nodular m.**, a condition of the tongue characterized by the formation of a nodule composed of degenerated muscle tissue.

myoma (mi-ō'mah), pl. *myomas* or *myomata* [*myo-* + *-oma*] a tumor made up of muscular elements. **ball m.**, one that is spherical. **m. levicellula're** (*obs.*), leiomyoma. **myoblastic m.**, myoblastoma. **m. pre'vium**, leiomyoma uteri. **m. sarcomato'des**, leiomyosarcoma. **m. striocellula're**, rhabdomyoma. **m. telangiecto'des**, vascular leiomyoma, a tumor consisting of a coil of blood vessels surrounded by a network of muscular fibers; angiomyoma.

myomagenesis (mi-ō'mah-jen'ē-sis) the production or causation of myoma (leiomyoma).

myomalacia (mi'ō-mah-la'she-ah) [*myo-* + Gr. *malakia* softening] morbid softening of a muscle.

myomata (mi-ō'mah-tah) plural of *myoma*.

myomatectomy (mi'ō-mah-tek'to-me) myomectomy, def. 1.

myomatosis (mi'ō-mah-to'sis) the formation of multiple myomas (leiomyomas).

myomatous (mi-ō'mah-tus) pertaining to or of the nature of a myoma (leiomyoma).

myomectomy (mi'ō-mek'to-me) [*myoma* + Gr. *ektomē* excision] 1. surgical removal of a myoma (leiomyoma). 2. myectomy.

myomelanosis (mi'ō-mel'ah-no'sis) [*myo-* + Gr. *melanōsis* blackening] melanosis, or black pigmentation of a portion of the muscular substance.

myomere (mi'ō-mēr) [*myo-* + Gr. *meros* part] myotome, def. 2.

myometer (mi-om'ē-ter) [*myo-* + Gr. *metron* measure] an apparatus for measuring muscle contraction.

myometritis (mi'ō-mē-tri'tis) [*myo-* + Gr. *mētra* womb + *-itis*] inflammation of the muscular substance, or myometrium, of the uterus.

myometrium (mi-ō-mē'tre-um) [*myo-* + Gr. *mētra* uterus] the smooth muscle coat of the uterus which forms the main mass of the organ. NA alternative term for *tunica muscularis uteri*.

myomohysterectomy (mi'ō-mo-his'ter-ek'to-me) [*myoma* + Gr. *hystera* uterus + *ektomē* excision] surgical removal of a myomatous uterus.

myomotomy (mi'ō-mot'o-me) incision into a myoma.

myon (mi'on) [Gr. *mys* muscle + *on* neuter ending] a muscular unit.

myonecrosis (mi'ō-nē-kro'sis) necrosis or death of individual muscle fibers. **clostridial m.**, gas gangrene.

myoneme (mi'ō-nēm) [*myo-* + Gr. *nēma* thread] one of the contractile fibrils in certain protozoa.

myonephropexy (mi'ō-nef'ro-pek-se) [*myo-* + Gr. *nephros* kidney + *pēxis* fixation] the operation of fixing a movable kidney by suturing it to a strap of muscle tissue.

myoneural (mi'ō-nu'ral) [*myo-* + Gr. *neuron* nerve] pertaining to both muscle and nerve; said of the nerve terminations in muscles.

myoneuralgia (mi'ō-nu-ral'je-ah) [*myo-* + *-neuralgia*] muscular neuralgia.

myoneurasthenia (mi'ō-nu'ras-the'ne-ah) [*myo-* + *neurasthenia*] weakness of the muscular system in neurasthenia.

myoneure (mi'ō-nūr) [*myo-* + Gr. *neuron* nerve] a nerve cell which supplies a muscle.

myonosis (mi-on'ō-sus) [*myo-* + Gr. *nosos* disease] myopathy.

myonymy (mi-on'i-me) [*myo-* + Gr. *onoma* name] nomenclature of the muscles.

myopachynsis (mi'ō-pah-kin'sis) [*myo-* + Gr. *pachynsis* thickening] hypertrophy of muscle.

myopalmus (mi'ō-pal'mus) muscle twitching.

myoparalysis (mi'ō-pah-ral'i-sis) [*myo-* + *paralysis*] paralysis of a muscle.

myoparesis (mi'ō-par'ē-sis) muscle weakness.

myopathia (mi'ō-path'e-ah) myopathy. **m. cor'dis**, myocarditis. **m. infraspina'ta**, a condition marked by the sudden development of pain in the shoulder with tenderness in the infraspinatus muscle.

myopathic (mi'ō-path'ik) of the nature of a myopathy.

myopathy (mi-op'ah-the) [*myo-* + Gr. *pathos* suffering] any disease of a muscle. **alcoholic m.**, myopathy affecting alcoholics, commonly characterized by acute myoglobinuria and sometimes by proximal limb weakness. **centronuclear m.**, myotubular m. **distal m.**, that affecting the distal muscles of the hands and feet first; see *late distal hereditary m.* **late distal hereditary m.**, a hereditary disorder, transmitted as an autosomal dominant trait, in which muscular dystrophy starts in the small muscles of the hands and feet and spreads proximally; the onset is usually after the age of 40. Called also *distal muscular dystrophy* and *Gowers type muscular dystrophy*. **myotubular m.**, myopathy characterized by myofibers resembling those of

early fetal muscle, i.e., with the nucleus located centrally and surrounded by a halo of apparently empty space; called also *centronuclear m.* **nemaline m.**, a congenital myofibrillar abnormality in which small threadlike or rod-shaped bodies are scattered through the muscle fibers; it is marked by hypotonia and proximal muscle weakness; called also *rod m.* **ocular m.**, a slowly progressive muscular dystrophy marked by ptosis and progressive immobility of the eyes; usually beginning in adulthood, it is sometimes limited to the levator muscles of the eyes. **rod m.**, nemaline m.

myope (mi'öp) [Gr. *myein* to shut + *ōps* eye] a nearsighted person; one affected with myopia.

myopericarditis (mi'o-per'i-kar-di'tis) myocarditis combined with pericarditis.

myophage (mi'o-fāj) a phagocyte which destroys the contractile substance of muscle.

myophagism (mi-o'fah-jizm) [*myo-* + Gr. *phagein* to eat] the atrophy or wasting away of muscular tissue.

myophone (mi'o-fōn) [*myo-* + Gr. *phōnē* voice] a device which renders audible the sound of a muscular contraction.

myophosphorylase (mi'o-fos-for'i-lās) the phosphorylase of muscle.

myopia (mi-o'pe-ah) [Gr. *myein* to shut + *ōps* eye + *-ia*] that error of refraction in which rays of light entering the eye parallel to the optic axis are brought to a focus in front of the retina, as a result of the eyeball being too long from front to back (*axial m.*) or of an increased strength in refractive power of the media of the eye (*index m.*). Called also *nearsightedness*, because the near point is less distant than it is in emmetropia with an equal amplitude of accommodation. **chronic m.**, defective color vision for objects at a distance. **curvature m.**, a form due to changes in the curvature of the refracting surfaces of the eye. **index m.**, a form due to abnormal refractivity of the mediums of the eye. **malignant m.**, **pernicious m.**, progressive myopia, associated with grave disease of the choroid and leading to retinal detachment and blindness. **prodromal m.**, a condition marked by the return of the ability to do close work without eyeglasses; sometimes seen in incipient cataract. **progressive m.**, myopia that continues to increase in adult life.

myopic (mi-op'ik) pertaining to or affected with myopia; nearsighted.

myoplasm (mi'o-plazm) [*myo-* + Gr. *plasma* something formed] the contractile part of the muscle cell, or myofibril.

myoplastic (mi'o-plas'tik) [*myo-* + Gr. *plassein* to form] performed by the plastic use of muscle; said of operations.

myoplasty (mi'o-plas'te) plastic surgery on muscle; an operation in which portions of partly detached muscle are utilized, especially in the field of defects or deformities.

myopolar (mi'o-po'lar) [*myo-* + *polar*] applied to a muscle between the electrodes of a battery.

myoprotein (mi'o-pro'te-in) a protein obtained from muscle tissue.

myopsis (mi-op'sis) myiodesopsia.

myopsychic (mi'o-si'kik) pertaining to the muscles and the mind—denoting the memory images of muscular activity.

myopsychopathy (mi'o-si-kop'ah-the) [*myo-* + Gr. *psychē* soul + *pathos* disease] any neuromuscular affection associated with mental weakness or disorder.

myopsychosis (mi'o-si-ko'sis) myopsychopathy.

myoreceptor (mi'o-re-sep'tor) a proprioceptor occurring in skeletal muscle.

myorrhaphy (mi-or'ah-fe) [*myo-* + Gr. *rhaphe* suture] suturation of divided muscle; myosuture.

myorrhesis (mi'o-rek'sis) [*myo-* + Gr. *rhēxis* rupture] the rupture of a muscle.

myosalgia (mi'o-sal'je-ah) myalgia.

myosalpingitis (mi'o-sal'pin-jit'is) [*myo-* + *salpingitis*] inflammation of the muscular tissue of the oviduct.

myosalpinx (mi'o-sal'pinks) the muscular tissue of the oviduct.

myosan (mi'o-san) a denatured and insoluble form of myosin.

myosarcoma (mi'o-sar-ko'mah) a malignant tumor derived from myogenic cells.

myoschwannoma (mi'o-shwan-no'mah) schwannoma.

myosclerosis (mi'o-skle-ro'sis) [*myo-* + Gr. *sklēros* hard] hardening or sclerosis of muscle tissue.

myscope (mi'o-skōp) [*myo-* + Gr. *skopein* to examine] 1. an instrument for observing muscle contraction. 2. an ocular instrument, on the principle of the orthoptoscope, which allows fusion and movement laterally, vertically, and in rotation.

myoseism (mi'o-sizm) [*myo-* + Gr. *seismos* shake] jerky, irregular muscular contractions.

myoseptum (mi'o-sep'tum) myocomma.

myoserum (mi'o-se'rum) the juice expressed from muscle.

myosin (mi'o-sin) a globin which is the most abundant protein (68 per cent) in muscle, occurring chiefly in the A band. It is soluble

in salt solution, but on long standing it coagulates into an insoluble protein called *myosin fibrin*. Along with actin (q.v.), it is responsible for the contraction and relaxation of muscle. Myosin has enzymatic properties, acting as an ATP-ase. It is the main constituent of the thick filaments of muscle fibers. Cf. *myogen* and *actomyosin*. **vegetable m.**, a substance resembling myosin, from seeds of various plants.

myosinogen (mi'o-sin'o-jen) [*myosin* + Gr. *gennan* to produce] myogen.

myosinuria (mi'o-sin-u're-ah) [*myosin* + Gr. *ouron* urine + *-ia*] the presence of myosin in the urine.

myosis (mi-o'sis) miosis.

myositic (mi'o-sit'ik) pertaining to myositis.

myositis (mi'o-si'tis) [Gr. *myos* of muscle + *-itis*] inflammation of a voluntary muscle. **acute disseminated m.**, primary multiple m. **acute progressive m.**, a rare disease in which the inflammation gradually involves the whole muscular system and ends in death by asphyxia and pneumonia. **epidemic m.**, epidemic pleurodynia. **m. fibro'sa**, a type in which there is a formation of connective tissue within the muscle substance. **m. a frigo're**, muscular rheumatism resulting from cold or chilling. **infectious m.**, **interstitial m.**, inflammation of the connective and septal elements of muscular tissue. **multiple m.**, polymyositis. **orbital m.**, see under *pseudotumor*. **m. ossif'icans**, myositis which is characterized by bony deposits or by ossification of muscles. **m. ossif'icans circumscripta**, a form marked by the formation of a muscular osteoma, such as rider's bone. **m. ossif'icans progressiva**, a progressive disease, beginning in early life, in which the muscles are gradually converted into bony tissue; called also *progressive ossifying m.* **m. ossif'icans traumatica**, myositis ossificans due to injury. **parenchymatous m.**, that which affects the essential substance of a muscle. **primary multiple m.**, an acute febrile disease characterized by edema and inflammation of the skin and muscles in various parts of the body; called also *acute disseminated m.* and *pseudotrachinosis*. **progressive ossifying m.**, myositis ossificans progressiva. **m. purulen'ta**, a suppurative and gangrenous type, due to a bacterial infection. **rheumatoid m.**, fibrositis. **m. sero'sa**, muscle inflammation characterized by a serous exudation. **suppurative m.**, inflammation of muscle resulting in muscular abscesses or in diffuse suppuration of muscles. **trichinous m.**, that which is caused by the presence of trichinae.

myospasia (mi'o-spa'ze-ah) clonic contraction of muscle; paramyoclonus.

myospasm (mi'o-spazm) [*myo-* + Gr. *spasmos* spasm] spasm of a muscle.

myospasmsia (mi'o-spaz'me-ah) disease characterized by uncontrollable muscular spasm.

myosteoma (mi-os'te-o'mah) [*myo-* + Gr. *osteon* bone + *-oma*] osteogenic sarcoma of soft parts.

myosthenic (mi'os-then'ik) [*myo-* + Gr. *sthenos* strength] pertaining to strength of muscle.

myosthenometer (mi'o-sthen-om'te-ter) [*myo-* + Gr. *sthenos* strength + *metron* measure] an instrument for measuring the power of muscle groups.

myostroma (mi'o-stro'mah) [*myo-* + *stroma*] the stroma or framework of muscle tissue.

myostromin (mi'o-stro'min) a protein occurring in muscle stroma.

myosuria (mi'o-su're-ah) [*myo-* + Gr. *ouron* urine + *-ia*] myosin in the urine.

myosuture (mi'o-su'tūr) [*myo-* + L. *sutura* sewing] the suture of a muscle; myorrhaphy.

myosynizesis (mi'o-sin'i-ze'sis) [*myo-* + Gr. *synizēsis* a sinking down] adhesion of muscles.

myotactic (mi'o-tak'tik) [*myo-* + L. *tactus* touch] pertaining to the proprioceptive sense of muscles.

myotamponade (mi'o-tam'po-nād) extrapleural pneumonolysis in which the cavity is packed with a mass of attached muscle.

myotasis (mi-ot'ah-sis) [*myo-* + Gr. *tasis* stretching] stretching of muscle.

myotatic (mi'o-tat'ik) [*myo-* + Gr. *teinein* to stretch] performed or induced by stretching or extending a muscle.

myotenontoplasty (mi'o-ten-on'to-plas'te) tenomyoplasty.

myotenositis (mi'o-ten'o-si'tis) [*myo-* + Gr. *tenōn* tendon + *-itis*] inflammation of a muscle and its tendon.

myotenotomy (mi'o-ten-ot'o-me) [*myo-* + *tenotomy*] surgical division of the tendon of a muscle.

myothermic (mi'o-ther'mik) [*myo-* + Gr. *thermē* heat] pertaining to temperature changes in muscle produced by its activity.

myotic (mi-ot'ik) miotic (def. 2).

myotility (mi'o-til'i-te) muscular contractility.

myotome (mi'o-tōm) [*myo-* + Gr. *tomē* a cut] 1. an instrument for performing myotomy. 2. the muscle plate or portion of a somite that develops into voluntary muscle; called also *myomere*. 3. a group of muscles innervated from a single spinal segment.

myotomic (mi'o-tom'ik) pertaining to or derived from a myotome.

myotomy (mi-ot'o-me) [*myo-* + Gr. *tomē* a cutting] the cutting or dissection of a muscle or of muscular tissue.

myotone (mi'o-tōn) myotonus.

myotonia (mi'o-to'ne-ah) [*myo-* + Gr. *tonos* tension] increased muscular irritability and contractility with decreased power of relaxation; tonic spasm of muscle. **m. acquis'ita**, tonic muscular spasm developed after injury or in consequence of disease; called also *Talma's disease*. **m. atroph'ica**, *myotonic dystrophy*; see under *dystrophy*. **m. congen'ita**, **m. heredita'ria**, congenital and hereditary disease characterized by tonic spasm and rigidity of certain muscles when an attempt is made to move them after a period of rest or when mechanically stimulated. The stiffness disappears as the muscles are used. It is transmitted as an autosomal dominant trait. Called also *paramyotonia congenita*, *Eulenburg's disease*, and *Thomsen's disease*. **m. dystroph'ica**, myotonic dystrophy. **m. neonato'rum**, tetanism.

myotonic (mi'o-ton'ik) 1. pertaining to or characterized by myotonia. 2. pertaining to the tonic function of muscle, as contrasted with the myokinetic or motion function.

myotonoid (mi-ot'o-noid) [*myo-* + Gr. *tonos* tension + *eidos* form] resembling myotonia; said of reactions in muscle which are marked by slow contraction or relaxation.

myotonometer (mi'o-to-nom'ē-ter) [*myotonia* + Gr. *metron* measure] an instrument for measuring muscular tonus.

myotonus (mi-ot'o-nus) tonic spasm of a muscle or of a group of muscles.

myotomy (mi-ot'o-ne) myotonia.

myotrophic (mi'o-tro'fik) 1. increasing the weight of muscle. 2. pertaining to myotrophy.

myotrophy (mi-ot'ro-fe) [*myo-* + Gr. *trophē* nutrition] nutrition of muscle.

myotropic (mi'o-trop'ik) [*myo-* + Gr. *tropos* a turning] having an affinity for muscle, as myotropic organisms.

myotube (mi'o-tüb) myotubule.

myotubular (mi'o-tu'bu-lar) relating to a myotubule.

myotubule (mi'o-tu'bül) a developing muscle fiber with a centrally, rather than peripherally, located nucleus.

myovascular (mi'o-vas'ku-lar) [*myo-* + *vascular*] pertaining to a muscle and its blood vessels.

myrcene (mer'sēn) an essential oil from the oil of bay; it is an olefinic terpene, $C_{10}H_{16}$, used in perfumery and pharmaceuticals as an odorant.

myria- [Gr. *myrios* numberless] a combining form meaning a great number.

myriachit (mir'e'ah-chit) [Russian] Gilles de la Tourette's syndrome.

Myriangiales (mir'e-an'je-a'lēz) an order of ascomycetous fungi (subclass Loculoascomycetaceae), in which the asci are formed in locules scattered throughout the ascocarp (fruiting body). They are usually parasites of higher plants, although a few are insect parasites; the order includes the family Piedraiceae.

myriapod (mir'e-ah-pod) a member of the Myriapoda; a centipede or millipede.

Myriapoda (mir'e-ap'o-dah) [*myria-* + Gr. *pous* foot] a superclass of arthropods, including the classes Chilopoda (centipedes) and Diplopoda (millipedes).

myrica (mir-i'kah) the dried bark of the root of *Myrica cerifera* L. (Myricaceae), bayberry or wax myrtle, formerly used internally as an emetic and astringent, and externally in the treatment of indolent ulcers.

myricin (mir'i-sin) [L. *myrica* myrtle] 1. a crystallizable principle, $C_{30}H_{51} \cdot C_{16}H_{31}O_2$, from yellow wax (beeswax). 2. a medicinal concentration prepared from *Myrica cerifera*, or wax myrtle; used like myrica.

myricyl (mir'i-sil) the radical, $C_{30}H_{51}$, occurring in beeswax and other waxes.

myringa (mī-ring'gah) [L.] the membrana tympani.

myringectomy (mir'in-jek'to-me) myringodectomy.

myringitis (mir'in-jit'is) [*myringa* + *-itis*] inflammation of the membrana tympani. **m. bullo'sa**, **bullous m.**, a form of viral otitis media in which serous or hemorrhagic blebs appear on the membrana tympani and often on the adjacent wall of the auditory meatus.

myringo- [L. *myringa* drum membrane] a combining form denoting relationship to the membrana tympani.

myringodectomy (mī-ring'go-dek'to-me) [*myringo-* + Gr. *ektomē* excision] surgical removal of the membrana tympani.

myringodermatitis (mī-ring'go-der'mah-ti'tis) [*myringo-* + Gr. *derma* skin] inflammation of the outer layer of the membrana tympani, with the formation of blebs.

myringomycosis (mī-ring'go-mi-ko'sis) [*myringo-* + Gr. *mykēs* fungus] disease of the membrana tympani caused by a fungus;

otomycosis. **m. aspergilli'na**, infection of the membrana tympani by an aspergillus; see *otomycosis*.

myringoplasty (mī-ring'go-plas'te) [*myringo-* + Gr. *plassein* to form] surgical restoration of a perforated tympanic membrane by grafting. See also *tympanoplasty*.

myringorupture (mī-ring'go-rup'chur) rupture of the membrana tympani.

myringostapediopexy (mī-ring'go-stah-pe'de-o-pek'se) fixation of the pars tensa of the membrana tympani to the head of the stapes.

myringotome (mī-ring'go-tōm) a knife for use in operating upon the membrana tympani.

myringotomy (mī-ring'go'to-me) [*myringo-* + Gr. *tomē* a cutting] surgical incision of the membrana tympani; tympanotomy.

myrinx (mī'rinks) membrana tympani.

myristate (mēr'is-tāt) tetradecanoate: the ionic form of myristic acid, a naturally occurring fatty acid. **isopropyl m.**, see under *isopropyl*.

Myristica (mī-ris'tī-kah) [L.; Gr. *myrizein* to anoint] a genus of trees of tropical countries. *M. fragrans* Houtt. (Myristicaceae), the nutmeg tree, is the source of myristica. *M. ocuba* is the source of ocuba wax.

myristica (mī-ris'tī-kah) nutmeg; the dried ripe seed of *Myristica fragrans* Houtt. (Myristicaceae) deprived of its seed coat and arillode and with or within a coating of lime. It is the source of nutmeg oil, which is used as a flavoring agent in pharmaceutical preparations. It has stimulating aromatic, carminative, and psychomimetic properties.

myristicene (mī-ris'tī-sēn) a fragrant eleopten, $C_{10}H_{14}$, from nutmeg (myristica) oil.

myristicol (mī-ris'tī-kol) a stearopten, or camphor, $C_{10}H_{16}O$, from nutmeg (myristica) oil.

myristin (mī-ris'tin) chemical name: glyceryl trimyristate, $C_{39}H_{76}(C_{14}H_{27}O_2)_3$, found in spermaceti and many vegetable oils and fats, especially coconut oil and fixed nutmeg (myristica) oil.

myrmecia (mur-me'she-ah) [Gr. *myrmēx* ant + *-ia*] a wart resembling somewhat an anthill.

myronate (mī-ro-nāt) any salt of myronic acid (derivable from black mustard). **potassium m.**, sinigrin.

myrosin (mī-ro-sin) thioglucosidase.

myrosinase (mī-ro'sī-nās) thioglucosidase.

myrrh (mur) the oleo-gum-resin obtained from species of East Indian and African trees, e.g., *Commiphora abyssinica* (Berg) Eng. (Burseraceae); it has been used as a carminative and a topical oral stimulant.

myrrholin (mur'o-lin) a mixture of myrrh and fat in equal parts, used as a vehicle for the administration of creosote.

myrtenol (mur'tē-nol) a terpene alcohol, $(CH_3)_2C:C_6H_7 \cdot CH_2OH$, from the volatile oil distilled from the leaves of *Myrtus communis* (Myrtaceae).

myrtiform (mur'tī-form) [L. *myrtiformis*; *myrtus* myrtle + *forma* shape] shaped like the leaf or berry of the myrtle.

Myrtus (mur'tus) [L.; Gr. *myrtos*] a genus of myrtaceous trees. **M. commu'nis**, L. (Myrtaceae), the Old World myrtle, a species affording leaves which are antiseptic and astringent.

Mysoline (mī'so-lēn) trademark for preparations of primidone.

mysophilia (mī'so-fil'e-ah) [Gr. *mysos* uncleanness of body or mind + Gr. *philein* to love] a form of paraphilia in which there is a lustful attitude toward excretions.

mysophobia (mī'so-fō-be-ah) [Gr. *mysos* uncleanness of body or mind + *phobia*] morbid dread of filth or contamination.

mysophobiaic (mī'so-fō-be-ak) a person affected with mysophobia.

mysophobic (mī'so-fō-bik) pertaining to or characterized by mysophobia.

mystin (mis'tin) a milk preservative, consisting of formaldehyde and sodium nitrite.

mytacism (mī'tah-sizm) [Gr. *mytakismos*] too free use of m sounds in utterance.

Mytelase (mī'tē-lās) trademark for a preparation of ambenonium chloride.

mythomania (mith'o-ma'ne-ah) [Gr. *mythos* myth + *mania* madness] a morbid propensity to lie or to exaggerate.

mythophobia (mith'o-fō-be-ah) [Gr. *mythos* myth + *phobia*] morbid fear of myths or of stating an untruth.

mytilocongestin (mit'i-lo-kon-jes'tin) [Gr. *mytilos* mussel + *congestion*] a toxic substance derived from mussels of the species *Mytilus edulis* which, when injected in laboratory animals, causes intense congestion of the splanchnic vessels, and hemorrhage.

mytilotoxin (mit'i-lo-tok'sin) a neurotoxic substance from mussels of the genus *Mytilus*; see *gonyaulax poison*, under *poison*.

mytilotoxism (mit'i-lo-tok'sizm) poisoning due to ingestion of mussels contaminated with mytilotoxin.

myx- see *myxo-*.

myxadenitis (miks'ad-ē-ni'tis) [*myxo-* + Gr. *adēn* gland + *-itis*]

inflammation of a mucous gland. **m. labia/lis**, see *cheilitis glandularis*.

myxadenoma (miks''ad-ě-no'mah) [*myxo-* + *adenoma*] an epithelial tumor with the structure of a mucous gland; mucinous adenoma.

myxangitis (miks''an-ji'tis) [*myxo-* + Gr. *angeion* vessel + *-itis*] inflammation of the ducts of mucous glands.

myxangoitis (miks''an-go-i'tis) myxangitis.

myxasthenia (miks''as-the-ne'ah) [*myxo-* + Gr. *astheneia* weakness] deficiency in the secretion of mucus.

myxedema (mik''sē-de'mah) [*myxo-* + Gr. *oidēma* swelling] a condition characterized by a dry, waxy type of swelling, with abnormal deposits of mucin in the skin (mucinoses) and other tissues, and associated with hypothyroidism. The edema is of the nonpitting type, and the facial changes are strikingly distinctive, with swollen lips and a thickened nose. The term myxedema is sometimes used interchangeably with adult hypothyroidism. Cf. *lichen myxedematosus*. **circumscribed m.**, pretibial m. **congenital m.**, cretinism. **infantile m.**, myxedema beginning during infancy in association with hypothyroidism developing after birth; called also *Brissaud's infantilism*. **nodular m.**, pretibial m. **operative m.**, myxedema developing subsequent to surgical removal of the thyroid gland. **papular m.**, lichen myxedematosus. **pituitary m.**, myxedema associated with hypothyroidism occurring as a consequence of deficient secretion of thyrotropic hormone by the anterior pituitary gland. **pretibial m.**, localized myxedema associated with preceding hyperthyroidism and exophthalmos, occurring typically on the anterior (pretibial) surface of the legs, the mucin deposits appearing as both plaques and papules.

myxedematoid (mik''sē-dem'ah-toid) [*myxedema* + Gr. *eidos* form] resembling myxedema.

myxedematous (mik''sē-dem'ah-tus) pertaining to or characterized by myxedema.

myxidiocy (miks-id'e-o-se) myxidiotie.

myxidiotie (miks-id'e-o-te) myxedema accompanied by defective mental development.

myxiosis (mik''se-o'sis) a discharge of mucus.

myxo-, myx- [Gr. *myxa* mucus] combining form denoting relationship to mucus, or slime.

myxoadenoma (mik''so-ad''ě-no'mah) myxadenoma.

Myxobacterales (mik''so-bak-tě-ra'lēz) an order of class Schizomycetes, made up of unicellular rods which, in the vegetative state, occur in two characteristic shapes, the cylindrical cells having blunt rounded ends, or tapering toward the tips. The cells multiply by binary, transverse fission, and movement is a universal characteristic. The order includes five families, Archangiaceae, Cytophagaceae, Myxococcaceae, Polyangiaceae, and Sorangiaceae, all occurring as saprophytic soil microorganisms.

myxoblastoma (mik''so-blas-to'mah) myxoma.

Myxobolus (miks-ob'o-lus) a genus of sporozoan parasites of the order Myxosporidia, which infect fish. **M. cypri'ni**, a protozoan parasite causing carp-pox. **M. pfeif'feri**, a parasite of fish of the genus *Barbus*.

myxochondrofibrosarcoma (mik''so-kon''dro-fi''bro-sar-ko'mah) malignant mesenchymoma.

myxochondroma (mik''so-kon-dro'mah) chondroma with a stroma resembling primitive mesenchymal tissue.

myxochondrosarcoma (mik''so-kon''dro-sar-ko'mah) malignant mesenchymoma.

Myxococcaceae (mik''so-kok-ka'se-e) a family of Schizomycetes, order Myxobacterales, made up of saprophytic microorganisms found in soil and decaying organic matter, and including four genera, *Myxococcus*, *Chondrococcus*, *Angiococcus*, and *Sporocytophaga*.

Myxococcus (mik''so-kok'us) [*myxo-* + *coccus*] a genus of bacteria of the family Myxococcaceae, found in decaying organic matter.

myxocystitis (mik''so-sis-ti'tis) [*myxo-* + *cystitis*] inflammation of the mucosa of the bladder.

myxocystoma (mik''so-sis-to'mah) myxoma with cystic degeneration.

myxocyte (mik''so-sit) [*myxo-* + *cyte*] one of the characteristic cells of mucous tissue.

myxoenchondroma (mik''so-en''kon-dro'mah) a chondroma in which some of the elements have undergone mucous degeneration.

myxoendothelioma (mik''so-en''do-the''le-o'mah) angioendothelioma with myxomatous degeneration.

myxofibroma (mik''so-fi-bro'mah) a fibroma containing myxomatous tissue.

myxofibrosarcoma (mik''so-fi''bro-sar-ko'mah) fibrosarcoma with myxomatous areas.

myxoglioma (mik''so-gli-o'mah) a glioma which has undergone myxomatous degeneration.

myxoglobulosis (mik''so-glob''u-lo'sis) [*myxo-* + *globule* + *-osis*] a cystic condition of the appendix marked by the presence in the cysts of globoid bodies of mucinous character.

myxoid (mik''soid) [*myxo-* + Gr. *eidos* form] resembling mucus.

myxoinoma (mik''so-in-o'mah) myxofibroma.

myxolipoma (mik''so-li-po'mah) lipoma with foci of myxomatous degeneration.

myxoma (mik-so'mah), pl. *myxomas* or *myxo'mata* [*myxo-* + *-oma*] a tumor composed of primitive connective tissue cells and stroma resembling mesenchyme. **atrial m.**, a benign gelatinous growth usually pedunculated and usually arising from the interatrial septum of the heart in the region of the fossa ovalis; symptoms may include effort dyspnea, loss of weight, fatigue, low-grade fever, polyneuritis, nausea, and palpitations, and sometimes sudden syncopal attacks related to obstruction. **cystic m.**, one that has undergone cystic degeneration. **enchondromatous m.**, one containing cartilage in the intercellular substance. **erectile m.**, an angioma with myxomatous areas. **m. fibro'sum**, myxofibroma. **infectious m.**, myxomatosis cuniculi. **lipomatous m.**, a lipoma with myxomatous degeneration. **odontogenic m.**, an uncommon tumor of the jaw, apparently arising from the mesenchymal portion of the tooth germ, and possibly produced by myxomatous degeneration of an odontogenic fibroma. **m. sarcomato'sum**, myxosarcoma. **vascular m.**, a myxoma containing many blood vessels.

myxomatosis (mik''so-mah-to'sis) 1. a condition marked by the development of multiple myxomas. 2. myxomatous degeneration. **m. cunic'uli**, **infectious m.**, an infectious, highly fatal, febrile disease of rabbits caused by a virus, and characterized by edematous swelling of the mucous membranes and the presence of myxoma-like tumors of the skin.

myxomatous (mik-so'mah-tus) of the nature of a myxoma.

Myxomycetes (mik''so-mi-se'tēz) [Gr. pl., from *myxo-* + *mykēs* fungus] a group of organisms considered to be closely related to the fungi, but classified by some as protozoa. See *Mycetozoida*.

myxomyoma (mik''so-mi-o'mah) a myoma with myxomatous degeneration.

myxoneurosis (mik''so-nu-ro'sis) [*myxo-* + *neurosis*] a neurosis characterized by deranged mucous secretion. **intestinal m.**, **m. intestina'lis**, an intestinal neurosis marked by the passage of mucous shreds in the stools; mucous colitis.

myxopapilloma (mik''so-pap'i-lo'mah) myxoma combined with papilloma.

myxopoiesis (mik''so-poi-e'sis) [*myxo-* + Gr. *poiēsis* a making, creation] the formation of mucus.

myxorrhoea (mik''so-re'ah) [*myxo-* + Gr. *rhoia* flow] a flow of mucus; blennorrhoea. **m. intestina'lis**, a flow of mucus from the bowel occurring in nervous individuals under mental strain.

myxosarcoma (mik''so-sar-ko'mah) a sarcoma containing myxomatous tissue.

myxosarcomatous (mik''so-sar-ko'mah-tus) relating to or affected with myxosarcoma.

Myxosporidia (mik''so-spo-rid'e-ah) [*myxo-* + *sporidia*] an order of endoparasitic ameoboid sporozoa parasitic on lower vertebrates, including amphibians, reptiles, and especially fishes.

myxovirus (mik''so-vi'rus) a general name for a large group of viruses, including the viruses of influenza, parainfluenza, mumps, and Newcastle disease; the viruses are characterized by an RNA nucleocapsid in a loose membrane, and they typically agglutinate erythrocytes. Myxoviruses have been divided into paramyxoviruses and orthomyxoviruses.

myzesis (mi-ze'sis) [Gr. *myzan* to suck] sucking.

Myzomyia (mi''zo-mi'yah) [Gr. *myzan* to suck + *myia* fly] a subgenus of anopheline mosquitoes, several species of which act as the carriers of malarial parasites.

Myzorhynchus (mi''zo-ring'kus) [Gr. *myzan* to suck + *rhynchos* snout] a subgenus of anopheline mosquitoes, several species of which are the carriers of malarial parasites. **M. (Anopheles) barbiros'tris**, a species which transmits malaria and filariasis in the Orient. **M. palu'dis**, an African species. **M. pseudopic'tus**, a European species. **M. sinen'sis**, a Japanese species.

N

N 1. symbol for refractive index. 2. chemical symbol for *nitrogen*; this symbol is also used as a prefix to denote combination with the nitrogen atom of organic compounds. 3. symbol for *normal* (solution); the expressions 2N, N/2 or 0.5N, N/10 or 0.1N, N/50 or 0.02N, N/200 or 0.005N, N/1000 or 0.001N denote the strength of a solution in comparison with the normal, respectively double normal, half-normal, tenth-normal, fiftieth-normal, two-hundredth-normal, and thousandth-normal. 4. symbol for an antigenic determinant of erythrocytes; see *blood type*. 5. symbol for *newton*.

n symbol for index of refraction; chemical symbol for *normal*.

NA abbreviation for *Nomina Anatomica*, the official anatomical terminology approved by the Sixth International Congress of Anatomists at Paris in 1955, with later emendations.

N.A. numerical aperture.

Na chemical symbol for *sodium* (L. *natrium*).

nabidrox (nab'f-droks) chemical name: (+)-3-(1,1-dimethylheptyl)-6a,7,8,9,10a-hexahydro-6,6-dimethyl-6H-dibenzo[b,d]pyran-1,9-diol; an antihypertensive, $C_{24}H_{38}O_3$.

nabilone (nab'f-lön) chemical name: *trans*-(+)-3-(1,1-dimethylheptyl)-6,6a,7,8,10,10a-hexahydro-1-hydroxy-6,6-dimethyl-9H-dibenzo[b,d]pyran-9-one; a synthetic cannabinoid, $C_{24}H_{38}O_3$, which acts as a minor tranquilizer and antiemetic.

Na₂B₄O₇·10H₂O borax.

Naboth's follicles (cysts, glands, ovules, vesicles) (na'bōths) [Martin Naboth, Leipzig anatomist, 1675–1721] see under *follicle*.

nabothian (nah-bo'the-an) described by or named in honor of Martin Naboth. See under *follicle*.

NaBr sodium bromide.

NaCl sodium chloride.

NaClO sodium hypochlorite.

NaClO₃ sodium chlorate.

Na₂CO₃ sodium carbonate.

Na₂C₂O₄ sodium oxalate.

nacreous (na'kre-us) [Fr. *nacre* mother of pearl] having a grayish-white, translucent color, with a pearl-like luster; said of bacterial colonies.

Nacton (nak'ton) trademark for a preparation of poldine methanesulfate.

NAD nicotinamide-adenine dinucleotide.

N.A.D. no appreciable disease.

NAD⁺ the oxidized form of NAD.

NADH the reduced form of NAD.

nadide (na'did) chemical name: adenosine 5'-(trihydrogen diphosphate)5'-5'-ester with 3-(aminocarbonyl)-1-β-D-ribofuranosylpyridinium, hydroxide inner salt; an alcohol and narcotic antagonist, $C_{21}H_{27}N_7O_{14}P_2$, it is the naturally occurring coenzyme nicotinamide-adenine dinucleotide.

nadolol (na-do'lol) chemical name: *cis*-5-[3-[(1,1-dimethylamino)amino]-2-hydroxypropoxy]-1,2,3,4-tetrahydro-2,3-naphthalenediol; an antiadrenergic (β-receptor), $C_{17}H_{27}NO_4$.

NADP nicotinamide-adenine dinucleotide phosphate.

NADP⁺ the oxidized form of NADP.

NADPH the reduced form of NADP.

Naegeli's law, leukemia (na'gē-lēz) [Otto Naegeli, Swiss hematologist, 1871–1937] see under *law*, and see *monocytic leukemia*, under *leukemia*.

Naegleria (na-gle'rī-ah) a genus of coprozoic amebae of the class Rhizopoda, which has both an ameboid and a flagellate stage in its life history; in the latter stage it possesses two flagella. Human infection may result in primary amebic meningoencephalitis. Called also *Dimastigamoeba* and *Wasielewska*.

naepaine (ne'pān) chemical name: 2-*n*-pentylaminoethyl *p*-aminobenzoate. Dimorphic crystals, $C_{14}H_{22}N_2O_2$, with a bitter taste and soluble in water; its hydrochloride is a local anesthetic for ocular use.

NaF sodium fluoride.

nafticillin (naf-sil'in) chemical name: 6-(2-ethoxy-1-naphthamido)-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate. A semisynthetic, acid- and penicillinase-resistant penicillin whose sodium salt [USP], $C_{21}H_{21}N_2NaO_5S$, a white to yellowish white powder, is used as an antibacterial in severe staphylococcal infections caused by penicillinase-positive organisms.

nafenopin (nah-fen'o-pin) chemical name: 2-methyl-2-[4-(1,2,3,4-tetrahydro-1-naphthalenyl)phenoxy]propanoic acid, an antihyperlipidemic, $C_{20}H_{22}O_3$.

Naffziger's operation, syndrome (naf'zig-erz) [Howard Chris-

tian Naffziger, American surgeon, 1884–1961] see under *operation*, and see *scalenus syndrome*, under *syndrome*.

naftomine malate (naf'o-mēn) chemical name: hydroxybutanedioic acid compound with *O*-[(2-methyl-1-naphthyl)methyl]hydroxylamine (1:1); a muscle relaxant, $C_{12}H_{13}NO \cdot C_4H_6O_5$.

nafoxidine hydrochloride (naf-oks'fī-dēn) chemical name: 1-[2-[4-(3,4-dihydro-6-methoxy-2-phenyl-1-naphthalenyl)phenoxy]ethyl]pyrrolidine hydrochloride; an antiestrogen, $C_{20}H_{31}NO_2 \cdot HCl$, which has been used in the treatment of breast cancer.

nafronyl oxalate (naf'fro-nil) chemical name: tetrahydro-α-(1-naphthalenylmethyl)-2-furanpropanoic acid 2-(diethylamino)ethyl ester ethanedioate (1:1); a vasodilator, $C_{24}H_{33}NO_3 \cdot C_2H_4O_4$, which has been used in the treatment of peripheral and cerebral vascular disorders.

naftalofos (naf'tah-lo'fos) chemical name: 2-[(diethoxyphosphoryl)oxy]-1-*H*-benz[de]isoquinoline-1,3(2*H*)-dione; a veterinary anthelmintic, $C_{18}H_{18}NO_6P$.

Naga sore (nah'gah) [*Naga*, a region in India] tropical ulcer, def. 1.

nagana (nah-gah'nah) a rapidly fatal trypanosomiasis of equines, dogs, pigs, goats, sheep, camels, and elephants, characterized by high fever, congestion of the mucous membranes, edema of the limbs, abdomen, and eyelids, anemia, icterus, and weakness. Widely distributed throughout Africa, it is caused by the parasite *Trypanosoma brucei*, which is transmitted by the bite of the tsetse fly, *Glossina morsitans*, and other species of *Glossina*. The term nagana also includes infections with *T. congolense* and *T. vivax*. Called also *tsetse-fly disease*.

naganol (nag'ah-nol) suramin sodium.

Nagel's test (nah'gelz) [Willibald A. Nagel, German physiologist, 1870–1911] see under *tests*.

Nägele's obliquity, pelvis, rule (na'gē-lēz) [Franz Karl Nägele, German obstetrician, 1777–1851] see under *obliquity*, *pelvis*, and *rule*.

Nägeli's maneuver (method, treatment) (na'gē-lēz) [Otto Nægeli, Swiss physician, 1843–1922] see under *maneuver*.

Nageotte bracelets, cell (nazh-yot') [Jean Nageotte, Paris histologist, 1866–1948] see under *bracelet* and *cell*.

Nagler effect (nahg'ler) [Joseph Nagler, Vienna radiologist] see under *effect*.

Nagler's reaction (test) (nag'lerz) [F. P. O. Nagler, British bacteriologist] see under *reaction*.

NaHCO₃ sodium bicarbonate.

NaH₂PO₄ monosodium acid phosphate (sodium biphosphate).

Na₂HPO₄ disodium acid phosphate (sodium phosphate).

nail (nāl) 1. [L. *unguis*; Gr. *onyx*] the horny cutaneous plate on the dorsal surface of the distal end of a finger or toe; see *unguis*.
2. a rod of metal, bone, or other material used for fixation of the

Nail (Hill).

ends or the fragments of fractured bones. **double-edge n's**, malformed fingernails in which the normal transverse convexity is replaced by a flat plateau, with a deep slope on each side, occurring as a family trait. **eggshell n.**, a fingernail which has become thin and curved upward at its anterior edge. **fracture n.**, a steel nail used to fasten together the fragments of a broken bone. **hippocratic n.**, see *hippocratic fingers*, under *finger*. **ingrown n.**, aberrant growth of a toenail, with one or, less often, both lateral margins pushing deeply into the adjacent soft tissues. Called also *ingrowing toenail*, *onychocryptosis*, and *unguis incarnatus*. **Jewett n.**, a nail for internal fixation of a trochanteric fracture; the nail is fastened to a plate for fixing the head and neck of the bone to the shaft. **Küntschers n.**, a tubular metal nail for the intramedullary fixation of fractures. **Neufeld n.**, a device for internal fixation of intertrochanteric fracture of the femur, the V nail section being set at an angle of about 130 degrees to the plate portion. **parrot beak n.**, a curvature of the fingernail like that of a parrot's beak. **pitted n's**, nails with surface pits, usually under 1 mm. in diameter, most often seen in psoriasis, frequently in alopecia areata, and sometimes unexplained. **racket n.**, thumbnails that are much shorter than they are wide; rarely, other fingers may be affected. In the commonest form, the distal phalanges of affected digits are shortened as well. **reedy n.**, a fingernail marked by

longitudinal furrows. **Smith-Petersen n.**, a flanged nail for fixing the head of the femur in fracture of the femoral neck. **spoon n.**, depression of the central portion of the fingernail, with raising of the edges at the sides. **turtle-back n.**, a fingernail which is greatly distorted, being more convex than normal. **watch-crystal n.**, a nail convex lengthwise as well as crosswise, and often as broad as it is long, seen in pulmonary osteoarthropathy and pachydermoperiostosis.

nailing (nāl'ing) the operation of fixing or fastening of a fractured bone with a nail. **intramedullary n.**, **marrow n.**, **medullary n.**, the fixation of a fractured long bone by insertion of a steel nail into the marrow cavity of the bone.

Nairobi eye, sheep disease (ni-ro'be) [*Nairobi*, the capital of Kenya, in East Africa] see under *disease* and *eye*.

naja (nah'jah) [Arabic] the cobra di capello, *Naja naja* (*N. tripudians*), a common cobra of India; also a homeopathic preparation of its venom. See *cobra*.

nalbuphine hydrochloride (nal'bu-fēn) chemical name: 17-(cyclobutylmethyl)-4,5α-epoxymorphinan-3,6α,14-triol hydrochloride; an analgesic and narcotic antagonist, $C_{21}H_{27}NO_4 \cdot HCl$.

Nalfon (nal'fon) trademark for a preparation of fenoprofen calcium.

nalidixate sodium (nal-i-diks'āt) chemical name: 1-ethyl-1,4-dihydro-7-methyl-4-oxo-1,8-naphthyridine-3-carboxylate sodium salt monohydrate; an antibacterial, $C_{12}H_{11}N_2NaO_3 \cdot H_2O$.

Nalline (nal'lēn) trademark for a preparation of nalorphine.

nalmexone hydrochloride (nal-meks'ōn) chemical name: 4,5α-epoxy-3,14-dihydroxy-17-(3-methyl-2-butenyl)morphinan-6-one hydrochloride; an antagonist and narcotic antagonist, $C_{21}H_{25}NO_4 \cdot HCl$.

nalorphine (nal'or-fēn, nal-or'fēn) chemical name: 17-allyl-7,8-didehydro-4,5α-epoxymorphinan-3,6α-diol. A drug structurally related to morphine, $C_{19}H_{21}NO_3$, which acts as an antagonist to morphine and related narcotics. Called also *allorphine* and *antorphine*. **n. hydrochloride** [USP], the hydrochloride salt of nalorphine, $C_{19}H_{21}NO_3 \cdot HCl$, occurring as a white or practically white, crystalline powder; used as a narcotic antagonist, chiefly to counteract respiratory depression due to narcotic overdosage, administered intravenously. It is also used to diagnose narcotic addiction; withdrawal symptoms occur following its subcutaneous administration to addicts.

naloxone hydrochloride (nal-oks'ōn) chemical name: 17-allyl-4,5α-epoxy-3,14-dihydroxymorphinan-6-one hydrochloride. A narcotic antagonist structurally related to oxymorphone, $C_{19}H_{21}NO_4 \cdot HCl$, occurring as a white to slightly off-white powder; used as an antidote to narcotic overdosage, and as an antagonist for pentazocine overdosage, administered parenterally.

naltrexone (nal-treks'ōn) chemical name: 17-(cyclopropylmethyl)-4,5α-epoxy-3,14-dihydroxymorphinan-6-one; a narcotic antagonist, $C_{20}H_{23}NO_4$.

nandrolone (nan'dro-lōn) chemical name: 17β-hydroxyestr-4-en-3-one. An anabolic steroid, $C_{18}H_{26}O_2$, differing from testosterone in not having a methyl group attached to carbon 10 of the steroid nucleus. Called also *norandrostenolone*. **n. cyclotate**, an ester of nandrolone, $C_{28}H_{38}O_3$. **n. decanoate** [USP], an ester of nandrolone, $C_{28}H_{44}O_3$, occurring as a fine, white to creamy white, crystalline powder, having the properties of other anabolic steroids and a long duration of action; used mainly as adjunctive therapy in senile and postmenopausal osteoporosis and in the treatment of severe growth retardation in children, administered intramuscularly. **n. phenpropionate** [USP], an ester of nandrolone, $C_{27}H_{34}O_3$, having a moderate duration of action and the appearance, properties, uses, and mode of administration of the decanoate ester.

nanism (na'nizm) [L. *nanus* dwarf] dwarfishness or marked undersize from whatever cause. **mulibrey n.**, a rare autosomal recessive disorder marked by dwarfism and constrictive pericarditis; called mulibrey to denote defects of *muscle*, *liver*, *brain*, and *eyes*. Affected infants have a triangular face often with hypocephaloid skull, muscular hypotonia, squeaky voice, and yellowish dots and pigment dispersion in the ocular fundus. **Paltauf's n.**, nanism associated with lymphatism. **pituitary n.**, hypophyseal infantilism. **renal n.**, infantile renal osteodystrophy. **senile n.**, progeria. **symptomatic n.**, nanism with defective ossification, dentition, and sexual development.

Nannizzia (nah-niz'i-ah) a genus of ascomycetous fungi (family Gymnoascaceae, order Eurotiales), in which the hyphae around the gymnothecium are verticillately branched and composed of cells with shallow constrictions; it contains the perfect (sexual) stages of *Microsporium*.

nano- (na'no) [Gr. *nanos*; L. *nanus* dwarf] a combining form designating small size; used in naming units of measurement to indicate one-billionth of the unit designated by the root with which it is combined (10^{-9}).

nanocephalia (nan'o-sē-fa'le-ah) nanocephaly.

nanocephalous (na'no-sef'ah-lus) [*nano-* + Gr. *kephalē* head] having a small head; pertaining to nanocephaly.

nanocephaly (na'no-sef'ah-le) abnormal smallness of the head.

nanocormia (na'no-kor'me-ah) [*nano-* + Gr. *kormostrunk* + *-ia*] a developmental anomaly characterized by abnormal smallness of the body, or trunk.

nanocurie (na'no-ku're) a unit of radioactivity, being 10^{-9} curie, or the quantity of radioactive material in which the number of nuclear disintegrations is 3.7×10 , or 37, per second; abbreviated nc. Called also *millimicrocurie*.

nanogram (na'no-gram) a unit of mass (weight) of the metric system, being one one-billionth (10^{-9}) gram; abbreviated ng. Called also *millimicrogram*.

nanoid (na'noid) [*nano-* + Gr. *eidos* form] dwarfish; resembling a dwarf.

nanoliter (na'no-le'ter) a unit of capacity equal to one-billionth (10^{-9}) of a liter; abbreviated nl. Called also *millimicroliter*.

nanomelia (na'no-me'le-ah) [*nano-* + Gr. *melos* limb + *-ia*] a developmental anomaly characterized by abnormal smallness of the limbs.

nanomalous (na-nom'ē-lus) pertaining to or characterized by nanomelia.

nanomelus (na-nom'ē-lus) an individual exhibiting nanomelia.

nanometer (na'no-me'ter) a unit of linear measure equal to one-billionth of a meter, 10^{-9} meter; abbreviated nm. Called also *millimicron*.

nanophthalmia (nan'of-thal'me-ah) nanophthalmos.

nanophthalmos (nan'of-thal'mus) [nan(o)- + Gr. *ophthalmos* eye] abnormal smallness in all dimensions of one or both eyes in the absence of other ocular defects; pure microphthalmos.

nanophthalmus (nan'of-thal'mus) 1. nanophthalmos. 2. a person affected with nanophthalmos.

Nanophyetus salmincola (na-no'fi-e-tus sal-min'ko-lah) *Trogloremma salmincola*.

nanoplankton (na'no-plank'ton) plankton of extremely minute size.

nanosecond (na'no-sek'ond) one-billionth (10^{-9}) of a second; abbreviated ns. or nsec.

nanosoma (na'no-so'mah) nanosomia.

nanosomia (na'no-so'me-ah) [*nano-* + Gr. *sōma* body + *-ia*] a dwarfish habit of body; nanism.

nanosomus (na-no-so'mus) [*nano-* + Gr. *sōma* body] a person of dwarfish stature and size; a dwarf.

nanounit (na'no-u'nit) one-billionth (10^{-9}) of a standard unit; abbreviated nU.

nanous (na'nus) dwarfish; stunted.

nanukayami (nah'nu-kah-yah'me) a leptospirosis marked by fever and jaundice, first reported in Japan and caused by *Leptospira hebdomidis*; the animal host is the field vole, *Microtus montebelli*. Called also *nanukayami disease* or *fever, akiyami, seven-day fever, autumn fever, and gikiyami*.

nanus (na'nus) [L.; Gr. *nanos*] a dwarf.

NaOH sodium hydroxide.

NAP see *angle of convexity*.

napelline (na-pel'in) [L. *napellus* aconite] an analgesic alkaloid, $C_{22}H_{33}O_3N$, from aconite.

napex (na'peks) the region of the scalp just below the occipital protuberance.

naphazoline hydrochloride (naf-az'o-lēn) [USP] chemical name: 4,5-dihydro-2-(1-naphthalenyl)-1H-imidazole monohydrochloride. An adrenergic, $C_{14}H_{11}N_2 \cdot HCl$, occurring as a white, crystalline powder; used as a vasoconstrictor, applied topically to the nasal or ocular mucous membranes.

naphthalin (naf'tah-lin) naphthalene.

naphthalinum, naphthalinum (naf'tah-li'num; naf'tah-li-num) [L.] naphthalene.

naphtha (naf'tah) [L., from Arabic] 1. petroleum benzin. 2. ligroin. **n. ace'ti, vinegar n.**, ethyl acetate. **wood n.**, methanol.

naphthalene (naf'tah-lēn) [L. *naphthalinum*] a silvery, crystalline hydrocarbon, $C_{10}H_8$, from coal tar oil. It is insoluble in cold water, but soluble in hot water, alcohol, ether, chloroform, and benzene. Formerly used as an antiseptic in diarrhea of typhoid fever.

naphthamine (naf'tah-min) methenamine.

naphthol (naf'thol) a crystalline, antiseptic substance, $C_{10}H_7 \cdot OH$, from coal tar, occurring in two forms, the α (alphanaphthol) and β (betanaphthol). **α-n.**, **alpha-n.**, see *alphanaphthol*. **n. aristol**, betanaphthol diiodide. **β-n.**, **beta-n.**, see *betanaphthol*.

naphtholate (naf'tho-lāt') a naphthol compound in which a base takes the place of hydrogen in the hydroxyl.

naphtholism (naf'thol-izm) naphthol poisoning.

naphtholum (naf'tho'lum) [L.] naphthol.

naphthoresorcine (naf'tho-re-sor'sin) a principle in transparent crystals derived from naphthol and resorcinol.

naphthyl (naf'thil) the radical, $C_{10}H_7$. **n. alcohol**, naphthol.

- n. benzoate**, benzonaphthol. **n. lactate**, lactol. **n. phenol**, naphthol.
- naphthylpararosaniline** (naf''thil-par''ah-ro-san''i-lin) a dye, isamine blue, which has been used experimentally in the treatment of malignant tumors.
- naphthol** (naf''tol) naphthol.
- napiform** (na'pī-form) [*L. napus* turnip + *forma* shape] having the shape or form of a turnip.
- N.A.P.N.E.S.** National Association for Practical Nurse Education and Services.
- naprapath** (nap'rah-path) a practitioner of naprapathy.
- naprapathy** (nah-prap'ah-the) [Bohemian *napraviti* to correct + *Gr. pathos* disease] a system of therapy employing manipulation of connective tissue (ligaments, muscles, and joints) and dietary measures; said to facilitate the recuperative and regenerative processes of the body.
- Naprosyn** (nah-pro'sin) trademark for a preparation of naproxen.
- naproxen** (nah-proks'en) chemical name: (+)-6-methoxy- α -methyl-2-naphthaleneacetic acid; an anti-inflammatory, analgesic, and antipyretic, $C_{14}H_{13}O_3$. **n. sodium**, the sodium salt of naproxen, $C_{14}H_{13}NaO_3$, having the same actions as the base.
- naproxol** (nah-proks'ol) chemical name: (+)-6-methoxy- α -methyl-2-naphthaleneacetic acid. An anti-inflammatory, antipyretic, and analgesic, occurring as a white to off-white, crystalline powder; used in the treatment of rheumatoid arthritis, administered orally.
- napsylate** (nap'sī-lāt) USAN contraction for 2-naphthalenesulfonate.
- Naqua** (nak'wah) trademark for a preparation of trichlormethazine.
- naranol hydrochloride** (nar'ah-nōl) chemical name: 8-, 9, 10, 11, 12-hexahydro-8, 10-dimethyl-7aH-naphtho[1', 2': 5, 6]pyrano[3, 2-c]pyridin-7a-ol; a tranquilizer, $C_{18}H_{21}NO_2 \cdot HCl$.
- narasin** (nar'ah-sin) chemical name: α -ethyl-6-[5-(2-(5-ethyltetrahydro-5-hydroxy-6-methyl-2H-pyran-2-yl)-15-hydroxy-2, 10, 12-trimethyl-1, 6, 8-trioxadispiro[4.1.5.3]pentadec-13-en-9-yl)-2-hydroxy-1, 3-dimethyl-4-oxoheptyl]tetrahydro-3, 5-dimethyl-2H-pyran-2-acetic acid; a veterinary coccidiostat and growth stimulant, $C_{43}H_{72}O_{11}$.
- Narath's operation** (nah'rats) [Albert Narath, Austrian surgeon, 1864-1924] see under *operation*.
- Narcan** (nar'kan) trademark for a preparation of naloxone hydrochloride.
- narcism** (nar'sizm) narcissism.
- narcissine** (nar-sis'in) a crystalline alkaloid, $C_{16}H_{17}NO_4$, having emetic properties, from the bulbs of many different plants, including the daffodil, *Narcissus pseudonarcissus* L. (Amaryllidaceae); identical with lycorine.
- narcissism** (nar'si-sizm) [from *Narcissus*, a character in Greek mythology who fell in love with his own image reflected in water] self-love, which may or may not include genital excitation. In psychoanalysis, *primary n.* is the original energy embodied in the infantile ego; *secondary n.* denotes libidinous attachments withdrawn from others and directed back onto the self, as in schizophrenia.
- narcissistic** (nar'si-sis'tik) pertaining to or characterized by narcissism.
- narco-** (nar'ko) [*Gr. narkē* numbness] a combining form denoting relationship to stupor or to a stuporous state.
- narcoanalysis** (nar''ko-ah-nal'i-sis) a form of psychotherapy that utilizes the slow intravenous administration of barbiturates in order to release suppressed or repressed thoughts, i.e., to disinhibit communication of affect-laden and unacceptable ideas.
- narcoanesthesia** (nar''ko-an'es-the'ze-ah) [*narco-* + *anesthesia*] (*obs.*) anesthesia by the production of a stuporous condition by the hypodermic injection of scopolamine and morphine.
- narcodiagnostics** (nar''ko-di'ag-no'sis) narcoanalysis.
- narcodhypnia** (nar''ko-hip'ne-ah) [*narco-* + *Gr. hypnos* sleep + *-ia*] numbness felt on waking from sleep.
- narcodhypnosis** (nar''ko-hip-no'sis) hypnotic suggestions made while the patient is under the influence of a narcotic drug.
- narcolepsy** (nar''ko-lep'se) [*narco-* + *Gr. lépsis* a taking hold, a seizure] a condition marked by an uncontrollable desire for sleep or by sudden attacks of sleep occurring at intervals; often associated with cataplexy. Called also *Gélineau's syndrome*, *paroxysmal sleep*, and *sleep epilepsy*.
- narcoleptic** (nar''ko-lep'tik) pertaining to, characterized by, or producing narcolepsy. By extension, sometimes used to denote an individual who exhibits narcolepsy.
- narcoma** (nar-ko'mah) a stuporous state produced by narcotics.
- narcose** (nar'kōs) stuporous; in a state of stupor.
- narcosine** (nar'ko-sēn) noscapine.
- narcosis** (nar-ko'sis) [*Gr. narkōsis* a numbing] a nonspecific and reversible depression of function of the central nervous system marked by stupor or insensibility and produced by drugs.
- basal n., basis n., narcosis** marked by complete unconsciousness, amnesia, and analgesia; see *preanesthesia*. **insufflation n., insufflation anesthesia.** **intravenous n., phlebonarcosis.** **medullary n.,** narcosis produced by injection of a local anesthetic into the medullary subarachnoid space. **Nussbaum's n.,** general narcosis by the use of ether or chloroform after an injection of morphine. **rausch n.,** see *rausch*.
- narcostimulant** (nar''ko-stim'u-lant) having both narcotic and stimulant properties.
- narcosynthesis** (nar''ko-sin'thē-sis) narcoanalysis.
- narcotic** (nar-kot'ik) [*Gr. narkōtikos* numbing, deadening] 1. pertaining to or producing narcosis. 2. an agent that produces insensibility or stupor.
- narcotico-acrid** (nar-kot''i-ko-ak'rid) both narcotic and acrid.
- narcotico-irritant** (nar-kot''i-ko-ir''i-tant) both narcotic and irritant.
- narcotile** (nar'ko-til) ethyl chloride.
- narcotine** (nar'ko-tēn) noscapine.
- narcotism** (nar'ko-tizm) (*obs.*) 1. narcosis. 2. addiction to narcotics.
- narcotize** (nar'ko-tīz) to put under the influence of a narcotic.
- narcose** (nar'kus) narcose.
- Nardil** (nar'dil) trademark for a preparation of phenelzine sulfate.
- nares** (na'rēz) [*L., pl. of na'ris, q.v.*] [NA] the external orifices of the nose; called also *nostrils*. See *naris*.
- naris** (na'ris), *pl. na'res* [*L.*] one of the openings of the nasal cavity. **anterior n., external n.,** either of the external orifices of the nose (nares [NA]). **internal nares,** see *cavum nasi*. **posterior nares,** the openings between the nasal cavity and the nasopharynx (choanae [NA]).
- Narone** (nar'ōn) trademark for a preparation of dipyrone.
- nasal** (na'zal) [*L. nasalis*] pertaining to the nose.
- nasalis** (na-za'lis) [*L.*] relating to the nose.
- nascent** (nas'ent, na'sent) [*L. nascens*] 1. just born; just coming into existence. 2. just liberated from a chemical combination, and hence more reactive because uncombined.
- N.A.S.E.** National Association for the Study of Epilepsy.
- nasioinic** (na'ze-o-in'e-ak) pertaining to the nasion and theinion.
- nasion** (na'ze-on) [*L. nasus* nose] 1. an anthropometric landmark, the point at which a horizontal line tangential to the highest points on the superior palpebral sulci is intersected by the midsagittal plane. Called also *nasal point*. 2. the depression at the root of the nose that indicates the position of the frontonasal suture.
- nasitis** (na-zi'tis) [*L. nasus* nose + *-itis*] inflammation of the nose.
- Nasmyth's membrane** (nas'miths) [Alexander Nasmyth, Scottish dental surgeon in London, died 1847] primary (enamel) cuticle.
- NAS-NRC** National Academy of Sciences-National Research Council.
- Na₂SO₄** sodium sulfate.
- Na₂S₂O₃** sodium thiosulfate.
- naso-** (na'zo) [*L. nasus* nose] a combining form denoting relationship to the nose.
- nasoantral** (na'zo-an'tral) pertaining to the nose and the maxillary antrum (sinus).
- nasoantritis** (na'zo-an-tri'tis) inflammation of the nose and antrum of Highmore.
- nasoantrostomy** (na'so-an-tros'to-me) surgical formation of a nasoantral window for drainage of an obstructed maxillary sinus.
- nasobronchial** (na'zo-brong'ke-al) pertaining to the nasal cavities and the bronchi.
- nasociliary** (na'zo-sil'e-a're) pertaining to or affecting the eyes, brow, and root of the nose, as the nasociliary nerve.
- nasofrontal** (na'zo-frun'tal) pertaining to the nasal and frontal bones.
- nasogastric** (na'zo-gas'trik) pertaining to the nose and stomach, as in (nasogastric) aspiration of the stomach's contents.
- nasograph** (na'zo-graf) an instrument for measuring the nose.
- nasolabial** (na'zo-la'be-al) [*naso-* + *L. labium* lip] pertaining to the nose and lip.
- nasolacrimal** (na'zo-lak'rī-mal) pertaining to the nose and lacrimal apparatus.
- nasomanometer** (na'zo-mah-nom'ē-ter) a manometer for measuring intranasal pressure.
- nasonnement** (na'zon-maw') [Fr.] a nasal quality of voice.
- naso-oral** (na'zo-o'ral) pertaining to or involving the nose and mouth.
- nasopalatine** (na'zo-pal'ah-tin) [*naso-* + *palatine*] pertaining to the nose and palate.

nasopharyngeal (na"zo-fah-rin'je-al) pertaining to the nasopharynx.

nasopharyngitis (na"zo-far'in-ji'tis) inflammation of the nasopharynx.

nasopharyngolaryngoscope (na"zo-fah-ring'go-lah-ring'go-skōp) a flexible fiberoptic endoscope for examining the nasopharynx and larynx.

nasopharyngoscope (na"zo-fah-rin'go-skōp) a lighted, telescopic endoscope for use in examination of the nasopharynx and the pharyngeal end of the auditory tube.

nasopharynx (na"zo-far'inks) [*naso-* + *pharynx*] the part of the pharynx which lies above the level of the soft palate (pars nasalis pharyngis [NA]).

nasorostral (na"zo-ros'tral) pertaining to the rostrum of the nose.

nasoscope (na'zo-skōp) [*naso-* + Gr. *skopein* to examine] an electrically lighted instrument for inspecting the nasal cavity.

nasoseptal (na"zo-sep'tal) pertaining to the nasal septum.

nasoseptitis (na"zo-sep-ti'tis) inflammation of the nasal septum.

nasosinusitis (na"zo-si'nu-si'tis) inflammation of the accessory sinuses of the nose.

nasospinale (na"zo-spi-na'le) the point at which a horizontal line tangential to the lower margins of the nasal aperture is intersected by the midsagittal plane.

nasoturbinal (na"zo-tur'bi-nal) pertaining to the nose and turbinate bone.

nastic (nas'tik) of or pertaining to a response of leaves or plant parts to external stimuli that is independent of the direction of origin of such stimuli; see under *movement*.

nasus (na'sus) [L.] [NA] the nose: the specialized structure of the face that serves as an organ of the sense of smell and as part of the respiratory apparatus. **n. exter'nus** [NA] the external nose: the part of the nose that protrudes on the face; made up of an osteocartilaginous framework, covered externally by muscles and skin and lined internally by mucous membrane.

natal (na'tal) 1. [L. *natus* birth] pertaining to birth. 2. [L. *nates* buttocks] pertaining to the buttocks; pygal.

natality (na-tal'i-te) [L. *natalis* pertaining to birth] the birth rate in any community.

nataloin (na-tal'o-in) an aloin or glycosidal bitter principle, $C_{25}H_{38}O_{11}$, derived from Natal aloes.

natamycin (nat'ah-mi'sin) chemical name: pimarinic, a polyene antibiotic, $C_{33}H_{47}NO_{13}$, used in topical treatment of fungal keratitis, blepharitis, and conjunctivitis.

nates (na'tēz) [L., pl. of *natis*] [NA] the prominences formed by the gluteal muscles on the lower part of the back; called also *buttocks* and *clunes*.

natimortality (na'te-mor-tal'i-te) [L. *natus* birth + *mortality*] the proportion of stillbirths to the general birth rate.

National Formulary a book of standards for certain pharmaceuticals and preparations that are not included in the USP. It is revised every five years, and recognized as a book of official standards by the Pure Food and Drugs Act of 1906. Abbreviated NF.

natis (na'tis) [L. "rump"] see *nates*.

native (na'tiv) [L. *nativus*] normal to a location; unaltered from its natural state.

Natolone (nat'o-lōn) trademark for a preparation of pregnenolone.

natremia (nah-tre'me-ah) [L. *natrium* sodium + Gr. *haima* blood + *-ia*] hypernatremia.

natrium (na'tre-um), gen. *na'trii* [L.] sodium.

natriuresis (na'tre-u-re'sis) [L. *natrium* sodium + Gr. *ourēsis* a making water] the excretion of abnormal amounts of sodium in the urine.

natriuretic (na'tre-u-ret'ik) 1. pertaining to, characterized by, or promoting natriuresis. 2. an agent that promotes natriuresis.

natron (na'tron) native sodium carbonate; also soda or sodium hydroxide.

natrum (na'trum) sodium.

natruresis (nat'roo-re'sis) natriuresis.

natruetic (nat'roo-ret'ik) natriuretic.

natural (nat'u-ral) [L. *naturalis*, from *natura* nature] neither artificial nor pathologic.

Naturetin (nat'u-re'tin) trademark for preparations of bendroflumethiazide.

naturopath (na'tūr-o-path") a practitioner of naturopathy.

naturopathic (na'tūr-o-path'ik) pertaining to naturopathy.

naturopathy (na'tūr-op'ah-the) a drugless system of therapy, making use of physical forces such as air, light, water, heat, massage, etc.

Nauheim bath, treatment (now'him) [Bad-Nauheim, a town and watering place in Hessen, Germany] see under *bath*, and see *Schott's treatment*, under *treatment*.

Naumanniella (naw-man'ne-el'lah) a genus of microorganisms of the family Siderocapsaceae, suborder Pseudomonadineae, order Pseudomonadales, occurring as ellipsoidal or rod-shaped cells with rounded ends, found in iron-containing water. It includes five species, *N. catenata*, *N. elliptica*, *N. minor*, *N. neustonica*, and *N. pygmaea*.

Naunyn-Minkowski method (now'nin-min-kow'ske) [Bernard Naunyn; Oscar Minkowski, Lithuanian physician in Wiesbaden, 1858-1931] see under *method*.

naupathia (naw-pa'the-ah, naw'pah-the'ah) [Gr. *naus* ship + *pathos* suffering + *-ia*] (*obs.*) seasickness.

nausea (naw'se-ah) [L.; Gr. *nausia* seasickness] an unpleasant sensation, vaguely referred to the epigastrium and abdomen, and often culminating in vomiting. **n. epidem'ica**, an epidemic disease, probably viral gastroenteritis, marked by nausea, vomiting, giddiness, and diarrhea. **n. gravidarum**, the morning sickness of pregnancy. **n. mari'na**, **n. nava'lis**, seasickness.

nauseant (naw'se-ant) 1. inducing nausea. 2. an agent that causes nausea.

nauseate (naw'se-āt) to affect with nausea.

nauseous (naw'shus, naw'se-us) pertaining to or producing nausea.

Navane (nav'ān) trademark for preparations of thiothixene.

navel (nav'el) the umbilicus. **blue n.**, Cullen's sign. **enamel n.**, an indentation in the outer dental epithelium of a developing tooth, in the end of the enamel cord.

navicula (nah-vik'u-lah) [L.] frenulum labiorum pudendi.

navicular (nah-vik'u-lar) [L. *navicula* boat] boat-shaped, as the navicular bone.

navicularthritis (nah-vik'u-lar-thri'tis) inflammation of the navicular joint of the horse's forefoot.

Nb chemical symbol for *niobium*.

N.B.S. National Bureau of Standards.

NBT nitroblue tetrazolium; see under *tests*.

nc. nanocurie.

N.C.A. neurocirculatory asthenia.

NCI National Cancer Institute.

N.C.M.H. National Committee for Mental Hygiene.

N.C.N. National Council of Nurses.

NCRP National Committee on Radiation Protection and Measurements.

Nd chemical symbol for *neodymium*.

n_D symbol for *refractive index*.

N.D.A. National Dental Association.

NDV Newcastle disease virus.

Ne chemical symbol for *neon*.

nealogy (ne-al'o-je) [Gr. *nealēs* young + *-logy*] the study of the early infant stages of animals.

near-sight (nēr'sīt) myopia.

nearsighted (nēr-sīt'ed) myopic.

nearsightedness (nēr-sīt'ed-nes) myopia.

nearthrosis (ne'ar-thro'sis) [Gr. *neos* new + *arthron* joint] 1. a false joint; pseudarthrosis. 2. an artificial joint constructed in the shaft of a bone by a surgical operation.

Nebcin (neb'sin) trademark for a preparation of tobramycin sulfate.

nebenagglutinin (na'ben-ah-gloo'tī-nin) [Ger. *neben* near, beside + *agglutinin*] partial agglutinin.

nebenkern (na'ben-kern) [Ger. *neben* near, beside + *kern* kernel, nucleus] 1. a name given to several structures of the cell, but especially to the paranucleus. 2. a large mitochondrial mass around the axial filament in the flagellum of the spermatozoon; it is formed by coalescence of smaller mitochondria during spermatogenesis.

nebramycin (neb'rah-mi'sin) a complex of antibacterial antibiotic substances produced by *Streptomyces tenebrarius*, consisting of eight components, one of which, factor 6 (known as *tobramycin*), is used clinically.

Nebs (nebz) trademark for preparations of acetaminophen.

nebula (neb'u-lah), pl. *neb'ulae* [L. "mist"] 1. a slight corneal opacity or scar that can be seen only by oblique illumination; it seldom interferes with vision. 2. cloudiness in urine. 3. an oily preparation for use in an atomizer.

nebularine (neb-u-lār'in) chemical name: 9-β-D-ribofuranosyl-9H-purine. An antibiotic substance, $C_{10}H_{12}N_4O_4$, isolated from the juice of the fungus *Clitocybe nebularis*, which has tuberculo-static and antimetabolic activity, and in high dilutions, preferentially inhibits growth of some cancer cells.

nebulization (neb'u-li-za'shun) [L. *nebula* mist] 1. conversion into a spray. 2. treatment by a spray.

nebulizer (neb'u-liz'er) an atomizer; a device for throwing a spray.

Necator (ne-ka'tor) [L. "murderer"] a genus of nematode parasites of the family Ancylostomidae. **N. america'nus**, the

American or New World hookworm, a nematode parasite resembling, but shorter and more slender than, *Ancylostoma duodenale*. It is characterized by its buccal cavity containing four plates, four pharyngeal lancets, and a dorsal conic tooth. Infection by this parasite produces hookworm disease. Called also *Ancylostoma americanum* and *Uncinaria americana*. See also *hookworm disease*, under *disease*.

necatoriasis (ne-ka'to-ri'ah-sis) the state of being infected with worms of the genus *Necator*. See *hookworm disease*, under *disease*.

necessity (nē-ses'i-te) something necessary or indispensable. **pharmaceutic n.**, **pharmaceutical n.**, a substance having slight or no value therapeutically, but used in the preparation of various pharmaceuticals, including preservatives, solvents, ointment bases, and flavoring, coloring, diluting, emulsifying, and suspending agents; called also *pharmaceutic* or *pharmaceutical aid*.

neck (nek) a constricted portion, such as the part connecting the head and trunk of the body (collum [NA]), or the constricted part of an organ, as of the uterus (cervix uteri), or other structure (e.g., collum dentis). **anatomical n. of humerus**, collum

Head of humerus showing the anatomical and surgical necks.

anatomicum humeri. **n. of ankle bone**, collum tali. **big n.**, goiter. **bull n.**, massive swelling of the neck, as in malignant diphtheria. **n. of condyloid process of mandible**, collum mandibulae. **dental n.**, collum dentis. **Derbyshire n.**, goiter. **false n. of humerus**, collum chirurgicum humeri. **n. of femur**, collum femoris. **n. of gallbladder**, collum vesicae felleae. **n. of glans penis**, collum glandis penis. **n. of hair follicle**, collum folliculi pili. **n. of humerus**, collum anatomicum humeri. **lateral n. of vertebra**, pediculus arcus vertebrae. **Madelung's n.**, diffuse symmetrical lipomas of the neck. **n. of malleus**, collum mallei. **n. of mandible**, collum mandibulae. **Nithsdale n.**, goiter. **n. of pancreas**, a constricted portion marking the junction of the head and body of the pancreas. **n. of radius**, collum radii. **n. of rib**, collum costae. **n. of scapula**, collum scapulae. **n. of spermatozoon**, the portion of the tail of a spermatozoon beginning immediately behind the head and extending to the anterior centriole. See illustration under *spermatozoon*. **surgical n. of humerus**, collum chirurgicum humeri. **n. of talus**, collum tali. **n. of tooth**, the slightly constricted region of union of the crown and root or roots of a tooth; called also *collum dentis* [NA] and *cervix dentis*. **true n. of humerus**, collum anatomicum humeri. **turkey gobble n.**, submental vertical skin folds. **n. of urinary bladder**, cervix vesicae. **uterine n.**, n. of uterus, cervix uteri. **n. of vertebra**, n. of vertebral arch, pediculus arcus vertebrae. **webbed n.**, pterygium colli. **wry n.**, torticollis.

necklace (nek'las) an encircling band around the neck. **Casal's n.**, an area of erythema and pigmentation around the neck in pellagra; called also *Casal's collar*.

necrectomy (nek-rek'to-me) [*necro-* + Gr. *ektomē* excision] excision of necrotic tissue.

necrencephalus (nek'ren-seff'ah-lus) [*necro-* + Gr. *enkephalos* brain] softening of the brain.

necro- (nek'ro) [Gr. *nekros* dead] a combining form denoting relationship to death or to a dead body, cells, or tissue.

necrobacillosis (nek'ro-bas'i-lo'sis) infection with *Schmorl's bacillus*, *Fusobacterium necrophorum*, which causes diphtheria with abscesses in cattle, gangrenous dermatitis in horses, areas of necrosis in hogs and cattle, and abscesses and areas of necrosis in rabbits. See also *calf diphtheria*, under *diphtheria*, and *Schmorl's disease*, under *disease*.

necrobiosis (nek'ro-bi-o'sis) [*necro-* + Gr. *biōsis* life] swelling, basophilia, and distortion of collagen bundles in the dermis, sometimes with obliteration of normal structure, but short of actual necrosis, characteristic especially of granuloma annulare

and necrobiosis lipoidica diabetorum. Cf. *gangrene* and *necrosis*. **n. lipoi'dica**, n. lipoidica diabetorum. **n. lipoi'dica diabetico'rum**, a dermatosis usually occurring in diabetics, characterized by necrobiosis of the elastic and connective tissue of the skin, with degenerated collagen occurring in irregular patches, especially in the upper dermis. The lesions are most commonly located on the mid or lower shins.

necrobiotic (nek'ro-bi-ot'ik) pertaining to or characterized by necrobiosis.

necrocytosis (nek'ro-si-to'sis) [*necro-* + Gr. *kytos* cell + *-osis*] death and decay of cells.

necrocystotoxin (nek'ro-si'to-tok'sin) a toxin that produces death of cells.

necrogenic (nek'ro-jen'ik) [*necro-* + Gr. *gennan* to produce] productive of necrosis or death.

necrogenous (nē-kroj'ē-nus) originating or arising from dead matter.

necrologic (nek'ro-loj'ik) pertaining to necrology.

necrologist (nē-krol'o-jist) an expert in necrology.

necrology (nē-krol'o-je, ne-krol'o-je) [*necro-* + *-logy*] the statistics or records of deaths.

necrolysis (nē-krol'i-sis) [*necro-* + Gr. *lysis* dissolution] separation or exfoliation of tissue due to necrosis. **toxic epidermal n.**, an exfoliative skin disease in which erythema rapidly spreads over the entire body, followed by the formation of large flaccid bullae and later by skin that appears scalded and separates from the body in sheets, much as in a second degree burn. Staphylococci of phage group two (in infants) and a toxic reaction to various drugs (in adults) are the usual causes. Called *Lyell's syndrome* and *scalded skin syndrome*. Cf. *dermatitis exfoliativa neonatorum*.

necromania (nek'ro-ma'ne-ah) [*necro-* + Gr. *mania* madness] necrophilia.

necrometer (nē-krom'ē-ter) [*necro-* + Gr. *metron* measure] an instrument for measuring the organs of the dead body.

necromimesis (nek'ro-mi-me'sis) [*necro-* + Gr. *mimēsis* imitation] a delusion of being dead, or the feigning of death.

necronectomy (nek'ro-nek'to-me) [*necro-* + Gr. *ektomē* excision] the excision of necrotic tissue.

necrophagous (nē-krof'ah-gus) [*necro-* + Gr. *phagein* to eat] devouring or subsisting on dead bodies.

necrophilia (nek'ro-fil'e-ah) morbid attraction to corpses; sexual intercourse with a dead body.

necrophilic (nek'ro-fil'ik) 1. pertaining to or characterized by necrophilism. 2. showing preference for dead tissue, as necrophilic bacteria.

necrophilism (nē-krof'i-lizm) [*necro-* + Gr. *philein* to love] necrophilia.

necrophilous (nē-krof'i-lus) 1. showing preference for dead tissues; said of organisms. 2. pertaining to or characterized by necrophilia.

necrophily (nē-krof'i-le) necrophilia.

necrophobia (nek'ro-fō-be-ah) [*necro-* + *phobia*] 1. morbid fear of death. 2. morbid dread of dead bodies.

necropneumonia (nek'ro-nu-mō'ne-ah) [*necro-* + Gr. *pneumōn* lung + *-ia*] gangrene of the lung.

necropsy (nek'rop-se) [Gr. *nekros* dead + *opsis* view] examination of a body after death; see *autopsy*.

necrosadism (nek'ro-sa'dizm) [Gr. *nekros* dead + *sadism*] mutilation of a corpse for the purpose of exciting or gratifying sexual feelings.

necroscopy (nē-kros'ko-pe) [Gr. *nekros* dead + *skopein* to examine] necropsy.

necrose (nek'rōs) to become necrotic or to undergo necrosis.

necroses (nē-kro'sēz) [Gr.] plural of *necrosis*.

necrosin (nek'ro-sin) a substance liberated by injured cells, which produces the signs of inflammation, central necrosis, lymphatic blockade, injury to vascular endothelium, and swelling of collagen.

necrosis (nē-kro'sis), pl. *necro'ses* [Gr. *nekros* deadness] the sum of the morphological changes indicative of cell death and caused by the progressive degradative action of enzymes; it may affect groups of cells or part of a structure or an organ. **arteriolar n.**, arteriolonecrosis. **aseptic n.**, increasing sclerosis and cystic changes in the head of the femur which sometimes follow traumatic dislocation of the hip. A similar condition sometimes develops in the head of the humerus after shoulder dislocation. **avascular n.**, that due to deficient blood supply. **bacillary n.**, necrobacillosis. **Balser's fatty n.**, gangrenous pancreatitis with omental bursitis and disseminated patches of necrosis of the fatty tissues; pancreatitis with fat necrosis. **caseous n.**, cheesy n. **central n.**, that which affects the central portion of a cell or of a bone or a lobe of the liver. **cerebrocortical n.**, a highly fatal condition due to abnormal utilization of thiamine or to anoxia, affecting calves and ewes and marked by circling movements, staggering gait, excitement, and convulsions. **cheesy n.**, necrosis in which the tissue is soft, dry and cheesy, thus resembling cottage cheese; it is seen mostly

in tuberculosis and syphilis. Called also *caseous n.* **coagulation n.**, necrosis of a portion of some organ or tissue, with the formation of fibrous infarcts, in which a relatively small part seems to have been deprived of the afflux of blood by the plugging of its vessels with coagula. **colliquative n.**, necrosis in which the necrotic material becomes softened and liquefied. **cystic medial n.**, Erdheim's cystic medial n. **dry n.**, that in which the necrotic tissue becomes dry. **embolic n.**, coagulation necrosis of an infarct following embolism. **epiphyseal ischemic n.**, degeneration and eventual replacement of the osseous nucleus of an epiphysis, which collapses under pressure and causes distortion of the surrounding healthy tissue; attributed to interference with the blood supply of the epiphysis. It may affect the femur, tibia, tarsal navicular head, humerus, etc. Called also *osteochondrosis* (q.v.). **Erdheim's cystic medial n.**, changes in the medial layer of the aorta, consisting of degeneration and necrosis of elastic and muscle fibers, mucoid infiltration, and cyst formation, often resulting in dissecting aneurysm; called also *medionecrosis of aorta*. **exanthematous n.**, an acute necrotizing process involving the gingivae, jaw bones, and contiguous soft tissues, which primarily affects children; it resembles gangrenous stomatitis, except that there is slight odor, a tendency to be self-limited, low mortality rate, and normal leukocyte count. **fat n.**, a condition in which the neutral fats in the cells of adipose tissue are split into fatty acids and glycerol; it usually affects subcutaneous fat depots, particularly in the female breast, as a result of trauma, and forms a focal area felt on percussion as a firm circumscribed mass. Called also *steatonecrosis*. **focal n.**, the presence of small foci of necrosis often seen in the course of an infection. **gangrenous n.**, cell death caused by a combination of ischemia and superimposed bacterial infection, combining the features of coagulation and colliquative necrosis. **hyaline n.**, Zenker's degeneration. **ischemic n.**, coagulation n. **labial n. of rabbits**, a fatal necrobacillosis of rabbits that begins in the lower lip and extends down to the thorax. **liquefaction n.**, colliquative n. **massive hepatic n.**, acute yellow atrophy. **medial n.**, medionecrosis. **mercurial n.**, necrosis due to mercury poisoning. **moist n.**, that in which the dead tissue becomes wet and soft. **mummification n.**, dry gangrene. **Paget's quiet n.**, a process of local necrosis and sequestrum formation in the superficial layers of the shaft of a long bone with a minimal amount of suppuration around the sequestrum and without sinus formation. **peripheral n.**, necrosis of the peripheral portions of a liver lobule as in puerperal eclampsia. **phosphorus n.**, phosphonecrosis. **postpartum pituitary n.**, necrosis of the pituitary during the postpartum period, often associated with shock and excessive uterine bleeding during delivery, and leading to variable patterns of hypopituitarism; called also *Sheehan's syndrome*. **pressure n.**, necrosis due to insufficient local blood supply as in decubitus ulcers. **n. progre/diens**, progressive sloughing. **progressive emphysematous n.**, gas gangrene. **radiation n.**, a death of tissue caused by radiation. **radium n.**, necrosis of the jaw bone occurring in workers in radium plants. **n. of renal papillae, renal papillary n.**, an accompaniment of acute pyelonephritis, most often seen in diabetics, characterized by necrosis of the renal papillae of one or both kidneys, with sharp demarcation between necrotic and living tissue; called also *necrotizing papillitis* and *necrotizing renal papillitis*. **septic n.**, necrosis resulting from bacterial infection. **simple n.**, degeneration of the protoplasm and nucleus of the cells of a tissue without change in the appearance of the tissue. **subcutaneous fat n.**, adiponecrosis subcutanea neonatorum. **superficial n.**, that which affects only the outer layers of a bone. **syphilitic n.**, necrosis caused by syphilis. **total n.**, that which affects all parts of a bone. **n. ustilagin/ea**, dry gangrene from ergotism. **Zenker's n.**, see under *degeneration*.

necrospemia (nek''ro-sper''me-ah) [Gr. *nekros* dead + *sperm* + *-ia*] a condition in which the spermatozoa of the semen are dead or motionless.

necrospemic (nek''ro-sper''mik) pertaining to or characterized by necrospemia.

necrotic (nē-krot''ik) pertaining to or characterized by necrosis.

necrotizing (nek''ro-tiz''ing) causing necrosis.

necrotomy (nē-krot''o-me) [Gr. *nekros* + *tomē* a cutting] 1. dissection of a dead body. 2. the excision of a sequestrum. **osteoplastic n.**, removal of a sequestrum from a bone after first lifting a flap of the bone, which is replaced after the operation.

necrotoxin (nek''ro-tok''sin) a factor or substance, produced by certain staphylococci, which kills tissue cells.

necrozooepemia (nek''ro-zo''o-sper''me-ah) necrospemia.

Necturus (nek-tu''rus) a genus of salamanders having large external gills; employed in physiologic research.

needle (ne'd'l) [L. *acus*] 1. a sharp instrument for suturing or puncturing. 2. to puncture with a needle, as in dissection of the lens for treatment of cataract. **Abrams' n.**, a biopsy needle designed to reduce the danger of introducing air into tissues, as in pleural biopsy. **aneurysm n.**, one with a handle, used in ligating blood vessels. **aspirating n.**, a long hollow needle for removing fluid from a cavity. **Babcock's n.**, a large hypodermic needle, provided with a stilet, for spinal puncture. **cata-**

ract n., one used in removing a cataract. **Cope's n.**, a blunt-ended hooklike needle with a concealed cutting edge and snare, used in biopsy of the pleura, pericardium, peritoneum, and synovium. **Deschamps' n.**, one with the eye near the point, and a long handle attached; used in ligating deep-seated arteries. **discission n.**, a special form of cataract needle. **Hagedorn's n's**, surgical needles which are flat from side to side, and have a straight cutting edge near the point and a large eye. **harelip n.**, a needle (or pin) introduced through edges of the wound in harelip operation, a figure-of-8 suture being applied over the needle. **hypodermic n.**, a short, slender, hollow needle used in injecting drugs beneath the skin. **knife n.**, a slender knife with a needle-like point, used in dissection of a cataract and other ophthalmic operations, as in goniotomy and goniotomy. **Kobak n.**, a needle used to inject anesthesia for vaginal delivery and cesarean section. **ligature n.**, a slender steel needle with a long handle and an eye in its curved end, used for passing a ligature underneath an artery. **Menghini n.**, a needle that does not require rotation to cut loose the tissue specimen in a biopsy of the liver. **Reverdin's n.**, a surgical needle having an eye which can be opened and closed by means of a slide. **Silverman n.**, an instrument for taking tissue specimens, consisting of an outer cannula, an obturator, and an inner split needle with longitudinal grooves in which the tissue is retained when the needle and cannula are withdrawn. **stop n.**, a needle with a shoulder that prevents it from being inserted beyond a certain distance. **swaged n.**, one permanently attached to the suture material. **Vim-Silverman n.**, a needle used in liver biopsy.

Neef's hammer (nāfs) [Christopher Ernst Neef, German physician, 1782-1849] see under *hammer*.

Neelsen (nēl'sen) see *Ziehl-Neelsen*.

neencephalon (ne''en-sef''ah-lon) [Gr. *neos* new + *enkephalos* brain] the cerebral cortex and its dependencies; the phylogenetically newer part of the brain.

NEFA nonesterified fatty acids.

nefluorophotometer (nē-floo''o-ro-fo-tom''ē-ter) fluoronephelometer.

nefopam hydrochloride (nef''o-pam) chemical name: 3,4,5,6-tetrahydro-5-methyl-1-phenyl-1*H*-2,5-benzoxazocine hydrochloride; an analgesic and muscle relaxant, C₁₇H₁₉NO·HCl.

Negatan (neg''ah-tan) trademark for a preparation of negatol.

negation (ne-ga''shun) refusal or denial; see *delusion of negation*.

negative (neg''ah-tiv) [L. *negativus*] 1. having a value of less than zero. 2. indicating a lack or absence, as chromatin negative or Wassermann negative. 3. characterized by resistance or opposition.

negativism (neg''ah-tiv-izm'') a morbid propensity to do the opposite of what most people would do under similar circumstances, or of what one is told to do or of what one's normal desires would suggest; e.g., it is not uncommon in catatonic schizophrenia for the patient to feel compelled to lower his arms if asked to raise them or to clench his fists if asked to open his hands.

negatol (neg''ah-tol) a colloidal product obtained by reacting meta-cresol sulfonic acid with formaldehyde; used as a parasiticide, germicide, and bacteriostatic, for topical application to the cervix.

negatoscope (neg''ah-to-skōp) an apparatus for showing radiographic negatives.

negatron (neg''ah-tron) the negative electron; see *positron* and *electron*.

NegGram (neg''gram) trademark for preparations of nalidixic acid.

Negri bodies (na''gre) [Adelchi Negri, Italian physician, 1876-1912] see under *body*.

Negro's phenomenon (na''grōz) [Camillo Negro, Italian neurologist, 1861-1927] see *cogwheel phenomenon*, under *phenomenon*.

neighborwise (na''bor-wiz) descriptive of the plastic behavior of transplanted embryonic cells or tissue in a manner appropriate to its new and strange location. Cf. *selfwise*.

Neill-Mooser bodies, reaction [Mather Humphrey Neill, American physician, 1882-1930; H. Mooser, American physician] see under *body* and *reaction*.

Neisser's diplococcus, syringe (ni''serz) [Albert Ludwig Siegmund Neisser, German physician, 1855-1916] see *Neisseria gonorrhoeae* and under *syringe*.

Neisser-Doering phenomenon (ni''ser-da''ring) [Ernst Neisser, German physician, born 1863; Hans Doering, German physician, born 1871] see under *phenomenon*.

Neisser-Wechsberg phenomenon, test (ni''ser-veks''berg) [Max Neisser, German physician, 1869-1938; Friedrich Wechsberg, German physician] see *complement fixation*, under *fixation*, and see under *tests*.

Neisseria (ni-se''re-ah) [Albert Ludwig Siegmund Neisser] a genus of microorganisms of the family Neisseriaceae, order Eubacteriales; it includes the gonococcus, the several meningococcus types, pigmented forms occasionally associated with meningitis, and a number of saprophytic or parasitic but nonpathogenic species.

- N. catarrha[']lis**, *Branhamella catarrhalis*. **N. gonorrhoe[']ae**, the specific etiologic agent of gonorrhea, occurring typically as pairs of flattened cells usually found intracellularly in heterophils in diagnostic smears of purulent material. **N. meningi[']tidis**, a prominent cause of meningitis and the specific etiologic agent of epidemic cerebrospinal meningitis. It occurs as several serologic types, usually taken to be four, of which IIa or C, depending on the system of nomenclature used, is considered to be the most important pathogen. **N. muc[']o[']sus**, a species characterized by the production of a heavy mucoid growth resulting from its luxuriant capsule formation; it is found in the human rhinopharynx and is occasionally pathogenic for man. Called also *Diplococcus mucosus* and *Streptococcus mucosus*.
- Neisseriaceae** (nīs-se're-a'se-e) a family of Schizomycetes, order Eubacteriales, made up of nonmotile gram-negative spherical cells occurring in pairs or masses; pigment may or may not be produced, and all known species are parasitic. There are two genera, *Neisseria*, the aerobic forms, and *Veillonella*, the obligate anaerobic forms.
- neisserial** (nīs-se're-al) of, relating to, or caused by *Neisseria*.
- neisseriology** (nī-se're-o'l'o-je) former term for the branch of medicine which deals with gonorrhea and its treatment.
- nekro-** for words beginning thus, see those beginning *necro-*.
- nekton** (nek'ton) [Gr. *nēktos* swimming] collective term for marine organisms that swim actively, as contrasted with plankton.
- Nélaton's catheter**, etc. (na-lah-taw'f) [Auguste Nélaton, French surgeon, 1807–1873] see under *catheter*, *line*, *operation*, *probe*, and *sphincter*.
- nelavane** (nel'ah-van) African trypanosomiasis.
- nem** (nem) acronym for Nahrungs Einheit Milch [Ger. "nutritional unit milk"]. The unit of nutrition in Pirquet's system of feeding, equivalent to the nutritive value of 1 gm. of breast milk.
- N.E.M.A.** National Eclectic Medical Association.
- Nema** (ne'mah) trademark for a preparation of tetrachloroethylene.
- nema** (ne'mah) [Gr. *nēma* thread] a nematode.
- nemathelminth** (nem'ah-thel'minth) [*nemato-* + Gr. *helmins* worms] a worm of the phylum Nemathelminthes.
- Nemathelminthes** (nem'ah-thel-min'thēz) in some systems of classification, a phylum including the Acanthocephala and Nematoda.
- nemathelminthiasis** (nem'ah-thel'min-thi'ah-sis) infection by nematodes, or roundworms.
- nematicide** (ně-mat'i-sid) nematocide.
- nematization** (nem'ah-ti-za'shun) infection with nematodes, or roundworms.
- nemato-** (nem'ah-to) [Gr. *nēma* thread] a combining form denoting relationship to a nematode, or to a threadlike structure.
- nematoblast** (nem'ah-to-blast'f) [Gr. *nēma* thread + *blastos* germ] spermatid.
- Nematocerca** (nem'ah-tos'er-ah) [Gr. *nēma* thread + *keras* horn] a suborder of Diptera characterized by having antennae of many segments and comprising the gnats, mosquitoes, midges, black flies, crane flies, gallflies, etc.
- nematocide** (nem'ah-to-sid'f) [*nemato-* + L. *caedere* to kill] 1. destructive to nematode worms. 2. an agent that destroys nematodes.
- nematocyst** (nem'ah-to-sist) a minute stinging structure, found in the cnidoblasts of jellyfish and other coelenterates, used for anchorage, for defense, and for the capture of prey.
- Nematoda** (nem'ah-to'dah) [Gr. *nēma* thread + *eidos* form] a class of tapered cylindrical helminths, the roundworms, of the phylum Aschelminthes, many species of which are parasites. They are characterized by longitudinally oriented muscles and by a triradial esophagus. In some systems of classification, they are considered to be a separate phylum. Sometimes called *Nemathelminthes*, or a class under that phylum.
- nematode** (nem'ah-tōd) a roundworm; any individual belonging to the class Nematoda.
- nematodiasis** (nem'ah-to-di'ah-sis) infection by a nematode parasite. **nonpatent n.**, visceral larva migrans.
- Nematodirus** (nem'ah-to'di-rus) a genus of nematode parasites belonging to the family Trichostrongylidae, found in the duodenum of ruminants.
- nematoid** (nem'ah-toid) resembling a thread; pertaining to a nematode parasite.
- nematologist** (nem'ah-tol'o-jist) a specialist in nematology.
- nematology** (nem'ah-tol'o-je) the branch of zoology which deals with nematode worms.
- Nematomorpha** (nem'ah-to-mor'fah) [Gr. *nēma* thread + *morphe* form] a class of long, slender, cylindrical worms of the phylum Aschelminthes, commonly called "hairworms," "horse hairs," or "hair eels," which are parasitic as juveniles. In some systems of classification, they are considered to be a separate phylum. Called also *Gordiacea*.
- nematosis** (nem'ah-to'sis) the condition of being infected with nematodes, or roundworms.
- nematospermia** (nem'ah-to-sper'me-ah) [*nemato-* + Gr. *sperma* sperm] spermatozoa having elongated tails.
- Nembutal** (nem'bu-tal) trademark for preparations of sodium pentobarbital.
- Nemertea** (nem-er'te-ah) Rhynchocoela.
- nemertean** (nem-er-te'an) 1. pertaining to the Nemertea. 2. any individual of the Nemertea. See *Rhynchocoela*.
- Nemertina** (nem-er-ti'nah) Rhynchocoela.
- nemic** (nem'ik) pertaining to nematodes, or roundworms.
- Nencki's test** (nents'kēz) [Marcellus von Nencki, Polish physician, 1847–1901] see under *tests*.
- neo-** (ne'o) [Gr. *neos* new] a combining form meaning new or strange.
- Neo-Antergan** (ne'o-an'ter-gan) trademark for a preparation of pyrilamine maleate.
- neoantigen** (ne'o-an'ti-jen) an intranuclear antigen, e.g., a T antigen, present in tumor cells transformed by oncogenic papovaviruses or adenoviruses.
- neointosman** (ne'o-an-tim'o-san) stibophen.
- neorsphenamine** (ne'o-ars-fen'ah-mēn) chemical name: [5-(3-amino-4-hydroxyphenyl)arseno]-2-hydroxyanilino]methanol sulfoxylate sodium. A modified soluble compound of arsphenamine, C₁₃H₁₃As₂N₂NaO₄S, formerly used as an antisyphilitic.
- neoarthritis** (ne'o-ar-thro'sis) nearthrosis.
- neobiogenesis** (ne'o-bi'o-jen'ē-sis) [*neo-* + *biogenesis*] biopoiesis.
- Neobiotic** (ne'o-bi-ot'ik) trademark for a preparation of neomycin sulfate.
- neoblastic** (ne'o-blas'tik) [*neo-* + Gr. *blastos* germ] originating in or of the nature of new tissue.
- Neo-Calglucon** (ne'o-kal'gloo-kon) trademark for a preparation of calcium glubionate.
- neocerebellum** (ne'o-ser'ē-bel'um) [*neo-* + *cerebellum*] a term applied originally to the cerebellar hemispheres and later to those parts predominantly supplied by corticopontocerebellar fibers.
- neocinchophen** (ne'o-sin'ko-fen) chemical name: ethyl ester of 6-methylcinchophen. Yellow needles, C₁₉H₁₇NO₂, which have been used as an analgesic, antipyretic, and uricosuric.
- neocinetic** (ne'o-si-net'ik) neokinetic.
- Neo-Cobefrin** (ne'o-cob'ē-frin) trademark for a preparation of levonordefrin.
- neocortex** (ne'o-kor'teks) neopallium.
- neocytosis** (ne'o-si-to'sis) the presence of immature cell forms in the blood.
- neodarwinism** (ne'o-dar'win-izm) the concept that species evolve by natural selection only, thus ruling out the inheritance of acquired traits; see *darwinism*.
- neodiathermy** (ne'o-di'ah-ther'me) short wave diathermy.
- Neo-Diloderm** (ne'o-di'lo-derm) trademark for a preparation of dichlorisone containing neomycin sulfate.
- neodymium** (ne'o-dim'e-um) a rare element of atomic number, 60; atomic weight, 144.24; symbol, Nd.
- neencephalon** (ne'o-en-sef'ah-lon) neencephalon.
- neofetal** (ne'o-fe'tal) pertaining to the transitional period between the embryonic and fetal stages of the developing human young.
- neofetus** (ne'o-fe'tus) the embryo at about the eighth week of intrauterine life.
- neoformation** (ne'o-for-ma'shun) a new growth or neoplasm.
- neoformative** (ne'o-for'mah-tiv) concerned in the formation of new tissue.
- neogala** (ne-og'ah-lah) [*neo-* + Gr. *gala* milk] the first milk developed after childbirth; see also *colostrum*.
- neogenesis** (ne'o-jen'ē-sis) [*neo-* + Gr. *genesis* production] a form of tissue regeneration that is slower than anagenesis.
- neogenetic** (ne'o-jē-net'ik) pertaining to neogenesis.
- neogermitrine** (ne'o-ger'mī-trēn) an alkaloid having antihypertensive properties, isolated from green hellebore (*Veratrum viride*).
- neoglottic** (ne'o-glot'ik) pertaining to a neoglottis.
- neoglottis** (ne'o-glot'is) a surgically constructed glottis created by suturing the pharyngeal muscosa over the superior end of the transected trachea above the primary tracheostoma and making a permanent stoma in the muscosa; it is created to permit phonation after laryngectomy. Called also *pseudoglottis*.
- neoglycogenesis** (ne'o-gli'ko-jen'ē-sis) gluconeogenesis.
- Neohetramine** (ne'o-he'trah-min) trademark for a preparation of thonzylamine hydrochloride.
- neo-hippocratism** (ne'o-hip-pok'rah-tizm) a school of medicine which trends toward a humanistic view of disease focused on the individual patient and scientific observation by the physician,

representing a return to the hippocratic theory and practice, with emphasis on observational and bedside medicine.

Neo-Hombreol (ne'o-hom'bre-ol) trademark for preparations of testosterone propionate.

neohymen (ne'o-hi'men) [*neo-* + *Gr. hymēn* membrane] a false membrane.

neokinetic (ne'o-ki-net'ik) [*neo-* + *Gr. kinētikos* pertaining to movement] a term applied to the nervous motor mechanism regulating voluntary muscular control. It is associated with the motor area of cerebral cortex, and receives its name because of the fact that it was developed more recently than the older paleokinetic system. Cf. *archeokinetic* and *paleokinetic*.

neolalia, neolalism (ne'o-lal'e-ah; ne'o-lal'izm) speech into which many neologisms are incorporated, as in schizophrenia.

neologism (ne-o-l'o-jizm) [*neo-* + *Gr. logos* word] a newly coined word; in psychiatry, a new word whose meaning may be known only to the person using it and may be related to his conflicts.

Neoloid (ne'o-loid) trademark for a preparation of castor oil.

neomembrane (ne'o-mem'brān) a false membrane.

neomin (ne'o-min) neomycin.

neomorph (ne'o-morf) [*neo-* + *Gr. morphē* form] a part or organ recently acquired in the course of evolution.

neomorphism (ne'o-mor'fizm) the development of new form in the course of evolution.

neomycin (ne'o-mi'sin) a broad-spectrum antibacterial antibiotic produced by the growth of *Streptomyces fradiae*, effective against a wide range of gram-negative organisms, including *Escherichia coli*, *Aerobacter aerogenes*, *Proteus vulgaris*, *Salmonella* and *Shigella* species, *Pseudomonas aeruginosa*, and *Mycobacterium tuberculosis*, and most gram-positive bacteria. **n. palmitate**, the palmitate salt of neomycin; used typically as an antibacterial in the treatment of superficial skin infections, burns, wounds, and ulcers. **n. sulfate** [USP], the sulfate salt of neomycin, occurring as a white to slightly yellow powder or cryodesiccated solid; used in the treatment of urinary tract, eye, skin, ear, and enteric infections due to susceptible bacteria and for preoperative disinfection, administered orally, intramuscularly, and topically.

neon (ne'on) [*Gr. neos* new] an inert gaseous element discovered in the air in 1898; symbol, Ne; atomic weight, 20.183; atomic number, 10.

neonatal (ne'o-na'tal) [*neo-* + *L. natus* born] pertaining to the first four weeks after birth.

neonate (ne'o-nāt) 1. newly born. 2. a new-born infant.

neonatologist (ne'o-na-to'l'o-jist) a physician whose primary concern is in the specialty of neonatology.

neonatology (ne'o-na-to'l'o-je) the art and science of diagnosis and treatment of disorders of the newborn infant.

neopallium (ne'o-pal'le-um) [*neo-* + *L. pallium* cloak] that portion of the pallium (cerebral cortex) showing stratification and organization characteristic of the most highly evolved type of cerebral tissue. It consists of six layers: layer I, the molecular or plexiform layer; layer II, the external granular layer; layer III, the pyramidal layer; layer IV, the internal granular layer; layer V, the ganglionic layer; layer VI, the multiform or polymorphic layer. Called also *homotypical cortex*, *isocortex*, *neocortex*, and *nonolfactory cortex*. Cf. *archipallium*.

neopathy (ne-op'ah-the) [*neo-* + *Gr. pathos* disease] (obs.) 1. a new disease. 2. a new condition or complication of disease in a patient.

neophrenia (ne'o-fre'ne-ah) [*neo-* + *Gr. phrēn* mind] Kahlbaum's term for mental disorder occurring in early youth; no longer in use.

neoplasia (ne'o-pla'ze-ah) the formation of a neoplasm, i.e., the progressive multiplication of cells under conditions that would not elicit, or would cause cessation of, multiplication of normal cells.

neoplasm (ne'o-plazm) [*neo-* + *Gr. plasma* formation] any new and abnormal growth; specifically a new growth of tissue in which the growth is uncontrolled and progressive (see neoplasia). Malignant neoplasms are distinguished from benign in that the former show a greater degree of anaplasia and have the properties of invasion and metastasis. Called also *tumor*. **histoid n.**, a neoplasm whose structure resembles that of the tissues in which it is situated. **organoid n.**, a neoplasm whose structure resembles that of some organ of the body.

neoplastic (ne'o-plas'tik) pertaining to or like a neoplasm; pertaining to neoplasia.

neoplastigenic (ne'o-plas'ti-jen'ik) tending to produce neoplasms.

Neopsylla (ne-op'sil-ah) a genus of fleas.

neouquassin (ne'o-kwas'in) a crystalline principle, $C_{24}H_{30}O_6$, from *Quassia amara* L. (Simarubaceae); it is a phenanthropropane derivative which forms quassin on oxidation.

Neorickettsia (ne'o-ri-ket'se-ah) a genus of the tribe Ehrlichieae, family Rickettsiaceae, order Rickettsiales. It includes a single species, *N. helminthoeca*, the etiologic agent of salmon poisoning (q.v.). It is found in the salmon fluke, *Trogloctrema*

salmincola, a parasite of various fish, especially salmon and trout, and is transmitted by ingestion of raw infected fish.

Neoschoengastia (ne'o-shān-gas'te-ah) a genus of mites of the family Trombiculidae. **N. america/na**, a species of mites which infest chickens in the southern United States.

Neosporidia (ne'o-spo-rid'e-ah) [*neo-* + *Gr. sporos* seed] a former division of the Sporozoa, in which growth and sporulation proceed together and simultaneously.

neostibosan (ne'o-sti'bo-san) a pentavalent antimony compound, used as an antileishmanial. Called also *ethylstibamine*.

neostigmine (ne'o-stig'min) chemical name: 3-[[[dimethylamino]carbonyl]oxy]-N,N,N-trimethylbenzenaminium. A synthetic quaternary ammonium compound with anticholinesterase (cholinergic) activity. **n. bromide** [USP], the bromide salt of neostigmine, $C_{12}H_{18}BrN_2O_2$, occurring as a white, crystalline powder; used as a cholinergic in the symptomatic control of myasthenia gravis, and to produce miosis in certain forms of glaucoma, administered orally and applied to the conjunctiva. **n. methylsulfate**, [USP], the methylsulfate salt of neostigmine, $C_{13}H_{22}N_2O_6S$, occurring as a white crystalline powder; used as a cholinergic in the prevention and treatment of postoperative distention and urinary retention, as a screening test for pregnancy, in the treatment of delayed menstruation, in the symptomatic treatment of myasthenia gravis, as a diagnostic test for myasthenia gravis, and as an antidote for curare principles, administered intravenously and subcutaneously.

neostomy (ne-os'to-me) [*neo-* + *Gr. stoma* mouth] surgical creation of an artificial opening into an organ or between two organs.

neostriatum (ne'o-stri-a'tum) [*neo-* + *striatum*] the later developed portion of the corpus striatum represented by the caudate nucleus and the putamen; called also *striatum*. Cf. *paleostriatum*.

Neo-Synephrine (ne'o-sī-nef'rin) trademark for preparations of phenylephrine hydrochloride.

neoteny (ne-ot'ē-ne) [*neo-* + *Gr. teinein* to extend] the tendency to remain in the larval state, although gaining sexual maturity.

neothalamus (ne'o-thal'ah-mus) [*Gr. neos* new + *thalamus*] new thalamus; the phylogenetically new part of the thalamus, i.e., the part connected to the neocortex. Cf. *paleothalamus*.

Neothylline (ne'o-thil'lin) trademark for preparations of dyphylline.

Neotoma (ne-ot'o-mah) a genus of rodents of western North America, including the wood or pack rats. **N. lep'ida**, the desert wood rat, from which *Brucella neotome* has been isolated.

Neotrizine (ne'o-tri'zēn) trademark for preparations of trisulfapyridines.

neotype (ne'o-tip) a strain of bacteria that replaces a type culture which no longer exists, and that agrees with the original description of the taxon and is accepted by international agreement.

nepenthic (ne-pen'thik) [*Gr. nēpenthēs* free from sorrow] pertaining to or inducing peace and forgetfulness.

Nepeta (nep'ē-tah) a genus of Eurasian mints that includes *Nepeta cataria*, L. (Labiatae), or catnip; see *cataria*.

nepetalactone (nep'ē-tah-lak'tōn) the chief constituent, $C_{10}H_{14}O_2$, of the aromatic volatile oil from the leaves and tops of catnip (*Nepeta cataria*), which is an attractant to cats.

nephelo- (nef'ē-lo) [*Gr. nephelē* cloud or mist] a combining form denoting relationship to cloudiness or mistiness.

nephelometer (nef'ē-lom'ē-ter) [*nephelo-* + *Gr. metron* measure] an instrument, similar in design to a visual colorimeter, which employs the Tyndall phenomenon for measurement of the concentration of substances in suspension. **photoelectric n.**, one in which photoelectric means of measurement is substituted for the human eye.

nephelometry (nef'ē-lom'ē-tre) [*nephelo-* + *Gr. metron* measure] measurement of the concentration of a suspension by means of a nephelometer.

nephelopia (nef'ē-lo'pe-ah) [*nephelo-* + *Gr. ōps* eye + *-ia*] defect of vision from cloudiness of the cornea.

nephelopsychosis (nef'ē-lo-si-ko'sis) [*nephelo-* + *psychosis*] an abnormal interest in clouds.

nephro- see *nephro-*.

nephradenoma (nef'rad-ē-no'mah) [*nephro-* + *adenoma*] adenoma of the kidney.

nephralgia (nē-fral'je-ah) [*nephro-* + *-algia*] pain in a kidney.

nephralgic (nē-fral'jik) pertaining to or characterized by nephralgia.

Nephramine (nef'rah-mēn) trademark for a crystalline solution of eight essential amino acids but no peptides; it is used as a component of total parenteral nutrition in renal failure.

nephrapostasis (nef'rah-pos'tah-sis) [*nephro-* + *Gr. apostasis* suppurative] abscess or suppurative inflammation of a kidney.

nephtratomy (nef'rah-to'ne-ah) [*nephro-* + *a neg.* + *Gr. tonos* tension + *-ia*] atony of the kidney.

nephtratomy (nē-frat'o-ne) nephtratomy.

nephrauxe (nef-rawk'se) [*nephr-* + Gr. *auxē* increase] nephromegaly.

nephrectasia (nef'rek-ta'ze-ah) [*nephr-* + Gr. *ektasis* distention + *-ia*] distention of the kidney; sacciform kidney.

nephrectasis (nē-frek'tah-sis) nephrectasia.

nephrectasy (nē-frek'tah-se) nephrectasia.

nephrectomize (nē-frek'to-miz) to deprive of one or both kidneys by surgical removal.

nephrectomy (nē-frek'to-me) [*nephr-* + Gr. *ektomē* excision] excision of a kidney. **abdominal n.**, **anterior n.**, nephrectomy through an incision in the abdominal wall. **lumbar n.**, nephrectomy through an incision in the loin. **paraperitoneal n.**, the surgical removal of a kidney by a cut through the side along the false rib. **posterior n.**, lumbar nephrectomy.

nephredema (nef'rē-de'mah) renal congestion; nephremia.

nephrelcosis (nef'rel-ko'sis) [*nephr-* + Gr. *helkōsis* ulceration] ulceration of the kidney.

nephremia (nē-fre'me-ah) [*nephr-* + Gr. *haima* blood + *-ia*] congestion of the kidney; nephredema.

nephric (nef'rik) pertaining to the kidney; renal.

nephridium (nē-frid'e-um) the excretory organ of the embryo; the embryonic tube whence the kidney is developed.

nephritic (nē-frit'ik) 1. pertaining to or affected with nephritis. 2. pertaining to the kidneys. 3. a drug or agent useful in kidney disease.

nephritides (nē-frit'i-dēz) plural of *nephritis*, used as a collective term, to include all types of nephritis.

nephritis (nē-frit'is), pl. *nephritides* [Gr. *nephros* kidney + *-itis*] inflammation of the kidney; a focal or diffuse proliferative or destructive process which may involve the glomerulus, tubule, or interstitial renal tissue. See also *glomerulonephritis*. Cf. *nephrosis*.

acute n., nephritis in an acute and active stage with clinical manifestations usually including edema, weight gain, proteinuria, microhematuria, and cylindruria. When involvement is primarily glomerular, gross hematuria is common. **arteriosclerotic n.**, nephrosclerotic nephritis which may result primarily from the aging process, with hyaline changes of the large and small arterioles, or from hypertension, with hyaline and/or muscular changes of the small arterioles in the glomerular hilum. Renal damage occurs primarily through ischemic atrophy of the tubules with resultant focal or diffuse interstitial fibrosis. **azotemic n.**, nephritis which has resulted in anatomic and functional impairment leading to nitrogen retention. **bacterial n.**, nephritis caused by microorganisms. **Balkan n.**, a very slowly progressive interstitial nephritis occurring in several well-defined areas of Yugoslavia, Rumania, Bulgaria, and Greece; called also *Balkan nephropathy*. **capsular n.**, a form said to affect especially Bowman's capsules. **n. caseosa**, **caseous n.**, cheesy n. **cheesy n.**, a chronic suppurative form with caseous deposits. **chloro-azotemic n.**, nonedematous renal failure with acidosis. **chronic n.**, active and slowly progressive parenchymal renal disease, usually with a predominantly glomerular lesion. **congenital n.**, nephritis existing at birth, as in congenital syphilis. **croupous n.**, acute n. **degenerative n.**, nephrosis. **n. dolorosa**, nonspecific involvement of the kidney characterized by painful thickening of the renal capsule due to inflammation of indeterminate etiology, as in some forms of perinephritis. **dropsical n.**, nephrotic syndrome. **exudative n.**, nephritis with exudation of the blood serum. **fibroliomatous n.**, perinephritis in which the perirenal fat has become enmeshed in fibrous tissue proliferation with scarring. **fibrous n.**, interstitial n. **glomerular n.**, that which principally affects the glomeruli; see *glomerulonephritis*. **glomerulocapsular n.**, a term sometimes used to describe glomerulopathy involving primarily the epithelial cells of Bowman's capsules. **n. gravida/rum**, nephritis or other glomerulopathies complicating pregnancy. **hemorrhagic n.**, glomerulopathy associated with gross hematuria. **hydremic n.**, **hydropigenous n.**, nephrotic syndrome; glomerulopathy with hypoproteinemia, massive proteinuria, and edema. **indurative n.**, a condition marked by atrophy and gross scarring of the kidney due to glomerular, tubular, or interstitial renal disease. **interstitial n.**, primary or secondary disease of the renal interstitial tissue resulting from arterial, arteriolar, glomerular, or tubular disease which destroys individual nephrons, or from toxic involvement of interstitial cells and tubules due to systemic diseases such as gout, to drug exposure (as in phenacetin abuse), or to mercury poisoning. Clinically, it may be manifested primarily by loss of concentrating capacity, mineral wasting, proteinuria, and abnormal urine sediment. It may be seen in an acute form, particularly after specific bacterial infection, and may result in acute papillary necrosis. More commonly, the process is a chronic one with progressive renal atrophy and diminution of renal function. **interstitial n., acute**, nephritis in which the inflammatory changes are usually confined to the interstitial tissue. It almost always occurs as a secondary complication of a systemic infection, especially one due to beta-hemolytic streptococci, although it may possibly have an allergic etiology. The kidneys may be normal in size and appearance, or enlarged, soft, and pale or mottled red or gray. Other signs include a thickened cortex, focal or diffuse

interstitial infiltration of leukocytes, and tubular degeneration. **Lancereaux's n.**, interstitial nephritis allegedly resulting from rheumatic disease. **lipomatous n.**, fatty replacement of renal nephrons associated with, but not causative of, a primary disease process; called also *lipomatosis renis*, *lipoma diffusum renis*. **lupus n.**, glomerulonephritis (diffuse, focal, or membranous) associated with systemic lupus erythematosus, marked by deposition of antigen-antibody complexes in the mesangium and basement membrane, by hematuria, and either by a fulminating course, with uremia and death in a few weeks, or by a chronic progressive course; hypertension is rare until late in the course of the disease. **Masugi n.**, experimental glomerulonephritis induced in one species, such as the rat, by the injection of antglomerular basement membrane antibody raised in a heterologous host, such as a rabbit, immunized with rat glomerular basement membrane antigens. Glomerulonephritis develops within a few hours following the inoculation of a large dose of antiserum, whereas repeated smaller doses require several weeks to produce disease. **nephrotoxic n.**, nephritis produced in an animal by the injection of antikidney antibody, the antibody being taken from an animal of a different species that had previously received a preparation of glomerular basement membrane from an animal of the same species as the one to be inoculated. **parenchymatous n.**, renal parenchymatous disease of specific or unknown etiology. **parenchymatous n., chronic**, chronic disease of the renal parenchyma of specific or nonspecific etiology, usually manifested as a diffuse glomerular, tubular, or interstitial fibrosis. **pneumococcus n.**, nephritis from infection with pneumococci, occurring usually as a complication of pneumonia or empyema. **potassium-losing n.**, persistent urinary potassium losses in the presence of hypokalemia. It may be seen in metabolic alkalosis, adrenocortical hormone excess, or in intrinsic renal disease (e.g., renal tubular acidosis or juxtaglomerular cell hyperplasia). Called also *potassium-losing nephropathy*. **n. of pregnancy**, *n. gravidarum*. **productive n.**, nephritis with the development of serous exudate and hypertrophy of the connective tissue stroma. **n. re'pens**, a condition in which the patient has advanced renal insufficiency and raised blood pressure but without an antecedent history of acute nephritis. **salt-losing n.**, intrinsic renal disease causing abnormal urinary sodium loss in persons ingesting normal amounts of sodium chloride; it usually affects the renal medulla (e.g., medullary cystic disease, polycystic kidney disease, pyelonephritis) and results in vomiting, dehydration, hypotension, and sudden death. Called also *Thorn's syndrome*. **saturnine n.**, a form due to chronic lead poisoning. **scarlatinal n.**, acute nephritis due to scarlet fever. **subacute n.**, parenchymatous n., chronic. **suppurative n.**, a form accompanied by abscess of the kidney. **suppurative n., acute**, a form due to septic infection, generally from operations on the genitourinary tract (then called *surgical kidney*), and marked by the development of multiple abscesses. **suppurative n., chronic**, is caused by infection with the tubercle bacillus; in this disease cavities are found in the kidney, filled with puslike, cheesy masses and tubercle bacilli. **syphilitic n.**, a form of nephritis occurring in tertiary syphilis. **tartrate n.**, acute nephritis produced by the subcutaneous injection of racemic tartaric acid. **transfusion n.**, a nephropathy following blood transfusion from a donor whose blood is incompatible with that of the recipient. **trench n.**, war n. **tubal n.**, **tubular n.**, a variety that affects principally the tubules. **tuberculous n.**, see *interstitial nephritis, chronic*. **vascular n.**, nephrosclerosis. **war n.**, an acute diffuse glomerulonephritis affecting soldiers under war conditions.

nephritogenic (nē-frit'o-jen'ik) giving rise to inflammation of the kidney, or nephritis.

nephr-, nephr- [Gr. *nephros* kidney] combining form denoting relationship to the kidney.

nepbroabdominal (nef'ro-ab-dom'i-nal) pertaining to the kidney and the abdominal wall.

nepbroangiosclerosis (nef'ro-an'je-o-skle-ro'sis) hypertension with renal lesions of arterial origin.

nepbroblastoma (nef'ro-blas-to'mah) Wilms' tumor.

nepbrocalcinosis (nef'ro-kal'si-no'sis) [*nephr-* + *calcium* + *-osis*] a condition characterized by precipitation of calcium phosphate in the tubules of the kidney, with resultant renal insufficiency.

nepbrocapsectomy (nef'ro-kap-sek'to-me) [*nephr-* + L. *capsula* capsule + Gr. *ektomē* excision] excision of the renal capsule; decapsulation of the kidney.

nepbrocardiac (nef'ro-kar'de-ak) pertaining to the kidney and the heart.

nepbrocele (nef'ro-sēl) [*nephr-* + Gr. *kēlē* hernia] hernial protrusion of a kidney.

nepbrocolic (nef'ro-kol'ik) [*nephr-* + *colic*] 1. pertaining to the kidney and the colon. 2. renal colic.

nepbrocolopexy (nef'ro-ko'lo-pek'se) [*nephr-* + Gr. *kolon* colon + *pēxis* fixation] operative suspension of the kidney and colon by fixation to the nepbrocolic ligament.

nepbrocoloptosis (nef'ro-ko'lop-to'sis) [*nephr-* + Gr. *kolon* co-

lon + *ptōsis* fall] downward displacement of the kidney and colon.

nephrocystanastomosis (nef'ro-sist'ah-nas'to-mō'sis) [*nephro-* + Gr. *kystis* bladder + *anastomōsis* an opening] the surgical formation of a communication between the kidney and the urinary bladder.

nephrocystitis (nef'ro-sis-ti'tis) [*nephro-* + Gr. *kystis* bladder + *-itis*] inflammation of the kidney and bladder.

nephrocystosis (nef'ro-sis-to'sis) [*nephro-* + *cyst* + *-osis*] development of cysts in the kidney.

nephroerysipelas (nef'ro-er'ī-sip'ē-las) erysipelas complicated with acute nephritis.

nephrogastric (nef'ro-gas'trik) pertaining to the kidney and the stomach; renogastric.

nephrogenic (nef'ro-jen'ik) [*nephro-* + Gr. *gennan* to produce] forming kidney tissue.

nephrogenous (nē-froj'ē-nus) originating or arising in the kidney.

nephrogram (nef'ro-gram) a roentgenogram of the kidney.

nephrography (nē-frog'rah-fe) [*nephro-* + Gr. *graphein* to write] roentgenography of the kidney.

nephrohemia (nef'ro-he'me-ah) [*nephro-* + Gr. *haima* blood + *-ia*] congestion of the kidney.

nephrohydrosis (nef'ro-hi-dro'sis) hydronephrosis.

nephrohypertrophy (nef'ro-hi-per'tro-fe) [*nephro-* + *hypertrophy*] hypertrophy of the kidney.

nephroid (nef'roid) [*nephro-* + Gr. *eidos* form] kidney-shaped, or resembling a kidney.

nephrolith (nef'ro-lith) [*nephro-* + Gr. *lithos* stone] a renal calculus; gravel in a kidney.

nephrolithiasis (nef'ro-li-thi'ah-sis) a condition marked by the presence of renal calculi.

nephrolithotomy (nef'ro-li-thot'o-me) [*nephrolith* + Gr. *tomē* a cutting] the removal of renal calculi by cutting through the body of the kidney.

nephrologist (nē-frol'o-jist) an expert in nephrology.

nephrology (nē-frol'o-je) [*nephro-* + *-logy*] scientific study of the kidney, its anatomy, physiology, and pathology.

nephrolysine (nē-frol'i-sin) [*nephro-* + *lysine*] nephrotoxin.

nephrolysis (nē-frol'i-sis) [*nephro-* + Gr. *lysis* dissolution] 1. solution of kidney substance. 2. the operation of separating the kidney from paranephric adhesions.

nephrolytic (nef'ro-lit'ik) pertaining to, characterized by, or producing nephrolysis.

nephroma (nē-fro'mah) [*nephro-* + *-oma*] a tumor of kidney tissue; a tumor of the kidney. **embryonal n.**, Wilms' tumor.

nephromalacia (nef'ro-mah-lā'she-ah) [*nephro-* + Gr. *malakia* softness] softening of the kidney.

nephromegaly (nef'ro-meg'ah-le) [*nephro-* + Gr. *megas* great] enlargement of the kidney.

nephromere (nef'ro-mēr) [*nephro-* + Gr. *meros* part] nephrotome.

nephron (nef'ron) [Gr. *nephros* kidney + *on* neuter ending] the anatomical and functional unit of the kidney, consisting of the renal corpuscle, the proximal convoluted tubule, the descending and ascending limbs of Henle's loop, the distal convoluted tubule, and the collecting tubule. See illustration accompanying *kidney*. **lower n.**, the thick segment of the ascending limb of Henle's loop and the parts distal to it.

nephroncus (nef-rong'kus) [*nephro-* + Gr. *onkos* mass] nephroma.

nephronophthisis (nef'ron-of'thi-sis) [*nephron* + Gr. *phthisis* wasting] wasting disease of the kidney substance. **familial juvenile n.**, a progressive hereditary disease of the kidneys characterized clinically by anemia, polyuria, and renal loss of sodium, progressing to chronic renal failure; pathologically, there is tubular atrophy, interstitial fibrosis, glomerular sclerosis, and medullary cysts. Called also *medullary cystic disease*.

nephro-omentopexy (nef'ro-o-men'to-pek'se) the operation of grafting the omentum on to the decapsulated ischemic kidney; proposed for the relief of hypertension.

nephroparalysis (nef'ro-pah-ral'i-sis) [*nephro-* + *paralysis*] paralysis of the kidney.

nephropathia (nef'ro-path'e-ah) nephropathy. **n. epidem'ica**, epidemic hemorrhagic fever.

nephropathic (nef'ro-path'ik) pertaining to, characterized by, or producing nephropathy.

nephropathy (nē-frop'ah-the) [*nephro-* + Gr. *pathos* disease] disease of the kidneys. **analgesic n.**, that due to renal damage associated with massive intake of analgesics containing phenacetin. **Balkan n.**, see under *nephritis*. **dropsical n.**, hypochloruric **n.** **gouty n.**, any of a group of kidney diseases associated with the abnormal production and excretion of uric acid. **hypazoturic n.**, kidney disease with retention of nitrogen. **hypochloruric n.**, kidney disease with sodium chloride retention. **IgA n.**, IgA glomerulonephritis. **membranous**

n., see under *glomerulonephritis*. **reflux r.**, childhood pyelonephritis in which the renal scarring results from vesicoureteric reflux, with radiological appearance of intrarenal reflux.

nephropexy (nef'ro-pek'se) [*nephro-* + Gr. *pēxis* fixation] the fixation or suspension of a floating kidney.

nephrophagiasis (nef'ro-fah-jī'ah-sis) [*nephro-* + Gr. *phagein* to eat] the devouring of the kidney by certain parasites.

nephrophthisis (nē-frof'thi-sis) [*nephro-* + Gr. *phthisis* wasting] 1. nephrotuberculosis. 2. nephronophthisis.

nephropoietic (nef'ro-poi-et'ik) [*nephro-* + Gr. *poiein* to make] forming kidney tissue.

nephropoietin (nef'ro-poi-e'tin) a substance thought to exist in the blood serum, in embryonic kidney, and in kidneys undergoing regeneration and to stimulate the formation of kidney tissue.

nephroptosis (nef'rop-to'se-ah) nephroptosis.

nephroptosis (nef'rop-to'sis) [*nephro-* + Gr. *ptōsis* falling] downward displacement of the kidney.

nephropyelitis (nef'ro-pi'ē-li'tis) [*nephro-* + *pyelitis*] pyelonephritis.

nephropyelography (nef'ro-pi'ē-log'rah-fe) radiography of the kidney and renal pelvis.

nephropyelolithotomy (nef'ro-pi'ē-lo-li-thot'o-me) [*nephro-* + Gr. *pyelos* pelvis + *lithos* stone + *tomē* a cut] the operation of removing a calculus from the renal pelvis by an incision through the kidney substance.

nephropyeloplasty (nef'ro-pi'ē-lo-plas'te) [*nephro-* + Gr. *pyelos* pelvis + *plassein* to form] plastic operation on the pelvis of the kidney.

nephropyosis (nef'ro-pi-o'sis) [*nephro-* + Gr. *pyōsis* suppuration] suppuration of the kidney.

nephrorosein (nef'ro-ro'ze-in) a urinary pigment identified spectroscopically.

nephrorrhagia (nef'ro-ra'je-ah) [*nephro-* + Gr. *rhēgnynai* to burst forth] hemorrhage from the kidney.

nephrorrhaphy (nef-ror'ah-fe) [*nephro-* + Gr. *rhaphē* suture] the operation of suturing the kidney.

nephrosclerosis (nef'ro-skle're-ah) nephrosclerosis.

nephrosclerosis (nef'ro-skle-ro'sis) [*nephro-* + Gr. *sklēros* hardening] sclerosis or hardening of the kidney; the condition of the kidney due to renovascular disease. **arteriolar n.**, nephrosclerosis involving chiefly the arterioles; it is frequently associated with hypertension, and characterized by insidious onset, cylindruria, edema, hypertrophy of the heart, degeneration of the renal tubules, and fibrotic thickening of the glomeruli (glomerulonephritis), resulting in renal insufficiency, congestive heart failure, and cerebral hemorrhage. Called also *intercapillary n.* and *glomerulosclerosis*. **benign n.**, arteriolar nephrosclerosis commonly occurring in patients sixty years of age or older, and frequently associated with benign hypertension and hyaline arteriolosclerosis; in younger persons, it may occur in diabetics with a predisposition to arteriosclerosis and in those who have hypertension resulting from an apparent underlying disease, such as pheochromocytoma. Called also *hyaline arteriolar n.* **hyaline arteriolar n.**, benign **n.** **hyperplastic arteriolar n.**, malignant **n.** **intercapillary n.**, arteriolar **n.** **malignant n.**, an uncommon form of arteriolar nephrosclerosis affecting all the vessels of the body, especially the small arteries and arterioles of the kidneys, and frequently associated with malignant hypertension and hyperplastic arteriolosclerosis. It may occur in the absence of previous history of hypertension, or may be superimposed on benign hypertension or primary renal disease, especially glomerulonephritis, benign nephrosclerosis, and pyelonephritis. Called also *hyperplastic arteriolar n.* and *Fahr-Volhard disease*. **senile n.**, nephrosclerosis which is just a part of the arteriosclerosis common in old age.

nephroscope (nef'ro-skōp) an instrument inserted into an incision in the renal pelvis for viewing the inside of the kidney, equipped with three channels for telescope, fiberoptic light input, and irrigation.

nephroscopy (nē-fros'ko-pe) visualization of the kidney by means of the nephroscope.

nephroses (nē-fro'sēz) plural of *nephrosis*.

nephrosis (nē-fro'sis), pl. *nephroses* [*nephro-* + *-osis*] any disease of the kidney, especially any disease of the kidneys characterized by purely degenerative lesions of the renal tubules—as opposed to nephritis—and marked by edema (noninflammatory), albuminuria, and decreased serum albumin (the nephrotic syndrome). **acute n.**, nephrosis marked by scanty urine but with little edema or albuminuria. **amyloid n.**, chronic nephrosis with amyloid degeneration of the median coat of the arteries and the glomerular capillaries; amyloid kidney. **cholemic n.**, renal disease associated with various types of hepatic or biliary dysfunction, especially those in which there is obstructive jaundice. **chronic n.**, renal disease characterized by chronic degeneration of the renal epithelium. **Epstein's n.**, a type of chronic tubular nephritis resulting from systemic metabolic disorder, occurring usually in young persons and in women, and frequently associated with hypothyroidism or other endocrine

- disturbance. **glycogen n.**, nephrosis associated with glycogen vacuolation within the proximal convoluted tubules and the loops of Henle. **hydropic n.**, vacuolar n. **hypokalemic n.**, vacuolar n. **infectious avian n.**, a sometimes fatal disease of chickens, usually four to nine weeks old, possibly caused by a variant of the infectious bronchitis virus; it is characterized by dehydration, swollen kidneys, and distention of the renal tubules and ureters with urates. In some outbreaks depression is observed, and in others mild respiratory symptoms. **larval n.**, a condition in which the renal lesions are slight and manifested clinically by albuminuria. **lipid n.**, **lipoid n.**, nephrosis characterized by edema, albuminuria, and changes in the protein and lipids of the blood and the accumulation of globules of cholesterol esters in the tubular epithelium of the kidney. **lower nephron n.**, a condition of renal insufficiency leading to uremia, due to necrosis of the cells of the lower nephron, blocking the tubular lumens of this region. The condition is seen after severe injuries, especially crushing injury to muscles (*crush syndrome*). **necrotizing n.**, renal disease characterized by necrosis of tubular epithelium of the kidney. **osmotic n.**, vacuolar n. **toxic n.**, nephrosis caused by some toxic agent, most frequently and typically by bichloride of mercury. **vacuolar n.**, renal disease in which injury of the renal tubules is associated with vacuolization of the proximal convoluted tubules and sometimes of the loops of Henle and collecting tubules, presumed to be caused by disturbances in the normal osmotic relationships within the cells. These changes are seen in various clinical situations, as following the administration of hypertonic solutions, in diseases resulting in marked alterations in fluid balance, and in severe hypokalemia. Called also *hydropic n.*, *hypokalemic n.*, and *osmotic n.*
- nephrosonephritis** (nē-fro'so-nē-frī'tis) [*nephrosis* + *nephritis*] renal disease with nephrotic and nephritic components. **hemorrhagic n.**, **Korean hemorrhagic n.**, epidemic hemorrhagic fever.
- nephrosonephrography** (nēf'ro-so-nog'rah-fe) ultrasonic scanning of the kidney.
- nephrospasis** (nēf'ro-spas'is) [*nephro* + Gr. *span* to draw] movable kidney in which the natural supports of the organ are so weakened that the organ hangs by its pedicle.
- nephrospenopexy** (nēf'ro-sple'no-pek'se) surgical fixation of the kidney and the spleen.
- nephrostoma** (nē-fros'to-mah) [*nephro* + Gr. *stoma* mouth] one of the funnel-shaped and ciliated orifices of excretory tubules that open into the coelom in the embryo, best seen in lower vertebrates.
- nephrostome** (nēf'ro-stōm) nephrostoma.
- nephrostomy** (nē-fros'to-me) [*nephro* + Gr. *stomoun* to provide with an opening, or mouth] the creation of a permanent fistula leading directly into the pelvis of the kidney.
- nephrotic** (nē-frot'ik) pertaining to, resembling, or caused by nephrosis.
- nephrotome** (nēf'ro-tōm) one of the segmented divisions of the mesoderm connecting the somite with the lateral plates of unsegmented mesoderm; it is the source of much of the urogenital system. Called also *intermediate cell mass* and *middle plate*.
- nephrotomogram** (nēf'ro-to'mo-gram) the sectional radiograph of the kidney obtained by nephrotomography.
- nephrotomography** (nēf'ro-to-mog'rah-fe) radiologic visualization of the kidney by tomography after intravenous introduction of contrast medium as a bolus or by infusion.
- nephrotomy** (nē-frot'o-me) [*nephro* + Gr. *tomē* a cutting] a surgical incision into the kidney. **abdominal n.**, nephrotomy performed through an incision into the abdomen. **lumbar n.**, nephrotomy performed through an incision into the loin.
- nephrotoxic** (nēf'ro-tok'sik) toxic or destructive to kidney cells.
- nephrotoxicity** (nēf'ro-tok-sis'i-te) the quality of being toxic or destructive to kidney cells.
- nephrotoxin** (nēf'ro-tok'sin) [*nephro* + Gr. *toxikon* poison] a toxin which has a specific destructive effect on kidney cells.
- nephrotresis** (nēf'ro-tre'sis) [*nephro* + Gr. *trēsis* boring] the operation of establishing a fistula into the kidney by stitching the edges of the kidney incision to the parietal muscles.
- nephrotropic** (nēf'ro-trop'ik) having a special affinity for or exerting its principal effect upon kidney tissue.
- nephrotuberculosis** (nēf'to-tu-ber'ku-lo'sis) [*nephro* + *tuberculosis*] disease of the kidney due to *Mycobacterium tuberculosis*.
- nephrotyphoid** (nēf'ro-ti'foid) typhoid fever complicated with acute nephritis.
- nephrotyphus** (nēf'ro-ti'fus) [*nephro* + *typhus*] typhus with nephritis and resultant hematuria.
- nephroureterectomy** (nēf'ro-u're-ter-ek'to-me) [*nephro* + *ureterectomy*] excision of a kidney and a whole or part of the ureter.
- nephroureterocystectomy** (nēf'ro-u're-ter-o-sis-tek'to-me) [*nephro* + Gr. *ourētēr* ureter + *kystis* bladder + *ektomē* excision] excision of the kidney, ureter, and a portion of the bladder wall.
- nephrozymase** (nēf'ro-zi'mās) [*nephro* + Gr. *zymē* leaven] an enzyme, like diastase, found in the urine.
- nephrozymosis** (nēf'ro-zi-mo'sis) zymotic or fermentative disease of the kidney.
- nephrydrosis** (nēf'ri-dro'sis) [*nephro* + Gr. *hydōr* water + *-osis*] hydronephrosis.
- nephrydrotic** (nēf'ri-drot'ik) pertaining to nephrydrosis.
- nephiology** (nep'e-ol'o-je) [Gr. *nēpio* infant + *-logy*] (*obs.*) the department of pediatrics treating of young infants.
- Neptazane** (nep'tah-zān) trademark for a preparation of methazolamine.
- neptunium** (nep-tu'ne-um) [from planet Neptune] a radioactive element of atomic number 93 and atomic weight 237, occurring in certain earths and obtained by splitting the uranium atom with neutrons. It is unstable and changes into plutonium. Symbol Np.
- nequinat** (nē-kwin'āt) chemical name: 6-butyl-1,4-dihydro-4-oxo-7-(phenylmethoxy)-3-quinolinecarboxylic acid methyl ester; a coccidiostat for poultry, C₂₂H₂₃NO₄.
- Nerium** (ne'ri-um) a genus of evergreen apocynaceous shrubs of the Mediterranean region and Asia. *N. odorum* (*N. indicum*) is the sweet-scented oleander; *N. oleander* L. is the common oleander.
- nerol** (ne'rol) an essential oil, (CH₃)₂C:CH·CH₂·CH₂·C·(CH₃)·CH·CH₂OH, a constituent of orange flower oil.
- neroli** (ner'o-le) an essential oil distilled from orange blossoms; orange flower oil.
- neropathy** (ne-rop'ah-the) see *weltmerism*.
- nerval** (ner'val) (*obs.*) neural.
- nerve** (nerv) [L. *nervus*; Gr. *neuron*] a cordlike structure, visible to the naked eye, comprising a collection of nerve fibers which convey impulses between a part of the central nervous system and some other region of the body. Called also *nervus* [NA]. A nerve consists of a connective tissue sheath (epineurium) enclosing bundles (funiculi or fasciculi) of nerve fibers, each bundle being surrounded by its own sheath of connective tissue (perineurium), the inner surface of which is formed by a membrane of flattened mesothelial cells. Very small nerves may consist of only one funiculus derived from the parent nerve. Within each such bundle, the individual nerve fibers, which are microscopic in size, are surrounded by interstitial connective tissue (endoneurium). An individual nerve fiber (an axon with its covering sheath) consists of formed elements in a matrix of protoplasm (axoplasm), the entire structure being enclosed in a thin membrane (axolemma). Each nerve fiber is enclosed by a cellular sheath (neurilemma), from which it may or may not be separated by a lipid layer (myelin sheath) derived from neurilemmal cells. **abducent n.**, *nervus abducens*. **accelerator n's**, the cardiac sympathetic nerves, which, when stimulated, accelerate the action of the heart. **accessory n.**, **accessory n.**, **spinal**, *nervus accessorius*. **accessory n.**, **vagal**, *ramus internus nervi accessorii*. **acoustic n.**, *nervus vestibulocochlearis*. **afferent n.**, any nerve that transmits impulses from the periphery toward the central nervous system; see *sensory n.* **alveolar n.**, **inferior**, *nervus alveolaris inferior*. **alveolar n's**, **superior**, *nervi alveolaris superior*. **ampullar n.**, **anterior**, *nervus ampullaris anterior*. **ampullar n.**, **inferior**, *nervus ampullaris posterior*. **ampullar n.**, **lateral**, *nervus ampullaris lateralis*. **ampullar n.**, **posterior**, *nervus ampullaris posterior*. **ampullar n.**, **superior**, *nervus ampullaris anterior*. **anabolic n.**, any nerve, such as the vagus, the stimulation of which serves to promote the anabolic processes. **Andersch's n.**, *nervus tympanicus*. **anococcygeal n's**, *nervi anococcygei*. **Arnold's n.**, *ramus auricularis nervi vagi*. **articular n.**, *nervus articularis*. **auditory n.**, *nervus vestibulocochlearis*. **auricular n's**, **anterior**, *nervi auriculares anteriores*. **auricular n.**, **great**, *nervus auricularis magnus*. **auricular n.**, **internal**, *ramus posterior nervi auricularis magni*. **auricular n.**, **posterior**, *nervus auricularis posterior*. **auricular n. of vagus n.**, *ramus auricularis nervi vagi*. **auriculotemporal n.**, *nervus auriculotemporalis*. **autonomic n's**, nerves of the autonomic nervous system, see under *system*. **axillary n.**, *nervus axillaris*. **Bell's n.**, *nervus thoracicus longus*. **Bock's n.**, *ramus pharyngeus ganglii pterygopalatini*. **buccal n.**, **buccinator n.**, *nervus buccalis*. **cardiac n.**, **cervical**, **inferior**, *nervus cardiacus cervicalis inferior*. **cardiac n.**, **cervical**, **middle**, *nervus cardiacus cervicalis medius*. **cardiac n.**, **cervical**, **superior**, *nervus cardiacus cervicalis superior*. **cardiac n.**, **inferior**, *nervus cardiacus cervicalis inferior*. **cardiac n.**, **middle**, *nervus cardiacus cervicalis medius*. **cardiac n.**, **superior**, *nervus cardiacus cervicalis superior*. **cardiac n's**, **supreme**, *rami cardiaci cervicales superiores nervi vagi*. **cardiac n's**, **thoracic**, *nervi cardiaci thoracici*. **caroticotympanic n's**, *nervi caroticotympanici*. **carotid n's**, **external**, *nervi carotici externi*. **carotid n.**, **internal**, *nervus caroticus internus*. **cavernous n's of clitoris**, *nervi cavernosi clitoridis*. **cavernous n's of penis**, *nervi cavernosi penis*. **celiac n's**, *rami celiacii nervi vagi*. **centrifugal n.**, *efferent n.* **centripetal n.**, *afferent n.* **cerebral n's**, *nervi craniales*. **cervical n's**, the eight pairs

Three types of human neuroglial cell. (King and Showers.)

Transverse section of a nerve.

SENSORY NEURON

MOTOR NEURON

Diagrammatic representation of two types of neurons. (King and Showers.)

Longitudinal section of a nerve fiber (Leeson and Leeson).

SUPERFICIAL NERVES AND MUSCLES OF HEAD AND NECK

Portions of the parotid gland and platysma muscle are shown cut away. (Jones and Shepard.)

DEEP NERVES SHOWN IN RELATION TO BONES OF FACE

DEEP NERVES OF NECK, AXILLA, AND UPPER THORAX

The sympathetic nerves are uncolored. (Jones and Shepard.)

DEEP NERVES OF LOWER TRUNK

The sympathetic nerves are uncolored. (Jones and Shepard.)

NERVES OF RIGHT UPPER EXTREMITY

Front view shows principal nerves and arteries (uncolored) in relation to the bones, C and D are cross sections made at levels indicated on drawing at left. (Jones and Shepard.)

NERVES OF RIGHT LOWER EXTREMITY

Front view shows principal nerves and arteries (uncolored) in relation to the bones. C and D are cross sections made at levels indicated on drawing at left. (Jones and Shepard.)

of nerves arising from the cervical segments of the spinal cord; see *nervi cervicales* [NA]. **cervical n., descending**, radix inferior ansae cervicalis. **cervical n., transverse**, nervus transversus colli. **chorda tympani n.**, see *chorda tympani*. **ciliary n's, long**, nervi ciliares longi. **ciliary n's, short**, nervi ciliares breves. **circumflex n.**, nervus axillaris. **clunial n's, inferior**, nervi clunium inferiores. **clunial n's, middle**, nervi clunium medii. **clunial n's, superior**, nervi clunium superiores. **coccygeal n.**, either of the thirty-first pair of spinal nerves, arising from the coccygeal segment of the spinal cord; called also *nervus coccygeus*. **cochlear n.**, pars cochlearis nervi vestibulocochlearis. **n. of Cotunnus**, nervus nasopalatinus. **cranial n's**, the twelve pairs of nerves connected with the brain; see *nervi craniales* [NA]. **cranial n., eighth**, nervus vestibulocochlearis. **cranial n., eleventh**, nervus accessorius. **cranial n., fifth**, nervus trigeminus. **cranial n's, first**, see *nervi olfactorii*. **cranial n., fourth**, nervus trochlearis. **cranial n., ninth**, nervus glossopharyngeus. **cranial n., second**, nervus opticus. **cranial n., seventh**, nervus facialis. **cranial n., sixth**, nervus abducens. **cranial n., tenth**, nervus vagus. **cranial n., third**, nervus oculomotorius. **cranial n., twelfth**, nervus hypoglossus. **crotaphitic n.**, nervus maxillaris. **cubital n.**, nervus ulnaris. **cutaneous n.**, nervus cutaneus. **cutaneous n. of abdomen, anterior**, ramus cutaneus anterior [pectoralis et abdominalis] nervorum intercostalium. **cutaneous n. of arm, lateral, inferior**, nervus cutaneus brachii lateralis inferior. **cutaneous n. of arm, lateral, superior**, nervus cutaneus brachii lateralis superior. **cutaneous n. of arm, medial**, nervus cutaneus brachii medialis. **cutaneous n. of arm, posterior**, nervus cutaneus brachii posterior. **cutaneous n. of calf, lateral**, nervus cutaneus surae lateralis. **cutaneous n. of calf, medial**, nervus cutaneus surae medialis. **cutaneous n. of foot, dorsal, intermediate**, nervus cutaneus dorsalis intermedius. **cutaneous n. of foot, dorsal, lateral**, nervus cutaneus dorsalis lateralis. **cutaneous n. of foot, dorsal, medial**, nervus cutaneus dorsalis medialis. **cutaneous n. of forearm, dorsal**, nervus cutaneus antebrachii posterior. **cutaneous n. of forearm, lateral**, nervus cutaneus antebrachii lateralis. **cutaneous n. of forearm, medial**, nervus cutaneus antebrachii medialis. **cutaneous n. of forearm, posterior**, nervus cutaneus antebrachii posterior. **cutaneous n. of thigh, lateral**, nervus cutaneus femoris lateralis. **cutaneous n. of thigh, posterior**, nervus cutaneus femoris posterior. **Cyon's n.**, a depressor nerve, the branch of the vagus nerve in the rabbit, stimulation of which results in lowering of the blood pressure. **dental n.**, **inferior**, nervus alveolaris inferior. **depressor n.**, 1. a nerve that lessens the activity of an organ. 2. an inhibitory nerve whose stimulation depresses a motor center. **diaphragmatic n.**, nervus phrenicus. **digestric n.**, ramus digastricus nervi facialis. **digital n's, dorsal, radial**, nervi digitales dorsales nervi radialis. **digital n's, dorsal, ulnar**, nervi digitales dorsales nervi ulnaris. **digital n's of foot, dorsal**, nervi digitales dorsales pedis. **digital n's of lateral planar nerve, plantar, common**, nervi digitales plantares communes nervi plantaris lateralis. **digital n's of lateral planar nerve, plantar, proper**, nervi digitales plantares proprii nervi plantaris lateralis. **digital n's of lateral surface of great toe and of medial surface of second toe, dorsal**, nervi digitales dorsales hallucis lateralis et digiti secundi medialis. **digital n's of medial planar nerve, plantar, common**, nervi digitales plantares communes nervi plantaris medialis. **digital n's of medial planar nerve, plantar, proper**, nervi digitales plantares proprii nervi plantaris medialis. **digital n's of median nerve, palmar, common**, nervi digitales palmares communes nervi mediani. **digital n's of median nerve, palmar, proper**, nervi digitales palmares proprii nervi mediani. **digital n's of radial nerve, dorsal**, nervi digitales dorsales nervi radialis. **digital n's of ulnar nerve, dorsal**, nervi digitales dorsales nervi ulnaris. **digital n's of ulnar nerve, palmar, collateral**, nervi digitales palmares proprii nervi ulnaris. **digital n's of ulnar nerve, palmar, common**, nervi digitales palmares communes nervi ulnaris. **digital n's of ulnar nerve, palmar, proper**, nervi digitales palmares proprii nervi ulnaris. **dorsal n. of clitoris**, nervus dorsalis clitoridis. **dorsal n. of penis**, nervus dorsalis penis. **dorsal n. of scapula**, nervus dorsalis scapulae. **efferent n.**, any nerve that carries impulses from the central nervous system toward the periphery, as a motor nerve. **eighth n.**, nervus vestibulocochlearis. **eleventh n.**, nervus accessorius. **esodic n.**, afferent n. **ethmoidal n., anterior**, nervus ethmoidalis anterior. **ethmoidal n., posterior**, nervus ethmoidalis posterior. **exciter n.**, a nerve that transmits impulses resulting in an increase in functional activity. **excitreflex n.**, a visceral nerve that produces reflex action. **exodic n.**, efferent n. **n. of external acoustic meatus**, nervus meatus acustici externi. **facial n.**, nervus facialis. **facial n., temporal**, see *rami temporales nervi facialis*. **femoral n.**, nervus femoralis. **fibular n., common**, nervus peroneus communis. **fibular n., deep**, nervus peroneus profundus. **fibular n., superficial**,

nervus peroneus superficialis. **fifth n.**, nervus trigeminus. **first n's**, see *nervi olfactorii*. **fourth n.**, nervus trochlearis. **frontal n.**, nervus frontalis. **furcal n.**, the fourth lumbar nerve, so called because its fibers pass to the lumbar and sacral plexuses. **fusimotor n's**, those with a special type of nerve ending that innervates intrafusal fibers of the muscle spindle. **gangliated n.**, any nerve of the sympathetic nervous system. **gastric n's**, truncus vagalis anterior and truncus vagalis posterior. **genitofemoral n.**, nervus genitofemoralis. **glossopharyngeal n.**, nervus glossopharyngeus. **gluteal n., inferior**, nervus gluteus inferior. **gluteal n's, inferior**, nervi clunium inferiores. **gluteal n's, middle**, nervi clunium medii. **gluteal n., superior**, nervus gluteus superior. **hemorrhoidal n's, inferior**, nervi rectales inferiores. **Hering's n.**, ramus sinus carotici nervi glossopharyngei. **hypogastric n.**, nervus hypogastricus [dexter et sinister]. **hypoglossal n.**, nervus hypoglossus. **iliohypogastric n.**, nervus iliohypogastricus. **ilioinguinal n.**, nervus ilioinguinalis. **infraoccipital n.**, nervus suboccipitalis. **infraorbital n.**, nervus infraorbitalis. **infratrochlear n.**, nervus infratrochlearis. **inhibitory n.**, a nerve that transmits impulses resulting in a decrease in functional activity. **intercostal n's**, rami ventrales nervorum thoraciorum. **intercostobrachial n's**, nervi intercostobrachiales. **intermediary n.**, **intermediate n.**, nervus intermedius. **interosseous n. of forearm, anterior**, nervus interosseus antebrachii anterior. **interosseous n. of forearm, posterior**, nervus interosseus antebrachii posterior. **interosseous n. of leg**, nervus interosseus cruris. **ischadic n.**, nervus ischiadicus. **Jacobson's n.**, nervus tympanicus. **jugular n.**, nervus jugularis. **labial n's, anterior**, nervi labiales anteriores. **labial n's, posterior**, nervi labiales posteriores. **lacrimal n.**, nervus lacrimalis. **n's of Lancisi**, stria longitudinalis lateralis corporis callosi and stria longitudinalis medialis corporis callosi. **Langley's n's**, pilomotor n's. **laryngeal n., inferior**, nervus laryngeus inferior. **laryngeal n., recurrent**, nervus laryngeus recurrens. **laryngeal n., superior**, nervus laryngeus superior. **laryngeal n., superior, internal**, ramus internus nervi laryngei superioris. **lingual n.**, nervus lingualis. **longitudinal n's of Lancisi**, stria longitudinalis lateralis corporis callosi and stria longitudinalis medialis corporis callosi. **lumbar n's**, the five pairs of nerves arising from the lumbar segments of the spinal cord; see *nervi lumbales*. **lumboinguinal n.**, ramus femoralis nervi genitofemoralis. **n. of Luschka**, 1. ramus meningeus nervorum spinalium. 2. nervus ethmoidalis posterior. **mandibular n.**, nervus mandibularis. **masseteric n.**, nervus massetericus. **maxillary n.**, nervus maxillaris. **median n.**, nervus medianus. **medullated n.**, myelinated n. **meningeal n.**, ramus meningeus nervi vagi. **mental n.**, nervus mentalis. **mixed n.**, a nerve composed of both sensory and motor fibers. **motor n.**, an efferent nerve that stimulates muscle contraction. **motor n. of tongue**, nervus hypoglossus. **musculocutaneous n.**, nervus musculocutaneus. **musculocutaneous n. of foot**, nervus peroneus superficialis. **musculocutaneous n. of leg**, nervus peroneus profundus. **musculospiral n.**, nervus radialis. **myelinated n.**, a nerve, especially a peripheral nerve, whose fibers (axons) are encased in a myelin sheath, which in turn is enclosed by a neurilemma. Called also *medullated n.* Cf. *unmyelinated n.* **mylohyoid n.**, nervus mylohyoideus. **nasociliary n.**, nervus nasociliaris. **nasopalatine n.**, nervus nasopalatinus. **ninth n.**, nervus glossopharyngeus. **non-medullated n.**, unmyelinated n. **obturator n.**, nervus obturatorius. **occipital n., greater**, nervus occipitalis major. **occipital n., internal (obs.)**, nervus occipitalis major. **occipital n., least**, nervus occipitalis tertius. **occipital n., lesser**, nervus occipitalis minor. **occipital n., third**, nervus occipitalis tertius. **oculomotor n.**, nervus oculomotorius. **olfactory n's**, nervi olfactorii. **ophthalmic n.**, nervus ophthalmicus. **optic n.**, nervus opticus. **pain n.**, a sensory nerve whose function is the conduction of stimuli which produce the sensation of pain. **palatine n., anterior**, nervus palatinus major. **palatine n., greater**, nervus palatinus major. **palatine n's, lesser**, nervi palatini minores. **palatine n., medial**, **palatine n., middle**, see *nervi palatini minores*. **palatine n., posterior**, see *nervi palatini minores*. **parasympathetic n.**, any of the nerves of the parasympathetic nervous system; see *parasympathetic system*, under *system*. **parotid n's**, rami parotidei nervi auriculotemporalis. **pectoral n., lateral**, nervus pectoralis lateralis. **pectoral n., medial**, nervus pectoralis medialis. **perineal n's**, nervi perineales. **peripheral n.**, any nerve outside the central nervous system (outside the brain and spinal cord). **peroneal n., accessory deep**, nervus peroneus profundus accessorius. **peroneal n., common**, nervus peroneus communis. **peroneal n., deep**, nervus peroneus profundus. **peroneal n., superficial**, nervus peroneus superficialis. **petrosal n., deep**, nervus petrosus profundus. **petrosal n., greater**, nervus petrosus major. **petrosal n., lesser**, nervus petrosus minor. **petrosal n., middle, superficial**, nervus petrosus minor. **phrenic n.**, nervus phrenicus. **phrenic n's, accessory**, nervi phrenici accessorii. **phrenicoabdominal n's**, rami

phrenicoabdominales nervi phrenici. **pilomotor n's**, the nerves that supply the arrectores pilorum muscles. **plantar n., lateral**, nervus plantaris lateralis. **plantar n., medial**, nervus plantaris medialis. **pneumogastric n.**, nervus vagus. **popliteal n., external**, nervus peroneus communis. **popliteal n., internal**, nervus tibialis. **popliteal n., lateral**, nervus peroneus communis. **popliteal n., medial**, nervus tibialis. **presacral n.**, plexus hypogastricus superior. **pressor n.**, any afferent nerve whose irritation stimulates a vasomotor center and increases intravascular tension. **pterygoid n., external**, nervus pterygoideus lateralis. **pterygoid n., internal**, nervus pterygoideus medialis. **pterygoid n., lateral**, nervus pterygoideus lateralis. **pterygoid n., medial**, nervus pterygoideus medialis. **n. of pterygoid canal**, nervus canalis pterygoidei. **pterygopalatine n's**, nervi pterygopalatini. **pudendal n.**, nervus pudendus. **pudic n.**, nervus pudendus. **radial n., nervus radialis**. **radial n., deep**, ramus profundus nervi radialis. **radial n., superficial**, ramus superficialis nervi radialis. **rectal n's, inferior**, nervi rectales inferiores. **recurrent n.**, nervus laryngeus recurrens. **recurrent n., ophthalmic**, ramus tentorii nervi ophthalmici. **sacculus n.**, nervus sacculus. **sacral n's**, the five pairs of nerves arising from the sacral segments of the spinal cord; see *nervi sacrales*. **saphenous n.**, nervus saphenus. **Scarpa's n.**, nervus nasopalatinus. **sciatic n.**, nervus ischiadicus. **sciatic n., small**, nervus cutaneus femoris posterior. **scrotal n's, anterior**, nervi scrotales anteriores. **scrotal n's, posterior**, nervi scrotales posteriores. **second n.**, nervus opticus. **secretory n.**, any efferent nerve whose stimulation increases glandular activity. **sensory n.**, a peripheral nerve that conducts impulses from a sense organ to the spinal cord or brain. **seventh n.**, nervus facialis. **sinus n.**, ramus sinus carotici nervi glossopharyngei. **sinu-vertebral n.**, ramus meningeus nervorum spinalium. **sixth n.**, nervus abducens. **somatic n's**, the motor and sensory nerves that supply skeletal muscle and somatic tissues. **spermatic n., external**, ramus genitalis nervi genitofemoralis. **spinal n's**, the thirty-one pairs of nerves arising from the spinal cord; see *nervi spinales*. **splanchnic n's**, the nerves of the blood vessels and viscera, especially the visceral branches of the thoracic, lumbar, and pelvic parts of the sympathetic trunks. **splanchnic n., greater**, nervus splanchnicus major. **splanchnic n., inferior**, splanchnic n., lesser, nervus splanchnicus minor. **splanchnic n., lowest**, nervus splanchnicus imus. **splanchnic n's, lumbar**, nervi splanchnici lumbales. **splanchnic n's, pelvic**, nervi splanchnici pelvini. **splanchnic n's, sacral**, nervi splanchnici sacrales. **stapedial n.**, stapedius n., nervus stapedius. **stylohyoid n.**, ramus stylohyoideus nervi facialis. **stylopharyngeal n.**, ramus musculi stylopharyngei nervi glossopharyngei. **subclavian n.**, nervus subclavius. **subcostal n.**, nervus subcostalis. **sublingual n.**, nervus sublingualis. **submaxillary n's**, rami glandulares ganglii submandibularis. **suboccipital n.**, nervus suboccipitalis. **subscapular n's**, nervi subscapulares. **sudomotor n's**, the nerves that innervate the sweat glands. **supraclavicular n's**, nervi supraclaviculares. **supraclavicular n's, anterior**, nervi supraclaviculares mediales. **supraclavicular n's, intermediate**, nervi supraclaviculares intermedii. **supraclavicular n's, lateral**, nervi supraclaviculares laterales. **supraclavicular n's, medial**, nervi supraclaviculares mediales. **supraclavicular n's, middle**, nervi supraclaviculares intermedii. **supraclavicular n's, posterior**, nervi supraclaviculares laterales [posteriores]. **supraorbital n.**, nervus supraorbitalis. **suprascapular n.**, nervus suprascapularis. **supratrochlear n.**, nervus supratrochlearis. **sural n.**, nervus suralis. **sympathetic n., 1.** truncus sympathicus. **2.** one of the nerves of the sympathetic nervous system; see *sympathetic system*, under *system*. **tem-**

poral n's, deep, nervi temporales profundi. **temporal n's, subcutaneous**, rami temporales superficiales nervi auriculo-temporalis. **n. of tensor tympani**, nervus tensoris tympani. **n. of tensor veli palatini**, nervus tensoris veli palatini. **tenth n.**, nervus vagus. **terminal n's**, nervi terminales. **third n.**, nervus oculomotorius. **thoracic n's**, the twelve pairs of spinal nerves arising from the thoracic segments of the spinal cord; see *nervi thoracici*. **thoracic n., long**, nervus thoracicus longus. **thoracodorsal n.**, nervus thoracodorsalis. **tibial n.**, nervus tibialis. **Tiedemann's n.**, a name given a plexus of sympathetic nerve fibrils surrounding the central artery of the retina. **tonsillar n's**, rami tonsillares nervi glossopharyngei. **transverse n. of neck**, nervus transversus colli. **trigeminal n.**, nervus trigeminus. **trochlear n.**, nervus trochlearis. **trophic n.**, a nerve that aids in regulating nutrition. **twelfth n.**, nervus hypoglossus. **tympenic n.**, nervus tympanicus. **ulnar n.**, nervus ulnaris. **unmyelinated n.**, a nerve whose fibers (axons) are not encased in a myelin sheath, and which may or may not be enclosed by a neurilemma. Called also *nonmedullated n.* Cf. *myelinated n.* **utricular n.**, nervus utricularis. **utrículoampullar n.**, nervus utrículoampullaris. **vaginal n's**, nervi vaginales. **vagus n.**, nervus vagus. **vascular n.**, nervus vascularis. **vasoconstrictor n.**, a nerve whose stimulation causes contraction of the blood vessels. **vasodilator n.**, a nerve whose stimulation causes dilation of the blood vessels. **vasomotor n.**, any nerve concerned in controlling the caliber of vessels, whether as a vasodilator or a vasoconstrictor. **vasosensory n.**, any nerve supplying sensory fibers to the vessels. **vertebral n.**, nervus vertebralis. **vestibular n.**, pars vestibularis nervi octavi. **vestibulocochlear n.**, nervus vestibulocochlearis. **vidian n.**, nervus canalis pterygoidei. **vidian n., deep**, nervus petrosus profundus. **n. of Willis**, nervus accessorius. **Wrisberg's n.**, 1. nervus intermedius. 2. nervus cutaneus brachii medialis. **zygomatic n.**, nervus zygomaticus. **zygomatofacial n.**, ramus zygomatofacialis nervi zygomatici. **zygomatocotemporal n.**, ramus zygomatocotemporalis nervi zygomatici.

nervi (ner'vi) [L.] plural of *nervus*.

nervimotility (ner'vi-mo-til'i-te) susceptibility to nervimotion.

nervimotion (ner'vi-mo'shun) motion effected through the agency of a nerve.

nervimotor (ner'vi-mo'tor) pertaining to a motor nerve.

nervimuscular (ner'vi-mus'ku-lar) pertaining to the nerve supply of muscles.

nervomuscular (ner'vo-mus'ku-lar) nervimuscular.

nervone (ner'vön) a cerebroside, $C_{48}H_{91}O_8N$, isolated from nerve tissue.

nervosism (ner'vo-sizm) (*obs.*) 1. neurasthenia. 2. the theory that disease is dependent on variations in nerve force.

nervous (ner'vus) [L. *nervosus*] 1. pertaining to a nerve or to nerves. 2. unduly excitable.

nervous breakdown (ner'vus brāk'down) a nonspecific, popular name for any type of mental disorder that interferes with the affected individual's normal activities, and may include neurosis, depression, or psychosis.

nervousness (ner'vus-nes) morbid or undue excitability; a state of excessive irritability, with great mental and physical unrest.

nervous system see under *system*.

nervus (ner'vus), pl. *ner'vi* [L.] [NA] a nerve: a cordlike structure, visible to the naked eye, comprising a collection of nerve fibers which convey impulses between a part of the central nervous system and some other region of the body. See also *nerve*. For names and description of specific nerves, see *Table of Nervi*.

TABLE OF NERVI

Descriptions are given on NA terms, and include anglicized names of specific nerves.

n. abdu'cens [NA], abducens nerve (6th cranial): *origin*, a nucleus in the pons, beneath the floor of the fourth ventricle, emerging from the brain stem anteriorly between the pons and medulla oblongata; *distribution*, lateral rectus muscle of eye; *modality*, motor.

n. accesso'rius [NA], accessory nerve (11th cranial): *origin*, by cranial roots from the side of the medulla oblongata, and by spinal roots from the side of the spinal cord (from the upper three or more cervical segments); the roots unite and the nerve thus formed divides into an internal branch (cranial portion) and an external branch (spinal portion); *distribution*, the internal branch to the vagus and thereby to the palate, pharynx, larynx, and thoracic viscera; the external branch to the sternocleidomastoid and trapezius muscles; *modality*, parasympathetic and motor.

n. acus'ticus, n. vestibulocochlearis.

n. alveola'ris infe'rior [NA], inferior alveolar nerve: *origin*,

mandibular nerve; *branches*, mylohyoid, inferior dental, mental, and inferior gingival nerves; *distribution*—see individual branches, in this table; *modality*, motor and general sensory.

ner'vi alveola'res superio'res [NA], superior alveolar nerves: a term denoting collectively the dental branches arising from the maxillary and infraorbital nerves. *viz.*, *rami alveolares superiores anteriores nervi infraorbitalis*, *ramus alveolaris superior medius nervi infraorbitalis*, and *rami alveolares superiores posteriores nervi maxillaris*.

n. ampulla'ris ante'rior [NA], anterior ampullar nerve: the branch of the pars vestibularis nervi octavi that innervates the ampulla of the anterior semicircular duct, ending around the hair cells of the ampullary crest.

n. ampulla'ris infe'rior, n. ampullaris posterior.

n. ampulla'ris latera'lis [NA], lateral ampullar nerve: the branch of the pars vestibularis nervi octavi that innervates the

TABLE OF NERVI (Continued)

ampulla of the lateral semicircular duct, ending around the hair cells of the ampullary crest.

n. ampulla'ris poste'rior [NA], posterior ampullar nerve: the branch of the pars vestibularis nervi octavi that innervates the ampulla of the posterior semicircular duct, ending around the hair cells of the ampullary crest.

n. ampulla'ris supe'rior, n. ampularis anterior.

ner'vi anococcyg'ei [NA], anococcygeal nerves: *origin*, coccygeal plexus; *distribution*, sacrococcygeal joint, coccyx, skin over the coccyx; *modality*, general sensory.

n. articula'ris [NA], articular nerve: a peripheral nerve that supplies a joint and its associated structures.

ner'vi auricula'res antero'ies [NA], anterior auricular nerves: *origin*, auriculotemporal nerve; *distribution*, skin of antero-superior part of external ear; *modality*, general sensory.

n. auricula'ris mag'nus [NA], great auricular nerve: *origin*, cervical plexus—C2–C3; *branches*, anterior and posterior rami; *distribution*, skin over parotid gland and mastoid process, and both surfaces of auricle; see individual branches under *ramus*; *modality*, general sensory.

n. auricula'ris poste'rior [NA], posterior auricular nerve: *origin*, facial nerve; *branches*, occipital ramus; *distribution*, auricular posterior and occipitofrontalis muscles and skin of external acoustic meatus; *modality*, motor and general sensory.

n. auriculotempora'lis [NA], auriculotemporal nerve: *origin*, by two roots from the mandibular nerve; *branches*, anterior auricular nerve, nerve of external acoustic meatus, parotid branches, branch to tympanic membrane, and branches communicating with facial nerve; its terminal branches are superficial temporal to the scalp; *distribution*—see individual branches, in this table and under *ramus*; *modality*, general sensory.

n. axilla'ris [NA], axillary nerve: *origin*, posterior cord of brachial plexus (C5–C6); *branches*, lateral superior brachial cutaneous nerve and muscular rami; *distribution*, deltoid and teres minor muscles, skin on back of arm; *modality*, motor and general sensory.

n. bucca'lis [NA], buccal nerve: *origin*, mandibular nerve; *distribution*, skin and mucous membrane of cheeks, gums, and perhaps first two molars and the premolars; *modality*, general sensory.

n. buccinato'rius, n. buccalis.

n. cana'lis pterygoi'dei [NA], nerve of pterygoid canal: *origin*, union of deep and greater petrosal nerves; *distribution*, pterygopalatine ganglion and branches; *modality*, parasympathetic and sympathetic. Called also *radix facialis* [NA alternative].

n. cardi'acus cervica'lis infe'rior [NA], inferior cervical cardiac nerve: *origin*, cervicothoracic ganglion; *distribution*, heart via cardiac plexus; *modality*, sympathetic (accelerator) and visceral afferent (chiefly pain).

n. cardi'acus cervica'lis me'dius [NA], middle cervical cardiac nerve: *origin*, middle cervical ganglion; *distribution*, heart; *modality*, sympathetic (accelerator) and visceral afferent (chiefly pain).

n. cardi'acus cervica'lis supe'rior [NA], superior cervical cardiac nerve: *origin*, superior cervical ganglion; *distribution*, heart; *modality*, sympathetic (accelerator).

n. cardi'acus infe'rior, n. cardiacus cervicalis inferior.

n. cardi'acus me'dius, n. cardiacus cervicalis medius.

n. cardi'acus supe'rior, n. cardiacus cervicalis superior.

ner'vi cardi'aci thora'cici [NA], thoracic cardiac nerves: *origin*, second through fourth or fifth thoracic ganglia of sympathetic trunk; *distribution*, heart; *modality*, sympathetic (accelerator) and visceral afferent (chiefly pain).

ner'vi caroticotympan'ici [NA], caroticotympanic nerves: *origin*, internal carotid plexus; *branches*, together with tympanic nerve, they form the tympanic plexus; *distribution*, tympanic region and parotid gland; *modality*, sympathetic.

n. caroticotympan'icus infe'rior, n. caroticotympan'icus supe'rior, see *nervi caroticotympanici*.

ner'vi carot'ici exter'ni [NA], external carotid nerves: *origin*, superior cervical ganglion; *distribution*, cranial blood vessels and glands via the external carotid plexus; *modality*, sympathetic.

n. carot'icus inter'nus [NA], internal carotid nerve: *origin*, superior cervical ganglion; *distribution*, cranial blood vessels and glands via internal carotid plexus; *modality*, sympathetic.

ner'vi caverno'si clitor'idis [NA], cavernous nerves of clitoris: *origin*, uterovaginal plexus; *distribution*, erectile tissue of clitoris; *modality*, parasympathetic, sympathetic, and visceral afferent.

n. caverno'sus clitor'idis ma'jor, **ner'vi caverno'si clitor'idis mino'res**, see *nervi cavernosi clitoridis*.

ner'vi caverno'si pe'nis [NA], cavernous nerves of penis: *origin*, prostatic plexus; *distribution*, erectile tissue of penis; *modality*, sympathetic, parasympathetic, and visceral afferent.

n. caverno'sus pe'nis ma'jor, **ner'vi caverno'si pe'nis mino'res**, see *nervi cavernosi penis*.

ner'vi cerebra'les, *nervi craniales*.

ner'vi cervica'les [NA], cervical nerves: the eight pairs of nerves that arise from the cervical segments of the spinal cord and, except for the last pair, leave the vertebral column above the correspondingly numbered vertebra. The ventral branches of the upper four, on either side, unite to form the cervical plexus, and those of the lower four, together with the ventral branch of the first thoracic nerve, form most of the brachial plexus.

ner'vi cilia'res bre'ves [NA], short ciliary nerves: *origin*, ciliary ganglion; *distribution*, smooth muscle and tunics of eye; *modality*, parasympathetic, sympathetic, and general sensory.

ner'vi cilia'res lon'gi [NA], long ciliary nerves: *origin*, nasociliary nerve, from ophthalmic nerve; *distribution*, dilator pupillae, uvea, cornea; *modality*, sympathetic and general sensory.

ner'vi clu'nium infe'rio'res [NA], inferior clunial nerves: *origin*, posterior femoral cutaneous nerve; *distribution*, skin of lower part of buttock; *modality*, general sensory.

ner'vi clu'nium me'dii [NA], middle clunial nerves: *origin*, plexus formed by lateral branches of dorsal rami of first four sacral nerves behind the sacrum and coccyx; *distribution*, ligaments of sacrum and skin over posterior part of buttock; *modality*, general sensory.

ner'vi clu'nium superio'res [NA], superior clunial nerves: *origin*, lateral branches of dorsal rami of upper lumbar nerves; *distribution*, skin of upper part of buttock; upper gluteal region; *modality*, general sensory.

n. coccyg'eus [NA], coccygeal nerve: one of the pair of nerves that arise from the coccygeal segment of the spinal cord.

n. coch'leae, *pars cochlearis nervi vestibulocochlearis*.

ner'vi crania'les [NA], cranial nerves: the twelve pairs of nerves that are connected with the brain, including the nervi olfactorii (I), and the opticus (II), oculomotorius (III), trochlearis (IV), trigeminus (V), abducens (VI), facialis (VII), vestibulocochlearis (VIII), glossopharyngeus (IX), vagus (X), accessorius (XI), and hypoglossus (XII). Called also *nervi cerebrales*.

n. cuta'neus [NA], cutaneous nerve: a peripheral nerve that supplies a region of the skin, many of them not being specifically named.

n. cuta'neus antebra'chii latera'lis [NA], lateral cutaneous nerve of forearm: *origin*, continuation of musculocutaneous nerve; *distribution*, skin over radial side of forearm and sometimes an area of skin of dorsum of hand; *modality*, general sensory.

n. cuta'neus antebra'chii media'lis [NA], medial cutaneous nerve of forearm: *origin*, medial cord of brachial plexus (C8, T1); *branches*, anterior and ulnar; *distribution*, skin of front, medial, and posteromedial aspects of forearm; *modality*, general sensory.

n. cuta'neus antebra'chii poste'rior [NA], posterior cutaneous nerve of forearm: *origin*, radial nerve; *distribution*, skin of dorsal aspect of forearm; *modality*, general sensory.

n. cuta'neus antibra'chii dorsa'lis, n. cutaneous antebra'chii posterior.

n. cuta'neus bra'chii latera'lis infe'rior [NA], inferior lateral cutaneous nerve of arm: *origin*, radial nerve; *distribution*, skin of lateral surface of lower part of arm; *modality*, general sensory.

n. cuta'neus bra'chii latera'lis supe'rior [NA], superior lateral cutaneous nerve of arm: *origin*, axillary nerve; *distribution*, skin of back of arm; *modality*, general sensory.

n. cuta'neus bra'chii media'lis [NA], medial cutaneous nerve of arm: *origin*, medial cord of brachial plexus (T1); *distribution*, skin on medial and posterior aspects of arm; *modality*, general sensory.

n. cuta'neus bra'chii poste'rior [NA], posterior cutaneous nerve of arm: *origin*, radial nerve in the axilla; *distribution*, skin on back of arm; *modality*, general sensory.

n. cuta'neus col'li, n. transversus colli.

n. cuta'neus dorsa'lis interme'dius [NA], intermediate dorsal cutaneous nerve: *origin*, superficial peroneal nerve; *branches*, dorsal digital nerves of foot; *distribution*, skin of front of lower third of leg and dorsum of foot, and skin and joints of adjacent sides of third and fourth, and of fourth and fifth toes; *modality*, general sensory.

n. cuta'neus dorsa'lis latera'lis pe'dis [NA], lateral dorsal cutaneous nerve: *origin*, continuation of sural nerve; *distribution*, skin and joints of lateral side of foot and fifth toe; *modality*, general sensory.

n. cuta'neus dorsa'lis media'lis [NA], medial dorsal cutaneous nerve: *origin*, superficial peroneal nerve; *distribution*, skin and joints of medial side of foot and big toe, and adjacent sides of second and third toes; *modality*, general sensory.

n. cuta'neus fem'oris latera'lis [NA], lateral cutaneous nerve of thigh: *origin*, lumbar plexus—L2–L3; *distribution*, skin of lateral and front aspects of thigh; *modality*, general sensory.

n. cuta'neus fem'oris poste'rior [NA], posterior cutaneous nerve of thigh: *origin*, sacral plexus—S1–S3; *branches*, inferior clunial nerves and perineal rami; *distribution*, skin of buttock, external genitalia, and back of thigh and calf; *modality*, general sensory.

n. cuta'neus su'rae latera'lis [NA], lateral cutaneous nerve of calf: *origin*, common peroneal nerve; *distribution*, skin of lateral side of back of leg, rarely may continue as the sural nerve; *modality*, general sensory.

n. cuta'neus su'rae media'lis [NA], medial cutaneous nerve of calf: *origin*, tibial nerve; usually joins peroneal communicating branch of common peroneal nerve to form the sural nerve; *distribution*, may continue as the sural nerve; *modality*, general sensory.

ner'vi digita'les dorsa'les hal'lucis latera'lis et dig'iti secun'di media'lis [NA], dorsal digital nerves of lateral surface of great toe and of medial surface of second toe: *origin*, medial terminal division of deep peroneal nerve; *distribution*, skin and

TABLE OF NERVI (Continued)

joints of adjacent sides of great and second toes; *modality*, general sensory.

ner'vi digita'les dorsa'les ner'vi radia'lis [NA], dorsal digital nerves of radial nerve: *origin*, superficial branch of radial nerve; *distribution*, skin and joints of back of thumb, index finger, and part of middle finger, as far distally as the distal phalanx; *modality*, general sensory.

ner'vi digita'les dorsa'les ner'vi ulna'ris [NA], dorsal digital nerves of ulnar nerve: *origin*, dorsal branch of ulnar nerve; *distribution*, skin and joints of medial side of little finger, dorsal aspects of adjacent sides of little and ring fingers and of ring and middle fingers; *modality*, general sensory.

ner'vi digita'les dorsa'les pe'dis [NA], dorsal digital nerves of foot: *origin*, intermediate dorsal cutaneous nerve; *distribution*, skin and joints of adjacent sides of third and fourth, and of fourth and fifth toes; *modality*, general sensory.

ner'vi digita'les palma'res commu'nes ner'vi media'ni [NA], common palmar digital nerves of median nerve: *number*, four; *origin*, lateral and medial divisions of median nerve; *branches*, proper palmar digital nerves; *distribution*, thumb, index, middle, and ring fingers, and first two lumbrical muscles—see individual branches, in this table; *modality*, motor and general sensory.

ner'vi digita'les palma'res commu'nes ner'vi ulna'ris [NA], common palmar digital nerves of ulnar nerve: *number*, two; *origin*, superficial branch of ulnar nerve; *branches*, proper palmar digital nerves; *distribution*, little and ring fingers—see individual branches, in this table; *modality*, general sensory.

ner'vi digita'les palma'res pro'prij ner'vi media'ni [NA], proper palmar digital nerves of median nerve: *origin*, common palmar digital nerves; *distribution*, first two lumbrical muscles, skin and joints of both sides and palmar aspect of thumb, index, and middle fingers, radial side of ring finger, and back of distal aspect of these digits; *modality*, general sensory and motor.

ner'vi digita'les palma'res pro'prij ner'vi ulna'ris [NA], proper palmar digital nerves of ulnar nerve: *origin*, the lateral of the two common palmar digital nerves from superficial branch of ulnar nerve; *distribution*, skin and joints of adjacent sides of fourth and fifth fingers; *modality*, general sensory.

ner'vi digita'les planta'res commu'nes ner'vi planta'ris latera'lis [NA], common plantar digital nerves of lateral plantar nerve: *number*, two; *origin*, superficial branch of lateral plantar nerve; *branches*, the medial nerve gives rise to two proper plantar digital nerves; *distribution*, the lateral one to the musculus flexor digiti minimi brevis pedis and to skin and joints of lateral side of sole and little toe; the medial one to adjacent sides of fourth and fifth toes—see individual branches, in this table; *modality*, motor and general sensory.

ner'vi digita'les planta'res commu'nes ner'vi planta'ris media'lis [NA], common plantar digital nerves of medial plantar nerve: *number*, four; *origin*, medial plantar nerve; *branches*, muscular and proper plantar digital nerves; *distribution*, flexor hallucis brevis muscle and first lumbrical muscles, skin and joints of medial side of foot and big toe, and adjacent sides of first and second, second and third, and third and fourth toes—see individual branches, in this table; *modality*, motor and general sensory.

ner'vi digita'les planta'res pro'prij ner'vi planta'ris latera'lis [NA], proper plantar digital nerves of lateral plantar nerve: *origin*, common plantar digital nerves; *distribution*, flexor digiti minimi brevis muscle, and skin and joints of lateral side of sole and little toe, and adjacent sides of fourth and fifth toes; *modality*, motor and general sensory.

ner'vi digita'les planta'res pro'prij ner'vi planta'ris media'lis [NA], proper plantar digital nerves of medial plantar nerve: *origin*, common plantar digital nerves; *distribution*, skin and joints of medial side of first toe, and adjacent sides of first and second, second and third, and third and fourth toes; the nerves extend to the dorsum to supply nail beds and tips of toes; *modality*, general sensory.

ner'vi digita'les vola'res commu'nes ner'vi media'ni, nervi digitales palmares communes nervi mediani.

ner'vi digita'les vola'res commu'nes ner'vi ulna'ris, nervi digitales palmares communes nervi ulnaris.

ner'vi digita'les vola'res pro'prij ner'vi media'ni, nervi digitales palmares proprii nervi mediani.

ner'vi digita'les vola'res pro'prij ner'vi ulna'ris, nervi digitales palmares proprii nervi ulnaris.

n. dorsa'lis clitor'idis [NA], dorsal nerve of clitoris: *origin*, pudendal nerve; *distribution*, transversus perinei profundus and sphincter urethrae muscles, corpus cavernosum clitoridis, and skin, prepuce, and glands of clitoris; *modality*, general sensory and motor.

n. dorsa'lis pe'nis [NA], dorsal nerve of penis: *origin*, pudendal nerve; *distribution*, transversus perinei profundus and sphincter urethrae muscles, corpus cavernosum penis, and skin, prepuce, and glands of penis; *modality*, general sensory and motor.

n. dorsa'lis scap'ulae [NA], dorsal nerve of scapula: *origin*, brachial plexus—ventral ramus of C5; *distribution*, rhomboid muscles and occasionally the levator scapulae muscle; *modality*, motor.

ner'vi erigen'tes, NA alternative for *nervi splanchnici pelvini*.

n. ethmoida'lis ante'rior [NA], anterior ethmoidal nerve: *origin*, continuation of nasociliary nerve, from ophthalmic nerve; *branches*, internal, external, lateral, and medial rami; *distribution*,

mucosa of upper and anterior nasal septum, lateral wall of nasal cavity, skin of lower bridge and tip of nose; *modality*, general sensory.

n. ethmoida'lis poste'rior [NA], posterior ethmoidal nerve: *origin*, nasociliary nerve, from ophthalmic nerve; *distribution*, mucosa of posterior ethmoid cells and of sphenoidal sinus; *modality*, general sensory.

n. facia'lis [NA], facial nerve (7th cranial), consisting of two roots: a large motor root, which supplies the muscles of facial expression, and a smaller root, the nervus intermedius (q.v.). *Origin*, inferior border of pons, between olive and inferior cerebellar peduncle; *branches* (of motor root), stapedius and posterior auricular nerves, parotid plexus, digastric, temporal, zygomatic, buccal, lingual, marginal mandibular, and cervical rami, and a communicating ramus with the tympanic plexus; *distribution*—see individual branches, in this table and under *ramus*; *modality*, motor, parasympathetic, general sensory, special sensory.

n. femora'lis [NA], femoral nerve: *origin*, lumbar plexus—L2–L4; descending behind the inguinal ligament to the femoral triangle; *branches*, saphenous nerve, muscular and anterior cutaneous rami; *distribution*, the skin of the thigh and leg, the muscles of the front of the thigh, and the hip and knee joints—see individual branches, in this table and under *ramus*; *modality*, general sensory and motor.

n. fibula'ris commu'nis, NA alternative for *n. peroneus communis*.

n. fibula'ris profun'dus, NA alternative for *n. peroneus profundus*.

n. fibula'ris superficia'lis, NA alternative for *n. peroneus superficialis*.

n. fronta'lis [NA], frontal nerve: *origin*, ophthalmic division of trigeminal nerve; enters the orbit through the superior orbital fissure; *branches*, supraorbital and supratrochlear nerves; *distribution*, chiefly to the forehead and scalp—see individual branches, in this table; *modality*, general sensory.

n. genitofemora'lis [NA], genitofemoral nerve: *origin*, lumbar plexus—L1–L2; *branches*, genital and femoral rami; *distribution*—see individual branches, under *ramus*; *modality*, general sensory and motor.

n. glossopharyn'geus [NA], glossopharyngeal nerve (9th cranial): *origin*, several rootlets from lateral side of upper part of medulla oblongata, between the olive and the inferior cerebellar peduncle; *branches*, tympanic nerve, pharyngeal, stylopharyngeal, tonsillar, and lingual rami, ramus to the carotid sinus, and a ramus communicating with the auricular ramus of the vagus nerve; *distribution*, it has two enlargements (superior and inferior ganglia) and supplies the tongue, pharynx, and parotid gland—see individual branches, in this table and under *ramus*; *modality*, motor, parasympathetic, and general, special, and visceral sensory.

n. glu'teus infe'rior [NA], inferior gluteal nerve: *origin*, sacral plexus—L5–S2; *distribution*, gluteus maximus muscle; *modality*, motor.

n. glu'teus supe'rior [NA], superior gluteal nerve: *origin*, sacral plexus—L4–S1; *distribution*, gluteus medius and minimus muscles, tensor fasciae latae, and hip joint; *modality*, motor and general sensory.

ner'vi haemorrhoida'les infe'rio'res, nervi rectales inferiores.

ner'vi haemorrhoida'les me'dii, former term for branches of the middle rectal plexus.

ner'vi haemorrhoida'les superio'res, former term for branches of the superior rectal plexus.

n. hypogas'tricus [dex'ter et sinis'ter] [NA], hypogastric nerve: a nerve trunk situated on either side (right and left), interconnecting the superior and inferior hypogastric plexuses.

n. hypoglos'sus [NA], hypoglossal nerve (12th cranial): *origin*, several rootlets in the anterolateral sulcus between the olive and the pyramid of the medulla oblongata; it passes through the hypoglossal canal to the tongue; *branches*, lingual rami; *distribution*, styloglossus, hypoglossus, and genioglossus muscles and intrinsic muscles of the tongue; *modality*, motor.

n. iliohypogas'tricus [NA], iliohypogastric nerve: *origin*, lumbar plexus—L1 (sometimes T12); *branches*, lateral and anterior cutaneous rami; *distribution*, the skin above the pubis and over the lateral side of the buttock, and occasionally the pyramidalis; *modality*, motor and general sensory.

n. ilioingui'na'lis [NA], ilioinguinal nerve: *origin*, lumbar plexus—L1 (sometimes T12); accompanies the spermatic cord through the inguinal canal; *branches*, anterior scrotal or labial rami; *distribution*, skin of scrotum or labia majora, and adjacent part of thigh; *modality*, general sensory.

n. infraorbita'lis [NA], infraorbital nerve: *origin*, continuation of the maxillary nerve, entering the orbit through the inferior orbital fissure, and occupying in succession the infraorbital groove, canal, and foramen; *branches*, middle and anterior superior alveolar, inferior palpebral, internal and external nasal, and superior labial rami; *distribution*—see individual branches, under *ramus*; *modality*, general sensory.

n. infratrochlea'ris [NA], infratrochlear nerve: *origin*, nasociliary nerve from ophthalmic nerve; *branches*, palpebral rami; *distribution*, skin of root and upper bridge of nose and lower eyelid, conjunctiva, lacrimal duct; *modality*, general sensory.

TABLE OF NERVI (Continued)

ner'vi intercosta'les, NA alternative for rami ventrales nervorum thoracorum.

ner'vi intercostobrachia'les [NA], intercostobrachial nerves: *origin*, second and third intercostal nerves; *distribution*, skin on back and medial aspect of arm; *modality*, general sensory.

n. interme'dius [NA], intermediate nerve: the smaller root of the facial nerve, lying between the main root and the vestibulocochlear nerve; it joins the main root at, or merges with the geniculate ganglion at the geniculum of the facial nerve; *branches*, chorda tympani and greater petrosal nerve; *distribution*, lacrimal, nasal, palatine, submandibular, and sublingual glands, and anterior two-thirds of tongue; *modality*, parasympathetic and special sensory.

n. interos'seus [antebra'chii] ante'rior [NA], anterior interosseous nerve of forearm: *origin*, median nerve; *distribution*, flexor pollicis longus, flexor digitorum profundus, and pronator quadratus muscles, wrist and intercarpal joints; *modality*, motor and general sensory.

n. interos'seus antebra'chii poste'rior [NA], posterior interosseous nerve of forearm: *origin*, continuation of deep branch of radial nerve; *distribution*, abductor pollicis longus, extensors of the thumb and second finger, and wrist and intercarpal joints; *modality*, motor and general sensory.

n. interos'seus [antebra'chii] dorsa'lis, n. interos'seus antebrachii posterior.

n. interos'seus [antebra'chii] vola'ris, n. interos'seus antebrachii anterior.

n. interos'seus cru'ris [NA], interosseous nerve of leg: *origin*, tibial nerve; *distribution*, interosseous membrane and tibiofibular syndesmosis; *modality*, general sensory.

n. ischiad'icus [NA], sciatic nerve, the largest nerve of the body: *origin*, sacral plexus—L4–S3; it leaves the pelvis through the greater sciatic foramen; *branches*, divides into the tibial and common peroneal nerves, usually in lower third of thigh; *distribution*—see individual branches, in this table; *modality*, general sensory and motor.

n. jugula'ris [NA], jugular nerve: a branch of the superior cervical ganglion which communicates with the vagus and glossopharyngeal nerves.

ner'vi labia'les anterio'res [NA], anterior labial nerves: *origin*, ilioinguinal nerve; *distribution*, skin of anterior labial region of labia majora, and adjacent part of thigh; *modality*, general sensory.

ner'vi labia'les posterio'res [NA], posterior labial nerves: *origin*, pudendal nerve; *distribution*, labium majus; *modality*, general sensory.

n. lacrima'lis [NA], lacrimal nerve: *origin*, ophthalmic division of trigeminal nerve, entering the orbit through the superior orbital fissure; *distribution*, lacrimal gland, conjunctiva, lateral commissure of eye, and skin of upper eyelid; *modality*, general sensory.

n. laryn'geus infe'rior [NA], inferior laryngeal nerve: *origin*, recurrent laryngeal nerve, especially the terminal portion of this nerve; *distribution*, intrinsic muscles of larynx, except cricothyroid; communicates with the internal laryngeal nerve; *modality*, motor.

n. laryn'geus recur'rens [NA], recurrent laryngeal nerve: *origin*, vagus nerve (chiefly the cranial part of the accessory nerve); *branches*, inferior laryngeal nerve, tracheal, esophageal, and inferior cardiac rami; *distribution*—see individual branches, in this table and under *ramus*; *modality*, parasympathetic, visceral afferent, and motor.

n. laryn'geus supe'rior [NA], superior laryngeal nerve: *origin*, inferior ganglion of vagus nerve; *branches*, external, internal, and communicating rami; *distribution*, inferior constrictor of the pharynx, cricothyroid muscle, and mucous membrane of back of tongue and larynx—see individual branches, under *ramus*; *modality*, motor, general sensory, visceral afferent, and parasympathetic.

n. lingua'lis [NA], lingual nerve: *origin*, mandibular nerve, descending to the tongue, first medial to the mandible and then under cover of the mucous membrane of the mouth; *branches*, sublingual nerve, lingual ramus, ramus to the isthmus of the fauces, and rami communicating with the hypoglossal nerve and chorda tympani; *distribution*—see individual branches, in this table and under *ramus*; *modality*, general sensory.

ner'vi lumba'les [NA], lumbar nerves: the five pairs of nerves that arise from the lumbar segments of the spinal cord, each pair leaving the vertebral column below the correspondingly numbered vertebra. The ventral branches of these nerves participate in the formation of the lumbosacral plexus.

n. lumboinguina'lis, ramus femoralis nervi genitofemoralis.

n. mandibula'ris [NA], mandibular nerve, one of three terminal divisions of the trigeminal nerve, passing through the foramen ovale to the infratemporal fossa. *Origin*, trigeminal ganglion; *branches*, meningeal ramus, masseteric, deep temporal, lateral and medial pterygoid, buccal, auriculotemporal, lingual, and inferior alveolar nerves; *distribution*, extensive distribution to muscles of mastication, skin of face, mucous membrane of mouth, and teeth—see individual branches, in this table and under *ramus*; *modality*, general sensory and motor.

n. masseter'icus [NA], masseteric nerve: *origin*, mandibular division of trigeminal nerve; *distribution*, masseter muscle and temporomandibular joint; *modality*, motor and general sensory.

n. masticato'rius, former term for radix motoria nervi trigemini.

n. maxilla'ris [NA], maxillary nerve, one of the three terminal

divisions of the trigeminal nerve, passing through the foramen rotundum, and entering the pterygopalatine fossa. *Origin*, trigeminal ganglion; *branches*, meningeal ramus, zygomatic nerve, posterior superior alveolar rami, infraorbital nerve, pterygopalatine nerves, and, indirectly, the branches of pterygopalatine ganglion; *distribution*, extensive distribution to skin of face and scalp, mucous membrane of maxillary sinus and nasal cavity, and teeth—see individual branches, in this table and under *ramus*; *modality*, general sensory.

n. mea'tus acus'tici exter'ni [NA], nerve of external acoustic meatus: *origin*, auriculotemporal nerve; *distribution*, skin lining external acoustic meatus, and tympanic membrane; *modality*, general sensory.

n. mea'tus audito'rii exter'ni, n. meatus acustici externi.

n. media'nus [NA], median nerve: *origin*, lateral and medial cords of brachial plexus—C6–T1; *branches*, anterior interosseous nerve of forearm, common palmar digital nerves, and muscular and palmar rami, and a communicating branch with the ulnar nerve; *distribution*, ultimately, skin on front of lateral part of hand, most of flexor muscles of front of forearm, most of short muscles of thumb, and elbow joint and many joints of hand—see individual branches, in this table and under *ramus*; *modality*, general sensory.

n. menin'geus [me'dius], ramus meningeus [medius] nervi maxillaris.

n. menta'lis [NA], mental nerve: *origin*, inferior alveolar nerve; *branches*, mental and inferior labial rami; *distribution*, skin of chin, and lower lip; *modality*, general sensory.

n. musculocuta'neus [NA], musculocutaneous nerve: *origin*, lateral cord of brachial plexus—C5–C7; *branches*, lateral cutaneous nerve of forearm, and muscular rami; *distribution*, coracobrachialis, biceps, brachialis muscles, the elbow joint, and skin of radial side of forearm; *modality*, general sensory and motor.

n. mylohyoi'deus [NA], mylohyoid nerve: *origin*, inferior alveolar nerve; *distribution*, mylohyoid muscle, anterior belly of digastric muscle; *modality*, motor.

n. nasocilia'ris [NA], nasociliary nerve: *origin*, ophthalmic division of trigeminal nerve; *branches*, long ciliary, posterior ethmoidal, anterior ethmoidal, and infratrochlear nerves, and a communicating branch to the ciliary ganglion; *distribution*—see individual branches, in this table; *modality*, general sensory.

n. nasopalati'nus [NA], nasopalatine nerve: *origin*, pterygopalatine ganglion; *distribution*, mucosa and glands of most of nasal septum and anterior part of hard palate; *modality*, parasympathetic and general sensory.

n. obturato'rius [NA], obturator nerve: *origin*, lumbar plexus—L3–L4; *branches*, anterior, posterior, and muscular rami; *distribution*, adductor muscles and gracilis muscle, skin of medial part of thigh, and hip and knee joints—see individual branches, under *ramus*; *modality*, general sensory and motor.

n. occipita'lis ma'jor [NA], greater occipital nerve: *origin*, medial branch of dorsal ramus of C2; *distribution*, semispinalis capitis muscle and skin of scalp as far forward as the vertex; *modality*, general sensory and motor.

n. occipita'lis mi'nor [NA], lesser occipital nerve: *origin*, superficial cervical plexus—C2–C3; *distribution*, ascends behind the auricle and supplies some of the skin on the side of the head and on the cranial surface of the auricle; *modality*, general sensory.

n. occipita'lis ter'tius [NA], third occipital nerve: *origin*, medial branch of dorsal ramus of C3; *distribution*, skin of upper part of back of neck and head; *modality*, general sensory.

n. octa'vus [L. "eighth nerve"], NA alternative for n. vestibulocochlearis.

n. oculomoto'rius [NA], oculomotor nerve (3rd cranial): *origin*, brain stem, emerging medial to cerebral peduncles and running forward in the cavernous sinus; *branches*, superior and inferior rami; *distribution*, entering the orbit through the superior orbital fissure, the branches supply the levator palpebrae superioris, all extrinsic eye muscles except the lateral rectus and superior oblique, and carry parasympathetic fibers for the ciliary muscle and sphincter pupillae; *modality*, motor and parasympathetic.

ner'vi olfacto'rii [NA], olfactory nerves (1st cranial): the nerves of smell, consisting of about 20 bundles which arise in the olfactory epithelium and pass through the cribriform plate of the ethmoid bone to the olfactory bulb.

n. ophthal'micus [NA], ophthalmic nerve, one of the three terminal divisions of the trigeminal nerve. *Origin*, trigeminal ganglion; *branches*, tentorial rami, frontal, lacrimal, and nasociliary nerves; *distribution*, eyeball and conjunctiva, lacrimal gland and sac, nasal mucosa and frontal sinus, external nose, upper eyelid, forehead, and scalp—see individual branches, in this table and under *ramus*; *modality*, general sensory.

n. op'ticus [NA], optic nerve (2nd cranial): the nerve of sight, consisting chiefly of axons and central processes of cells of the ganglionic layer of the retina, which leave the orbit through the optic canal, join the optic chiasm (the medial ones crossing over to opposite side), and continue as the optic tract.

ner'vi palati'ni, see n. palatinus major and nervi palatini minores.

n. palati'nus ante'rior, n. palatinus major.

n. palati'nus ma'jor [NA], greater palatine nerve: *origin*, pterygopalatine ganglion; *branches*, posterior inferior [lateral] nasal branches; *distribution*, emerges through the greater palatine fora-

TABLE OF NERVI (Continued)

men and supplies the palate; *modality*, parasympathetic, sympathetic, and general sensory.

n. palati/nus me'dius, see *nervi palatini minores*.

ner'vi palati'ni mino'res [NA], lesser palatine nerves: *origin*, pterygopalatine ganglion; *distribution*, emerge through the lesser palatine foramen and supply the soft palate and tonsil; *modality*, parasympathetic, sympathetic, and general sensory.

n. palati'nus poste'rior, see *nervi palatini minores*.

n. pectora'lis latera'lis [NA], lateral pectoral nerve: *origin*, lateral cord of brachial plexus or anterior divisions of upper and middle trunks (C5–C7); *distribution*, usually several nerves supplying the musculus pectoralis minor and acromioclavicular and shoulder joints; *modality*, motor and general sensory.

n. pectora'lis media'lis [NA], medial pectoral nerve: *origin*, medial cord or lower trunk of brachial plexus (C8, T1); *distribution*, usually several nerves supplying the musculus pectoralis major and pectoralis minor; *modality*, motor.

ner'vi perinea'les [NA], perineal nerves: *origin*, pudendal nerve in the pudendal canal; *branches*, muscular branches and posterior scrotal or labial nerves; *distribution*, muscular branches supply the bulbospongiosus, ischiocavernosus, superficial transverse perineal muscles and bulb of the penis and, in part, the sphincter ani externus and levator ani; the scrotal (labial) nerves supply the scrotum or labium majus; *modality*, general sensory and motor.

ner'vi perine'i, *nervi perineales*.

n. perone'us commu'nis [NA], common peroneal nerve: *origin*, sciatic nerve in lower part of thigh; *branches and distribution*, supplies short head of biceps femoris muscle (while still incorporated in sciatic nerve), gives off lateral sural cutaneous nerve and peroneal communicating branch as it descends in popliteal fossa, supplies knee and superior tibiofibular joints and tibialis anterior muscle, and divides into superficial and deep peroneal nerves; *modality*, general sensory and motor. Called also *n. fibularis communis* [NA alternative] or *common fibular nerve*.

n. perone'us profun'dus [NA], deep peroneal nerve: *origin*, a terminal branch of common peroneal nerve; *branches and distribution*, winds around the neck of the fibula and descends on the interosseous membrane to the front of the ankle; muscular branches are given off to the tibialis anterior, extensor hallucis longus, extensor digitorum longus, and peroneus tertius muscles, and a twig to the ankle joint; a lateral terminal division supplies the extensor digitorum brevis muscle and tarsal joints; the medial terminal division, or digital branch, divides into dorsal digital nerves for the skin and joints of the adjacent sides of the big and second toes; *modality*, general sensory and motor. Called also *n. fibularis profundus* [NA alternative] or *deep fibular nerve*.

n. perone'us profun'dus access'o'rius, the accessory deep peroneal nerve: the branch of the superficial peroneal nerve to the musculus peroneus brevis, often prolonged to the lateral malleolus and ending in twigs to the musculus extensor digitorum brevis and adjacent joints.

n. perone'us superficia'lis [NA], superficial peroneal nerve: *origin*, a terminal branch of common peroneal nerve; *branches and distribution*, descends in front of fibula, supplies peroneus longus and brevis muscles and, in the lower part of the leg, divides into the muscular rami, medial and intermediate dorsal cutaneous nerves—see also individual branches, in this table and under *ramus*; *modality*, general sensory and motor. Called also *n. fibularis superficialis* [NA alternative] or *superficial fibular nerve*.

n. petro'sus ma'jor [NA], greater petrosal nerve: *origin*, intermediate nerve via geniculate ganglion; *distribution*, running forward from the geniculate ganglion, it joins the deep petrosal nerve of the pterygoid canal, and reaches lacrimal, nasal, and palatine glands and nasopharynx, via pterygopalatine ganglion and its branches; *modality*, parasympathetic and general sensory.

n. petro'sus mi'nor [NA], lesser petrosal nerve: *origin*, tympanic plexus; *distribution*, parotid gland via otic ganglion and auriculotemporal nerve; *modality*, parasympathetic.

n. petro'sus profun'dus [NA], deep petrosal nerve: *origin*, internal carotid plexus; *distribution*, joins greater petrosal nerve to form nerve of pterygoid canal, and supplies lacrimal, nasal, and palatine glands via pterygopalatine ganglion and its branches; *modality*, sympathetic.

n. petro'sus superficia'lis ma'jor, *n. petrosus major*.

n. petro'sus superficia'lis mi'nor, *n. petrosus minor*.

n. phren'icus [NA], phrenic nerve: *origin*, cervical plexus—C4–C5; *branches*, pericardiac and phrenicoabdominal rami; *distribution*, pleura, pericardium, diaphragm, peritoneum, and sympathetic plexuses; *modality*, general sensory and motor.

ner'vi phren'ici access'o'rii [NA], accessory phrenic nerves: an inconstant contribution of the fifth cervical nerve to the phrenic nerve; when present, they run a separate course to the root of the neck or into the thorax before joining the phrenic nerve.

n. planta'ris latera'lis [NA], lateral plantar nerve: *origin*, the smaller of terminal branches of tibial nerve; *branches*, muscular, superficial, and deep rami; *distribution*, lying between first and second layers of muscles of sole, it supplies the quadratus plantae, abductor digiti minimi, flexor digiti minimi brevis, adductor hallucis, interossei, and second, third, and fourth lumbrical muscles, and gives off cutaneous and articular twigs to lateral side of sole and fourth and fifth toes—see individual branches, under *ramus*; *modality*, general sensory and motor.

n. planta'ris media'lis [NA], medial plantar nerve: *origin*, the larger of the terminal branches of tibial nerve; *branches*, common plantar digital nerves and muscular rami; *distribution*, abductor hallucis, flexor digitorum brevis, flexor hallucis brevis, and first lumbrical muscles, and cutaneous and articular twigs to the medial side of the sole, and to the first to fourth toes—see individual branches, in this table and under *ramus*; *modality*, general sensory and motor.

n. presacra'lis, NA alternative for *plexus hypogastricus superior*.

n. pterygoi'deus exter'nus, *n. pterygoideus lateralis*.

n. pterygoi'deus inter'nus, *n. pterygoideus medialis*.

n. pterygoi'deus latera'lis [NA], lateral pterygoid nerve: *origin*, mandibular nerve; *distribution*, lateral pterygoid muscle; *modality*, motor.

n. pterygoi'deus media'lis [NA], medial pterygoid nerve: *origin*, mandibular nerve; *distribution*, medial pterygoid, tensor tympani, and tensor veli palatini muscles; *modality*, motor.

ner'vi pterygopalati'ni [NA], pterygopalatine nerves: the two nerves which connect the maxillary nerve to the pterygopalatine ganglion; they are the sensory roots of the ganglion.

n. puden'dus [NA], pudendal nerve: *origin*, sacral plexus—S2–S4; *branches*, enters the pudendal canal, gives off the inferior rectal nerve, and then divides into the perineal nerve and dorsal nerve of the penis (clitoris); *distribution*, muscles, skin, and erectile tissue of perineum—see individual branches; *modality*, general sensory, motor, and parasympathetic. Called also *pudic nerve*.

n. radia'lis [NA], radial nerve: *origin*, posterior cord of brachial plexus—C6–C8, and sometimes C5 and T1; *branches*, posterior cutaneous and inferior lateral cutaneous nerves of arm, posterior cutaneous nerve of forearm, muscular, deep, and superficial rami; *distribution*, descending in the back of arm and forearm, it is ultimately distributed to skin on back of arm, forearm, and hand, extensor muscles on back of arm and forearm, and elbow joint and many joints of hand—see individual branches, in this table and under *ramus*; *modality*, general sensory and motor.

ner'vi recta'les inferio'res [NA], inferior rectal nerves: *origin*, pudendal nerve, or independently from sacral plexus; *distribution*, sphincter ani externus muscle, skin around anus, and lining of anal canal up to pectinate line; *modality*, general sensory and motor.

n. recur'rens, *n. laryngeus recurrens*.

n. saccula'ris [NA], sacular nerve: the branch of the pars vestibularis nervi octavi that innervates the macula of the sacculle.

ner'vi sacra'les [NA], sacral nerves: the five pairs of nerves that arise from the sacral segments of the spinal cord; the ventral branches of the first four pairs participate in the formation of the sacral plexus.

n. saphe'nus [NA], saphenous nerve: *origin*, termination of femoral nerve, descending first with femoral vessels and then on medial side of leg and foot; *branches*, infrapatellar and medial crural cutaneous rami; *distribution*, knee joint, subsartorial and patellar plexuses, skin on medial side of leg and foot—see individual branches, under *ramus*; *modality*, general sensory.

ner'vi scrota'les anterio'res [NA], anterior scrotal nerves: *origin*, ilioinguinal nerve; *distribution*, skin of anterior scrotal region; *modality*, general sensory.

ner'vi scrota'les posterio'res [NA], posterior scrotal nerves: *origin*, perineal nerves; *distribution*, skin of scrotum; *modality*, general sensory.

n. spermat'icus exter'nus, *ramus genitalis nervi genitofemoralis*.

ner'vi sphenopalati'ni, *nervi pterygopalatini*.

ner'vi spina'les [NA], spinal nerves: the thirty-one pairs of nerves that arise from the spinal cord and pass out between the vertebrae, including the eight pairs of cervical, twelve of thoracic, five of lumbar, five of sacral, and one pair of coccygeal nerves.

n. spino'sus, former term for *ramus meningeus nervi mandibularis*.

n. splanchn'icus i'mus [NA], lowest splanchnic nerve: *origin*, last ganglion of sympathetic trunk or lesser splanchnic nerve; *distribution*, aorticorenal ganglion and adjacent plexus; *modality*, sympathetic and visceral afferent.

ner'vi splanchn'ici lumba'les [NA], lumbar splanchnic nerves: *origin*, lumbar ganglia or sympathetic trunk; *distribution*, upper nerves join celiac and adjacent plexuses, middle ones go to intermesenteric and adjacent plexuses, and lower ones descend to superior hypogastric plexus; *modality*, preganglionic sympathetic and visceral afferent.

n. splanchn'icus ma'jor [NA], greater splanchnic nerve: *origin*, thoracic sympathetic trunk and fifth through tenth thoracic ganglia; *distribution*, descending through the diaphragm or its aortic opening, ends in celiac ganglia and plexuses, with a splanchnic ganglion commonly occurring near the diaphragm; *modality*, preganglionic sympathetic and visceral afferent.

n. splanchn'icus mi'nor [NA], lesser splanchnic nerve: *origin*, ninth and tenth thoracic ganglia of sympathetic trunk; *branches*, renal ramus; *distribution*, pierces the diaphragm, joins the aorticorenal ganglion and celiac plexus, and communicates with the renal and superior mesenteric plexuses; *modality*, preganglionic sympathetic and visceral afferent.

ner'vi splanchn'ici pelvi'ni [NA], pelvic splanchnic nerves: *origin*, sacral plexus—S3–S4; *distribution*, leaving the sacral plexus,

TABLE OF NERVI (Continued)

they enter the inferior hypogastric plexus and supply the pelvic organs; *modality*, preganglionic parasympathetic and visceral afferent. Called also *nervi erigentes* [NA alternative].

ner'vi splanchnici sacrales [NA], sacral splanchnic nerves: *origin*, sacral part of sympathetic trunk; *distribution*, pelvic organs and blood vessels via inferior hypogastric plexus; *modality*, preganglionic sympathetic and visceral afferent.

n. stapedius [NA], stapedius nerve: *origin*, facial nerve; *distribution*, stapedius muscle; *modality*, motor.

n. subclavius [NA], subclavian nerve: *origin*, upper trunk of brachial plexus—C5; *distribution*, subclavius muscle and sternoclavicular joint; *modality*, motor and general sensory.

n. subcostalis [NA], subcostal nerve: *origin*, ventral ramus of twelfth thoracic nerve; *distribution*, skin of lower abdomen and lateral side of gluteal region, parts of transversus, oblique, and rectus muscles, and usually the pyramidalis muscle, and adjacent peritoneum; *modality*, general sensory and motor.

n. sublingualis [NA], sublingual nerve: *origin*, lingual nerve; *distribution*, sublingual gland and overlying mucous membrane; *modality*, parasympathetic and general sensory.

n. suboccipitalis [NA], suboccipital nerve: *origin*, dorsal ramus of first cervical nerve; *distribution*, emerges above posterior arch of atlas and supplies muscles of suboccipital triangle and semispinalis capitis muscle; *modality*, motor.

n. subscapularis [NA], subscapular nerve: *origin*, posterior cord of brachial plexus—C5; *distribution*, usually two or more nerves, upper and lower, supplying subscapularis and teres major muscles; *modality*, motor.

ner'vi supraclaviculares [NA], supraclavicular nerves: a term denoting collectively the common trunk, which is a branch of the cervical plexus (C3–C4) and which emerges under cover of the posterior border of the sternocleidomastoid muscle and divides into the nervi supraclaviculares intermedii, nervi supraclaviculares laterales, and nervi supraclaviculares mediales.

ner'vi supraclaviculares anteriores, nervi supraclaviculares mediales.

ner'vi supraclaviculares intermedii [NA], intermediate supraclavicular nerves: *origin*, cervical plexus—C3–C4; *distribution*, descends in the posterior triangle, crosses the clavicle, and supplies the skin over pectoral and deltoid region; *modality*, general sensory.

ner'vi supraclaviculares laterales posteriores [NA], lateral supraclavicular nerves: *origin*, cervical plexus—C3–C4; *distribution*, descends in the posterior triangle, crosses the clavicle, and supplies the skin of superior and posterior parts of shoulder; *modality*, general sensory. Called also *nervi supraclaviculares posteriores* [NA alternative].

ner'vi supraclaviculares mediales [NA], medial supraclavicular nerves: *origin*, cervical plexus—C3–C4; *distribution*, descends in posterior triangle, crosses the clavicle, and supplies the skin of medial infraclavicular region; *modality*, general sensory.

ner'vi supraclaviculares medii, nervi supraclaviculares intermedii.

ner'vi supraclaviculares posteriores, NA alternative for *nervi supraclaviculares laterales*.

n. supraorbitalis [NA], supraorbital nerve: *origin*, continuation of frontal nerve, from ophthalmic nerve; *branches*, lateral and medial rami; *distribution*, leaves orbit through supraorbital notch or foramen, and supplies the skin of upper eyelid, forehead, anterior scalp (to vertex), mucosa of frontal sinus; *modality*, general sensory.

n. suprascapularis [NA], suprascapular nerve: *origin*, brachial plexus—C5–C6; *distribution*, descends through suprascapular and spinoglenoid notches and supplies acromioclavicular and shoulder joints, and supraspinatus and infraspinatus muscles; *modality*, motor and general sensory.

n. supratrochlearis [NA], supratrochlear nerve: *origin*, frontal nerve, from ophthalmic nerve; *distribution*, leaves orbit at medial end of supraorbital margin and supplies the forehead and upper eyelid; *modality*, general sensory.

n. suralis [NA], sural nerve: *origin*, medial sural cutaneous nerve and peroneal communicating branch of common peroneal nerve; *branches*, lateral dorsal cutaneous nerve and lateral calcaneal rami; *distribution*, skin on back of leg, and skin and joints on lateral side of heel and foot—see individual branches, in this table and under *ramus*; *modality*, general sensory.

ner'vi temporales profundi [NA], deep temporal nerves, usually two in number, anterior and posterior: *origin*, mandibular nerve; *distribution*, temporal muscles; *modality*, motor.

n. temporalis profundus anterior, the anterior of the two deep temporal nerves.

n. temporalis profundus posterior, the posterior of the two temporal nerves.

n. tensor tympani [NA], nerve of tensor tympani: *origin*, mandibular nerve via nerve to medial pterygoid muscle and otic ganglion; *distribution*, tensor tympani muscle; *modality*, motor.

n. tensor veli palatini [NA], nerve of tensor veli palatini: *origin*, mandibular nerve via nerve to medial pterygoid muscle and otic ganglion; *distribution*, tensor veli palatini muscle; *modality*, motor.

n. tentorii, ramus tentorii nervi ophthalmici.

ner'vi terminales [NA], terminal nerves: nerve filaments, collectively termed the nervus terminalis, found in the pia mater between the olfactory bulb and the crista galli, and passing through

the cribriform plate to the nasal mucosa; ganglion cells occur along their course.

ner'vi thoracales, nervi thoracici.

ner'vi thoracales anteriores, former term for the medial and lateral pectoral nerves.

ner'vi thoracales posteriores, former term for dorsal scapular and long thoracic nerves collectively.

n. thoracalis longus, n. thoracicus longus.

ner'vi thoracici [NA], thoracic nerves: the twelve pairs of spinal nerves that arise from the thoracic segments of the spinal cord, each pair leaving the vertebral column below the correspondingly numbered vertebra. They innervate the body wall of the thorax and upper abdomen.

n. thoracicus longus [NA], long thoracic nerve: *origin*, brachial plexus—ventral rami of C5–C7; *distribution*, descends behind brachial plexus to serratus anterior muscle; *modality*, motor.

n. thoracodorsalis [NA], thoracodorsal nerve: *origin*, posterior cord of brachial plexus—C7–C8; *distribution*, latissimus dorsi muscle; *modality*, motor.

n. tibialis [NA], tibial nerve: *origin*, sciatic nerve in lower part of thigh; *branches*, interosseous nerve of leg, medial cutaneous nerve of calf, sural, and medial and lateral plantar nerves, and muscular and medial calcaneal rami; *distribution*, while still incorporated in the sciatic nerve, it supplies the semimembranosus and semitendinosus muscles, long head of biceps, and adductor magnus muscle; it supplies the knee joint as it descends in the popliteal fossa and, continuing into the leg, supplies the muscles and skin of the calf and sole of the foot, and the toes—see individual branches, in this table and under *ramus*; *modality*, general sensory and motor.

n. transversus colli [NA], transverse nerve of neck: *origin*, cervical plexus—C2–C3; *branches*, superior and inferior rami; *distribution*, skin on side and front of neck; *modality*, general sensory.

n. trigeminus [NA], trigeminal nerve (5th cranial), which emerges from the lateral surface of the pons as a motor and a sensory root, together with some intermediate fibers. The sensory root expands into the trigeminal ganglion, which contains the cells of origin of most of the sensory fibers, and from which the three divisions of the nerve arise. See *n. mandibularis*, *n. maxillaris*, and *n. ophthalmicus*. The trigeminal nerve is sensory in supplying the face, teeth, mouth, and nasal cavity, and motor in supplying the muscles of mastication.

n. trochlearis [NA], trochlear nerve (4th cranial): *origin*, the fibers of each trochlear nerve (one on either side) decussate across the median plane and emerge from the back of the brain stem below the corresponding inferior colliculus; *distribution*, runs forward in lateral wall of cavernous sinus, traverses the superior orbital fissure, and supplies superior oblique muscle of eyeball; *modality*, motor.

n. tympanicus [NA], tympanic nerve: *origin*, inferior ganglion of glossopharyngeal nerve; *branches*, helps form tympanic plexus; *distribution*, mucous membrane of tympanic cavity, mastoid air cells, auditory tube, and, via lesser petrosal nerve and otic ganglion, the parotid gland; *modality*, general sensory and parasympathetic.

n. ulnaris [NA], ulnar nerve: *origin*, medial and lateral cords of brachial plexus—C7–T1; *branches*, muscular, dorsal, palmar, superficial, and deep rami; *distribution*, ultimately to skin on front and back of medial part of hand, some flexor muscles on front of forearm, many short muscles of hand, elbow joint, many joints of hand—see individual branches, under *ramus*; *modality*, general sensory and motor.

n. utricularis [NA], utricular nerve: the branch of the pars vestibularis nervi octavi that innervates the macula of the utricle.

n. utriculoampullaris [NA], utriculoampullar nerve: a nerve that arises by peripheral division of the vestibular part of the eighth cranial nerve, and supplies the utricle and ampullae of the semicircular ducts.

ner'vi vaginales [NA], vaginal nerves: *origin*, uterovaginal plexus; *distribution*, vagina; *modality*, sympathetic and parasympathetic.

n. vagus [NA], vagus nerve (10th cranial): *origin*, by numerous rootlets from lateral side of medulla oblongata in the groove between the olive and the inferior cerebellar peduncle; *branches*, superior and recurrent laryngeal nerves, meningeal, auricular, pharyngeal, cardiac, bronchial, gastric, hepatic, celiac, and renal rami, pharyngeal, pulmonary, and esophageal plexuses, and anterior and posterior trunks; *distribution*, descending through the jugular foramen, it presents a superior and an inferior ganglion, and continues through the neck and thorax into the abdomen. It supplies sensory fibers to the ear, tongue, pharynx, and larynx, motor fibers to the pharynx, larynx, and esophagus, and parasympathetic and visceral afferent fibers to thoracic and abdominal viscera—see individual branches, in this table and under *ramus*; *modality*, parasympathetic, visceral afferent, motor, general sensory.

n. vascularis [NA], vascular nerve: a nerve branch that supplies the adventitia of a blood vessel.

n. vertebralis [NA], vertebral nerve: *origin*, cervicothoracic and vertebral ganglia; *distribution*, ascends with vertebral artery and gives fibers to spinal meninges, cervical nerves, and posterior cranial fossa; *modality*, sympathetic.

ner'vi vesicales inferiores plexus pudendi, former term for a few small nerves to the bladder, thought to arise from the pudendal plexus (pudendal nerve).

ner'vi vesicales inferiores plexus vesicalis, former

TABLE OF NERVI (Concluded)

term for the nerves reaching the vesical plexus by way of the inferior vesical artery.

ner/vi vesica/les superio/res plex/us vesica/lis, former term for the nerves reaching the vesical plexus by way of the superior vesical artery.

n. vestib/uli, pars vestibularis nervi octavi.

n. vestibulocochlea/ris [NA], vestibulocochlear nerve (8th cranial), which emerges from the brain between the pons and the medulla oblongata, at the cerebellopontine angle and behind the facial nerve. It consists of two sets of fibers, the pars vestibularis

nervi octavi from the utricle, saccule, and semicircular ducts, and the pars cochlearis nervi octavi from the cochlea, and is connected with the brain by corresponding roots, the radix superior and the radix inferior nervi vestibulocochlearis. Called also *n. acusticus*, *n. octavus* [NA alternative], and *acoustic nerve*.

n. zygomat/icus [NA], zygomatic nerve: *origin*, maxillary nerve, entering the orbit through the inferior orbital fissure; *branches*, zygomaticofacial and zygomaticotemporal rami; *distribution*, communicates with the lacrimal nerve and supplies the skin of the temple and adjacent part of the face—see individual branches, under *ramus*; *modality*, general sensory.

Nesacaine (nes'ah-kān) trademark for preparations of chloroprocaine hydrochloride.

nesidiectomy (ne-sid'e-ek'to-me) [Gr. *nēsidiōn* islet + *ektomē* excision] excision of the islands of Langerhans of the pancreas.

nesidioblast (ne-sid'e-o-blast') [Gr. *nēsidiōn* islet + *blastos* germ] any one of the cells that build up the islet cells of the pancreas.

nesidioblastoma (ne-sid'e-o-blas-to'mah) an islet-cell tumor of the pancreas.

nesidioblastosis (ne-sid'e-o-blas-to'sis) diffuse proliferation of the islet cells of the pancreas.

Nessler's reagent (solution, test) (nes'lerz) [A. Nessler, German chemist, 1827–1905] see under *reagent*.

nesslerization (nes'ler-i-za'shun) treatment with Nessler's reagent.

nesslerize (nes'ler-iz) to treat with Nessler's reagent.

nest (nest) a small mass of cells foreign to the area in which it is found. **birds' n's**, endocardial pockets. **Brunn's epithelial n's**, solid or branched clusters of cells occurring in the healthy ureter. **cancer n's**, masses of concentrically arranged cells seen in cancerous growths. **cell n.**, a mass of closely packed epithelial cells surrounded by a stroma of connective tissue. **swallow's n.**, nidus avis.

neosteostomy (nes'te-os'to-me) [*nestis* + Gr. *stomoun* to provide with an opening, or mouth] creation of a permanent opening into the jejunum through the abdominal wall; also, the opening so established.

nestiatria (nes'te-a'tre-ah) hunger cure.

nestithrapy (nes'ti-ther'ah-pe) nestotherapy.

nestotherapy (nes'to-ther'ah-pe) [Gr. *nēstis* fasting + *therapy*] hunger cure; the therapeutic use of fasting or of a restricted diet.

net (net) a meshlike structure of interlocking fibers or strands; see also under *network*. **achromatic n.**, the network within the cell which does not stain with dyes. **chromidial n.**, a network of chromatin staining material in the cytoplasm of certain cells; it has the properties of active nuclear material. **nerve n.**, a nonsynaptic protoplasmic network of nerve fibers; a form of free nerve fiber ending characteristic of connective tissue, consisting of a network of thin threads. **Trolard's n.**, plexus venosus canalis hypoglossi.

nethalide (neth'ah-lid) pronethalol.

netilmicin sulfate (net'il-mi'sin) chemical name: (2*S*-cis)-4-O-[3-amino-6-(aminomethyl)-3,4-dihydro-2*H*-pyran-2-yl]-2-deoxy-6-O-[3-deoxy-4-C-methyl-3-(methylamino)-β-L-arabinopyranosyl]-N'-ethyl-D-streptamine, sulfate (2:5) salt; an antibacterial, (C₂₁H₄₁N₅O₇)₂·5H₂SO₄.

nettle (net'l) any plant of the genus *Urtica*, having leaves covered with stinging hairs that secrete a poisonous and irritating fluid.

network (net'werk) a meshlike structure of interlocking fibers or strands; see also under *net*. **cell n.**, mitome. **Chiari's n.**, a network of fine fibers which sometimes extend across the interior of the right atrium of the heart from the thebesian and eustachian valves to the crista terminalis. **Gerlach's n.**, an apparent (but not real) interlacement of the dendritic processes of the ganglion cells of the spinal cord. **n. of Gesvelst**, a reticular appearance sometimes seen on the myelin sheath of a neuron, perhaps artificial. **neurofibrillar n.**, the network formed by the neurofibrils of a nerve cell. **peritarsal n.**, a set of lymphatics in the eyelid. **Purkinje's n.**, a reticulation of immature muscle fibers in the subendocardial tissue of the ventricles of the heart. **subpapillary n.**, rete subpapillare. **venous n.**, rete venosum.

neu (nu) neurilemma.

Neubauer's artery (noi'bow-erz) [Johann Ernst Neubauer, German anatomist, 1742–1777] arteria thyroidea.

Neubauer-Fischer test (noi'bow-er-fish'er) [Otto Neubauer, Munich physician, born 1874] see *glycyltryptophan test*, under *tests*.

Neuber's treatment, tubes (noi'berz) [Gustav Adolf Neuber, German surgeon, 1850–1932] see under *treatment and tube*.

Neufeld nail (nu'feld) [Alonzo John Neufeld, American orthopedic surgeon, born 1906] see under *nail*.

Neufeld's phenomenon, reaction (test) (noi'felts) [Fred Neu-

feld, German bacteriologist, 1861–1945] see under *phenomenon and reaction*.

Neumann's cells, sheath (noi'manz) [Ernst Neumann, German pathologist, 1834–1918] see under *cell*, and see *dental sheath*, under *sheath*.

Neumann's law [Franz Ernst Neumann, German physicist, 1798–1895] see under *law*.

Neumann's method [Heinrich Neumann, otologist in Vienna, 1873–1939] see under *method*.

neur- see *neuro-*.

neurad (nu'rad) toward a neural axis or aspect.

neuradynamia (nu'rah-di-na'me-ah) [*neur-* + *a neg.* + Gr. *dynamis* power] neurasthenia.

neuragmia (nu-rag'me-ah) [*neur-* + Gr. *agmos* break] the tearing of a nerve trunk.

neural (nu'ral) [L. *neuralis*; Gr. *neuron* nerve] 1. pertaining to a nerve or to the nerves. 2. situated in the region of the spinal axis, as the neural arch; cf. *hemal*.

neuralgia (nu-ral'je-ah) [*neur-* + *-algia*] paroxysmal pain which extends along the course of one or more nerves. Many varieties of neuralgia are distinguished according to the part affected or to the cause, as brachial, facial, occipital, supraorbital, etc., or anemic, diabetic, gouty, malarial, syphilitic, etc. **cardiac n.** (obs.), angina pectoris. **cervicobrachial n.**, pain in the neck radiating to the arm, due to compression of nerve roots of the cervical spinal cord. **cervico-occipital n.**, neuralgia in the upper cervical nerves, especially the posterior division of the second cervical nerve. **cranial n.**, neuralgia along the course of a cranial nerve. **n. facia/lis ve/ra**, geniculate n. **Fothergill's n.**, trigeminal n. **geniculate n.**, Ramsay Hunt syndrome, def. 1. **glossopharyngeal n.**, neuralgia affecting the petrosal and jugular ganglia of the glossopharyngeal nerve, marked by severe paroxysmal pain originating on the side of the throat and extending to the ear. Occasionally attacks are associated with cardiac slowing or arrest, and syncope. **hallucinatory n.**, a mental impression of pain without any actual peripheral stimulus. **Harris' migrainous n.**, migrainous neuralgia. **Hunt's n.**, Ramsay Hunt syndrome, def. 1. **idiopathic n.**, neuralgia of unknown etiology, unaccompanied by any structural change. **intercostal n.**, neuralgia of the intercostal nerves. **mammary n.**, neuralgic pain in the breast. **mandibular joint n.**, vertex and occipital pain, otalgia, glossodynia, and pain about the nose and eyes, associated with disturbed function of the temporomandibular joint. **migrainous n.**, a migraine variant characterized by attacks of unilateral excruciating pain over the eye and forehead, with temperature elevation, lacrimation, and rhinorrhea; attacks last 15 to 30 minutes and tend to occur in clusters. Because attacks identical to the spontaneous attacks may be induced in sufferers by subcutaneous injection of histamine diphosphate, it is also known as *histamine cephalalgia* or *headache*. Called also *cluster headache*, and *Horton's headache* or *syndrome*. **Morton's n.**, see under *toe*. **nasociliary n.**, pain in the eyes, brow, and root of the nose. **otic n.**, geniculate n. **peripheral n.**, pain along the course of a peripheral sensory nerve. **postherpetic n.**, persistent burning pain and hyperesthesia along the distribution of a cutaneous nerve following an attack of herpes zoster; it may last for a few weeks or many months. **red n.**, erythromelalgia. **reminiscent n.**, a mental impression of neuralgic pain persisting after the actual pain has ceased. **sciatic n.**, sciatica. **Sluder's n.**, neuralgia of the sphenopalatine ganglion, causing a burning and boring pain in the area of the superior maxilla and a radiation of the pain into the neck and shoulder. Called also *sphenopalatine n.* **sphenopalatine n.**, Sluder's n. **stump n.**, neuralgia at the site of an amputation. **supraorbital n.**, neuralgia of the supraorbital nerve. **trifacial n.**, trigeminal n. **trigeminal n.**, excruciating episodic pain in the area supplied by the trigeminal nerve, often precipitated by stimulation of well-defined trigger points. Called also *Fothergill's n.*, *trifocal n.*, and *tic douloureux*. **vidian n.**, neuralgia affecting the vidian nerve (nervus canalis pterygoidei). **visceral n.**, neurasthenic pain in the pelvic region.

neuralgic (nu-ral'jik) pertaining to or of the nature of neuralgia.

neuralgiform (nu-ral'ji-form) resembling neuralgia.

neuraminidase (nūr-ah-min'ī-dās) an enzyme contained in

the surface coat of myxoviruses that destroys the neuraminic acid of the cell surface during attachment, thereby preventing hemagglutination.

neuragenesis (nu''ran-ah-jen'ē-sis) [*neur-* + Gr. *anagennan* to regenerate] regeneration or renewal of nerve tissue.

neurangiosis (nu''ran-je-o'sis) [*neur-* + Gr. *angeion* vessel] (*obs.*) a disorder of the nerves supplying blood vessels.

neurapophysis (nu''rah-pof'i-sis) [*neur-* + *apophysis*] the structure forming either side of the neural arch; also the part supposedly homologous with this structure in a so-called cranial vertebra.

neurapraxia (nu''rah-prak'se-ah) [*neur-* + Gr. *apraxia* absence of action] failure of conduction in a nerve in the absence of structural changes, due to blunt injury, compression, or ischemia; return of function normally ensues. Called also *axonapraxia*. Cf. *axonotmesis* and *neurotmesis*.

neurarchy (nu''rar-ke) [*neur-* + Gr. *archē* rule] the control of the cerebrospinal system over the body.

neurarthropathy (nu''rar-throp'ah-the) neuroarthropathy.

neurasthenia (nu''ras-the'ne-ah) [*neur-* + Gr. *astheneia* debility] neurasthenic neurosis. **acoustic n.**, neurasthenia marked by hearing loss of varying degrees. **angioparalytic n.**, **angio-pathic n.**, a condition in neurasthenic patients in which there is a constant sense of the pulse beat. **cardiac n.**, **cardiovascular n.**, neurocirculatory asthenia. **gastric n.**, a form characterized by functional stomach complications. **n. gra'vis**, a severe form of neurasthenia with great exhaustion on the slightest exertion. **grippal n.**, neurasthenia occurring as a sequel of influenza. **obsessive n.**, psychasthenia. **prostatic n.**, a neurasthenic condition due to prostatic hyperemia and hyperesthesia. **pulsating n.**, angioparalytic n. **sexual n.**, a variety associated with disorders of the sexual function. **traumatic n.**, neurasthenia following shock or injury.

neurastheniac (nu''ras-the'ne-ak) a person suffering from neurasthenic neurosis.

neurasthenic (nu''ras-then'ik) pertaining to or affected with neurasthenic neurosis.

neuratrophia (nu''rah-tro'fe-ah) [*neur-* + Gr. *atrophia* atrophy] impaired nutrition of the nervous system.

neuratrophic (nu''rah-trof'ik) 1. characterized by atrophy of the nerves. 2. a person affected with atrophy of the nerves.

neuratrophy (nu-rat'ro-fe) neuratrophia.

neuraxial (nu-rak'se-al) pertaining to the neuraxis.

neuraxis (nu-rak'sis) [*neur-* + *axis*] 1. an axon. 2. the central nervous system.

neuraxon (nu-rak'son) [*neur-* + Gr. *axōn* axis] an axon.

neure (nūr) neuron, def. 1.

neurectasia (nu''rek-ta'ze-ah) [*neur-* + Gr. *ektasis* stretching] neurotony.

neurectomy (nu-rek'to-me) [*neur-* + Gr. *ektomē* excision] the excision of a part of a nerve. **gastric n.**, surgical vagotomy. **optociliary n.**, excision of the optic and ciliary nerves.

neurectopia (nu''rek-to'pe-ah) [*neur-* + Gr. *ektōpos* out of place + *-ia*] displacement of a nerve or abnormal situation of a nerve.

neurectopy (nu-rek'to-pe) neurectopia.

neurenteric (nu''ren-ter'ik) [*neur-* + Gr. *enteron* intestine] pertaining to the neural tube and archenteron of the embryo, applied especially to the canal interconnecting them.

neurepithelial (nūr'ep-ī-the'le-al) neuroepithelial.

neurepithelium (nūr'ep-ī-the'le-um) neuroepithelium.

neuregic (nu-rer'jik) [*neur-* + Gr. *ergon* work] pertaining to or dependent on nerve action.

neurexeresis (nūr'ek-ser'ē-sis) [*neur-* + Gr. *exairein* to extract] operation of tearing out (avulsion) of a nerve.

neurhypnology (nūr'hip-nol'o-je) neurohypnology.

neuriatry (nu-rī'ah-tre) [*neur-* + Gr. *iatriā* medication] the treatment of nervous diseases.

neuridine (nu-rī-dēn) a base isolated from fresh human brain, identical with spermine.

neurilemma (nu''rī-lem'mah) [*neur-* + Gr. *lemma* rind, husk, a covering or wrapper] the thin membrane spirally enveloping the myelin layers of certain, especially peripheral, myelinated nerve fibers or the axons of certain unmyelinated nerve fibers. Called also *neurolemma*, *Schwann's membrane*, *sheath of Schwann*, and *endoneural membrane*.

neurilemmal (nu''rī-lem'mal) pertaining to a neurilemma.

neurilemmatitis (nu''rī-lem-mi'tis) inflammation of the neurilemma.

neurilemmoma (nu''rī-lem-mo'mah) neurilemmoma.

neurilemoma (nu''rī-lē-mo'mah) [*neur-* + Gr. *eilēma* a closely adhering sheath + *-oma*] a tumor of a peripheral nerve sheath (neurilemma). **acoustic n.**, acoustic neuroma.

neurility (nu-ril'i-te) the sum of the attributes and functions of nerve tissue.

neurimotility (nu''rī-mo-til'i-te) nervimotility.

neurimotor (nu''rī-mo'tor) nervimotor.

neurine (nu''rin) a poisonous ptomaine, vinyl trimethyl ammonium hydroxide, $\text{CH}_2\text{CHN}(\text{CH}_3)_3\text{OH}$, found in decaying fish, fungi, and in the brain and in many other normal tissues.

neurinoma (nu''rī-no'mah) [*neur-* + Gr. *is* fiber + *-oma*] schwannoma. **acoustic n.**, acoustic neuroma.

neurite (nu'rit) an axon.

neuritic (nu-rit'ik) pertaining to or affected with neuritis.

neuritis (nu-ri'tis) [*neur-* + *-itis*] inflammation of a nerve, a condition attended by pain and tenderness over the nerves, anesthesia and paresthesias, paralysis, wasting, and disappearance of the reflexes. In practice, the term is also used to denote noninflammatory lesions of the peripheral nervous system; see *neuropathy*. **adventitial n.**, that which affects the sheath of a nerve. **alcoholic n.**, see under *neuropathy*. **ascending n.**, see under *neuropathy*. **brachial n.**, neuralgic amyotrophy. **central n.**, parenchymatous n. **descending n.**, see under *neuropathy*. **dietetic n.**, beriberi. **disseminated n.**, polyneuritis. **endemic n.**, beriberi. **fallopian n.**, neuritis of the facial nerve in the fallopian canal. **Gombault's n.**, progressive hypertrophic interstitial neuropathy. **interstitial n.**, inflammation of the connective tissue of a nerve trunk. **interstitial hypertrophic n.**, progressive hypertrophic interstitial neuropathy. **intraocular n.**, neuritis of the retinal part of the optic nerve. **jake n.**, Jamaica ginger paralysis. **latent n.**, degeneration of the fibers of a nerve without corresponding clinical phenomena. **lead n.**, n. saturnina. **leprous n.**, a form associated with true leprosy. **malarial n.**, a form associated with malaria. **malarial multiple n.**, inflammation involving many nerves, and associated with malaria. **n. mi'grans**, **migrating n.**, neuritis affecting first one nerve and then another. **multiple n.**, polyneuritis. **n. mul'tiplex** **endem'ica**, beriberi. **n. nodo'sa**, a form characterized by the formation of nodes on the nerves. **optic n.**, inflammation of the optic nerve; it may affect the part of the nerve within the eyeball (*neuropapillitis*) or the portion behind the eyeball (*retrobulbar n.*). **orbital optic n.**, retrobulbar n. **parenchymatous n.**, neuritis affecting principally the axons and myelin of the peripheral nerves; called also *central n.* **periaxial n.**, segmental (demyelination) neuropathy. **peripheral n.**, inflammation of the nerve endings or of terminal nerves. **porphyric n.**, neuritis occurring as a manifestation of acute intermittent porphyria. **postfebrile n.**, that which mostly follows an attack of severe exanthematous disease. **postocular n.**, retrobulbar n. **pressure n.**, a form due to compression of the nerve. **n. puerpera'lis** **traumat'ica**, neuritis occurring in parturient women as a result of injury at childbirth. **radiation n.**, radioneuritis. **radicular n.**, neuritis involving the spinal roots of the nerves; radiculitis. **retrobulbar n.**, inflammation in that portion of the optic nerve which is posterior to the eyeball. **rheumatic n.**, a form associated with rheumatic symptoms. **n. saturni'na**, neuritis due to plumbism. **sciatic n.**, sciatica. **segmental n.**, segmental (demyelination) neuropathy. **senile n.**, a form occurring in aged persons, and affecting chiefly the nerves of the extremities. **serum n.**, see under *neuropathy*. **shoulder-girdle n.**, neuralgic amyotrophy. **syphilitic n.**, neuritis due to syphilis. **tabetic n.**, neuritis associated with tabes dorsalis. **toxic n.**, that which is due to some poison. **traumatic n.**, that which follows and is caused by an injury.

neuro-, neur- (nu'ro, nūr) [Gr. *neuron* nerve] combining form denoting relationship to a nerve or nerves, or to the nervous system.

neuroallergy (nu''ro-al'er-je) allergy in nervous tissue.

neuroamebiasis (nu''ro-am'e-bi'ah-sis) neuritis due to amebiasis.

neuroanastomosis (nu''ro-ah-nas'to-mo'sis) the operation of forming an anastomosis of nerves.

neuroanatomy (nu''ro-ah-nat'o-me) [*neuro-* + *anatomy*] that branch of neurology which is concerned with the anatomy of the nervous system.

neuroarthropathy (nu''ro-ar-throp'ah-the) [*neuro-* + Gr. *arthron* joint + *pathos* disease] any disease of joint structures associated with disease of the central or peripheral nervous system.

neuroastrocytoma (nu''ro-as'tro-si-to'mah) [*neuro-* + *astrocytoma*] a glioma composed mainly of astrocytes, closely resembling an astrocytoma and most commonly found in the floor of the third ventricle and the temporal lobes, although it may arise in almost any part of the central nervous system.

neurobehavioral (nu''ro-be-hāv'u-ral) relating to neurologic status as assessed by observation of behavior.

neurobiologist (nu''ro-bi-ol'o-jist) a specialist in neurobiology.

neurobiology (nu''ro-bi-ol'o-je) the biology of the nervous system.

neurobiotaxis (nu''ro-bi'o-tak'sis) [*neuro-* + *biotaxis*] the theory that nerve cell bodies have a tendency during development to migrate in the direction from which they habitually receive their stimuli.

neuroblast (nu''ro-blast) [*neuro-* + Gr. *blastos* germ] any em-

bryonic cell which develops into a nerve cell or neuron; an immature nerve cell.

neuroblastoma (nu''ro-blas-to'mah) sarcoma of nervous system origin, composed chiefly of neuroblasts and affecting mostly infants and children up to 10 years of age. Most of such tumors arise in the autonomic nervous system (sympathicoblastoma) or in the adrenal medulla. When there is metastasis from the adrenal medulla to the cranium or to the liver, it is known as *Hutchinson's type* or *Pepper's syndrome*, respectively.

neurocanal (nu''ro-kah-nal') [*neuro-* + *canal*] the vertebral canal (canalis vertebralis).

neurocardiac (nu''ro-kar'de-ak) [*neuro-* + Gr. *kardia* heart] pertaining to the nervous system and the heart.

neurocentral (nu''ro-sen'tral) pertaining to the centrum and the two lateral masses of a developing vertebra.

neurocentrum (nu''ro-sen'trum) one of the embryonic vertebral elements from which the spinous processes of the vertebrae develop.

neuroceptor (nu''ro-sep'tor) [*neuro-* + L. *capere* to take] one of the terminal elements of a dendrite which receives the stimulus from the neuromittor of the adjoining neuron; called also *ceptor*.

neuroceratin (nu''ro-ser'ah-tin) neurokeratin.

neurochemistry (nu''ro-kem'is-tre) that branch of neurology which is concerned with the chemistry of the nervous system.

neurochitin (nu''ro-ki'tin) [*neuro-* + Gr. *chitōn* frock, skin, membrane] the substance that forms the framework support of nerve fibers.

neurochondrite (nu''ro-kon'drit) [*neuro-* + Gr. *chondros* cartilage] one of the embryonic cartilaginous elements which develop into the neural arch of a vertebra.

neurochorioretinitis (nu''ro-ko're-o-ret'i-ni'tis) [*neuro-* + *chorioretinitis*] inflammation of the optic nerve, choroid, and retina.

neurochoroiditis (nu''ro-ko'roi-di'tis) inflammation of the choroid coat and optic nerves.

neurocirculatory (nu''ro-cir'cu-lah-to're) pertaining to the nervous and circulatory systems, as neurocirculatory asthenia.

neurocladism (nu-rok'lah-dizm) [*neuro-* + Gr. *klados* branch] the formation of new branches by the process of a neuron; especially the force by which, in regeneration of divided nerves, the newly formed axons of the proximal stump become attracted by the peripheral stump so as to form a bridge between the two ends. Called also *odogenesis*.

neuroclonic (nu''ro-klon'ik) [*neuro-* + Gr. *klonos* spasm] characterized by nervous spasms.

neurocommunications (nu''ro-kō-mu'ni-ka'shunz) the branch of neurology dealing with the transfer and integration of information within the nervous system.

neurocranial (nu''ro-kra'ne-al) pertaining to the neurocranium.

neurocranium (nu''ro-kra'ne-um) the portion of the cranium which encloses the brain.

neurocrine (nu''ro-krin) [*neuro-* + Gr. *krinein* to secrete] 1. denoting an endocrine influence on or by the nerves. 2. pertaining to neurosecretion.

neurocrinia (nu''ro-krin'e-ah) endocrine influence on the nerves.

neurocristopathy (nu''ro-kris-top'ah-the) [*neuro-* + L. *crista* crest + *-pathy*] any disease arising from maldevelopment of the neural crest.

neurocutaneous (nu''ro-ku-ta'ne-us) pertaining to the nerves and the skin; pertaining to the cutaneous nerves.

neurocyte (nu''ro-sit) [*neuro-* + *-cyte*] a nerve cell of any kind; a neuron.

neurocytology (nu''ro-si-to'l'o-je) that branch of neurology which is concerned with the cellular components of the nervous system.

neurocytolysin (nu''ro-si-to'l'i-sin) a constituent of the venom of certain snakes (rattler, coral, cobra), which lyses nerve cells.

neurocytoma (nu''ro-si-to'mah) a brain tumor consisting of undifferentiated cells of nervous origin, i.e., cells resembling medullary neural epithelium; called also *neuroepithelioma* and *medulloepithelioma*.

neurodealgia (nu-ro'de-al'je-ah) [Gr. *neurōdēs* retina + *-algia*] pain in the retina.

neurodeatrophia (nu-ro'de-ah-tro'fe-ah) [Gr. *neurōdēs* retina + *atrophia*] retinal atrophy.

neurodegenerative (nu''ro-de-jen'er-a-tiv) relating to or marked by nervous degeneration.

neurodendrite (nu''ro-den'drit) [*neuro-* + Gr. *dendritēs* of a tree] dendrite.

neurodendron (nu''ro-den'dron) dendrite.

neuroderm (nu''ro-derm) the neural ectoderm; that portion of the ectoderm which develops into the neural tube.

neurodermatitis (nu''ro-der'mah-ti'tis) [*neuro-* + Gr. *dermaskin* + *-itis*] a general term for a dermatosis presumed to be caused

by itching due to emotional causes; it is also used to refer to n. circumscripta (*lichen simplex chronicus*) and sometimes n. disseminata (*atopic dermatitis*).

neurodiagnosis (nu''ro-di'ag-no'sis) [*neuro-* + *diagnosis*] the diagnosis of diseases of the nervous system.

neurodin (nu-ro'din) acetyl para-oxyphenylurethane, C₆H₄-(OCOCH₃)NH-COOC₂H₅, used as an antineuralgic and antipyr-retic.

neurodynamic (nu''ro-di-nam'ik) [*neuro-* + Gr. *dynamis* force] relating to nervous energy.

neurodynia (nu''ro-din'e-ah) [*neuro-* + Gr. *odynē* pain] pain in a nerve or in nerves.

neuroectoderm (nu''ro-ek'to-derm) the portion of the ectoderm of the early embryo which gives rise to the central and peripheral nervous systems, including some glial cells.

neuroectodermal (nu''ro-ek'to-der'mal) pertaining or relating to the neuroectoderm.

neuroeffector (nu''ro-ef-fek'tor) of or relating to the junction between a neuron and the effector organ it innervates.

neuroelectricity (nu''ro-e'lek-tris'i-te) the electrical signals, currents, or voltages generated by the nervous system.

neuroelectrotherapeutics (nu''ro-e-lek'tro-ther'ah-pu'tiks) the treatment of nervous diseases by electricity.

neuroencephalomyelopathy (nu''ro-en-sef'ah-lo-mi''ē-lop'-ah-the) [*neuro-* + Gr. *enkephalos* brain + *myelos* marrow + *pathos* disease] disease involving the brain, spinal cord, and nerves. **optic n.**, neuromyelitis optica.

neuroendocrine (nu''ro-en'do-krin) pertaining to neural and endocrine influence, and particularly to the interaction between the nervous and endocrine systems.

neuroendocrinology (nu''ro-en'do-krī-nol'o-je) the study of the interactions of the nervous system and endocrine system.

neuroenteric (nu''ro-en-ter'ik) neuroenteric.

neuroepidermal (nu''ro-ep'i-der'mal) [*neuro-* + *epidermis*] pertaining to or giving origin to the nervous and epidermal tissues.

neuroepithelial (nu''ro-ep'i-the'le-al) pertaining to or composed of neuroepithelium.

neuroepithelioma (nu''ro-ep'i-the'le-o'mah) neurocytoma.

neuroepithelium (nu''ro-ep'i-the'le-um) [*neuro-* + *epithelium*]

1. simple columnar epithelium made up of cells specialized to serve as sensory cells for the reception of external stimuli, as the sensory cells of the cochlea, vestibule, nasal mucosa, and tongue. 2. the epithelium of the ectoderm, from which the central nervous system is developed. **n. of ampullary crest**, **n. cristae ampullaris** [NA], the specialized epithelium of the ampullary crest of the labyrinth, containing receptor cells from some of which sensory hairs project into the cupula. **n. of maculae**, **n. maculae** [NA], the specialized epithelium of the maculae of the labyrinth, containing receptor cells from some of which sensory hairs project into the statoconic membrane.

neurofibril (nu''ro-fi'bril) any of the delicate interlacing threads coursing through the cytoplasm of the body of a neuron and extending from one dendrite into another or into the axon; with the electron microscope, it can be seen to be formed by aggregations of neurofilaments and neurotubules.

neurofibrilla (nu''ro-fi-bril'ah), pl. *neurofibrillae*. A neurofibril.

neurofibrillae (nu''ro-fi-bril'e) plural of *neurofibrilla*.

neurofibrillar (nu''ro-fi-bril'ar) pertaining to neurofibrils.

neurofibroma (nu''ro-fi-bro'mah) [*neuro-* + *fibroma*] a tumor of peripheral nerves caused by abnormal proliferation of Schwann cells.

neurofibromatosis (nu''ro-fi'bro-mah-to'sis) a familial condition characterized by developmental changes in the nervous system, muscles, bones and skin and marked superficially by the formation of multiple pedunculated soft tumors (neurofibromas) distributed over the entire body associated with areas of pigmentation. Called also *multiple neuroma*, *neuromatosis*, and *von Recklinghausen's disease*.

neurofilament (nu''ro-fil'ah-ment) one of the slender, fibrillar elements which, along with the neurotubules, forms a neurofibril; they seem to correspond to the microfilaments occurring in many cells outside the nervous system, and in addition to a cytoskeletal function, they may be involved in intracellular transport of metabolites.

neurofixation (nu''ro-fik-sa'shun) development of syphilis of the central nervous system after use of arsenical preparations for the treatment of the primary chancre or of the skin lesion of secondary syphilis.

neurogangliitis (nu''ro-gang'gle-i'tis) inflammation of a neuroganglion.

neuroganglion (nu''ro-gang'gle-on) a ganglion, or mass of nervous matter.

neurogastric (nu''ro-gas'trik) involving the nerves of the stomach.

neurogen (nu'ro-jen) 1. transmitter substance. 2. the chemical substance by means of which the primary organizer causes the development of the neural plate.

neurogenesis (nu'ro-jen'ē-sis) [*neuro-* + Gr. *genesis* production] the development of nervous tissue.

neurogenetic (nu'ro-jē-net'ik) pertaining to neurogenesis.

neurogenic (nu'ro-jen'ik) [*neuro-* + Gr. *gennan* to produce] 1. forming nervous tissue, or stimulating nervous energy. 2. originating in the nervous system.

neurogenous (nu-roj'ē-nus) arising in the nervous system; arising from some lesion of the nervous system.

neuroglia (nu-rog'le-ah) [*neuro-* + Gr. *glia* glue] the supporting structure of nervous tissue (Virchow, 1854). It consists of a fine web of tissue made up of modified ectodermal elements, in which are enclosed peculiar branched cells known as *neuroglial cells* or *glial cells*. The neuroglial cells are of three types: astrocytes and oligodendrocytes (collectively macroglia, which are of ectodermal origin, and microglia, said to be of mesodermal origin. Astrocytes and oligodendrocytes appear to play a role in myelin formation, transport of material to neurons, and maintenance of the ionic environment of neurons. Called also *bind web* and *glia*. —**interfascicular n.**, oligodendroglia of white matter along the myelin sheaths. **peripheral n.**, the neurilemma, Schwann cells, and satellite cells of the peripheral nervous system.

neuroglial, neurogliar (nu-rog'le-al, nu-rog'le-ar) pertaining to the neuroglia.

neurogliocyte (nu-rog'le-o-sit') [*neuroglia* + *-cyte*] a cell of the neuroglia.

neurogliocytoma (nu-rog'le-o-si-to'mah) a tumor composed of neuroglial cells; a glioma.

neuroglioma (nu'ro-gli-o'mah) [*neuro-* + *glioma*] a tumor made up of neuroglial tissue. **n. ganglionaire**, ganglioneuroma.

neurogliomatosis (nu'ro-gli'o-mah-to'sis) neurogliosis.

neurogliosis (nu-rog'le-o'sis) a condition marked by diffuse formation of neurogliomas. **n. gangliocellularis diffusa**, tuberous sclerosis.

neuroglycopenia (nu'ro-gli'ko-pe'ne-ah) [*neuro-* + Gr. *glykys* sweet + *penia* poverty] chronic hypoglycemia of a degree sufficient to impair brain function, resulting in personality changes and intellectual deterioration.

neurogram (nu'ro-gram) [*neuro-* + Gr. *gramma* mark] Prince's name for residua of past cerebral activities which make up the brain disposition and thus take part in the formation of personality.

neurography (nu-rog'rah-fe) [*neuro-* + Gr. *graphein* to write] a treatise on or description of the nerves.

neurohistology (nu'ro-his-tol'o-je) the histology of the nervous system.

neurohormonal (nu'ro-hor'mo-nal) both neural and hormonal.

neurohormone (nu'ro-hor'mōn) a hormone stimulating the neural mechanism.

neurohumor (nu'ro-hu'mor) a chemical substance formed in a neuron and able to activate or modify the function of a neighboring neuron, muscle, or gland.

neurohumoral (nu'ro-hu'mor-al) pertaining to the neurohumors.

neurohumoralism (nu'ro-hu'mor-al-izm) the theory that the action of the autonomic nerves on peripheral organs is produced through the medium of chemicals (neurohumors) which are liberated at the endings of activated nerves.

neurohypnologist (nu'ro-hip-nol'o-jist) an expert in neurohypnology.

neurohypnology (nu'ro-hip-nol'o-je) [*neuro-* + Gr. *hypnos* sleep + *-logy*] the sum of knowledge concerning hypnotic conditions.

neurohypophyseal (nu'ro-hi'po-fiz'e-al) pertaining to the neurohypophysis.

neurohypophysectomy (nu'ro-hi'po-fiz-ek'to-me) [*neuro-* + *hypophysectomy*] surgical removal of the neural lobe of the pituitary gland.

neurohypophysial (nu'ro-hi'po-fiz'e-al) neurohypophyseal.

neurohypophysis (nu'ro-hi-pof'is-sis) [NA alternative] the posterior (neural) lobe of the pituitary gland as distinguished from the anterior lobe (adenohypophysis). See *pituitary gland*, under *gland*.

neuroid (nu'roid) [*neuro-* + Gr. *eidos* form] resembling a nerve.

neuroimmunologic (nu'ro-im'u-no-loj'ik) pertaining to neuroimmunology.

neuroimmunology (nu'ro-im'u-nol'o-je) that branch of science which deals with the interaction of the nervous and immune systems in health and disease, as in the effects of autonomic nervous activity on the immune response and the role of antibodies in myasthenia gravis.

neuroinduction (nu'ro-in-duk'shun) [*neuro-* + L. *inducere* to persuade] mental suggestion.

neuroinidia (nu'ro-i-nid'e-ah) deficient nutrition of nerve cells.

neurokeratin (nu'ro-ker'ah-tin) [*neuro-* + Gr. *keras* horn] a variety of keratin said to form the supporting network of the myelin sheath of medullated nerve fibers.

neurokinet (nu'ro-kin'et) [*neuro-* + Gr. *kinein* to move] an apparatus for stimulating the nerve by percussion.

neurokyme (nu'ro-kim) a nervous process in general.

neuro labyrinthitis (nu'ro-lab'i-rin-thi'tis) inflammation of the nervous structures of the labyrinth.

neuro lathyrism (nu'ro-lath'i-rizm) lathyrism.

neurolemma (nu'ro-lem'ah) neurilemma.

neurolemmitis (nu'ro-lē-mi'tis) neurilemmitis.

neurolemmoma (nu'ro-lē-mo'mah) neurilemmoma.

neuroleptanalgesia (nu'ro-lep'tan-al-je'ze-ah) [*neuro-* + Gr. *leptos* slender + *an* neg. + *algēsis* pain + *-ia*] a state of quiescence, altered awareness, and analgesia produced by the administration of a combination of a narcotic analgesic and a neuroleptic agent.

neuroleptanalgesic (nu'ro-lep'tan-al-je'zik) 1. pertaining to or producing neuroleptanalgesia. 2. an agent that produces neuroleptanalgesia.

neuroleptanesthesia (nu'ro-lep'tan-es-the'ze-ah) [*neuro-* + Gr. *leptos* slender + *an* neg. + *aisthēsis* sensation] a state of neuroleptanalgesia and unconsciousness, produced by the combined administration of a narcotic analgesic and a neuroleptic agent, together with the inhalation of nitrous oxide and oxygen.

neuroleptanesthetic (nu'ro-lep'tan-es-thet'ik) 1. pertaining to or producing neuroleptanesthesia. 2. an agent that produces neuroleptanesthesia.

neuroleptic (nu'ro-lep'tik) [*neuro-* + Gr. *lēpsis* a taking hold] 1. modifying psychotic behavior. 2. any drug that favorably modifies psychotic symptoms; the main categories of neuroleptics include the phenothiazines, butyrophenones, and thioxanthenes. Called also *antipsychotic* and *major tranquilizer*.

neuro lipomatosis (nu'ro-li-po'mah-to'sus) a condition characterized by the formation of subcutaneous multiple fat deposits, with pressure on the nerves resulting in tenderness, pain, and paresthesias. **n. dolorosa**, adiposis dolorosa.

neurologia (nu'ro-lo'je-ah) neurology.

neurologic (nu-ro-loj'ik) pertaining to neurology or to the nervous system.

neurologist (nu-ro-lo-jist) an expert in neurology or in the treatment of disorders of the nervous system.

neurology (nu-ro-lo-je) [*neuro-* + *-logy*] that branch of medical science which deals with the nervous system, both normal and in disease. **clinical n.**, that specialty concerned with the diagnosis and treatment of disorders of the nervous system.

neuroloues (nu'ro-loo'ēz) neurosyphilis.

neurolymph (nu'ro-limf) (*obs.*) the cerebrospinal fluid.

neurolymphomatosis (nu'ro-lim'fo-mah-to'sis) lymphoblastic infiltration of a nerve. **n. gallinae**, Marek's disease.

neurolysin (nu-ro-l'i-sin) a cytolysin which has a specific destructive action upon nerve cells.

neurolysis (nu-ro-l'i-sis) [*neuro-* + Gr. *lysis* dissolution] 1. release of a nerve sheath by cutting it longitudinally. 2. the operative breaking up of perineural adhesions. 3. the relief of tension upon a nerve obtained by stretching. 4. exhaustion of nervous energy. 5. destruction or dissolution of nerve tissue.

neurolytic (nu'ro-lit'ik) destructive of nerve substance.

neuroma (nu-ro'mah) [*neuro-* + *-oma*] a tumor or new growth largely made up of nerve cells and nerve fibers; a tumor growing from a nerve. **acoustic n.**, a progressively enlarging, benign tumor within the auditory canal arising from the eighth cranial (acoustic) nerve; the symptoms, which vary with the size and location of the tumor, may include hearing loss, headache, disturbances of balance and gait, facial numbness or pain, and tinnitus. It may be unilateral or bilateral. Called also *acoustic neurilemmoma* or *neurinoma*, and *schwannoma*. **amputation n.**, traumatic neuroma occurring after amputation of an extremity or part. **amyelinic n.**, one containing only nonmedullated nerve fibers. **n. cutis**, neuroma seated in the skin. **cystic n.**, a false neuroma, or a neuroma which has become cystic. **false n.**, one which does not contain nerve elements. **fascicular n.**, medullated n., a neuroma made up of myelinated nerve fibers. **ganglionar n.**, ganglionated n., ganglionic n., one made up of nerve cells. **malignant n.**, sarcoma of a nerve structure, usually spindle celled. **multiple n.**, see *neumatosis* and *neurofibromatosis*. **myelinic n.**, one that contains myelinated nerve fibers. **nevoid n.**, neuroma telangiectodes. **plexiform n.**, a neuroma made up of contorted nerve trunks; called also *Verneuil's n.* **n. telangiectodes**, one which contains an excess of blood vessels; called also *nevoid n.* **traumatic n.**, an unorganized bulbous or nodular mass of nerve fibers and Schwann cells produced by hyperplasia of nerve fibers and their supporting tissues after accidental or

purposeful sectioning of the nerve. **true n.**, a neuroma made up of nerve tissue. **Verneuil's n.**, plexiform n.

neuromalacia (nu/'ro-mah-la'she-ah) [*neuro-* + Gr. *malakia* softening] morbid softening of the nerves.

neuromalacia (nu/'ro-mah-la'ke-ah) neuromalacia.

neuromatosis (nu/'ro-mah-to'sis) a disease condition characterized by the presence of many neuromas; see also *neurofibromatosis*.

neuromatous (nu-rom/'ah-tus) affected with or of the nature of neuroma.

neuromechanism (nu/'ro-mek/'ah-nizm) the structure and arrangement of the nervous system in relation to function.

neuromeningeal (nu/'ro-men-in/'je-al) pertaining to or affecting nervous tissue and the meninges.

neuromere (nu/'ro-mēr) [*neuro-* + Gr. *meros* part] 1. any of the series of transitory segmental elevations in the wall of the neural tube of the developing embryo; also commonly used to refer to such elevations in the wall of the mature rhombencephalon. 2. a part of the spinal cord to which a pair of dorsal roots and a pair of ventral roots are attached. Called also *neural segment*.

neuromimesis (nu/'ro-mi-me'sis) [*neuro-* + *mimesis*] hysterical simulation of organic disease.

neuromimetic (nu/'ro-mi-met/'ik) 1. eliciting a response in effector organs that simulates that elicited by nervous impulses. 2. an agent that elicits such a response. 3. pertaining to neuromimesis.

neuromittor (nu/'ro-mit/'or) [*neuro-* + L. *mittere* to send] one of the terminal elements at the peripheral end of a neuron which transfers a stimulus to the neuroceptor of the adjoining neuron. Called also *mittor*.

neuromotor (nu/'ro-mo/'tor) involving both nerves and muscles; pertaining to nervous impulses to muscles.

neuromuscular (nu/'ro-mus/'ku-lar) pertaining to muscles and nerves.

neuromyal (nu/'ro-mi'al) [*neuro-* + Gr. *mys* a muscle] neuromuscular.

neuromyasthenia (nu/'ro-mi/'as-the'ne-ah) [*neuro-* + *myasthenia*] muscular weakness associated with emotional lability.

epidemic n., benign myalgic encephalomyelitis.

neuromyelitis (nu/'ro-mi/'ē-li'tis) [*neuro-* + Gr. *myelos* marrow + *-itis*] inflammation of nervous and medullary substance; myelitis attended with neuritis. **n. optica**, combined demyelination of the optic nerve and the spinal cord; it is marked by diminution of vision and possibly blindness, flaccid paralysis of the extremities, and sensory and genitourinary disturbances. Called also *Devic's disease*, *optic neuroencephalomyelopathy*, and *neuro-optic myelitis*.

neuromyic (nu/'ro-mi/'ik) [*neuro-* + Gr. *mys* muscle] neuromuscular.

neuromyon (nu/'ro-mi/'on) [*neuro-* + Gr. *mys* muscle] (*obs.*) the neural elements in a muscle.

neuromyopathic (nu/'ro-mi/'o-path/'ik) pertaining to or affecting the nervous system and muscle, including the heart.

neuromyositis (nu/'ro-mi/'o-si'tis) [*neuro-* + *myositis*] neuritis complicated with myositis.

neuron (nu/'ron) [Gr. *neuron* nerve] 1. any of the conducting cells of the nervous system. A typical neuron consists of a cell body, containing the nucleus and the surrounding cytoplasm (perikaryon); several short radiating processes (dendrites); and one long process (the axon), which terminates in twiglike branches (telodendrons) and may have branches (collaterals) projecting along its course. The axon together with its covering or sheath forms the nerve fiber. See illustration accompanying *nerve*. Called also *nerve cell*. 2. (*obs.*) axon. 3. (*obs.*) the central nervous system. **afferent n.**, a neuron which conducts a nervous impulse from a receptor to a center. **bipolar n.**, a neuron having two processes, one projecting from each end of the cell body. **central n.**, a neuron which belongs entirely to the central nervous system. **connector n.**, one whose dendrites and axon both synapse with other neurons. **correlation n.**, a neuron which takes part in the function of correlating various stimuli into the appropriate response; see *correlation*. **efferent n.**, a neuron which conducts a nervous impulse from a center to an organ of response. **Golgi type I n's**, pyramidal neurons with very long axons, which leave the gray matter of the central nervous system, traverse the white matter, and terminate in the periphery; called also *Golgi cells*. **Golgi type II n's**, stellate neurons with short axons that do not pass out of the gray matter in which the cell body lies, and are especially numerous in the cerebral and cerebellar cortices and in the retina. Called also *Golgi cells* and *cells of van Gehuchten*. **intercalary n.**, **internuncial n.**, **interneuron**. **long n.**, axon, def. 2. **motor n.**, any neuron possessing a motor function; an efferent neuron conveying motor impulses. See *motoneuron*. **multiform n.**, polymorphic n. **multipolar n.**, a neuron with several to many processes; such neurons vary in shape, depending on the arrangement of the processes, with pyramidal and stellate (star) shapes being common. Called also *polymorphic n.* **peripheral sensory n.**, a

neuron forming the first part of a peripheral reflex arc; situated outside the central nervous system, it has a peripheral branch which enters the central nervous system. Together with the interneurons and the peripheral motor neuron it forms a peripheral reflex arc. **polymorphic n.**, a neuron of irregular shape. **postganglionic n's**, neurons whose cell bodies are situated in the autonomic ganglia and whose purpose is to relay impulses beyond the ganglia. **preganglionic n's**, neurons whose cell bodies lie in the central nervous system and whose efferent fibers terminate in the autonomic ganglia. **premotor n.**, a neuron not connected directly with muscle, but serving as a connecting center to command excitation in one or more motor neurons. **projection n.**, one which serves for the transmission of nervous impulses, whether motor or sensory, between the cerebral cortex and the lower centers. **pseudounipolar n.**, a unipolar neuron which was originally bipolar but whose two processes fused during development to form a single process that bifurcates at a distance from the cell body. **pyramidal n.**, see under *cell*. **sensory n.**, any neuron possessing a sensory function; an afferent neuron conveying sensory impulses. See illustration accompanying *nerve*. **short n.**, a local process from a nerve cell or brain cell reaching only to a nearby gray mass. **unipolar n.**, a neuron with one process only; see also *pseudounipolar n.*

neuronogenesis (nu/'rōn-ah-jen/'ē-sis) [*neuron* + a neg. + Gr. *gennan* to produce] lack of development of neurons.

neuronal (nu/'ro-nal) pertaining to a neuron or neurons.

neuronatrophy (nu/'ron-at/'ro-fe) Southard and Solomon's term for any nervous disease due to sclerosis of neurons.

neurone (nu/'rōn) neuron.

neuronephric (nu/'ro-nef/'rik) pertaining to the nervous and renal systems.

neuronevus (nu/'ro-ne/'vus) a cellular or nevocytic nevus, especially a mature one with differentiation toward neural skin structures, such as Meissner corpuscles.

neuronic (nu-'ron/'ik) pertaining to or affecting a neuron.

neuronin (nu/'ro-nin) the principal protein of the axon of a nerve.

neuronist (nu/'ro-nist) (*obs.*) an adherent of the neuron theory.

neuronitis (nu/'ro-ni'tis) a term applied by Foster Kennedy to a disorder of unknown origin involving the more proximal part of the peripheral nervous system, characterized by breakdown of nerve fibers, sometimes in association with inflammatory-cell reaction. Currently seldom used, it was in the past one of numerous synonyms used for *acute febrile polyneuritis*.

neuronophage (nu-'ron/'o-fāj) [*neuron* + Gr. *phagein* to eat] a phagocyte which destroys nerve cells.

neuronophagia (nu/'ron-'o-fa/'je-ah) the destruction of nerve cells by phagocytic action.

neuronophagy (nu/'ron-of/'ah-je) neuronophagia.

neuronosis (nu/'ro-no'sis) [*neuron* + Gr. *nosos* disease] any disease of nervous origin.

neuronotropic (nu-'ron/'o-trōp/'ik) [*neuron* + Gr. *tropein* to turn] having a special affinity for neurons.

neuronomy (nu-'ron/'i-me) [*neuron* + Gr. *onoma* name] the systematic naming of the parts of the nervous system.

neuro-ophthalmology (nu/'ro-of/'thal-mol/'o-je) the field of specialization dealing with portions of the nervous system related to the eye.

neuro-otology (nu/'ro-o-tol/'o-je) that part of otology dealing especially with portions of the nervous system related to the ear.

neuropacemaker (nu/'ro-pās/'māk-er) an implant device that relieves pain due to nerve injury.

neuropapillitis (nu/'ro-pap/'i-li'tis) optic neuritis.

neuroparalysis (nu/'ro-pah-'ral/'i-sis) paralysis due to disease of a nerve or nerves.

neuroparalytic (nu/'ro-par/'ah-lit/'ik) pertaining to or characterized by neuroparalysis.

neuropath (nu/'ro-path) a person with a tendency to neurosis.

neuropathic (nu/'ro-path/'ik) pertaining to or characterized by neuropathy.

neuropathogenesis (nu/'ro-path/'o-jen/'ē-sis) development of disease of the nervous system.

neuropathogenicity (nu/'ro-path/'o-jē-nis/'i-te) the quality of producing or the ability to produce pathologic changes in nerve tissue.

neuropathology (nu/'ro-pah-'thol/'o-je) the branch of medicine dealing with morphological and other aspects of disease of the nervous system.

neuropathy (nu-'rop/'ah-the) a general term denoting functional disturbances and/or pathological changes in the peripheral nervous system. The etiology may be known (e.g., *arsenical n.*, *diabetic n.*, *ischemic n.*, *traumatic n.*), or unknown. *Encephalopathy* and *myelopathy* are corresponding terms relating to involvement of the brain and spinal cord, respectively. The term is also used to designate noninflammatory lesions in the peripheral nervous system, in contrast to inflammatory lesions (neuritis).

alcoholic n., neuropathy due to thiamine deficiency in chronic alcoholism; called *polyneuritis potatorum*. **ascending n.**, that which progresses from the feet upwards to affect the thigh, hip, trunk, etc. **descending n.**, that which starts proximally (shoulder, hip) and spreads distally toward the limb extremities (hands, feet). **diabetic n.**, a chronic, symmetrical sensory polynuropathy affecting first the nerves of the lower limbs and often affecting autonomic nerves; pathologically, there is segmental demyelination of the peripheral nerves. An uncommon, acute form is marked by severe pain, weakness, and wasting of proximal and distal muscles, peripheral sensory impairment, and loss of tendon reflexes. With autonomic involvement there may be orthostatic hypotension, nocturnal diarrhea, retention of urine, impotence, and small diameter of the pupils with sluggish reaction to light. **entrapment n.**, any of a group of neuropathies, including the carpal tunnel syndrome, tarsal tunnel syndrome, and meralgia paresthetica, in which a peripheral nerve is injured by compression in its course through a fibrous or osseofibrous tunnel or at a point where it abruptly changes its course through deep fascia over a fibrous or muscular band. **hereditary sensory radicular n.**, a dominantly inherited disorder characterized by signs of radicular sensory loss in both the upper and lower extremities; shooting pains; chronic, indolent, trophic ulceration of the feet; and sometimes deafness. The pathologic findings are primary degeneration of the dorsal root ganglia together with evidence of degeneration of the olivary nuclei, optic nerves, and cerebellum. **periaxial n.**, segmental (demyelination) n. **progressive hypertrophic interstitial n.**, a condition characterized by hyperplasia of the interstitial connective tissue, causing thickening of peripheral nerve trunks and posterior roots, and by sclerosis of the posterior columns of the spinal cord. It is a slowly progressive familial disease beginning in early life, marked by atrophy of distal parts of the legs, and by diminution of tendon reflexes and of sensation. Called also *Dejerine-Sottas disease* or *atrophy*, and *interstitial hypertrophic neuritis*. **segmental (demyelination) n.**, neuropathy in which there is loss of myelin segments; called also *periaxial n.* **serum n.**, a neurologic disorder, usually involving the cervical nerves or brachial plexus, occurring two to eight days after the injection of foreign protein, as in immunization or serotherapy for tetanus, diphtheria, or scarlet fever, and characterized by local pain followed by sensory disturbances and paralysis. Called also *serum neuritis*.

neuropeptide (nu'ro-pep'tid) any of the molecules composed of short chains of amino acids (endorphins, enkephalins, vasopressin, etc.) found in brain tissue, often localized in axon terminals at synapses; they are classified as putative neurotransmitters, although some are also hormones.

neurophage (nu'ro-fāj) neuronophagocytosis.

neuropharmacological (nu'ro-fahr'mah-ko-loj'i-k'l) pertaining to neuropharmacology.

neuropharmacology (nu'ro-fahr'mah-kol'o-je) that branch of pharmacology dealing especially with the action of drugs upon various parts and elements of the nervous system.

neurophilic (nu'ro-fil'ik) neurotropic.

neurophonia (nu'ro-fo'ne-ah) [*neuro-* + Gr. *phōnē* voice + *-ia*] a form of nervous disorder in which the patient utters peculiar cries, sometimes like those of certain animals.

neurophthalmology (nu'rof-thah-mol'o-je) neuro-ophthalmology.

neurophthisis (nu-rof'thī-sis) [*neuro-* + Gr. *phthisis* wasting] wasting of nerve tissue.

neurophysin (nu'ro-fi'sin) any of a group of soluble proteins (molecular weights 9500-10,500) secreted in the hypothalamus that serve as binding ("carrier") proteins for vasopressin and oxytocin and play a role in transport of these hormones in the neurohypophyseal tract and their storage in the posterior pituitary.

neurophysiology (nu'ro-fiz'e-ol'o-je) [*neuro-* + *physiology*] the physiology of the nervous system.

neuropil (nu'ro-pil) [*neuro-* + Gr. *pilos* felt] a dense feltwork of interwoven cytoplasmic processes of nerve cells (dendrites and neurites) and of neuroglial cells in the central nervous system and in some parts of the peripheral nervous system.

neuropile (nu'ro-pil) neuropil.

neuropilem (nu-ro-pi'lem) neuropil.

neuropilasm (nu'ro-plazm) [*neuro-* + Gr. *plasma* something formed] the undifferentiated basophilic protoplasm of a nerve cell.

neuropilasmic (nu'ro-plaz'mik) of or relating to neuropilasm.

neuroplasty (nu'ro-plas'te) [*neuro-* + Gr. *plassein* to form] plastic surgery of a nerve.

neuroplexus (nu'ro-plek'sus) a plexus of nerves.

neuropodia (nu'ro-po'de-ah) plural of *neuropodium*.

neuropodium (nu'ro-po'de-on) neuropodium.

neuropodium (nu'ro-po'de-um), pl. *neuropodia* [*neuro-* + Gr. *pous* foot] a bulbous termination of an axon in one type of synapse.

neuropore (nu'ro-pōr) [*neuro-* + Gr. *poros* pore] the open ante-

rior end (foramen anterius) or the open posterior end (foramen posterius) of the neural tube of the early embryo. These openings gradually close as the tube develops, the timing of each closure being so precise that they are used to define horizons XI and XII. **anterior n.**, the embryonic opening in the anterior portion of the forebrain, which closes at the 20-somite stage, marking the end of Streeter's horizon XI. **posterior n.**, the embryonic opening at the posterior end of the neural tube, which closes by about the 25-somite stage.

neuropotential (nu'ro-po-ten'shal) nerve energy; nerve potential.

neuroprobasia (nu'ro-pro-ba'se-ah) [*neuro-* + Gr. *pro* forward + *basis* walking] advance along the nerves; said of the action of certain viruses.

neuropsychiatrist (nu'ro-si-ki'ah-trist) a physician who specializes in neuropsychiatry.

neuropsychiatry (nu'ro-si-ki'ah-tre) the branch of medicine which includes both neurology and psychiatry.

neuropsychic (nu'ro-si'kik) [*neuro-* + Gr. *psychē* soul] pertaining to the nerve center concerned in mental processes.

neuropsychopathy (nu'ro-si-kop'ah-the) [*neuro-* + Gr. *psychē* soul + *pathos* disease] a disease condition of the nerves and mind.

neuropsychopharmacology (nu'ro-si'ko-fahr'mah-kol'o-je) the science of the effect of drugs in psychiatric disorders.

neuropsychosis (nu'ro-si-ko'sis) [*neuro-* + *psychosis*] (*obs.*) psychosis.

neuroradiology (nu'ro-ra'de-ol'o-je) radiology of the nervous system.

neurorecidive (nu'ro-res'i-dēv) neurorelapse.

neurorecurrence (nu'ro-re-kur'ens) neurorelapse.

neurorelapse (nu'ro-re-laps) a peculiar outburst of neurosyphilis precipitated by insufficient treatment with arsphenamine, and characterized by various nervous symptoms; called also *neurorecidive* and *neurorecurrence*.

neuroretinitis (nu'ro-ret'i-ni'tis) inflammation of the optic nerve and retina.

neuroretinopathy (nu'ro-ret'i-nop'ah-the) [*neuro-* + *retina* + Gr. *pathos* disease] a disease of the optic disk and retina. **hypertensive n.**, swelling of the optic disk and formation of serous and fibrinous precipitates in the retina, occurring in severe hypertension.

neuroroentgenography (nu'ro-rent'gen-og'rah-fe) neuroradiology.

neurorrhaphy (nu-ror'ah-fe) [*neuro-* + Gr. *rhaphe* stitch] the suturing of a cut nerve.

Neurorrhyches hydrophobiae (nu'ro-rik'tēz hi'dro-fo'be-e) Negri bodies.

neurosarcokleisis (nu'ro-sar'ko-kli'sis) [*neuro-* + Gr. *sarx* flesh + *kleisis* closure] an operation performed for neuralgia, done by relieving pressure on the affected nerve by partial resection of the bony canal through which it passes, and transplanting the nerve among soft tissues.

neurosarcoma (nu'ro-sar-ko'mah) a sarcoma with neuromatous elements.

neuroscience (nu'ro-si'ens) any of the branches of science dealing with the embryology, anatomy, physiology, biochemistry, pharmacology, etc., of the nervous system.

neuroscientist (nu'ro-si'en-tist) an expert in any of the branches of the neurosciences.

neuro sclerosis (nu'ro-skle-ro'sis) [*neuro-* + Gr. *sklēros* hard] the hardening of the substance of a nerve or nerve center.

neurosecretion (nu'ro-se-kre'shun) [*neuro-* + *secretion*] 1. the secretory activities of nerve cells, as the secretion of releasing hormones, vasopressin, neurotransmitters, etc. 2. the product of such activities; a neurosecretory substance.

neurosecretory (nu'ro-se-kre'to-re) [*neuro-* + *secretory*] pertaining to neurosecretion.

neurosegmental (nu'ro-seg-men'tal) [*neuro-* + *segmenta*] of or pertaining to a pair of spinal dorsal and ventral roots or to the area which they supply.

neurosensory (nu'ro-sen'so-re) pertaining to a sensory nerve.

neuroses (nu-ro'sēz) plural of *neurosis*.

neurosis (nu-ro'sis), pl. *neuro'ses* [*neur-* + *-osis*] an emotional disorder due to unresolved conflicts, anxiety being its chief characteristic. The anxiety may be expressed directly or indirectly, as by conversion, displacement, etc. In contrast to the psychoses, the neuroses do not involve gross distortions of external reality or disorganization of personality. Called also *psychoneurosis*. **accident n.**, a neurosis with hysterical symptoms caused by accident or injury. **anxiety n.**, neurosis characterized by morbid and unjustified dread, sometimes extending to panic and frequently associated with somatic symptoms; it occurs without apparent external cause. Called also *anxiety reaction*. **association n.** (*obs.*), a condition in which an abnormal mental experience tends to be reproduced, with all its original mental and physical phenomena, when an idea related to the original experi-

- ence is brought into the mind. **cardiac n.**, neurocirculatory asthenia. **character n.**, a neurosis in which certain personality traits have become exaggerated or overdeveloped, but the behavior is socially acceptable and may not be easily recognized as symptomatic. **combat n.**, a neurosis resulting from battle experiences and conditions of military life; formerly called *combat fatigue*. **compensation n.**, the neurotic phenomena developing after an accident in persons who are insured or who believe that by being ill they may increase their chances of receiving compensation. **compulsion n.**, a neurosis marked by an imperative impulse toward some absurd act or speech. **conversion n.**, see under *reaction*. **craft n.**, occupation n. **depersonalization n.**, a syndrome characterized by a feeling of unreality and of estrangement from the self, one's body, or one's surroundings; it differs from the process of *depersonalization*, which may be part of another mental disorder or a manifestation of normal anxiety. Called also *depersonalization syndrome*. **depressive n.**, a neurosis characterized by an excessive reaction of depression due to an internal conflict or to an identifiable event. **expectation n.**, a neurotic condition in which the expectation of an occurrence induces mental tension, etc. **experimental n.**, a neurosis produced by deliberate exposure to biological or psychologic stress. **fatigue n.**, a neurosis due to nervous fatigue, as neurasthenia or psychasthenia. **fixation n.**, a neurosis based on fixation of the personality at a stage short of complete maturity, a psychoanalytic concept. **gastric n.**, a disorder of gastric digestion based on disturbance of the nervous system. **hypochondriacal n.**, a neurosis characterized by persistent preoccupation with the body and fear of presumed diseases of various organs. **hysterical n.**, a neurosis characterized by sudden involuntary psychogenic loss or disorder of function in response to emotional stress, occurring in two types: a *conversion type*, which is manifested by disorders of the special senses or the voluntary nervous system and produces such symptoms as blindness, deafness, anesthesia, paresthesia, paralysis, and impaired muscular coordination, and a *dissociative type*, which is manifested by alterations in the state of consciousness or in identity and produces such symptoms as amnesia, somnambulism, fugue, and multiple personality. **intestinal n.**, intestinal indigestion due to disturbance of innervation or of psychic control. **neurasthenic n.**, a neurosis characterized by chronic weakness, easy fatigability, and sometimes exhaustion; believed by some to be one of the psychophysiologic, or psychosomatic, disorders. Called also *neurasthenia*, *psychophysiologic asthenic reaction*, and *psychophysiologic nervous system reaction*. **obsessional n.**, a neurosis marked by obsessions which dominate the conduct of the patient. **obsessive-compulsive n.**, a neurosis marked by the persistent intrusion of unwanted and repetitive thoughts or urges, compelling the patient to perform rituals such as handwashing. **occupational n.**, a neurosis due to the patient's employment. **pension n.**, compensation n. **phobic n.**, a neurosis characterized by intense fear, usually leading to avoidance, of an object or situation that the individual consciously recognizes as harmless. **professional n.**, occupational n. **rectal n.**, a rectal disorder due to disturbance of innervation or of psychic control. **regression n.**, fixation n. **transference n.**, hysteria and compulsion neurosis. **traumatic n.**, one which results from an injury. **true n.**, in Freudian theory, a neurosis resulting from present disruption of sexual activity; the true neuroses include neurasthenia and anxiety neurosis and are distinguished theoretically from the psychoneuroses, which are held to be derived from past (infancy and childhood) experiences. **vegetative n.**, acrodynia. **war n.**, a term referring to a number of conditions, chiefly hysterical conversion phenomena, seen in soldiers.
- neuroskeletal** (nu'ro-skel'ē-tal) pertaining to the nervous tissues and the skeletal muscular tissue.
- neuroskeleton** (nu'ro-skel'ē-ton) [*neuro-* + Gr. *skeleton* skeleton] endoskeleton.
- neurosoma** (nu'ro-sōm) [*neuro-* + Gr. *sōma* body] 1. the body of a nerve cell. 2. any of a set of minute particles in the ground substance of the protoplasm of the neurons.
- neurospasm** (nu'ro-spazm) [*neuro-* + Gr. *spasmos* spasm] the nervous twitching of a muscle.
- neurosplanchic** (nu'ro-splangk'nik) pertaining to the cerebrospinal and sympathetic nervous systems; neurovisceral.
- neurospingioma** (nu'ro-spon'je-o'mah) glioma.
- neurospangium** (nu'ro-spon'je-um) [*neuro-* + Gr. *spongos* sponge] 1. the fibrillar component of neurons. 2. a meshwork of nerve fibers, especially the inner reticular layer of the retina.
- Neurospora** (nu-ro'spo-rah) a genus of ascomycetous fungi (family Sordariaceae, order Sphaeriales) comprising the bread molds, which are capable of converting tryptophan to nicotinic acid, and are extensively used in genetic and enzyme research.
- neurostatus** (nu'ro-sta'tus) the state or condition of neural symptoms in a case history.
- neurosthenia** (nu'ro-sthe'ne-ah) [*neuro-* + Gr. *sthenos* strength + *-ia*] great nervous power and excitement; cf. *neurasthenia*.
- neurosurgeon** (nu'ro-sur'jun) a physician who specializes in neurosurgery.
- neurosurgery** (nu'ro-sur'jer-e) surgery of the nervous system.
- functional n.**, that designed (a) to restore normal conductivity in malfunctioning nerve fibers or to improve blood flow in nerve tissue, or (b) to alleviate mental illness.
- neurosuture** (nu'ro-su'tūr) neurorrhaphy.
- neurosyphilis** (nu'ro-sif'i-lis) syphilis of the central nervous system. **ectodermogenic n.**, neurosyphilis affecting the substance of the brain, cord, or nerves. **meningeal n.**, neurosyphilis affecting chiefly the meninges. **meningovascular n.**, neurosyphilis in which both the meninges and the vessels of the nervous system are involved. **mesodermogenic n.**, neurosyphilis affecting the meninges, blood vessels, and nerve sheaths. **paretic n.**, dementia paralytica. **tabetic n.**, tabes dorsalis.
- neurotabes** (nu'ro-ta'bēz) [*neuro-* + *tabes*] (obs.) pseudotabes.
- neurotagma** (nu'ro-tag'mah) [*neuro-* + Gr. *tagma* arrangement] a linear arrangement of the structural elements of a nerve cell.
- neurotendinous** (nu'ro-ten'dī-nus) pertaining to both nerve and tendon.
- neurotensin** (nu'ro-ten'sin) a tridecapeptide first isolated from the bovine hypothalamus that induces vasodilatation and hypotension; it is present in the brain tissue of man and is postulated to be a neurotransmitter.
- neuroterminal** (nu'ro-ter'mi-nal) an end organ of a peripheral nerve.
- neurothele** (nu'ro-the'le) [*neuro-* + Gr. *thele* nipple] a sensory papilla of the corium.
- neurotherapeutics** (nu'ro-ther'ah-pu'tiks) neurotherapy.
- neurotherapy** (nu'ro-ther'ah-pe) [*neuro-* + Gr. *therapeia* treatment] 1. the treatment of nervous disorders. 2. a term proposed for psychotherapy on the ground that the basis of such treatment is the employment of all sources of nervous activity.
- neurotic** (nu-rot'ik) 1. pertaining to or affected with a neurosis. 2. pertaining to the nerves. 3. a nervous person in whom emotions predominate over reason.
- neurotica** (nu-rot'ī-kah) functional nervous disorders.
- neuroticism** (nu-rot'ī-sizm) a state of perverted or excessive nervous action.
- neurotogenic** (nu-rot'ī-jen'ik) producing a neurosis.
- neurotization** (nu'rot-i-zā'shun) 1. the regeneration of a nerve after its division. 2. the operation of implanting a nerve into a paralyzed muscle.
- neurotmesis** (nu'rot-me'sis) [*neuro-* + Gr. *tmēsis* cutting apart] partial or complete severance of a nerve, with disruption of the axon and its myelin sheath and the connective tissue elements; regeneration does not occur. Cf. *axonotmesis* and *neurapraxia*.
- neurotology** (nu'ro-tol'o-je) neuro-ology.
- neurotome** (nu'ro-tōm) [*neuro-* + Gr. *tomē* a cut] 1. a needle-like knife for dissecting the nerves. 2. neuromere.
- neurotomography** (nu'ro-to-mog'rah-fe) tomography of the central nervous system.
- neurotomy** (nu-rot'o-me) [*neuro-* + Gr. *temnein* to cut] 1. the dissection or anatomy of the nerves. 2. the surgical cutting of a nerve. **retrogasserian n.**, see under *rhizotomy*.
- neurotonia** (nu'ro-to'ne-ah) instability of tonus of the vegetative nervous system.
- neurotonic** (nu'ro-ton'ik) [*neuro-* + *tonic*] having a tonic effect upon the nerves.
- neurotonometer** (nu'ro-to-nom'ē-ter) an apparatus for measuring minute differences in skin tonus.
- neurotony** (nu-rot'o-ne) [*neuro-* + Gr. *teinein* to stretch] the stretching of a nerve, chiefly to relieve pain; called also *nerve stretching*.
- neurotoxia** (nu'ro-tok'se-ah) a toxic condition of the nervous system; neurasthenia regarded as an autointoxication.
- neurotoxic** (nu'ro-tok'sik) poisonous or destructive to nerve tissue.
- neurotoxicity** (nu'ro-tok-sis'i-te) the quality of exerting a destructive or poisonous effect upon nerve tissue.
- neurotoxin** (nu'ro-tok'sin) a substance that is poisonous or destructive to nerve tissue, especially an exotoxin which is characterized by a marked affinity for nerve tissue and which produces a fatty degeneration in the myelin sheath of peripheral nerves, in the white substance of the brain and spinal cord, and in certain other tissues, such as heart muscle.
- neurotransducer** (nu'ro-trans-du'ser) a neuron that synthesizes and releases hormones which serve as the functional link between the nervous system and the pituitary gland.
- neurotransmitter** (nu'ro-trans-mit'er) a substance (norepinephrine, acetylcholine, dopamine, etc.) that is released from the axon terminal of a presynaptic neuron on excitation, and that travels across the synaptic cleft to either excite or inhibit the target cell. Called also *transmitter substance*. **false n.**, an amine, e.g., octopamine, that can be stored in and released from presynaptic vesicles but that has little effect on postsynaptic receptors.

neurotrauma (nu''ro-traw'mah) [*neuro-* + *trauma*] mechanical injury of a nerve.

neutrophasthenia (nu''ro-tro'fas-the'ne-ah) [*neuro-* + Gr. *trophē* nutrition + *astheneia* weakness] defective nutrition of the nervous system.

neutrophilic (nu''ro-trof'ik) pertaining to neurotrophy.

neurotrophy (nu-rot'ro-fe) [*neuro-* + Gr. *trophē* nutrition] the nutrition and maintenance of tissues as regulated by nervous influence.

neurotropic (nu''ro-trop'ik) having a selective affinity for nervous tissue, or exerting its principal effect on the nervous system; polioclastic; polioencephalotropic.

neurotropism (nu-rot'ro-pizm) [*neuro-* + Gr. *tropē* a turn, turning] 1. the quality of having a special affinity for nervous tissue. 2. the alleged tendency of regenerating nerve fibers to grow toward specific portions of the periphery.

neurotrophy (nu-rot'ro-pe) neurotropism.

neutrotrosia (nu''ro-tro'sis) [*neuro-* + Gr. *trōsis* wound] neurotrauma.

neurotubule (nu''ro-too'būl) [*neuro-* + *tubule*] any of the long, straight, parallel tubules within neurons, which along with the neurofilaments, form neurofibrils; they seem to correspond to the microtubules occurring in many cells outside the nervous system.

neurovaccine (nu''ro-vak'sin) vaccine virus prepared by growing the virus in the brain of a rabbit.

neurovaricosis (nu''ro-var'f'i-ko'sis) [*neuro-* + *varicose* + *-osis*] a varicose state of the fibers of a nerve.

neurovariola (nu''ro-vah-ri'o-lah) neurovaccine.

neurovascular (nu''ro-vas'ku-lar) pertaining to both nervous and vascular elements; pertaining to the nerves that control the caliber of blood vessels.

neurovegetative (nu''ro-vej'ē-ta'tiv) pertaining to the vegetative (autonomic) nervous system.

neurovirulence (nu''ro-vir'u-lens) the competence of an infectious agent to produce pathologic effects on the nervous system.

neurovirulent (nu''ro-vir'u-lent) capable of producing pathologic effects on the nervous system.

neurovirus (nu''ro-vi'rus) a vaccine virus which has been modified by passing into nervous tissue.

neurovisceral (nu''ro-vis'er-al) neurosplanchnic.

neurula (nu''roo-lah) [*neuro-* + dim. *-ula*] the early embryo during the development of the neural tube from the neural plate, marking the first appearance of the nervous system; the next stage after the gastrula, and occurring 19 to 26 days after fertilization.

neurulation (nu''roo-la'shun) formation, in the early embryo, of the neural plate, followed by its closure with development of the neural tube.

neururgic (nu-rer'jik) [*neuro-* + Gr. *ergon* work] pertaining to nerve action.

neurypnology (nu''rip-nol'o-je) neurohypnology.

Neusser's granules (noi'serz) [Edmund von Neusser, Austrian physician, 1852-1912] see under *granule*.

neutral (nu'tral) [L. *neutalis*; *neuter*, neither] in chemistry, neither acid nor basic.

neutralism (nu'tral-izm) the absence of interaction between coexisting organisms of different species.

neutrality (nu-tral'i-te) the state of being neutral.

neutralize (nu'tral-iz) to render neutral.

neutramycin (nu-trah-mi'sin) an antibacterial substance produced by *Streptomyces rimosus*.

Neutrapen (nu'trah-pen) trademark for a lyophilized preparation of penicillinase.

Neutra-Phos-K (nu'trah-fos'ka) trademark for a preparation of potassium phosphate.

neutretto (nu-tret'o) a particle similar in mass to a barytron but having no electrical charge.

neutrino (nu-tre'no) an elementary (subatomic) particle that has no electric charge and no rest mass, and that very rarely reacts with matter; it is a product of beta decay.

neuroclulsion (nu'trō-kloo'zhun) malocclusion characterized by irregularities of individual teeth, but with normal mesiodistal or normal anteroposterior relation of the mandibular to the maxillary dental arch. Generally regarded as identical with class I in Angle's classification of malocclusion.

neutrocyte (nu'tro-sit) a neutrophilic leukocyte; see *neutrophil*, def. 1.

neutrocytopenia (nu'tro-si'to-pe'ne-ah) neutropenia.

neutrocytosis (nu'tro-si-to'sis) neutrophilia.

neutroflavine (nu'tro-fla'vin) acriflavine.

neutron (nu'tron) an electrically neutral or uncharged particle of matter existing along with protons in the atoms of all elements except the mass 1 isotope of hydrogen. **epithermal n.**, a neutron having an energy level of a few hundredths electron volt to 100 electron volts. **fast n.**, a neutron having an energy level exceeding 10⁵ electron volt. **intermediate n.**, a neutron hav-

ing an energy level of 100 to 100,000 electron volts. **slow n.**, 1. thermal n. 2. any neutron having an energy level up to 100 electron volts. **thermal n.**, a neutron having an energy level of about 0.025 electron volt; called also *slow n.*

neutropenia (nu'tro-pe'ne-ah) [*neutrophil* + Gr. *penia* poverty] a decrease in the number of neutrophilic leukocytes in the blood; see *agranulocytosis*. **chronic benign n. of childhood**, a condition observed in children in which granulocytopenia and, often, recurrent infections may be present for a considerable time, with subsequent spontaneous remission. **chronic hypoplastic n.**, a syndrome of extreme chronicity, repeated infections of skin and oral cavity, moderate splenomegaly, and bone marrow markedly deficient in granulocyte precursors. **congenital n.**, a condition occurring in infants, characterized by absence of neutrophils from the peripheral blood; called also *congenital aleukia* and *congenital leukopenia*. **cyclic n.**, periodic n. **familial benign chronic n.**, a familial type of peripheral neutropenia, probably transmitted by an autosomal dominant gene. **hypersplenic n.**, primary splenic n. **idiopathic n.**, **malignant n.**, **agranulocytosis**. **neonatal n.**, **transitory**, a short-lived neutropenia, observed in the newborn, which may be of the isoimmune type. **periodic n.**, a chronic form of neutropenia characterized by its regular, periodic episodic recurrences, association with malaise, fever, stomatitis, and various types of infections. **peripheral n.**, decrease in the number of neutrophils in the circulating blood. **primary splenic n.**, a syndrome characterized by splenomegaly, profound leukopenia and neutropenia, susceptibility to infection, occasionally anemia and thrombocytopenia, and hypercellular bone marrow.

neutrophil (nu'tro-fil) [L. *neuter* neither + Gr. *philein* to love] 1. a granular leukocyte having a nucleus with three to five lobes connected by slender threads of chromatin, and cytoplasm containing fine inconspicuous granules; neutrophils have the properties of chemotaxis, adherence to immune complexes, and phagocytosis; called also *polymorphonuclear*, *polynuclear*, or *neutrophilic leukocytes*. Their counterparts in nonhuman mammals are heterophils. 2. any cell, structure, or histologic element readily stainable by neutral dyes. **filamented n.**, a neutrophil having two or more lobes connected by a filament of chromatin. **giant n.**, **macrophocyte**. **juvenile n.**, a metamyelocyte. **nonfilamented n.**, a neutrophil whose lobes are connected by thick strands of chromatin. **rod n.**, **stab n.**, a neutrophil whose nucleus is not divided into segments.

neutrophilia (nu'tro-fil'e-ah) increase in the number of neutrophils in the blood; it is the most common form of leukocytosis and may result from many causes, among them acute infections, intoxications, hemorrhage, and rapidly growing malignant neoplasms.

neutrophilic (nu'tro-fil'ik) 1. stainable by neutral dyes. 2. neither antrophilic nor zoophilous; said of certain mosquitoes.

neutropism (nu'tro-pizm) neurotropism.

neutrotaxis (nu'tro-tak'sis) [*neutrophil* + Gr. *taxis* arrangement] the attractive or repellent influence exerted by neutrophilic leukocytes.

nevi (ne'vi) [L.] plural of *nevus*.

nevocarcinoma (ne'vo-kar'si-no'mah) malignant melanoma.

nevocytic (ne-vo-sit'ik) pertaining to or composed of nevus cells.

nevroid (ne'void) resembling a nevus.

nevolipoma (ne'vo-li-po'mah) a nevus containing a large amount of fibrofatty tissue.

nevoxanthoendotherlioma (ne'vo-zan'tho-en'do-the'le-o'-mah) juvenile xanthogranuloma.

Nevskia (nev'ske-ah) [*Neva*, a river in Russia] a genus of microorganisms of the family Caulobacteraceae, suborder Pseudomonadineae, order Pseudomonadales, occurring as stalked, rod-shaped cells, the long axis of the cell being at right angles to the axis of the stalk. The type species is *N. ramo'sa*.

nevus (ne'vus), pl. *ne'vi* [L. *naevus*] a circumscribed stable malformation of the skin and occasionally of the oral mucosa, which is not due to external causes and therefore presumed to be of hereditary origin. The excess (or deficiency) of tissue may involve epidermal, connective tissue, adnexal, nervous, or vascular elements. **amelanotic n.**, a nevocytic nevus which contains no pigment. **n. ane'micus**, a nevus characterized by the presence of circumscribed pale macules, which are often grouped; the condition seems to be a functional incapacity of the blood vessels to dilate. **n. arachnoi'deus**, **n. araneo'sus**, **n. araneus**, vascular spider. **bathing trunk n.**, a giant, hairy, darkly pigmented, usually congenital, nevocytic nevus affecting the lower portion of the body, or the area usually covered by bathing trunks. Its major importance is cosmetic, but it is also potentially a precursor of malignant melanoma. **Becker's n.**, a nevus composed of loosely clustered tan macules, usually occupying a single upper thoracic dermatome, most frequently appearing in late adolescence, and soon developing dark terminal hairs 2 or 3 cm. long; sometimes called *pigmented hairy epidermal nevus* or *nevus spilus tardus*. **blue n.**, a benign, slowly growing, light to dark blue nodular lesion, usually between 2 and 7 mm. in

diameter, composed of closely grouped melanocytes and melanophages situated in the mid-dermis. Called also *Jadassohn-Tièche n.* and *dermal melanocytoma*. **blue rubber bleb n.**, a hereditary disorder, transmitted as an autosomal dominant trait, characterized by multiple bluish cutaneous hemangiomas with soft raised centers somewhat resembling nipples, frequently associated with hemangiomas scattered throughout the gastrointestinal tract. **cellular n.**, nevocytic nevus. **cellular blue n.**, a blue to blue-black nodule or tumor, usually present at birth in the region of the buttocks or sacrum, which differs from the blue nevus of Jadassohn-Tièche only in its larger size and its occasional, though infrequent, malignant transformation and metastasis. Called also *dermal melanocytoma*. **n. comedon/icus**, a rare epidermal nevus marked by one or more patches 2 to 5 cm. or more in diameter, in which there is a collection of large comedones or comedo-like lesions; these nevi usually occur unilaterally on the trunk in a linear manner and are frequently associated with ichthyosis hystrix. **compound n.**, a usually raised, flesh-colored to brown, nevocytic nevus, which may be papillomatous and may contain hairs; it is composed of both fully formed nevus-cell nests (theques) in the dermis and newly forming nevus cell nests in the epidermis, or of cells in transition from the lower epidermis down to the dermis (a process known as *abtropfung*). **connective tissue n.**, nevi occurring in the dermal connective tissue and characterized clinically by nodules, papules, or plaques, or by varying combinations of such lesions. Histological features include inconstant focal or diffuse thickening and abnormal staining of collagen fibers, and normal or diminished elastic fibers. Although attempts to differentiate distinct forms on the basis of clinical and histological features have resulted in terms such as juvenile elastoma, shagreen skin, nevus elasticus of Lewandowsky, and nodular connective tissue nevus, the evidence supporting distinct forms is inconclusive. Most connective tissue nevi apparently are isolated developmental anomalies and not of genetic origin. **connective tissue n., nodular**, a connective tissue nevus (q.v.) in which the lesions are smooth skin-colored or yellowish nodules, usually occurring between five and ten years of age, singly or in plaques, on the thighs, lower abdomen, and buttocks, and occasionally on the arms and legs. **n. elas/ticus**, 1. pseudoxanthoma elasticum. 2. connective tissue n. **n. elas/ticus of Lewandowsky**, a connective tissue nevus (q.v.) in which the lesions—patches of smooth ivory- or skin-colored papules—occur most frequently on the trunk, especially on the chest and back, usually with asymmetrical, and sometimes with zoniform or linear, distribution. Most lesions are present from birth or shortly thereafter and show no changes, although some may extend gradually for years. **epidermal nevi, epithelial nevi**, congenital skin tumors which do not contain melanocytes, ordinarily present at birth or appearing in early childhood, and showing some predilection for the flexor surfaces; they vary widely in appearance, size, and distribution, and are commonly hyperkeratotic. The term includes such lesions as nevus unius lateris, ichthyosis hystrix, nevus sebaceus, nevus comedonicus, and nevus syringocystadenomatosus papilliferus. **fatty n.**, n. lipomatosus. **n. flam/meus**, a diffuse, poorly defined area varying from pink to dark bluish red, involving otherwise normal

Nevus flammeus (Homans).

skin; called also *capillary hemangioma*, and *port-wine stain* or *mark*. **n. follicula/ris**, hair follicle n. **n. fuscoceru/leus acromiodeltoi/deus**, n. of Ito. **n. fuscoceru/leus ophthalmomaxilla/ris**, n. of Ota. **giant pigmented n.**, a very large, hairy, nevocytic nevus. **hair follicle n.**, a usually congenital nevus consisting of a nodule with a central crater from which hairs project; called also *n. follicularis*. **hairy n.**, a more or less pigmented nevus of variable size, with hairs growing from its surface. **halo n.**, a pigmented nevus, usually of the compound or intradermal type, surrounded by a concentric ring of depigmentation; called also *leukoderma centrifugum acquisitum*, and *Sutton's disease* or *nevus*. **hepatic n.**, hemorrhagic infarct of the liver. **intradermal n.**, a nevocytic nevus, clinically indistinguishable from a compound nevus, in which the nevus cells occur in nests (theques) in the upper part of the dermis, with no remaining evidence of the proliferative process (abtropfung) by which they originated. **n. of Ito**, a mongolian spot in the distribution of the posterior supraclavicular and lateral cutaneous brachial nerves, over the shoulder, usually on only one side; called also *n. fuscoceruleus acromiodeltoideus*. **Jadassohn-Tièche n.**, blue n. **junction n., junctional n.**, a brownish, smooth, hairless, flat or slightly elevated nevocytic nevus, varying in size from 1 to 8 mm. in diameter, which may occur anywhere on the body. Histologically, there are nests of nevus cells (theques) in the lower epidermis, which contain

melanin, and seem about to "fall off" into the dermis. **linear n.**, an epidermal nevus composed of a collection of papillary elevations, occurring in elongated streaks, and due to hypertrophy of epidermal and, to an extent, dermal elements. **n. lipomato/sus**, one containing much fibro-fatty tissue. **n. lipomato/sus cutane/us superficia/lis**, a nevus composed of masses of fat cells in the dermis, usually on the buttocks or thighs, manifested as yellowish papules, nodules, and plaques. **n. lymphangiecto/des, lymphatic n., n. lymphat/icus**, a skin growth containing lymph and blood elements intermediate in position between hemangioma and lymphangioma; hemolymphangioma. **melanocytic n.**, a usually pigmented nevus composed of melanocytes; it includes *n. spilus*, *Becker's n.*, *n. of Ota*, *n. of Ito*, *blue n.*, *cellular blue n.*, *lentigo*, and *mongolian spot*. **nevocytic n.**, the common mole: a usually more or less hyperpigmented nevus, initially flat but soon becoming elevated, composed of nests of nevus cells (theques), possibly derived from Schwann cells or from melanocytes. Occasionally present at birth, they may arise at any age, but usually in adolescence or early adult life, and are divided, according to their stage of growth, into *junction nevi* (growing into the dermis from the epidermis), *compound nevi* (still growing, but largely static in the dermis), or *intradermal nevi* (no longer growing, but static in the dermis). Called also *cellular nevus* and *nevus-cell nevus*. **nevus-cell n.**, nevocytic nevus. **nonpigmented n.**, amelanotic n. **n. of Ota, Ota's n.**, a mongolian spot involving the conjunctiva and lids, as well as the adjacent facial skin, sclera, ocular muscles, and periosteum, usually on only one side. Rarely, malignant melanoma may occur, usually in the iris. Called also *n. fuscoceruleus ophthalmomaxillaris*. **pigmented n., n. pigmento/sus**, a nevus containing melanin; the term is usually restricted to nevocytic nevi, or moles, but may be applied to other pigmented nevi, e.g., nevus spilus and Becker's nevus. **pigmented hairy epidermal n.**, Becker's n. **pilose n., n. pilo/sus**, hairy n. **sebaceous n., sebaceous n. of Jadassohn**, an epidermal nevus of the scalp or less often the face, which frequently grows larger during puberty or early adult life, and may rarely give rise to a variety of new growths, including basal cell carcinoma. **n. seba/ceus**, sebaceous n. **spider n.**, vascular spider. **n. spi/lus**, a smooth-surfaced, tan to brown, macular, epidermal, melanocytic nevus, which is speckled with smaller, darker macules. **n. spi/lus tar/dus**, Becker's n. **spindle cell n.**, juvenile melanoma. **Spitz n.**, juvenile melanoma. **n. spongio/sus al/bus muc'o/sae**, white sponge n. **stellar n.**, vascular spider. **strawberry n.**, cavernous hemangioma. **Sutton's n., halo n.** **n. syringocystadeno/sus papillif/erus**, an epidermal nevus usually involving the apocrine sweat glands, and with a predilection for the shoulders, axillae, genital and inguinal regions, and scalp; the lesions, occurring in groups, are rose-red papules of firm consistency, with vesicle-like inclusions filled with clear fluid. **n. un/ius lat'eris**, a verrucous epidermal nevus occurring as a linear band, patch, or streak, usually along the margin between two neurotomes, most often between L4 and 5 and S1, 2, and 3. **Unna's n. (obs.)**, n. flammeus. **vascular n., n. vascula/ris**, n. **vasculo/sus**, a reddish swelling or patch on the skin due to hypertrophy of the skin capillaries; it includes nevus flammeus, blue rubber bleb nevus, vascular spider, and cavernous hemangioma. **verrucoid n., n. verruco/sus**, a pinkish, grayish, or brownish, raised nevus, with fine digitate excrescences on its surface. **white sponge n.**, a white spongy nevus of a mucous membrane, inherited as an autosomal dominant trait; called also *n. spongiosus albus mucosae*.

newborn (nu'born) 1. recently born. 2. a recently born infant.

Newcastle disease (nu'kas-el) [*Newcastle*, a seaport on the Tyne River in Northeast England] see under *disease*.

newton (nu'ton) [Sir Isaac Newton, English mathematician, physicist, and astronomer, 1643-1727] the SI unit of force which, when applied in a vacuum to a body having a mass of one kilogram, accelerates it at the rate of one meter per second. Symbol, N.

Newton's law, rings (nu'tonz) [Sir Isaac Newton, English mathematician, physicist, and astronomer, 1643-1727] see under *law* and *ring*.

nexeridine hydrochloride (nek-ser'i-dēn) chemical name: 1-[2-(dimethylamino)-1-methylethyl]-2-phenylcyclohexanol acetate (ester) hydrochloride; an analgesic, C₁₉H₂₅NO₂·HCl.

nexin (neks'in) a substance which serves as a connecting link between the outer pairs of microtubules in cilia and flagella.

nexus (nek'sus), pl. *nex'us* [L. "bond"] 1. a bond, especially one between members of a series or group. 2. gap junction.

NF National Formulary.

N.F.L.P.N. National Federation for Licensed Practical Nurses.

ng nanogram.

n'gana (na-gah'nah) nagana.

NGF nerve growth factor.

NH₃ ammonia.

NH₄Br ammonium bromide.

N.H.C. National Health Council.

NH₄Cl ammonium chloride.

NH₄CNO ammonium cyanate.

(NH₂)₂CO urea.

(NH₄)₂CO₃ ammonium carbonate.

(NH₄)HS ammonium hydrosulfide.

N.H.I. National Health Insurance; National Heart Institute.

N.H.L.I. National Heart and Lung Institute.

N.H.M.R.C. National Health and Medical Research Council.

NH₄NO₃ ammonium nitrate.

NH₄O.CO.NH₂ ammonium carbamate.

N.H.S. National Health Service (British).

(NH₄)₂.SO₄ ammonium sulfate.

NH₂-terminal (ter'min-al) N-terminal.

Ni chemical symbol for *nickel*.

niacin (ni'ah-sin) chemical name: 3-pyridinecarboxylic acid. A water-soluble vitamin of the B complex, C₆H₅NO₂, occurring in various animal and plant tissues, especially liver, yeast, bran, peanuts, lean meats, poultry, and fish, and first prepared by the oxidation of nicotine. It is required by the body for the formation of the coenzymes nicotinamide-adenine dinucleotide (NAD) and nicotinamide-adenine dinucleotide phosphate (NADP), which are important in biochemical oxidations, and it also has a pellagra-curative property and a vasodilating action. The official preparation [USP], occurring as white crystals or crystalline powder, is administered orally and parenterally in the prophylaxis and treatment of pellagra, to improve the peripheral circulation, and to depress the blood cholesterol level. Called also *nicotinic acid*.

niacinamide (ni'ah-sin-am'id) chemical name: 3-pyridinecarboxamide. The amide of niacin, C₆H₆N₂O, which lacks the vasodilating action of the parent compound. The official preparation [USP], occurring as a white, crystalline powder, is administered in the prophylaxis and treatment of pellagra. Called also *nicotinamide*.

NIAID National Institute of Allergy and Infectious Diseases.

nialamide (ni-al'ah-mid) chemical name: 4-pyridinecarboxylic acid 2-[3-oxo-3-[(phenylmethyl)amino]propyl]hydrazide. A monoamine oxidase inhibitor, C₁₆H₁₈N₄O₂, occurring as a white, crystalline powder; it has been used orally as an antidepressant.

NIAMD National Institute of Arthritis and Metabolic Diseases.

Niamid (ni'ah-mid) trademark for a preparation of nialamide.

nibroxane (ni-broks'an) chemical name: 5-bromo-2-methyl-5-nitro-1,3-dioxane; a topical antimicrobial, C₅H₈BrNO₄.

Nicalex (nik'ah-leks) trademark for a preparation of aluminum nicotinate.

Nicander (nik-an'der) (3rd century B.C.) a celebrated Greek physician and poet. Two of his works (on toxicology), the *Theriaca* and the *Alexipharmaca*, have survived. He is said to have been the first writer to describe the use of leeches in medicine.

niccolum (nik'o-lum), gen. *nic'coli* [L.] nickel.

nicergoline (ni-ser'go-lēn) chemical name: 10-methoxy-1,6-dimethylergoline-8β-methanol 5-bromo-3-pyridinecarboxylate (ester); a vasodilator, C₂₄H₂₈BrN₃O₃.

niche (nich) a defect in an otherwise even surface, especially a depression or recess in the wall of a hollow organ, as seen in the roentgenogram, or such a depression in an organ visible to the naked eye. **Barclay's n.**, a deformity of the cap in the roentgenogram in duodenal ulcer consisting of a small projection.

ecologic n., the place of an organism within its community or ecosystem.

enamel n., either of two depressions between the dental lamina and the developing tooth germ, one pointing distally (*distal enamel n.*) and the other mesially (*mesial enamel n.*).

Haudek's n., see under *sign*. **n. of round window**, fossula fenestrae cochleae.

NICHHD National Institute of Child Health and Human Development.

Nichrome (nik'krōm) trademark for an alloy of nickel and chromium, having a melting point between that of brass and that of iron, and being very durable because of its resistance to oxidation under heat; widely used for laboratory equipment.

nickel (nik'el) [L. *niccolum*] a silver-white metallic element; symbol, Ni; specific gravity, 8.9; atomic number, 28; atomic weight, 58.71. **n. carbonyl**, a volatile liquid, Ni(CO)₄, used in industry, which may produce serious pulmonary edema and dyspnea.

nicking (nik'ing) localized constrictions in the retinal blood vessels seen in arterial hypertension.

Nicklès's test (ne-klēz') [François Joseph J. Nicklès, a French chemist, 1821–1869] see under *tests*.

niclosamide (ni-klo'sah-mid) chemical name: 5-chloro-N-(2-chloro-4-nitrophenyl)-2-hydroxybenzamide. An anthelmintic, C₁₃H₈Cl₂N₂O₄, occurring as a pale yellow, crystalline powder, effective against the tapeworms *Diphyllobothrium latum*, *Hymenolepis nana*, *Taenia saginata*, and the adults of *T. solium*; administered orally.

Nicol prism (nik'ol) [William Nicol, Scottish physicist, 1768–1851] see under *prism*.

Nicolas-Favre disease (ne-ko-lah fav'r) [Joseph Nicolas, born 1869; M. Favre, French physicians] lymphogranuloma venereum.

Nicolle (ne-kol') see *Nicollella*.

Nicollella (ni-ko-lel'ah) [Charles Jules Henri Nicolle, French physician, 1866–1936, noted for his discovery of the role of body lice in the transmission of typhus fever; winner of the Nobel prize for medicine in 1928] a genus of holotrichous ciliate protozoa found in the intestinal tract of the gundi (*Ctenodactylus gundi*), a northern African rodent.

Niconyl (ni'ko-nil) trademark for a preparation of isoniazid.

Nicotiana (nik'o-she-a'nah) [Jean Nicot de Villemain, 1530–1600, who introduced tobacco chewing to Catherine de Medici] a genus of solanaceous annual plants, native to tropical America, from which tobacco is derived, mainly from *N. tabacum* L. and its varieties.

nicotinamide (nik'o-tin'ah-mid) niacinamide. **n.-adenine dinucleotide (NAD)**, the dinucleotide of nicotinamide and of adenine, a coenzyme found widely in nature and involved in numerous enzymatic reactions, in which it serves as an electron carrier by being alternately oxidized (NAD⁺) and reduced (NADH). The products of hydrolysis are 1 molecule of adenine, 1 of nicotinamide, 2 of d-ribose, and 2 of phosphoric acid. Called also *codehydrogenase I*, *coenzyme I* (CoI), *dihydrocoenzyme I*, and formerly *diphosphopyridine nucleotide (DPN)*. **n.-adenine dinucleotide phosphate (NADP)**, a coenzyme required for a limited number of reactions, and similar to nicotinamide-adenine dinucleotide, except for the inclusion of 3 phosphate units. It serves as an electron carrier linking catabolic reactions (in the reduced form, NADPH) to biosynthetic (anabolic) reactions, where it gives up an electron (oxidized form, NADP⁺). Called also *coenzyme II*, *codehydrogenase II* (CoII), *triphosphopyridine nucleotide (TPN)*, and *Warburg's coenzyme*.

nicotinamidemia (nik'o-tin-am'i-de'me-ah) the presence of nicotinamide in the blood.

nicotine (nik'o-tēn, nik'o-tin) [L. *nicotiana* tobacco] chemical name: β-pyridyl-α-N-methylpyrrolidine. A very poisonous colorless, soluble fluid alkaloid, C₁₀H₁₄N₂, with a pyridine-like odor and a burning taste, obtained from tobacco or produced synthetically. It is used as an agricultural insecticide and, in veterinary medicine, as an external parasiticide and is used in pharmacological and physiological studies for its neurological effects (see *nicotinic*).

nicotinic (nik'o-tin'ik) denoting the effect of nicotine and other drugs in initially stimulating and subsequently, in high doses, inhibiting neural impulses at autonomic ganglia and the neuromuscular junction.

nicotinism (nik'o-tin-izm') poisoning by nicotine, characterized by stimulation and subsequent depression of the central and autonomic nervous systems, with death due to respiratory paralysis.

nicotinolytic (nik'o-tin-o-lit'ik) [*nicotine* + Gr. *lysis* dissolution] destroying or suppressing the toxic action of nicotine.

β-nicotyrine (nik-o'ti-rin) chemical name: 3-(1-methyl-2-pyr-ryl)pyridine. An alkaloid, C₁₀H₁₀N₂, from tobacco, which occurs as an oily liquid with a characteristic odor, and has insecticidal properties.

nicoumalone (ni-koo'mah-lōn) acenocoumarin.

Nicozide (nik'o-zid) trademark for preparations of isoniazid.

nictation (nik-ta'shun) nictitation.

nictitation (nik'ti-ta'shun) [L. *nictitare* to wink] the act of winking.

nidal (ni'dal) pertaining to a nidus.

nidation (ni-da'shun) [L. *nidus* nest] implantation of the conceptus in the endometrium.

nidi (ni'di) [L.] plural of *nidus*.

NIDR National Institute of Dental Research.

nidus (ni'dus), pl. *ni'di* [L. "nest"] 1. the point of origin or focus of a morbid process. 2. nucleus, def. 2. **n. a'vis**, a depression in the cerebellum between the posterior velum and the uvula, the location of the tonsil of the cerebellum. **n. hiron'dinis**, n. avis.

Niemann's disease (splenomegaly) (ne'man) [Albert Niemann, German pediatrician, 1880–1921] Niemann-Pick disease.

Niewenglowski's ray (nya-ven-glov'ske) [Gaston Henri Niewenglowski, French physicist] see under *ray*.

nifedipine (ni-fed'i-pēn) chemical name: 1,4-dihydro-2,6-dimethyl-4-(2-nitrophenyl)pyridinedicarboxylic acid dimethyl ester. A coronary vasodilator, C₁₇H₁₈N₂O₆, used in the treatment of coronary insufficiency and angina of effort.

nifungin (ni-fun'jin) an antifungal polypeptide derived from *Aspergillus giganteus*.

nifuradene (ni-für'ah-dēn) chemical name: 1-[[[5-nitro-2-furanyl)methylene]amino]-2-imidazolidinone; an antibacterial, C₈H₈N₄O₄.

nifuraldezone (ni-fūr-al'de-zōn) chemical name: 5-nitro-2-furaldehyde semioxamazone; an antibacterial, $C_7H_6N_4$.

nifuratel (ni-fūr'ah-tel) chemical name: 5-[(methylthio)methyl]-3-[[[5-nitro-2-furanyl)methylene]amino]-2-oxazolidinone; an antibacterial, antifungal, and antitrichomonal, $C_{10}H_{11}N_3O_5S$.

nifuratrone (ni-fūr'ah-trōn) chemical name: *N*-(2-hydroxyethyl)- α -(5-nitro-2-furyl)nitron; an antibacterial, $C_8H_8N_2O_5$.

nifurdazil (ni-fūr'dah-zil) chemical name: 1-(2-hydroxyethyl)-3-[[[5-nitro-2-furanyl)methylene]amino]-2-imidazolidinone; an antibacterial, $C_{10}H_{12}N_4O_5$.

nifurimide (ni-fūr'i-mīd) chemical name: ($\pm$)-4-methyl-1-[[[5-nitro-2-furanyl)methylene]amino]-2-imidazolidinone; an antibacterial, $C_9H_{10}N_4O_4$.

nifurmerone (ni-fūr'mer-ōn) chemical name: 2-chloro-1-(5-nitro-2-furanyl)ethanone; an antifungal agent, $C_6H_6ClNO_4$.

nifuroxime (ni-fūr-ok'sēm) chemical name: 5-nitro-2-furancarboxaldehyde oxime. A fungicide, $C_{13}H_8Cl_2N_2O_4$, occurring as a colorless to pale yellow, somewhat viscous liquid; used in combination with furazolidone (an antibacterial and antiprotozoal agent) in the treatment of bacterial, cardial, and trichomonal vaginitis due to susceptible organisms, administered intravaginally.

nifurpirinol (ni-fūr-pēr'i-nōl) chemical name: 6-[2-(5-nitro-2-furanyl)ethenyl]-2-pyridinemethanol; an antibacterial, $C_{12}H_{10}N_2O_4$.

nifurquinazol (ni-fūr-kwin'ah-zōl) chemical name: 2,2'[[2-(5-nitro-2-furanyl)-4-quinazolinyl]imino]bisethanol; an antibacterial, $C_{16}H_{16}N_4O_5$.

nifursemizone (ni-fūr-sem'i-zōn) chemical name: 1-ethyl-2-[[2-nitro-2-furanyl)methylene]hydrazinecarboxamide. An antiprotozoal, $C_8H_{10}N_4O_4$, effective against *Histomonas*; used in poultry.

nifursol (ni-fūr-sōl) chemical name: 2-hydroxy-3,5-dinitrobenzoic acid [[5-nitro-2-furanyl)methylene]hydrazide. An antiprotozoal, $C_{12}H_7N_5O_6$, effective against *Histomonas*; used in poultry.

nightmare (nīt'mār) a terrifying dream; called also *oneirodynia*.

nightshade (nīt'shād) a plant of the genus *Solanum*. **deadly n.**, belladonna leaf.

NIH National Institute of General Medical Sciences.

nigra (ni'grah) [L. "black"] the substantia nigra.

nigral (ni'gral) pertaining to the substantia nigra.

nigricans (ni'grī-kans) [L.] blackish.

nigrities (ni-grīsh'e-ēz) [L.] blackness. **n. lin'guae**, black tongue.

nigrosin (ni'gro-sin) an aniline dye, $C_{16}H_{11}N_3$, having a special affinity for ganglion cells, used to stain tissues from the central nervous system for study under the microscope.

nigrostriatal (ni'gro-stri-a'tal) projecting from the substantia nigra to the corpus striatum; said of a bundle of nerve fibers.

NIH National Institutes of Health.

nihilism (ni'hil-izm) [L. *nihil* nothing + *-ism*] a form of delusion in which, to the patient, everything no longer exists. **therapeutic n.**, skepticism regarding the therapeutic value of drugs.

nikethamide (ni-keth'ah-mīd) chemical name: *N,N*-diethyl-3-pyridinecarboxamide. A central and respiratory stimulant, $C_{10}H_{14}N_2O$, occurring as a colorless to pale yellow, somewhat viscous liquid; used to counteract respiratory and central nervous system depression and circulatory failure, administered intramuscularly and intravenously.

Nikiforoff's method (ne'ke-for'ofs) [Mikhail *Nikiforoff*, Russian dermatologist, 1858–1915] see under *method*.

Nikolsky's sign (ni-kol'skēz) [Petr Vasilyevich *Nikolsky*, Russian dermatologist, 1858–1940] see under *sign*.

Nilevar (ni'lē-var) trademark for preparations of norethandrolone.

nimazone (nim'ah-zōn) chemical name: 3-(4-chlorophenyl)-4-imino-2-oxo-1-imidazolideneacetonitrile; an anti-inflammatory, $C_{11}H_8ClN_4O$.

Nimeh's method (ne'mez) [William *Nimeh*, Lebanese gastroenterologist, born 1891] see under *method*.

NIMH National Institute of Mental Health.

nimidane (nim'i-dān) chemical name: 4-chloro-*N*-1,3-dithietan-2-ylidene-2-methylbenzeneamine; a veterinary acaricide, $C_9H_8ClNS_2$.

nimiety (ni-mi'ē-te) [L. *nimis* overmuch + *-ety* state or condition of] (obs.) repletion or excess, as that degree of repletion or excess of water which, beyond satiety, elicits aversion to the ingestion of fluids.

NINDB National Institute of Neurological Diseases and Blindness.

Ninhydrin (nin-hi'drin) trademark for a preparation of triketohydrindene hydrate.

niobium (ni-o'be-um) [named for *Niobe*, of Greek mythology, who was turned into stone] the chemical element, atomic number, 41; atomic weight, 92.906; symbol, Nb. It was formerly called *columbium*.

Nionate (ni'o-nāt) trademark for a preparation of ferrous gluconate.

NIOSH National Institute of Occupational Safety and Health.

niperyt (ni'per-it) pentaerythritol tetranitrate.

niphablepsia (nif'ah-blep'se-ah) [Gr. *nipha* snow + *ablepsia* blindness] snow blindness.

niphotyphlosis (nif'o-tif-lo'sis) [Gr. *nipha* snow + *typhlōsis* blindness] snow blindness.

nipple (nip'l) the pigmented projection on the anterior surface of the mammary gland, surrounded by the areola; it gives outlet to milk from the breast. Called also *papilla mammae* [NA], *mamilla*, and *thelium*. Also, any similarly shaped structure.

Nippostrongylus (nip'o-stron'jī-lus) a genus of hookworms of the family Trichostrongylidae. **N. mu'ris**, a species occurring in rats.

Nipride (nip'rid) trademark for a preparation of sodium nitroprusside.

niridazole (ni-rid'ah-zōl) chemical name: 1-(5-nitro-2-thiazolyl)-2-imidazolidinone; an antischistosomal, $C_8H_8N_4O_3S$, occurring as a yellow, crystalline powder; it is also used in the treatment of intestinal and extraintestinal amebiasis and in dracunculiasis, administered orally.

nisbuterol mesylate (nis-bu'tē-rōl) chemical name: ($\pm$)-4-methoxy benzoic acid 2-(acetyloxy)-4-[2-[[1,1-dimethylethyl)amino]-1-hydroxy ethyl]phenyl ester methanesulfonate (salt); a bronchodilator, $C_{22}H_{27}NO_6 \cdot CH_3O_3S$.

Nisentil (ni'sen-til) trademark for a preparation of alphaprodine.

nisin (ni'sin) an antibiotic substance from cultures of lactic acid streptococci, said to be effective against gram-positive organisms, including *Mycobacterium tuberculosis*.

nisobamate (ni-so-bah'māt) chemical name: 2-(hydroxymethyl)-2,3-dimethylpentyl isopropylcarbamate carbamate(ester); a minor tranquilizer, sedative, and hypnotic, $C_{13}H_{26}N_2O_4$.

nisoxetine (ni-soks'ē-tēn) chemical name: ($\pm$)- γ -(2-methoxyphenoxy)-*N*-methylbenzenepropanamine; an antidepressant, $C_{17}H_{21}NO_2$.

Nissl bodies (granules, substance), **degeneration, method of staining** (nis'lz) [Franz *Nissl*, neurologist in Heidelberg, 1860–1919] see under *body*, *degeneration*, and *Table of Stains*.

nisterime acetate (ni-stēr'em) chemical name: 17 β -(acetyloxy)-2 α -chloro-5 α -androstane-3-one 3-[O-(4-nitrophenyl)oxime]; an androgen, $C_{27}H_{35}ClN_2O_5$.

nisus (ni'sus) [L.] an effort, strong tendency, or molimen.

nit (nit) the egg of a louse.

Nitabuch's layer (stria, zone) (ne'tah-books) [Raissa *Nitabuch*, German physician of 19th century] see under *layer*.

nitarsone (ni-tar'sōn) chemical name: (4-nitrophenyl) arsonic acid; an antiprotozoal, $C_6H_6AsNO_5$, effective against *Histomonas*; used in poultry.

nitavirus (ni'tah-vi'rus) [nuclear inclusion type A] a name suggested, but not generally accepted, for herpesviruses that induce formation of single homogeneous eosinophilic inclusion bodies occupying most of the central area of the nucleus of the infected cells, and clearly separated from the marginated chromatin (A-type inclusions).

niter (ni'ter) nitre.

nithiamide (ni-thi'ah-mīd) chemical name: *N*-(5-nitro-2-thiazolyl)acetamide; a veterinary antibiotic, $C_8H_8N_3O_3S$.

niton (ni'ton) radon.

nitramine (ni-tram'in) a nitro derivative of an amine.

nitramisole hydrochloride (ni-tram'i-sōl) chemical name: ($\pm$)-2,3,5,6-tetrahydro-6-(3-nitrophenyl)-imidazo[2,1-*b*]thiazole monohydrochloride; an anthelmintic, $C_{11}H_{11}N_3O_2S \cdot HCl$.

nitratase (ni'trah-tās) [nitrate + *-ase*] a bacterial enzyme catalyzing the reduction of nitrate to nitrite.

nitrate (ni'trāt) [L. *nitratum*] any salt of nitric acid. Organic nitrates are used in the treatment of angina pectoris.

nitrazepam (ni-trah'zē-pam) chemical name: 1,3-dihydro-7-nitro-5-phenyl-2*H*-1,4-benzodiazepin-2-one. One of the benzodiazepine tranquilizers, $C_{15}H_{11}N_3O$, used as an anticonvulsant and hypnotic.

nitre (ni'ter) [L. *nitrum*; Gr. *nitron*] potassium nitrate, or saltpeter. **cubic n.**, sodium nitrate.

nitremia (ni-tre'me-ah) azotemia.

nitric (ni'trik) pertaining to or containing nitrogen, applied especially to compounds containing nitrogen with a higher valence than that contained in the nitrous compounds.

nitridation (ni-trī-da'shun) combination with nitrogen to form a nitride.

nitride (ni'trid) a binary compound of nitrogen with a metal.

nitrification (ni'tri-fi-ka'shun) [nitric acid + L. *facere* to make] the bacterial oxidation of ammonia to nitrate and nitrite in the soil.

nitrifier (ni'trī-fi'er) a nitrifying microorganism.

nitrifying (ni'trī-fi'ing) oxidizing ammonia to nitrite and then to nitrate, the first step being carried out by *Nitrosomonas* and *Nitrosococcus* and the second by *Nitrobacter*.

nitrlase (ni'tril-ās) an enzyme which catalyzes the decomposition of nitrites.

nitrite (ni'trit) an organic compound containing trivalent nitrogen attached to one carbon atom, $\cdot\text{C}\equiv\text{N}$.

nitrite (ni'trit) any salt of nitrous acid. Organic nitrites are used in the treatment of angina pectoris.

nitritoid (ni'tri-toid) resembling a nitrite or the reaction caused by a nitrite.

nitrituria (ni'tri-tū're-ah) [*nitrite* + Gr. *ouron* urine + *-ia*] the presence of nitrites in the urine.

nitro- (ni'tro) a prefix indicating presence of the group $-\text{NO}_2$.

nitro-amine (ni'tro-am'in) nitramine.

nitro-anisol (ni'tro-an'i-sol) a nitro derivative of anisol, $\text{NO}_2\cdot\text{C}_6\text{H}_4\cdot\text{O}\cdot\text{CH}_3$.

Nitrobacter (ni'tro-bak'ter) [*L. nitrum* nitre + *bactrum* rod] a genus of microorganisms of the family Nitrobacteraceae, suborder Pseudomonadineae, order Pseudomonadales, occurring as rod-shaped cells which oxidize nitrites to nitrates. It includes two species, *N. agilis* and *N. winogradskyi*.

Nitrobacteraceae (ni'tro-bak'te-ra'se-e) a family of Schizomycetes (order Pseudomonadales, suborder Pseudomonadineae), occurring as rod-shaped, ellipsoidal, spherical or spirillar cells, deriving energy exclusively from oxidation of ammonia to nitrite, or of nitrite to nitrate; also known informally as the nitrifying bacteria. It includes seven genera, *Nitrobacter*, *Nitrocystis*, *Nitrosococcus*, *Nitrosocystis*, *Nitrosogloea*, *Nitrosomonas*, and *Nitrospira*.

nitrobacteria (ni'tro-bak-te're-ah) plural of *nitrobacterium*.

nitrobacterium (ni'tro-bak-te're-um), pl. *nitrobacte'ria*. A microorganism that oxidizes ammonia to nitrites.

nitrobenzene (ni'tro-ben'zēn) a poisonous benzene derivative, $\text{C}_6\text{H}_5\text{NO}_2$, occurring as a colorless to pale yellow, oily liquid; used in the manufacture of aniline. Called also *nitrobenzol* and *oil of mirbane*.

nitrobenzol (ni'tro-ben'zol) nitrobenzene.

nitroblue tetrazolium (ni'tro-blu tet'rah-zo'le-um) a yellow water-soluble dye that on reduction is converted to a dark blue water-insoluble formazan; see also under *tests*.

nitrocellulose (ni'tro-sel'u-lōs) pyroxylin.

nitrocycleline (ni-tro-si'klēn) chemical name: 4-(dimethylamino)-1,4,4a,5,5a,6,11,12a-octahydro-3,10,12,12a-tetrahydroxy-7-nitro-1,11-dioxo-2-naphthacene-carboxamide; an antibiotic, $\text{C}_{21}\text{H}_{21}\text{N}_3\text{O}_9$.

Nitrocystis (ni'tro-sis'tis) a genus of microorganisms of the family Nitrobacteraceae, suborder Pseudomonadineae, order Pseudomonadales, occurring as ellipsoidal or rod-shaped cells, which are embedded in slime to form zoogloea and which oxidize nitrites to nitrates. It includes two species, *N. micropunctata* and *N. sarcinoides*.

nitrofurantoin (ni-tro-fu'ran) any of a group of antibacterials, including furazolidone, nitrofurazone, nitrofurantoin, and related compounds, which are effective against a wide range of bacteria.

nitrofurantoin (ni'tro-fu-ran'to-in) [USP] chemical name: 1-[[[5-nitro-2-furanyl)methyl]amino]-2,4-imidazolidinedione. A synthetic antibacterial, $\text{C}_8\text{H}_8\text{N}_4\text{O}_6$, occurring as lemon-yellow crystals or fine powder, effective against many gram-negative and gram-positive organisms, including *Escherichia coli*, *Staphylococcus pyogenes*, *Streptococcus pyogenes*, *Aerobacter aerogenes*, and *Paracolobactrum* species; used in the treatment of urinary tract infections due to susceptible bacteria, administered orally.

nitrofurazone (ni'tro-fu'rah-zōn) [USP] chemical name: 2-[(5-nitro-2-furanyl)methylene]hydrazinecarboxamide. An antibacterial $\text{C}_8\text{H}_8\text{N}_4\text{O}_6$, occurring as a lemon yellow, crystalline powder, effective against a wide variety of gram-negative and gram-positive organisms. It is used topically as a local anti-infective in many skin lesions, including wounds, burns, skin infections, and ulcers; to aid healing and prevent infection of skin grafts; and in the treatment of otitis media and externa, urethritis, and eye infections. It has also been used orally in the treatment of African trypanosomiasis.

nitrogen (ni'tro-jen) [Gr. *nitron* niter + *gennan* to produce] 1. a colorless, gaseous element found free in the air; symbol, N; specific gravity, 0.9713; atomic number, 7; atomic weight, 14.007. It constitutes part of the atmosphere, forming about four fifths of common air. Chemically, it is almost inert, but forms by combination nitric acid and ammonia. Nitrogen is important biologically, being a constituent of protein and nucleic acids and thus present in all living cells. It is a gas unfitted to support respiration; not a poison, but proving fatal if breathed alone, because of the want of oxygen. It is soluble in the blood and body fluids and when released as bubbles of gas by reduction of atmospheric pressure causes serious symptoms. See *decompression sickness*, under *sickness*. 2. [NF] N_2 ; nitrogen containing not less than 99 per cent, by volume, of N_2 . It is used to replace air in pharmaceutical

preparations. **amide n.**, that portion of the nitrogen in protein that exists in the form of acid amides. **n. dioxide**, a brownish, irritant gas, NO_2 , generated by the decomposition of nitrogen tetroxide or the reaction of metals with concentrated nitric acid. **n. monoxide**, nitrous oxide. **n. mustards**, see under *mustard*. **nomadic n.**, free nitrogen from the air which enters into plant and animal growth. **nonprotein n.**, the nitrogenous constituents of the blood exclusive of the protein bodies. It consists of the nitrogen of urea, uric acid, creatine, creatinine, amino acids, polypeptides, and an undetermined part known as *rest nitrogen*. **n. pentoxide**, a crystalline compound, N_2O_5 , or nitric anhydride, which combines with water to form nitric acid. **n. peroxide**, **n. tetroxide**, a poisonous volatile liquid, N_2O_4 , decomposing at room temperature to nitrogen dioxide (q.v.). **rest n.**, see *nonprotein n.* **urea n.**, see under *urea*.

nitrogenase (ni'tro-jen-ās) as enzyme system of nitrogen-fixing bacteria and blue-green algae that catalyzes the reduction of molecular nitrogen (N_2) to ammonia (NH_3).

nitrogen-fixing (ni'tro-jen-fiks'ing) accomplishing nitrogen fixation (see under *fixation*); said of certain bacteria.

nitrogenization (ni'tro-jen-i-za'shun) the act of impregnating with nitrogen.

nitrogenous (ni-troj'ē-nus) containing nitrogen.

nitroglycerin (ni-tro-glīs'er-in) chemical name: glyceryl trinitrate. A colorless to yellow liquid, $\text{C}_3\text{H}_5\text{N}_3\text{O}_9$, formed by the action of nitric and sulfuric acids on glycerine. It explodes on concussion, but is rendered safe when compounded in tablets with mannitol. The official preparation [USP] is used in medicine chiefly in the prophylaxis and treatment of angina pectoris, administered sublingually.

Nitroglyn (ni'tro-glin) trademark for a preparation of nitroglycerin.

Nitrol (ni'trol) trademark for preparations of nitroglycerin.

nitromannite (ni'tro-man'it) mannitol hexanitrate.

nitromersol (ni'tro-mer'sol) [USP] chemical name: 5-methyl-2-nitro-7-oxa-8-mercurabicyclo[4.2.0]octa-1,3,5-triene. A mercurial compound, $\text{C}_7\text{H}_5\text{HgNO}_3$, occurring as brownish yellow to yellow granules or powder; used as a local anti-infective, applied topically to the skin and mucous membranes. It is also used to disinfect surgical and dental instruments.

nitrometer (ni-trom'ē-ter) [*nitrogen* + Gr. *metron* measure] an apparatus for measuring the quantity of nitrogen given off in a reaction.

nitromethane (ni'tro-meth'ān) a nitrated form of methane, CH_3NO_2 , which is a powerful explosive.

nitromifene citrate (ni-tro'mi-fēn) chemical name: 1-[2-[4-[1-(4-methoxyphenyl)-2-nitro-2-phenylethenyl]phenoxy]ethyl]pyrrolidene-2-hydroxy-1,2,3-propanetricarboxylate (1:1); an antitumor agent, $\text{C}_{27}\text{H}_{28}\text{N}_2\text{O}_4\cdot\text{C}_6\text{H}_5\text{O}_7$.

nitron (ni'tron) the name suggested by Sir W. Ramsay and R. W. Gray for the molecular weight of a radium emanation.

nitronaphthalene (ni'tro-naf'thah-lēn) a substance, $\text{C}_{10}\text{H}_7\cdot\text{NO}_2$, whose vapors may cause vesication and opacity of the cornea.

nitronaphthalin (ni'tro-naf'thah-lin) nitronaphthalene.

nitrophenol (ni'tro-fe'nal) an indicator, para-nitrophenylic acid, $\text{C}_6\text{H}_4(\text{NO}_2)\text{OH}$, with a pH range of 5 to 7; being colorless at 5 and yellow at 7.

nitropropiol (ni'tro-pro'pe-ol) orthonitrophenylpropionic acid, $\text{NO}_2\cdot\text{C}_6\text{H}_4\cdot\text{C}\cdot\text{C}\cdot\text{COOH}$; used as a test for sugar.

nitroprotein (ni'tro-pro'te-in) a nitrated protein made by treating serum protein with nitric acid.

nitroprusside (ni'tro-prus'id) a salt of nitroprussic acid; see also under *sodium*.

nitrosaccharose (ni'tro-sak'ah-rōs) nitrated sucrose, an explosive and vasodilator used like nitroglycerin.

nitrosalol (ni'tro-sal'ol) an ester, $\text{C}_6\text{H}_4(\text{OH})\text{CO}_2\cdot\text{C}_6\text{H}_4\text{NO}_2$, in a yellowish, crystalline powder.

nitrosamine (ni'trōs-ah'mēn) any of a group of *N*-nitroso derivatives of secondary amines, ($\text{R}_2\text{N}-\text{NO}$), formed by the combining of nitrates with amines; some nitrosamines show carcinogenic activity.

nitrosate (ni'tro-sāt) to convert into a nitroso compound.

nitrosation (ni'tro-sa'shun) conversion into a nitroso compound.

nitroscanate (ni'tro-skan'āt) chemical name: 1-isothiocyanato-4-(4-nitrophenoxy)benzene; a veterinary anthelmintic, $\text{C}_{13}\text{H}_8\text{N}_2\text{O}_3\text{S}$.

nitrose (ni'trōs) a term used to include nitric and nitrous acids.

nitrosification (ni-tro'si-fi-ka'shun) the oxidation of ammonia into nitrites.

nitrosifying (ni-tro'si-fi'ing) oxidizing ammonia into nitrites; said of certain nitrogen bacteria.

nitroso- (ni-tro'so) a prefix indicating presence of the group $-\text{N}\cdot\text{O}$.

nitrosobacteria (ni-tro/'so-bak-te're-ah) plural of *nitrosobacterium*.

nitrosobacterium (ni-tro/'so-bak-te're-um), pl. *nitrosobacteria*. A microorganism that oxidizes nitrites to nitrates.

Nitrosococcus (ni/'tro-so-kok'us) [L. *nitrosus* full of soda + Gr. *kokkos* berry] a genus of microorganisms of the family Nitrobacteraceae, suborder Pseudomonadineae, order Pseudomonadales, occurring as large spherical, nonmotile cells, which oxidize ammonia to nitrite. The type species is *N. nitrosus*.

Nitrosocystis (ni-tro/'so-sis'tis) a genus of microorganisms of the family Nitrobacteraceae, suborder Pseudomonadineae, order Pseudomonadales, occurring as ellipsoidal or elongated cells which unite in cystlike compact rounded aggregates, and oxidizing ammonia to nitrite. It includes two species, *N. coccoïdes* and *N. javanensis*.

Nitrosogloea (ni-tro/'so-gle'ah) a genus of microorganisms of the family Nitrobacteraceae, suborder Pseudomonadineae, order Pseudomonadales, occurring as ellipsoidal or rod-shaped bacteria, embedded in slime to form zoogloea, and oxidizing ammonia to nitrite. It includes three species, *N. membrana'cea*, *N. merismoides*, and *N. schizobacteroides*.

nitroso-indol (ni-tro/'so-in'dol) a compound which gives a red reaction when indol is treated with sulfuric acid and potassium nitrite.

Nitrosomonas (ni-tro/'so-mo'nas) [L. *nitrosus* full of soda + Gr. *monas* unit] a genus of microorganisms of the family Nitrobacteraceae, suborder Pseudomonadineae, order Pseudomonadales, occurring as nonmotile ellipsoidal cells, which oxidize ammonia to nitrite more rapidly than other genera of the family. It includes two species, *N. europaea* and *N. monocella*.

Nitrospira (ni-tro/'so-spi'rah) [L. *nitrosus* full of soda + *spira* coil] a genus of microorganisms of the family Nitrobacteraceae, suborder Pseudomonadineae, order Pseudomonadales, occurring as spiral-shaped cells which oxidize ammonia to nitrite very slowly. It includes two species, *N. antarc'tica* and *N. brien'sis*.

nitroso substitution (ni-tro/'so-sub'sti-tu'shun) the substitution of the radical nitroxyl for some other radical or atom in a compound.

nitrosoarea (ni-tro/'so-u-re'ah) any of a group of lipid-soluble proteins that function as alkylating agents, and which, because of their ability to penetrate the central nervous system, have been used as antineoplastics in the treatment of meningeal leukemia and brain tumors.

Nitrostat (ni'tro-stat) trademark for a preparation of nitroglycerin.

nitrosugars (ni/'tro-shug'erz) a class of substances which have been used in the treatment of angina pectoris.

nitrosyl (ni'tro-sil) the univalent radical NO.

nitrous (ni'trus) pertaining to nitrogen in its lowest valency.

n. oxide, a colorless gas, N_2O , having a sweetish taste and a pleasant odor and used as a general anesthetic or analgesic; called also *nitrogen monoxide*, *factitious air*, and *laughing gas*.

Nitrovas (ni'tro-vas) trademark for a preparation of nitroglycerin.

nitroxyl (ni-trok'sil) the radical NO_2 .

nitryl (ni'tril) nitroxyl.

nivazol (ni'vah-zöl) chemical name: 2'(4-fluorophenyl)-2'H-pregna-2,4-dien-20-yno[3,2-c]pyrazol-17a-ol; a glucocorticoid, $C_{28}H_{31}FN_2O$.

nivemycin (niv'ē-mi'sin) neomycin.

nivimedone sodium (ni-vi'mē-dōn) chemical name: 5,6-dimethyl-2-nitro-1H-indene-1,3(2H)-dione ion(1-)sodium monohydrate; an antiallergic agent, $C_{11}H_8NNaO_4 \cdot H_2O$.

NK. abbreviation for *Nomenklatur Kommission*, a committee of the Anatomical Society of Germany which has given supplementary names to the terminology of anatomy.

nl. nanoliter.

N.L.N. National League for Nursing.

Nm. abbreviation for L. *nux moscha'ta*, nutmeg.

nm. nanometer.

N.M.A. National Malaria Association; National Medical Association.

NMRI Naval Medical Research Institute, part of the National Naval Medical Center.

N.M.S.S. National Multiple Sclerosis Society.

N-Multistix (mul'ti-stiks) trademark for a reagent strip for testing urine specimens for protein, glucose, ketones, bilirubin, occult blood, urobilinogen, nitrite, and to indicate urinary pH.

nn. abbreviation for L. *nervi* (nerves).

N.N.D. *New and Nonofficial Drugs*, former annual publication of the American Medical Association containing descriptions of agents proposed for use in or on the human body in the prevention, diagnosis, or treatment of disease, which have been evaluated by the Council on Drugs of the A.M.A.

NO nitric oxide.

N₂O dinitrogen monoxide (nitrous oxide).

No chemical symbol for *nobelium*.

No. abbreviation of L. *nu'mero*, "to the number of."

Nobel prize (no-bel') [Alfred Bernard *Nobel*, Swedish chemist and engineer, 1833-1896; the inventor of dynamite, under the terms of whose will the prizes were established] an award usually given annually for outstanding achievement in chemistry, physics, medicine and physiology, literature, and in the interest of world peace. First presented in 1901. An award for achievement in economics has since been added.

nobelium (no-be'le-um) [Alfred Bernard *Nobel*] the chemical element of atomic number 102, atomic weight 253, symbol No, obtained in 1958 by bombardment of ^{246}Cm with ^{12}C ions in a heavy ion linear accelerator.

Noble's position (no'b'lyz) [Charles Percy *Noble*, American gynecologist, 1863-1935] see under *position*.

Nocard's bacillus [Edmond Isidore Étienne *Nocard*, French veterinarian, 1850-1903] *Salmonella typhimurium*.

Nocardia (no-kar'de-ah) [Edmond Isidore Étienne *Nocard*] a genus of actinomycetes of the family Actinomycetaceae, order Actinomycetales, separable into 40 or more species, of which a few are pathogenic and the remainder saprophytic forms. They are aerobic, fragment into bacillary or coccoid forms, and produce chains of spores by simple fragmentation of hyphal branches. Called also *Streptothrix*. **N. asteroides**, an acid-fast filamentous actinomycete producing pulmonary infection in man that simulates tuberculosis. The disease, considered to be an opportunistic infection, sometimes becomes systemic and may be fatal. See *nocardiosis*. **N. brasiliensis**, an acid-fast species found in soil, which causes nocardiosis and maduromycosis in man. It is particularly prevalent in Mexico and South America, but has been reported worldwide. **N. caviae**, *N. otitidis-caviarum*. **N. farcinica**, a species of acid-fast filamentous actinomycetes of uncertain classification, associated with a disease in cattle resembling tuberculosis; it is probably identical with *N. asteroides*. See *cattle farcy*, under *farcy*. **N. madurae**, *Actinomadura madurae*. **N. otitidis-caviarum**, a species isolated from an ear infection in guinea pigs and from soil in the United States and India; the species is related to *N. asteroides* and causes some cases of nocardiosis and maduromycosis.

nocardial (no-kar'de-al) pertaining to or caused by *Nocardia*.

nocardiasis (no'kar-di'ah-sis) nocardiosis.

nocardin (no-kar'din) an antibiotic substance from *Nocardia coeliaca*, active against tubercle bacilli.

nocardiosis (no-kar-de-o'sis) an acute or chronic suppurative infection, usually of the lungs but with a marked tendency to spread to any organ of the body, especially to the brain; abscess formation occurs in any organ, most commonly in the lungs, brain, or skin or subcutaneous tissue. Lung abscesses tend to cavitate with time. The causative agent in most instances is *Nocardia asteroides*, but *N. brasiliensis* and *N. caviae* cause occasional cases.

Noctia (nok'te-ah) a genus of small nematode worms. **N. nochtii**, a species of worms found in and apparently causing the production of tumors in the stomachs of Javanese monkeys.

noci- (no'se) [L. *nocere* to injure] a combining form denoting relation to injury or to a noxious or deleterious agent or influence.

nociassociation (no'se-ah-so'se-a'shun) the unconscious discharge of nervous energy under the stimulus of trauma, as in surgical shock.

nociceptive (no'se-sep'tiv) [*noci-* + L. *capere* to receive] receiving injury; said of a receptive neuron for painful sensations.

nociceptor (no'se-sep'tor) a receptor which is stimulated by injury; a receptor for pain. Cf. *beneceptor* and *ceptor* (def. 2).

nocifensor (no'se-fen'sor) [*noci-* + L. *fendere* to defend] Sir Thomas Lewis' name for a system of nerves in the skin and mucous membranes which are concerned with local defense against injury.

noci-influence (no'se-in'floo-ens) injurious or traumatic influence.

nociperception (no'se-per-sep'shun) the perception by the system of injurious (traumatic) stimuli.

nocodazole (no-ko'dah-zöl) chemical name: [5-(2-thienylcarbonyl)-1H-benzimidazolecarbamic acid methyl ester; an antineoplastic, $C_{14}H_{11}N_3O_3S$.

Noct. abbreviation for L. *nocte*, at night.

noctalbuminuria (nok'tal-bu'mi-nu're-ah) [L. *nox* night + *albuminuria*] the presence of excessive amounts of albumin in the urine secreted during the night.

noctambulation (nok'tam-bu-la'shun) [L. *noctambulatio*; *nox* night + *ambulare* to walk] somnambulism, def. 1.

noctambulic (nok'tam-bu'lik) pertaining to or marked by sleep walking (somnambulism).

Noctec (nok'tek) trademark for preparations of chloral hydrate.

noctiphobia (nok'te-fo'be-ah) [L. *nox* night + *phobia*] morbid dread of night and its darkness and silence.

Noct. mane. abbreviation for L. *nocte mane'que*, at night and in the morning.

nocturia (nok-tu're-ah) [L. *nox* night + Gr. *ouron* urine + *-ia*] excessive urination at night.

nocturnal (nok-tur'nal) [L. *nocturnus*] pertaining to, occurring at, or active at night.

nocuity (nok-u'i-te) (obs.) noxiousness.

nodal (no'dal) pertaining to a node, particularly the atrioventricular node.

node (nód) [L. *nodus* knot] a small mass of tissue in the form of a swelling, knot, or protuberance, either normal or pathological. See also *nodule* and *nodus*. **Aschoff's n.**, n. of **Aschoff** and **Tawara**, nodus atrioventricularis. **atrioventricular n.**, nodus atrioventricularis. **axillary n's**, axillary lymph n's, nodi lymphatici axillares; see under *nodus*. **Bouchard's n's**, cartilaginous and bony enlargements of the proximal interphalangeal joints of the fingers in degenerative joint disease. Such nodules in the terminal interphalangeal joints are called *Heberden's nodes*. **bronchopulmonary lymph n's**, nodi lymphatici bronchopulmonales. **buccal lymph n's**, nodi lymphatici buccales. **celiac lymph n's**, nodi lymphatici celiac. **cervical lymph n's**, deep, nodi lymphatici cervicales profundae. **cervical lymph n's**, superficial, nodi lymphatici cervicales superficiales. **Cloquet's n.**, n. of **Cloquet**, the highest of the deep inguinal lymph nodes; called also *Cloquet's gland*. **colic lymph n's**, left, nodi lymphatici colici sinistri. **colic lymph n's**, middle, nodi lymphatici colici medii. **colic lymph n's**, right, nodi lymphatici colici dextri. **cubital lymph n's**, nodi lymphatici cubitales. **Delphian n.**, a lymph node encased in the fascia in the midline, just anterior to the thyroid isthmus, so called because it is exposed first at surgery and, if diseased, is indicative of disease in the thyroid gland, but not of a specific disease process. **Dürk's n's**, granulomatous perivascular infiltrations in the cerebral cortex in trypanosomiasis. **epigastric lymph n's**, nodi lymphatici epigastrici. **Ewald's n.**, sentinel n. **Féréol's n's** (obs.), subcutaneous nodes sometimes occurring in acute rheumatism. **Flack's n.**, sinoatrial n. **gastric lymph n's**, left, nodi lymphatici gastrici sinistri. **gastric lymph n's**, right, nodi lymphatici gastrici dextri. **gastroepiploic lymph n's**, lymph nodes associated with the left and right gastroepiploic arteries. **gouty n.**, a nodule produced by gouty inflammation. **Haygarth's n's**, joint swellings in arthritis deformans. **Heberden's n's**, small hard nodules, formed usually at the distal interphalangeal articulations of the fingers, produced by calcific spurs of the articular cartilage and associated with interphalangeal osteoarthritis. Heredity is an important etiologic factor. Called also *Heberden's sign*. Cf. *Bouchard's n's*. **hemal n's**, nodes with a rich content of erythrocytes within sinuses, having an organization much like a lymph node but no lymphatic supply, found near large blood vessels along the ventral side of the vertebrae and near the spleen and kidneys in various mammals, especially ruminants; their functions are probably like those of the spleen. The presence of such nodes in man is doubtful. A special type of hemal node is found in the pig; see *hemolymph n's*, def. 2. Called also *hemal glands*, *hemolymph n's*, and *vascular glands*. **hemolymph n's**, 1. hemal n's. 2. special types of hemal nodes found in the pig, having characteristics midway between those of ordinary lymph nodes and typical hemal nodes, containing both blood and lymphatic vessels, the contents of both of which mix in the sinuses; called also *hemolymph glands*. **Hensen's n.**, primitive knot. **hepatic lymph n's**, nodi lymphatici hepatici. **ileocolic lymph n's**, nodi lymphatici ileocolici. **iliac lymph n's**, nodi lymphatici iliaci. **iliac lymph n's**, common, nodi lymphatici iliaci communes. **iliac lymph n's**, external, nodi lymphatici iliaci externi. **iliac lymph n's**, internal, nodi lymphatici iliaci interni. **inguinal lymph n's**, deep, nodi lymphatici inguinales profundae. **inguinal lymph n's**, superficial, nodi lymphatici inguinales superficiales. **intercostal lymph n's**, nodi lymphatici intercostales. **Keith's n.**, **Keith-Flack n.**, sinoatrial n. **Koch's n.**, nodus atrioventricularis. **lumbar lymph n's**, nodi lymphatici lumbales. **lymph n.**, any of the accumulations of lymphoid tissue organized as definite lymphoid organs, varying from 1 to 25 mm. in diameter, situated along the course of lymphatic vessels (see illustration accompanying *lymph*), and consisting of an outer cortical and an inner medullary part. The lymph nodes are the main source of lymphocytes of the peripheral blood and, as part of the reticuloendothelial system, serve as a defense mechanism by removing noxious agents, such as bacteria and toxins, and probably play a role in antibody production. Called also *nodus lymphaticus* [NA]. **mandibular lymph n's**, nodi lymphatici mandibulares. **mediastinal lymph n's**, anterior, nodi lymphatici mediastinales anteriores. **mediastinal lymph n's**, posterior, nodi lymphatici mediastinales posteriores. **mesenteric lymph n's**, nodi lymphatici mesenterici. **mesenteric lymph n's**, inferior, nodi lymphatici mesenterici inferiores. **mesenteric lymph n's**, superior, nodi lymphatici mesenterici superiores. **Meynet's n's**, nodules in the capsules of joints and in tendons in rheumatic disorders, especially of children. **occipital lymph n's**, nodi lymphatici occipitales. **Osler's n's**, small, raised, swollen tender areas, about the size of a pea, characteristically bluish but sometimes pink or red, and sometimes having a blanched center, occurring most commonly in the pads of the fingers or toes, in the thenar or hypothenar eminences, or the soles of the feet; they are practically pathognomonic

of subacute bacterial endocarditis. **pancreaticosplenic lymph n's**, nodi lymphatici pancreaticolienales. **parasternal lymph n's**, nodi lymphatici parasternales. **paratracheal n.**, any of the minute lymph nodes situated alongside the recurrent nerves on the lateral aspect of the trachea and esophagus, which help drain the thyroid gland. **parotid lymph n's**, superficial and deep, nodi lymphatici parotidei superficiales et profundi. **Parrot's n.**, see *Parrot's sign* (def. 2), under *sign*. **phrenic lymph n's**, nodi lymphatici phrenici. **popliteal lymph n's**, nodi lymphatici poplitei. **prelaryngeal n.**, a lymph node deep in the neck that helps drain the thyroid gland. **pretracheal n.**, a lymph node deep in the neck that helps drain the thyroid gland. **primitive n.**, primitive knot. **pulmonary lymph n's**, nodi lymphatici pulmonales. **pyloric lymph n's**, nodi lymphatici pylorici. **n's of Ranvier**, constrictions occurring on myelinated nerve fibers at regular intervals of about 1 millimeter; at these sites the myelin sheath is absent and the axon is enclosed only by Schwann cell processes. **retroauricular lymph n's**, nodi lymphatici retroauriculares. **retropharyngeal lymph nodes**, nodi lymphatici retropharyngei. **Rosenmüller's n.**, 1. pars palpebralis glandulae lacrimalis. 2. [pl.] nodi lymphatici inguinales profundi. **Rotter's n's**, lymph nodes occasionally found between the pectoralis major and minor muscles which often contain metastases from mammary cancer. **sacral lymph n's**, nodi lymphatici sacrales. **Schmidt's n.**, the medullated interannular segment of a nerve fiber. **Schmorl's n.**, an irregular or hemispherical bone defect in the upper or lower margin of the body of the vertebra. **sentinel n.**, **signal n.**, an enlarged supraclavicular node which is often the first sign of an abdominal tumor; called also *Virchow's n.* or *gland*, and *Troisier's n.* **singer's n.**, a small white nodule occurring on the vocal cord in chondritis tuberosa. Called also *vocal nodule*. **sinoatrial n.**, **sinus n.**, a microscopic collection of atypical cardiac muscle fibers at the superior end of the sulcus terminalis, at the junction of the superior vena cava and right atrium. Called also *nodus sinuatrialis* [NA]. The cardiac rhythm normally takes its origin in this node which is, for that reason, also known as the pacemaker of the heart. **submandibular lymph n's**, nodi lymphatici submandibulares. **submental lymph n's**, nodi lymphatici submentales. **syphilitic n.**, a swelling on a bone due to syphilitic periostitis. **n. of Tawara**, nodus atrioventricularis. **teacher's n.**, singer's n. **tibial lymph n's**, anterior, nodi lymphatici tibialis anterior. **tracheal lymph n's**, nodi lymphatici tracheales. **tracheobronchial lymph n's**, inferior, nodi lymphatici tracheobronchiales inferiores. **tracheobronchial lymph n's**, superior, nodi lymphatici tracheobronchiales superiores. **triticeous n.**, cartilago triticea. **Troisier's n.**, **Virchow's n.**, signal n. **vital n.**, an old name applied to the respiratory centers.

node (no'di) plural of *nodus*.

nodose (no'dōs) [L. *nodosus*] having nodes or projections.

nodosity (no-dos'i-te) [L. *nodositas*] 1. the quality or condition of being nodose. 2. a node. **Haygarth's n's**, see under *node*.

nodular (nod'u-lar) 1. like a nodule or node. 2. marked with nodules.

nodulated (nod'u-lāt'ed) marked with nodules.

nodulation (nod'u-la'shun) the presence of nodules.

nodule (nod'ul) [L. *nodulus* little knot] a small boss or node which is solid and can be detected by touch; see also *nodulus*. **accessory thymic n's**, noduli thymici accessorii. **aggregate n's**, folliculi lymphatici aggregati. **Albini's n's**, gray nodules of the size of small grains, sometimes seen on the free edges of the atrioventricular valves of infants; they are remains of fetal structures. Called also *Cruveilhier's n's*. **n's of aortic valve**, see *noduli valvularum semilunarium*. **apple jelly n's**, minute translucent nodules of a distinctive yellowish or reddish brown color, visible on diascopic examination of the lesions of lupus vulgaris. **n's of Arantius**, see *noduli valvularum semilunarium*. **Aschoff's n's**, Aschoff bodies. **Bianchi's n's**, nodules of aortic valve; see *noduli valvularum semilunarium*. **Bohn's n's**, small white or yellow nodules near the midline of the palate in the newborn, which disappear soon after birth; they are small retention cysts arising from mucus glands. **Bouchard's n's** (obs.), see under *node*. **Busacca n's**, an accumulation of epithelioid cells and lymphocytes occurring in chronic inflammation of the iris, usually on the anterior surface about the region of the ciliary zone. **cortical n's**, nodules of closely packed lymphocytes in the cortical portion of a lymph gland. **Cruveilhier's n's**, Albini's n's. **Dalen-Fuchs n's**, small hemispherical mounds principally composed of epithelioid cells and cells of the retinal epithelium, seen in sympathetic ophthalmia and certain other disorders. **Fraenkel's n's**, typhus nodules of the cutaneous blood vessels. **Gamna n's**, brown or yellow pigmented nodules seen in the spleen in certain cases of enlargement, such as Gamna's disease and siderotic splenomegaly; called also *nodules tabac*. **Gandy-Gamna n's**, Gamna n's. **Guata-mahri's n's** (obs.), nodules on the scalp and face in onchocerciasis. **Hoboken's n's**, dilations of the outer surface of the umbilical arteries. **Jeanselme's n's**, gummata of tertiary syphilis and of nonvenereal treponemal diseases, located on joint

capsules, bursae or tendon sheaths; called also *juxta-articular n's* and *Steiner's tumors*. **juxta-articular n's**, Jeanselme's n's. **n's of Kerckring**, nodules of aortic valve; see *noduli valvularum semilunarium*. **Koepp's n's**, white to gray nodules observed at the pupillary border in chronic inflammation of the iris, and consisting of accumulations of epithelioid cells and lymphocytes. **Koester's n.**, a tubercle composed of one giant cell enclosed by a double layer of cells. **Leishman's n's**, (*obs.*), pinkish nodules observed in cutaneous leishmaniasis. **lentiform n.**, processus lenticularis. **Lutz-Jeanselme n's**, Jeanselme's n's. **lymphatic n's**, a term applied to lymph nodes, as well as to one of the small collections of lymphoid tissue (folliculus lymphaticus [NA]) situated deep to epithelial surfaces, and also to temporary small (about 1 mm. in diameter), dense accumulations of lymphocytes located within the cortex of a lymph node and expressing the cytogenetic and defense functions of the tissue. **lymphatic n's, solitary, of large intestine**, folliculi lymphatici solitarii intestini crassi. **lymphatic n's, solitary, of small intestine**, folliculi lymphatici solitarii intestini tenuis. **lymphatic n's of stomach**, folliculi lymphatici gastrici. **milkers' n's**, hard circumscribed nodules on the hands of persons who milk cows suffering from cowpox. **Morgagni's n's**, nodules of aortic valve; see *noduli valvularum semilunarium*. **Paterson's n's**, molluscum bodies. **pearly n.**, one of the nodules of bovine tuberculosis. **primary n.**, a lymph node without a germinal center, or apart from a center. **n's of pulmonary trunk valves**, see *noduli valvularum semilunarium*. **pulp n.**, denticle, *def. 2*. **rheumatic n's**, small round or oval, mostly subcutaneous nodules made up chiefly of a mass of Aschoff bodies and seen in cases of rheumatic fever. **Schmorl's n.**, a nodule seen in roentgenograms of the spine, due to prolapse of a nucleus pulposus into an adjoining vertebra. **secondary n.**, germinal center. **siderotic n's**, focal fibrotic lesions characterized by the presence of crystals of iron on the degenerated elastic tissue fibers, seen in the spleen in Banti's disease. **singers' n.**, a small white node occurring on the vocal cord in chondritis tuberosa. **surfers' n's**, hyperplastic, fibrosing, rarely ulcerated granulomas 1 to 3 cm. in diameter, occurring over bony prominences of the feet and legs of surfers, occurring as a result of repeated trauma from kneeling on surfboards; called also *Malibu disease* and *surfers' knobs or knots*. **n's tabac**, Ganna n's. **teachers' n.**, a nodule of the vocal cords in chondritis tuberosa. **triticeous n.**, cartilago triticea. **typhoid n.**, a mass of macrophages and other necrotic cells observed in the liver in typhoid fever. **typhus n's**, minute nodules in the skin, formed by perivascular infiltration of mononuclear cells in typhus. **n. of vermis**, nodulus vermis. **vestigial n.**, tuberculum auriculae. **vocal n.**, singer's node. **warm n.**, a nodule in the thyroid gland which shows the same ¹³¹I uptake as the rest of the gland; normally not carcinomatous.

noduli (nod'u-li) [L.] plural of *nodulus*.

nodulous (nod'u-lus) nodose.

nodulus (nod'u-lus), pl. *nod'uli* [L., dim. of *nodus*] a nodule or small knot; used in anatomical nomenclature as a general term to designate a comparatively minute collection of tissue. **nod'uli aggrega'ti proces'sus vermifor'mis**, folliculi lymphatici aggregati appendicis vermiformis. **n. cerebel'li**, n. vermis. **n. intercarot'icus**, glomus caroticum. **n. lymphat'icus**, folliculus lymphaticus. **nod'uli lymphat'ici aggrega'ti** [Peyer'i], folliculi lymphatici aggregati. **nod'uli lymphat'ici bronchia'les**, lymph nodes situated in the lining of the bronchi. **nod'uli lymphat'ici conjunctiva'les**, lymph nodules situated in the conjunctiva. **nod'uli lymphat'ici gas'trici**, folliculi lymphatici gastrici. **nod'uli lymphat'ici laryn'gei**, folliculi lymphatici laryngei. **nod'uli lymphat'ici lienales** [Malpig'hi], folliculi lymphatici lienales. **nod'uli lymphat'ici rec'ti**, folliculi lymphatici recti. **nod'uli lymphat'ici solita'rii intesti'ni cras'si**, folliculi lymphatici solitarii intestini crassi. **nod'uli lymphat'ici solita'rii intesti'ni ten'uis**, folliculi lymphatici solitarii intestini tenuis. **nod'uli lymphat'ici tuba'rii tu'bae auditi'vae**, lymphatic follicles about the pharyngeal end and internally along the median wall of the auditory tube; called also *Gerlach's tonsil*. **nod'uli lymphat'ici vagina'les**, small collections of lymphatic tissue deep to the epithelial surface of the vagina. **nod'uli lymphat'ici vesica'les**, collections of lymphatic tissue in the lining of the urinary bladder. **nod'uli thy'mici access'o'rii** [NA], accessory thymic nodules: portions of thymus tissue that have been detached from the stalk and left behind in the caudal migration of the gland in embryonic development. **nod'uli valvula'rum aor'tae**, former NA term for nodules of aortic valve; see *noduli valvularum semilunarium*. **nod'uli valvula'rum semiluna'rium** [NA], small fibrous tubercles, one at the center of the free margin of each of the three cusps of the valve of the pulmonary trunk (called also *noduli valvularum semilunarium* [ventriculi dextri] and *nodules of pulmonary trunk valve*) and of the aortic valve (called also *noduli valvularum aortae* or *nodules of aortic valve*, and *nodules of Arantius*). **nod'uli valvula'rum semiluna'rium** [Aran'tii], nodules of aortic valve; see *noduli valvularum semilunarium*. **nod'uli valvula'rum semiluna'rium** [ventric'uli dex'tri], see *noduli val-*

ularum semilunarium. **n. ver'mis**, 1. [NA], nodule of vermis: the part of the vermis of the cerebellum, on the ventral surface, where the inferior medullary velum attaches. 2. the central part of the flocculonodular node.

nodus (no'dus), pl. *no'di* [L.] a node or knot; used in anatomical nomenclature as a general term to designate a small mass of tissue. **n. atrioventricula'ris** [NA], atrioventricular node: a microscopic collection of specialized cardiac muscle fibers (Purkinje's fibers), located beneath the endocardium of the right atrium, and continuous with atrial muscle fibers and with the atrioventricular bundle; it is similar to but somewhat smaller than the nodus sinuatrialis. Called also *Aschoff's*, *Koch's*, and *Tawara's node*. **n. cor'dis**, see *trigona fibrosa cordis*. **n. curso'rius**, a point in the corpus striatum of some animals, as the rabbit, stimulation of which causes the animal to rush forward. **n. lymphat'icus** [NA], one of the accumulations of lymphoid tissue interposed throughout the lymphatic system. See *lymph node*, under *node*. Called also *lymphoglandula* and *lymphonodus* [NA alternative]. **no'di lymphat'ici apica'les** [NA], see *nodi lymphatici axillares*. **no'di lymphat'ici axilla'res** [NA], axillary lymph nodes: the lymph nodes of the axilla, which receive lymph from the arm and the thoracic wall. They comprise five groups: the apical nodes (nodi lymphatici apicales), lying medial to the axillary vein; the central (nodi lymphatici centrales), near the base of the axilla; the lateral (nodi lymphatici laterales), behind the axillary vein; the pectoral (nodi lymphatici pectorales), along the lateral thoracic veins; and the subscapular (nodi lymphatici subscapulares), along the subscapular vein. Called also *lymphoglandulae axillares*. **no'di lymphat'ici bronchopulmona'les** [NA], bronchopulmonary lymph nodes: nodes embedded in and receiving lymph from the root of the lung. **no'di lymphat'ici bucca'les** [NA], buccal lymph nodes: a variable number of lymph nodes lying on a line between the angle of the mandible and the angle of the mouth; called also *lymphoglandulae faciales profundae*. **no'di lymphat'ici celi'aci** [NA], celiac lymph nodes: a few nodes along the celiac trunk, which receive lymph from the stomach, spleen, duodenum, liver, and pancreas; called also *lymphoglandulae coeliacae*. **no'di lymphat'ici centra'les** [NA], see *nodi lymphatici axillares*. **no'di lymphat'ici cervica'les profun'dae** [NA], deep cervical lymph nodes: the 15 to 30 nodes that lie along the course of the carotid artery and internal jugular vein, including the jugulodigastric, lingual, and jugulo-omohyoid nodes. They receive lymph from both superficial and deep structures. Called also *lymphoglandulae cervicales profundae superiores*. **no'di lymphat'ici cervica'les superficia'les** [NA], superficial cervical lymph nodes: nodes along the external jugular vein which receive lymph from the entire cervical skin surface; called also *lymphoglandulae cervicales superficiales*. **no'di lymphat'ici col'ici dex'tri** [NA], right colic lymph nodes: nodes accompanying the right colic vessels and receiving lymph from the adjacent region. **no'di lymphat'ici col'ici me'dii** [NA], middle colic lymph nodes: nodes accompanying the middle colic vessels and receiving lymph from the adjacent region. **no'di lymphat'ici col'ici sinis'tri** [NA], left colic lymph nodes: nodes situated along the left colic vessels and receiving lymph drained from the adjacent region. **no'di lymphat'ici cubita'les** [NA], cubital lymph nodes: a few lymph nodes situated in the deep part of the elbow. **no'di lymphat'ici epigas'trici** [NA], epigastric lymph nodes: lymph nodes along the deep epigastric vessels, receiving lymph from the lower abdominal wall; called also *lymphoglandulae epigastricae*. **no'di lymphat'ici gas'trici dex'tri** [NA], right gastric lymph nodes: a few nodes along the right gastric artery that receive lymph from the stomach, spleen, duodenum, liver, and pancreas; called also *lymphoglandulae gastricae inferiores*. **no'di lymphat'ici gas'trici sinis'tri** [NA], left gastric lymph nodes: a few nodes along the left gastric artery that receive lymph from the stomach, spleen, duodenum, liver, and pancreas; called also *lymphoglandulae gastricae superiores*. **no'di lymphat'ici gastroepiplo'ici dex'tri** [NA], lymph nodes associated with the right gastroepiploic artery. **no'di lymphat'ici gastroepiplo'ici sinis'tri** [NA], lymph nodes associated with the left gastroepiploic artery. **no'di lymphat'ici hepat'ici** [NA], hepatic lymph nodes: a few nodes along the common hepatic artery that receive lymph from the stomach, spleen, duodenum, liver, and pancreas; called also *lymphoglandulae hepaticae*. **no'di lymphat'ici ileocol'ici** [NA], ileocolic lymph nodes: nodes in the region of the ileocolic junction, draining adjacent structures. **no'di lymphat'ici ili'aci**, iliac lymph nodes: nodes located along the aorta and the common, internal, and external iliac arteries, receiving lymph from the pelvic viscera; called also *lymphoglandulae iliacaе*. **no'di lymphat'ici ili'aci commu'nes** [NA], common iliac lymph nodes: the four to six lymph nodes grouped at the sides and dorsal to the common iliac artery. **no'di lymphat'ici ili'aci exter'ni** [NA], external iliac lymph nodes: the eight to ten nodes along the external iliac vessels. **no'di lymphat'ici ili'aci inter'ni** [NA], internal iliac lymph nodes: nodes grouped around the origins of the branches of the internal iliac vessels, receiving lymph from the regions supplied by these various branches; called also *lymphoglandulae hypogastricae*. **no'di lymphat'ici inguina'les profun'di** [NA], deep inguinal

lymph nodes: nodes deep to the fascia lata along the femoral vein, receiving lymph from adjacent areas; called also *lymphoglandulae subinguinales profundae*. **no'di lymphat'ici inguina'les superficial'les** [NA], superficial inguinal lymph nodes: nodes in the subcutaneous tissue inferior to the inguinal ligament; called also *lymphoglandulae subinguinales superficiales*. **no'di lymphat'ici intercosta'les** [NA], intercostal lymph nodes: lymph nodes in the back of the thorax, along the intercostal vessels; called also *lymphoglandulae intercostales*. **n. lymphat'icus jugulodigas'tricus** [NA], one of the deep cervical lymph nodes lying on the internal jugular vein at the level of the greater cornu of the hyoid bone. **n. lymphat'icus juguloomohyoi'deus** [NA], one of the deep cervical lymph nodes lying on the internal jugular vein just above the tendon of the omohyoid muscle. **no'di lymphat'ici latera'les** [NA], see *nodi lymphatici axillares*. **no'di lymphat'ici lingua'les** [NA], deep cervical lymph nodes receiving afferent vessels from the tongue; called also *lymphoglandulae linguales*. **no'di lymphat'ici lumba'les** [NA], lumbar lymph nodes: a chain of nodes alongside the lower abdominal aorta, receiving most of the lymph from the abdominal structures; called also *lymphoglandulae lumbales*. **no'di lymphat'ici mandibula'res** [NA], mandibular lymph nodes: nodes near the angle of the mandible, into which lymph from some of the superficial tissues of the head and neck is drained. **no'di lymphat'ici mediastina'les anterio'res** [NA], anterior mediastinal lymph nodes: nodes along the great vessels of the superior mediastinum and on the anterior part of the diaphragm, receiving lymph from adjacent structures; called also *lymphoglandulae mediastinales anteriores*. **no'di lymphat'ici mediastina'les posterio'res** [NA], posterior mediastinal lymph nodes: 8 to 10 nodes along the thoracic aorta, receiving lymph from the mediastinal structures; called also *lymphoglandulae mediastinales posteriores*. **no'di lymphat'ici mesenter'ici**, mesenteric lymph nodes: nodes that lie at the root of the mesentery, receiving lymph from the parts of the small intestine, cecum, appendix, and large intestine; called also *lymphoglandulae mesentericae*. **no'di lymphat'ici mesenter'ici inferio'res** [NA], inferior mesenteric lymph nodes: nodes situated along the inferior mesenteric vessels and receiving lymph from the adjacent region. **no'di lymphat'ici mesenter'ici superio'res** [NA], superior mesenteric lymph nodes: nodes situated along the superior mesenteric vessels, receiving lymph from the adjacent regions. **no'di lymphat'ici occipita'les** [NA], occipital lymph nodes: several small nodes near the occipital insertion of the semispinalis capitis muscle; called also *lymphoglandulae occipitales*. **no'di lymphat'ici pancreat'icoliena'les** [NA], pancreatocolic lymph nodes: a few nodes along the splenic artery that receive lymph from the stomach, spleen, duodenum, liver, and pancreas; called also *lymphoglandulae pancreatocolienales*. **no'di lymphat'ici parasterna'les** [NA], parasternal lymph nodes: nodes located along the course of the internal thoracic artery, which drain the mammary gland, abdominal wall, and diaphragm; called also *lymphoglandulae sternaes*. **no'di lymphat'ici paroti'dei superficial'les et profundi** [NA], superficial and deep parotid lymph glands: a dozen or so nodes in the substance of the parotid gland, through which lymph drains from the adjacent area; called also *lymphoglandulae parotideae*. **no'di lymphat'ici pectora'les** [NA], see *nodi lymphatici axillares*. **no'di lymphat'ici phren'ici** [NA], phrenic lymph nodes: several nodes on the thoracic surface of the diaphragm, receiving lymph from the intercostal spaces, pericardium, diaphragm, and liver. **no'di lymphat'ici poplite'i** [NA], popliteal lymph nodes: a few nodes deep to the fascia around the popliteal vessels, through which lymph drains from nearby areas; called also *lymphoglandulae popliteae*. **no'di lymphat'ici pulmona'les** [NA], pulmonary lymph nodes: nodes located along the larger bronchi within the lung substance, through which lymph from the lung drains; called also *lymphoglandulae pulmonales*. **no'di lymphat'ici pylo'rici** [NA], pyloric lymph nodes: nodes that lie in front of the head of the pancreas, receiving lymph from the pyloric part of the stomach, the adjacent part of the duodenum, and part of the inferior portion of the body of the stomach. **no'di lymphat'ici retroauricula'res** [NA], retroauricular lymph nodes: two small nodes on the insertion of the sternocleidomastoid muscle; called also *lymphoglandulae auriculares posteriores*. **no'di lymphat'ici retropharyn'gei** [NA], retropharyngeal lymph nodes: nodes deep in the neck behind the pharynx, receiving lymph from some of the deeper structures of the head and neck. **no'di lymphat'ici sacra'les** [NA], sacral lymph nodes: nodes located in the hollow of the sacrum, receiving lymph from the pelvic, perineal, and gluteal regions; called also *lymphoglandulae sacrales*. **no'di lymphat'ici submandibula'res** [NA], submandibular lymph nodes: the three to six nodes alongside the submandibular gland, through which lymph drains from the adjacent skin and mucous membrane; called also *lymphoglandulae submaxillares*. **no'di lymphat'ici submenta'les** [NA], submental lymph nodes: nodes under the chin into which the lymph from some of the superficial tissues of the head and neck is drained. **no'di lymphat'ici subscapula'res** [NA], see *nodi lymphatici axillares*. **no'di lymphat'ici tibia'lis ante'rior** [NA], anterior tibial lymph nodes:

lymph nodes occasionally occurring along the anterior tibial vessels; called also *lymphoglandulae tibialis anterior*. **no'di lymphat'ici trachea'les** [NA], tracheal lymph nodes: nodes along each side of the trachea, receiving lymph from the trachea, esophagus, and tracheobronchial nodes; called also *lymphoglandulae tracheales*. **no'di lymphat'ici tracheobronchia'les inferio'res** [NA], inferior tracheobronchial lymph nodes: nodes in the angle of the bifurcation of the trachea, receiving lymph from adjacent structures. **no'di lymphat'ici tracheobronchia'les superio'res** [NA], superior tracheobronchial lymph nodes: nodes between the trachea and the bronchus on either side, receiving lymph from the adjacent structures. **n. sinuatria'lis** [NA], a microscopic collection of atypical cardiac muscle fibers (Purkinje's fibers) at the superior end of the sulcus terminalis, at the junction of the superior vena cava and the right atrium. See *sinoatrial node*, under *node*.

noematachograph (no-e'mah-tak'o-graf) [Gr. *noēma* thought + *tachys* swift + *graphein* to write] a device for registering the time required in a mental operation.

noematachometer (no-e'mah-tah-kom'ē-ter) [Gr. *noēma* thought + *tachys* swift + *metron* measure] a device for measuring the time required in a mental operation.

noematic (no'e-mat'ik) pertaining to thought or the operation of the mind.

noesis (no-e'sis) [Gr. *noēsis* thought] the operation of the intellect; cognition.

noetic (no-et'ik) pertaining to the intellect or to cognition.

noeud (nuh) [Fr.] knot, or node. **n. vital** (nuh-ve-tal') ["vital node"], an old term applied to the respiratory centers.

nogalamycin (no-gal-ah-mi'sin) an antineoplastic antibiotic produced by a variant of *Streptomyces nogalater*.

Noguchi's culture medium, leutin reaction, reagent, test (no-goo'chēz) [Hideyo *Noguchi*, Japanese pathologist in New York, 1876–1928] see *tissue culture medium*, under *culture medium*, and see under *reaction, reagent, and tests*.

Noguchia (no-goo'che-ah) [Hideyo *Noguchi*] a genus of microorganisms of the family Brucellaceae, order Eubacteriales, made up of small, gram-negative rods, motile by means of peritrichous flagella, and found in the conjunctiva of man and animals having a follicular type of disease. **N. cuni'culi**, an organism that is said to be the cause of conjunctival folliculosis in rabbits. **N. granulo'sis**, an organism which at one time was thought to be the etiologic agent of trachoma. **N. si'miae**, an organism that is said to be the cause of conjunctival folliculosis in monkeys.

noli-me-tangere (no'li-me-tan'jer-e) [L. "touch me not"] a term believed to have been originally applied by the Romans to the ulcerative form of lupus, because of the unfortunate effects of certain types of treatment; frequently applied to different types of destructive lesions of the skin.

nolinium bromide (no-lin'e-um) chemical name: 2-[(3,4-dichlorophenyl)amino]quinolinizinium bromide; an antisecretory and antiulcerative, C₁₅H₁₁BrCl₂N₂.

Noludar (nol'u-dar) trademark for preparations of methypyrilone.

Nolvadex (nol'vah-deks) trademark for a preparation of tamoxifen.

noma (no'mah) [Gr. *nomai* eating sores] gangrene processes of the mouth (gangrenous stomatitis or cancrum oris) or genitalia (noma pudendi, noma vulvae, or phlegmonous vulvitis). In the mouth, it begins as a small gingival ulcer and results in gangrenous necrosis of surrounding facial tissues. On the genitalia, it involves first one labium majus and then the other.

nomadic (no-mad'ik) wandering; unsettled; free.

nomenclature (no'men-kla'tūr, no-men'kla'tūr) [L. *nomen* name + *calare* to call] a classified system of names, as of anatomical structures, organisms, etc. See *Nomina Anatomica*. **binomial n.**, the Linnean system of designating plants and animals by two latinized words signifying the genus and species.

nomifensine maleate (no'mī-fen'sēn) chemical name: 1,2,3,4-tetrahydro-2-methyl-4-phenyl-8-isoquinolinamine (Z)-2-butenedioate (1:1). A central nervous system stimulant, C₁₈H₁₈N₂·C₄H₄O₄, used as an antidepressant.

Nomina Anatomica (no'mī-nah an-ah-tom'i-kah) [L. "anatomical names"] the official body of anatomical nomenclature, applied specifically to that revised by the International Anatomical Nomenclature Committee appointed by the Fifth International Congress of Anatomists held at Oxford in 1950, and approved by the Sixth, Seventh, and Eighth International Congresses of Anatomists held in Paris, 1955, New York, 1960, and Wiesbaden, 1965. Abbreviated NA.

nomo- (no'mo) [Gr. *nomos* law] a combining form denoting relationship to usage or law.

nomogenesis (no'mo-jen'ē-sis) [*nomo-* + Gr. *genesis* generation] the theory of evolution according to which the course of evolution is fixed and predetermined by law, no place being left for chance.

nomogram (nom'o-gram) [*nomo-* + Gr. *gramma* mark] the graphic representation produced in nomography; a chart or diagram on which a number of variables are plotted, forming a

computation chart for the solution of complex numerical formulae.

nomography (no-mog'rah-fe) [*nomo-* + Gr. *graphein* to write] a graphic method by which the relation between any number of variables may be represented graphically on a plane surface, such as a piece of paper.

nomotopic (no'mo-top'ik) [*nomo-* + Gr. *topos* place] occurring at a normal place; occurring normally.

nona (no'nah) a condition resembling lethargic encephalitis which appeared in epidemic form in southern Europe in 1889-1890.

nonacosane (non'ah-ko'sān) an aliphatic hydrocarbon, $C_{29}H_{60}$, extracted from plant waxes.

nonadherent (non'ad-he'rent) not adherent to or connected with adjacent structures.

nonan (no'nan) [*L. nonus* ninth] recurring every ninth day, or at intervals of eight days.

nonantigenic (non'an-ti-jen'ik) not eliciting an immune response (antibody formation or cell-mediated immunity); without antigenic effect, attributable to either the physical and chemical nature of the antigen or the genetically determined ability of the host to respond.

nonapeptide (non'ah-pep'tid) a peptide containing nine amino acids.

non compos mentis (non kom'pos men'tis) [*L.*] not of sound mind.

nonconductor (non'kon-duk'tor) any substance that does not readily transmit electricity, light, or heat.

nondepolarizer (non'de-po'lar-iz'er) a muscle relaxant that produces striate muscle paralysis by competitive interference with the transmission of nerve impulses from nerve ending to muscle receptor.

nondisjunction (non'dis-junk'shun) failure (a) of two homologous chromosomes to pass to separate cells during the first division of meiosis, or (b) of the two chromatids of a chromosome to pass to separate cells during mitosis or during the second meiotic division. As a result, one daughter cell has two chromosomes or two chromatids, and the other has none.

nonelectrolyte (non'e-lek'tro-lit) a substance which in solution is a nonconductor of electricity.

nonheme (non-hēm) not bound within a porphyrin ring; said of iron so contained within a protein.

nonhomogeneity (non-ho'mo-jē-ne'i-te) the lack of homogeneity; the state of not being homogeneous.

nonigravida (no'ne-grav'i-dah) [*L. nonus* ninth + *gravida* pregnant] a woman pregnant for the ninth time. Written *gravida IX*.

noninfectious (non'in-fek'shus) not infectious; not spread by contact, inhalation, etc.; not able to spread disease.

noninvolution (non'in-vo-lu'shun) failure of a part to return to normal size and condition after enlargement from functional activity, as noninvolution of the uterus after pregnancy.

nonipara (no-nip'ah-rah) [*L. nonus* ninth + *parere* to bring forth, produce] a woman who has had nine pregnancies which resulted in viable offspring. Written *para IX*.

nonmedullated (non-med'u-lāt'ed) unmyelinated.

nonmetal (non-met'al) any chemical element that is not a metal or a metalloid.

nonmyelinated (non-mi'ē-lī-nāt'ed) unmyelinated.

Nonne's syndrome, test (non'ez) [Max Nonne, Hamburg neurologist, 1861-1959] see *hereditary cerebellar ataxia*, and see *Ross-Jones test*, under *tests*.

Nonne-Apelt reaction (phase, test) (non'ē-ah'pelt) [Max Nonne; F. Apelt, German physician, 1877-1911] see under *reaction*.

Nonne-Milroy-Meige syndrome (non'e-mil'roy-mehzh'e) [Max Nonne; William Forsyth Milroy, American physician, 1855-1942; Henri Meige, French physician, 1866-1940] Milroy's disease.

non-neuronal (non'nu-ro'nal) pertaining to or composed of nonconducting cells of the nervous system, e.g., neuroglial cells.

non-nucleated (non-nu'kle-āt'ed) without a nucleus; cf. *anuclear*.

nonocclusion (non'ō-kloo'zhun) open bite malocclusion.

nonoliguric (non-ol'ig-u'rik) not pertaining to, characterized by, or conducive to oliguria.

nononcogenic (non'on-ko-jen'ik) not giving rise to tumors or causing tumor formation.

nonopaque (non'o-pāk') not opaque to the roentgen ray.

nonose (non'ōs) [*L. nonus* ninth] a carbohydrate containing nine atoms of carbon in the molecule.

nonoxynol (no-noks'i-nōl) nonylphenoxypolyethoxyethanol. A group of compounds of the general composition $C_{15}H_{24}O(C_2H_4-O)_n$, which are assigned numbers according to the approximate value of *n*: *nonoxynol 4* is $C_{15}H_{24}O(C_2H_4O)_4$, or $C_{23}H_{40}O_5$; *nonoxynol 9* is $C_{33}H_{60}O_{10}$; *nonoxynol 15* is $C_{45}H_{84}O_{16}$; *nonoxynol 30* is

$C_{75}H_{144}O_{31}$. *Nonoxynol 4*, *15*, and *30* are nonionic surfactants, and *nonoxynol 9* is used as a spermicide. *Nonoxynol 10* [NF], in which *n* varies from 6 to 16, is used as a pharmaceutical surfactant.

nonparous (non-par'us) nulliparous.

nonphotochromogen (non'fo-to-kro'mo-jen) a microorganism which is not conspicuously affected in color by exposure to light; specifically a member of Group III of the so-called "anonymus" or "unclassified" mycobacteria, e.g., *Battley bacilli*.

nonpolar (non-po'lar) not having poles; not exhibiting dipole characteristics.

nonradiable (non-ra'de-ah-b'l) impervious to rays, such as roentgen rays, cathode rays, etc.

non repetat. abbreviation for *L. non repeta'tur*, do not repeat.

nonrotation (non'ro-ta'shun) [*non-* + *L. rotare* to turn] failure of rotation of a part to the proper position. **n. of the intestine**, failure of rotation of the intestine during embryonic development, with the result that the small intestine lies on the right side of the abdomen and the large intestine on the left.

nonsecretor (non'se-kre'tor) an individual possessing A or B type blood whose saliva and other body secretions do not contain the particular (A or B) substance.

nonseptate (non-sep'tāt) without a septum or septa.

nonspecific (non-spē-sif'ik) 1. not due to any single known cause, as to a particular pathogen. 2. not directed against a particular agent, but rather having a general effect, as nonspecific therapy.

nontaster (non-tās'ter) an individual incapable of tasting a particular test substance, such as phenylthiocarbamide, used in certain genetic studies.

nonunion (non-ūn'yun) failure of the ends of a fractured bone to unite.

nonus (no'nus) [*L. "ninth"*] (*obs.*) the hypoglossal nerve (*nervus hypoglossus* [NA]); so called because formerly regarded as the ninth cranial nerve.

nonvalent (non-va'lent) [*L. non* not + *valere* to be able] having no chemical valency; not capable of entering into chemical composition; said of argon, helium, and the other inert gases.

nonviable (non-vi'ah-b'l) [*L. non* not + *viable*] not capable of living.

nonyl (no'nil) the monovalent radical C_9H_{19} .

noopsyche (no'o-si'ke) [*Gr. nous* mind + *psychē* soul] the intellectual processes of the mind.

Noorden treatment (noor'den) [Carl Harko von Noorden, German physician, 1858-1944] oatmeal treatment.

noothymopyschic (no'o-thi'mo-si'kik) pertaining to the intellectual and the affective processes of the mind.

nopalin G (no'pal-in) bluish eosin; see under *eosin*.

N.O.P.H.N. National Organization for Public Health Nursing.

nor- chemical prefix denoting (a) a compound (e.g., norleucine) of normal structure (having an unbranched chain of carbon atoms) that is isomeric with one (e.g., leucine) having a branched chain, or (b) a compound (e.g., norepinephrine) whose chain or ring contains one less methylene (CH_2) group than does that of its homologue (e.g., epinephrine).

noradrenalin (nor'ah-dren'ah-lin) norepinephrine.

noradrenergic (nor'ah-dren-er'jik) activated by or secreting norepinephrine.

noramidopyrine (nor-am'i-do-pi'rēn) dipyrone.

norandrosthenolone (nor-an'dro-sten'o-lōn) nandrolone.

Nordau's disease (nor'dowz) [Max Simon Nordau, German scientist, 1849-1923] degeneracy.

nordauism (nor-dow'izm) [named for M. S. Nordau] degeneracy.

nordefrin hydrochloride (nor-def'rin) chemical name: 4-(2-amino-1-hydroxypropyl)-1,2-benzenediol hydrochloride. An adrenergic agent isomeric with epinephrine, $C_9H_{13}NO_3$, having significant central stimulant action and almost no vasoconstrictor action; the levo-isomer, *levodefrin* (q.v.), is usually used when vasoconstriction is desired. Called also *homoarterenol hydrochloride*.

norepinephrine (nor'ep-i-nef'rin) one of the naturally occurring catecholamines; a neurohormone released by the postganglionic adrenergic nerves, which is the principal neurotransmitter of adrenergic neurons, having predominately α -adrenergic but some β -adrenergic activity. It is also secreted by the adrenal medulla in response to splanchnic stimulation and is stored in the chromaffin granules, being released predominately in response to hypotension. Norepinephrine is a powerful vasopressor and is used in the form of the bitartrate salt. Called also *arterenol* and *noradrenalin*. **n. bitartrate** [USP], the bitartrate salt of norepinephrine, $C_9H_{11}NO_3 \cdot C_4H_6O_6 \cdot H_2O$, occurring as a white or faintly gray, crystalline powder, having the vasoconstrictor actions of the parent compound; used to restore the blood pressure in certain cases of acute hypotension, and as an adjunct in the treatment of cardiac arrest and profound hypotension, administered by intravenous infusion. Called also *levarterenol bitartrate*.

norethandrolone (nor-'eth-an-'dro-lōn) [NF] chemical name: 17-hydroxy-19-nor-17 α -pregn-4-en-3-one. A synthetic androgen, $C_{20}H_{30}O_2$, equal to testosterone in anabolic activity, but having less androgenic activity.

norethindrone (nor-'eth-'in-'drōn) [USP] chemical name: 17 β -hydroxy-19-nor-17 α -pregn-4-en-20-yn-3-one. A progestin, $C_{20}H_{28}O_2$, occurring as a white to creamy white, crystalline powder, having some anabolic, estrogenic, and androgenic properties; used in the treatment of amenorrhea, abnormal uterine bleeding due to hormonal imbalance, and endometriosis, administered orally. Also used, alone or in combination with an estrogen component, as an oral contraceptive. **n. acetate** [NF], the acetate salt of norethindrone, $C_{22}H_{28}O_3$, having the same appearance, actions, uses, and route of administration as the base.

norethisterone (nor-'eth-'is-'ter-ōn) norethindrone.

norethynodrel (nor-'ē-'thi-'no-'drel) [USP] chemical name: 17-hydroxy-19-nor-17 α -pregn-5(10)-en-20-yn-3-one. A progestin, $C_{20}H_{28}O_2$, occurring as a white or nearly white, crystalline powder; used in combination with an estrogen component as an oral contraceptive, to control endometriosis, for the treatment of hypermenorrhea, to produce cyclic withdrawal bleeding, and to produce amenorrhea for medical or sociological reasons.

Norflex (nor-'fleks) trademark for a preparation of orphenadrine citrate.

norflurane (nor-'floor-'ān) chemical name: 1,1,1,2-tetrafluoroethane; an inhalation anesthetic, $C_2H_2F_4$.

norgestimate (nor-'jes-'ti-'māt) chemical name: (+)-17-(acetyloxy)-13-ethyl-18,19-dinor-17 α -pregn-4-en-20-yn-3-one oxime; a progestin, $C_{23}H_{34}NO_3$.

norgestomet (nor-'jes-'to-'met) chemical name: 17-(acetyloxy)-11 β -methyl-19-norpregn-4-ene-3,20-dione; a progestin, $C_{23}H_{32}O_4$.

norgestrel (nor-'jes-'trel) [USP] chemical name: (+)-13 β -ethyl-17-hydroxy-18,19-dinor-17 α -pregn-4-en-20-yn-3-one. A potent progestin, $C_{23}H_{34}O_2$, occurring as a white or nearly white, crystalline powder; used in combination with an estrogen component as an oral contraceptive.

norhyoscyamine (nor-'hi-'o-'si-'ah-'mēn) chemical name: 1-tropic acid 3 α -nortropanyl ester. An alkaloid, $C_{18}H_{21}NO_3$, from plants of the family Solanaceae, having properties like those of hyoscyamine. Called also *pseudohyoscyamine* and *solandrine*.

Norisodrine (nor-'i-'so-'drin) trademark for preparations of isoproterenol.

norleucine (nor-'lu-'sin) chemical name: 2-aminohexanoic acid. A nonessential amino acid, $CH_3(CH_2)_3CH(NH_2)COOH$, extracted from the leucine fraction of the decomposition of the proteins of nervous tissue. It has been synthesized.

Norlutate (nor-'lu-'tāt) trademark for a preparation of norethindrone acetate.

Norlutin (nor-'lu-'tin) trademark for a preparation of norethindrone.

norm (norm) [L. *norma* rule] a fixed or ideal standard.

norma (nor-'mah) [L.] an outline established to define the aspects of the cranium; also a norm or typical standard. **n. anterior**, norma frontalis. **n. basilaris**, the outline of the inferior aspect of the skull. **n. facialis**, norma frontalis. **n. frontalis**, the outline of the skull viewed from the front. **n. inferior**, norma basilaris. **n. lateralis**, the outline of the skull seen from either side. **n. occipitalis**, the outline of the skull seen from behind. **n. posterior**, norma occipitalis. **n. sagittalis**, the outline of a sagittal section through the skull. **n. superior**, norma verticalis. **n. tempora**, norma lateralis. **n. ventralis**, the outline of the inferior aspect of the skull. **n. verticalis**, the outline of the skull viewed from above.

normal (nor-'mal) [L. *norma* rule] 1. agreeing with the regular and established type. 2. in chemistry, (a) denoting a solution containing in each 1000 ml. 1 gram equivalent weight of the active substance; (b) denoting aliphatic hydrocarbons in which no carbon atom is combined with more than two other carbon atoms; (c) denoting salts formed from acids and bases in such a way that no acidic hydrogen of the acid remains nor any of the basic hydroxyl of the base. Abbreviated N, n. 3. in bacteriology, not immunized or otherwise bacteriologically treated.

normality (nor-'mal-'i-'te) 1. the state of being normal. 2. the number of gram-equivalent weights of solute per liter of solution.

normalization (nor-'mal-'i-'za-'shun) the process of bringing or restoring to the normal standard.

normergic (norm-'er-'jik) [norm- + Gr. *ergon* work] reacting in a normal manner.

normetanephine (nor-'met-'ah-'nef-'rin) α -(aminomethyl)-vanillyl alcohol (3-methylnorepinephrine): a metabolite of epinephrine excreted in the urine and found in certain tissues.

normo- (nor-'mo) [L. *norma* rule] a combining form meaning conforming to the rule; normal or usual.

normoblast (nor-'mo-'blast) [normo- + Gr. *blastos* germ] a nucleated precursor cell in the erythrocyte series; four developmental stages are recognized: the pronormoblast and the basophilic, polychromatic, and orthochromatic normoblasts. **acidophilic**

n., orthochromatic n. **basophilic n.**, a nucleated immature erythrocyte. The cytoplasm in general is similar to that of the earlier pronormoblast but may be even more basophilic, and is usually regular in outline. The nucleus is still relatively large, but the chromatin strands are thicker and more deeply staining, giving a coarser appearance; the nucleoli have disappeared. Called also *prorubricyte*, *early normoblast*, and *early basophilic erythroblast*. **early n.**, basophilic n. **eosinophilic n.**, orthochromatic n. **intermediate n.**, polychromatic n. **late n.**, orthochromatic n. **orthochromatic n.**, the final stage of the nucleated, immature erythrocyte, before nuclear loss. Typically the cytoplasm is described as acidophilic, but it still shows a faint polychromatic tint. The nucleus is small and initially may still have very coarse, clumped chromatin, as in its precursor, the polychromatic normoblast, but ultimately it becomes pyknotic, and appears as a deeply staining, blue-black, homogeneous structureless mass. The nucleus is often eccentric and is sometimes lobulated. Called also *late*, *acidophilic*, *oxyphilic*, or *eosinophilic normoblast*; *late*, *orthochromatic*, *acidophilic*, *oxyphilic*, or *eosinophilic erythroblast*; and *metarubricyte*. **oxyphilic n.**, orthochromatic n. **polychromatic n.**, a nucleated, immature erythrocyte in which the nucleus occupies a relatively smaller part of the cell than in its precursor, the basophilic normoblast. The cytoplasm is beginning to acquire hemoglobin and thus is no longer a purely blue color, but takes on an acidophilic tint, which becomes progressively more marked as the cell matures. The chromatin of the nucleus is arranged in coarse, deeply staining clumps. Called also *intermediate n.*, *intermediate* or *polychromatic erythroblast*, and *rubricyte*.

normoblastic (nor-'mo-'blas-'tik) relating to or having the character of a normoblast.

normoblastosis (nor-'mo-'blas-'to-'sis) excessive production of normoblasts by the bone marrow.

normocalcemia (nor-'mo-'kal-'se-'me-'ah) a normal level of calcium in the blood.

normocalcemic (nor-'mo-'kal-'se-'mik) pertaining to or characterized by normocalcemia.

normocapnia (nor-'mo-'kap-'ne-'ah) a normal tension of carbon dioxide in the blood.

normocapnic (nor-'mo-'kap-'nik) pertaining to or characterized by normocapnia.

normocholesterolemia (nor-'mo-'ko-'les-'ter-'o-'le-'me-'ah) a normal level of cholesterol in the blood.

normocholesterolemic (nor-'mo-'ko-'les-'ter-'o-'le-'mik) pertaining to, characterized by, or tending to produce a normal level of cholesterol in the blood.

normochromasia (nor-'mo-'kro-'ma-'ze-'ah) [normo- + Gr. *chrōma* color] 1. a normal staining reaction in a cell or tissue. 2. normal color of the red blood cells.

normochromia (nor-'mo-'kro-'me-'ah) normal color of the red blood cells.

normochromic (nor-'mo-'kro-'mik) having a normal color; having a normal hemoglobin content.

normocrinic (nor-'mo-'krin-'ik) pertaining to normal secretion or to normal endocrine action.

normocyte (nor-'mo-'sit) [normo- + -cyte] an erythrocyte that is normal in size, shape, and color.

normocytic (nor-'mo-'sit-'ik) relating to or having the character of a normocyte.

Normocytin (nor-'mo-'si-'tin) trademark for preparations of concentrated crystalline vitamin B₁₂. See *cyanocobalamin*.

normocytosis (nor-'mo-'si-'to-'sis) a normal state of the blood in respect to the erythrocytes.

normoerythrocyte (nor-'mo-'ē-'rith-'ro-'sit) normocyte.

normoglycemia (nor-'mo-'gli-'se-'me-'ah) the state of having the level of glucose in the blood within the normal range.

normoglycemic (nor-'mo-'gli-'se-'mik) pertaining to, characterized by, or conducive to normoglycemia.

normokalemia (nor-'mo-'kah-'le-'me-'ah) a normal level of potassium in the blood.

normokalemic (nor-'mo-'kah-'le-'mik) pertaining to, characterized by, or conducive to normokalemia.

normolineal (nor-'mo-'lin-'e-'al) built on normal lines.

normomastic (nor-'mo-'mas-'tik) see *Kafka's test*, under *tests*.

normo-orthocytosis (nor-'mo-'or-'tho-'si-'to-'sis) [normo- + Gr. *orthos* correct + -cyte + -osis] a condition of the blood leukocytes in which the total number is increased, but the proportion between the different varieties remains normal.

normosexual (nor-'mo-'seks-'u-'al) having normal sexuality.

normoskeocytosis (nor-'mo-'ske-'o-'si-'to-'sis) [normo- + Gr. *skaios* left + -cyte + -osis] a condition of the leukocytes of the blood in which the number is normal, but many immature forms (deviation to the left) are present.

normospermic (nor-'mo-'sper-'mik) producing spermatozoa normal in number and motility.

normosthenuria (nor-'mo-'sthen-'u-'re-'ah) [normo- + Gr. *sthenos* strength + *ouron* urine + -ia] 1. the secretion of urine of vary-

ing specific gravity within the normal range. 2. normally active urination.

normotension (nor''mo-ten'shun) normal tone, tension, or pressure.

normotensive (nor''mo-ten'siv) 1. characterized by normal tone, tension, or pressure, as by normal blood pressure. 2. a person with normal blood pressure.

normothermia (nor''mo-ther'me-ah) [*normo-* + Gr. *thermē* heat + *-ia*] a normal state of temperature, especially (a) normal body temperature (98.6° F.), or (b) that state of normal environmental temperature at which there is neither stimulation nor depression of the activity of the body cells (Herrmann).

normothermic (nor''mo-ther'mik) pertaining to or characterized by normal temperature; neither hyperthermic nor hypothermic.

normotonia (nor''mo-to'ne-ah) normal tone or tension.

normotonic (nor''mo-ton'ik) pertaining to or characterized by normotonia.

normotopia (nor''mo-to'pe-ah) [*normo-* + Gr. *topos* place + *-ia*] (*obs.*) normal location.

normotopic (nor''mo-top'ik) (*obs.*) normally located.

normotrophic (nor''mo-trof'ik) of normal development; exhibiting neither hypertrophy nor hypotrophy.

normouricemia (nor''mo-u'rī-se'me-ah) a normal value of uric acid in the blood.

normouricemic (nor''mo-u'rī-se'mik) pertaining to or characterized by normouricemia.

normouricuria (nor''mo-u'rī-ku're-ah) a normal amount of uric acid in the urine.

normouricuric (nor''mo-u'rī-ku'rik) pertaining to or characterized by normouricuria.

normovolemia (nor''mo-vo-le'me-ah) [*normo-* + *volume* + Gr. *haima* blood + *-ia*] normal blood volume.

normovolemic (nor''mo-vo-le'mik) pertaining to or characterized by normovolemia; having a normal volume of circulating fluid (plasma) in the body.

Norodin (nor'o-din) trademark for a preparation of methamphetamine hydrochloride.

Norpac (nor'pās) trademark for a preparation of disopyramide phosphate.

Norpramin (nor'pram-in) trademark for a preparation of desipramine hydrochloride.

norpseudoephedrine (nor-su'do-ē-fed'rēn) a nervous system stimulant, C₉H₁₃NO, from the leaves of the shrub *Catha edulis*.

Norris' corpuscles (nor'is-ez) [Richard Norris, English physician, 1831-1916] see under *corpuscle*.

norsulfazole (nor-sul'fah-zōl) sulfathiazole.

Northrop (north'rup), John Howard. An American chemist (born 1891), co-winner, with J. B. Sumner and W. M. Stanley, of the Nobel prize in chemistry for 1946, for pioneering work in crystallizing protein.

nortriptyline hydrochloride (nor-trip'ti-lēn) [USP] chemical name: 3-(10,11-dihydro-5H-dibenzo[*a,d*]cyclohepten-5-ylidene)-N-methyl-1-propanamine hydrochloride. An antidepressant, C₁₉H₂₁N·HCl, occurring as a white to off-white powder; administered orally.

nortropinon (nor'trop'pi-non) a solid, fusible ketone, C₈H₁₁NO, derived from tropin.

nosazontology (nos-az'on-tol'o-je) nosetiology.

noscapine (nos'kah-pēn) chemical name: (S)-6,7-dimethoxy-3-(5,6,7,8-tetrahydro-4-methoxy-6-methyl-1,3-dioxolo[4,5-*g*]isoquinolin-5-yl)-1(3H)-isobenzofuranone. An alkaloid of opium, C₂₂H₂₃NO₇, occurring as a white to nearly white, crystalline powder; used as an antitussive, administered orally. **n. hydrochloride**, the hydrochloride salt of noscapine, C₂₂H₂₃NO₇·HCl, having the same appearance, actions, uses, and route of administration as the base.

nose (nōz) [L. *nasus*; Gr. *rhis*] the specialized structure of the face that serves as an organ of the sense of smell and as part of the respiratory apparatus. The receptor cells for the sense of smell (olfactory cells) lie in the olfactory membrane, in the superior portion of each nostril. In its respiratory function, the nose serves to warm the inspired air as it passes along the surfaces of the septum and turbinate bones and to moisten and filter the air. Called also *nasus* [NA]. **brandy n.**, rosacea. **cleft n.**, a developmental anomaly resulting from incomplete union of the paired nasal primordia. **external n.**, *nasus externus*. **hammer n.**, rhinophyma. **potato n.**, rhinophyma. **saddle n.**, **saddle-back n.**, **swayback n.**, concavity of the contour of the bridge of the nose due to collapse of cartilaginous or bony support, or both; it was once most often due to congenital syphilis, but is now more commonly the result of congenital epidermal defect or of leprosy.

nosebrain (nōz'brān) (*obs.*) rhinencephalon, def. 1.

nosegay (nōz'ga) a name applied to an anatomical structure resembling a small bunch of flowers. **Riolan's n.**, the group of

muscles that take their origin from the styloid process of the temporal bone.

Nosema (no-se'mah) a genus of sporozoan parasites of the order Microsporidia. *N. apis* causes the nosema disease of bees. *N. bombycis* causes the disease pébrine in silkworms. **N. cuniculi**, the causative agent of spontaneous encephalomyelitis of the rabbit; it is found in intracellular cysts as well as free in the brain, kidney, and other organs.

nosema (no-se'mah), pl. *nosemas* or *nosemata* [Gr. *nosēma* a sickness] (*obs.*) any illness or disease.

nosematosis (no-se'mah-to'sis) infection with *Nosema*.

nosencephalus (no'sen-sef'ah-lus) [*noso-* + Gr. *enkephalos* brain] a fetus with a defective cranium and brain.

nosepiece (nōz'pēs) the portion of a microscope nearest to the stage, which bears the objective or objectives, constructed so as to permit change of the objective without disturbing the focus of the instrument. **quick-change n.**, one bearing a single objective, which may be quickly attached to or removed from a microscope. **rotating n.**, one bearing more than one objective, designed to permit the one selected to be rotated into place, with its axis coincident with the optical axis of the microscope.

nosetiology (nos'e-te-ol'o-je) [*noso-* + Gr. *aitia* cause + *-logy*] the study of the causation of disease.

nosiheptide (no'sī-hep'tid) a veterinary growth stimulant, C₅₁-H₄₃N₁₃O₁₂S₆.

noso- (nos'o) [Gr. *nosos* disease] a combining form denoting relationship to disease.

nosochthonography (nos'ok-tho-nog'rah-fe) [*noso-* + Gr. *chthōn* land + *graphein* to write] the geography of epidemic or other diseases; the study of the geographical distribution of diseases; nosogeography.

nosocomial (nos'o-ko'me-al) [Gr. *nosokomeion* from *nosos* disease + *komeion* to take care of] pertaining to or originating in a hospital, as nosocomial disease.

nosocomium (nos'o-ko'me-um) [Gr. *nosokomeion*, from *nosos* disease + *komeion* to take care of] (*obs.*) a hospital or an infirmary.

nosode (nos'ōd) any disease product used as a remedy.

nosogenesis (nos'o-jen'ē-sis) pathogenesis.

nosogenic (nos'o-jen'ik) pathogenic.

nosogeny (no-soj'ē-ne) [*noso-* + Gr. *gennan* to produce] pathogenesis.

nosogeography (nos'o-je-og'rah-fe) [*noso-* + Gr. *gē* earth + *graphein* to write] nosochthonography.

nosographer (no-sog'rah-fer) a writer of nosography.

nosography (no-sog'rah-fe) [*noso-* + Gr. *graphein* to write] a written account or description of diseases.

nosointoxication (nos'o-in-tok'sī-ka'shun) intoxication by the harmful products of disease.

nosologic (nos'o-loj'ik) pertaining to the classification of disease.

nosological (nos'o-loj'e-kal) pertaining to nosology.

nosology (no-sol'o-je) [*noso-* + *-logy*] the science of the classification of diseases.

nosomania (nos'o-ma'ne-ah) [*noso-* + Gr. *mania* madness] the incorrect belief of a patient that he has some special disease; hypochondriasis.

nosometry (no-som'ē-tre) [*noso-* + Gr. *metron* measure] the measurement of the morbidity rate.

nosomycosis (nos'o-mi-ko'sis) [*noso-* + Gr. *mykēs* fungus] a disease caused by a fungus.

nosonomy (no-son'o-me) [*noso-* + Gr. *nomos* law] the classification of diseases.

nosoparasite (nos'o-par'ah-sīt) [*noso-* + *parasite*] an organism found in conjunction with a disease which it is able to modify, but not to produce.

nosophilia (nos'o-fil'e-ah) [*noso-* + Gr. *philein* to love] a morbid desire to be sick.

nosophobe (nos'o-fōb) a person who has an abnormal fear of some particular disease, such as cancer, venereal disease, appendicitis, etc.

nosophobia (nos'o-fō'be-ah) [*noso-* + *phobia*] morbid dread of sickness or of any special disease.

nosophyte (nos'o-fit) [*noso-* + Gr. *phyton* plant] a pathogenic plant microorganism.

nosopoietic (nos'o-poi-et'ik) [*noso-* + Gr. *poiein* to make] causing or producing disease.

Nosopsyllus (nos'o-sil'us) [*noso-* + Gr. *psylla* flea] a genus of fleas. **N. fasciatus**, the common rat flea of North America and Europe; it is a vector of murine typhus and probably of plague. Formerly called *Ceratophyllus fasciatus*.

nosotaxy (nos'o-tak'se) [*noso-* + Gr. *taxis* arrangement] the classification of disease.

nosotherapy (nos'o-ther'ah-pe) the treatment of one disease by means of another, as in malaria therapy.

nosotoxic (nos''o-tok'sik) producing nosotoxicosis.

nosotoxicity (nos''o-tok-sis'i-te) the quality of being nosotoxic.

nosotoxicosis (nos''o-tok'si-ko'sis) [*noso-* + *toxicosis*] any disease due to or associated with poisoning.

nosotoxin (nos''o-tok'sin) [*noso-* + *toxin*] any toxin causing or associated with disease.

nosotrophy (no-sot'ro-fe) [*noso-* + Gr. *trophē* nourishment] the care and nursing of the sick.

nosotropic (no'so-trop'ik) [*noso-* + Gr. *tropos* a turning] directed against or opposed to a disease.

nostalgia (nos-tal'je-ah) [Gr. *nostein* to return home + *-algia*] homesickness; longing to return home or to one's native land.

nostology (nos-tol'o-je) [Gr. *nostein* to return home + *-logy*] (*obs.*) gerontology.

nostomania (nos'to-ma'ne-ah) [Gr. *nostein* to return home + *mania* madness] intense nostalgia.

nostril (nos'tril) one of the external orifices of the nose; called also *anterior* or *external naris*. See *nares*.

nostrum (nos'trum) [L.] a quack, patent, or secret remedy.

Nostyn (nos'tin) trademark for a preparation of ectylurea.

notalgia (no-tal'je-ah) [Gr. *nōton* back + *-algia*] pain in the back; dorsalgia.

notancephalia (no'tan-sē-fa'le-ah) [Gr. *nōton* + *an* neg. + *kephalē* head + *-ia*] congenital absence of the back of the skull.

notancephalia (no'tan-sē-fa'le-ah) [Gr. *nōton* back + *an* neg. + *enkephalos* brain + *-ia*] absence of the cerebellum.

notatin (nō'tā-tin) glucose oxidase.

N.O.T.B. National Ophthalmic Treatment Board (British).

notch (noch) an indentation or depression, especially one on the edge of a bone or other organ. See also *incisura*. **acetabular n.**, incisura acetabuli. **aortic n.**, dicrotic n. **auricular n.**, incisura anterior auri. **cardiac n. of left lung**, incisura cardiaca pulmonis sinistri. **cardiac n. of stomach**, incisura cardiaca ventriculi. **cerebellar n., anterior**, incisura cerebelli anterior. **cerebellar n., posterior**, incisura cerebelli posterior. **clavicular n. of sternum**, incisura claviculæ sterni. **coracoid n.**, incisura scapulae. **costal n's of sternum**, incisurae costales sterni. **cotyloid n.**, incisura acetabuli. **dicrotic n.**, a small downward deflection in the arterial pulse or pressure contour immediately following the closure of the semilunar valves, sometimes used as a marker for the end of systole or the ejection period. **ethmoidal n. of frontal bone**, incisura ethmoidalis ossis frontalis. **fibular n.**, incisura fibularis tibiae. **frontal n.**, incisura frontalis. **n. of gallbladder**, fossa vesicae felleae. **gastric n.**, incisura angularis ventriculi. **interarytenoid n.**, incisura interarytenoidea laryngis. **interclavicular n.**, incisura jugularis sterni. **interclavicular n. of occipital bone**, incisura jugularis ossis occipitalis. **interclavicular n. of temporal bone**, incisura jugularis ossis temporalis. **intercondylar n. of femur**, fossa intercondylaris femoris. **interlobar n.**, incisura ligamenti teretis. **intertragic n.**, incisura intertragica. **intervertebral n.**, see *incisura vertebralis inferior* and *incisura vertebralis superior*. **ischiatric n., greater**, incisura ischiadica major. **ischiatric n., lesser**, incisura ischiadica minor. **jugal n. of occipital bone**, incisura jugularis ossis occipitalis. **jugal n. of sternum**, incisura jugularis sterni. **jugal n. of temporal bone**, incisura jugularis ossis temporalis. **lacrimal n. of maxilla**, incisura lacrimalis maxillae. **n. of ligamentum teres**, incisura ligamenti teretis. **mandibular n.**, incisura mandibulae. **marsupial n.**, incisura cerebelli posterior. **mastoid n.**, incisura mastoidea ossis temporalis. **nasal n. of maxilla**, incisura nasalis maxillae. **palatine n.**, fissura pterygoidea. **palatine n. of palatine bone**, incisura sphenopalatina ossis palatini. **pancreatic n.**, incisura pancreatis. **parietal n. of temporal bone**, incisura parietalis ossis temporalis. **parotid n.**, the notch between the ramus of the mandible and the mastoid process of the temporal bone. **popliteal n.**, fossa intercondylaris femoris. **preoccipital n.**, incisura preoccipitalis. **presternal n.**, incisura jugularis sterni. **pterygoid n.**, fissura pterygoidea. **radial n., radial n. of ulna**, incisura radialis ulnae. **rivian n., n. of Rivinus**, incisura tympanica. **sacrosciatic n., greater**, incisura ischiadica major. **sacrosciatic n., lesser**, incisura ischiadica minor. **scapular n.**, incisura scapulae. **sciatic n., greater**, incisura ischiadica major. **sciatic n., lesser**, incisura ischiadica minor. **semilunar n. of mandible**, incisura mandibulae. **semilunar n. of scapula**, incisura scapulae. **Sibson's n.**, an inward bend of the left upward limit of precordial dullness in acute pericardial effusion. **sigmoid n.**, incisura mandibulae. **sphenopalatine n. of palatine bone**, incisura sphenopalatina ossis palatini. **sternal n.**, incisura jugularis sterni. **supraorbital n.**, 1. incisura supraorbitalis. 2. incisura frontalis. **suprascapular n.**, incisura scapulae. **suprasternal n.**, incisura jugularis sterni. **tentorial n.**, incisura tentorii cerebelli. **thyroid n., inferior**, incisura thyroidea inferior. **thyroid n., superior**, incisura thyroidea superior. **trigeminal n.**, a notch in the superior border of the petrosal portion of the temporal

bone, near the apex, for transmission of the trigeminal nerve. **trochlear n. of ulna**, incisura trochlearis ulnae. **tympanic n.**, incisura tympanica. **ulnar n., ulnar n. of radius**, incisura ulnaris radii. **umbilical n.**, incisura ligamenti teretis. **vertebral n., inferior**, incisura vertebralis superior. **vertebral n., superior**, incisura vertebralis superior.

Notechis (no-tek'is) a genus of extremely venomous snakes of Australia. *N. scutatus* is the tiger snake.

notencephalocoele (no'ten-sē-fa'o-sēl') [*noto-* + Gr. *enkephalos* brain + *kēlē* hernia] hernial protrusion of the brain from the back of the head.

notencephalus (no'ten-sēf'ah-lus) [*noto-* + Gr. *enkephalos* brain] a monster affected with notencephalocoele.

Nothnagel's bodies, syndrome, type (nōt'nah-gelz) [Carl Wilhelm Hermann Nothnagel, German physician, 1841–1905] see under *body*, *syndrome*, and *acroparathesia*.

notifiable (no'ti-fi'ah-b'l) denoting that which should be made known; said of diseases that are required to be made known to the board of health.

noto- [Gr. *nōton* back] a combining form denoting relationship to the back.

notochord (no'to-kord) [*noto-* + Gr. *chordē* cord] the rod-shaped body, composed of cells derived from the mesoblast, below the primitive groove of the embryo, defining the primitive axis of the body; it is the common factor of all species of the phylum Chordata. It is the center of development of the axial skeleton. Called also *chorda dorsalis*.

notochordoma (no'to-kor-do'mah) chordoma.

Notoedres (no'to-ed'rēz) a genus of mites. **N. ca'ti**, an itch mite which causes a very persistent and often fatal mange in cats; it also infests domestic rabbits, and may temporarily infest man.

notogenesis (no'to-jen'ē-sis) [*noto-* + Gr. *gennan* to produce] the development of the notochord.

notomelus (no-tom'ē-lus) [*noto-* + Gr. *melos* limb] a fetus with accessory limbs on the back.

notomyelitis (no'to-mi'ē-li'tis) [*noto-* + *myelitis*] (*obs.*) inflammation of the spinal cord.

not-self (not'self) a term introduced by Burnet and Fenner to denote antigenic constituents foreign to the organism (self), which are eliminated through humoral or cell-mediated immunity.

notum (no'tum) [Gr. *nōton* the back] 1. the dorsal part of the body. 2. the dorsal element of each segment of an arthropod.

noumenal (nu'me-nal) pertaining to the noumenon; pertaining to rational intuition independent of sensory perception.

noumenon (nu'me-non) [Gr. *nooumenon* a thing thought] an object of intuition by the understanding independent of sensory perception.

nousic (noo'sik) [Gr. *nous* mind] pertaining to or affecting cerebration or the intellectual powers.

Novaldin (no-val'din) trademark for preparations of dipyrone.

novobiocin (no'vo-bi'o-sin) chemical name: *N*-[7-[[3-*O*-(aminocarbonyl)-5,5-di-*C*-methyl-4-*O*-methyl- α -L-lyxopyranosyl]-oxy]-4-hydroxy-8-methyl-2-oxo-2*H*-1-benzopyran-3-yl]-4-hydroxy-3-(3-methyl-2-butenyl)benzamide. An antibiotic, $C_{13}H_{36}N_2O_{11}$, obtained from *Streptomyces niveus* and other *Streptomyces* species, effective chiefly against staphylococci and other gram-positive organisms. **n. calcium**, the calcium salt of novobiocin, $C_{62}H_{70}CaN_4O_{22} \cdot 2H_2O$, occurring as a white or nearly white, crystalline powder, having the same actions as the base; used in the treatment of infections in children due to susceptible bacteria resistant to other antibiotics, administered orally. **n. sodium**, the sodium salt of novobiocin, $C_{31}H_{35}N_2NaO_{11}$, having the same appearance, actions, uses, and mode of administration as the calcium salt; usually used in adults.

Novocain (no'vo-kān) trademark for preparations of procaine hydrochloride.

novoscope (no'vo-skōp) [L. *novus* new + *scope*] Fornai's instrument for auscultatory percussion.

Novrad (nov'rad) trademark for preparations of levopropoxyphene napsylate.

Novy's rat disease (no'vēz) [Frederick George Novy, American bacteriologist, 1864–1957] see under *disease*.

noxa (nok'sah), pl. *nox'ae* [L. "harm"] an injurious agent, act, or influence.

noxious (nok'shus) [L. *noxius*] hurtful; not wholesome; pernicious; damaging to tissue.

Np chemical symbol for neptunium.

NPN nonprotein nitrogen.

N.R.C. normal retinal correspondence.

NREM non-rapid eye movements (see under *sleep*).

ns. nanosecond.

N.S.A. Neurosurgical Society of America.

N.S.C.C. National Society for Crippled Children.

nsec. nanosecond.

N.S.N.A. National Student Nurse Association.

N.S.P.B. National Society for the Prevention of Blindness.

N.T.A. National Tuberculosis Association.

N-terminal (ter'min-al) the amino (NH₂) end of a polypeptide chain, conventionally written to the left; called also *NH₂-terminal*.

N.T.P. normal temperature and pressure.

nu nanounit.

nubecula (nu-bek'u-lah) [L., dim. of *nubes* cloud] 1. a slight cloudiness of the cornea or of the urine; a nebula. 2. statoconia.

nubility (nu-bil'i-te) [L. *nubilitas*; from *nubere* to marry] marriageableness; fitness to marry; said of the female.

nucha (nu'kah) [L.] [NA] the nape, or scruff, or back of the neck.

nuchal (nu'kal) pertaining to the nucha, or back of the neck.

nucin (nu'sin) [L. *nux*, *nucis*, nut] juglandic acid.

nucis (nu'sis) [L.] genitive of *nux*.

Nuck's canal, diverticulum, hydrocele (nuks) [Anton Nuck, Dutch anatomist, 1650-1692] see *processus vaginalis peritonei* and *hydrocele muliebri*.

nuclear (nu'kle-ar) pertaining to a nucleus.

nuclease (nu'kle-ās) an enzyme or a group of enzymes which split nucleic acid into mononucleotides and other products. They are present as digestive enzymes in the intestinal tract and as autolytic enzymes in many cells. Similar enzymes are found in bacterial cultures. Some are specific for RNA (ribonuclease) and others for DNA (deoxyribonuclease). **purine n.**, an enzyme that causes the hydrolysis of purine nucleotides so as to liberate the purine base; it has been found in the pancreas.

nucleated (nu'kle-āt'ed) [L. *nucleatus*] having a nucleus or nuclei.

nuclei (nu'kle-i) [L.] plural of *nucleus*.

nucleide (nu'kle-id) any compound of nucleic acid with a metallic element.

nucleiform (nu'kle-i-form) shaped like a nucleus.

nuclein (nu'kle-in) a decomposition product of nucleoprotein intermediate between native nucleoprotein and nucleic acid (F. Miescher, 1874). It is a colorless, amorphous compound, soluble in dilute alkalis, but insoluble in dilute acids. The nucleins consists of nucleic acid and bases which vary in the different nucleins.

nucleinase (nu'kle-in-ās) nuclease.

nucleocapsid (nu'kle-o-kap'sid) a unit of viral structure, consisting of a capsid (protein coat) with the enclosed nucleic acid; some simple viruses are naked nucleocapsids, while in others the nucleocapsids form part of a more complex structure.

nucleochylema (nu'kle-o-ki-le'mah) [*nucleus* + Gr. *chylos* juice] the ground substance of the nucleus of a cell as distinguished from that of the cytoplasm.

nucleochyme (nu'kle-o-kīm) [*nucleus* + Gr. *chymos* juice] karyolymph.

nucleocytoplasmic (nu'kle-o-si'to-plaz'mik) pertaining to the nucleus and the cytoplasm of cells.

nucleofugal (nu'kle-of'u-gal) [*nucleus* + L. *fugere* to flee] moving away from a nucleus.

nucleoglucoprotein (nu'kle-o-gloo'ko-pro'te-in) a combination of a nucleoprotein with a carbohydrate.

nucleohistone (nu'kle-o-his'tōn) a complex nucleoprotein made up of deoxyribonucleic acid (DNA) and a histone, the principal constituent of chromatin.

nucleohyaloplasm (nu'kle-o-hi-al'o-plazm) linin.

nucleoid (nu'kle-oid) 1. resembling a nucleus. 2. a nucleus-like body sometimes seen in the center of an erythrocyte. 3. the nuclear region of a bacterium, which contains the chromosomes but is not limited by a nuclear membrane. 4. the genetic material (nucleic acid) of a virus, situated in the center of the virion. **Ladovski's n.**, centrosome.

nucleokeratin (nu'kle-o-ker'ah-tin) a variety of keratin found in the nervous system.

nucleolar (nu-kle'o-lar) pertaining to a nucleolus.

nucleoli (nu-kle'o-li) plural of *nucleolus*.

nucleoliform (nu'kle-ol'i-form) resembling a nucleolus.

nucleolin (nu-kle'o-lin) the substance composing the nucleolus of a cell.

nucleolinus (nu'kle-o-li'nus) a deeply staining granule in the nucleolus.

nucleoloid (nu'kle-o-loid) resembling a nucleolus.

nucleolulus (nu'kle-ol'o-lus) a minute spot within the nucleolus.

nucleolonema (nu'kle-o'lo-ne'mah) [*nucleolus* + Gr. *nēma* thread] a network of strands formed by organization of a finely granular substance, perhaps containing ribonucleic acid, in the nucleolus of a cell.

nucleoloneme (nu'kle-o'lo-nēm) nucleolonema.

nucleolonucleus (nu'kle-o-lo-nu'kle-us) a nucleolulus.

nucleolus (nu-kle'o-lus), pl. *nucle'oli* [L., dim. of *nucleus*] a

rounded refractile body present in the nucleus of most cells, which is the site of synthesis of ribosomal RNA, becoming enlarged during periods of synthesis and atrophied during quiescent periods; it consists of a mixed granular (*pars granulosa*) and a fibrillar (*pars fibrosa*) portion. Multiple nucleoli occur in some cells. Called also *micronucleus* and *plasmosome*. **chromatin n.**, **false n.**, **nucleinic n.**, **karyosome**. **secondary n.**, a mass sometimes seen near a nucleolus, and looking like a separated portion of the latter.

nucleolymph (nu'kle-o-limf'') karyolymph.

nucleomicrosome (nu'kle-o-mi'kro-sōm) [*nucleus* + Gr. *mikros* small + *sōma* body] any of the minute segments of a chromatin fiber.

nucleon (nu'kle-on) 1. a particle of the atomic nucleus, a proton or a neutron. 2. phosphocarnic acid.

nucleonic (nu'kle-on'ik) pertaining to a nucleus.

nucleonics (nu'kle-on'iks) the study of atomic nuclei and their reactions; nuclear physics.

nucleopetal (nu'kle-op'e-tal) [*nucleus* + L. *petere* to seek] moving toward a nucleus.

Nucleophaga (nu'kle-of'ah-gah) [*nucleus* + Gr. *phagein* to eat] an organism that is parasitic in amebas, destroying the nucleus of the latter.

nucleophagocytosis (noo'kle-o-fag'o-si-to'sis) the engulfing of the nuclei of other cells by phagocytes; see *tart cell*, under *cell*.

nucleophile (nu'kle-o-fil'') an electron donor in chemical reactions involving covalent catalysis in which the donated electrons bond other chemical groups (electrophiles).

nucleophilic (nu'kle-o-fil'ik) having an affinity for nuclei; being or serving as a nucleophile.

nucleophosphatase (nu'kle-o-fos'fah-tās) nucleotidase.

nucleoplasm (nu'kle-o-plazm'') [*nucleus* + *plasma*] the protoplasm composing the nucleus of a cell; karyoplasm. Cf. *cytoplasm*.

nucleoprotamine (nu'kle-o-pro-tam'in) a compound of protamine and nucleic acid found chiefly in fish sperm.

nucleoprotein (nu'kle-o-pro'te-in) a substance composed of a simple basic protein, usually a histone or protamine, combined with a nucleic acid. **deoxyribose n.**, a deoxyribonucleic acid-protein complex. **ribose n.**, a ribonucleic acid-protein complex.

nucleoreticulum (nu'kle-o-re-tik'u-lum) [*nucleus* + *reticulum*] any intranuclear network.

nucleosidase (nu'kle-o-si'dās) *N*-ribosyl-purine ribohydrolase: an enzyme that catalyzes the splitting of nucleosides. The nucleosidases are adenosin-hydrolase, guanosin-hydrolase, inosin-hydrolase, and xanthosin-hydrolase.

nucleoside (nu'kle-o-sid'') one of the glycosidic compounds into which a nucleotide is split by the action of nucleotidase or by chemical means; it is a combination of a sugar (a pentose) with a purine or a pyrimidine base.

nucleosidediphosphatase (nu'kle-o-sid-di-fos'fah-tās) nucleosidediphosphate phosphohydrolase: an enzyme occurring in the liver and kidney that catalyzes the hydrolysis of a nucleoside diphosphate to a nucleotide and an orthophosphate.

nucleosin (nu'kle-o-sin) thymine.

nucleosis (nu'kle-o-sis) nuclear proliferation; abnormal increase in the production of nuclei, such as occurs in the subsarcolemmal nuclei of muscle following injury.

nucleosome (nu'kle-o-sōm'') [*nucleus* + Gr. *sōma* body] any of the complexes of histone and DNA in eukaryotic cells, seen under the electron microscope as beadlike bodies on a string of DNA.

nucleospindle (nu'kle-o-spin'd'l) the spindle-shaped body in mitosis.

nucleotherapy (nu'kle-o-ther'ah-pe) [*nuclein* + *therapy*] the treatment of disease with nucleins.

nucleotidase (nu'kle-of'i-dās) ribonucleotide phosphohydrolase: an enzyme that splits nucleotides into nucleosides and phosphoric acid; called also *phosphonuclease* and *nucleophosphatase*.

nucleotide (nu'kle-o-tid) one of the compounds into which nucleic acid is split by the action of nuclease; the nucleotides are composed of a base (purine or pyrimidine), a sugar (ribose or deoxyribose), and a phosphate group. See *mononucleotide*. **cyclic n's**, nucleotides in which the phosphate group forms a ring, as in AMP and GMP. **n. polymerase**, an enzyme that takes part in the polymerization of activated nucleoside triphosphate in DNA synthesis.

nucleotidyl (nu'kle-o-tid'il) a nucleotide residue.

nucleotidyltransferase (nu'kle-o-tid'il-trans'fer-ās) any enzyme that catalyzes the transfer of a nucleotidyl from nucleoside phosphates to polymer forms. **DNA n.**, an enzyme that catalyzes the formation of DNA from deoxyribonucleoside triphosphates, with single-stranded DNA serving as a template; called also *DNA polymerase*. **polyadenate n.**, an enzyme that catalyzes the transfer of a phosphate group from ATP to form pyrophosphate and an adenylate polymer. **polyribonucleotide n.**, polynucleotide phosphorylase. **RNA n.**, an enzyme

that catalyzes the formation of RNA from the four ribonucleoside triphosphates (which contain the bases adenine, guanine, cytosine, and uracil), with single-stranded DNA serving as a template; called also *RNA polymerase*.

nucleotoxin (nu'kle-o-tok'sin) 1. a toxin from cell nuclei. 2. any toxin exerting a deleterious effect on cell nuclei.

nucleus (nu'kle-us), pl. *nu'clei* [L., dim. of *nux* nut] 1. a cell nucleus: a spheroid body within a cell, consisting of a number of characteristic organelles visible with the optical microscope, a thin nuclear membrane, a nucleolus or nucleoli, irregular granules of chromatin and linin, and a diffuse nucleoplasm. 2. [NA] a general term used to designate a group of nerve cells ordinarily located within the central nervous system and bearing a direct relationship to the fibers of a particular nerve. 3. in organic chemistry, the combination of atoms forming the central element or basic framework of the molecule of a specific compound or class of compounds. 4. see *atomic n.* **abducens n., n. of abducens nerve, n. abducen'tis, n. nervi abducentis. n. accessorius** [NA], **accessory n.**, a collection of small cells located dorsal to the upper part of the somatic groups of the oculomotor nuclear complex, comprising the parasympathetic outflow via the ciliary ganglion to the ciliary muscle and sphincter pupillae of the eye; called also *Edinger-Westphal n.* and *n. autonomicus* [NA alternative]. **nuclei of acoustic nerve, nuclei nervi vestibulocochlearis. n. acusticus, see nuclei nervi vestibulocochlearis. n. acusticus, inferior et latera'lis, see nuclei cochleares, ventralis et dorsalis. n. acusticus superior, the superior vestibular nucleus; see nuclei vestibulares. n. alae cine'reae, n. dorsalis nervi vagi. ambiguous n., n. ambiguus. ambiguous n. of Quain, n. nervi hypoglossi. n. ambig'uus** [NA], ambiguous nucleus: the nucleus of origin of motor fibers of the vagus, glossopharyngeal, and accessory nerves that supply the striated muscles of the larynx and pharynx. It consists of an intermittent cell column in the middle of the lateral funiculus of the medulla oblongata, between the caudal end of the medulla and the level of exit of the glossopharyngeal nerve. **n. amygdalae, amygdaloid n., corpus amygdaloideum. n. amygdaliformis of J. Stillin'g, n. subthalamicus. amygdaloid n., corpus amygdaloideum. n. angula'ris, Bekhterev's, the superior vestibular nucleus; see nuclei vestibulares. n. anterior thal'ami, former NA term for nuclei anteriores thalami. anterior nuclei of thalamus, nuclei anteriores thalami. nu'clei anterioro'res thal'ami** [NA], anterior nuclei of thalamus: the three nuclei in the anterior part of the thalamus: the nucleus anteromedialis, nucleus anterodorsalis, and nucleus anteromedialis. Together, they receive connections from the mamillary body and fornix and project fibers to the cingulate body. Formerly called *n. anterior thalami. anterodorsal n., n. anterodorsalis* [NA], see *nuclei anteriores thalami. anteromedial n., n. anteromedialis* [NA], see *nuclei anteriores thalami. anteroventral n., n. anteroventralis* [NA], see *nuclei anteriores thalami. nu'clei arcuati, mes, nuclei arcuati. nu'clei arcua'ti* [NA], arcuate nuclei of medulla oblongata: small, irregular areas of gray substance found on the ventromedial aspect of the pyramid of the medulla oblongata. **n. of atom, atomic n.**, the central core of an atom, constituting almost all of its mass but only a small part of its volume, and composed of protons and neutrons, the protons being positively charged and their number (atomic number) being fixed for all the atoms of each element and equal to the number of the orbiting electrons. The neutrons, which bear no charge, may vary in number, accounting for the isotopes of an element. **auditory nuclei, see nuclei cochleares, ventralis et dorsalis, and nuclei vestibularis. nuclei of auditory nerve, nuclei nervi vestibulocochlearis. n. of auditory nerve, accessory, see nuclei cochleares, ventralis et dorsalis. n. autonom'icus, NA alternative for n. accessorius. Balbiani's n., yolk n. basal n., 1. nucleus olivaris. 2. [pl.] the corpus striatum, amygdaloid body, and claustrum; see also *basal ganglia. n. basa'lis, n. olivaris. Béclard's n.*, a vascular lentil-shaped center of ossification seen in the cartilage of the lower epiphysis of the femur during the latter part of fetal life. **Bekhterev's n.**, the superior vestibular nucleus; see *nuclei vestibulares. Blumenau's n.*, the lateral portion of the cuneate nucleus. **n. of Burdach's column, n. cuneatus. n. cauda'lis centra'lis** [NA], central caudate nucleus: an unpaired collection of cells in the caudal third of the oculomotor nuclear complex, located in the median raphe somewhat dorsal to the lateral nuclei. **caudate n., n. cauda'tus** [NA], an elongated, arched gray mass closely related to the lateral ventricle throughout its entire extent and consisting of a head, body, and tail. The caudate nucleus and putamen form a functional unit (the neostriatum) of the corpus striatum. **cell n., cellular n.**, see *nucleus*, def. 1. **central n. of thalamus, n. centra'lis thal'ami**, a collection of cells lying close to the wall of the third ventricle, between the medial and the posterior ventral nuclei of the thalamus, medial to and partially embedded in the internal medullary lamina. **n. centromedia'nus thal'ami, NA alternative for n. medialis centralis thalami. n. cerebel'li, n. dentatus. n. of cerebellum, dentate, n. dentatus. n. of cerebellum, medullary, corpus medullare cerebelli. cervical n., cervical n., lateral, n. lateralis cervicalis. cho-****

lane n., a cyclopentanophenanthrene structure forming the basis of the specific compounds, found in the bile acids, the sterols, in toad poisons, in digitalis, strophanthus, ouabain, and other heart aglycones, in the sex hormones, and in some carcinogenic hydrocarbons. **n. cine'reum, substantia grisea medullae spinalis. Clarke's n., n. of Clarke's column, n. thoracicus. cleavage n.**, segmentation n. **cochlear n., dorsal, see nuclei cochleares, ventralis et dorsalis. cochlear n., ventral, see nuclei cochleares, ventralis et dorsalis. nu'clei cochlea'res, ventra'lis et dorsa'lis** [NA], the ventral and dorsal cochlear nuclei: the nuclei of termination of the sensory fibers of the pars cochlearis nervi vestibulocochlearis, which enter the brain through the inferior root of the nerve. The nuclei partly encircle the inferior cerebellar peduncle at the junction between the medulla oblongata and pons. The dorsal cochlear nucleus forms an eminence (the acoustic tubercle) on the most lateral part of the floor of the fourth ventricle. Called also *nuclei nervi cochlearis. nuclei of cochlear nerve, nuclei cochlearis, ventralis et dorsalis. n. collic'uli inferior'is* [NA], nucleus of inferior colliculus: the large oval-shaped group of nerve cell bodies that makes up most of the substance of the inferior colliculus. **compact n.**, a cellular nucleus with an inconspicuous nuclear membrane and minute chromatin granules throughout its substance. **conjugation n., fertilization n. n. cor'poris genicula'ti latera'lis** [NA], nucleus of lateral geniculate body: a nucleus within the lateral geniculate body, composed of a small ventral and a large dorsal part, the latter consisting of six concentrically arranged cell layers which receive crossed and uncrossed fibers of the optic tract and which are connected with the visual cortex. **n. cor'poris genicula'ti media'lis** [NA], nucleus of medial geniculate body: a nucleus within the medial geniculate body, composed of central and dorsal parts which receive ascending auditory fibers and project to the auditory cortex. **nu'clei cor'poris mamilla'ris** [NA], nuclei of mamillary body: three masses of cells within the mamillary body which comprise medial, intermediate, and lateral nuclei. The nuclei receive fibers from the basal olfactory areas and the fornix, and project to the thalamus and midbrain via mamillothalamic and mamillotegmental fasciculi. **nuclei cor'poris trapezoi'dei** [NA], the two nuclei of the trapezoid body in the pons: the dorsal (superior olive) and the ventral nuclei. **n. of corpus striatum, intraventricular, n. caudatus. nuclei of cranial nerves, nuclei nervorum cranialium. cuneate n., n. cuneatus. cuneate n., accessory, cuneate n., lateral, n. cuneatus accessorius. n. cuneatus** [NA], cuneate nucleus: a nucleus in the medulla oblongata at the rostral end of the fasciculus cuneatus, in which the fibers of this fasciculus synapse; the cells project to the thalamus via the medial lemniscus. Called also *n. funiculi cuneati. n. cuneatus accessorius* [NA], accessory cuneate nucleus: a group of nerve cells lying lateral to the nucleus cuneatus that relay impulses from upper limb fibers in the fasciculus cuneatus to the cerebellum (rostral spinocerebellar tract) via external arcuate fibers and the inferior cerebellar peduncle; called also *lateral cuneate n. Darkshevich's n.*, a small nucleus dorsal to the medial longitudinal fasciculus in the central gray matter at the rostral end of the cerebral aqueduct; it is believed to receive fibers from the fasciculus and from the superior colliculus. **daughter n.**, a new cell nucleus formed in mitosis by the diaster. **Deiters' n.**, the lateral vestibular nucleus; see *nuclei vestibulares. dental n., pulpa dentis. dentate n., n. denta'tus [NA], the largest of the deep cerebellar nuclei lying in the white matter of the cerebellum just lateral to the emboliform nucleus, and receiving Purkinje cell fibers from the neocerebellum; its axons form most of the superior cerebellar peduncle and project chiefly to the contralateral red nucleus and thalamus. **diploid n.**, a cell nucleus containing the number of chromosomes typical of the somatic cells of the particular species. **dorsal n. of Clarke, n. dorsa'lis, n. thoracicus. dorsal lateral n., lateralis dorsalis. n. dorsa'lis** [Stillin'g, Clark'ii], n. thoracicus. **n. dorsa'lis cor'poris trapezoi'dei** [NA], dorsal nucleus of trapezoid body: a group of nerve cell bodies dorsolateral to the trapezoid body; it receives cochlear fibers and contributes to the formation of the trapezoid body and lateral lemniscus. Called also *n. olivaris superior* or *superior olivary n. n. dorsa'lis ner'vi glossopharyn'gei* [NA], dorsal nucleus of glossopharyngeal nerve: the rostral part of the column which forms the dorsal nucleus of the vagus nerve; it is believed to give some parasympathetic fibers to the glossopharyngeal nerve. **n. dorsa'lis ner'vi va'gi** [NA], dorsal nucleus of vagus nerve: the nucleus of origin of the parasympathetic fibers of the vagus nerve, situated just dorsal or dorsolateral to the nucleus intercalatus; called also *n. alae cinereae. dorsolateral n., n. dorsolatera'lis* [NA], dorsally placed cells in the lateral part of the oculomotor nuclear complex; they are very distinct from the ventrally placed cells in the middle third of the complex and have a somatic motor function. **dorsomedial n. of thalamus, n. medialis thalami. n. dorsomedialis hypothal'ami** [NA], dorsomedial nucleus of hypothalamus: the dorsal one of two main cell groups in the medial part of the tuberal region of the hypothalamus. **drumstick n.**, see *drumstick*, under D. **Duval's n.**, a collection of multipolar ganglion cells situated ventrolaterally from the*

hypoglossal nucleus in the medulla oblongata. **Edinger's n.**, n. accessorius. **Edinger-Westphal n.**, n. accessorius. **emboliform n.**, n. emboliformis cerebel/li [NA], a small mass that lies between the dentate nucleus and globose nucleus and contributes to the superior peduncles. **end nuclei**, terminal nuclei. **n. of facial nerve**, n. nervi facialis. **fastigial n.**, n. fastigii [NA], the most medial of the deep cerebellar nuclei, near the midline in the roof of the fourth ventricle; it projects to the pons and medulla oblongata, chiefly to the vestibular nuclei. **fertilization n.**, the nucleus produced by fusion of the male and female pronuclei in the fertilized ovum; called also *conjugation n.*, *zygote n.*, and *synkaryon*. **free n.**, a cell nucleus from which the other elements of the cell have disappeared. **n. funiculi cuneati**, n. cuneatus. **n. funiculi gracilis**, n. gracilis. **n. gelatino/sus**, n. pulposus disci intervertebralis. **germ n.**, germinal n., pronucleus. **gingival n.**, a part of the cerebellum in the third and fourth months of fetal life. **globose n.**, n. globo/sus cerebel/li [NA], a deep cerebellar nucleus that lies between the emboliform nucleus and the fastigial nucleus and projects its fibers via the superior cerebellar peduncle. **n. of glossopharyngeal nerve, dorsal**, n. dorsalis nervi glossopharyngei. **n. of Goll's column**, n. gracilis. **gonad n.**, micronucleus, def. 1. **n. gracilis** [NA], a nucleus in the medulla oblongata at the rostral end of the fasciculus gracilis of the cord, in which the fibers of the fasciculus gracilis synapse; the cells project to the thalamus via the medial lemniscus. Called also *n. funiculi gracilis* and *Goll's tract*. **gray n.**, substantia grisea medullae spinalis. **nuclei of habenula**, **nu'clei haben'ulae** [NA], **habenular n.**, two nerve cell groups within the habenula which give rise to the fasciculus retroflexus. **haploid n.**, a cell nucleus containing half of the number of chromosomes typical of the somatic cells of a particular species. **hypoglossal n.**, n. of hypoglossal nerve, n. nervi hypoglossi. **hypothalamic n.**, n. hypothalamicus (*obs.*), n. subthalamicus. **n. of hypothalamus, dorsomedial**, n. dorsomedialis hypothalami. **n. of hypothalamus, paraventricular**, n. paraventricularis hypothalami. **n. of hypothalamus, posterior**, n. posterior hypothalami. **n. of hypothalamus, supraoptic**, n. supraopticus hypothalami. **n. of hypothalamus, ventromedial**, n. ventromedialis hypothalami. **n. of inferior colliculus**, n. colliculi inferioris. **n. intercalatus** [NA], a group of nerve cells between the dorsal nucleus of the vagus nerve and the nucleus of the hypoglossal nerve, forming part of the perihypoglossal nuclear complex; called also *Staderini's n.* **intermediolateral n.**, n. intermediolateralis, a nucleus situated in the substantia intermedia lateralis of thoracic and upper lumbar levels of the spinal cord, which forms the lateral horn, and whose cells give rise to the preganglionic sympathetic outflow. **intermediomedial n.**, n. intermediomedialis, a nucleus composed of scattered cells in the substantia intermedia centralis, medial to the nucleus intermediolateralis; it is most prominent in the cervical spinal cord and is thought to be propriospinal in its connections. **n. of internal geniculate body**, n. corporis geniculati medialis. **interpeduncular n.**, **n. interpeduncularis** [NA], a nucleus situated between the cerebral peduncles immediately dorsal to the interpeduncular fossa, which receives the fasciculus retroflexus; called also *Ganser's ganglion*. **interstitial n.**, **interstitial n. of Cajal**, n. interstitia/lis [NA], a nucleus at the rostral end of the medial longitudinal fasciculus in the mesencephalic tegmentum; its chief connections are reciprocal with vestibular nuclei and it also projects to the spinal cord. **intralaminar nuclei**, **nu'clei intralamina/res** [NA], the nuclei within the internal medullary lamina of the thalamus. **Kaiser's nuclei**, longitudinal motor nuclei in the cervical and lumbar enlargements of the cord, between the intermediolateral column and the median column. **Klein-Gumprecht nuclei** (*obs.*), unstainable nuclei seen in degenerating lymphocytes in leukemia. **Kölliker's n.**, substantia intermedia centralis. **large cell auditory n.**, the lateral vestibular nucleus; see *nuclei vestibulares*. **laryngeal n.**, the nucleus of origin (nucleus ambiguus) of the nerve fibers going to the larynx. **n. of lateral geniculate body**, n. corporis geniculati lateralis. **n. of lateral lemniscus**, n. lemnisci lateralis. **n. latera/lis cervica/lis**, lateral cervical nucleus: a small group of cells in the lateral funiculus of the first and second cervical segments of the spinal cord, comprising a relay station in a spinocervicothalamic path. **n. latera/lis dorsa/lis** [NA], dorsal lateral nucleus: one of the two dorsally placed nuclei in the lateral nuclei of the thalamus; its chief connections are with the cingulate gyrus. **n. latera/lis medulla/lae oblonga/tae** [NA], a nucleus in the reticular substance of the medulla oblongata, dorsolateral to the olive; it relays spinal impulses to the cerebellum. Called also *lateral reticular n.* **nu'clei latera/les thal/ami** [NA], lateral nuclei of thalamus: a nuclear mass lying between the internal medullary lamina and the internal capsule, commonly divided into a larger ventral part and a smaller dorsal part. The ventral part comprises the n. ventralis anterolateralis, n. ventralis intermedius, n. ventralis posteromedialis, and n. ventralis posterolateralis; these nuclei (particularly the last two), together with the geniculate bodies, are concerned with relaying sensory impulses to specific areas of the

cerebral cortex. The dorsal part includes n. lateralis dorsalis, which has major connections with the cingulate gyrus, and n. posterior thalami, which has extensive connections with the cerebral cortex. **n. latera/lis thal/ami**, a term replaced by the plural form; see *n. laterales thalami*. **n. lemnis/ci latera/lis** [NA], nucleus of lateral lemniscus: several diffuse cell groups interposed in the course of the lateral lemniscus through the pons. **n. of lens**, n. lentis. **lenticular n.**, **lentiform n.**, n. lentiformis. **n. lentifor/mis** [NA], lentiform nucleus: the part of the corpus striatum comprising the putamen and globus pallidus; it lies just lateral to the internal capsule. Called also *lenticular n.* **n. len'tis** [NA], nucleus of the lens: the harder internal part of the lens of the eye. **n. of Luys**, nucleus subthalamicus. **n. magnocellula'ris**, the lateral vestibular nucleus; see *nuclei vestibulares*. **nuclei of mamillary body**, nuclei corporis mammillaris. **n. of medial geniculate body**, n. corporis geniculati medialis. **n. media/lis centra/lis thal/ami** [NA], centromedian nucleus of thalamus: a prominent nucleus lying mostly within the internal medullary lamina of the thalamus, between the medial nucleus above and the ventral posteromedial nucleus below; it has complex connections with the corpus striatum and motor cortex. Called also *n. centromedianus thalami* [NA alternative] and *centrum medianum*. **n. media/lis thal/ami** [NA], medial nucleus of thalamus: a prominent nuclear mass lying between the internal medullary lamina and the periventricular gray matter. Composed of magnocellular and parvocellular parts, it has extensive intrathalamic, hypothalamic, subcortical, and cortical connections. Called also *dorsomedial n. of thalamus*. **n. of medulla oblongata, arcuate**, nuclei arcuati. **n. medulla/ris cerebel/li**, corpus medullare cerebelli. **n. of mesencephalic tract of trigeminal nerve**, n. tractus mesencephalicus nervi trigemini. **Monakow's n.**, the lateral part of the cuneate nucleus. **motion n.**, kinetoplast. **motor n.**, any collection of cells of the central nervous system giving origin to motor fibers of a nerve. **motor n. of trigeminal nerve**, **n. moto'rius ner'vi trigem'ini** [NA], the nucleus of origin of the motor fibers of the trigeminal nerve, located in the dorsolateral part of the pons, just medial to the main sensory nucleus and the entering sensory root. See also *n. sensorius principalis nervi trigemini*. **n. ner'vi abducent'is** [NA], nucleus of abducent nerve: the nucleus of origin of the abducent nerve; it lies in the lower part of the pons and forms the lateral part of the facial colliculus in the floor of the fourth ventricle; fibers of the facial nerve form a complicated loop about the nucleus. **n. ner'vi accesso'rii** [NA], the nucleus of origin of the accessory nerve; situated in the medulla oblongata and upper five or six levels of the cervical spinal cord, it comprises the nucleus ambiguus (caudal part) and the spinal nucleus in the anterior horn. **nu'clei ner'vi acus'tici**, nuclei nervi vestibulocochlearis. **nu'clei nervo'rum cerebra/lium**, nuclei nervorum cranialium. **nu'clei ner'vi cochlea/ris**, nuclei cochleares, ventralis et dorsalis. **nu'clei nervo'rum crania/lium** [NA], nuclei of cranial nerves: groups of nerve cells in the central nervous system that give rise to, or transmit or receive impulses from, the motor and sensory components of the cranial nerves. **n. ner'vi facia/lis** [NA], nucleus of facial nerve: the nucleus of origin of the motor fibers of the facial nerve, which innervate the muscles of facial expression; the nucleus lies in the ventrolateral part of the lower pons, and its emerging fibers form a complicated loop about the nucleus of the abducent nerve. The term is also applied collectively to the motor nucleus, the superior salivatory nucleus, and the nucleus of the tractus solitarius. **n. ner'vi facia/lis of Arnold**, colliculus facialis. **n. ner'vi glossopharyngei** [NA], the nucleus of origin and termination of the glossopharyngeal nerve; located in the medulla oblongata, it comprises the inferior salivatory nucleus, the nucleus ambiguus (rostral part), and the nucleus of the tractus solitarius. **n. ner'vi hypoglos'si** [NA], nucleus of hypoglossal nerve: the nucleus of origin of the hypoglossal nerve, forming a column in the central gray matter of the medial eminence from below the level of the inferior olive to the upper part of the medulla oblongata. **n. ner'vi oculomoto'rii** [NA], nucleus of oculomotor nerve: the nucleus or origin of the fibers of the oculomotor nerve, situated in the tegmentum of the mesencephalon immediately ventral to the central gray matter, where its two cell groups form a complex between the medial longitudinal fasciculi; the complex comprises paired lateral somatic groups, an unpaired median somatic group, and paired dorsal autonomic (parasympathetic) groups. The somatic groups supply the levator palpebrae superioris and all the extrinsic eye muscles except the lateral rectus and superior oblique; the autonomic group supplies the ciliary muscle and sphincter pupillae. **nu'clei ner'vi trigem'ini** [NA], the nuclear complex of the trigeminal nerve, located chiefly in the pons and medulla oblongata, but also in the mesencephalon and upper cervical cord. See *n. motorius nervi trigemini*, *n. sensorius principalis nervi trigemini*, *n. tractus mesencephalicus nervi trigemini*, and *n. tractus spinalis nervi trigemini*. **n. ner'vi trochlea/ris** [NA], nucleus of trochlear nerve: the nucleus of origin of the motor fibers of the trochlear nerve; it lies in the central gray matter on the dorsal surface of the medial longitudinal fasciculus in the lower part of the mesencephalon. **n. ner'vi va'gi**, the

nucleus of origin and termination of the vagus nerve; situated in the medulla oblongata, it comprises the nucleus dorsalis, the nucleus ambiguus, and the nucleus of the tractus solitarius. **nu'clei ner'vi vestibula'ris**, nuclei vestibulares. **nu'clei ner'vi vestibulocochlea'ris** [NA], vestibulocochlear nuclei: the nuclei of termination of the sensory fibers of the vestibular and cochlear divisions of the eighth cranial nerve, comprising the ventral and dorsal cochlear nuclei and the medial, lateral, superior, and inferior vestibular nuclei. Called also *nuclei nervi acustici*. **nutrition n.**, macronucleus. **n. of oculomotor nerve**, *n. nervi oculomotorii*. **n. oliva'ris** [NA], olivary nucleus: a folded band of gray substance enclosing a white core (hilus nuclei olivaris), and producing the elevation on the medulla oblongata known as the olive; it is a nuclear complex which receives heavy projections from the spinal cord, mesencephalon, and cerebral cortex, and projects fibers, via the opposite inferior cerebellar peduncle, partly to the vermis, but principally to the neocerebellum. Called also *n. olivaris inferior* or *inferior olivary n.* **n. oliva'ris accesso'rius dorsa'lis** [NA], dorsal accessory olivary nucleus: the band of cells that lies dorsal to the olivary nucleus and projects fibers to the opposite side of the cerebellum, especially to the vermis. **n. oliva'ris accesso'rius media'lis** [NA], medial accessory olivary nucleus: the band of gray substance that lies medial to the olivary nucleus and projects fibers to the opposite side of the cerebellum, especially to the vermis. **n. oliva'ris inferior**, *n. olivaris*. **n. oliva'ris supe'rior**, *n. dorsalis corporis trapezoidei*. **olivary n.**, 1. nucleus olivaris. 2. *oliva*. **olivary n.**, accessory, olivary n., dorsal accessory, *n. olivaris accessorius dorsalis*. **olivary n.**, inferior, *n. olivaris*. **olivary n.**, medial accessory, *n. olivaris accessorius medialis*. **olivary n.**, superior, *n. dorsalis corporis trapezoidei*. **n. of origin**, any collection of nerve cells giving origin to the fibers, or a part of the fibers, of a peripheral nerve. **nuclei of origin of cranial nerves**, **nu'clei ori'ginis nervo'rum cerebra'lium**, **nu'clei ori'ginis nervo'rum crania'lium** [NA], groups of nerve cells in the central nervous system, the axons of which exit as the efferent fibers of various cranial nerves. **Pander's n.**, *n. subthalamicus*. **n. paraventricula'ris hypothal'ami** [NA], paraventricular nucleus of hypothalamus: a sharply defined band of cells in the wall of the third ventricle in the supraoptic part of the hypothalamus; many of its cells are neurosecretory in function (secreting oxytocin) and project to the neurohypophysis. **Perlia's n.**, a group of cells in the midline of the oculomotor nuclear complex, thought to be associated with ocular convergence. **phenanthrene n.**, choline. **polymorphic n.**, a cell nucleus that assumes an irregular form or splits up into more or less completely separated lobes, such as the nuclei in the polymorphonuclear leukocytes (neutrophils). **pontine nuclei**, **nu'clei pon'tis** [NA], groups of nerve cell bodies in the portion of the pyramidal tract within the pars ventralis of the pons upon which the fibers of the corticopontine tract synapse, and whose axons in turn cross to the opposite side and form the middle cerebellar peduncle, which projects fibers to the neocerebellum. **n. poste'rior hypothal'ami** [NA], posterior nucleus of hypothalamus: a group of nerve cell bodies in the posterior, mamillary part of the hypothalamus, above the nucleus of the mamillary body; the nucleus has major brain stem connections via periventricular fibers and the dorsal longitudinal fasciculus. **n. poste'rior thal'ami** [NA], the posterior nucleus of the thalamus, which receives fibers from the somatic, sensory, auditory, and visual projection areas of the cortex. Called also *pulvinar thalami* [NA alternative]. **pretectal n.**, **n. pretecta'lis** [NA], several indistinct groups of cells in the pretectal area which receive impulses chiefly from the optic tract; they project to the nucleus accessorius of the oculomotor nerve and constitute the midbrain center for the pupillary light reflex. **n. pulpo'sus dis'ci intervertebra'lis** [NA], **pulpy n.**, a semifluid mass of fine white and elastic fibers that forms the central portion of an intervertebral disk; it has been regarded as the persistent remains of the embryonic notochord. **pyramidal n.**, *n. olivaris accessorius medialis*. **n. radi'cis descenden'tis ner'vi trigem'ini**, *n. tractus mesencephalicus nervi trigemini*. **red n.**, *n. ruber*. **reproductive n.**, micronucleus, *def. 1.* **reticular n.**, **lat-eral**, *n. lateralis medullae oblongatae*. **n. reticula'ris tegmen'ti**, a nucleus in the tegmentum of the pons which receives fibers from the cerebral cortex and mesencephalon and which projects fibers to the neocerebellum via the middle cerebellar peduncle. **n. reticula'ris thal'ami** [NA], reticular nucleus of thalamus: a thin layer of cells on the lateral surface of the thalamus, within and lateral to the external medullary lamina. **Roller's n.**, 1. a sharply defined nucleus immediately anterior to the hypoglossal nucleus, forming part of the perihypoglossal nuclear complex; called also *sublingual n.* 2. cells near the hilus of the olivary nucleus. **n. of roof of cerebellum**, *n. fastigii*. **n. ru'ber** [NA], red nucleus: a distinctive oval nucleus (pink in fresh specimens because of relatively high vascularity) centrally placed in the upper mesencephalic reticular formation; it receives fibers from the deep cerebellar nuclei and cerebral cortex and projects fibers to the cerebellum, brain stem, spinal cord, and probably to the thalamus. **sacral n.**, the lumbosacral extension of the nucleus thoracicus. **n. salivato'rius**

Nucleus pulposus in transverse section, showing normal intervertebral disk and herniation of the nucleus pulposus.

infe'rior [NA], inferior salivatory nucleus: the caudal part of the column of scattered cells in the dorsolateral part of the reticular formation in the lower pons and upper medulla oblongata, whose cells comprise the parasympathetic outflow of the glossopharyngeal nerve for the supply of the parotid gland. **n. sa-livato'rius supe'rior** [NA], superior salivatory nucleus: a column of scattered cells in the dorsolateral part of the reticular formation of the lower pons whose cells comprise the parasympathetic outflow of the facial nerve (via the nervus intermedius) for the supply of the lacrimal, nasal, palatine, submandibular, and sublingual glands; it is continuous with the nucleus salivatorius inferior. **salivatory n.**, inferior, *n. salivatorius inferior*. **salivatory n.**, superior, *n. salivatorius superior*. **n. of Sappey**, *n. ruber*. **Schwalbe's n.**, the medial vestibular nucleus; see *nuclei vestibulares*. **Schwann's n.**, the nucleus of a Schwann cell. **segmentation n.**, the fertilization nucleus after cleavage has begun. **n. senso'rius infe'rior ner'vi trigem'ini**, *n. tractus spinalis nervi trigemini*. **n. senso'rius principa'lis ner'vi trigem'ini** [NA], **n. senso'rius supe'rior ner'vi trigem'ini**, principal sensory nucleus of trigeminal nerve: the nucleus of termination of afferent fibers of the trigeminal nerve, carrying impulses for sensations of touch and pressure, located in the dorsolateral part of the middle of the pons, just lateral to the entering trigeminal root fibers. Called also *superior sensory n. of trigeminal nerve*. **sensory n.**, the nucleus of termination of the afferent (sensory) fibers of a peripheral nerve. **sensory n. of trigeminal nerve**, lower, *n. tractus spinalis nervi trigemini*. **sensory n. of trigeminal nerve**, superior, *n. sensorius superior nervi trigemini*. **Setchenow's (Sechenoff's) nuclei**, see under *center*. **shadow n.**, a cell nucleus that does not stain and appears as a faint shadow under the microscope. **Siemerling's n.**, one of the subdivisions of the oculomotor nuclear complex. **n. of solitary tract**, *n. tractus solitarii*. **somatic n.**, macronucleus. **sperm n.**, the male pronucleus. **spherical n.**, *n. globosus*. **spinal n. of accessory nerve**, *n. spinalis nervi accessorii*. **n. of spinal tract of trigeminal nerve**, *n. tractus spinalis nervi trigemini*. **n. spina'lis ner'vi accesso'rii** [NA], spinal nucleus of accessory nerve: the group of cells in the anterior horn of the upper five or six levels of the cervical spinal cord that form the spinal roots of the accessory nerve. **Spitzka's n.**, *Perlia's n.* **Staderini's n.**, *n. intercalatus*. **Stilling's n.**, 1. sacral n. 2. n. thoracicus. **Stilling's sacral n.**, sacral n. **striate n.**, a term loosely applied to the neostriatum, to a nucleus of the corpus striatum, or to the corpus striatum itself. **subependymal n.**, the dorsal cochlear nucleus. **sublingual n.**, *Roller's n.*, *def. 1.* **subthalam-ic n.**, **n. subthalam'icus** [NA], a biconvex mass of gray matter on the medial side of the junction of the internal capsule and the crus cerebri; its chief connections are with the globus pallidus. Called also *n. of Luys*, *corpus Luysi*, and *Luys' body*. **superior n.**, the superior vestibular nucleus; see *nuclei vestibulares*. **n. supraop'ticus hypothal'ami** [NA], supraoptic nucleus of hypothalamus: a sharply defined nucleus immediately above the lateral part of the optic chiasm; many of its cells are neurosecretory in function (secreting antidiuretic hormone) and project to the neurohypophysis; other cells are osmoreceptors which respond to increased osmotic pressure to signal the release of antidiuretic hormone by the neurohypophysis. **n. taeniae-for'mis**, *corpus amygdaloideum*. **n. tec'ti**, *n. fastigii*. **tegmen-tal nuclei**, nuclei tegmenti mesencephalici. **nu'clei tegmen'ti mesencephal'ici** [NA], several nuclear masses of the reticular formations of the pons and midbrain, especially of the latter, where they are in close approximation to the superior

cerebellar peduncles. **terminal nuclei**, **nu'clei termina'les**, **nu'clei terminatio'nis nervo'rum crania'lium** [NA], nuclei of termination of cranial nerves, groups of nerve cells within the central nervous system upon which the axons of primary afferent neurons of various cranial nerves synapse. **nuclei of thalamus, anterior**, **nu'clei anteriores thalami**. **n. of thalamus, central**, **n. centralis thalami**. **nuclei of thalamus, intralaminar**, **nu'clei intralaminares**. **n. of thalamus, lateral**, **nu'clei laterales thalami**. **n. of thalamus, medial**, **n. medialis thalami**. **n. of thalamus, posterior**, **n. posterior thalami**. **n. of thalamus, reticular**, **reticularis thalami**. **n. thorac'icus** [NA], a well-defined column of cells in the medial part of the base of the posterior gray column of the spinal cord, extending from the seventh or eighth cervical segments to the second or third lumbar level; the cells give rise to the posterior spinocerebellar tract. Called also *n. dorsalis* [Stillings, Clarkii]. **n. of tongue, fibrous**, **septum linguae**. **n. tractus mesencephalicus ner'vi trigem'ini** [NA], nucleus of mesencephalic tract of trigeminal nerve: a slender column of cells in the lateral part of the central gray matter of the rostral portion of the fourth ventricle and the cerebral aqueduct. It is the only central nervous system site of primary sensory neurons, its cells resembling dorsal root ganglion cells. The peripheral processes of its cells, which form the mesencephalic tract, carry proprioceptive impulses; the central processes have widespread cerebellar and brain stem connections, including the motor nucleus of the trigeminal nerve. Called also *n. descendens nervi trigemini*. **n. tractus solita'rii** [NA], nucleus of solitary tract: the nucleus of termination of the visceral afferent fibers of the facial, glossopharyngeal, and vagus nerves, which enter the tractus solitarius. It surrounds the tractus solitarius and its caudal end joins with the caudal end of the corresponding nucleus of the opposite side. **n. tractus spina'lis ner'vi trigem'ini** [NA], nucleus of spinal tract of trigeminal nerve: a column of cells which lies along the medial aspect of the spinal tract, extending from the level of entry of the trigeminal nerve in the pons to the second cervical segment of the spinal cord, where it is continuous with the posterior gray column. The nucleus has several cytoarchitectonic subdivisions and the fibers of the spinal tract end in it. **n. of trapezoid body, dorsal**, **n. dorsalis corporis trapezoidei**. **triangular n.**, the medial vestibular nucleus; see *nuclei vestibulares*. **n. triangularis**, the medial vestibular nucleus; see *nuclei vestibulares*. **nuclei of trigeminal nerve**, see *n. motorius nervi trigemini*, *n. sensorius principalis nervi trigemini*, and *n. tractus spinalis nervi trigemini*. **n. of trochlear nerve**, **n. nervi trochlearis**. **trophic n.**, macronucleus. **tuberal nuclei**, **nu'clei tubera'les** [NA], **nu'clei tuber'is**, see *n. dorsomedialis hypothalami* and *n. ventromedialis hypothalami*. **vaguglossopharyngeal n.**, **n. ambiguus**. **n. of vagus nerve, dorsal**, **n. dorsalis nervi vagi**. **ventral n. of thalamus**, the nuclear group containing several ventral nuclei of the nuclei laterales thalami. **ventral n. of thalamus, anterior**, **n. ventralis anterolateralis**. **ventral n. of thalamus, intermediate**, **n. ventralis intermedius**. **ventral n. of thalamus, lateral**, **n. ventralis lateralis**. **ventral n. of thalamus, posterior**, see *n. ventralis thalami posterior*. **ventral n. of trapezoid body**, **n. ventralis corporis trapezoidei**. **n. ventralis anterolateralis** [NA], the anterolateral ventral nucleus of the thalamus, which receives fibers from the globus pallidus and sends other fibers back to the corpus striatum; called also *n. ventralis thalami anterior* or *anterior ventral n. of thalamus*. **n. ventralis corporis trapezoidei** [NA], ventral nucleus of trapezoid body: a group of nerve cells intermingled with the fibers of the trapezoid body, medial and ventral to the dorsal nucleus (superior olive); they contribute fibers to the lateral lemniscus. **n. ventralis interme'dius** [NA], the intermediate part of the ventral nucleus of the thalamus, which receives fibers from the superior cerebellar peduncle and sends fibers to the motor cortex and to the premotor cortex of the frontal lobe; called also *n. ventralis thalami intermedius* and *lateral ventral n. of thalamus*. **n. ventralis posterolateralis** [NA], the posterolateral part of the ventral nucleus of the thalamus, which is the terminus of the spinothalamic tract and medial lemniscus and projects to the postcentral gyrus. **n. ventralis posteromedialis** [NA], the posteromedial part of the posterior ventral nucleus of the thalamus, which receives the secondary trigeminal tract and sends axons to the somesthetic area of the postcentral gyrus for the face. **n. ventralis thal'ami**, the nuclear group containing the several ventral nuclei of the nuclei laterales thalami. **n. ventralis thal'ami ante'rior**, former NA term for *n. ventralis anterolateralis*. **n. ventralis thal'ami interme'dius**, former NA term for *n. ventralis intermedius*. **n. ventralis thal'ami poste'rior**, the posterior part of the ventral nucleus of the thalamus, which is the site of termination of the main ascending sensory pathways. It is divided into the *n. ventralis posteromedialis* and *n. ventralis posterolateralis*. **ventromedial n. of hypothalamus**, **n. ventromedialis hypo'thal'ami** [NA], the ventral one of two main groups of nerve cell bodies found in the middle, tuberal region of the hypothalamus; it appears to be involved in diverse functions, e.g., the control of food intake and of sexual behavior. **n. ventromedia'lis**,

ventrally placed cells in the lateral part of the oculomotor nuclear complex; they are very distinct from the dorsally placed cells in the middle third of the complex and have a somatic motor function. **vesicular n.**, a form of cell nucleus the membrane of which stains deeply, while the central part is rather pale. **vestibular nuclei**, **nu'clei vestibula'les** [NA], the four cellular masses in the floor of the fourth ventricle: the superior (*n. acusticus*, *n. angularis*, Bekhterev, or Bekhterev's *n.*), lateral (Deiter's *n.*, *n. magnocellularis*, or large cell auditory *n.*), medial (Schwalbe's *n.*, triangular *n.*, or *n. triangularis*), and inferior vestibular nuclei, in which the short ascending and longer descending branches of the *pars vestibularis nervi octavi* terminate and in which cerebellar projections are received. The nuclei give rise to a widely dispersed special sensory system through projections to motor nuclei in the brain stem and cervical cord via the medial longitudinal fasciculi (from all the vestibular nuclei), to the cerebellum (chiefly from the inferior and medial nuclei), and to motor cells throughout the spinal cord (from the lateral nucleus). Additional connections of the nuclei provide for conscious perception of, and autonomic reactions to, labyrinthine stimulation. Called also *nuclei nervi vestibularis*. **vestibulocochlear nuclei**, **nu'clei nervi vestibulocochlearis**. **Voit's n.**, a cerebellar nucleus accessory to the dentate nucleus. **Westphal's n.**, **n. accessorius**. **yolk n.**, a special area of the cytoplasm of an ovum in which the synthetic activities leading to the accumulation of food supplies in the oocyte are apparently initiated; called also *vitelline body*, *Balbani's body*, and *Balbani's n.* **zygote n.**, fertilization *n.*

nuclide (nu'klid) a species of atom characterized by the charge, mass, number, and quantum state of its nucleus, and capable of existing for a measurable lifetime (generally greater than 10^{-10} sec.). Thus nuclear isomers are separate nuclides, but promptly decaying excited nuclear states and unstable intermediates in nuclear reactions are not so considered. **radioactive n.**, radionuclide.

nudophobia (nu'do-fo'be-ah) [L. *nudus* unclothed, bare + Gr. *phobos* fear + *-ia*] an abnormal aversion to being unclothed.

Nuel's space (ne-elz') [Jean Pierre Nuel, Belgian oculist, 1847-1920] see under *space*.

nufenoxole (noo'fē-nok'sōl) chemical name: 2-[3-(5-methyl-1,3,4-oxadiazol-2-yl)-3,3-diphenylpropyl]-2-azabicyclo[2.2.2]octane; an antipertistaltic, $C_{25}H_{29}N_3O$.

Nuhn's glands (noonz) [Anton Nuhn, German anatomist, 1814-1889] *glandulae linguales anteriores*.

nullipara (nuh-lip'ah-rah) [L. *nullus* none + *parere* to bring forth, produce] a woman who has never borne a viable child. Also written *para 0*.

nulliparity (nul'i-par'i-te) the condition or fact of being nulliparous.

nulliparous (nuh-lip'ah-rus) having never given birth to a viable infant.

nullisomatic (nul'i-so-mat'ik) lacking one pair of chromosomes.

number (num'ber) a symbol, as a figure or word, expressive of a certain value or of a specified quantity determined by count.

acetyl n., the number of milligrams of KOH necessary to neutralize the acetic acid saponified from 1 gram of acetylated fat; it represents the extent to which hydroxyl groups are present.

acid n., the number of milligrams of potassium hydroxide necessary to neutralize the free fatty acids in 1 gram of fat; it represents a measure of the amount of free fatty acids in the fat.

atomic n., a number expressive of the number of protons in an atomic nucleus, or the positive charge of the nucleus in terms of the number of electrons outside the nucleus of a neutral atom. All atoms having the same atomic number exhibit the same chemical properties.

Avogadro's n., the number of particles, real or imaginary, of the type specified by the chemical formula of a certain substance in one mole of the substance; the value assigned to the number is 6.023×10^{23} . Called also *Avogadro's constant*.

Brinell hardness n., an expression of the hardness of a substance determined by use of the Brinell tester.

chromosome n., the number of chromosomes present in the somatic cells of an organism; the normal individual receives, at conception, one set of chromosomes (the haploid number, symbol *n*) from each of the gametes forming the zygote, thus acquiring the diploid number (*2n*). In humans, *n* equals 23.

dibucaine n., an expression of the percentage of inhibition of the enzyme cholinesterase in a serum sample by dibucaine; used to differentiate between normal and abnormal serum cholinesterase phenotypes. Normal or usual is about 80; intermediate is about 60; abnormal or atypical is about 20. Abbreviated DN.

Hehner n., the percentage of fatty acids not volatile with steam, obtainable from a fat. **Hittorf n.**, the fraction of the total current passing through an electrolysis cell that is carried by a given ion species; called also *transport n.*

Hounsfield n's, a series of numbers used in computed tomography to represent the densities of various substances, structures, and growths.

Hübl n., iodine *n.* **hydrogen n.**, the amount of hydrogen that fats can take up; it represents the amount of unsaturated fatty acids present. **iodine n.**, the amount of iodine in grams which 100 grams of the fat can take up; it indicates

the amount of unsaturated fatty acids present in the fat. **isotopic n.**, the number which added to twice the atomic number gives the atomic weight. **Knoop hardness n.**, an expression of the hardness (indentation) of a material determined by use of a special indenting tool. **Loschmidt's n.**, 1. Avogadro's number. 2. the number of molecules per unit volume of an ideal gas at 0° C. and normal pressure. **mass n.**, the whole number nearest to the atomic weight of an element or isotope. Symbol A. **polar n.**, the number of valences (positive or negative) possessed by an atom in any particular compound. **Po-lenske n.**, the number of milliliters of tenth normal KOH required to neutralize the insoluble, volatile fatty acids from 5 gm. of the fat. **Reichert-Meissl n.**, the number of milliliters of tenth normal KOH required to neutralize the soluble volatile fatty acids distilled from 5 gm. of fat after it has been saponified with KOH and then made acid with H_3PO_4 or H_2SO_4 . **Reynold's n.**, the velocity of flow of a fluid multiplied by the diameter of the vessel and divided by the kinematic viscosity of the circulating fluid. **saponification n.**, the number of milligrams of potassium hydroxide required to neutralize the fatty acids in 1 gram of a fat or oil; it indicates the average size of the fatty acid molecules or the amount of the lower fatty acids present. **thiocyanogen n.**, the amount of thiocyanogen absorbed by a fat or oil. **transport n.**, Hittorf number. **turnover n.**, the number of molecules of substrate acted upon by one molecule of enzyme per minute. **wave n.**, in light waves, the reciprocal of the wavelength expressed as a fraction of a centimeter.

numbness (num'nes) a lack or diminution of sensation in a part.

nummular (num'u-lar) [L. *nummularis*] 1. coin-sized and coin-shaped. 2. made up of round, flat disks. 3. piled, like coins, in a rouleau.

Numorphan (nu-mor'fan) trademark for preparations of oxymorphone hydrochloride.

nunnation (nun-a'shun) [Heb. *nun* letter N] the too frequent use of *n* sounds, or the nasalizing of sounds or words.

Nupercainal (noo'per-kān'al) trademark for a preparation of dibucaine.

Nupercaine (nu'per-kān) trademark for preparations of dibucaine.

nuptiality (nup-shal'i-te) [L. *nuptus* married] the proportion of marriages to the population.

N-Uristix (u'ri-stiks) trademark for a reagent strip designed for testing for nitrite, glucose, and protein in urine.

nurse (ners) 1. a person who is especially prepared in the scientific basis of nursing and who meets certain prescribed standards of education and clinical competence. 2. to provide services that are essential to or helpful in the promotion, maintenance, and restoration of health and well-being. 3. to breast-feed an infant. See also *nursing*. **charge n.**, one who is in charge of a patient care unit of a hospital or similar health agency; called also *head n.* **clinical n. specialist**, a registered nurse with a high degree of knowledge, skill, and competence in a specialized area of nursing. These skills are made directly available through the provision of nursing care to clients and are indirectly available through guidance and planning of care with other nursing personnel. Clinical nurse specialists hold a master's degree in nursing, preferably with an emphasis in clinical nursing. Called also *n. specialist*. **n. clinician**, a registered nurse, referred to as a *nurse clinician* or as a *nurse practitioner*, who has well-developed competencies in utilizing a broad range of cues. These cues are used for prescribing and implementing both direct and indirect nursing care and for articulating nursing therapies with other planned therapies. Nurse clinicians demonstrate expertise in nursing practice and ensure ongoing development of expertise through clinical experience and continuing education. Generally, minimal preparation for this role is the baccalaureate degree. **community n.**, the name given in Great Britain to a public health nurse, from the fact that such a nurse was placed in charge of each one of the districts into which the city or community was divided. See also *public health n.* **community health n.**, public health *n.* **district n.**, community *n.* **dry n.**, a woman who has charge of another's infant but does not breast-feed it. **general duty n.**, a registered nurse, usually one who has not undergone training beyond the basic nursing program, who sees to the general nursing care of patients in a hospital or other health agency. **graduate n.**, a graduate of a school of nursing; often used to designate one who has not been registered or licensed to practice. Called also *trained n.* **head n.**, charge *n.* **hospital n.**, one employed by a hospital. **licensed practical n.**, a graduate of a school of practical nursing whose qualifications have been examined by a state board of nursing and who has been legally authorized to practice as a licensed practical or vocational nurse (L.P.N. or L.V.N.), under the supervision of a physician or registered nurse. **licensed vocational n.**, see *licensed practical n.* **monthly n.**, a nurse who attends confinement cases. **occupational health n.**, an especially prepared registered nurse employed by an institution to apply nursing principles and procedures for the promotion, restoration, and maintenance of optimal health of its employees as compared to a nurse who performs normal nursing functions in an

occupational setting. **office n.**, a registered nurse employed by a physician in his office to perform or to assist him in the performance of certain procedures. **practical n.**, a person who has had practical experience in nursing care but who is not a graduate of any kind of nursing school; not to be confused with a licensed practical nurse. **n. practitioner**, see *n. clinician*. **private n.**, **private duty n.**, one who attends an individual patient, usually on a fee-for-service basis, and who may specialize in a specific class of diseases; called also *special n.* **probationer n.**, a person who has entered a school of nursing and is under observation to determine her fitness for the nursing profession; applied principally to nursing students enrolled in hospital schools of nursing. **public health n.**, an especially prepared registered nurse employed in a community agency to safeguard the health of persons in the community, giving care to the sick in their homes, promoting health and well-being by teaching families how to keep well, and assisting in programs for the prevention of disease. Called also *community health n.* and *visiting n.* **Queen's n.**, in Great Britain, a district nurse who has been trained at or in accordance with the regulations of the Queen Victoria Jubilee Institute for Nurses. **registered n.**, a graduate nurse who has been legally authorized (registered) to practice after examination by a state board of nurse examiners or similar regulatory authority, and who is legally entitled to use the designation R.N. **school n.**, an especially prepared registered nurse employed in a school system or public health agency to assist in safeguarding the health of students and to teach health practices. **scrub n.**, one who directly assists the surgeon in the operating room. **special n.**, 1. a private nurse. 2. a nurse who specializes in a particular class of cases. **n. specialist**, clinical *n. specialist*. **student n.**, a person enrolled in a basic program of nursing education. **trained n.**, graduate *n.* **visiting n.**, see *public health n.* **wet n.**, a woman who breast-feeds the infant of another.

nurse-midwife (ners-mid'wif) an individual educated in the two disciplines of nursing and midwifery, who possesses evidence of certification according to the requirements of the American College of Nurse-Midwives. Abbreviated C.N.M. (Certified Nurse-Midwife).

nurse-midwifery (ners-mid'wi-fer-e, ners-mid'wif-ē-re) the independent management of care of essentially normal newborns and women, antepartally, intrapartally, postpartally, and/or gynecologically, occurring within a health care system which provides for medical consultation, collaborative management, or referral, and is in accord with the functions, standards, and qualifications as defined by the American College of Nurse-Midwives.

nursery (ner'sē-re) the department in a hospital where newborn infants are cared for. **day n.**, **day care n.**, an institution devoted to the care of young children during the day.

nursing (ners'ing) the provision, at various levels of preparation, of services that are essential to or helpful in the promotion, maintenance, and restoration of health and well-being or in the prevention of illness, as of infants, of the sick and injured, or of others for any reason unable to provide such services for themselves. Sometimes designated according to the age of the patients being cared for (e.g., pediatric or geriatric nursing), or their particular health problems (e.g., gynecologic, medical, obstetrical, orthopedic, psychiatric, surgical, urological nursing, or the like), or the setting in which the services are provided (e.g., office, school, or occupational health nursing). See also *nurse*.

Nussbaum's bracelet, narcosis (nōōs'bowmz) [Johann Nepomuk Nussbaum, German surgeon, 1829–1890] see under *bracelet* and *narcosis*.

Nussbaum's experiment (nōōs'bowmz) [Moritz Nussbaum, German histologist, 1850–1915] see under *experiment*.

nut (nut) [L. *nux*; Gr. *karyon*] a seed element, as of various trees, usually enclosed in a coating of variable hardness. **betel n.**, areca.

nutatation (nu-ta'shun) [L. *nutatio*] the act of nodding, especially involuntary nodding.

nutatory (nu'tah-tor'e) [L. *nutare* to keep nodding, to sway] nodding, especially involuntarily.

nutgall (nut'gawl) [L. *galla*] an excrescence growing on oak trees, especially species of *Quercus* (e.g., *Q. infectoria* Oliv., Fagaceae), produced by insect eggs and larvae embedded in the plant tissues; it is a source of gallic and tannic acids, which are used in various pharmaceuticals for their astringent properties. Called also *gall*, *Aleppo gall*, *Smyrna gall*, and *gallnut*.

nutmeg (nut'meg) myristica.

nutrient (nu'tre-ent) [L. *nutriens*] 1. nourishing; affording nutriment. 2. a nutritious substance; food, or a component of food. **essential n's**, those nutrients (proteins, minerals, carbohydrates, fat, vitamins) necessary for growth, normal functioning, and maintaining life; they must be supplied by food, since they cannot be synthesized by the body. **secondary n.**, a substance that stimulates the intestinal microflora to synthesize other nutrients.

nutrilite (nu'tri-lit) any organic substance which in minute amounts is important in the nutrition of a microorganism.

nutriment (nu'trī-ment) [L. *nutrimentum*] nourishment; nutritious material; food.

nutriology (nu'tre-ol'o-je) the science of nutrition; the study of foods and their use in diet and therapy.

nutrition (nu-trish'un) [L. *nutritio*] 1. the sum of the processes involved in taking in nutrients and assimilating and utilizing them. 2. nutriment. **adequate n.**, see under *diet*. **heterotrophic n.**, that of organisms which, because they cannot synthesize their own food from inorganic substances, must live either by eating autotrophic organisms or dead or decaying organic matter. See also *holozoic n.*, *parasitic n.*, and *saprophytic n.* **holozoic n.**, heterotrophic nutrition in which organisms, including most animals, must obtain food as particles of some size which must be eaten and digested before it can be absorbed. **parasitic n.**, heterotrophic nutrition in which an organism lives on the body of another living organism and obtains its nourishment from it. **saprophytic n.**, heterotrophic nutrition in which organisms, such as many protozoa, as well as yeasts, molds, and most bacteria, absorb required nutrients through the cell membrane following extracellular digestion of nonliving organic material. **total parenteral n.**, parenteral hyperalimentation.

nutritional (nu-trish'un-al) relating to or affecting nutrition.

nutritionist (nu-trish'un-ist) a specialist in food and nutrition.

nutritious (nu-trish'us) [L. *nutritus*] affording nourishment.

nutritive (nu'trī-tiv) pertaining to nutrition.

nutriture (nu'trī-tūr') the status of the body in relation to nutrition, generally or in regard to a specific nutrient, such as protein.

nutrix (nu'triks) a wet nurse.

nutrose (nu'trōs) neutral casein sodium; a dry food preparation of milk for the use of invalids.

Nuttallia (nū-tal'e-ah) [George H. F. Nuttall, biologist, Cambridge University, 1862-1937] *Babesia*. **N. e'qui**, *Babesia equi*. **N. gibso'ni**, *Babesia gibsoni*.

nux (nuks), gen. *nu'cis* [L.] nut. **n. moscha'ta**, myristica. **n. vom'ica**, the dried ripe seed of *Strychnos nux-vomica* L. (Loganiaceae), containing several alkaloids, principally strychnine and brucine. It has been used as a bitter tonic and central nervous system stimulant, and in veterinary medicine it is used as a bitter tonic and in the treatment of inappetence, atony of the rumen, and chronic indigestion.

nyacyne (ni'ah-sin) neomycin.

nyad (ni'ad) the nymph form of certain arthropods.

nyctalga (nik-tal'je-ah) [*nycto-* + *-algia*] pain that occurs in sleep only.

nyctalope (nik'tah-lōp) a person affected with nyctalopia.

nyctalopia (nik'tah-lo'pe-ah) [Gr. *nyktalōps*] 1. night blindness (Galen); failure or imperfection of vision at night or in a dim light, with good vision only on bright days (Heberden, 1767). 2. in French (and incorrectly in English), day blindness (Hippocrates), or hemeralopia, a condition in which the patient sees better in an obscure light than in bright sunlight.

nyctaphonia (nik'tah-fo'ne-ah) [*nycto-* + *aphonia*] loss of voice during the night.

nycterine (nik'ter-in) [Gr. *nykterinos* by night] 1. occurring at night. 2. obscure.

nyctohemeral (nik'ter-o-hem'er-al) nyctohemeral.

nycto- (nik'to) [Gr. *nyx* night] a combining form denoting relationship to night or to darkness.

nyctohemeral (nik'to-hem'er-al) [*nycto-* + Gr. *hēmera* day] pertaining to both night and day.

nyctophilia (nik'to-fil'e-ah) [*nycto-* + Gr. *philein* to love] abnormal preference for night over day.

nyctophobia (nik'to-to'be-ah) [*nycto-* + Gr. *phobein* to be frightened by] morbid dread of darkness.

nyctophonia (nik'to-to'ne-ah) [*nycto-* + Gr. *phōnē* voice] loss of voice during the day but not at night.

Nyctotherus (nik-toth'er-us) [Gr. "one who hunts at night"] a genus of ciliate protozoa of the subclass Euciliatia, found as parasites of the large intestine of amphibians, fish, and invertebrates. *N. cordiformis* occurs in the rectums of frogs and tadpoles. *N. ova'lis*, occurs in the intestines of cockroaches.

nyctotyphlosis (nik'to-tif-lo'sis) [*nycto-* + Gr. *typhlōsis* blindness] nyctalopia.

nycturia (nik-tu're-ah) [*nycto-* + Gr. *ouron* urine + *-ia*] frequent urination during the night, especially the passage of more urine at night than during the day.

N.Y.D. not yet diagnosed.

Nydravid (ni'dra-zid) trademark for preparations of isoniazid.

Nylander's test (reagent) (ni'lan-derz) [Emil Salomon Nylander, Swedish chemist, 1858-1936] see under *tests*.

nylestriol (ni-les'tre-ōl) chemical name: 3-(cyclopentyloxy)-19-nor-17α-pregna-1,3,5(10)-trien-20-yne-16,17-diol; an estrogen, C₂₅-H₃₂O₄.

nylidrin hydrochloride (nil'i-drin) [USP] chemical name: 4-hydroxy-α-[1-[(1-methyl-3-phenylpropyl)amino]ethyl] benzene-

methanol hydrochloride. A synthetic adrenergic, C₁₆H₂₅NO₂·HCl, occurring as a white, crystalline powder; used as a peripheral vasodilator, administered orally, intramuscularly, and subcutaneously.

nylon (ni'lon) a synthetic polymerized plastic which in fiber form is used as suture material.

nymph (nimf) [Gr. *nymphē* a bride] a stage in the life cycle of certain arthropods, as the ticks, between the larva and the adult. A nymph resembles the adult in appearance.

nympha (nim'fah), pl. *nym'phae* [L.; Gr. *nymphē*] labium minus pudendi. **n. of Krause**, clitoris.

nymphae (nim'fe) [L.] plural of *nympha*.

nymphectomy (nim-fek'to-me) [*nympha* + Gr. *ektomē* excision] excision of the nymphae.

nymphitis (nim-fi'tis) inflammation of the nymphae.

nympho- (nim'fo) [L. *nympha*; Gr. *nymphē*] a combining form denoting relationship to the nymphae, or labia minora.

nymphocaruncular (nim'fo-kah-rung'ku-lar) pertaining to the labia minora and the caruncula hymenalis.

nymphohymeneal (nim'fo-hi'mē-ne'al) pertaining to the labia minora and the hymen.

nymphomania (nim'fo-ma'ne-ah) [*nympho-* + Gr. *mania* madness] exaggerated sexual desire in a female. Cf. *satyriasis*.

nymphomaniac (nim'fo-ma'ne-ak) 1. affected with nymphomania. 2. one who is affected with nymphomania.

nymphoncus (nim-fong'kus) [*nympho-* + Gr. *onkos* mass, bulk] swelling of the nymphae.

nymphotomy (nim-fot'o-me) [*nympho-* + Gr. *tomē* a cutting] surgical incision of the nymphae or clitoris.

Nyssorhynchus (nis'o-ring'kus) [Gr. *nyssa* prick + *rhynchos* snout] a subgenus of anopheline mosquitoes, several species of which act as carriers of the malarial parasite in tropical America.

nystagmic (nis-tag'mik) pertaining to or characterized by nystagmus.

nystagmiform (nis-tag'mi-form) nystagmoid.

nystagmograph (nis-tag'mo-graf) [*nystagmus* + Gr. *graphein* to write] an instrument for recording the movements of the eyeball in nystagmus.

nystagmoid (nis-tag'moid) resembling nystagmus.

nystagmus (nis-tag'mus) [Gr. *nystagmos* drowsiness, from *nys-tazein* to nod] an involuntary rapid movement of the eyeball, which may be horizontal, vertical, rotatory, or mixed, i.e., of two varieties. **aural n.**, nystagmus due to disturbances in the labyrinth; the eye movements are rhythmic, with a fast and a slow component. **caloric n.**, that induced by irrigating the ears with warm or cold water or air; see *Bárány's symptom* (def. 2), under *symptom*. **Cheyne's n.**, **Cheyne-Stokes n.**, a peculiar rhythmical eye movement resembling Cheyne-Stokes respiration in its rhythm. **disjunctive n.**, nystagmus in which the eyes swing toward and away from each other. **dissociated n.**, nystagmus in which the movements in the two eyes are dissimilar. **end-position n.**, nystagmus occurring at extremes of gaze. **fixation n.**, nystagmus which appears only on gazing fixedly at an object. **gaze n.**, nystagmus made apparent by looking to the right or to the left. **head n.**, an oscillatory motion of the head of an animal which occurs when it is rotated. **jerk n.**, **jerky n.**, nystagmus which consists of a slow movement in one direction, followed by a rapid return movement in the opposite direction; called also *resilient n.* and *rhythmical n.* **labyrinthine n.**, vestibular n. **latent n.**, nystagmus which occurs only when one eye is covered. **lateral n.**, nystagmus in which the movement of the eyes is from side to side. **miner's n.**, an occupational disease of coal miners consisting of abnormal eye movements associated with other signs and symptoms; it is considered by some to be related to poor lighting and by others as a functional disorder. **ocular n.**, nystagmus due to eye disease. **optokinetic n.**, **optokinetic n.**, the normal nystagmus occurring when looking at objects passing across the field of vision, as in viewing from a moving railroad car or automobile. **oscillating n.**, undulatory n. **palatal n.**, see under *myoclonus*. **paretic n.**, a false nystagmus occurring when there is a weakness of the ocular muscles. **pendular n.**, undulatory n. **positional n.**, that which occurs, or is altered in form or intensity, on assumption of certain positions of the head. **railroad n.**, optokinetic n. **resilient n.**, jerk n. **retraction n.**, **n. retracto'rius**, a spasmodic backward retraction of the eyeball occurring on attempted movement of the eye; it is a sign of disease of the midbrain. **rhythmical n.**, jerk n. **rotatory n.**, nystagmus in which the movement is about the visual axis. **see-saw n.**, that in which one eye moves up as the other moves down. **spontaneous n.**, that occurring without specific stimulation of the vestibular system. **undulatory n.**, one which consists of to-and-fro movements of equal velocity; called also *pendular n.*, *vibratory n.*, and *oscillating n.* **unilateral n.**, nystagmus manifest in only one eye. **vertical n.**, an up-and-down movement of the eyes. **vestibular n.**, nystagmus due to vestibular disturbance; eye movements are rhythmic, with a slow and a fast component. Called also *labyrinthine n.* **vibratory n.**, undulatory n. **visual n.**, nystagmus character-

ized by smooth pendulum-like movement. **voluntary n.**, rapid rhythmic eye movements which can be produced at will by some normal individuals.

nystagmus-myoclonus (nis-tag'mus-mi-ok'lo-nus) a rare congenital condition in which there is nystagmus together with abnormal involuntary movements of the extremities and trunk.

nystatin (nis'tah-tin) [USP] an antibiotic, $C_{46}H_{77}NO_{16}$, produced by the growth of *Streptomyces noursei*, occurring as a yellow

to tan powder, specifically effective against *Candida albicans*; used in the treatment of vaginal, intestinal, oral, or cutaneous candidal infections, administered orally and topically. Called also *fungicidin*.

nystaxis (nis-tak'sis) [Gr.] nystagmus.

Nysten's law (ne-stahz') [Pierre Hubert Nysten, French pediatrician, 1771-1818] see under *law*.

nyxis (nik'sis) [Gr. "pricking"] puncture, or paracentesis.

O

O chemical symbol for oxygen.

O symbol for the nonmotile strain of an organism and for its surface antigen. Cf. *H*, and see *O agglutinin*.

O. abbreviation for *L. oculus*, eye; *octarius*, pint; and for *opening*.

o- chemical symbol for ortho-.

O₂ 1. symbol for the diatomic form of oxygen; molecular oxygen. 2. symbol for *both eyes*.

O₃ ozone.

oak (ōk) a cupuliferous tree of the genus *Quercus*. The bark of all species contains a large proportion of tannin. **poison o.**, the plants *Toxicodendron diversilobum* (T. and G.) Greene (true western poison oak) and *T. quercifolium* (Michx.) Greene (true eastern poison oak). The term is also used loosely to refer to *T. radicans* (L.) Kuntze (poison ivy). All contain toxic urishiol resin, whose major constituent is 3-*n*-pentadecylcatechol, a highly allergenic compound.

oakum (o'kum) prepared fiber from old ropes; formerly used in making surgical dressings.

oario- for words beginning thus, see those beginning *oophoro-* and *ovario-*.

oasis (o-a'sis), pl. *oa'ses* [Gr. "a fertile islet in a desert"] an island or spot of healthy tissue in a diseased area.

oath (ōth) a solemn declaration or affirmation. **o. of Hippocrates**, **hippocratic o.**, see under *Hippocrates*.

OB. obstetrics.

ob- [L. *ob* against] prefix signifying against, in front of, towards.

obcecation (ob'se-ka'shun) incomplete blindness.

obducent (ob-du'sent) [L. *obducere* to draw over, to cover] serving as a cover; covering.

obduction (ob-duk'shun) [L. *obductio*] a medicolegal autopsy.

O'Beirne's sphincter (o-birnz') [James O'Beirne, Irish surgeon, 1786-1862] see under *sphincter*.

obeliac (o-be'le-ak) pertaining to the obelion.

obeliad (o-be'le-ad) toward the obelion.

obelion (o-be'le-on) [Gr., *dim.* of *obelos* a spit] a point on the sagittal suture where it is crossed by a line which connects the parietal foramina.

Ober's operation, test (sign) (o'berz) [Frank Roberts Ober, Boston orthopedic surgeon, born 1881] see under *operation* and *tests*.

Obermayer's test (o'ber-mi'erz) [Friedrich Obermayer, physiologic chemist in Vienna, 1861-1925] see under *tests*.

Obermüller's test (o'ber-mil-erz) [Kuno Obermüller, German physician, born 1861] see under *tests*.

Oberst's method (o'bersts) [Maximilian Oberst, German surgeon, 1849-1925] see under *method*.

Obersteiner-Redlich area (zone) (o'ber-sti'ner-red'likh) [Heinrich Obersteiner, Austrian neurologist, 1847-1922; Emil Redlich, Austrian neurologist, 1866-1930] see under *area*.

obese (o-bēs') [L. *obesus*] excessively fat.

obesitas (o-be'si-tas) [L.] obesity.

obesity (o-bēs'i-te) [L. *obesitas*] an increase in body weight beyond the limitation of skeletal and physical requirement, as the result of an excessive accumulation of fat in the body.

adult-onset o., obesity beginning in adulthood and characterized by increase in size (hypertrophy) of adipose cell with no increase in number; called also *hypertrophic o.* **alimentary o.**, exogenous obesity. **endogenous o.**, obesity due to metabolic (endocrine) abnormalities. **exogenous o.**, obesity due to overeating. **hyperinsulinar o.**, obesity due to overactivity of insulin secretion, associated with hypoglycemia and increased appetite. **hyperinterrenal o.**, obesity associated with hyperfunction of the adrenal cortex. **hyperplasmic o.**, obesity due to increase in the body protoplasm, as distinguished from that due to accumulation of fat and water. **hyperplastic-hypertrophic o.**, lifelong o. **hypertrophic o.**, adult-onset o. **hypogonad o.**, obesity associated with hypofunction of the gonads. **hypoplasmic o.**, obesity due to increase of fat and water and marked by decrease of the body protoplasm. **hypo-**

thyroid o., obesity due to hypothyroidism. **lifelong o.**, obesity beginning in childhood and characterized by an increase both in number (hyperplasia) and in size (hypertrophy) of adipose cells; called also *hyperplastic-hypertrophic o.* **morbid o.**, the condition of weighing two or three, or more, times the ideal weight; so called because it is associated with many serious and life-threatening disorders (diabetes mellitus, atherosclerosis, hypertension, pickwickian syndrome, etc.). **simple o.**, exogenous o.

obesogenous (o-bēs-ōj'ē-nus) producing or causing obesity.

obex (o'beks) [L. "barrier"] [NA] the ependyma-lined junction of the tenebrae of the fourth ventricle of the brain at the inferior angle.

obfuscation (ob'fus-ka'shun) [L. *obfuscatio* a darkening] the act of rendering, or process of becoming, obscure; a darkening.

obidoxime chloride (ō-bī-doks'ēm) chemical name: 1,1'-(oxydimethylene) bis[4-formylpyridinium]dichloride; a cholinesterase reactivator, $C_{14}H_{16}Cl_2N_4O_3$, which has been used to counter organophosphorus poisoning.

objective (ob-jek'tiv) [L. *objectivus*] 1. perceptible to the external senses. 2. a result for whose achievement an effort is made. 3. the lens or system of lenses in a microscope (or telescope) that is nearest to the object under examination. **achromatic o.**, a microscope objective in which the chromatic aberration is corrected for light of two wavelengths and the spherical aberration is corrected for that of one wavelength. **apochromatic o.**, a microscope objective in which the chromatic aberration is corrected for light of three wavelengths and the spherical aberration is corrected for that of two. **dry o.**, a microscope objective designed to be used without a liquid between its tip and the cover glass over the specimen. **fluorite o.**, a microscope objective in which some of the lenses are made from fluorite instead of glass. **immersion o.**, a microscope objective designed to have its tip and the cover glass over the specimen connected by a liquid instead of by air. The liquid may be water (water immersion) or a specially prepared oil (oil immersion). **semiaapochromatic o.**, a microscope objective in which the correction of chromatic and spherical aberrations is between those of the achromatic and apochromatic objectives.

obligate (ob'li-gāt) [L. *obligatus*] not facultative; necessary; compulsory; pertaining to or characterized by the ability to survive only in a particular environment or to assume only a particular role, as an obligate anaerobe.

oblique (ō-blēk, ō-blik) [L. *obliquus*] slanting; inclined; between a horizontal and a perpendicular direction.

obliquity (ob-lik'wī-te) the state of being oblique, or slanting. **Litzmann's o.**, inclination of the fetal head so that the posterior parietal bone presents to the parturient canal; called also *posterior asynclitism*. **Nägele's o.**, the position of the fetal head in which the anterior parietal bone presents to the parturient canal, the biparietal diameter being oblique in relation to the brim of the pelvis; called also *anterior asynclitism*. **o. of pelvis**, inclination of the pelvis.

obliquus (ob-li'kwus) [L.] oblique.

obliteration (ob-lit'er-a'shun) [L. *obliteratio*] complete removal, whether by disease, degeneration, surgical procedure, irradiation, etc. **cortical o.**, cortical achromia; a condition in which the cerebral cortex is marked by areas in which the ganglion cells have disappeared.

oblongata (ob'long-ga'tah, ob'long-gah'tah) a Latin adjective meaning oblong, sometimes used informally to refer to the medulla oblongata.

oblongatal (ob'long-ga'tal) pertaining to the medulla oblongata.

obnubilation (ob-nu'bi-la'shun) a clouded state of the mind.

O'Brien akinesia (o-bri'en) [Cecil Starling O'Brien, American ophthalmologist, born 1889] see under *akinesia*.

observerscope (ob-zer'ver-skōp) a form of endoscope with two ocular systems which permit two persons to inspect the same spot at the same time.

obsession (ob-sesh'un) [L. *obsessio*] preoccupation with an idea which morbidly dominates the mind, constantly suggesting irrational action.

obsessive (ob-ses'siv) pertaining to or characterized by obsession.

obsessive-compulsive (ob-ses'siv-kom-pul'siv) marked by compulsion to repetitively perform certain acts, or carry out certain rituals; see under *neurosis*.

obsolescence (ob'so-les'ens) [L. *obsolescere* to grow old] the cessation or the beginning of the cessation of any physiologic process.

obsolete (ob'so-lēt) [L. *obsoletus*, from *obsoletus* to go out of use] indistinct; faded; gone out of use.

obstetric, obstetrical (ob-stet'rik; ob-stet're-kal) [L. *obstetricius*] pertaining to obstetrics.

obstetrician (ob'stē-trish'un) [L. *obstetrix* midwife] one who practices obstetrics.

obstetrics (ob-stet'riks) [L. *obstetricia*] that branch of surgery which deals with the management of pregnancy, labor, and the puerperium.

obstipation (ob'stī-pa'shun) [L. *obstipatio*] intractable constipation.

obstruction (ob-struk'shun) [L. *obstructio*] 1. the act of blocking or clogging. 2. the state or condition of being clogged. **false colonic o.**, see *Ogilvie's syndrome*, under *syndrome*. **intestinal o.**, any hindrance to the passage of the intestinal contents. See also *ileus*.

obstruent (ob'stroo-ent) [L. *obstruens*] 1. causing obstruction or blocking. 2. any agent or agency that causes obstruction.

obtund (ob-tund') [L. *obtundere*] to render dull or blunt; to render less acute.

obtundent (ob-tun'dent) [L. *obtundens*] 1. having the power to dull sensibility or to soothe pain. 2. a soothing or partially anesthetic medicine.

obturation (ob'tu-ra'shun) the act of closing or occluding; a form of intestinal obstruction.

obturator (ob'tu-ra'tor) [L.] a disk or plate, natural or artificial, which closes an opening, such as a prosthetic appliance used to close a congenital or acquired opening in the palate.

obtuse (ob-tūs') [L. *obtusus*] 1. blunt; dull. 2. having a dull intellect.

obtusio (ob-tu'zhun) [L. *obtusio*] morbid bluntness or dullness of sensibility.

occipital (ok-sip'i-tal) [L. *occipitalis*] pertaining to the occiput; located near the occipital bone, as the occipital lobe.

occipitalis (ok-sip'i-ta'lis) [L.] the posterior part of the occipitofrontalis muscle.

occipitalization (ok-sip'i-tal-i-za'shun) synostosis of the atlas with the occipital bone.

occipitoanterior (ok-sip'i-to-an-te're-or) having the occiput directed forward toward the pubis (designating the position of the fetus in relation to the maternal pelvis).

occipitoatloid (ok-sip'i-to-at'loid) pertaining to the occipital bone and the atlas.

occipitoaxoid (ok-sip'i-to-ak'soid) pertaining to the occipital bone and the axis.

occipitobasilar (ok-sip'i-to-bas'i-ler) pertaining to the occiput and the base of the skull.

occipitobregmatic (ok-sip'i-to-breg-mat'ik) pertaining to the occiput and the bregma.

occipitocalcarine (ok-sip'i-to-kal'kar-in) both occipital and calcareine.

occipitocervical (ok-sip'i-to-ser'vi-kal) pertaining to the occiput and neck.

occipitofacial (ok-sip'i-to-fa'shal) pertaining to the occiput and the face.

occipitofrontal (ok-sip'i-to-fron'tal) pertaining to the occiput and the forehead.

occipitomastoid (ok-sip'i-to-mas'toid) pertaining to the occipital bone and the mastoid process.

occipitomenta (ok-sip'i-to-men'tal) pertaining to the occiput and the chin.

occipitoparietal (ok-sip'i-to-pah-ri'e-tal) pertaining to the occipital and parietal bones or lobes of the brain.

occipitoposterior (ok-sip'i-to-pos-te're-or) having the occiput directed toward the back, or turned toward the sacrum (designating the position of the fetus in relation to the maternal pelvis).

occipitotemporal (ok-sip'i-to-tem'po-ral) pertaining to the occipital and the temporal bones.

occipitothalamic (ok-sip'i-to-thah-lam'ik) pertaining to the occipital lobe and thalamus.

occiput (ok'si-put) [L.] [NA] the back part of the head; called also *o. cranii* and *o. of cranium*.

occlude (ō-klood') to fit close together; to close tight, as to bring the mandibular teeth into contact with the teeth in the maxilla; to obstruct or close off.

occluder (ō-klood'er) a form of dental articulator.

occlusal (ō-klood'zal) pertaining to closure; applied to the masticating surfaces of the premolar and molar teeth, or to the contacting surfaces of opposing occlusion rims, or designating a position toward the hypothetical plane passing between the mandibular and maxillary teeth when the jaws are brought into approximation.

occlusion (ō-klood'zhun) [L. *occlusio*] 1. the act of closure or state of being closed; an obstruction or a closing off. 2. the trapping of a material, either liquid or gas, within cavities in a solid. 3. the relation of the maxillary and mandibular teeth when in functional contact during activity of the mandible. **abnormal o.**, malocclusion. **acentric o.**, a condition in which the habitual voluntary closure pattern of the mandible does not coincide with centric relation, producing primary premature tooth contacts in the centric path of closure. **afunctional o.**, malocclusion which prevents mastication. **anatomic o.**, occlusion in which all the teeth are present and occlude normally according to the anatomical standard. **anterior o.**, mesiocclusion. **balanced o.**, that in which the occlusal contact of the teeth on the working side of the jaw is accompanied by the harmonious contact of the teeth of the opposite (balancing) side. The occlusion of artificial teeth may be *mechanically balanced*, as on an articulator, without reference to physiologic considerations, or *physiologically balanced*, functioning in harmony with the temporomandibular joint and the neuromuscular system. **buccal o.**, the position of a posterior tooth when it is outside (buccal to) the line of occlusion. **capsular o.**, surgical closure of the perinephric capsule for the relief of floating kidney. **central o.**, centric o. **centric o.**, occlusion of the teeth when the mandible is in centric relation to the maxilla, i.e., full occlusal surface contact of the upper and lower teeth in habitual occlusion, with the mandibular condyles in their most posterior, unstrained position on the posteroinferior third of the articular eminencia. It is a reference position from which all other horizontal positions are eccentric. **components of o.**, the various factors involved in occlusion, e.g., the temporomandibular joint, the associated neuromusculature, and the teeth, and in denture prosthetics, the denture-supporting structures. **coronary o.**, complete obstruction of an artery of the heart, usually from progressive atherosclerosis (sometimes complicated by thrombosis), rarely from embolism, arteritis, or dissecting aneurysm. **distal o.**, the position of a lower tooth when it is distal to its opposite number in the maxilla. **eccentric o.**, occlusion of the teeth when the lower jaw has moved from the centric position; see *centric o.* **edge-to-edge o.**, occlusion in which the anterior maxillary and mandibular teeth meet along their incisal edges when the mandible is in centric position. **end-to-end o.**, edge-to-edge o. **enteromesenteric o.**, obstruction of blood vessels in both the mesentery and the wall of the intestine. **functional o.**, such contact of the maxillary and mandibular teeth as will provide the highest efficiency in the centric position and during all excursive movements of the jaw that are essential to mastication, without producing trauma. **habitual o.**, the consistent relationship of the teeth in the maxilla to those of the mandible when the teeth in both jaws are brought into maximum contact, such relationship varying from individual to individual; the ideal habitual occlusion is centric occlusion, but it is seldom attained without corrective dental treatment. **hyperfunctional o.**, traumatic o. **ideal o.**, perfect interdigitation of the upper and lower teeth. **labial o.**, the position of an anterior tooth when it is outside (labial to) the line of occlusion. **lateral o.**, the occlusion of the teeth when the lower jaw is moved to the right or left of centric position. **lingual o.**, malocclusion in which the tooth is lingual to the line of the normal dental arch. **mesial o.**, the position of a lower tooth when it is mesial to its opposite number in the maxilla. **neutral o.**, normal o. **normal o.**, the contact of the upper and lower teeth in the centric relationship. **pathogenic o.**, an occlusal relationship that is capable of producing pathologic changes in the supporting tissues. **physiologic o.**, occlusion which is in harmony with the functioning of the temporomandibular joint and the neuromuscular system. **posterior o.**, distocclusion. **postnormal o.**, distal o. **prenormal o.**, mesial o. **protrusive o.**, anteroocclusion. **o. of pupil**, closure of the opening in the iris of the eye by formation of an opaque membrane. **retrusive o.**, distocclusion. **spherical form of o.**, an arrangement of teeth that places their occlusal surfaces on the surface of an imaginary sphere, about 8 inches in diameter, with its center above the level of the teeth; see also *Monson curve*, under *curve*. **terminal o.**, the relationship of opposing occlusal surfaces that provides the maximum natural or planned contact and/or intercuspation. **traumatic o.**, occlusion in which the contact relation of the masticatory surfaces of the teeth is directly the result of trauma. **traumatogenic o.**, occlusion which, under biting pressure, produces injury to the periodontal tissues. **working o.**, the contact made between the teeth on the side toward which the mandible is moved.

occlusive (ō-klood'siv) pertaining to or effecting occlusion.

occlusocervical (ō-klood'so-ser'vi-kal) pertaining to the occlusal surface and the neck of a tooth.

occlusometer (ok'loo-som'ē-ter) gnathodynamometer.

occlusorehabilitation (ō-klood'zo-re'hah-bil'i-ta'shun) the

employment of procedures designed to restore the dentition to an optimal functional relationship.

occult (ô-kult') [L. *occultus*] obscure; concealed from observation; difficult to be understood.

occupancy (ok'ü-pan-se) the period of time during which a unit quantity of a substance, administered in a specified way, is present in, or occupies, a part of the body before it is excreted or broken down.

ocellus (o-sel'us) [L., dim. of *oculus* eye] 1. a small simple eye in insects and other invertebrates. 2. one of the elements of a compound eye of insects. 3. a roundish, eyelike patch of color.

ochlesis (ok-le'sis) [Gr. *ochlêsis* crowding] any disease due to overcrowding.

Ochoa (o-cho'ah), Severo. United States physician and biochemist, born 1905; co-winner, with Arthur Kornberg, of the Nobel prize in medicine and physiology for 1959, for work in the discovery of enzymes for producing nucleic acids artificially.

Ochromium (o-kro'me-um) a genus of microorganisms of the family Siderocapsaceae, suborder Pseudomonadineae, order Pseudomonadales, occurring as ellipsoidal to rod-shaped cells partially surrounded by a marginal thickening heavily impregnated with iron, and contained in a delicate, transparent capsule. The type species is *O. tectum*.

ochrometer (o-krom'ê-ter) [Gr. *ôchros* paleness + *metron* measure] an instrument for measuring the capillary blood pressure by registering the force necessary to compress a finger by a rubber balloon until blanching of the skin occurs.

Ochromonadidae (ok'ro-mo-nad'i-de) a family of free-swimming, colonial, flagellate protozoa of the order Chrysomonadina, class Phytomastigophora, including the genera *Uroglena* and *Uroglensis*.

Ochromyia (o'kro-mi'yah) Cordylobia.

ochronosis (ô'kro-no'sis) [Gr. *ôchros* yellow + *nosos* disease] a peculiar discoloration of certain tissues of the body, caused by the deposit of alkapton bodies as the result of a metabolic disorder.

exogenous o., ochronosis allegedly resulting from exposure to some noxious substance in the internal environment, such as phenol, trinitrophenol, or benzene derivatives. **ocular o.**, a condition characterized by symmetrical, semilunar, or V-shaped accumulations of brown or gray pigment in the sclera, midway between the margin of the cornea and the inner or outer canthus. The eyelids and conjunctivae may also be affected.

ochronosus (ô'kro-no'sus) ochronosis.

ochronotic (ô'kro-not'ik) pertaining to, characterized by, or caused by ochronosis.

Ochsner's muscle, ring, treatment (oks'nerz) [Albert John Ochsner, surgeon in Chicago, 1858-1925] see under *muscle, ring, and treatment*.

Ocimum (os'i-mum) a genus of herbs, including *O. basilicum* L. (Labiatae), or basil. They are a source of condiment and perfume oil.

ocrylate (ok'ri-lât) chemical name: octyl 2-cyanoacrylate; a tissue adhesive, C₁₂H₁₉NO₂.

octa- (ok'tah) [Gr. *oktô*, L. *octo* eight] a combining form meaning eight.

octabenzene (ok-tah-ben'zôn) chemical name: 2-hydroxy-4-(octyloxy)benzophenone; an ultraviolet screen, C₂₁H₂₆O₃.

octacosane (ok'tah-ko'sân) an aliphatic hydrocarbon, C₂₈H₅₈, extracted from plant waxes.

octacosanol (ok'tah-ko-sa'nol) a solid white alcohol, C₂₈H₅₇-OH, from wheat oil and from the cuticular wax of apples.

octadecanoate (ok'tah-dek'ah-no'ât) systematic name for stearate, denoting that it has eighteen (*octa* eight + *deca* ten) carbon atoms in a straight chain.

octamethyl pyrophosphoramidate (ok'tah-meth'il pir'o-fos-for'ah-mid) chemical name: octamethyldiphosphoramidate. A cholinesterase inhibitor, C₈H₂₄N₄O₈P₂, used as a systemic insecticide for plants. Called also *schradan*. Abbreviated OMPA.

octamylose (ok-tam'i-lôs) a crystalline amylose, (C₆H₁₀O₅)₈.

octan (ok'tan) [L. *octo* eight] recurring every eighth day, or at intervals of seven days.

octane (ok'tân) an oily hydrocarbon, CH₃(CH₂)₆CH₃, occurring in petroleum.

octapeptide (ok'tah-pep'tid) a peptide which on hydrolysis yields eight amino acids.

octaploid (ok'tah-ploid) 1. pertaining to or characterized by octaploidy. 2. an individual or cell having eight sets of chromosomes.

octaploidy (ok'tah-ploi'de) the state of having eight sets of chromosomes (8n).

octarius (ok-ta're-us) [L.; from *octo* eight] a pint; the eighth part of a gallon.

octavalent (ok'tah-va'lent) [L. *octo* eight + *valens* able] having a valency of eight.

octazamide (ok-ta'zah-mid) chemical name: 5-benzoylhexahydro-1H-furo[3,4-c]pyrrole; an analgesic, C₁₃H₁₅NO₂.

octet (ok'tet) a group of eight identical or similar objects or entities, as the group of eight electrons (four pairs) in the outer, or valence, shell of an atom, which pairs may or may not be shared with another atom.

octicizer (ok'ti-si'zer) chemical name: 2-ethylhexyl diphenyl phosphate; a plasticizer, C₂₀H₂₇O₄P.

octigravida (ok'ti-grav'i-dah) [L. *octo* eight + *gravida* pregnant] a woman pregnant for the eighth time; also written *gravida VIII*.

Octin (ok'tin) trademark for preparations of isometheptene.

octipara (ok-tip'ah-rah) [L. *octo* eight + *parere* to bring forth, produce] a woman who has had eight pregnancies which resulted in viable offspring; also written *para VIII*.

octodrine (ok'to-drên) chemical name: 1,5-dimethylhexylamine; an adrenergic with vasoconstrictor and local anesthetic actions, C₈H₁₉N.

octofollin (ok'to-fol'in) benzenestrol.

Octomitus (ok-tom'i-tus) Hexamita. **O. hom'inis**, *Trichomonas hominis*.

Octomyces (ok'to-mi'sêz) a former genus of yeastlike fungi, now considered to be identical with *Saccharomyces*. **O. etien'nei**, yeastlike fungi of uncertain identity once isolated from a severe pleuropulmonary infection, probably as a contaminant.

octopamine (ok'to-pam'ên) a sympathomimetic amine thought to result from inability of the diseased liver to metabolize tyrosine; it is called a false neurotransmitter, since it can be stored in presynaptic vesicles, replacing norepinephrine, but has little effect on postsynaptic receptors. It is used as the hydrochloride salt in treatment of hypotension.

octose (ok'tôs) [L. *octo* eight] a monosaccharide having the formula C₈H₁₆O₈.

octoxynol 9 (ok-toks'i-nol) [NF] a clear, pale yellow, viscous liquid composed of an anhydrous mixture of mono[*p*-(1,1,3,3-tetramethylbutyl)phenyl]ethers of polyethylene glycols containing 5 to 15 oxyethylene groups in the polyoxyethylene chain, and having an average molecular weight of 647, corresponding to the formula C₃₄H₆₂O₁₁; used as a surfactant in pharmaceutical preparations. Called also *octylphenoxy polyethoxyethanol*.

octriptyline phosphate (ok-trip'ti-lên) chemical name: 3-(1a, 10b-dihydrodibenzo[a,e]cyclopropa[c]cyclohepten-6(1H)-ylidene)-N-methyl-1-propanamine phosphate(1:1); an antidepressant, C₂₀H₂₁N·H₃PO₄.

octylphenoxy polyethoxyethanol (ok'til-fe'nok-se pol'ê-eth-ok'se-eth'ah-nol) octoxynol 9.

ocufilcon (ok'u-fil'kon) chemical name: 2-methyl-2-propenoic acid 2-hydroxyethyl ester polymer with 2-methyl-2-propenoic acid and 1,2-ethanediyl bis(2-methyl-2-propenoate); either of two hydrophilic contact lens materials, designated A or B, (C₈H₁₀O₃)_x-(C₄H₆O₂)_y(C₁₀H₁₄O₄)_z.

ocular (ok'u-lar) [L. *ocularis*; *oculus* eye] 1. of, pertaining to, or affecting the eye. 2. eyepiece.

oculentum (ok'u-len'tum), pl. *oculen'ta*. An eye ointment.

oculi (ok'u-li) [L.] plural of *oculus*.

oculist (ok'u-list) ophthalmologist.

oculistics (ok'u-lis'tiks) the treatment of diseases of the eye.

oculo- (ok'u-lo) [L. *oculus* eye] a combining form denoting relationship to the eye.

oculocephalogyric (ok'u-lo-sef'ah-lo-ji'rik) pertaining to the movements of the head in connection with vision.

oculocutaneous (ok'u-lo-ku-ta'ne-us) pertaining to or affecting both the eyes and the skin.

oculofacial (ok'u-lo-fa'she-al) pertaining to the eyes and the face.

oculogyration (ok'u-lo-ji-ra'shun) movement of the eye about the anteroposterior axis.

oculogyria (ok'u-lo-ji're-ah) a condition characterized by oculogyration.

oculogyric (ok'u-lo-ji'rik) [*oculo-* + L. *gyrus* a turn] pertaining to, characterized by, or causing oculogyration; see also under *crisis*.

oculometroscope (ok'u-lo-met'ro-sköp) an instrument for performing retinoscopy in which the trial lenses are rotated before the eyes without effort on the part of the examiner.

oculomotor (ok'u-lo-mo'tor) [*oculo-* + L. *motor* mover] pertaining to or effecting movements of the eye.

oculomotorius (ok'u-lo-mo-to're-us) [L.] nervum oculomotorius.

oculomycosis (ok'u-lo-mi-ko'sis) [*oculo-* + *mycosis*] any eye disease caused by a fungus.

oculonasal (ok'u-lo-na'zal) pertaining to the eye and the nose.

oculopathy (ok'u-lo-p'ah-the) [*oculo-* + Gr. *pathos* disease] any morbid condition of the eyes. **pituitarygenic o.**, abnormality of the eye caused by secretions of the pituitary gland.

oculoplastic (ok'u-lo-plas'tik) [*oculo-* + Gr. *plassein* to form, to mold] denoting plastic surgery of the eye, eyelids, ocular muscles, lacrimal apparatus, orbit.

oculopupillary (ok''u-lo-pu''pi-lār-e) pertaining to the pupil of the eye.

oculoreaction (ok''u-lo-re-ak''shun) the ophthalmic reaction; see under *reaction*.

oculospinal (ok''u-lo-spi''nal) pertaining to the eye and the spinal cord.

oculozygomatic (ok''u-lo-zi''go-mat''ik) pertaining to the eye and the zygoma.

oculus (ok''u-lus), pl. *oculi* [L.] [NA] the organ of vision; see *eye*.

O.D. abbreviation for *Doctor of Optometry*; L. *oculus dexter*, right eye; and *outside diameter*; popular name for *drug overdose*.

od (od) [Gr. *hodos* pathway] (*obs.*) the influence supposedly exerted upon the nervous system by mesmerism.

O.D.A. abbreviation for L. *occipito-dextra anterior* (right occipito-anterior, a position of the fetus).

odaxesmus (o''dak-sez''mus) [Gr. *odaxēsmos* an itching] the biting of the tongue or cheek in an epileptic seizure.

odaxetic (o''dak-set''ik) [Gr. *odaxētikos*] causing a biting or itching sensation.

Oddi's muscle (sphincter) (od''ēz) [Ruggero Oddi, Italian physician of 19th century] see under *muscle*.

odditis (od-di''tis) inflammation of Oddi's muscle.

odogenesis (od''o-jen''ē-sis) [Gr. *hodos* pathway + *genesis* formation] neurocladism.

odon-eki (o''don-ek''e) [Japanese "icteric pestilence"] a disease resembling spirochetal jaundice.

odontalgia (o-don-tal''je-ah) [*odonto-* + *-algia*] pain in a tooth.

odontalgic (o-don-tal''jik) pertaining to or characterized by toothache.

odontectomy (o''don-tek''to-me) [*odonto-* + Gr. *ektomē* excision] excision of an erupted tooth, or of an unerupted or impacted tooth.

odontexesis (o''don-tek's'e-sis) [*odonto-* + Gr. *xesis* scraping] (*obs.*) the removal of dental calculus and polishing of the teeth.

odontiatry (o-don''te-at''re-ah) [*odonto-* + Gr. *iatreia* treatment] dentistry.

odontiatrogenic (o-don''te-at''ro-jen''ik) [*odont* + Gr. *iatros* one who heals + *gennan* to produce] occurring as a result of treatment by a dentist.

odontic (o-don''tik) [Gr. *odous* tooth] pertaining to the teeth.

odonto- (o-don''to) [Gr. *odous* tooth] a combining form denoting relationship to a tooth or to the teeth.

odontoameloblastoma (o-don''to-am''ē-lo-blas-to''mah) ameloblastic odontoma.

odontoblast (o-don''to-blast) [*odonto-* + Gr. *blastos* germ] one of the columnar connective tissue cells which deposit dentin and form the outer surface of the dental pulp adjacent to the dentin.

odontoblastoma (o-don''to-blas-to''mah) a tumor made up of odontoblasts.

odontobothrion (o-don''to-both''re-on) [*odonto-* + Gr. *bothrion* a small trench] an alveolar crypt.

odontobothritis (o-don''to-both-ri''tis) inflammation of the alveolar process.

odontoclamis (o-don''to-kla''mis) [*odonto-* + Gr. *klamys* cloak] dental operculum.

odontoclast (o-don''to-klast) [*odonto-* + Gr. *kla-n* break] a multinucleated giant cell (osteoclast), found associated with absorption of the roots of a deciduous tooth.

odontogen (o-don''to-jen) [*odonto-* + Gr. *gennan* to produce] the substance which develops into the dentin of the teeth.

odontogenesis (o-don''to-jen''ē-sis) [*odonto-* + Gr. *genesis* production] the origin and histogenesis of the teeth. **o. imperfecta**, dentinogenesis imperfecta.

odontogenetic (o-don''to-jē-net''ik) pertaining to odontogenesis.

odontogenic (o-don''to-jen''ik) 1. forming teeth. 2. arising in tissues which give origin to the teeth.

odontogenous (o''don-toj''ē-nus) arising or originating in the teeth, or a dental condition.

odontogeny (o''don-toj''ē-ne) odontogenesis.

odontogram (o-don''to-gram) [*odonto-* + Gr. *gramma* mark] the tracing made by an odontograph.

odontograph (o-don''to-graf) [*odonto-* + Gr. *graphein* to write] an instrument for recording the unevenness of surface of tooth enamel.

odontography (o''don-tog''rah-fe) [*odonto-* + Gr. *graphein* to write] 1. a description of the teeth. 2. the use of the odontograph.

odontoiatry (o-don''to-i-at''re-ah) [*odonto-* + Gr. *iatreia* cure] dental therapeutics.

odontoid (o-don''to-oid) [*odonto-* + Gr. *eidos* form] toothlike; resembling a tooth.

odontolith (o-don''to-lith) [*odonto-* + Gr. *lithos* stone] dental calculus.

odontolithiasis (o-don''to-li-thi''ah-sis) a condition marked by the presence of deposits of calcium on the teeth.

odontologist (o''don-tol''o-jist) a dentist.

odontology (o''don-tol''o-je) [*odonto-* + *-logy*] 1. the sum of knowledge regarding the teeth. 2. dentistry.

odontolysis (o-don-tol''i-sis) [*odonto-* + Gr. *lysis* dissolution] the resorption of dental tissue.

odontoma (o-don-to''mah) [*odonto-* + Gr. *ōma* tumor] any tumor of odontogenic origin; customarily used to designate a composite odontoma (q.v.); called also *coronodental cyst*. **o. adamantin'um**, ameloblastic o. **ameloblastic o.**, a rare neoplasm composed of enamel, dentin, and an odontogenic epithelium like that seen in ameloblastoma; called also *odontoameloblastoma*. **composite o.**, an odontogenic tumor in which both the epithelial and mesenchymal cells exhibit complete differentiation; this results in the formation, by functional ameloblasts and odontoblasts, of enamel and dentin which are usually laid down in an abnormal pattern because of failure of the odontogenic cells to reach a normal state of morphodifferentiation. **composite o., complex**, a composite odontoma in which the calcified dental tissues occur in an irregular mass, and there is no morphologic similarity to even rudimentary teeth. **composite o., compound**, a composite odontoma in which the enamel and dentin are laid down so that the structure bears a superficial anatomic resemblance to normal teeth. **coronal o., coronary o.**, odontoma associated with the crown of a tooth, or one formed at the time when the crown of the tooth was developing. **dilated o.**, dens in dente. **embryoplastic o.**, a soft odontoma formed in the period that precedes the formation of the dental tissues. **fibrous o.**, an odontoma containing fibrous elements. **mixed o.**, an odontogenic neoplasm containing different elements of the tooth structure. **radicular o.**, one associated with the root of a tooth, or one formed at the time when the root of the tooth was developing.

odontonomy (o''don-ton''o-me) [*odonto-* + Gr. *onoma* name] dental nomenclature.

odontopathic (o-don''to-path''ik) relating to disease of the teeth.

odontopathy (o''don-top''ah-the) [*odonto-* + Gr. *pathos* illness] any disease of the teeth.

odontoperiosteum (o-don''to-per''e-os''te-um) periodontium.

odontophobia (o-don''to-to''fo-be-ah) [*odonto-* + Gr. *phobein* to be affrighted by] a morbid fear associated with teeth, as that aroused by the sight of teeth, or abnormal dread of dental operations.

odontoplasty (o-don''to-plas''te) [*odonto-* + Gr. *plassein* to form] (*obs.*) orthodontics.

odontoprisis (o-don''to-pri''sis) [*odonto-* + Gr. *prisis* sawing] bruxism.

odontoradiograph (o-don''to-ra''de-o-graf) a roentgenogram of a tooth or of the teeth.

odontorthosis (o-don''tor-tho''sis) [*odonto-* + Gr. *orthōsis* a making straight] orthodontics.

odontoschism (o-don''to-skizm) [*odonto-* + Gr. *schisma* cleft] fissure of a tooth.

odontoscopy (o''don-tos''ko-pe) the taking of impressions of the teeth in order to make casts to be used as a means of personal identification.

odontoseisis (o-don''to-si''sis) [*odonto-* + Gr. *seisis* a shaking] looseness of the teeth.

odontosis (o''don-to''sis) [Gr. *odous* tooth] the formation or eruption of the teeth.

odontotechny (o-don''to-tek''ne) [*odonto-* + Gr. *technē* art] dentistry.

odontotheca (o-don''to-the''kah) [*odonto-* + Gr. *thēkē* case] the dental sac.

odontotomy (o''don-tot''o-me) [*odonto-* + Gr. *tomē* a cutting] the operation of cutting into a tooth, especially incision into an occlusal groove.

odontotripsis (o-don''to-trip''sis) [*odonto-* + Gr. *tripsis* rubbing] wearing away of the teeth.

odor (o''dor) [L.] a volatile emanation that is perceived by the sense of smell. **butcher shop o.**, a smell like that of a butcher shop given off by yellow fever patients. **minimal identifiable o.**, the lowest concentration of a substance in air, or in another medium, which still permits its identification by the sense of smell.

odorant (o''dor-ant) any substance capable of eliciting olfactory excitation, i.e., of stimulating the sense of smell.

odoratism (o''dor-a''tizm) osteolathyrism.

odoriferous (o''dor-if''er-us) [*odor* + L. *ferre* to bear] fragrant; emitting an odor.

odorimeter (o''dor-im''ē-ter) an instrument for performing odorimetry.

odorimetry (o''dor-im''ē-tre) the measurement of olfactory stimuli.

odoriphore (o-dor''fi-fōr) osmophore.

odorivector (o'dor-i-vek'tor) a substance which gives off an odor.

odorography (o'dor-og'rah-fe) [odor + Gr. *graphein* to write] a description of odors.

O.D.P. abbreviation for L. *occipito-dextra posterior* (right occipitoposterior, a position of the fetus).

O.D.T. abbreviation for L. *occipito-dextra transversa* (right occipitotransverse, a position of the fetus).

O'Dwyer's tubes (o-dwi'erz) [Joseph P. O'Dwyer, American otolaryngologist, 1841-1898] intubation tube.

odynacusis (o'din-ah-ku'sis) [odyno- + Gr. *akousis* hearing] painful hearing.

-odynia (o-din'e-ah) [Gr. *odynē* pain] a word ending meaning pain.

odyno- (o-din'o) [Gr. *odynē* pain] a combining form meaning pain.

odynometer (o'din-om'ē-ter) [odyno- + Gr. *metron* measure] an instrument for measuring pain.

odynophagia (od'i-no-fa'je-ah) [odyno- + Gr. *phagein* to eat] pain on deglutition.

odynphagia (o'din-fa'je-ah) odynophagia.

oe- for other words beginning thus, see also those beginning with e-.

Oeciacus (e-si'ah-kus) a genus of insects closely related to the bedbugs (*Cimex*), but distinguished by their hairy bodies covered by long silklike coats; they are found on birds and in their nests. *O. hirudinis* is found on barn swallows in Europe and sometimes invades homes and attacks man, causing a severe irritation; *O. vicarius* is found on swallows in North America.

oedipism (ed'i-pizm) [see *Oedipus complex*] edipism.

Oedipus complex (ed'i-pus) [*Oedipus*, a character in Greek tragedy who, raised by a foster parent, killed his actual father in a quarrel, and subsequently married his mother. Later, when he discovered the true relationship, he blinded himself (edipism)] see under *complex*.

Oehler's symptom (e'lerz) [Johannes Oehler, German physician, born 1879] see under *symptom*.

oenanthol (e-nan'thol) heptoc aldehyde, $\text{CH}_3(\text{CH}_2)_5\text{CHO}$; called also *heptanal*.

oersted (er'sted) [Hans Christian Oersted, Danish physicist, 1777-1851] the unit of magnetizing force, symbol *H*.

Oertel's treatment (er'telz) [Max Joseph Oertel, physician in Munich, 1835-1897] see under *treatment*.

oesophago- for words beginning thus, see those beginning *esophago-*.

oesophagostomiasis (e-sof'ah-go-sto-mi'ah-sis) infection with *Oesophagostomum*.

Esophagostomum (e-sof'ah-gos'to-mum) [*Esophagus* + Gr. *stoma* mouth] a genus of nematode worms of the family Strongylidae, parasitic in the intestines of various animals; the larvae often encyst in the intestinal wall, while the adults are mostly free in the lumen. *Æ. apios'tomum*, *Æ. bifurcum*. *Æ. bifurcum*, a parasite that forms tumors in the large intestine of monkeys and occasionally of man in Africa and the Philippines. *Æ. brevicau'dum*, a species found in pigs. *Æ. brump'ti*, *Æ. bifurcum*. *Æ. columbia'num*, the nodular worm, infects sheep and goats in the southern United States; see *nodular disease*, under *disease*. *Æ. denta'tum*, a parasite of the pig. *Æ. infla'tum*, *Æ. radiatum*. *Æ. longicau'dum*, a parasite of pigs. *Æ. radia'tum*, a parasite of cattle. *Æ. stephanos'tomum*, a species, normally parasitic in gorillas; a single human case has been recorded from Brazil. *Æ. su'is*, *Æ. brevicau'dum*.

oesophagus (ē-sof'ah-gus) esophagus.

Oestreicher's reaction (est'ri-kerz) [A. Oestreicher] xanthidrol reaction.

oestriasis (es-tri'ah-sis) infestation with larvae of flies of the genus *Oestrus*.

Oestridae (es'tri-de) the family of the "bot," "heel," or "warble" flies. They are very hairy diptera with rudimentary mouth parts and with the antennae inserted into round pits. The family includes the following genera: *Gasterophilus*, *Oestrus*, *Hypoderma*, *Dermatobia*, *Rhinoestrus*, and *Cuterebra*.

oestrone (es'trōn) estrone.

oestrous (es'trus) estrous.

oestrua (es'troo-al) estrual.

oestrum (es'trum) estrus.

oestrus (es'trus) estrus.

Oestrus (es'trus) [Gr. *oistros* gadfly] a genus of botflies of the family Oestridae, which may cause ophthalmomyiasis, called also *Cephalomyia*. *O. hom'inis*, *O. ovis*. *O. o'vis*, a species of botfly whose larvae infest nasal cavities and sinuses of sheep; they may cause ocular myiasis in man.

official (ō-fish'al) [L. *officialis*; *officium* duty] recognized by the current U. S. Pharmacopeia or National Formulary, and meeting the standards established by the respective authority.

officinal (ō-fis'i-nal) [L. *officinalis*; *officina* shop] regularly kept for sale in the shops of druggists.

Ogata's method (o-gah'tahz) [M. Ogata, Japanese physician] see under *method*.

Ogen (o'jen) trademark for preparations of piperazine estrone sulfate; see under *estrone*.

ogive (o'jiv) a S-shaped curve; a term used in biometry.

ogo (o'go) gangosa.

Ogston's line, operation (og'stonz) [Sir Alexander Ogston, Scottish surgeon, 1844-1929] see under *line* and *operation*.

Ogston-Luc operation (og'ston-luk') [Sir Alexander Ogston; Henry Luc, French laryngologist, 1855-1925] see under *operation*.

Oguchi's disease (o-goo'chēz) [Chuta Oguchi, Japanese ophthalmologist, born 1875] see under *disease*.

OH hydroxyl group; (with negative sign) hydroxide ion; a hydroxide.

Ohara's disease (o-hah'rahz) [Hachiro Ohara, Japanese physician, born 1882] see under *disease*.

ohm (ōm) [George S. Ohm, German physicist, 1787-1854] the SI unit of electrical resistance, being equivalent to that of a column of mercury one square millimeter in cross-section and one hundred and six centimeters long. Symbol Ω .

Ohm's law (ōmz) [George S. Ohm, German physicist, 1787-1854] see under *law*.

ohmmeter (ōm'am-me'ter) an ohmmeter and ammeter combined.

ohmmeter (ōm'me-ter) an instrument for measuring electric resistance in ohms.

ohne Hauch (o'nah-houkh) [Ger. "without breath"] see *O*, and also see *H* (def. 2).

-oid [Gr. *eidos* form, shape] a word termination signifying resemblance to the thing specified by the stem to which it is affixed, as ovoid.

Oidiomycetes (o-id'e-o-mi-se'tēz) former name for a group of fungi characterized by having mycelial threads and producing small spores by fragmentation.

oidiomycosis (o-id'e-o-mi-ko'sis) [oidium + Gr. *mykēs* fungus] infection with fungi of the genus *Oidium*.

oidiomycotic (o-id'e-o-mi-ko'tik) pertaining to oidiomycosis.

Oidium (o-id'e-um) [dim. of Gr. *ōon* egg] 1. a former name for a genus of fungi the species of which are now included in the genera *Candida* and *Geotrichum*. 2. the imperfect (sexual) stage of the powdery mildews (order Erysiphales), causing many plant diseases.

oikosite (oi'ko-sit) ecosite.

oil (oil) [L. *oleum*] 1. an unctuous, combustible substance which is liquid, or easily liquefiable, on warming, and is soluble in ether but insoluble in water. Such substances, depending on their origin, are classified as animal, mineral, or vegetable oils. Depending on their behavior on heating, they are classified as volatile or fixed. 2. a fat that is liquid at room temperature. **allspice o.**, pimenta o. **almond o.** [NF], a preparation of the fixed oil obtained from the kernels of varieties of *Prunus amygdalus*; used as an emollient and perfume and as an ingredient of rose water ointment. Called also *expressed* or *sweet almond o.*, and *oleum amygdalae expressum*. **almond o., bitter**, the volatile oil obtained from the dried ripe kernels of *Prunus amygdalus* var. *amara* Focke (Rosaceae) or from other kernels containing amygdalin; formerly used as a topical antipruritic; used also in perfumery and liqueurs. **almond o., expressed**, see *almond o.* **almond o., sweet**, see *almond o.* **anise o.** [NF], a volatile oil distilled from the dried, ripe fruit of *Pimpinella anisum* or of *Illicium verum*; used as a flavoring agent for drugs, and has been used as a carminative and expectorant. **apricot kernel o.**, persic o. **arachis o.**, peanut o. **argemone o.**, an oil from *Argemone mexicana* L. (Papaveraceae), the prickly poppy, which is toxic to humans; it is the cause of epidemic dropsy, and sometimes causes disturbances of the gastrointestinal tract and of vision. **bay o.**, myrcia o. **Benne o.**, sesame o. **bergamot o.**, a volatile oil obtained by expression from the rind of the fresh fruit of *Citrus bergamia*; used as a perfuming agent and insecticide. **betula o.**, methyl salicylate. **bhilawanol o.**, a fluid obtained from the nut of a tree, *Semecarpus anacardium* (ral tree, bella gutta tree), in India, used by native washermen for marking laundry, and the cause, through induction of eczematous contact sensitization, of dhoobie itch. **birch o., sweet**, methyl salicylate. **birch tar o., rectified**, the pyroligneous oil obtained by the dry distillation of the bark and wood of *Betula alba* L. (Betulaceae) and other species of *Betula*, and rectified by steam distillation; used typically in the treatment of eczema and other dermatitides. **cade o.**, juniper tar. **o. of cajuput**, a volatile oil from the fresh leaves and twigs of *Melaleuca leucadendron* L. (Myrtaceae) and other species of *Melaleuca*; used as a stimulant, expectorant, counterirritant, and external parasiticide, and in veterinary medicine as a rubefacient and parasiticide in the treatment of ringworm. **camphorated o.**, camphor liniment. **caraway o.** [NF], a volatile oil distilled from the dried

ripe fruit of *Carum carvi*, yielding at least 50 per cent by volume of carvone; used as a flavoring agent for drugs. Called also *oleum cari*. **cardamom o.** [NF], a volatile oil distilled from the seed of *Elettaria cardamomum* (cardamom seed), a perennial herb of the ginger family of tropical Asia; used as a flavoring agent in pharmaceutical preparations. Called also *oleum cardamomi*. **cassia o.**, cinnamon o. **castor o.** [USP], a fixed oil obtained from the seed of *Ricinus communis*; used as a cathartic and as a plasticizer for pharmaceutical preparations, and has been used as a bland emollient to the skin in certain dermatoses. **castor o., aromatic** [USP], a mixture of cinnamon, clove, and castor oils, with saccharin, vanillin, and alcohol, used as a cathartic. **cedar o.**, a volatile oil from cedar wood, used as a clearing agent in microscopical techniques; the thicker fraction is used as the immersion medium with oil-immersion objectives. **chaulmoogra o.**, a fixed oil expressed from the ripe seeds of *Taraktognos kurzii*, *Hydnocarpus wightiana*, and *H. anthelmintica*; formerly used in the treatment of leprosy; ethyl esters of the fatty acids (ethyl chaulmoograte) obtained from this oil are now so used. **chenopodium o.**, a volatile oil obtained by steam distillation of fresh overground parts of the flowering and fruiting plant of *Chenopodium ambrosioides*, L. (Chenopodiaceae); it contains 65 per cent of ascaridole, an active anthelmintic principle and was once used as an anthelmintic. **chloriodized o.**, an iodine monochloride addition product of vegetable oil; formerly used as a radiopaque medium in roentgenography of the uterus and uterine tubes, and of the bronchi. **cinnamon o.** [NF], a volatile oil distilled with steam from the leaves and twigs of *Cinnamomum cassia*; used as a flavoring agent for pharmaceuticals and as a carminative. **citronella o.**, a fragrant oil used as an insect repellent. **clove o.** [NF], a volatile oil distilled with steam from clove, the dried flowerbuds of *Eugenia caryophyllus*; used as a flavor in pharmaceutical preparations, and as a topical germicide and analgesic in dentistry. **coconut o.**, the fixed oil obtained by expression or extraction from the kernels of seeds of *Cocos nucifera*; used as an ointment base and edible oil and in soap, chocolate, and candle formulations. **cod liver o.** [USP], the partially destearinated fixed oil obtained from fresh livers of *Gadus morrhua* and other species of the family Gadidae; used as a source of vitamin A and vitamin D. In veterinary medicine, it is also used topically to promote wound-healing and in abscesses, burns, and dermatoses. **cod liver o., nondestearinated** [NF], the entire fixed oil obtained from fresh livers of *Gadus morrhua* and other species of the family Gadidae; used as a source of vitamins A and D. **o. of copaiba**, a volatile oil derived from *Copaiba* spp. (Leguminosae), trees indigenous to central South America; it contains aromatic principles and was once used for chronic inflammations of mucous membranes. **coriander o.** [NF], a volatile oil distilled with steam from the dried ripe fruit of *Coriandrum sativum*; used as a flavoring agent. **corn o.** [NF], a refined fixed oil obtained from the embryo of *Zea mays*; used as a solvent and vehicle for various medicinal agents and as a vehicle for injections. It has also been promoted as a source of polyunsaturated fatty acids in special diets. **cottonseed o.** [NF], a refined fixed oil obtained from the seeds of cultivated plants of various varieties of *Gossypium hirsutum*; used as a solvent and vehicle for drugs. It has also been promoted as a source of polyunsaturated fatty acids in special diets. **croton o.**, the thick, fixed oil of the seeds of *Croton tiglium*, L. Euphorbiaceae, an Asiatic plant. A drastic purgative and counterirritant, unsafe for human use, it is used as standard irritant in pharmacological research. **o. of dill**, an oil distilled from the dried ripe fruits of *Anethum graveolens* L. (Umbelliferae); used as an aromatic carminative and as a source of carvone. **distilled o.**, volatile o. **drying o.**, a type of fixed oil which thickens and hardens on exposure to the air, especially when spread out in a thin layer, being converted to a solid by absorption and reaction with oxygen. **empyreumatic o.**, a volatile oil formed by the destructive distillation of organic material. **essential o.**, volatile o. **ethereal o.**, 1. a compound of ether with heavy oil of wine. 2. a volatile oil. **ethiodized o.** [USP], an iodine addition product of the ethyl ester of the fatty acids of poppyseed oil, containing 35.2 to 38.9 per cent of organically combined iodine; used as a radiopaque medium in hysterosalpingography and lymphography. **eucalyptus o.** [NF], a volatile oil distilled with steam from the fresh leaf of *Eucalyptus globulus* and other species of *Eucalyptus*; used as a flavor in pharmaceutical preparations, and as an expectorant and local antiseptic with mild anesthetic effect. Formerly used as a vermifuge. **expressed o., fatty o.**, fixed o. **fennel o.** [NF], a volatile oil distilled with steam from the dried ripe fruit of *Poenicium vulgare*; used as a flavoring agent for pharmaceuticals and formerly as a carminative. **fixed o.**, an oil which does not evaporate on warming. Such oils, consisting of a mixture of fatty acids and their esters, are classified as solid (chiefly stearin), semisolid (chiefly palmitin), and liquid (chiefly olein). Fixed oils are also classified as *drying*, *semidrying*, and *nondrying*, depending on their tendency to solidify when exposed, in a thin film, to air. Called also *expressed o.* and *fatty o.* **flaxseed o.**, linseed o. **gaultheria o.**, methyl salicylate. **gingilli o.**, sesame o. **groundnut o.**, peanut o. **Haarlem o.**, juniper tar. **halibut liver o.**, a fixed oil obtained from fresh or suitably preserved livers of halibut

species of the genus *Hippoglossus* Linné; used as a source of vitamins A and D. **heavy o.**, an oily product obtained by the action of sulfuric acid on alcohol. **hydncarpus o.**, chaulmoogra o. **iodized o.**, an iodine addition product of vegetable oil; used as radiopaque medium in roentgenography of the uterus and uterine tubes. **juniper o.**, a volatile oil distilled with steam from the dried ripe fruit of *Juniperus communis*; used to preserve catgut sutures and has been used as a diuretic. **lavender o.** [NF], a volatile oil distilled with steam from the fresh flowering tops of *Lavandula officinalis*; used as a perfuming agent and flavor, and has been used as a carminative and aromatic. **lavender flowers o.**, lavender o. **lemon o.** [NF], the volatile oil obtained by expression from the fresh peel of the fruit of *Citrus limon*; used as a flavoring agent. **linseed o., raw linseed o.**, the fixed oil obtained from the dried ripe seed of *Linum usitatissimum* (L. Linaceae); used as an emollient in liniments, pastes, and medicinal soaps, and in veterinary medicine as a laxative. Called also *flaxseed o.* **o. of male fern**, an oleoresin from the root of the male fern, *Dryopteris filix-mas* (L.) Schott., Polypodiaceae; it contains about 24 per cent of crude filicin and is used as an anthelmintic. **mineral o.** [USP], a mixture of liquid hydrocarbons obtained from petroleum, with a specific gravity of 0.845–0.905; used as a cathartic and as a solvent and oleaginous vehicle in pharmaceutical preparations. Called also *heavy liquid petrolatum*, *liquid petrolatum*, *liquid paraffin*, *petrolatum liquidum*, and *white mineral o.* **mineral o., light** [USP], **mineral o., light white**, a mixture of liquid hydrocarbons obtained from petrolatum, with a specific gravity of 0.818–0.880; used as a vehicle for drugs and also as a laxative. Called also *light liquid paraffin* and *light liquid petrolatum*. **mineral o., white**, liquid petrolatum. **o. of mirbane**, nitrobenzene. **o. of mustard**, an oil derived from the seeds of species of *Brassica*. Volatile mustard oil is from the seeds of black mustard (see *allyl isothiocyanate*). Used internally as a condiment and emetic and externally as a counterirritant. **myrcia o.**, the volatile oil obtained by distilling the leaves of *Pimenta officinalis* Lindl. (Myrtaceae). It contains 55–65 per cent of eugenol and other related aromatic principles and is used in perfumes and such products as bay rum as an after-shave lotion and rub or liniment. Called also *bay o.* **myristica o.**, nutmeg o. **neroli o.**, orange flower o. **nutmeg o.** [NF], the volatile oil distilled with steam from the dried kernels of the ripe seeds of *Myristica fragrans* Houtt. (Myristicaceae); used as a flavoring agent in pharmaceutical preparations. Called also *myristica o.* **olive o.** [NF], the fixed oil obtained from the ripe fruit of *Olea europaea*; used as a setting retardant for dental cements and as a topical emollient, and has been used as a laxative. Called also *sweet o.* **orange o.** [NF], the volatile oil obtained by expression from the fresh peel of the ripe fruit of *Citrus sinensis*; used as a flavoring agent in pharmaceuticals. Called also *sweet orange o.* **orange o., bitter**, a volatile oil obtained by expression from the fresh peel of the fruit of *Citrus aurantium* L. (Rutaceae); used as a flavoring agent. **orange o., sweet**, orange o. **orange flower o.** [NF], a volatile oil distilled from the fresh flowers of *Citrus aurantium*; used as a flavoring agent and perfume. Called also *neroli o.* **o. of Palma Christi**, castor o. **peach kernel o.**, persic o. **peanut o.** [NF], the refined fixed oil obtained from the seed kernels of one or more of the cultivated varieties of *Arachis hypogaea*; used as a solvent and oleaginous vehicle for drugs, and as a laxative in veterinary medicine. **peppermint o.** [NF], the volatile oil distilled with steam from the fresh overground parts of the flowering plant of *Mentha piperita* L. (Labiata); used as a flavor in pharmaceutical preparations, and as a gastric stimulant and carminative. **persic o.** [NF], an oil expressed from the kernels of varieties of *Prunus armeniaca*, the apricot, or from *P. persica*, the peach; used as a vehicle for drugs. **pimenta o.**, the volatile oil distilled from the fruit of *Pimenta officinalis*; used as a flavoring agent for drugs. **pine o.**, the volatile oil obtained by steam distillation of the wood of *Pinus palustris* and of other species of *Pinus*; used as a deodorant and disinfectant. **pine needle o.** [NF], **pine needle o., dwarf**, the volatile oil distilled with steam from the fresh leaf of the dwarf pine, *Pinus mugo* and its variety *pumilio*; used as a perfume and flavoring agent. **ricinus o.**, castor o. **rose o.** [NF], the volatile oil distilled with steam from the fresh flowers of *Rosa gallica* L., *R. damascena* Mill., *R. alba* L., *R. centifolia*, and varieties of these species; used as a perfuming agent in pharmaceuticals. It has also been used as a flavoring agent in ointments and lozenges. Called also *attar of rose*. **rosemary o.**, the volatile oil distilled with steam from the fresh flowering tops of *Rosmarinus officinalis* L.; used as a flavoring or perfuming agent. **safflower o.**, an oily liquid extracted from the seeds of the safflower, *Carthamus tinctorius*; used as a dietary supplement in the management of hypercholesterolemia. **sandalwood o.**, santal o. **santal o.**, a pale yellow, somewhat viscid, oily liquid with characteristic odor and taste of sandalwood, distilled with steam from the dried heartwood of *Santalum album* L. (Santalaceae), or sandalwood; formerly used as a urinary antiseptic. **sassafras o.**, the volatile oil distilled with steam from the root of *Sassafras albidum*; used as a flavoring agent for liquid pharmaceutical preparations and to offset their disagreeable odor. It is also applied to insect bites and stings and has been used as

a topical antiseptic, pediculicide, and carminative. It contains saffron and safflower. The oil is also the basis of the soda beverage known as root beer. **sesame o.** [NF], the refined fixed oil obtained from the seed of one or more cultivated varieties of *Sesamum indicum*; it is used as a solvent and oleaginous vehicle for drugs, and has been used internally as a laxative and externally as a skin softener. **spearmint o.** [NF], the volatile oil distilled with steam from the fresh overground parts of *Mentha spicata* (*M. viridis*) or *Mentha cardiaca*, yielding at least 55 per cent by volume of carvone; used as a flavoring agent and has been used as a carminative. **o. of spike**, a volatile oil obtained from a broad-leaved variety of lavender, *Lavandula latifolia*, growing wild in Europe; used in perfumery, and formerly in home remedies as an emmenagogue and abortive. **o. of spruce**, a volatile oil obtained from the hemlock tree, *Tsuga canadensis*, sometimes used in veterinary liniments. **sweet o.**, olive o. **tangan-tangan o.**, castor o. **tar o., rectified**, the volatile oil from pine tar rectified by steam distillation; used, in veterinary medicine, internally as a stimulant expectorant and externally as an antipruritic, antiseptic, and stimulant for diseases of the skin. Also widely used in disinfecting and deodorizing preparations. **teel o.**, sesame o. **theobroma o.**, cocoa butter. **thyme o.**, the volatile oil distilled from the flowering plant of *Thymus vulgaris*; used as a flavoring agent for drugs, and has been used as a rubefacient, expectorant, counterirritant, antiseptic, and carminative. **turpentine o.**, the volatile oil distilled from an oleoresin obtained from *Pinus palustris* Mill. (Pinaceae) and other species of *Pinus*. Its chief constituent is pinene, which is used in the synthetic production of camphor. It is used as a counterirritant and rubefacient. **turpentine o., rectified**, turpentine oil rectified by use of sodium hydroxide; used as an inhalation expectorant. **volatile o.**, an oil which evaporates readily. The volatile oils occur in aromatic plants, to which they give odor and other characteristics. Most volatile oils consist of a mixture of two or more terpenes or of a mixture of an eleopten with a stearopten. Called also *distilled o.*, *essential o.*, and *ethereal o.* **wheat-germ o.**, oil derived from the germ of wheat kernels; it is rich in vitamin E. **wintergreen o.**, methyl salicylate. **wormseed o.**, **American**, chenopodium o.

oinomania (oi'no-ma'ne-ah) alcoholism.

ointment (oi'tment) [*L. unguentum*] a semisolid preparation for external application to the body, and usually containing a medicinal substance. Called also *unguent*, *unction*, and *salve*. **ammoniated mercury o.** [USP], a preparation of ammoniated mercury, liquid petrolatum, and white ointment, containing 4.5 to 5.5 per cent of HgNH_2Cl ; used as a topical anti-infective. Called also *white precipitate o.* **anthralin o.** [USP], a preparation of anthralin in a petrolatum or other suitable base; used as a topical antipsoriatic. **bacitracin o.** [USP], a preparation of bacitracin or bacitracin zinc in an anhydrous ointment base, containing not less than 500 U.S.P. units per gram; used as an antibacterial, applied topically to the skin. **bacitracin ophthalmic o.** [USP], a preparation of bacitracin in an anhydrous ointment base, containing not less than 500 U.S.P. units per gram; used as an antibacterial, applied topically to the conjunctiva. **belladonna o.**, a preparation of pilular belladonna extract and diluted alcohol in yellow ointment; used locally as an analgesic. **benzocaine o.** [USP], a preparation of finely powdered benzocaine in white ointment, used as a local anesthetic; called also *ethyl aminobenzoate o.* **benzoic and salicylic acids o.** [USP], a preparation of benzoic acid and salicylic acid in a water-soluble base (polyethylene glycol ointment), formerly used topically as an antifungal agent. Called *Whitfield's o.* **betamethasone valerate o.** [USP], a preparation containing betamethasone valerate equivalent to 95 to 120 per cent of the labeled amount of betamethasone; used as an anti-inflammatory glucocorticoid. **blue o.**, mercurial o., mild. **boric acid o.**, a preparation of finely powdered boric acid and liquid petrolatum in white ointment, formerly used extensively for its emollient and protective action in superficial wounds, abrasions, and burns, and for ophthalmic application. **calamine o.**, a preparation containing calamine, yellow wax, anhydrous lanolin, and petrolatum; used as an astringent protective application. **calomel o.**, a preparation of calomel, hydrous wool fat, and white petrolatum, containing 28.5 to 31.5 per cent calomel; has been used to treat various infections and parasitic infestations of the skin. Called also *mild mercurous chloride o.* **candididin o.** [USP], a semisolid preparation of candididin in a suitable ointment base, containing 90 to 140 per cent of the labeled amount of candididin; used as a local antifungal agent in the treatment of vaginal candidiasis, administered intravaginally. **carbolic acid o.**, phenol o. **chloramphenicol ophthalmic o.** [USP], an ointment containing between 90 and 130 per cent of the labeled amount of chloramphenicol; used as an antibacterial, applied topically to the conjunctiva. **chrysarobin o.**, a preparation of chrysarobin, chloroform, and white ointment; used topically in the treatment of psoriasis and other chronic skin diseases. **coal tar o.** [USP], a preparation of coal tar, polysorbate 80, and zinc oxide paste, used as a topical antieczematous and antipsoriatic. **Credé's o.**, one containing collargol, water, white wax, and benzoated lard, used in septicemia, pyemia, boils, carbuncles, etc. **cyclomethycaine sulfate o.** [USP], a preparation containing

90 to 110 per cent of the labeled amount of cyclomethycaine sulfate in a suitable ointment base; used as a topical anesthetic. **dexamethasone sodium phosphate ophthalmic o.** [NF], an ointment containing 90 to 115 per cent of the labeled amount of dexamethasone sodium phosphate; used as an anti-inflammatory glucocorticoid applied to the conjunctiva. **dibucaine o.** [USP], a semisolid preparation of dibucaine in a suitable ointment base, containing 90 to 110 per cent of the labeled amount of dibucaine; used as a local anesthetic, especially for dry, encrusted lesions, applied topically to the skin and mucous membranes. **dimethisoquin hydrochloride o.** [USP], an ointment containing 90 to 110 per cent of the labeled amount of dimethisoquin hydrochloride; used as a local anesthetic, applied topically to the skin to relieve pain, itching, and burning. **dipiperodon o.** [USP], a preparation containing 90 to 110 per cent of the labeled amount of dipiperodon in a suitable ointment base; used as a local anesthetic, applied topically to the skin for abrasions, irritations, and pruritus or intrarectally for relief of discomfort associated with hemorrhoids. **erythromycin o.** [USP], a preparation containing 90 to 125 per cent of the labeled amount of erythromycin (the labeled amount being 10 mg. of erythromycin per gm. of ointment) in a suitable ointment base; used as a topical antibacterial in the treatment of superficial infections of the skin due to organisms susceptible to erythromycin. **erythromycin ophthalmic o.** [USP], a preparation containing 90 to 120 per cent of the labeled amount of erythromycin (the labeled amount being 5 mg. of erythromycin per gm. of ophthalmic ointment) in a suitable ointment base; used as a topical antibacterial in the treatment of superficial infections of the conjunctiva and/or cornea due to organisms susceptible to erythromycin. **ethyl aminobenzoate o.**, benzocaine o. **fluocinolone acetonide o.** [USP], an ointment containing 90 to 110 per cent of the labeled amount of fluocinolone acetonide; used as an anti-inflammatory in steroid-responsive dermatoses, applied topically. **flurandrenolide o.** [USP], an ointment containing 85 to 115 per cent of the labeled amount of flurandrenolide; used as a topical anti-inflammatory glucocorticoid in the treatment of steroid-responsive dermatoses. **gentamicin sulfate o.** [USP], a semisolid preparation of gentamicin sulfate in a suitable ointment base, containing 90 to 135 per cent of the labeled amount of gentamicin; used as a topical antibacterial. **gentamicin sulfate ophthalmic o.** [USP], a sterile preparation of gentamicin sulfate in a petroleum base, containing the equivalent of 90 to 135 per cent of the labeled amount of gentamicin; used as an antibacterial, applied topically to the conjunctiva. **hydrocortisone o.** [USP], a semisolid preparation of hydrocortisone in a suitable ointment base, containing 90 to 110 per cent of the labeled amount of hydrocortisone; used as an anti-inflammatory adrenocortical steroid. **hydrocortisone acetate o.** [USP], a preparation containing 1.00 to 1.25 per cent hydrocortisone acetate, equivalent to 0.9 to 1.1 per cent hydrocortisone, used as a topical adrenocortical steroid. **hydrocortisone acetate ophthalmic o.** [USP], a semisolid preparation of hydrocortisone acetate in a suitable ointment base, containing 90 to 110 per cent of the labeled amount of hydrocortisone acetate; used as an anti-inflammatory steroid applied to the conjunctiva. **hydrophilic o.** [USP], a water-in-oil emulsion consisting of methylparaben, propylparaben, sodium lauryl sulfate, propylene glycol, stearyl alcohol, white petrolatum, and purified water; used as an ointment base. **hydroquinone o.**, an ointment containing 94 to 106 per cent of the labeled amount of hydroquinone; used as a depigmenting agent. **ichthammol o.** [USP], a preparation of ichthammol in anhydrous lanolin and petrolatum, used in dermatologic preparations. **idoxuridine ophthalmic o.** [USP], a semisolid preparation of idoxuridine in a petrolatum base, containing 0.45 to 0.55 per cent idoxuridine; used as an antiviral agent in the treatment of herpes simplex keratitis, applied to the conjunctiva. **iodochlorhydroxyquin o.** [USP], an ointment containing 90 to 110 per cent of the labeled amount of iodochlorhydroxyquin in a suitable ointment base; used as a local anti-infective in the treatment of a wide range of dermatoses, including all types of eczema, applied topically. **iodochlorhydroxyquin and hydrocortisone o.**, an ointment containing 90 to 110 per cent of the labeled amounts of iodochlorhydroxyquin and of hydrocortisone; used as a local anti-infective agent and glucocorticoid. **isofluorophate ophthalmic o.** [USP], an ointment containing 0.0225 to 0.0275 per cent of isofluorophate in a suitable anhydrous base; used as a cholinergic applied to the conjunctiva in the treatment of glaucoma. **lidocaine o.** [USP], a semisolid preparation of lidocaine in a suitable hydrophilic base, containing 95 to 105 per cent of the labeled amount of lidocaine; used as a topical anesthetic. **Löwenstein's o.**, an ointment prepared from a detoxicated unfiltered culture of diphtheria bacilli containing toxoid and killed bacteria; formerly used by inunction in attempted immunization against diphtheria. **mercurial o., diluted**, mercurial o., mild. **mercurial o., mild**, a preparation of mercury and mercury oleate, in solid bases, containing between 9 and 11 per cent mercury, used chiefly as a topical parasiticide. Called also *blue o.* **mercurial o., strong**, a preparation of mercury, mercury oleate, anhydrous lanolin, white wax, and white petrolatum, containing 47.5–52.5 per cent of mercury; used as a topical parasiticide. **mercuric oxide ophthalmic o., yellow**, a

mixture of finely powdered yellow mercuric oxide, liquid petrolatum, and white ointment, containing 0.9–1.1 per cent of mercuric oxide, used as a topical anti-infective in the treatment of blepharitis, conjunctivitis, and stytes. **mercurous chloride o.**, mild calomel o. **methylbenzethonium chloride o.** [USP], an ointment containing 0.1 per cent methylbenzethonium chloride; used as a local anti-infective, applied topically to the skin of the genitalia, rectum, thighs, and intertriginous areas in the treatment of ammonia dermatitis and in the treatment and prevention of dermatoses caused by contact with urine, feces, and perspiration. **monobenzene o.** [USP], an ointment containing 94 to 106 per cent of the labeled amount of monobenzene; used as a depigmenting agent. **neomycin sulfate o.** [USP], an ointment containing 3.5 mg. of neomycin base per gram, used as a topical antibacterial. **neomycin and polymyxin B sulfates, and bacitracin zinc o.** [USP], an ointment containing 90 per cent of the labeled amounts of neomycin sulfate, polymyxin B sulfate, and zinc bacitracin; used as a local anti-infective agent. **nitrofurazone o.** [USP], an ointment containing 95 to 105 per cent of the labeled amount of nitrofurazone in a suitable water-miscible base; used as a local anti-infective against a wide variety of gram-negative and gram-positive bacteria in the treatment of many skin lesions, especially second and third degree burns and to aid healing and prevent infection of skin grafts, applied topically. **nystatin o.** [USP], a semisolid preparation of nystatin in a suitable ointment base, containing in each gram, 90,000 to 130,000 units of nystatin activity, the labeled amount being 100,000 units per gram; used as a topical antifungal agent. **Pagenstecher's o.**, yellow mercuric oxide; see under *mercuric*. **penicillin o.**, a preparation of calcium penicillin, crystalline penicillin, or procaine penicillin in a suitable ointment base, with or without incorporation of a suitable anesthetic. **phenol o.**, a preparation of phenol, glycerin, and white ointment, containing 1.8–2.2 per cent of phenol; used as an antipruritic. Called also *carbolic acid o.* **pine tar o.**, a preparation of pine tar, yellow wax, and yellow ointment, used as a local antieczematous and rubefacient. **polyethylene glycol o.** [NF], a mixture of polyethylene glycol 4000 and polyethylene glycol 400, used as a water-soluble ointment base. **polymyxin B sulfate o.**, a semisolid preparation of polymyxin B sulfate in an anhydrous petrolatum base, containing 90 to 120 per cent of the labeled amount of polymyxin B, the labeled amount being 20,000 polymyxin B units per gram; used as a topical antibacterial agent. **resorcinol o., compound** [USP], a preparation of resorcinol, zinc oxide, bismuth subnitrate, juniper tar, yellow wax, petrolatum, anhydrous lanolin, and glycerin, used as a topical antifungal and keratolytic. **rose water o.** [USP], a preparation of spermaceti, white wax, almond oil, sodium borate, stronger rose water, purified water, and rose oil, used as an emollient and ointment base. **rose water o., petrolatum**, an ointment prepared with spermaceti, white wax, mineral oil, sodium borate, rose water, purified water, and rose oil. **scarlet red o.**, a preparation of scarlet red, olive oil, anhydrous lanolin, and petrolatum, applied locally as a protective agent. **simple o.**, white o. **sulfacetamide sodium ophthalmic o.** [USP], a sterile ointment containing 95 to 105 per cent of the labeled amount of sulfacetamide sodium; used as an antibacterial in sulfonamide-responsive eye infections, applied topically to the conjunctiva. **sulfisoxazole diolamine ophthalmic s.** [USP], a sterile ointment containing sulfisoxazole diolamine equivalent to 90 to 110 per cent of the labeled amount of sulfisoxazole; used as an antibacterial in the treatment of sulfonamide-responsive eye infections. **sulfur o.** [USP], a mixture of precipitated sulfur, mineral oil, and white ointment, used as a scabicide. **sutillains o.** [USP], a preparation of sutillains in a suitable ointment base; used as a proteolytic agent in wound débridement. **tar o., compound**, a preparation of rectified tar oil, benzoin tincture, zinc oxide, yellow wax, lard, and cottonseed oil, used locally as an antibacterial and irritant. **tetracaine o.** [USP], an ointment containing 5 per cent of tetracaine in a suitable ointment base; used as a local anesthetic, applied topically to the conjunctiva. **tetracaine ophthalmic o.** [USP], an ointment containing 0.45 to 0.55 per cent tetracaine in white petrolatum; used as a local anesthetic. **triamcinolone acetonide o.** [USP], a semisolid preparation of triamcinolone acetonide in a suitable ointment base, containing 90 to 115 per cent of the labeled amount of triamcinolone acetonide; used as a topical anti-inflammatory adrenocortical steroid. **triclobisonium chloride o.**, an ointment containing 90 to 110 per cent of the labeled amount of triclobisonium chloride; used as a topical anti-infective agent, primarily in gynecological infections. **undecylenic acid o., compound**, 1. [USP] a preparation of undecylenic acid, zinc undecylenate, and polyethylene glycol ointment, used as a topical antifungal. 2. a preparation of clove and cinnamon oils, salicylic acid, undecylenic acid, benzoic acid, and white petrolatum, used in podiatry. **Wertheim's o.** (obs.), a combination of ammoniated mercury, bismuth, and glycerin ointment, for application in chloasma. **white o.** [USP], an oleaginous ointment base prepared from white wax and white petrolatum. **Whitfield's o.**, benzoic and salicylic acid o. **yellow o.** [USP], a mixture of yellow wax and petrolatum, used as an ointment base for drugs. **zinc o.**, zinc oxide o. **zinc oxide o.** [USP], a

preparation of zinc oxide and mineral oil in white ointment, used topically as an astringent and protective.

Oken's body (corpus), canal (o'kenz) [Lorenz Oken, German physiologist, 1779–1851] see *mesonephros* and *ductus mesonephricus*.

O.L. abbreviation for *L. oculus lae'vus*, left eye.

Ol. abbreviation for *L. oleum*, oil.

-ol suffix indicating that the substance is an alcohol or a phenol, i.e., a hydroxyl derivative of a hydrocarbon.

O.L.A. abbreviation for *L. occipito-lae'va anterior* (left occipito-anterior, a position of the fetus).

olafur (o'lah-floor) chemical name: 2,2'-[[3-(2-hydroxyethyl)octadecylamino]propyl]imino]bisethanol dihydrofluoride; a dental caries prophylactic, $C_{27}H_{58}N_2O_3 \cdot 2HF$.

olamine (o'lah-men) USAN contraction for ethanolamine.

Olea (o'le-ah) a genus of small trees or shrubs having oily fruit, including the true wild olive (*O. oleaster*) and the common olive (*O. europaea* L.).

olea (o'le-ah) [L.] 1. olive. 2. plural of *oleum*.

oleaginous (o'le-aj'i-nus) [L. *oleaginus*] oily; greasy; unctuous.

oleander (o'le-an'der) a poisonous evergreen apocynaceous shrub, *Nerium oleander*, whose roots, flowers, seeds, and bark contain a cardiac glycoside.

oleandomycin phosphate (o'le-an'do-mi'sin) a macrolide antibiotic, $C_{35}H_{61}NO_{12} \cdot H_3PO_4$, elaborated by the growth of *Streptomyces antibioticus*, resembling erythromycin in chemical structure, actions, and uses but having weaker antibacterial activity; it has been used chiefly in the treatment of infections due to staphylococci and other gram-positive bacteria resistant to other systemic antibiotics, administered parenterally.

oleandrin (o'le-an'drin) 1. a cardiac glycoside, $C_{30}H_{48}O_8$, from oleander, composed of digitalose and digitaligenin. 2. an alkaloid, $C_{32}H_{48}O_9$, from oleander which is a potent diuretic and has been used in cardiac insufficiency.

oleandrism (o'le-an'drizm) poisoning by oleander.

oleanol (o'le-ah-nol) a white solid alcohol, $C_{18}H_{35}OH$, from the liver oils of fish.

olease (o'le-ās) an enzyme from olive oil which produces rancidity and discoloration of the oil.

oleaster (o'le-as'ter) 1. the true wild olive, *Olea oleaster*. 2. any plant of the genus *Elaeagnus*, a large shrub or small tree native to Asia and southern Europe, but especially the Russian olive (*E. angustifolia*).

oleate (o'le-āt) 1. any salt of oleic acid. 2. [L. *oleatum*] a solution of a chemical substance or drug in oleic acid, used as an ointment.

olecranal (o-lek'rah-nal) pertaining to the olecranon.

olecranarthritis (o-lek'ran-ar-thri'tis) [*olecranon* + 'arthritis] inflammation of the elbow joint.

olecranarthrocace (o-lek'ran-ar-throk'ah-se) [*olecranon* + Gr. *arthron* joint + *kakē* badness] tuberculosis of the elbow joint.

olecranarthropathy (o-lek'ran-ar-throp'ah-the) [*olecranon* + Gr. *arthron* joint + *pathos* disease] disease of the elbow joint.

olecranoid (o-lek'rah-noid) resembling the olecranon.

olecranon (o-lek'rah-non) [Gr. *ōlekranon*] [NA] the proximal bony projection of the ulna at the elbow, its anterior surface forming part of the trochlear notch.

olefin (o'le-fin) [*oleo* + L. *facere* to make] an unsaturated hydrocarbon; alkene.

olei (o'le-i) genitive of *oleum*.

olein (o'le-in) glycerotrioleate, $C_3H_5[CH_2(CH_2)_7CH:CH(CH_2)_7COO]_3$, found in various fixed oils and fats; it is a colorless, oily liquid, insoluble in water but freely soluble in ether and alcohol.

olenitis (o-len-i'tis) inflammation of the elbow joint.

oleo- (o'le-o) [L. *oleum* oil] a combining form denoting relationship to oil.

oleoarthrosis (o'le-o-ar-thro'sis) [*oleo* + Gr. *arthron* joint + *-osis*] therapeutic injection of oil into a joint.

oleochrysotherapy (o'le-o-kris'o-ther'ah-pe) [*oleo* + Gr. *chrysos* gold + *therapy*] therapeutic administration of gold salts in oily suspensions.

oleocresote (o'le-o-kre'o-söt) the oleic acid ester of cresote.

oleodipalmitin (o'le-o-di-pal'mī-tin) a fat found in soya bean oil, butter, cocoa fat, etc.

oleodistearin (o'le-o-di-ste'ah-rin) a fat found in the seeds of the Indian mango, *Mangifera indica*.

oleogranuloma (o'le-o-gran'u-lo'mah) paraffinoma.

oleoinfusion (o'le-o-in-fu'zhun) a preparation made by infusing a drug in oil.

oleoma (o'le-o'mah) [*oleo* + 'oma] paraffinoma.

oleomargarine (o'le-o-mar'jah-rin) margarine, def. 1.

oleometer (o'le-om'ē-ter) [*oleo* + Gr. *metron* measure] an instrument for testing the purity of oil.

oleonucleoprotein (o'le-o-nu'kle-o-pro'te-in) the caseinogen and fat of milk regarded as forming one complex substance.

oleopalmitate (o'le-o-pal'mi-tāt) an oleate and a palmitate of the same base.

oleoperitoneography (o'le-o-per'i-to-ne-og'rah-fe) roentgenography of the peritoneum following the injection of iodized oil.

oleoresin (o'le-o-rez'in) [L. *oleoresina*] 1. any natural combination of a resin and a volatile oil such as exudes from pines and other plants. 2. a compound prepared by exhausting a drug by percolation with a volatile solvent, such as acetone, alcohol, or ether, and evaporating the solvent. **aspidium o.**, a thick dark green liquid, an ether extract from *aspidium*, yielding not less than 24 per cent of crude filicin; used as an anthelmintic in the treatment of intestinal tapeworm infestation. **capsicum o.**, the extract from *capsicum* obtained by percolation, with either acetone or ether as the menstruum; used as an irritant and carminative.

oleoresina (o'le-o-re-zi'nah), pl. *oleoresinae* [L.] oleoresin.

oleosaccharum (o'le-o-sak'ah-rum) eleosaccharum.

oleostearate (o'le-o-ste'ar-āt) an oleate and a stearate of the same base.

oleosus (o'le-o'sus) [L.] oily; greasy.

oleotherapy (o'le-o-ther'ah-pe) [*oleo-* + *therapy*] treatment with oil, particularly treatment by the injection of oil.

oleothorax (o'le-o-tho'raks) [*oleo-* + *thorax*] intrapleural injection of oil in order to compress the lung in pulmonary tuberculosis.

oleotine (o'le-o'tin) a peptonized fat for use as a butter substitute.

oleovitamin (o'le-o-vi'tah-min) a preparation of fish liver oil or edible vegetable oil containing one or more fat-soluble vitamins or their derivatives. **o. A**, an oily preparation containing the natural or synthetic form of vitamin A. **o. A and D** [USP], an oily preparation containing vitamin A and natural or synthetic vitamin D; used as a dietary supplement. **o. D, synthetic**, a solution of calciferol or of activated 7-dehydrocholesterol in an edible vegetable oil, used as an antirachitic vitamin. **o. D₂**, calciferol. **o. D₃**, 7-dehydrocholesterol, activated.

oleum (o'le-um), gen. *o'lei*, pl. *o'lea* [L.] oil. **o. aethe'reum**, ethereal oil. **o. amygd'alae ama'rae**, bitter almond oil. **o. amygd'alae expres'sum**, almond oil. **o. ane'thi**, oil of dill. **o. arach'idis**, peanut oil. **o. auran'tii**, orange oil. **o. auran'tii ama'ri**, bitter orange oil. **o. auran'tii flo'ris**, orange flower oil. **o. bergamot'tae**, bergamot oil. **o. bet'ulae empyreumat'icum rectificat'um**, rectified birch tar oil. **o. cardamo'mi**, cardamom oil. **o. ca'ri**, caraway oil. **o. caryophyl'li**, clove oil. **o. chaulmo'o'grae**, chaulmoogra oil. **o. chenopo'dii**, chenopodium oil. **o. co'cois**, coconut oil. **o. eucalypt'i**, eucalyptus oil. **o. gossyp'ii sem'inis**, cottonseed oil. **o. hippoglos'si**, halibut liver oil. **o. jec'oris asel'li**, cod liver oil. **o. junip'eri**, juniper oil. **o. junip'eri empyreumat'icum**, juniper tar. **o. li'ni**, linseed oil. **o. may'dis**, corn oil. **o. men'thae piperi'tae**, peppermint oil. **o. mor'rhuae**, cod liver oil. **o. myr'ciae**, myrcia oil. **o. pi'cis li'quidae rectificat'um**, **o. pi'cis rectificat'um**, rectified tar oil. **o. pimen'tae**, pimenta oil. **o. pi'ni**, pine oil. **o. pi'ni pumilio'nis**, dwarf pine needle oil. **o. ric'ini**, castor oil. **o. ric'ini aromat'icum**, aromatic castor oil. **o. rosmari'ni**, rosemary oil. **o. rus'ci**, rectified birch tar oil. **o. san'tali**, santal oil. **o. ses'ami**, sesame oil. **o. terebin'thinae**, turpentine oil. **o. terebin'thinae rectificat'um**, rectified turpentine oil. **o. thy'mi**, thyme oil. **o. tig'lii**, croton oil.

olfact (ol'fakt) a unit of odor, the *minimum perceptible odor*, being the minimum concentration of a substance in solution which can be perceived by a large number of normal individuals, expressed in terms of grams per liter.

olfactie (ol-fak'te) a term applied by Zwaardemaker to a unit of the distance of withdrawal of the tube of his olfactometer at which an odorous substance was recognized, representing the exposed surface area of the odorous or solution-impregnated substance of which the cylinders were made.

olfaction (ol-fak'shun) [L. *olfacere* to smell] the act of smelling; the sense of smell.

olfactism (ol-fak'tizm) a sensation of smell produced by other than olfactory stimuli.

olfactology (ol'fak-tol'o-je) the science of the sense of smell.

olfactometer (ol'fak-tom'ē-ter) [L. *olfactus* smell + *metrum* measure] an apparatus for testing the sensitiveness of perception of odors.

olfactometry (ol'fak-tom'ē-tre) the study of the sense of smell.

olfactory (ol-fak'to-re) [L. *olfacere* to smell] pertaining to olfaction, or the sense of smell.

olfactus (ol-fak'tus) a unit of acuity of smell. See also under *organum*.

olfacty (ol-fak'te) olfactie.

oligakisuria (ol'i-gak'i-su're-ah) [Gr. *oligakis* few times + *ouron* urine + *-ia*] a condition in which urination occurs at long intervals.

oligemia (ol'i-ge'me-ah) [*oligo-* + Gr. *haima* blood + *-ia*] deficiency in the volume of the blood.

oligemic (ol'i-ge'mik) pertaining to or characterized by oligemia.

oligergasia (ol'ig-er-ga'se-ah) an oligergastic disorder; a mental disorder based on intellectual inadequacy or feeble-mindedness.

oligergastic (ol'ig-er-gas'tik) [*oligo-* + Gr. *ergon* work] Meyer's term for psychic disorders based on brain deficiency from lack of development.

oligo- (ol'i-go) [Gr. *oligos* little] a combining form meaning few, little, or scanty.

oligoamnios (ol'i-go-am'ne-os) [*oligo-* + *amnios*] oligohydramnios.

oligoblast (ol'i-go-blast') a primitive oligodendrocyte.

oligocardia (ol'i-go-kar'de-ah) [*oligo-* + Gr. *kardia* heart] bradycardia.

oligocholia (ol'i-go-ko'le-ah) [*oligo-* + Gr. *cholē* bile + *-ia*] (*obs.*) a lack or deficiency of the bile.

oligochromasia (ol'i-go-kro-ma'se-ah) hypochromasia.

oligochromemia (ol'i-go-kro-me'me-ah) [*oligo-* + Gr. *chrōma* color + *haima* blood + *-ia*] insufficiency of hemoglobin in the blood.

oligochylia (ol'i-go-ki'le-ah) [*oligo-* + Gr. *chylos* chyle + *-ia*] (*obs.*) deficiency of chyle.

oligochymia (ol'i-go-ki'me-ah) [*oligo-* + Gr. *chymos* juice + *-ia*] (*obs.*) deficiency of chyme.

oligocystic (ol'i-go-sis'tik) [*oligo-* + Gr. *kystis* sac, bladder] containing only a few cysts.

oligocythemia (ol'i-go-si-the'me-ah) [*oligo-* + *-cyte* + Gr. *haima* blood + *-ia*] reduction in the red cell mass of the blood; called also *oligocytosis*.

oligocythemic (ol'i-go-si-them'ik) relating to or affected with oligocythemia.

oligocytosis (ol'i-go-si-to'sis) oligocythemia.

oligodactyly (ol'i-go-dak'ti-le) [*oligo-* + Gr. *daktylos* finger] a developmental anomaly characterized by a smaller than usual number of fingers or toes.

oligodendria (ol'i-go-den'dre-ah) oligodendroglia.

oligodendroblastoma (ol'i-go-den'dro-blas-to'mah) oligodendrogloma.

oligodendrocyte (ol'i-go-den'dro-sit) [*oligodendroglia* + *-cyte*] see *oligodendroglia*.

oligodendroglia (ol'i-go-den-drog'le-ah) [*oligo-* + Gr. *dendron* dendron + *neuroglia*] 1. the non-neural cells of ectodermal origin forming part of the adventitial structure (neuroglia) of the central nervous system; projections of the surface membrane of each of these cells (oligodendrocytes) fan out and coil around the axon of many neurons to form myelin sheaths in the white matter. With microglia, they form the perineuronal satellites in the gray matter. 2. the tissue composed of such cells.

oligodendrogloma (ol'i-go-den'dro-gli-o'mah) a neoplasm derived from and composed of oligodendrogliaocytes in varying stages of differentiation; called also *oligodendroblastoma*.

oligodipsia (ol'i-go-dip'se-ah) [*oligo-* + Gr. *dipsa* thirst + *-ia*] abnormally diminished thirst.

oligodontia (ol'i-go-don'she-ah) [*oligo-* + Gr. *odous* tooth] presence of less than the normal number of teeth, some of them being congenitally absent.

oligodynamic (ol'i-go-di-nam'ik) [*oligo-* + Gr. *dynamis* power] active in very minute quantities; said especially of heavy metal ions (Hg⁺⁺, Ag⁺).

oligoencephalon (ol'i-go-en-sef'ah-lon) [*oligo-* + Gr. *enkephalos* brain] micrencephalon (def. 1).

oligogalactia (ol'i-go-gah-lak'she-ah) [*oligo-* + Gr. *gala* milk + *-ia*] deficient secretion of milk.

oligogenic (ol'e-go-jen'ik) [*oligo-* + *gene*] produced by a few genes at most; used in reference to certain hereditary characters.

oligogenics (ol'i-go-jen'iks) [*oligo-* + Gr. *gennan* to produce] limitation of the number of offspring; birth control.

oligoglia (ol'i-gog'le-ah) oligodendroglia.

oligohemia (ol'i-go-he'me-ah) oligemia.

oligohydramnios (ol'i-go-hi-dram'ne-os) [*oligo-* + Gr. *hydōr* water + *amnion*] the presence of less than 300 ml. of amniotic fluid at term.

oligohydruria (ol'i-go-hi-droo're-ah) [*oligo-* + Gr. *hydōr* water + *ouron* urine + *-ia*] abnormally high concentration of the urine.

oligohypermenorrhea (ol'i-go-hi'per-men'o-re'ah) infrequent menstruation with excessive menstrual flow.

oligohypomenorrhea (ol'i-go-hi'po-men'o-re'ah) infrequent menstruation with diminished menstrual flow.

oligolecithal (ol'i-go-les'i-thal) [*oligo-* + Gr. *lekithos* yolk] possessing only a little yolk.

oligomeganephronia (ol'i-go-meg'ah-nēfro'ne-ah) [*oligo-* + Gr. *megas* great + *nephros* kidney] congenital renal hypoplasia

in which there is a reduction in the number of lobes and of total number of nephrons, and hypertrophy of the nephrons.

oligomeganephronic (ol'i-go-meg'ah-nef-ron'ik) 1. characterized by a reduced number of and hypertrophy of the nephrons. 2. pertaining to oligomeganephronia.

oligomenorrhea (ol'i-go-men'o-re'ah) [*oligo-* + Gr. *mēn* month + *rhoia* flow] markedly diminished menstrual flow; relative amenorrhea.

oligometallic (ol'i-go-mē-tal'ik) containing only small quantities of metals.

oligomorphic (ol'i-go-mor'fik) [*oligo-* + Gr. *morphē* form] passing through only a few forms of growth; said of microorganisms.

oligonatality (ol'i-go-na-tal'i-te) [*oligo-* + L. *natus* birth] scanty birth rate.

oligonecrospermia (ol'i-go-nek'ro-sper'me-ah) [*oligo-* + Gr. *nekros* dead + *sperma* sperm + *-ia*] a condition of the spermatogenic fluid in which there is diminution of the number of spermatozoa, some of which are dead.

oligonitrophilic (ol'i-go-ni'tro-fil'ik) [*oligo-* + *nitrogen* + Gr. *philein* to love] absorbing nitrogen from the air and from media containing combined nitrogen; said of microorganisms.

oligonucleotide (ol'i-go-nu'kle-o-tid) [*oligo-* + *nucleotide*] a polymer made up of a few (2-10) nucleotides.

oligo-ovulation (ol'i-go-ov'u-la'shun) maturation and discharge of fewer than the normal number of ova from the ovaries.

oligopeptide (ol'i-go-pep'tid) the structure formed by the linkage of a few amino acids.

oligophosphaturia (ol'i-go-fos'fah-tu're-ah) deficiency in the excretion of phosphates in the urine.

oligophrenia (ol'i-go-fre'ne-ah) [*oligo-* + Gr. *phrēn* mind + *-ia*] defective mental development; mental deficiency. **moral o.**, see under *insanity*. **phenylpyruvic o.**, **o. phenylpyruvica**, mental deficiency associated with phenylketonuria. **polydystrophic o.**, Sanfilippo's syndrome.

oligophrenic (ol'i-go-fren'ik) 1. pertaining to oligophrenia. 2. a person affected with oligophrenia.

oligoplastic (ol'i-go-plas'tik) deficient tissue repair.

oligopnea (ol'i-go-pne'ah) [*oligo-* + Gr. *pnoia* breath] hypoventilation.

oligoposia (ol'i-go-po'ze-ah) [*oligo-* + Gr. *posis* drinking + *-ia*] abnormally diminished ingestion of fluids.

oligoposy (ol'i-go-po'o-se) oligoposia.

oligoptyalism (ol'i-go-ti'al-izm) [*oligo-* + Gr. *ptyalon* saliva + *-ism*] diminished secretion of saliva.

oligopyrene, oligopyrous (ol'i-go-pi'rēn; ol'i-go-pi'rus) [*oligo-* + Gr. *pyrēn* stone of fruit] deficient in nuclear or chromatin material.

oligosaccharide (ol'i-go-sak'ah-rid) a carbohydrate which on hydrolysis yields a small number (from two to four or as many as ten, according to various authorities) of monosaccharides. Cf. *polysaccharide*.

oligosialia (ol'i-go-si-a'le-ah) [*oligo-* + Gr. *sialon* saliva + *-ia*] pathologically diminished secretion of saliva.

oligospermatism (ol'i-go-sper'mah-tizm) oligospermia.

oligospermia (ol'i-go-sper'me-ah) [*oligo-* + Gr. *sperma* seed + *-ia*] deficiency in the number of spermatozoa in the semen.

Oligosporidia (ol'i-go-spo-rid'e-ah) former name for a suborder of sporozoan parasites of the order Coccidia.

oligosynaptic (ol'i-go-sin-ap'tik) [*oligo-* + *synaptic*] involving a few synapses in series and therefore a sequence of only a few neurons; called also *paucisynaptic*. Cf. *polysynaptic*.

oligotrophia (ol'i-go-tro'fe-ah) [*oligo-* + Gr. *trophē* nourishment + *-ia*] a state of poor (insufficient) nutrition.

oligotrophic (ol'i-go-trof'ik) pertaining to, characterized by, or conducive to poor (insufficient) nutrition.

oligotrophy (ol'i-got'ro-fe) oligotrophia.

oligozoospermatism (ol'i-go-zo'o-sper'mah-tizm) oligospermia.

oligozoospermia (ol'i-go-zo'o-sper'me-ah) oligospermia.

oliguresis (ol'i-gu-re'sis) oliguria.

oliguria (ol'i-gu're-ah) [*oligo-* + Gr. *ouron* urine + *-ia*] secretion of a diminished amount of urine in relation to the fluid intake.

oliguric (ol'i-gu'rik) pertaining to or characterized by oliguria.

olisthe (o-lis'the) olisthy.

olisthy (o-lis'the) [Gr. *olisthanein* to slip] a slipping, as the slipping of the bones of a joint from their normal relation in the joint.

oliva (o-li'vā), pl. *oli'vae* [L.] [NA] a rounded elevation, lateral to the upper part of each pyramid of the medulla oblongata. It is produced by an irregular mass of gray substance, the olivary nucleus, located just beneath its surface. Called also *olive*, *inferior olive*, and *olivary body* or *nucleus*. **o. cerebella'ris**, nucleus dentatus.

olivae (o-li've) [L.] plural of *oliva*.

olivary (ol'i-ver'e) [L. *olivarius*] shaped like an olive, as the olivary nucleus.

olive (ol'iv) [L. *ōliva*] 1. the tree *Olea europaea* L. (Oleaceae), and its fruit. The latter affords a fixed oil (*olive oil*, *sweet oil*), which consists chiefly of olein and palmitin, and is employed as a food, as a mild laxative, and as an application to wounds, bruises, etc. 2. a rounded elevation, lateral to the upper part of each pyramid of the medulla oblongata; see *oliva*. **inferior o.**, *oliva*. **spurge o.**, *mezereum*. **superior o.**, *nucleus dorsalis corporis trapezoidei*.

Oliver's sign (ol'i-verz) [William Silver *Oliver*, English physician, 1836-1908] tracheal tugging.

Oliver's test (ol'i-verz) [George *Oliver*, English physician, 1841-1915] see under *tests*.

olivifugal (ol'i-vif'u-gal) [*olive* + L. *fugere* to flee] moving or conducting away from the oliva.

olivipetal (ol'i-vip'e-tal) [*olive* + L. *petere* to seek] passing or conducting toward the oliva.

olivopontocerebellar (ol'i-vo-pon'to-ser'ē-bel'ar) pertaining to the olivae, the middle peduncles, and the cortex of the cerebellum.

Ollier's disease, law, layer (ol'e-āz') [Léopold Louis Xavier Edouard *Ollier*, French surgeon, 1830-1900] see *enchondromatosis*, and under *law* and *layer*.

Ollier-Thiersch graft (ol'e-a'tērsh') [L.L.X.E. *Ollier*; Karl *Thiersch*, German surgeon, 1822-1895] see under *graft*.

Ol. oliv. abbreviation for L. *o'leum oli'vae*, olive oil.

olophonia (ol'lo-to'ne-ah) [Gr. *oloos* destroyed, lost + *phōnē* voice + *-ia*] defective speech due to malformed vocal organs.

O.L.P. abbreviation for L. *occipito-laeva posterior* (left occipito-posterior, a position of the fetus).

Olpitrichum (ol-pi-trik'um) a genus of imperfect fungi of the order Moniliales, family Monidiaceae, which contains species of the former genera *Oidium* and *Acladium*; they are found in soil, and are sometimes isolated from infected wounds.

Olshausen's operation (ols'how-zenz) [Robert von *Olshausen*, obstetrician in Berlin, 1835-1915] see under *operation*.

Olshevsky tube (ol-shev'ske) [Dimitry E. *Olshevsky*, American physician, born 1900] see under *tube*.

O.L.T. abbreviation for L. *occipito-laeva transversa* (left occipito-transverse, a position of the fetus).

o.m. abbreviation for L. *om'ni ma'ne*, every morning.

-oma [Gr. *ōma*, perhaps adapted from *onkōma*, a swelling] a word termination meaning tumor or neoplasm, of the part indicated by the stem to which it is attached.

omacephalus (o'mah-sef'ah-lus) [Gr. *ōmos* shoulder + *a neg.* + *kephālē* head] a monster with deficient head and no upper extremities.

omagra (o-ma'grah) [Gr. *ōmos* shoulder + *agra* seizure] gout in the shoulder.

omalgia (o-mal'je-ah) [Gr. *ōmos* shoulder + *-algia*] pain in the shoulder.

omarthrit (o'mar-thri'tis) [Gr. *ōmos* shoulder + *arthron* joint + *-itis*] inflammation of the shoulder joint.

omasitis (o'mah-si'tis) inflammation of the omasum.

omasum (o-ma'sum) [L.] the third division of the stomach of ruminant animals; called also *manyplies* and *psalterium*.

Ombredanne's operation (ahm-bra-danz') [Louis *Ombredanne*, Paris surgeon, 1871-1956] see under *operation*.

ombrophore (om'bro-för) [Gr. *ombros* rain + *phoros* bearer] an apparatus for applying a douche bath of water containing carbon dioxide.

omega (o-me'gah) the twenty-fourth, and final, letter of the Greek alphabet, Ω or ω. **o. melanco'licum**, a folding of the skin between the eyebrows like the Greek letter omega; a sign of melancholia. Called also *Schüle's sign*.

omeire (o-mi're) a native drink of southwest Africa, made by permitting milk to ferment.

omenta (o-men'tah) [L.] plural of *omentum*.

omental (o-men'tal) pertaining to the omentum.

omentectomy (o'men-tek'to-me) [*omentum* + Gr. *ektomē* excision] excision of all or a portion of the omentum.

omentitis (o'men-ti'tis) inflammation of the omentum.

omentofixation (o-men'to-fik-sa'shun) omentopexy.

omentopexy (o-men'to-pek'se) [*omentum* + Gr. *pēxis* fixation] in general, an operation which fastens the omentum to some other tissue, and especially one which uses a part of the omentum as a circulatory bridge either to lessen congestion, as in the Talma operation for relief of the portal circulation, or to supply more vascular nutrition as to the heart in coronary disease.

omentoplasty (o-men'to-plas'te) [*omentum* + Gr. *plassein* to form] the use of omental grafts.

omentoportography (o-men'to-por-tog'rah-fe) roentgenography of the hepatic portal veins after injection of a contrast medium into the gastroepiploic vein in the base of the omentum.

omenterrhaphy (o'men-tor'ah-fe) [*omentum* + Gr. *rhaphē* suture] suture or repair of the omentum.

omentosplenopexy (o-men'to-sple'no-pek'se) combined omentopexy and splenopexy.

omentotomy (o'men-tot'o-me) [*omentum* + Gr. *temnein* to cut] incision of the omentum.

omentovolvulus (o-men'to-vol'vu-lus) volvulus of the omentum.

omentum (o-men'tum), pl. *omen'ta* [L. "fat skin"] a fold of peritoneum extending from the stomach to adjacent organs in the abdominal cavity; see *omentum majus* and *omentum minus*.

colic o., gastrocolic o., o. majus. **gastrohepatic o., o. minus.** **gastrosplenic o.,** ligamentum gastrosplenicale.

greater o., o. majus. **lesser o.,** 1. ligamentum hepatogastrium. 2. omentum minus. **o. majus** [NA], greater omentum: a prominent peritoneal fold suspended from the greater curvature of the stomach and passing inferiorly a variable distance in front of the intestines; it is attached to the anterior surface of the transverse colon.

o. mi'nus [NA], lesser omentum: a peritoneal fold joining the lesser curvature of the stomach and the first part of the duodenum to the porta hepatis.

pancreaticosplenic o., a fold of peritoneum connecting the tail of the pancreas and the visceral surface of the spleen.

spleno-gastric o., ligamentum gastrosplenicale.

omentumectomy (o-men'tum-ek'to-me) [*omentum* + Gr. *ektomē* excision] omentectomy.

omitis (o-mi'tis) [*omo-* + *-itis*] inflammation of the shoulder.

ommatidium (om'ah-tid'e-um) [Gr. *omma* the eye] one of the elongated units of a compound eye of an arthropod.

ommochrome (om'o-krōm) [Gr. *omma* eye + *chrōma* color] a product of tryptophan metabolism which gives rise to pigments, particularly the eye pigments of certain animals; it is apparently not involved in the visual processes.

Omn. bih. abbreviation for L. *om'ni biho'ra*, every two hours

Omn. hor. abbreviation for L. *om'ni ho'ra*, every hour.

Omnipen (om'nī-pen) trademark for preparations of ampicillin.

omnipotence (om-nip'o-tens) the state of being all-powerful.

o. of thought, the deluded belief of a patient that his thoughts and wishes are all powerful and will be fulfilled as soon as he expresses them.

omnivorous (om-niv'o-rous) [L. *omnis* all + *vorare* to eat] subsisting upon both plants and animals.

Omn. noct. abbreviation for L. *om'ni noc'te*, every night.

omo- (o'mo) [Gr. *ōmos* shoulder] a combining form denoting relationship to the shoulder.

omocephalus (o'mo-sef'ah-lus) [*omo-* + Gr. *kephalē* head] a fetus with no arms and an incomplete head.

omoclavicular (o'mo-klah-vik'u-lar) pertaining to the shoulder and the clavicle.

omodynia (o'mo-din'e-ah) [*omo-* + Gr. *odynē* pain] pain in the shoulder.

omohyoid (o'mo-hi'oid) pertaining to the shoulder and the hyoid bone.

omophagia (o'mo-fa'je-ah) [Gr. *ōmos* raw + *phagein* to eat] the eating of raw food.

omoplatā (o'mo-plat'ah) [Gr. *ōmoplatē* the shoulder-blade] the scapula.

omosternum (o'mo-ster'num) the interarticular cartilage at the joint between the sternum and clavicle.

OMPA octamethyl pyrophosphoramidate.

omphalectomy (om'fah-lek'to-me) [*omphalo-* + Gr. *ektomē* excision] excision of the umbilicus.

omphalelcosis (om'fal-el-ko'sis) [*omphalo-* + Gr. *helkōsis* ulceration] ulceration of the umbilicus.

omphalic (om-fal'ik) [Gr. *omphalikos*] pertaining to the umbilicus.

omphalitis (om'fah-li'tis) [*omphalo-* + *-itis*] inflammation of the umbilicus.

o. of birds, infection of the yolk sac with bacteria normally found in the alimentary tract and on the skin of the hen, leading to death of the embryos and chicks, occurring up to ten days after hatching; called also *mushy chick disease*.

omphalo- (om'fah-lo) [Gr. *omphalos* the navel] a combining form denoting relationship to the umbilicus.

omphaloangiopagous (om'fah-lo-an'je-op'ah-gus) [*omphalo-* + Gr. *angeion* vessel + *pagos* thing fixed] allantoideoangiopagous.

omphaloangiopagus (om'fah-lo-an'je-op'ah-gus) allantoideoangiopagus.

omphalocele (om'fah-lo-sēl') [*omphalo-* + Gr. *kēlē* hernia] protrusion, at birth, of part of the intestine through a large defect in the abdominal wall at the umbilicus, the protruding bowel being covered only by a thin transparent membrane composed of amnion and peritoneum.

omphalochorion (om'fah-lo-ko're-on) the structure formed by fusion of the yolk sac with the chorion; a choriovitelline placenta.

omphalodidymus (om'fah-lo-did'i-mus) [*omphalo-* + Gr. *didymos* twin] gastrodidymus.

omphalogenesis (om'fah-lo-jen'ē-sis) [*omphalo-* + Gr. *genesis* formation] development of the umbilicus or yolk sac in the embryo.

omphaloma (om'fah-lo'mah) [*omphalo-* + *-oma*] a tumor of the umbilicus.

omphalomesaraic (om'fah-lo-mes-ah-ra'ik) omphalomesenteric.

omphalomesenteric (om'fah-lo-mes'en-ter'ik) pertaining to the umbilicus and mesentery.

omphaloncus (om'fah-long'kus) [*omphalo-* + Gr. *onkos* mass, bulk] omphaloma.

omphalopagus (om'fah-lop'ah-gus) [*omphalo-* + Gr. *pagos* thing fixed] monomphalus.

omphalophlebitis (om'fah-lo-fle-bi'tis) [*omphalo-* + Gr. *phleps* vein + *-itis*] 1. inflammation of the umbilical veins. 2. a condition characterized by markedly suppurative lesions of the umbilicus in young animals, due to infection through the umbilicus; see *navel ill*, under *ill*.

omphalorrhagia (om'fah-lo-ra'je-ah) [*omphalo-* + Gr. *rhēgnynai* to burst forth] hemorrhage from the umbilicus.

omphalorrhoea (om'fah-lo-re'ah) [*omphalo-* + Gr. *rhoia* flow] an effusion of lymph at the navel.

omphalorrhexis (om'fah-lo-rek'sis) [*omphalo-* + Gr. *rhēxis* rupture] rupture of the umbilicus.

omphalositis (om'fah-lo-sit') [*omphalo-* + Gr. *sitos* food] an underdeveloped member of allantoideoangiopagous twins, which is joined to the more developed member (autosite) by the vessels of the umbilical cord.

omphalotomy (om'fah-lot'o-me) [*omphalo-* + Gr. *tomē* a cutting] the cutting of the umbilical cord.

omphalus (om'fah-lus) [Gr. *omphalos*] the umbilicus.

Om. quar. hor. abbreviation for L. *om'ni quadrante ho'ra*, every quarter of an hour.

omunono (om'u-no'no) yaws.

o.n. abbreviation for L. *om'ni noc'te*, every night.

onanism (o'nah-nizm) [*Onan*, son of Judah] 1. coitus interruptus. 2. masturbation.

onaye (o-nah'ye) an exceedingly virulent poison from the seeds of *Strophanthus hispidus*.

Onchocerca (ong'ko-ser'kah) [Gr. *onkos* tumor + *kerkos* tail] a genus of nematode parasites of the superfamily Filarioidea. The adults live and breed in subcutaneous fibroid nodules; the young (the microfilariae) are carried by the lymph and are found chiefly in the skin, subcutaneous connective tissues, and eyes.

O. caecu'tiens, O. volvulus. **O. cervica'lis,** a species found in the cervical ligament of horses and mules.

O. gibso'ni, a species that infects the subcutaneous tissues of cattle and zebra, producing nodular swellings on the flanks, knees, and shoulders.

O. volvulus, the etiologic agent of onchocerciasis in man, found in tropical Africa and the Western Hemisphere, especially Guatemala, Mexico, and Venezuela. Transmitted by the bites of flies of the family Simuliidae, the parasites invade the skin, subcutaneous tissues, and other tissues, producing fibrous nodules. In the Western Hemisphere, subcutaneous lesions are usually seen on the head, most often the scalp, but in Africa they are primarily found on the trunk, axillae, and around the pelvis. Blindness occurs after ocular invasion (*Robles' disease, blinding filarial disease, river blindness*). Called also *mal morado* and *volvulosis*. See also *coast erysipelas*, under *erysipelas*, and *craw-craw*.

onchocerciasis (ong'ko-ser-ki'ah-sis) the state of being infected with worms of the genus *Onchocerca*. See individual species under *Onchocerca*.

onchocercosis (ong'ko-ser-ko'sis) onchocerciasis.

Onciolo (on-si'o-lah) a genus of acanthocephalous parasites.

O. ca'nis, a species found in the intestines of dogs in Texas and Nebraska.

onco- (ong'ko) [Gr. *onkos* mass, bulk] a combining form denoting relationship to a tumor, swelling, or mass.

Oncocerca (ong'ko-ser'kah) *Onchocerca*.

oncocyte (on'ko-sit') a large epithelial cell with an extremely acidophilic and granular cytoplasm, containing vast numbers of mitochondria; such cells undergo neoplastic transformation.

oncocyctic (on'ko-sit'ik) composed of or containing oncocytes.

oncocyctoma (ong'ko-si-to'ma) [*oncocyte* + *-oma*] Hürthle cell tumor; see under *tumor*.

oncodnavirus (on-kod'nah-vi'rus) [*onco-* + *DNA* + *virus*] any DNA virus that causes cancer.

oncofetal (on'ko-fe'tal) carcinoembryonic; see under *antigen*.

oncogene (ong'ko-jēn) hypothetical viral genetic material carrying the potential of cancer and passed from parent to offspring.

oncogenesis (ong'ko-jen'ē-sis) [*onco-* + Gr. *genesis* production, generation] the production or causation of tumors.

oncogenetic (ong'ko-jē-net'ik) pertaining to or characterized by oncogenesis.

oncogenic (ong/'ko-jen/'ik) giving rise to tumors or causing tumor formation; said especially of tumor-inducing viruses. Cf. *tumorigenic*.

oncogenicity (ong/'ko-jē-nis/'i-te) the quality or property of being able to cause tumor formation.

oncogenous (ong-kōj/'ē-nus) arising in or originating from a tumor.

oncoides (ong-koi/'dēz) [*onco-* + Gr. *eidos* form] turgid swelling; intumescence.

oncology (ong-kol/'o-je) [*onco-* + *-logy*] the sum of knowledge concerning tumors; the study of tumors.

oncolysate (on-kol/'i-sāt) any agent that lyses or destroys tumor cells.

oncolysis (ong-kol/'i-sis) [*onco-* + Gr. *lysis* dissolution] the lysis or destruction of tumor cells.

oncolytic (ong/'ko-lit/'ik) pertaining to, characterized by, or causing oncolysis.

oncoma (ong-'ko-mah) [Gr. *onkōma*] a swelling; tumor.

Oncomelania (ong/'ko-mē-la-'ne-ah) a genus of snails species of which transmit schistosomiasis japonica; formerly called *Katayama*.

oncometer (ong-kom/'ē-ter) [*onco-* + Gr. *metron* measure] (*obs.*) an instrument for measuring variations in the size of various organs or parts of the body, as of the kidney or spleen.

oncornavirus (on-kor/'nah-vi-'rus) [*onco-* + *RNA* + *virus*] any RNA virus that causes cancer.

oncosis (ong-'ko-sis) [*onco-* + *-osis*] a morbid condition characterized by the development of tumors.

oncosphere (ong/'ko-sfēr) [Gr. *onkos* barb + *sphaira* sphere] the larva of the tapeworm contained within the external embryonic envelope and armed with six hooks; it may be found in the feces.

oncotherapy (ong/'ko-ther-'ah-pe) [*onco-* + *therapy*] the treatment of tumors.

oncothlipsis (ong/'ko-thlip/'sis) [*onco-* + Gr. *thlipsis* pressure] pressure caused by a tumor.

oncotic (ong-'kot/'ik) pertaining to, caused by, or marked by, swelling; see also under *pressure*.

oncotomy (ong-'kot/'o-me) [*onco-* + Gr. *temnein* to cut] the incision of a tumor or swelling.

oncotropic (ong/'ko-trop/'ik) [*onco-* + Gr. *tropos* a turning] having a special affinity or attraction for tumor cells.

Oncovin (on/'ko-vin) trademark for a preparation of vincristine sulfate.

oncovirus (on/'ko-vi-'rus) [*onco-* + *virus*] any virus that causes cancer.

ondometer (on-dom/'ē-ter) an apparatus for measuring the frequency of the oscillations in high frequency currents.

-one a suffix used in chemistry to indicate (a) quintivalent nitrogen, and (b) a compound having two hydrocarbon radicals attached to the carbonyl group; a ketone.

oneiric (o-ni/'rik) pertaining to or characterized by dreaming.

oneirism (o-ni/'rizm) a dreamlike waking hallucination; cerebral automatism, as in a dream prolonged into the waking state.

oneiro- (o-ni/'ro) [Gr. *oneiros* dream] a combining form denoting relationship to a dream.

oneiroanalysis (o-ni/'ro-ah-nal/'i-sis) the exploration of the conscious and unconscious personality through the interpretation of pharmacologically induced dreams.

oneirodynia (o-ni/'ro-din/'e-ah) [*oneiro-* + Gr. *odynē* pain] nightmare.

oneirogenic (o-ni-ro-jen/'ik) producing a dreamlike state; capable of causing dreams.

oneirogmus (o-ni-ro-'g-mus) [Gr. *oneirōgmos* an effusion during sleep] emission of semen accompanying dreams.

oneiroid (o-ni-'roid) resembling a dream.

oneirology (o-ni-rol/'o-je) [*oneiro-* + *-logy*] the science of dreams.

oneirophrenia (o-ni/'ro-fre-'ne-ah) [*oneiro-* + Gr. *phrēn* mind + *-ia*] Meduna's term for a form of schizophrenia characterized by disturbances of the sensorium (illusions, confusions, disorientation), amnesia, stupor, and hallucinations.

oneiroscopy (o-ni-'ros/'ko-pe) [Gr. *oneiroskopikos* of the interpretation of dreams] analysis of dreams for the purpose of diagnosing the patient's mental state.

oniric (o-ni/'rik) oneiric.

onirogenic (o-ni-ro-jen/'ik) oneirogenic.

oniroid (o-ni-'roid) oneiroid.

onium (o-ne-'um) a term applied to a cation in which nitrogen has its maximum covalency, as in the ammonium ion NH_4^+ . The compounds include betaines, choline, and amine oxides.

onkinocoele (on-kin/'o-sēl) [Gr. *onkos* swelling + *is* fiber + *kēlē* hernia, tumor] a swollen condition of a tendon sheath.

onlay (on/'la) a graft applied or laid on the surface of an organ or structure. **epithelial o.**, an epithelial graft, the edges of

which are not completely approximated to the edges of the wound, thus permitting new epithelium to grow out around the margin; see also under *inlay*.

onobaio (o/'no-ba-'yo) a powerful arrow poison from Obok, in Africa; it has a depressant action on the heart.

onomatology (on/'o-mah-tol/'o-je) [Gr. *onoma* name + *-logy*] the science of names and nomenclature.

onomatomania (on/'o-mat/'o-ma-'ne-ah) [Gr. *onoma* name + *mania* madness] mental derangement with regard to words or names, marked by persistent dwelling on some particular word, by perplexed effort to recall some word, by attaching some special significance to certain words, or by showing disgust for certain words (Charcot and Magnan, 1885).

onomatophobia (on/'o-mat/'o-fo-'be-ah) [Gr. *onoma* name + *phobia*] morbid dread of hearing a certain name or word.

onomatopoesis (on/'o-mat/'o-poi-'e-sis) [Gr. *onoma* name + *poiein* to make] the formation of meaningless words by the psychotic.

Ontjom the fermented product of peanut press cake, made by the natives of Java and Sumatra; occasionally this product causes poisoning of which one sign is jaundice.

ontogenesis (on/'to-jen/'ē-sis) ontogeny.

ontogenetic (on/'to-jē-net/'ik) ontogenic.

ontogenic (on/'to-jen/'ik) pertaining to ontogeny.

ontogeny (on-toj/'ē-ne) [Gr. *ōn* existing + *gennan* to produce] the development of the individual organism. Cf. *phylogeny*.

onyalai, onyalia (o/'ne-al-'a-e; o/'ne-al-'le-ah) a nutritional disorder occurring among the blacks in various parts of Africa, and marked by the formation, on the palatal and buccal mucous membrane, of blebs containing semicoagulated blood and without signs of constitutional disorder. It is a form of thrombopenic purpura.

onych- (on/'ik) see *onycho-*.

onychatrophia (o/'nik-ah-tro-'fe-ah) [*onych-* + *aneg.* + Gr. *trophē* nutrition + *-ia*] atrophy of a nail or of the nails.

onychatrophy (on/'ik-at/'ro-fe) onychatrophia.

onychauxis (on/'i-kawk/'sis) [*onych-* + Gr. *auxein* to increase] overgrowth or, especially, thickening of the nails.

onychectomy (on/'i-kek/'to-me) [*onych-* + Gr. *ektomē* excision] excision of a nail or nail bed, or of the claws of animals.

onychial (o-nik-'e-ah) [*onych-* + *-ia*] inflammation of the matrix of the nail resulting in shedding of the nail; see *paronychia*.

onychitis (on/'i-ki-'tis) [*onych-* + *-itis*] onychia.

onycho-, onych- (on/'i-ko, on/'ik) [Gr. *onyx* nail] a combining form denoting relationship to the nails.

onychoclasis (on/'i-kok/'lah-sis) [*onycho-* + Gr. *klasis* breaking] breaking of the nail.

onychocryptosis (on/'i-ko-krip-'to-sis) [*onycho-* + Gr. *kryptein* to conceal] ingrown nail.

onychodystrophy (on/'i-ko-dis/'tro-fe) [*onycho-* + *dystrophy*] malformation of a nail.

onychogenic (on/'i-ko-jen/'ik) [*onycho-* + Gr. *gennan* to produce] producing or forming nail substance.

onychogram (o-nik/'o-gram) a tracing made by the onychograph.

onychograph (o-nik/'o-graf) [*onycho-* + Gr. *graphein* to write] an instrument for observing and recording the nail pulse and capillary circulation.

onychogryphosis (on/'i-ko-grī-'fo-sis) [*onycho-* + Gr. *grypōsis* a crooking, hooking] a deformed overgrowth of the nails; hooked or incurved state of the nails.

onychogryposis (on/'i-ko-grī-'po-sis) onychogryphosis.

onychoheterotopia (on/'i-ko-het/'er-o-to-'pī-ah) [*onycho-* + *heterotopia*] a condition in which the nails are abnormally situated.

onychoid (on/'i-koid) [*onycho-* + Gr. *eidos* form] resembling a fingernail.

onycholysis (on/'i-kol/'i-sis) [*onycho-* + Gr. *lysis* dissolution] loosening or separation of all or part of a nail from its nail bed; often a manifestation of psoriasis.

onychomadesis (on/'i-ko-mah-'de-sis) [*onycho-* + Gr. *madēsis* loss of hair] complete shedding of the nails.

onychomalacia (on/'i-ko-mah-'la-'she-ah) [*onycho-* + Gr. *malakia* softness] softening of the fingernail.

onychomycosis (on/'i-ko-mi-'ko-sis) [*onycho-* + Gr. *mykēs* fungus + *-osis*] a disease of the nails of the fingers and toes caused by *Epidermophyton floccosum*, by several species of *Trichophyton*, or by *Candida albicans*. The nails become opaque, white, thickened, friable, and brittle. Called also *tinea unguium* and *ringworm of the nails*.

onycho-osteodysplasia (on/'i-ko-os/'te-o-dis-'pla-'ze-ah) nail-patella syndrome.

onychopathic (on/'i-ko-path/'ik) pertaining to onychopathy or any disease of the nails.

onychopathology (on/'i-ko-pah-'thol/'o-je) [*onycho-* + *pathology*] the pathology of diseases of the nails.

onychopathy (on''i-kop'ah-the) [*onycho-* + Gr. *pathos* disease] disease of the nails.

onychophagia (on''i-ko-fa'je-ah) [*onycho-* + Gr. *phagein* to eat + *-ia*] the habit of biting the nails.

onychophagist (on''i-kof'ah-jist) one who habitually bites the fingernails.

onychophagy (on''i-kof'ah-je) [*onycho-* + Gr. *phagein* to eat] onychophagia.

onychophyma (on''i-ko-fi'mah) [*onycho-* + Gr. *phyma* growth] (obs.) onychauxis.

onychoptosis (on''i-kop-to'sis) [*onycho-* + Gr. *ptōsis* falling] onychomadesis.

onychorrhaxis (on''i-ko-rek'sis) spontaneous splitting or breaking of the nails.

onychoschizia (on''i-ko-skiz'e-ah) [*onycho-* + Gr. *schizein* to divide + *-ia*] onycholysis.

onychosis (on''i-ko'sis) [*onycho-* + *-osis*] disease or deformity of a nail or of the nails.

onychotillomania (on''i-ko-til''o-ma'ne-ah) neurotic picking at the nails.

onychotomy (on''i-kot'o-me) [*onycho-* + Gr. *tomē* a cutting] incision of a nail.

onym (on'im) [Gr. *onyma* name] a technical name or term; a combining form denoting relationship to a name or word.

onyx (on'iks) [Gr. "nail"] 1. a fingernail or toenail; see *unguis* [NA]. 2. a variety of hypoppon.

onyxis (o-nik'sis) ingrown nail.

oo- [Gr. *ōon* an egg] a combining form denoting relationship to an egg or ovum; see also words beginning *ovo-*.

ooblast (o'o-blast) [*oo-* + Gr. *blastos* germ] a primitive cell from which an ovum ultimately is developed.

oocenter (o'o-sen'ter) ooventer.

oocephalus (o'o-sef'ah-lus) [*oo-* + Gr. *kephalē* head] an individual characterized by an egg-shaped head.

Oochoristica (o'o-ko-ris'ti-kah) a large genus of tapeworms, family Linstowiidae, which are parasitic in birds, reptiles, and mammals.

oocinesia (o'o-si-ne'ze-ah) ookinesis.

oocinete (o'o-sin'et) ookinete.

oocyan (o'o-si'an) a blue-green pigment from the shells of birds' eggs; it is a dehydro bilirubin.

oocyanin (o'o-si'ah-nin) [*oo-* + Gr. *kyanos* blue] a bluish coloring matter from birds' eggs.

oocyesis (o'o-si-e'sis) [*oo-* + Gr. *kyēs* pregnancy] ovarian pregnancy.

oocyst (o'o-sist) [*oo-* + Gr. *kystis* sac, bladder] the encysted or encapsulated ookinete in the wall of a mosquito's stomach; also, the analogous stage in the development of any sporozoon, as in *Isospora*.

oocytase (o'o-si'tās) an enzyme having a destructive effect on ovarian cells.

oocyte (o'o-sit) [*oo-* + *-cyte*] a developing egg cell in one of two stages: The *primary* oocyte (one that has begun but not completed the first maturation division) is derived from an oogonium by differentiation near the time of birth. The *secondary* oocyte (one in the period between the first and second maturation division) is derived from a primary oocyte shortly before ovulation by a division that splits off the first polar body. Ovulation follows. If fertilized, the secondary oocyte divides into an ootid and the second polar body; otherwise it perishes.

oocytin (o'o-si'tin) a substance obtained from spermatozoa, leukocytes, and red blood cells which will cause the formation of fertilization membranes in ova.

oodeoceles (o-o'de-o-sēl) [Gr. *ōoeidēs* egg-shaped + *kēlē* hernia] (obs.) obturator hernia.

oogamous (o-og'ah-mus) pertaining or relating to or produced by oogamy; heterogamous.

oogamy (o-og'ah-me) 1. the fertilization of a large nonmotile egg by a small, motile male gamete or sperm, as seen in certain algae. 2. the conjugation of two dissimilar gametes; heterogamy.

oogenesis (o'o-jen'ē-sis) [*oo-* + Gr. *genesis* production] the process of formation of the female gametes (ova).

oogenetic (o'o-jē-net'ik) pertaining to oogenesis.

oogenic (o'o-jen'ik) producing ova.

oogonium (o'o-go-ne-um), pl. *oogonia* [*oo-* + Gr. *gonē* generation] 1. an ovarian egg during fetal development; it is derived from primordial germ cell, multiplies rapidly, then becomes encapsulated in primordial follicle cells and, near time of birth, becomes a primary oocyte by entering into prophase of first maturation division. 2. in certain fungi and algae, the female gametangium containing one or more eggs (oospheres).

ookinesis (o'o-kī-ne'sis) [*oo-* + Gr. *kinēsis* motion] the mitotic movements of the egg during maturation and fertilization.

ookinete (o'o-kī-nēt') the fertilized form of the malarial para-

site in the body of a mosquito; it is formed by fertilization of a macrogamete by a microgamete and develops into an oocyst.

oolemma (o'o-lem'ah) [*oo-* + Gr. *lemma* sheath] zona pellucida, def. 1.

Oomycetes (o'o-mi-se'tēz) [*oo-* + Gr. *mykēs* fungus] a subclass of phycomycetous fungi having sporangia of different kinds and cell walls made up of cellulose, in which reproduction takes place sexually by biflagellate spores; it includes the order Saprolegniales.

oophagia (o'o-fa'je-ah) oophagy.

oophagy (o-o'fah-je) [Gr. *ōophagein* to eat eggs] the eating of eggs; said of insects whose diet consists largely of eggs.

oophor- see *oophoro-*.

oophoralgia (o'of-or-al'je-ah) [*oophor-* + *-algia*] pain in an ovary.

oophorectomize (o'of-o-rek'to-miz) to deprive of the ovaries by surgical removal.

oophorectomy (o'of-o-rek'to-me) [*oophor-* + Gr. *ektomē* excision] the removal of an ovary or ovaries; called also *ovariectomy*.

oophoritis (o'of-o-ri'tis) [*oophor-* + *-itis*] inflammation of an ovary. **o. parotid'ea**, oophoritis occurring in association with infection by the virus causing mumps.

oophoro-, oophor- (o-o'f-o-ro, o'o-fōr) [Gr. *ōophoros* bearing eggs] combining form denoting relationship to the ovary.

oophorocystectomy (o-o'f-o-ro-sis-tek'to-me) [*oophoro-* + *cyst* + Gr. *ektomē* excision] excision of an ovarian cyst.

oophorocystosis (o-o'f-o-ro-sis-to'sis) [*oophoro-* + *cyst* + *-osis*] the formation of ovarian cysts.

oophorogenous (o-o'f-o-roj'ē-nus) derived from the ovary.

oophorohysterectomy (o-o'f-o-ro-his'ter-ek'to-me) [*oophoro-* + Gr. *hystera* uterus + *ektomē* excision] surgical removal of the uterus and ovaries.

oophoroma (o-o'f-o-ro-mah) seldom used term for malignant tumor of the ovary. **o. follicula're**, Brenner tumor.

oophoron (o-o'f-o-ron) [Gr. *ōon* egg + *pherein* to bear] an ovary (ovarium [NA]).

oophoropathy (o-o'f-o-ro-pah-the) [*oophoro-* + Gr. *pathos* disease] any disease of the ovaries.

oophoropexy (o-o'f-o-ro-pek'se) [*oophoro-* + Gr. *pēxis* fixation] ovariopepy.

oophoroplasty (o-o'f-o-ro-plas'te) plastic operation on the ovary.

oophorosalingectomy (o-o'f-o-ro-sal'pin-jek'to-me) [*oophoro-* + Gr. *salpinx* tube + *ektomē* excision] salpingo-oophorectomy.

oophorosalingitis (o-o'f-o-ro-sal'pin-jit'is) salpingo-oophoritis.

oophorostomy (o-o'f-o-ro-s'to-me) [*oophoro-* + Gr. *stomoun* to provide with an opening, or mouth] the making of an opening into an ovarian cyst for drainage purposes.

oophorotomy (o-o'f-o-ro-t'o-me) [*oophoro-* + Gr. *tomē* a cutting] incision of the ovary.

oophorrhagia (o-o'f-o-ra'je-ah) [*oophoro-* + Gr. *rhēgnynaito* burst forth] severe hemorrhage from an ovary.

oophyte (o'o-fit) [*oo-* + Gr. *phyton* plant] any member of the generation in the life history of mosses, ferns, etc., in which the sexual organs are produced.

ooplasm (o'o-plazm) the cytoplasm of the egg.

ooporphyrin (o'o-por'fir-in) protoporphyrin contained in egg shells.

oorhodein (o'o-ro'de-in) [*oo-* + Gr. *rhodon* rose] a red coloring matter from birds' eggs.

oosperm (o'o-sperm) [*oo-* + Gr. *sperma* seed] the recently fertilized ovum.

oosphere (o'o-sfēr) 1. an unfertilized female gamete of certain fungi. 2. the large, nonmotile, fertile gamete of certain algae and fungi.

Oospora (o-os'po-rah) [*oo-* + Gr. *sporos* seed] a genus of imperfect fungi of the family Moniliaceae, order Moniliales, which is associated with disease of citrus trees and potatoes. **O. catena'ta**, **O. frag'ilis**, species of uncertain classification which were once isolated from black tongue, probably as a contaminant. **O. lac'tis**, *Geotrichum candidum*. **O. to-zeu'ri**, *Madurella mycetomi*.

oosporangium (o'o-spo-ran'je-um) the female element in the sexual formation of oospores.

oospore (o'o-spōr) [*oo-* + *spore*] 1. the final developmental stage after fusion of sexually differentiated gametes in certain fungi. 2. the thick-walled, resting zygote formed from a fertilized oosphere.

oosporosis (o'o-spo-ro'sis) (obs.) infection with an oospore; e.g., in chronic bronchitis.

ootheca (o'o-the'kah) [*oo-* + Gr. *thēkē* case] 1. an egg case, such as is found in some lower animals. 2. an ovary.

ootherco- [Gr. *ōon* egg + *thēkē* case] for words beginning thus, see those beginning *oophoro-* and *ovario-*.

ootherapy (o'o-ther'ah-pe) ootherapy.

ootid (o'o-tid) a ripe ovum; one of four cells derived from the two consecutive divisions of the primary oocyte, and corresponding to the spermatids derived from division of the primary spermatocyte. In mammals, the second maturation division is not completed unless fertilization occurs, hence the ootid has male as well as female pronuclear (haploid) elements.

ootype (o'o-tip) [oo- + Gr. *typos* impression] in some trematodes, a dilated portion of the uterus into which the oviduct opens and where the ovum is fertilized, provided with the yolk, and invested with a shell.

ooxanthine (o'o-zan'thin) [oo- + Gr. *xanthos* yellow] a yellow pigment found in egg shells.

oozoid (o'o-zo'oid) [oo- + Gr. *zōo-eidēs* like an animal] an individual developed from an ovum, that is, as a result of sexual reproduction. Cf. *blastozoid*.

opacification (o-pas'i-fi-ka'shun) 1. the development of opacity, as of the cornea or lens. 2. the rendering opaque to radiation of a tissue or organ by introduction of a contrast medium.

opacity (o-pas'i-te) [L. *opacitas*] 1. the condition of being opaque. 2. an opaque spot or area. See also *cataract*. **Caspar's ring o.**, a ring-shaped opacity of the cornea caused by contusion.

opalescent (o'pal-es'ent) showing a milky iridescence, like an opal.

opalescin (o'pal-es'in) an albuminoid derivable from milk; its solutions are opalescent.

opalgia (o-pal'je-ah) [Gr. *ōps* face + *-algia*] facial neuralgia.

Opalina (o'pah-li'nah) a genus of ciliate protozoa of the subclass Protociliata found as parasites in the colon of frogs and toads. **O. rana-rum**, a species found in the large intestine of the frog.

opaline (o'pah-lēn) [L. *opalus* opal] having the appearance of an opal.

opalin (o-pal'i-sin) an opalescent protein, obtainable from human milk.

opaque (o-pāk') [L. *opacus*] impervious to light rays, or by extension to roentgen rays or other electromagnetic vibrations; neither transparent nor translucent.

OPD outpatient department.

opeidoscope (o-pi'do-skōp) [Gr. *ops* a voice + *eidōs* form + *skopein* to examine] (*obs.*) an apparatus for studying the vibrations of the voice by means of light reflected from a mirror.

open (o'pen) 1. exposed to the air; not covered by unbroken skin. 2. interrupted (as a circuit) so that an electric current cannot pass. 3. not obstructed or closed.

opening (o'pen-ing) an aperture, orifice, or open space; see also *ostium*. **o. in adductor magnus muscle**, hiatus tendineus. **aortic o. in diaphragm**, hiatus aorticus. **o. of aqueduct of cochlea, external**, apertura externa canaliculi cochleae. **o. of bladder**, ostium urethrae internum. **cardiac o.**, ostium cardiacum. **cutaneous o. of male urethra**, ostium urethrae externum masculinae. **duodenal o. of stomach**, ostium pyloricum. **esophageal o. in diaphragm**, hiatus esophageus. **o. of Hunter's canal, inferior**, hiatus tendineus. **ileocecal o.**, ostium ileocecale. **o. to lesser sac of peritoneum**, foramen epiploicum. **o. for lesser superficial petrosal nerve**, apertura superior canaliculi tympanici. **nasal o. of facial skeleton**, apertura piriformis. **orbital o.**, o. of orbital cavity, anterior, aditus orbitae. **ovarian o. of uterine tube**, ostium abdominale tubae uterinae. **o. of pelvis, inferior**, apertura pelvis inferior. **o. of pelvis, superior**, apertura pelvis superior. **pharyngeal o. of auditory tube**, ostium pharyngeum tubae auditivae. **piriform o.**, apertura piriformis. **o. of pulmonary trunk**, ostium trunci pulmonalis. **pyloric o.**, ostium pyloricum. **o. of sacral canal, inferior**, hiatus sacralis. **saphenous o.**, hiatus saphenus. **semilunar o. of ethmoid bone**, hiatus semilunaris. **o. for smaller superficial petrosal nerve**, apertura superior canaliculi tympanici. **o. of sphenoidal sinus**, apertura sinus sphenoidalis. **o. of stomach, anterior**, ostium pyloricum. **tendinous o.**, hiatus tendineus. **thoracic o., inferior**, thoracic o., lower, apertura thoracis inferior. **thoracic o., superior**, thoracic o., upper, apertura thoracis superior. **tympanic o. of auditory tube**, ostium tympanicum tubae auditivae. **o. for tympanic branch of glossopharyngeal nerve**, apertura inferior canaliculi tympanici. **o. of tympanic canal, superior**, apertura superior canaliculi tympanici. **uterine o. of uterine tube**, ostium uterinum tubae uterinae. **o. for vena cava**, foramen venae cavae. **o. of vermiform appendix**, ostium appendicis vermiformis. **vesicourethral o.**, ostium urethrae internum.

operable (op'er-ah-b'l) subject to being operated upon with a reasonable degree of safety; appropriate for surgical removal.

operant (op'er-rant) in psychology, any response that is not elicited by specific external stimuli but that recurs at a given rate in a particular set of circumstances. See also *conditioning*.

operate (op'er-ät) 1. to perform an operation. 2. an individual

that has undergone a specific experimental surgical procedure, in contrast to the normal control.

operation (op'er-a'shun) [L. *operatio*] 1. any act performed with instruments or by the hands of a surgeon; a surgical procedure. 2. any effect produced by an agent employed in therapy. **Abbe's o.**, 1. a lateral intestinal anastomosis made with rings of catgut. 2. division of an esophageal stricture by string friction. 3. (*obs.*) intracranial resection of the second and third divisions of the fifth nerve for trigeminal neuralgia. **Abbé-Estlander o.**, the transfer of a full-thickness flap from one lip to fill a defect in the other lip, using an arterial pedicle to ensure survival of the graft. **Adams' o.**, 1. subcutaneous intracapsular division of the neck of the femur for ankylosis of the hip. 2. subcutaneous division of the palmar fascia at various points for Dupuytren's contracture. 3. excision of a wedge-shaped piece from the eyelid for relief of ectropion. 4. advancement of the round ligaments. 5. (*obs.*) operation of crushing the projecting portion of a deflected nasal septum with forceps and inserting a splint. **Adelmann's o.**, disarticulation of a finger with the attached head of the metacarpal bone. **Albee's o.**, 1. operation for ankylosis of the hip, consisting of cutting off the upper surface of the head of the femur and freshening a corresponding point on the acetabulum, and permitting the two freshened surfaces to rest in contact. 2. transplantation of a portion of the tibia into the split spinous processes of the vertebrae for tuberculous spondylitis. **Albee-Delbet o.**, an operation for fracture of the neck of the femur, done by drilling a hole through the trochanter and the neck and head of the femur and inserting a bone peg in this hole. **Albert's o.**, excision of the knee to secure ankylosis for the cure of flail joint. **Alexander's o.**, 1. [William Alexander] the shortening of the round ligaments of the uterus for displacement of that organ. 2. [William Alexander] (*obs.*) ligation of the vertebral arteries for the cure or relief of epilepsy. 3. [Samuel Alexander] prostatectomy by median suprapubic and median perineal incisions. **Alexander-Adams o.**, Alexander's o., def. 1. **Allarton's o.**, marian lithotomy. **Allingham's o.**, 1. [Herbert William Allingham] inguinal colotomy by an incision parallel with and one-half inch above Poupart's ligament. 2. [William Allingham] excision of the rectum by an incision into the ischiorectal fossae, about the rectum, and extending backward to the coccyx. **Alouette's o.**, see under *amputation*. **Ammon's o.**, 1. blepharoplasty by a flap from the cheek. 2. dacryocystotomy. 3. for epicanthus: resection of a spindle-shaped piece of skin over the bridge of the nose, undermining the flaps of the epicanthal fold and closing with sutures. **Amussat's o.**, a long transverse incision for exposure of the colon. **Anagnostakis' o.**, an operation for entropion; also an operation for trichiasis. **Anderson's o.**, longitudinal splitting of a tendon followed by sliding along of the cut surfaces to produce lengthening of the tendon. **Anel's o.**, dilatation of the lacrimal duct with a probe, followed by an astringent injection. **Annandale's o.**, 1. the removal of the condyles of the femur for genu valgum. 2. the fixation of displaced cartilages of the knee joint by stitches. **Arlt's o.**, any of several operations on the eye and the eyelid. **Arlt-Jaeschke o.**, the transplantation of the ciliary bulbs from the edge of the lid for the correction of distichiasis. **Asch's o.** (*obs.*), an operation for the correction of deflection of the nasal septum, consisting of making a crucial incision over the deflection, taking up the segments, reducing the deflection, and inserting a tube to keep the segments in place. **Babcock's o.**, extirpation of the saphenous vein by inserting a long probe with an acorn tip and drawing out the vein by invagination; done for eradication of varicose veins. **Badal's o.** (*obs.*), laceration of the infratrochlear nerve for the pain of glaucoma. **Baldwin's o.**, formation of an artificial vagina by transplantation of a piece of the ileum between the bladder and the rectum. **Baldy's o.**, **Baldy-Webster o.**, Webster's o. **Barkan's o.**, goniotomy. **Barker's o.**, 1. an excision of the hip joint by an anterior cut. 2. a special method of excising the astragalus by an incision extending from just above the external malleolus forward and inward to the dorsum of the foot. **Barraquer's o.**, phacoerysis. **Barsky's o.**, an operation for repair of a cleft hand with a missing central ray and a deep central V-shaped cleft, consisting in closing the cleft, bringing the ring and index fingers closer together, and correcting the associated syndactyly, if present. **Barton's o.**, an operation for ankylosis consisting of sawing through the bone and removing a V-shaped piece. **Barwell's o.**, a method of osteotomy for genu valgum by division of the upper end of the tibia below and the lower end of the tibia above their respective epiphyses. **Basset's o.**, a method of dissecting the inguinal glands in operation for cancer of the vulva. **Bassini's o.**, a method for the radical cure of inguinal hernia. **Bates' o.**, the division of a urethral stricture from within outward by means of a special form of urethrotome. **Battle's o.**, an operation for appendicitis in which the rectus muscle is temporarily retracted. **Baum's o.** (*obs.*), the stretching of the facial nerve by an incision below the ear. **Beatson's o.** (*obs.*), ovariectomy in cases of inoperable cancer of the breast, on the theory that lack of the internal secretion of the ovary will produce atrophy of the tumor. **Beck I o.**, an operation for supplying collateral circulation to the heart; the procedure includes abrasion

of the epicardium and lining of the parietal pericardium, application of an irritant (0.2 gm. of powdered asbestos) to these surfaces, partial occlusion of the coronary sinus at its entrance to the right atrium, and grafting the parietal pericardium and mediastinal fat to the surface of the myocardium. **Beck II o.**, a two-stage operation for supplying collateral circulation to the heart: 1. a venous graft is placed between the aorta and coronary sinus to shunt the arterial blood. 2. two to three weeks later, the coronary sinus is partially occluded to raise the pressure therein and cause the arterialized blood entering from the aorta to flow back to the coronary vessels. **Beer's o.**, a flap method for cataract. **Belfield's o.**, vasotomy. **Bennett's o.**, operation for varicocele by partial excision of the pampiniform plexus, followed by suture of the divided ends of the plexus. **Bent's o.**, a form of shoulder excision with flap taken from the deltoid region. **Bergenheim's o.**, surgical implantation of the ureter into the rectum. **Berger's o.**, interscapulothoracic amputation. **Bergmann's o.**, incision of the tunica vaginalis, with removal of its parietal layer, performed for hydrocele. **Berke's o.**, an operation for ptosis of the upper eyelid, consisting of resection of the levator muscle through a skin incision, and excision of excess muscle. **Berke-Motais o.**, an operation for ptosis of the upper eyelid, consisting in suspension of the ptotic lid from the superior rectus muscle. **Bevan's o.**, an operation for undescended testicle, by which the testicle is brought down permanently into the scrotum. **Bier's o.**, see under *amputation*. **Biesenberger's o.**, reduction mammoplasty operation using transposition of the nipple, consisting in excision of the lateral portion of the mammary gland with rotation of the remaining glandular pedicle attached to the nipple, and formation of a skin brassiere. **Bigelow's o.**, litholapaxy or rapid lithotripsy. **Billroth's o.**, 1. partial resection of the stomach with anastomosis of the severed end of the duodenum to the partially closed end of the resected stomach (Billroth I), or with anastomosis of the resected stomach to the jejunum through the transverse mesocolon (Billroth II). 2. pylorogastrectomy with anterior gastroenterostomy. 3. excision of the tongue by making a transverse incision below the symphysis of the jaw and joining it by two incisions, one on each side, parallel to the body of the mandible, with preliminary ligation of the lingual arteries. **Bissell's o. (obs.)**, excision of a section of the round and the broad ligaments for uterine retroversion. **Blacklock-Hanlen o.**, an operation to compensate for transposition of the great vessels, consisting in the creation of an interatrial septal defect. **Blacklock-Taussig o.**, the anastomosis of the subclavian artery to the pulmonary artery in order to shunt some of the systemic circulation into the pulmonary circulation; performed in cases of congenital pulmonary stenosis. **Blaskovics o.**, for epicanthus: resection of a semilunar piece of skin from the canthal fold nearer to the side of the nose than the canthus, followed by closure with black silk sutures. **Boari's o.**, transplantation of the vasa deferentia so that they will empty into the urethra. **Bobroff's o.**, an osteoplastic operation for spina bifida. **Bogue's o.**, multiple ligation of the veins with catgut in varicocele. **Böhm's o.**, tenotomy of an ocular muscle for strabismus. **Bonzel's o.**, iridodialysis performed with a hook inserted through a corneal incision. **Bose's o.**, a method of performing tracheotomy. **Bottini's o.**, the operation of making a channel through the prostate with the galvanocautery for the cure of prostatic enlargement. **Bozeman's o.**, hysterocytocleisis. **Brailey's o. (obs.)**, stretching of the supratrochlear nerve to relieve pain in glaucoma. **Brenner's o.**, a modification of Bassini's operation in which the abdominal muscles are sutured to the cremaster muscle. **Bricker's o.**, the surgical creation of an ileal conduit with a flat stoma for the collection of urine; the flat contour is achieved by suturing the ileal mucosa to the skin. **Brock's o.**, transventricular closed valvotomy. **Brophy's o.**, an operation for cleft palate. **Brunschwig's o.**, pancreatoduodenectomy performed in two stages. **Bryant's o.**, lumbar colotomy by an oblique incision between the lowest rib and the crest of the ilium. **Buck's o.**, cuneiform excision of the patella and the ends of tibia and fibula. **Burckhardt's o. (obs.)**, incision into a retropharyngeal abscess from the outside of the neck. **(von) Burow's o.**, plastic operation for removal of tumors. **Buzzi's o.**, the creation of an artificial pupil by a needle passed through the cornea. **Caldwell-Luc o.**, the operation of opening into the maxillary sinus by way of an incision into the supradental fossa opposite the premolar teeth. **Calot's o.**, forcible reduction of kyphosis by stretching under narcosis. **Carnochan's o. (obs.)**, removal of Meckel's ganglion and a considerable part of the fifth nerve for neuralgia; incision is made below the orbit, and the ganglion is reached by trephination through the maxillary antrum. **Carpue's o.**, the Indian method of rhinoplasty. **Carter's o.**, 1. formation of an artificial pupil by making a small opening in the cornea and doing an iridotomy. 2. [W. W. Carter] reconstruction of the bridge of the nose by transplanting a piece of bone from the rib. **Cassel's o. (obs.)**, excision of exostoses of the ear through the external auditory meatus by means of a gouge. **Cecil's o.**, a three-stage operation for urethral stricture: 1. the entire strictured area is excised through an incision on the ventral surface of the penis. 2. a new urethral segment is constructed and buried in the scrotum. 3. the penis is separated from the scrotum; peri-

neal or suprapubic drainage of urine is continued until skin incisions are healed. **celcian o.**, 1. perineal lithotomy. 2. excision of epithelioma of the lip by a V-shaped incision. 3. circular amputation. **Cheever's o. (obs.)**, complete tonsillectomy through the neck. **Chiene's o.**, 1. the removal of a wedge from the inner condyle of the femur for the cure of knock knee. 2. *(obs.)* exposure of the retropharyngeal space by lateral cervical incision along the posterior border of the sternocleidomastoid. **Chopart's o.**, 1. see under *amputation*. 2. a plastic operation on the lip. **Civiale's o.**, lithotripsy. **Clark's o.**, a plastic operation for urethral fistula. **Coakley's o. (obs.)**, an operation for disease of the frontal sinus by incising through the cheek, removing the anterior wall, and curetting away the mucous membrane. **Cock's o.**, urethrotomy by a cut along the median line of the perineum. **Codivilla's o.**, an operation for pseudarthrosis by surrounding the pseudarthrosis with thin osteoperiosteal plates taken from the internal face of the tibia. **Colonna's o.**, 1. a reconstruction operation for intracapsular fracture of the femoral neck. 2. capsular arthroplasty of the hip. **Commando's o.**, an operation for management of oral cancer, consisting in resection of the primary lesion and the regional lymphatic nodes. **cosmetic o.**, one intended to remove or correct a deformity in an esthetically acceptable manner. **Cotte's o.**, removal of the presacral nerve. **Cotting's o.**, operation for ingrowing toe-nail, consisting in cutting off the side of the toe down to and including the ingrowing edge of the nail. **Crile and Matas's o. (obs.)**, production of regional anesthesia by intraneural infiltration. **Critchett's o.**, excision of the anterior part of the eyeball. **Crosby-Cooney o.**, introduction of a flanged glass tube into the peritoneal cavity for drainage of fluid in ascites. **Cushing's o.**, 1. *(obs.)* exposure of the gas-serian ganglion and three divisions of the fifth nerve by the direct infra-arterial route. 2. a method of performing ureterorrhaphy without support. **Dana's o. (obs.)**, posterior rhizotomy. **Daniels' o.**, an exploratory operation for nonpalpable lymph nodes on the scalene muscles to determine the presence or absence of lymphoma, metastatic tumors, and sarcoidosis. **Davat's o.**, cure of varicocele by compressing the veins by acupressure. **Daviel's o.**, extraction of cataract through a corneal incision without cutting the iris. **Davies-Colley o.**, the removal of a wedge of bone from the outer side of the tarsus for the correction of talipes. **de Grandmont's o.**, an operation for ptosis of the lid. **Delorme's o. (obs.)**, decortication of the heart in adhesive pericarditis; pericardiectomy. **Del Toro's o.**, destruction of the apex of a conical cornea by a white-hot knife. **Denonvilliers' o.**, plastic correction of a defective ala nasi by transferring a triangular flap from the adjacent side of the nose. **Dieffenbach's o.**, 1. amputation at the hip by a circular incision, with application of an elastic ligature, followed by removal of the ligature, securing of the vessels, and the making of an incision on the outer aspect from a point two inches above the great trochanter to the circular incision. 2. plastic closure of triangular defects by displacing a quadrangular flap toward one side of the triangle. **Dittel's o.**, the enucleation of the lateral lobes of an enlarged prostate through an external incision. **Dolérís' o.**, an operation for retrodeviation of the uterus by shortening the round ligaments and fixing them on either side by an opening in the rectus muscle just above the spine of the ilium. **Doppler's o.**, bissection of, or injection of phenol into the tissues around, the sympathetic nerve leading to the gonads with the object of increasing hormone production and producing sexual rejuvenation; called also *sympathicodiaphoresis*. **Doyen's o.**, eversion of the sac for the relief of hydrocele. **Duhamel o.**, the treatment of Hirschsprung's disease by a modification of the pull-through procedure and establishment of a longitudinal anastomosis between the proximal ganglionated segment of colon and the rectum, leaving the latter *in situ*. **Dührssen's o.**, vaginofixation of the uterus. **Duplay's o.**, a designation for several plastic operations upon the congenitally deformed penis (epispadias and hypospadias). **Dupuy-Dutemps o.**, blepharoplasty of the lower lid with tissue from the opposing lid. **Dupuytren's o.**, see under *amputation*. **Edebohl's o.**, decapsulation of the kidney for Bright's disease. **Elliot's o.**, a method of trephining the sclerocornea for the relief of increased tension in glaucoma. **Ely's o.**, skin grafting performed on the granulating surfaces in chronic suppurative otitis media. **Emmet's o.**, 1. a method of repairing a lacerated perineum. 2. trachelorrhaphy, or suture of the edges of a lacerated cervix uteri. 3. surgical creation of a vesicovaginal fistula to secure drainage of the bladder in cystitis. **equilibrating o.**, tenotomy of the direct antagonist of a paralyzed eye muscle. **Esser's o.**, epithelial inlay; see under *inlay*. **Estes' o.**, implantation of an ovary into a uterine cornu; performed for sterility when the tubes are absent. **Estlander's o. (obs.)**, the resection of one or more ribs in empyema so as to allow the chest wall to collapse and close the abnormal cavity. **Eversbusch's o.**, an operation for the correction of ptosis. **exploratory o.**, surgical incision into an area of the body followed by inspection and palpation of organs and tissues to determine the cause of unexplained symptoms. **Fergusson's o.**, see under *incision*. **Finney's o.**, see under *pyloroplasty*. **Flajani's o.**, iridodialysis performed with a needle thrust through the cornea. **flap o.**, any operation involv-

ing the raising of a flap of tissue. In periodontics, an operation to secure greater access to granulation tissue and osseous defects, consisting in detachment of the gingivae, the alveolar mucosa, and/or a portion of the palatal mucosa. See also under *amputation*.

Förster's o., 1. (*obs.*) the operation of cutting intradurally the seventh, eighth, and ninth dorsal nerve roots on both sides in locomotor ataxia. 2. an operation to produce rapid artificial ripening of cataract (1884).

Förster-Penfield o. (*obs.*), total excision of the scar tissue along with the epileptogenic cortical area in traumatic epilepsy.

Fothergill o., an operation for uterine prolapse by fixation of the cardinal ligaments.

Franco's o., suprapubic cystotomy.

Frank's o., a method of performing gastrotomy by shaping a valve out of a cone of the stomach, suturing it to the incision in the chest wall, and inserting a tube.

Franke's o. (*obs.*), removal of the intercostal nerves for the visceral crises of tabes.

Frazier-Spiller o., division of the sensory root of the gasserian ganglion for relief of trigeminal neuralgia.

Fredet-Ramstedt o., the operation for congenital stenosis of the pylorus by longitudinally incising the thickened serosa and muscularis down to the mucosa; pyloromyotomy.

Freund's o., chondrotomy for congenital funnel breast.

Freyer's o., a method of performing suprapubic enucleation of the hypertrophied prostate.

Frommel's o. (*obs.*), shortening of the uterosacral ligaments for retrodeviation of the uterus.

Frost-Lang o., insertion of a gold ball to take the place of an enucleated eyeball.

Fukala's o., removal of the lens of the eye for the treatment of marked myopia.

Fuller's o., incision of the seminal vesicles.

Gant's o., division of the shaft of the femur below the lesser trochanter for ankylosis of the hip joint.

Gaza's o. (*obs.*), section or division of the rami communicantes; ramisection.

Gifford's o., 1. delimiting keratotomy. 2. destruction of the lacrimal sac by instilling trichloroacetic acid into it.

Gigli's o., lateral section of the os pubis by means of Gigli's wire saw; done in difficult labor.

Gill's o., an operation for dropfoot or pes equinus done by inserting a wedge of bone in order to limit plantar flexion.

Gillespie's o., excision of the wrist by a lengthwise dorsal incision between the extensor communis and extensor medii digiti.

Gilliam's o., an operation for retroversion of the uterus by drawing a loop of each round ligament through the abdominal wall and fixing the loops to the abdominal fascia.

Gillie's o., a technique for reducing fractures of the zygoma and the zygomatic arch through an incision in the temporal region above the hairline.

Gillies' o., operation for correction of ectropion utilizing a split-skin graft known as an *epithelial outlay*.

Glenn's o., an operation for pulmonary atresia, consisting in anastomosis of the superior vena cava to the right pulmonary artery.

Gonin's o., treatment of retinal detachment by thermocautery of the fissure in the retina performed through an opening in the sclera.

Grabber-Duvernay o., the operation of boring minute channels through the bone to the center of the head of the femur with the object of modifying the circulation within the bone in chronic arthritis.

Graefe's o., removal of the cataractous lens by a scleral cut, with laceration of the capsule and iridectomy.

Grant's o., excision of tumors of the lip by removing a square block of tissue containing the tumor, and then making oblique incisions extending down and out from each angle of the wound. The triangular flaps thus formed are drawn toward the center and sutured.

Gritti's o., see under *amputation*.

Gron Dahl-Finney o., esophagogastroplasty in which the orifice between the esophagus and stomach is enlarged.

Grossmann's o., treatment of retinal detachment by aspiration of the subretinal fluid and the slow injection of warm salt solution into the vitreous.

Gussenbauer's o., the cutting of an esophageal stricture through an opening above the stricture.

Guyon's o., see under *amputation*.

Hacker's o., an operation for balanitic hypospadias.

Hagner's o., drainage of gonorrheal epididymitis through an incision into the epididymis.

Hahn's o., Loreta's o.

Halpin's o., extirpation of the lacrimal gland by a curved incision through the middle of the eyebrow.

Halsted's o., 1. an operation for the radical cure of inguinal hernia. 2. radical mastectomy with removal of the supraclavicular nodes for cancer of the breast.

Hancock's o., see under *amputation*.

Hartmann's o., see under *procedure*.

Hartley-Krause o. (*obs.*), excision of the gasserian ganglion and its roots to relieve facial neuralgia.

Haultaim's o., a modification of the Huntington operation (q.v.) for replacement of a chronically inverted uterus, involving a posterior incision in the uterus through the cervical ring.

Haynes's o. (*obs.*), the operation of draining the cisterna magna for acute suppurative meningitis.

Heath's o., division of the ascending rami of the lower jaw with a saw for ankylosis; performed within the mouth.

Heaton's o., an operation for inguinal hernia.

Heine's o., cyclodialysis in glaucoma.

Heineke's o., a multiple stage operation for resection of the colon to remove tumors.

Heineke-Mikulicz o., see under *pyloroplasty*.

Heisrath's o., excision of the tarsal folds for trachoma.

Heller's o., cardiomyotomy for relief of obstruction of the esophagogastric junction.

Herbert's o., displacement of a wedge-shaped flap of sclera in order to form a filtering cicatrix in glaucoma.

Hey's o., see under *amputation*.

Hibbs' o., an operation for Pott's disease by fracturing the spinous processes of the vertebrae and pressing the tip of each downward to rest in the denuded area caused by the

fracture of its elbow below.

Hochenegg's o., an operation for rectal cancer.

Hoffa's o., **Hoffa-Lorenz o.**, **Lorenz's o.**

Holme's o., a method of excising the os calcis by an incision along its upper border and at the outer border of the foot to the calcaneocuboid joint, and another across the sole, the peroneal tendons being divided.

Holth's o., excision of the sclera by punch operation.

Horsley's o. (*obs.*), excision of an area of motor cortex for relief of athetoid and convulsive movements of an upper extremity.

Hotchkiss' o., operation for epithelioma of the cheek, with resection of part of the mandible and maxilla and plastic restoration of the defect from the tongue and side of the neck.

Huggins' o., castration performed for cancer of the prostate.

Hunter's o. (*obs.*), ligation of an artery in the proximal side of an aneurysm and at a distance from it.

Huntington's o., the replacement of a chronically inverted uterus through an opening made in the abdominal wall below the umbilicus, done by grasping the invaginated portion with vulsella placed on both sides of the rim; as the uterus is pulled up, additional vulsella are placed lower down and upward traction is applied. After the uterus is in place, it is packed through the vagina.

Indian o., see under *rhinoplasty*.

interposition o., **Watkins' o.**

interval o., an operation performed during the interval between two acute attacks of a disease, as in appendicitis.

Irving's sterilization o., a method of tubal ligation in which the uterine tubes are ligated and severed.

Italian o., see under *rhinoplasty*.

Jaboulay's o., interperivisceral amputation.

Jacobaeus o., the treatment of pleural adhesions by thoracoscopy and cauterization.

Janseen's o. (*obs.*), operation for disease of the frontal sinus by removing the lower wall and a part of the anterior wall and curetting away the mucous membrane.

Jarvis' o., removal of the hypertrophied portion of the lower turbinated bone with a special wire snare écraseur.

Jelks's o., incision of the fibrous tissue around the rectum through incisions on each side of the anus; done for stricture of rectum.

Jonnesco's o. (*obs.*), sympathectomy.

Kader's o., **Kader-Senn o.**, gastrotomy by which the feeding tube is introduced through a valvelike flap which closes on withdrawal of the tube.

Kasai o., portoenterostomy.

Kazanjian's o., a technique of surgical extension of the buccal vestibular sulcus of edentulous ridges to increase their height and to improve denture retention.

Keegan's o., a modification of the Indian rhinoplasty for reconstructing the nose, the flap being taken mainly from one side of the forehead.

Kelly's o., 1. [Howard A. Kelly] an operation for correction of urinary incontinence (usually due to stress) in women, in which the site of the internal urethral sphincter is identified by means of a balloon catheter, and the connective tissue between the vagina and the urethra and the floor of the bladder are sutured to form a wide shelf of firm tissue to support the urethra and bladder. 2. [J. D. Kelly] arytenuoidopexy.

Key's o., the lateral operation of lithotomy done with a straight staff.

Killian's o., excision of the anterior wall of the frontal sinus, removal of the diseased tissue, and formation of a permanent communication with the nose.

King's o., arytenuoidopexy.

Kirmisson's o., transplantation of the Achilles tendon to the peroneus longus muscle in clubfoot.

Knapp's o. (for cataract), the formation of a peripheral opening in the capsule behind the iris, without iridectomy.

Kocher's o., 1. a method of excising the ankle joint by a cut below the outer malleolus, division of the peroneal tendons, removal of the diseased tissues, and suture of the divided tendons. 2. a method of reducing a subcoracoid dislocation of the humerus. 3. excision of the tongue through an incision extending from the symphysis of the jaw to the hyoid bone and thence to the mastoid process. 4. a method of mobilizing the duodenum. 5. a method of pylorotomy.

Kocks's o. (*obs.*), shortening of the base of the broad ligament by the vaginal route for uterine retroversion or prolapse.

Kolomnin's o., cauterization of the diseased tissues in hip joint disease by ignipuncture.

Kondoleon o., treatment of elephantiasis by the removal of strips of subcutaneous tissue.

König's o., operation for congenital dislocation of hip by reducing the dislocation and forming an edge on the upper border of the acetabulum by an osteoperiosteal flap from the ilium.

Körte-Ballance o., anastomosis of the facial and hypoglossal nerves.

Kortzeborn's o., an operation to relieve ape hand due to median nerve paralysis; the extensor tendons of the thumb are lengthened and the thumb is tied to the ulnar side of the hand by means of a strip of fascia.

Kraske's o., removal of the coccyx and part of the sacrum for access to a carcinoma of the rectum.

Krause's o. (*obs.*), extradural excision of the gasserian ganglion for trigeminal neuralgia.

Krimer's o., uranoplasty in which mucoperiosteal flaps from each side of the palatal cleft are sutured together at the median line.

Krönlein's o., 1. (*obs.*) exposure of the third branch of the trigeminal nerve for facial neuralgia. 2. resection of the outer wall of the orbit for the removal of an orbital tumor without excising the eye.

Küstner o., replacement of an inverted uterus through an incision made in the cervix and uterus along the posterior surface.

Lagrange's o., sclerectoiridectomy.

Landolt's o., the formation of a lower eyelid with a double pedicle or bridge flap of eyelid skin taken from the upper lid.

Lane's o., the operation of dividing the ileum near the cecum, closing the distal portion and anastomosing the proximal end with

the upper part of the rectum or lower part of the sigmoid, thus eliminating the colon from the fecal current. **Lange's o.**, artificial tendon transplantation with strands of silk; see *silk implantation*, under *implantation*. **Lanz's o.**, an operation for elephantiasis of the leg in which the strips of fascia lata are inserted into an opening made in the femur. **Larrey's o.**, see under *amputation*. **Latzko's o.**, 1. see *cesarean section*, *Latzko's*, under *section*. 2. a method of repairing a vesicovaginal fistula by using mucosa denuded from the posterior wall of the vagina as a flap to cover the fistula. **Lauren's o.**, a plastic operation for closure of a cicatricial opening following mastoid operation. **Le Fort's o.**, **Le Fort-Neugebauer o.**, the operation of uniting the anterior and posterior vaginal walls along the middle line for the repair of prolapse of the uterus. **Lempert's fenestration o.**, an operation for otosclerosis, consisting in drilling a small window into the lateral semicircular canal and then placing a flap of skin over the fistula; as long as the new passage remains patent, hearing is significantly improved. **Lisfranc's o.**, see under *amputation* (def. 3). **Liston's o.**, an operation for excision of the upper jaw. **Littre's o.**, a method of inguinal colostomy, proposed by Littre and reported in 1710. **Lizar's o.**, excision of the upper jaw by a curved incision extending from the angle of the mouth to the malar bone. **Longuet's o.**, extraserous transplantation of the testicle for varicocele and hydrocele. **Lorenz's o.**, an operation for congenital dislocation of the hip, consisting in reduction of the dislocation, and keeping the head of the femur fixed against the rudimentary acetabulum until a socket is formed. **Loreta's o.**, gastrotomy with distal dilatation of the pylorus. **Lowsley's o.**, an operation for repair of simple epispadias, consisting in closing the glandular cleft urethra, splitting the glans, and burying the repaired urethra deep in the soft tissue so that the orifice will be positioned at the normal site. **Luc's o.**, Caldwell-Luc o. **Ludloff's o.**, oblique osteotomy of the first metatarsal bone for the correction of hallux valgus. **Lund's o.**, removal of the astragalus for the correction of talipes. **McBurney's o.**, an operation for the radical cure of inguinal hernia: the sac is exposed, ligated, and cut off at the internal ring; the skin is turned in and stitched to the underlying tendinous and ligamentous structures. **Macewen's o.**, 1. supracondylar division of the femur for genu valgum. 2. an operation for the radical cure of hernia by closing the internal ring with a pad made of the hernial sac. **McGill's o.**, suprapubic transvesical prostatectomy. **Mackenrodt's o.**, vaginal fixation of the round ligaments for retrodisplacement of the uterus. **Madlener o.**, a method of sterilization in the female, in which the middle portion of the fallopian tube is crushed with a clamp, which is then replaced with a ligature of nonabsorbable material. **magnet o.**, removal of a fragment of steel or iron from the eyeball by means of a powerful magnet. **major o.**, a surgical procedure of major magnitude and risk. **Makka's o.**, an operation for ectopia of the bladder in which the cecum is utilized as a bladder and the appendix as a ureter. **Manchester o.**, Fothergill o. **Marian's o.**, a perineal median operation for stone in the bladder. **Marshall-Marchetti o.**, an operation for the correction of stress incontinence, the anterior portion of the urethra, vesical neck, and bladder being sutured to the posterior surface of the pubic bone. **Martin's o.**, an operation for radical cure of hydrocele. **mas-toid o.**, mastoidotomy. **Matas' o.**, endoaneurysmorrhaphy. **Maydl's o.**, 1. colostomy in which the colon is drawn out through the wound and maintained in position by placing a glass rod beneath it until adhesions have formed. 2. insertion of the ureters into the rectum for exstrophy of the bladder. **Mayo's o.**, 1. excision of the pyloric end of the stomach, followed by closure of both duodenum and stomach and the construction of an independent posterior gastrojejunostomy. 2. for radical cure of umbilical hernia by excision of the hernial mass and overlapping the abdominal aponeuroses transversely. 3. subcutaneous removal of varicose veins with a long-handled stripper terminating in a small ring angled with the shaft of the instrument. **Mel-ler's o.**, an operation for excision of the tear sac. **Mercier's o.**, prostatectomy. **mika o.**, the making of a permanent fistula in the bulbous urethra for the purpose of preventing or avoiding procreation. **Mikulicz's o.**, 1. removal of the sternocleidomastoid muscle for torticollis. 2. Heineke-Mikulicz pyloroplasty. 3. tarsectomy in which the heel, or calcis, and astragalus are removed, the articular surfaces of the tibia, fibula, cuboid, and scaphoid are excised, and the foot brought into line with the leg; called also *Wladimiroff's o.* 4. by anterior gastrotomy a dilating instrument is introduced into the esophagus, which is stretched up to 6 cm. 5. enterectomy in stages, including exteriorization of the section of intestine to be resected, usually the colon; resection of the exteriorized loop; elimination of the fecal fistula by crushing the spur between the two barrels of the anastomosis; and closure of the fecal fistula. **Miles' o.**, abdominoperineal resection for cancer of the lower sigmoid and rectum, which includes permanent colostomy, removal of the pelvic colon, mesocolon, and adjacent lymph nodes, and wide perineal excision of the rectum and anus. **Millin-Read o.**, an operation for the correction of stress incontinence employing the suprapubic approach. **Mingazzini-Förster o.** (*obs.*), Förster's o. **minor o.**, a surgical operation which is not seri-

ous in its magnitude or risk. **Moore's o.** (*obs.*), introduction of a coil of small wire into the sac of an aortic aneurysm to effect coagulation. **Moore-Corradi o.** (*obs.*), Moore's operation in which a strong galvanic current is passed through the wire. **Morestin's o.**, disarticulation of the knee with intracondyloid division of the femur. **Moschcowitz's o.**, an operation for the repair of a femoral hernia by the inguinal approach. **Motais's o.**, an operation for ptosis, consisting of transplanting the middle portion of the tendon of the superior rectus muscle of the eyeball into the upper lid. **Mules' o.**, eversion of the eyeball, with insertion of an artificial vitreous. **Müller's o.**, 1. (*obs.*) a method of vaginal hysterectomy: the uterus is split into lateral halves, which are brought down in succession and removed. 2. (*obs.*) cesarean section in which the uterus is lifted out of the abdomen and then opened. 3. resection of the sclera for detachment of the retina. **Mustard's o.**, an intra-atrial operation to correct the hemodynamic fault in transposition of the great vessels. **Naffziger's o.**, excision of the superior and lateral walls of the orbit for exophthalmos. **Narath's o.**, fixing of the omentum to the subcutaneous tissue of the abdominal wall in order to establish collateral circulation in portal obstruction. **Nélaton's o.**, excision of the shoulder joint by a transverse incision. **Neuber's o.**, the operation of filling a cavity in bone with skin flaps taken from the sides of the wound. **Ober's o.**, cutting or division of a joint capsule. **Ogston's o.**, 1. removal of the inner condyle of the femur for knock knee. 2. excision of the wedge of the tarsus for the purpose of restoring the arch in flatfoot. **Ogston-Luc o.** (*obs.*), an operation for frontal sinus disease, the incision being made from the edge of the orbit, the sinus being opened on the outer side of the median line. **Olshausen's o.**, the operation of fixing or suturing the uterus to the abdominal wall for the cure of retroversion. **Ombredanne's o.**, 1. an operation for hypospadias. 2. transscrotal orchiopexy. **open o.**, an operation in which the tissues and organs are exposed to view through a surgical incision. **Ord's o.**, an operation for breaking up fresh adhesions in joints. **Paci's o.**, a modification of Lorenz's bloodless operation for congenital dislocation of the hip. **Panas' o.**, the attachment of the upper eyelid to the occipitofrontalis muscle for ptosis. **Partsch's o.**, a technique for marsupialization of dental cyst. **Péan's o.**, 1. (*obs.*) vaginal hysterectomy bit by bit. 2. hip joint amputation in which the vessels are ligated as the operation goes on. **Petersen's o.**, a modification of high lithotomy. **Phelps' o.**, an open and direct incision through the sole and inner side of the foot, done for talipes. **Phemister o.**, use of an onlay graft of cancellous bone without internal fixation, for treatment of a stable but ununited fracture. **Physick's o.**, the removal of a circular piece of the iris by means of a cutting forceps to create an artificial pupil. **plastic o.**, one in which the shape of a part or the character of its covering is altered by transplantation of tissue, etc. **Politzer's o.** (*obs.*), 1. the creation of an artificial opening in the membrana tympani by incision and galvanocautery. 2. division of the anterior ligament of the malleus. **Pollock's o.**, amputation at the knee joint by a long anterior and short posterior flap, the patella being left. **Polya's o.**, anastomosis of the transected end of the stomach to the side of the jejunum following subtotal gastrectomy. **Pomeroy's o.**, a method of sterilization in the female, in which the fallopian tube is picked up about two inches from the uterine cornua, a chronic catgut ligature tied around the loop without crushing it, and the tied loop is then resected. **Poncet's o.**, 1. lengthening of the Achilles tendon for talipes equinus. 2. perineotomy. 3. perineal urethrostomy. **Potts-Smith-Gibson o.**, anastomosis between the aorta and the pulmonary artery in congenital pulmonary stenosis. **Power's o.**, removal of a corneal leukoma, followed by the insertion of a rabbit's cornea. **Puusepp's o.**, splitting of the central canal of the spinal cord for the treatment of syringomyelia. **Quaglino's o.**, sclerotomy done with a small knife and a spatula. **Quénu-Mayo o.**, excision of the rectum, together with the neighboring lymph glands, for cancer. **radical o.**, one involving extensive resection of tissue for the complete extirpation of disease. **Ramstedt's o.**, Fredet-Ramstedt o. **Rastelli's o.**, an operation to correct such cardiac anomalies as transposition of the great vessels (with pulmonary stenosis), truncus arteriosus, and pulmonary arterial atresia, in which an aortic allograft is used to carry blood from the right ventricle to the pulmonary artery. **Regnoli's o.**, excision of the tongue through a median opening below the lower jaw, reaching from the chin to the hyoid bone. **Reverdin's o.**, a method of taking an epidermic graft and transplanting it to a defect. **Ridell's o.**, excision of the anterior and inferior walls of the frontal sinus for chronic inflammation. **Rigaud's o.**, a plastic operation for urethral fistula: a square flap is taken from below the fistula, turned over it, and reinforced by flaps from each side. **Rose's o.**, gasserectomy. **Rou-tier's o.**, a method of operating for Dupuytren's contracture. **Route's o.**, venoperitoneostomy: the operation of suturing the saphenous vein so that it will open into the peritoneal cavity, so as to drain that cavity in cases of ascites with cirrhosis of the liver. **Roux-en-Y o.**, see under *anastomosis*. **Saemisch's o.**, transfixion of the cornea and of the base of the ulcer for the cure of hypopyon. **Sayre's o.**, the application of a plaster-of-Paris jacket in the treatment of spondylitis and Pott's disease.

Scanzoni's o., see under *maneuver*. **Scarpa's o.**, ligation of the femoral artery in Scarpa's triangle. **Schauta's o.**, extended vaginal hysterectomy for cancer of the cervix uteri. **Schauta-Wertheim o.**, Wertheim-Schauta o. **Schede's o.**, 1. resection of the thorax for chronic empyema. 2. an operation for varicose veins of the leg, done by a circular incision, rolling one cuff up and another down, so as to reach and remove the varices. 3. excision of the necrosed part of a bone, all dead bone and diseased tissue being scraped away, and the cavity permitted to fill with blood clot, the latter being kept moist and aseptic with a cover of gauze and rubber tissue, and eventually becoming organized. **Scheie's o.**, 1. scleral cauterization with peripheral iridectomy for treatment of glaucoma. 2. a technique for needling and aspiration of cataract. **Schlatter's o.**, total excision of the stomach for cancer. **Schmalz's o.**, the introduction of a thread into the lacrimal duct for the cure of stricture. **Schönbein's o.**, staphyloplasty in which a flap of mucous membrane from the posterior wall of the pharynx is stitched to the velum palati, shutting off the nose from the mouth. **Sédillot's o.**, 1. a method of staphyloplasty. 2. a flap operation for restoring the upper lip. **Semb's o.**, extrafascial apicolysis for pulmonary tuberculosis. **Senn's o.**, intestinal anastomosis by lateral approximation and the use of bone plates. **Serre's o.**, an operation for correction of skin contractures that distort the angle of the mouth, involving switching of a skin and subcutaneous tissue flap from one lip to another. **shelf o.**, a reconstructive arthroplasty. **shelving o.**, König's o. **Siebold's o.**, pubiotomy. **Sistrunk o.**, a surgical procedure for removal of thyroglossal cysts and sinuses. **Sluder's o.**, removal of the tonsil along with its capsule. **Smith's o.**, extraction of an immature cataract with an intact capsule. **Socin's o.**, enucleation of a goitrous or thyroidal tumor from the healthy part of the gland to avoid cachexia strumipriva. **Spinelli's o.**, the operation of splitting the anterior wall of the prolapsed inverted uterus, reversing the organ, and restoring it to the correct position. **Spivack's o.**, a method of cystostomy in which a tube, with a valve at its base, is formed from a flap on the anterior abdominal wall. **Ssabanejew-Frank o.**, Frank's o. **Stacke's o.**, the removal of the mastoid and the contents of the tympanum, so that the antrum, attic, tympanum, and meatus form a single cavity. **State o.**, the treatment of Hirschsprung's disease by end-to-end anastomosis of the colon from above the aganglionic segment to the upper part of the rectum. **Stein o.**, an operation for reconstruction of the lower lip with flaps taken from the upper lip. **Steinach's o.**, ligation of the vas deferens with resection of a portion of the vas; done with a view of rejuvenating the patient by causing atrophy of the spermatogenic apparatus and proliferation of the interstitial tissue of the testicle, thus increasing the patient's output of gonadal hormone. **Stokes's o.**, Gritti-Stokes amputation. **Sturmdorf's o.**, conical excision of the diseased endocervix. **subcutaneous o.**, operation on the subcutaneous tissues, as excision of a wen. **Swenson's o.**, an operation for Hirschsprung's disease, consisting in removal of the rectum and the aganglionic segment of the bowel, with preservation of the anal sphincters, by the pull-through surgical technique. **Syme's o.**, 1. see under *amputation*. 2. a method of external urethrotomy. **tagliacotian o.**, see under *rhinoplasty*. **Talma's o.**, the surgical production of artificial adhesions between the liver and spleen and the omentum and abdominal wall in cases of ascites due to cirrhosis of the liver. **Tanner's o.**, an operation for bleeding esophageal varices in which the left and short gastric veins are divided and the stomach is bisected and resutured just distal to the esophagus. **Tansini's o.**, 1. amputation of the breast with all the skin over it, the denuded area being covered by a flap from the back. 2. a method of removing a cyst of the liver. 3. a method of gastric resection. **Teale's o.**, see under *amputation*. **Textor's o.**, removal of thin, split-thickness skin grafts by means of a razor, skin-graft cutting knife, or a dermatome. **Thiersch's o.**, removal of skin grafts by means of a razor. **Torek o.**, 1. an operation for undescended testicle. 2. an operation for the excision of the thoracic part of the esophagus. **Torkildsen's o.**, ventriculocisternostomy. **Toti's o.**, dacryocystorhinostomy. **Trendelenburg's o.**, 1. excision of varicose veins. 2. ligation of the great saphenous vein for varicose veins. 3. synchondrosectomy. 4. pulmonary embolectomy for the treatment of postoperative embolism. **Treves' o.**, operation for Pott's disease by opening the abscess through the loin, irrigating and curetting the sac, and scraping away dead bone. **van Hook's o.**, ureteroureterostomy. **Verhoeff's o.**, posterior sclerotomy followed by electrolytic punctures, for detachment of the retina. **Vermale's o.**, amputation by double-flap transfixion. **Vidal's o.**, subcutaneous ligation of the veins for varicocele. **Vineberg's o.**, an operation to establish a collateral blood supply to the heart, in which an internal mammary artery is implanted in the myocardium, the artery being pulled into a myocardial tunnel after blunt dissection between the muscle bundles. **Volkman's o.**, incision of the tunica vaginalis for hydrocele. **Voronoff's o.**, transplantation into man of the testes of an anthropoid ape, in the hope of rejuvenating the recipient. **Wagner's o.**, osteoplastic resection of the skull. **Water's o.**, a form of extraperitoneal cesarean section. **Watkins' o.**, an operation for prolapse and

procidentia uteri in which the bladder is separated from the anterior wall of the uterus so that the uterus is left in a position to support the entire bladder. Called also *interposition o.* **Webster's o.**, for retrodissplacement of the uterus: the round ligaments are passed through the perforated broad ligaments and fixed to the back of the uterus. **Weir's o.**, appendicostomy. **Wertheim's o.**, radical hysterectomy; an operation for cancer of the cervix in which there is removed with the uterus as much of the parametrial tissue as possible and a wide margin of the vagina. **Wertheim-Schauta o.**, an operation for cystocele, consisting in the interposition of the uterus between the base of the bladder and the anterior vaginal wall. **Wheelhouse's o.**, a method of perineal section for impermeable stricture of the urethra by cutting the stricture on a fine staff passed through it. **Whipple's o.**, radical pancreatoduodenectomy. **White's o.**, castration for hypertrophy of the prostate. **Whitehead's o.**, 1. treatment of hemorrhoids by excision. 2. removal of the tongue with scissors, the operation being performed within the mouth. **Whitman's o.**, 1. an operation for arthroplasty of the hip joint. 2. a method of astragalectomy. **Winiwarter's o.**, cholecystoenterostomy. **Witzel's o.**, gastrostomy by drawing a cone of the stomach wall through an incision, and inserting a tube which is buried in the stomach wall and carried into the lumen; the stomach cone is replaced and the wound sutured. **Wladimiroff's o.**, Mikulicz's o., def. 3. **Wölfler's o.**, anterior gastrojejunostomy for pyloric obstruction. **Wutzer's o.**, a process for the radical cure of inguinal hernia by invaginating the scrotum into the inguinal canal and fixing it in place with a suture. **Wyeth's o.**, amputation at the hip joint, hemorrhage being controlled by an elastic cord or tube fastened above large needles which transfix the tissues on each side of the articulation. **Yankauer's o.**, curettement of the bony end of the eustachian tube for the purpose of shutting off infection from the nasopharynx and thereby curing chronic suppuration of the middle ear. **Young's o.**, 1. partial prostatectomy by punch. 2. total excision of the seminal vesicles and partial excision of the ejaculatory ducts by a suprapubic T-shaped incision. **Ziegler's o.**, V-shaped iridectomy for forming an artificial pupil.

operative (op'er-ä-tiv) [L. *operativus*] 1. pertaining to an operation. 2. effective; not inert.

operator (op'er-a-tor) 1. one who performs an operation, or operates a mechanical device. 2. operator gene.

opercula (o-per'ku-lah) [L.] plural of *operculum*.

opercular (o-per'ku-lar) pertaining to an operculum.

operculectomy (o-per'ku-lek'to-me) the surgical removal of a mucosal flap partially or completely covering an unerupted tooth.

operculitis (o-per'ku-li'tis) pericoronitis.

operculum (o-per'ku-lum), pl. *opercula* [L.] 1. a lid or covering structure, such as the mucus plug obstructing the cervix of the gravid uterus in various animals. 2. the folds of the pallium covering the insula and forming part of the lips of the lateral sulcus; see *operculum frontale*, *o. frontoparietale*, and *o. temporale*. **cartilaginous o.**, discus articularis articulationis temporomandibularis. **dental o.**, the hood of gingival tissue overlying the crown of an erupting tooth. **frontal o.**, *o. fronta'le* [NA], the part of the inferior frontal gyrus between the anterior and ascending branches of the lateral sulcus, covering over a part of the insula; called also *pars frontalis operculi*. **frontoparietal o.**, *o. frontoparieta'le* [NA], the part of the inferior frontal gyrus behind the ascending branch of the lateral sulcus, together with the lower ends of the precentral and postcentral gyri, plus the anterior and lower part of the inferior parietal lobule, all covering over a part of the insula; called also *pars parietalis operculi*. **opercula in'sulae**, the folds of the pallium covering the insula; see *o. frontale*, *o. frontoparietale*, and *o. temporale*. **occipital o.**, a part of the occipital lobe of the brain demarcated by the sulcus lunatus, when the latter structure is present. **temporal o.**, *o. tempora'le* [NA], the parts of the superior temporal gyrus and transverse temporal gyri that cover over a part of the insula; called also *pars temporalis operculi*. **trophoblastic o.**, the plug of trophoblast that helps close the gap in the endometrium made by the implanting blastocyst.

operon (op'er-on) [L. *opera* exertion + Gr. *on* neuter ending] in genetic theory, a segment of a chromosome comprising an operator gene and closely linked structural genes having related functions, the activity of the latter being controlled by the operator gene through its interaction with a regulator gene.

ophiasis (o-fi'ah-sis) [Gr.] a form of alopecia areata of long duration, involving the temporal and occipital margins of the scalp in a continuous band.

Ophidia (o-fid'e-ah) [Gr. *ophidion* serpent] a suborder of Reptilia which embraces the snakes.

ophidiiasis (o'fi-di'ah-sis) ophidism.

ophidic (o-fid'ik) pertaining to, caused by, or derived from snakes.

ophidism (o'fi-dizm) poisoning by snake venom.

Ophiophagus hannah (o'fe-of'ah-gus han'ah) the king cobra of India; see *cobra*.

ophiotoxemia (o/'fe-o-tok-se/'me-ah) [Gr. *ophis* snake + *toxemia*] poisoning by snake venom.

ophitoxemia (o/'fe-tok-se/'me-ah) ophiotoxemia.

ophryitis (of/'re-i'tis) [Gr. *ophrys* eyebrow + *-itis*] (*obs.*) dermatitis in the eyebrow region.

ophryon (of/'re-on) [Gr. *ophrys* eyebrow + *ón* neuter ending] the middle point of the transverse supraorbital line.

ophryosis (of/'re-o'sis) [Gr. *ophrys* eyebrow] spasm of the eyebrow.

Ophthaine (of/'thān) trademark for a preparation of proparcaine hydrochloride.

ophthalm- see *ophthalmo-*.

ophthalmagra (of/'thal-mag/'rah) [*ophthalm-* + Gr. *agra* seizure] sudden pain in the eye.

ophthalmalgia (of/'thal-mal/'je-ah) [*ophthalm-* + *-algia*] pain in the eye.

ophthalmatrophia (of/'thal-mah-tro/'fe-ah) [*ophthalm-* + Gr. *atrophia* atrophy] atrophy of the eye.

ophthalmectomy (of/'thal-mek-to-me) [*ophthalm-* + Gr. *ektomē* excision] the surgical removal of an eye; enucleation of the eyeball.

ophthalmencephalon (of/'thal-men-sef/'ah-lon) [*ophthalm-* + Gr. *enkephalos* brain] the retina, optic nerve, and visual apparatus of the brain.

ophthalmia (of-thal/'me-ah) [Gr., from *ophthalmos* eye] severe inflammation of the eye or of the conjunctiva or deeper structures of the eye. **actinic ray o.**, electric o. **catarrhal o.**, a severe form of simple conjunctivitis. **caterpillar o.**, o. nodosa. **o. eczematosa**, phlyctenulosis. **Egyptian o.**, trachoma, def. 1. **electric o.**, conjunctivitis due to the effect of bright electric light, especially that of a welding arc. **flash o.**, electric o. **gonorrheal o.**, acute and severe purulent ophthalmia due to gonorrheal infection. **granular o.**, an acute and severe form of purulent conjunctivitis. **jequirity o.**, a form due to poisoning by jequirity, the poisonous seeds of *Abrus precatorius*. **metastatic o.**, choroiditis due to metastasis or to pyemia. **migratory o.**, sympathetic o. **mucous o.**, catarrhal o. **o. neonatorum**, any hyperacute purulent conjunctivitis occurring during the first ten days of life, usually contracted during birth from infected vaginal discharge of the mother. Formerly it referred only to ocular gonorrheal infections. **neuroparalytic o.**, keratitis due to lesion of branches of the fifth nerve or of the gasserian ganglion. **o. nivia'lis**, snow blindness. **o. nodo'sa**, inflammation of the conjunctiva produced by caterpillar hairs, and marked by the formation of a round, gray swelling where each hair is embedded. **periodic o.**, a form of recurrent uveitis affecting horses. **phlyctenular o.**, see under *keratoconjunctivitis*. **purulent o.**, a form with a purulent discharge, commonly due to gonorrheal infection. **scrofulous o.**, keratoconjunctivitis associated with tuberculosis. **spring o.**, vernal conjunctivitis. **strumous o.**, phlyctenular keratoconjunctivitis. **sympathetic o.**, granulomatous inflammation of the uveal tract of the uninjured eye (the sympathizing eye) following some weeks after a wound involving the uveal tract of the other eye (the exciting eye). The end result is bilateral granulomatous inflammation of the entire uveal tract. Called also *sympathetic uveitis*. **transferred o.**, sympathetic o. **ultra-violet ray o.**, electric o. **varicose o.**, a variety associated with varicosity of the veins of the conjunctiva.

ophthalmiac (of-thal/'me-ak) a person affected with ophthalmia.

ophthalmiatrics (of/'thal-me-at/'riks) [*ophthalm-* + Gr. *iatrikē* surgery, medicine] the treatment of eye diseases.

ophthalmic (of-thal/'mik) [Gr. *ophthalmikos*] pertaining to the eye.

ophthalmitic (of/'thal-mit/'ik) pertaining to ophthalmitis.

ophthalmitis (of/'thal-mi'tis) [*ophthalm-* + *-itis*] inflammation of the eye.

ophthalmo-, ophthalm- [Gr. *ophthalmos* eye] a combining form denoting relationship to the eye.

ophthalmoblennorrhoea (of-thal/'mo-blen/'o-re/'ah) [*ophthalmo-* + Gr. *blenna* mucus + *rhoia* flow] gonorrheal or purulent ophthalmia.

ophthalmoceale (of-thal/'mo-sēl) [*ophthalmo-* + Gr. *kēlē* hernia, tumor] exophthalmos.

ophthalmocopia (of-thal/'mo-ko/'pe-ah) [*ophthalmo-* + Gr. *kopos* weariness] asthenopia, or eyestrain; fatigue of the eyes.

ophthalmodesmitis (of-thal/'mo-dez-mi'tis) [*ophthalmo-* + Gr. *desmos* ligament + *-itis*] inflammation of the ocular tendons.

ophthalmodiaphanoscope (of-thal/'mo-di-ah-fan/'o-skōp) [*ophthalmo-* + *diaphanoscope*] an instrument for examining the back of the eye (retina) by transillumination through the buccal cavity.

ophthalmodiastimeter (of-thal/'mo-di'as-tim/'ē-ter) [*ophthalmo-* + Gr. *diastēma* interval + *metron* measure] an instrument for determining the proper distance at which to place lenses for the two eyes.

ophthalmodonesis (of-thal/'mo-do-ne/'sis) [*ophthalmo-* + Gr. *donēsīs* trembling] a trembling motion of the eyes.

ophthalmodynamometer (of-thal/'mo-di'nah-mom/'ē-ter) 1. an instrument for measuring the retinal arterial pressure. 2. an instrument for determining the near point of convergence.

ophthalmodynamometry (of-thal/'mo-di'nah-mom/'ē-tre) determination of the retinal arterial pressure.

ophthalmodynia (of-thal/'mo-din/'e-ah) [*ophthalmo-* + Gr. *odynē* pain] ophthalmalgia.

ophthalmoeikonometer (of-thal/'mo-i/'ko-nom/'ē-ter) an instrument used to determine both the refraction of the eye and the relative size and shape of the ocular images.

ophthalmograph (of-thal/'mo-graf) [*ophthalmo-* + Gr. *graphein* to write] an instrument for photographing the movements of the eye during reading.

ophthalmography (of/'thal-mog/'rah-fe) [*ophthalmo-* + Gr. *graphein* to write] description of the eyes.

ophthalmogyric (of-thal/'mo-ji/'rik) [*ophthalmo-* + Gr. *gyros* circle] oculogyric.

ophthalmoleukoscope (of-thal/'mo-lu/'ko-skōp) [*ophthalmo-* + Gr. *leukos* white + *skopein* to examine] an apparatus for testing color perception by means of colors produced by polarized light.

ophthalmolith (of-thal/'mo-lith) [*ophthalmo-* + Gr. *lithos* stone] a lacrimal calculus.

ophthalmologic (of/'thal-mo-loj/'ik) pertaining to ophthalmology.

ophthalmologist (of/'thal-mol/'o-jist) a physician who specializes in the diagnosis and medical and surgical treatment of diseases and defects of the eye and related structures.

ophthalmology (of/'thal-mol/'o-je) [*ophthalmo-* + *-logy*] that branch of medicine dealing with the eye, its anatomy, physiology, pathology, etc.

ophthalmomalacia (of-thal/'mo-mah-la/'she-ah) [*ophthalmo-* + Gr. *malakia* softness] abnormal softness of the eye.

ophthalmometer (of/'thal-mom/'ē-ter) [*ophthalmo-* + Gr. *metron* measure] any instrument for measuring the eye, especially one for determining its refractive powers and defects by measuring the size of the images reflected from the cornea and lens. Called also *Javel's o.*

ophthalmometroscope (of-thal/'mo-met/'ro-skōp) an ophthalmoscope with an attachment for measuring the refraction of the eye.

ophthalmometry (of/'thal-mom/'ē-tre) determination of the refractive powers and defects of the eye.

ophthalmomycosis (of-thal/'mo-mi-ko/'sis) [*ophthalmo-* + Gr. *mykēs* fungus + *-osis*] any disease of the eye caused by a fungus.

ophthalmomyiasis (of-thal/'mo-mi/'yah-sis) [*ophthalmo-* + Gr. *myia* a fly + *-sis*] infection of the eye by the larvae of the fly *Oestrus ovis*.

ophthalmomyitis (of-thal/'mo-mi-i'tis) [*ophthalmo-* + Gr. *mys* muscles + *-itis*] inflammation of the muscles that move the eyeball.

ophthalmomyositis (of-thal/'mo-mi-'o-si'tis) inflammation of the eye muscles.

ophthalmomyotomy (of-thal/'mo-mi-ot/'o-me) [*ophthalmo-* + *myotomy*] surgical division of the muscles of the eye.

ophthalmoneuritis (of-thal/'mo-nu-ri'tis) inflammation of the ophthalmic nerve.

ophthalmoneuromyelitis (of-thal/'mo-nu-'ro-mi-ē-'li'tis) neuro-optic myelitis.

ophthalmopathy (of/'thal-mop/'ah-the) [*ophthalmo-* + Gr. *pathos* disease] any disease of the eye. **external o.**, any affection of the eyelids, cornea, conjunctiva, or eye muscles. **internal o.**, any affection of the deep or more essential parts of the eye.

ophthalmophacometer (of-thal/'mo-fa-kom/'ē-ter) [*ophthalmo-* + Gr. *phakos* lens + *metron* measure] an ophthalmometer used to determine the refractive power of the lens.

ophthalmophantom (of-thal/'mo-fan/'tom) 1. a model of the eye used in demonstration. 2. an apparatus for holding animals' eyes for operation.

ophthalmophlebotomy (of-thal/'mo-flē-bot/'o-me) [*ophthalmo-* + *phlebotomy*] phlebotomy to relieve congestion of the conjunctival veins.

ophthalmophthisis (of/'thal-mof/'thi-sis) [*ophthalmo-* + Gr. *phthisis* wasting] ophthalmomalacia.

ophthalmoplasty (of-thal/'mo-plas/'te) [*ophthalmo-* + Gr. *plassein* to mold] plastic surgery of the eye or of its appendages.

ophthalmoplegia (of-thal/'mo-ple/'je-ah) [*ophthalmo-* + Gr. *plēgē* stroke + *-ia*] paralysis of the eye muscles. **basal o.**, ophthalmoplegia due to a lesion at the base of the brain. **exophthalmic o.**, hyperophthalmopathic syndrome. **o. exter'na**, paralysis of the external ocular muscles. **fascicular o.**, ophthalmoplegia due to lesion in the pons varolii. **infectious o.**, encephalitis lethargica. **o. inter'na**, paralysis of the iris and

ciliary apparatus. **internuclear o.**, that which is due to some lesion between the nuclei of the motor nerves of the eye; called also *internuclear paralysis*. **nuclear o.**, that which is due to some lesion of the nuclei of the motor nerves of the eye. **orbital o.**, ophthalmoplegia due to lesion in the orbit. **Parinaud's o.**, paralysis of conjugate upward movement of the eyes without paralysis of convergence, associated with lesions of the midbrain, such as a tumor of the pineal gland. Called also *Parinaud's syndrome*. **o. partia'lis**, paralysis of either one or two of the eye muscles. **o. progressi'va, progressive o.**, gradual paralysis affecting first one eye muscle and then another; called also *Graefe's disease*. **o. tota'lis**, that affecting both the extrinsic and intrinsic muscular apparatus of the eye.

ophthalmoplegic (of-thal'mo-ple'jik) pertaining to ophthalmoplegia.

ophthalmoptosis (of-thal'mop-to'sis) [*ophthalmo-* + Gr. *ptōsis* fall] exophthalmos.

ophthalmoreaction (of-thal'mo-re-ak'shun) see *ophthalmic reaction*, under *reaction*. **Calmette's o.**, ophthalmic reaction.

ophthalmorrhagia (of-thal'mo-ra'je-ah) [*ophthalmo-* + Gr. *rhēgnynai* to burst forth] hemorrhage from the eye.

ophthalmorrhoea (of-thal'mo-re'ah) [*ophthalmo-* + Gr. *rhoia* flow] oozing of blood from the eye.

ophthalmorrhexis (of-thal'mo-rek'sis) [*ophthalmo-* + Gr. *rhēxis* rupture] rupture of the eyeball.

ophthalmoscope (of-thal'mo-skōp) [*ophthalmo-* + Gr. *skopein* to examine] an instrument containing a perforated mirror and lenses used to examine the interior of the eye. **binocular o.**, an instrument for stereoscopic examination of the eye. **direct o.**, one that produces an upright, or unreversed, image of approximately 15 times magnification. **ghost o.**, a form in which a portion of the reflected rays are deflected by a mirror. **indirect o.**, one that produces an inverted, or reversed, direct image of 2 to 5 times magnification, depending on the dioptric power to the examining lens.

ophthalmoscopy (of-thal-mos'ko-pe) the examination of that interior of the eye with the ophthalmoscope. **direct o.**, that performed with a direct ophthalmoscope. **indirect o.**, that performed with an indirect ophthalmoscope. **medical o.**, that performed for diagnostic purposes. **metric o.**, that performed for the measurement of refraction.

ophthalmostasis (of-thal-mos'tah-sis) [*ophthalmo-* + Gr. *stasis* standing] fixation of the eye with the ophthalmostat.

ophthalmostat (of-thal'mo-stat) [*ophthalmo-* + Gr. *histanai* to halt] an instrument for holding the eye steady during operation.

ophthalmostatometer (of-thal'mo-stah-tom'ē-ter) [*ophthalmo-* + Gr. *histanai* to halt + *metron* measure] an instrument for determining the degree of protrusion of the eyeball.

ophthalmosteresis (of-thal'mo-stē-re'sis) [*ophthalmo-* + Gr. *steresis* privation, loss] loss of an eye.

ophthalmosynchysis (of-thal'mo-sin'ki-sis) [*ophthalmo-* + Gr. *synchysis* a mixing] effusion into the eye.

ophthalmothermometer (of-thal'mo-ther-mom'ē-ter) [*ophthalmo-* + *thermometer*] an apparatus for recording the temperature of the eye.

ophthalmotomy (of-thal'mo-to'me) [*ophthalmo-* + Gr. *temnein* to cut] the operation of incising the eyeball.

ophthalmotonometer (of-thal'mo-to-nom'ē-ter) [*ophthalmo-* + Gr. *tonos* tension + *metron* measure] an instrument used in measuring the intraocular tension; a tonometer.

ophthalmotonometry (of-thal'mo-to-nom'ē-tre) the measurement of the intraocular tension; tonometry.

ophthalmotoxin (of-thal'mo-tok'sin) [*ophthalmo-* + *toxin*] 1. a toxin formed on injection of emulsion of the ciliary body. 2. a toxin acting on the eye.

ophthalmotrope (of-thal'mo-trōp) [*ophthalmo-* + Gr. *trepein* to turn] a mechanical eye that moves like a real eye, used for demonstrating the action of the ocular muscles.

ophthalmotropometer (of-thal'mo-tro-pom'ē-ter) [*ophthalmo-* + Gr. *tropos* a turning + *metron* measure] an instrument for measuring eye movements.

ophthalmovascular (of-thal'mo-vas'ku-lar) pertaining to the blood vessels of the eye.

ophthalmoxerosis (of-thal'mo-ze-ro'sis) xerophthalmia.

ophthalmoxyster (of-thal'moks-is'ter) [*ophthalmo-* + Gr. *xystēr* scraper] an instrument for scraping the conjunctiva.

Ophthetic (of-thet'ik) trademark for a preparation of proparcaine hydrochloride.

Ophthochlor (of'tho-klōr) trademark for a preparation of chloramphenicol.

opian (o'pe-an) noscapine.

opiane (o-pi'ah-nin) noscapine.

opiate (o'pe-at) a remedy containing or derived from opium; also any drug that induces sleep.

Opie paradox (o'pe) [Eugene Lindsay Opie, American pathologist, born 1873] see under *paradox*.

opilação (o'pil-ah-sah'o) [Port.] Chagas' disease.

opilation (o'pi-la'shun) Chagas' disease.

opioid (o'pe-oid) 1. any synthetic narcotic that has opiate-like activities but is not derived from opium. 2. denoting naturally occurring peptides, e.g., enkephalins, that exert opiate-like effects by interacting with opiate receptors of cell membranes.

opiomania (o'pe-o-ma'ne-ah) [*opium* + Gr. *mania* madness] a craving for opium.

opiomanic (o'pe-o-ma'ne-ak) a person affected with opiomania.

opiophagism, opiophagy (o'pe-of'ah-jizm; o-pe-of'ah-je) [*opium* + Gr. *phagein* to eat] the habitual use or eating of opium.

opipramol hydrochloride (o-pip'rah-mōl) chemical name: 4-[3-(5*H*-dibenz[*b,f*]azepin-5-yl)propyl]-1-piperazineethanol dihydrochloride; a tricyclic antidepressant with mild tranquilizing properties, C₂₃H₂₉N₃O·2HCl.

Opisocrostis (o'pi-so-kros'tis) a genus of fleas. **O. bru'neri**, a squirrel flea said to be a vector of sylvatic plague.

opisthe (o-pis'the) [Gr. *opisthen* behind] the posterior daughter organism after transverse division of a protozoan; cf. *proter*.

opisthenar (o-pis'the-nar) [*opistho-* + Gr. *thenar* palm of the hand] the dorsum of the hand.

opisthencephalon (o-pis'then-sef'ah-lon) [*opistho-* + Gr. *enkephalos* brain] the cerebellum.

opisthiobasial (o-pis'the-o-ba'se-al) pertaining to or connecting the opisthion and basion.

opisthion (o-pis'the-on) [Gr. *opisthion* rear, posterior] the midpoint of the lower border of the foramen magnum.

opisthionasial (o-pis'the-o-na'ze-al) connecting the opisthion and nasion.

opistho- (o-pis'tho) [Gr. *opisthen* behind, at the back] a combining form meaning backward or denoting relationship to the back.

opisthogenia (o-pis'tho-je'ne-ah) defective development of the jaws following ankylosis of the jaw.

opisthognathism (o'pis-thog'nah-thizm) the condition of having receding jaws.

opisthoporeia (o-pis'tho-po-ri'ah) [*opistho-* + Gr. *poreia* walk] involuntary walking backward, as in parkinsonism; retropulsion.

opisthorchiasis (o'pis-thor-ki'ah-sis) infection of the biliary tract by the liver flukes *Opisthorchis felinus* and *O. viverrini*. In heavy infections, local injury to the distal bile capillaries and surrounding liver tissue develops; in severe infections, there may be cirrhosis of the liver with areas of necrosis and fatty degeneration.

Opisthorchis (o'pis-thor'kis) [*opistho-* + Gr. *orchis* testicle] a genus of trematodes or flukes characterized by having the testes near the posterior end of the body. **O. felin'eus**, the Siberian liver fluke found in the liver of cats, dogs, pigs, and man; infection (see *opisthorchiasis*) results from ingestion of infected fish (*Leuciscus rutilis*, *Idus melanotus*, and related species). **O. nov'er'ca**, *Amphimerus noverca*. **O. sinen'sis**, *Clonorchis sinensis*. **O. viverri'ni**, a species found in Thailand in the civet cat and sometimes in man (see *opisthorchiasis*).

opisthorchosis (o'pis-thor-ko'sis) infection with any species of *Opisthorchis*.

opisthotic (o'pis-thot'ik) [*opistho-* + Gr. *ous* ear] situated behind the ear.

opisthotonoid (o'pis-thot'o-noid) resembling opisthotonos.

opisthotonos (o'pis-thot'o-nos) [*opistho-* + Gr. *tonos* tension] a

Opisthotonos

form of spasm in which the head and the heels are bent backward and the body bowed forward. **o. feta/lis**, an exaggerated deflection attitude of the fetus during labor, which may persist during the neonatal period, but which gradually changes to a more normal posture.

opisthotonus (o'pis-thot'o-nus) opisthotonos.

Opitz's disease (o'pitz) [Hans Opitz, German pediatrician, born 1888] see under *disease*.

opium (o'pe-um) [L.; Gr. *opion*] [USP] an air-dried milky exudate obtained by incising the unripe capsules of *Papaver somniferum* L. (Papaveraceae) or its variety, *album*, yielding not less than 9.5 per cent of anhydrous morphine. Called also *crude o.* and *gum o.* Various principles and derivatives of opium, including some 20 alkaloids, notably morphine, codeine, papaverine, and thebaine, are used for their narcotic and analgesic effects. Because it is highly addictive, the production of opium is restricted, and the cultivation of the plants from which it is obtained is prohibited by most nations under an international agreement. **crude o.**, see *opium*. **denarcotized o.**, **o. deodora'tum**, **deodorized o.**, powdered opium freed from certain nauseating constituents by extraction with purified petroleum benzine. **granulated o.**, **o. granula'tum**, opium reduced to a coarse powder. **gum o.**, see *opium*. **lettuce o.**, the bitter, inspissated juice of various species of lettuce, e.g., *Lactuca sativa* L. (Compositae), formerly used for mild hypnotic and sedative action. **powdered o.** [USP], **o. pulvera'tum**, opium dried at a temperature not exceeding 70° C., and reduced to a very fine powder, yielding not less than 10 per cent and not more than 10.5 per cent of anhydrous morphine. It may contain any of the diluents, except starch, permitted in powdered extracts. See *brown mixture*, under *mixture*, and see *paregoric*.

opobalsamum (o'po-bal'sah-mum) [Gr. *opos* juice + *balsamon* balsam] balsam of Gilead.

opocephalus (o'po-seff'ah-lus) [Gr. *ops* face + *kephalē* head] a monster with the ears fused to the head, one orbit, no mouth, and no nose.

opodidymus (o'po-did'i-mus) [Gr. *ops* fact + *didymos* twin] a fetus with two fused heads and with the sense organs partially fused.

opodymus (o-pod'i-mus) opodidymus.

opossum (o-pos'um) a marsupial animal, species of which (*Didelphis*) in South America are reservoirs of *Trypanosoma cruzi*.

opotherapy (o'po-ther'ah-pe) [Gr. *opos* juice + *therapeia* treatment] treatment by juices, especially treatment of disease by the administration of extract from animals' organs, as from endocrine organs.

Oppenheim's disease (syndrome), sign (reflex) (op'en-himz) [Hermann Oppenheim, neurologist in Berlin, 1858-1919] see *amyotonia congenita*, and see under *sign*.

oppilation (op'i-la'shun) [L. *oppilatio*] (*obs.*) constipation.

oppilative (op'i-la'tiv) (*obs.*) closing the pores; also constipating.

opponens (o-po'nenz) [L.] opposing; said of an opposing structure, as *musculus opponens*.

opportunistic (op'or-tu-nis'tik) 1. denoting a microorganism which does not ordinarily cause disease but which, under certain circumstances (e.g., impaired immune responses), becomes pathogenic. 2. denoting a disease or infection caused by such an organism.

oppositipolar (o-poz'i-ti-po'lar) having two poles on opposite sides of a cell.

opsialgia (op'se-al'je-ah) [Gr. *ops* face + *-algia*] geniculate neuralgia.

opsigenes (op-sij'ē-nēz) [Gr. *opsigenēs*] late born; a term sometimes applied to the third permanent molars (wisdom teeth).

opsin (op'sin) a protein of the retinal rods (scotopsin) and cones (photopsin) that combines with 11-*cis*-retinal to form visual pigments; see *retinal* (def. 2). The opsins are also named according to the color of pigment: iodopsin (violet), porphyropsin (red), rhodopsin (purple), etc.

opsinogen (op-sin'o-jen) a substance (antigen) with the power to induce the formation of opsonins in the body.

opsinogenous (op'sin-oi'ē-nus) able to form opsonins.

opsiometer (op'se-om'ē-ter) [Gr. *opsis* vision + *metron* measure] optometer.

opsiuria (op'se-u're-ah) [Gr. *opse* late + *ouron* urine + *-ia*] the condition in which more urine is excreted during fasting than during digestion.

opsoclonia, opsoclonus (op'so-klo'ne-ah; op'so-klo'nus) a condition characterized by nonrhythmic horizontal and vertical oscillations of the eyes, observed in various disorders of the brain stem or cerebellum.

opsogen (op'so-jen) opsinogen.

opsomania (op'so-ma'ne-ah) [Gr. *opson* dainty + *mania* madness] a craving for some special food.

opsone (op'sōn) opsonin.

opsonic (op-son'ik) pertaining to opsonins.

opsoniferous (op'so-nif'er-us) bearing opsonin.

opsonification (op-son'i-fi-ka'shun) opsonization.

opsonify (op-son'i-fi) to subject to opsonization.

opsonin (op'so-nin) [Gr. *opsōnein* to buy victuals] 1. an antibody that renders bacteria and other cells susceptible to phagocytosis. 2. a nonantibody substance, which may be derived from the C3 component of complement, capable of rendering bacteria susceptible to phagocytosis. The basic proteins, protamine, globin, and lysozyme, have been shown to be opsonins. Two proteins, one a β -globulin and the other an α_1 -globulin, are opsonic without the aid of complement and are not basic proteins. These are called P.P.F. (phagocytosis promoting factor). **immune o.**, an antibody that sensitizes a particulate antigen to phagocytosis, following combination with the homologous antigen in vivo or in vitro.

opsoninopathy (op-so'nin-op'ah-the) a condition marked by reduced levels of serum opsonins, leading to increased susceptibility to infection. **consumptive o.**, depletion of opsonins by consumption (i.e., by reacting with antigen) of specific antibody or complement components, or both, during infection. Fatal cases are usually associated with malnutrition.

opsonist (op'so-nist) one who is expert in opsonic technique.

opsonization (op'so-ni-za'shun) the rendering of bacteria and other cells subject to phagocytosis.

opsonize (op'so-niz) to subject to opsonization.

opsonocytophagic (op'so-no-si'to-faj'ik) denoting the phagocytic activity of blood in the presence of serum opsonins and homologous leukocytes.

opsonogen (op-son'o-jen) opsinogen.

opsonology (op'so-nol'o-je) the study of opsonins and opsonic action.

opsonometry (op'so-nom'ē-tre) the measurement of the amount of opsonin present.

opsonophilia (op'so-no-fil'e-ah) [*opsonin* + Gr. *philein* to love] affinity for opsonins.

opsonophilic (op'so-no-fil'ik) having an affinity for opsonins.

opsonophoric (op'so-no-for'ik) bearing opsonin; the term applied to that group of an opsonin which acts on the bacterium or other cell to render it subject to phagocytosis.

opsonotherapy (op'so-no-ther'ah-pe) treatment by the use of bacterial vaccines to increase the opsonic action of the blood.

Optef (op'tef) trademark for a preparation of hydrocortisone.

optesthesia (op'tes-the'ze-ah) visual sensibility; ability to perceive visual stimuli.

optic (op'tik) [Gr. *optikos* of or for sight] of or pertaining to the eye.

optical (op'ti-kal) [L. *opticus*; Gr. *optikos*] pertaining to or subserving vision.

optician (op-tish'an) an expert in opticianry.

opticianry (op-tish'an-re) the science, craft, and art of optics as applied to the translation, filling, and adapting of ophthalmic prescriptions, products, and accessories.

optician (op'ti-sist) an expert in the science of optics.

opticochiasmatic (op'ti-ko-ki'az-mat'ik) pertaining to the optic nerves and chiasma.

optociliary (op'ti-ko-sil'e-a-re) pertaining to the optic and ciliary nerves.

optiocinerea (op'ti-ko-si-ne're-ah) [*optic* + *cinerea*] (*obs.*) the gray matter of the optic tract.

opticokinetic (op'ti-ko-ki-net'ik) pertaining to movement of the eyes.

opticonasion (op'ti-ko-na'se-on) the distance from the posterior edge of the optic foramen to the nasion.

opticopupillary (op'ti-ko-pu'pī-ler-e) pertaining to the optic nerve and the pupil.

optics (op'tiks) [Gr. *optikos* of or for sight] the science which treats of light and of vision. **fiber o.**, see *fiberoptics*.

optimal (op'ti-mal) the best; the most favorable.

optimeter (op-tim'ē-ter) optometer.

optimum (op'ti-mum) [L. "best"] 1. that condition of surroundings which is conducive to the most favorable activity or function. 2. Pirquet's term for the amount of food most desirable under given circumstances.

optist (op'tist) a person skilled in optometry.

opto- (op'to) [Gr. *optos* seen] a combining form meaning visible, or denoting relationship to vision or sight.

optoblast (op'to-blast) [*opto-* + Gr. *blastos* germ] one of the large ganglion cells of the retina.

optochiasmatic (op'to-ki-az'mik) opticochiasmatic.

optogram (op'to-gram) [*opto-* + Gr. *gramma* mark] the retinal image formed by the bleaching of the visual purple under the influence of light.

optokinetic (op'to-ki-net'ik) pertaining to movement of the eyes, as in nystagmus.

optomeninx (op'to-me'ningks) [*opto-* + Gr. *mēninx* membrane] the retina.

optometer (op-tom'ē-ter) [*opto-* + Gr. *metron* measure] a device for measuring the power and range of vision.

optometrist (op-tom'ē-trist) a person trained and licensed to examine and test the eyes and to treat visual defects by prescribing and adapting corrective lenses and other optical aids, and by establishing programs of visual training.

optometry (op-tom'ē-tre) measurement of the powers of vision and the adaptation of prisms or lenses for the aid thereof, utilizing any means other than drugs. See *optometrist*.

optomyometer (op'to-mi-om'ē-ter) [*opto-* + Gr. *mys* muscle + *metron* measure] a device used in measuring the power of the ocular muscles.

optophone (op'to-fōn) [*opto-* + Gr. *phōne* voice] an instrument by means of which light and darkness are made discernible to the blind through their sense of hearing, the light waves being transformed into sound waves.

optotype (op'to-tip) [*opto-* + *type*] the test types used in testing vision.

Opuntia (o-pun'she-ah) a genus of cacti. *O. vulgaris*, the prickly pear, is used as a remedy in homeopathic practice.

O.R. operating room.

ora¹ (o'rah), pl. *orae* [L.] an edge or margin. **o. serra'ta ret'inae** [NA], the irregular anterior margin of the pars optica of the retina, lying internal and slightly posterior to the junction of the choroid and the ciliary body.

ora² (o'rah) [L.] plural of *os*, mouth.

Orabilex (or'ah-bi'leks) trademark for a preparation of bunamiodyl.

orad (o'rad) [L. *os*, *oris* mouth + *ad* toward] toward the mouth.

orae (o're) [L.] plural of *ora*, edge.

Oragrafin (or'ah-graff'in) trademark for a preparation of the calcium or the sodium salt of ipodate.

oral (o'ral) [L. *oralis*] 1. pertaining to the mouth, taken through or applied in the mouth, as an oral medication or an oral thermometer. 2. denoting that aspect of the teeth which faces the oral cavity or tongue.

orale (o-ra'le) the point in the midline of the maxillary suture just lingual to the central incisors in the alveolar process.

orality (o-ral'i-te) a term embracing all of the aspects and components (sucking, mouthing, etc.) of the oral stage of psychosexual development.

oralogy (o-ral'o-je) [L. *oralis* pertaining to the mouth + *-logy*] stomatology.

orange (o'anj) [L. *aurantium*] 1. the rutaceous tree, *Citrus aurantium* L., and its yellow, edible fruit (*aurantii fructus*). There are two varieties, *bitter orange* (*aurantii amara*) and *sweet orange* (*aurantii dulcis*). The peel of the two varieties is used in making various pharmaceutical preparations. 2. a color between red and yellow. 3. a dye or stain that produces an orange color.

acridine o., see under *acridine*. **ethyl o.**, an indicator with a pH range of 2 to 4. **o. G.**, an acid azo dye used as a cytoplasmic stain, $C_6H_5 \cdot N \cdot N \cdot C_{10}H_4(SO_2 \cdot ONa)_2 \cdot OH$. **gold o.**, methyl o. **o. III**, methyl o. **methyl o.** [USP], an orange-yellow powder, the sodium salt of dimethylaminoazobenzene sulfonic acid, used as an indicator with a pH range of 3.2 to 4.4 and a color change from pink to yellow. Called also *gold o.* and *helianthin*.

Poirrier's o., methyl o. **victoria o.**, a salt of dinitrocresol used in histology as a stain. **wool o.**, orange G.

orangeophil (or-an'je-o-fil) 1. staining readily with orange dyes. 2. a cell or other histologic element that stains readily with orange dyes. 3. one of the acidophils, or alpha cells (*somatotropes*), of the adenohypophysis staining readily with orange G; called also *alpha acidophil*.

orangutan (o-rang'oo-tan') [Malayan *orang* a human being + *utan* (hutan) wild] one of the anthropoid apes, of the family Pongidae, frequently used for laboratory studies because it is susceptible to some of the same diseases as man.

Oranixon (or'ah-nik'son) trademark for a preparation of methenesisin.

Ora-Testryl (o'rah-tes'tril) trademark for a preparation of fluoxymesterone.

orb (orb) [L. *orbis* circle, disk] a sphere; the eyeball.

Orbeli phenomenon (effect) (or-ba'le) [Leon Algarovich Orbeli, Russian physiologist, 1882-1958] see under *phenomenon*.

orbicular (or-bik'u-lar) [L. *orbicularis*] circular, or rounded.

orbiculare (or-bik'u-la're) [L.] process lenticularis incudis.

orbiculi (or-bik'u-li) plural of *orbiculus*.

orbiculus (or-bik'u-lus), pl. *orbiculi* [L., dim. of *orbis* orb, circle] [NA], a general term denoting a structure shaped like a small circle, or disk. **o. cilia'ris** [NA], the thin part of the ciliary body extending between its crown and the ora serrata retinae; called also *ciliary disk*.

orbit (or'bit) the bony cavity that contains the eyeball; see *orbita* [NA].

orbita (or'bi-tah), pl. *orbitae* [L. "mark of a wheel"] [NA] the orbit: bony cavity that contains the eyeball and its associated muscles, vessels, and nerves; the ethmoidal, frontal, lacrimal, nasal, palatine, sphenoidal, and zygomatic bones, and the maxilla contribute to its formation.

orbitae (or'bi-te) [L.] plural of *orbita*.

orbital (or'bi-tal) [L. *orbitalis*] 1. pertaining to the orbit. 2. a region in an atom that may contain either one or two opposite spin electrons; orbitals of various sizes and shapes may occur in a single atom. A set of orbitals is a housing arrangement for electrons.

orbitale (or'bi-ta'le) an anthropometric landmark, the lowest point on the inferior margin of the orbit.

orbitalis (or'bi-ta'lis) [L.] pertaining to the orbit.

orbitonasal (or'bi-to-na'zal) pertaining to the orbit and the nose.

orbitonometer (or'bi-to-nom'ē-ter) an instrument for measurement of the backward displacement of the eyeball produced by a given pressure exerted against its anterior aspect.

orbitonometry (or'bi-to-nom'ē-tre) the measurement of the backward displacement of the eyeball under varying pressures.

orbitopagus (or'bi-top'ah-gus) [*orbit* + Gr. *pagos* thing fixed] a twin monster composed of a small fetus attached to the orbit of the autosite.

orbitostat (or'bi-to-stat) an instrument for measuring the axis of the orbit.

orbitotemporal (or'bi-to-tem'po-ral) pertaining to the orbital and temporal regions.

orbitotomy (or'bi-tot'o-me) [*orbit* + Gr. *temnein* to cut] the operation of incising or opening into the orbit through the orbital margin.

orbivirus (or'bi-vi'rus) a group of RNA viruses, a subgroup of the diplomavirus.

orcein (or-se'in) a brown coloring matter, $C_{28}H_{24}N_2O_7$, derived from orcin and soluble in alcohol; used as a specific stain for elastic tissue.

orchectomy (or-kek'to-me) orchiectomy.

orchella (or-shel'ah) a histologic stain composed of 5 ml. of acetic acid and 40 ml. each of alcohol and water, colored to a dark red with archil from which excess of ammonia has been driven off.

orchi- see *orchio-*.

orchialgia (or'ke-al'je-ah) [*orchi-* + *-algia*] pain in a testis.

orchic (or'kik) orchidic.

orchichorea (or'ke-ko-re'ah) [*orchi-* + *chorea*] a twitching or jerking movement of a testis.

orchidalgia (or'ki-dal'je-ah) orchialgia.

orchidectomy (or'ki-dek'to-me) orchiectomy.

orchidic (or-kid'ik) pertaining to the testes.

orchiditis (or'ki-di'tis) orchitis.

orchido- (or'ki-do) [Gr. *orchidion* dim. of *orchis*] see *orchio-*.

orchidocelioplasty (or'ki-do-se'le-o-plas'te) [*orchido-* + Gr. *kolia* belly + *plassein* to form] the operation of transplanting an undescended testis to the abdominal cavity.

orchidoepididymectomy (or'ki-do-ep'i-did'i-mek'to-me) [*orchido-* + *epididymis* + Gr. *ektomē* excision] the operation of excising the testis and epididymis.

orchidometer (or'ki-dom'ē-ter) an instrument for measuring the testis. **Prader o.**, a string of plastic models of testicular shape, marked according to their volume in cubic centimeters; used for measuring the size of the testes in genital development.

orchidoncus (or'ki-dong'kus) [*orchido-* + Gr. *onkos* tumor] a tumor of a testis.

orchidopathy (or'ki-dop'ah-the) orchioopathy.

orchidopexy (or'ki-do-pek'se) orchiopepy.

orchidoplasty (or'ki-do-plas'te) orchiopepy.

orchidoptosis (or'ki-dop-to'sis) [*orchido-* + Gr. *ptōsis*] downward displacement of the testis, a condition due to varicocele or relaxation of the scrotum.

orchidorrhaphy (or'ki-dor'ah-fe) orchiopepy.

orchidotherapy (or'ki-do-ther'ah-pe) [*orchido-* + Gr. *therapeia* treatment] use of testicular extract in treating diseases.

orchidotomy (or'ki-dot'o-me) orchiotomy.

orchiectomy (or'ke-ek'to-me) [*orchio-* + Gr. *ektomē* excision] excision of one or both testes.

orchiencephaloma (or'ke-en-sef'ah-lo'mah) [*orchio-* + *encephaloma*] embryonal carcinoma.

orchiepididymitis (or'ke-ep'i-did'i-mi'tis) [*orchio-* + *epididymis* + *-itis*] inflammation of a testis and an epididymis.

orchilytic (or'ki-lit'ik) [*orchio-* + Gr. *lytikos* dissolving] destroying testicular tissue.

orchio-, orchi-, orchido- [Gr. *orchis* testis] a combining form denoting relationship to the testes.

orchiocatabasis (or'ke-o-kah-tab'ah-sis) [*orchio-* + Gr. *katabasis* descent] the descent of the testes.

orchiocele (or'ke-o-sel') [*orchio-* + Gr. *kēlē* hernia] 1. hernial protrusion of a testis. 2. scrotal hernia. 3. tumor of a testis.

orchiococcus (or'ke-o-kok'us) [*orchio-* + Gr. *kokkos* berry] former term for diplococcus recovered from gonorrheal orchitis.

orchiodynia (or'ke-o-din'e-ah) orchialgia.

orchiomyloma (or'ke-o-mi'ē-lo'mah) [*orchio-* + *myeloma*] plasmacytoma of the testis.

orchioncus (or'ke-ong'kus) [*orchio-* + Gr. *onkos* mass, tumor] tumor of the testis.

orchioneuralgia (or'ke-o-nu-ral'je-ah) [*orchio-* + *neuralgia*] orchialgia.

orchioopathy (or'ke-op'ah-the) [*orchio-* + Gr. *pathos* disease] any disease of the testis.

orchiopexy (or'ke-o-pek'se) [*orchio-* + G. *pēxis* fixation] surgical fixation in the scrotum of an undescended testis.

orchiopeasty (or'ke-o-plas'te) [*orchio-* + Gr. *plassein* to form] plastic surgery of the testis.

orchiorrhaphy (or'ke-or'ah-fe) [*orchio-* + Gr. *rhaphe* suture] orchiopexy.

orchioscheoceles (or'ke-os'ke-o-sel') [*orchio-* + Gr. *oscheon* scrotum + *kēlē* hernia] scrotal tumor with scrotal hernia.

orchioscirrhosis (or'ke-o-skir'us) [*orchio-* + Gr. *skirrhos* hard] hardening of the testis.

orchiotomy (or'ke-ot'o-me) [*orchio-* + Gr. *temnein* to cut] incision and drainage of a testis.

Orchis (or'kis) the typical genus of orchidaceous plants, so named because certain species bear root or rhizome systems that resemble testicles. Various species are medicinal.

orchis (or'kis) [Gr.] the testis.

orchitic (or-kit'ik) pertaining to, causing, or affected with orchitis.

orchitis (or-ki'tis) [*orchio-* + *-itis*] inflammation of a testis. The disease is marked by pain, swelling, and a feeling of weight. It may occur idiopathically, but is usually due to gonorrhea, syphilis, filarial disease, or tuberculosis. **metastatic o.**, an infection brought to the testis by the blood stream, as in mumps. **mumps o.**, *o.* parotidea. **o. parotid'ea**, orchitis occurring before, or as the only manifestation of, mumps. **spermatogenic granulomatous o.**, orchitis in which the normal structure of the testis has been replaced by gray-white granulomatous tissue without evident necrosis; it is thought to be in some way a reaction to spermatozoa. **traumatic o.**, orchitis following trauma, vas ligation, or surgical manipulation, without evidence of previous disease, believed to be due to an infectious process resulting from lowered resistance of the injured tissues to bacteria. **o. variolo'sa**, orchitis occurring in smallpox.

orchitolytic (or'ki-to-lit'ik) orchilytic.

orchotomy (or-kot'o-me) orchiotomy.

orcin (or'sin) orcinol.

orcinol (or'si-nol) chemical name: 5-methylresorcinol. An antiseptic principle, $C_7H_6O_2 \cdot H_2O$, mainly derived from various lichens, used as a reagent in various tests; called also *orcin*.

Ord's operation [William Miller Ord, English surgeon, 1834-1902] see under *operation*.

order (or'der) [L. *ordo* a line, row, or series] a taxonomic category subordinate to a class and superior to a family; see *taxon*.

orderly (or'der-le) a male attendant in a hospital who does general work, attending especially to the preoperative preparation (shaving, catheterizing, etc.) of male patients.

ordinate (or'di-nāt) one of the lines used as a base of reference in graphs; see *abscissa*.

ordure (or'dūr) excrement.

O.R.E.F. Orthopedic Research & Education Foundation.

oreoselinum (o're-o-se-li-num) [L.] an umbelliferous plant of the Old World, *Peucedanum oreoselinum* (L.) Munch. (Umbelliferae); used in homeopathic practice as a diuretic.

Oretic (o-ret'ik) trademark for a preparation of hydrochlorothiazide.

Oreton (or'e-ton) trademark for preparations of testosterone propionate.

orexia (o-rek'se-ah) [Gr. *orexis*] appetite.

orexigenic (o-rek'si-jen'ik) [Gr. *orexis* appetite + *gennan* to produce] increasing or stimulating the appetite.

oreximania (o-rek'si-ma'ne-ah) [Gr. *orexis* appetite + *mania* madness] enormous increase in appetite and food intake due to fear of becoming thin.

orf 1. a contagious pustular dermatitis of sheep, caused by a virus and communicable to man. 2. sheep-pox.

Orfila museum (or'fi-lah') a museum of anatomy at the Medical School of Paris, founded by Mathieu Joseph Bonaventure Orfila (1787-1853).

organ (or'gan) [L. *organum*; Gr. *organon*] a somewhat independent part of the body that performs a special function or functions;

see *organum* [NA]. **absorbent o.**, vascular granulation tissue interposed between the enamel epithelium of a growing permanent tooth and the dentin of the deciduous tooth that the former is replacing. **accessory o's of eye**, structures accessory to the eye, including the ocular muscles and fascia, and the eyebrows, eyelids, conjunctiva, and lacrimal apparatus (*organa oculi accessoria* [NA]). **acoustic o.**, organum spirale. **Bidder's o.**, an anterior portion, ovarian in character, of the gonad of male toads. **cell o.**, a structural part of a cell having some definite function in its life or reproduction, as a nucleus or a centrosome. **cement o.**, the embryonic tissue that develops into the cement layer of the tooth. **Chievitz's o.**, an embryonic outgrowth behind the parotid gland which may merge into the latter or may disappear. **o. of Corti**, organum spirale. **digestive o's**, those concerned with the ingestion, digestion, and assimilation of food (*apparatus digestorius* [NA]). **effector o.**, a muscle or gland that contracts or secretes, respectively, in direct response to nerve impulses. **enamel o.**, a process of epithelium forming a cap over a dental papilla and developing into the enamel. **end o.**, end-organ; see under *E*. **essential o. of thalamus**, some portion of the thalamus, possibly the medial nucleus, which functions as an integrating center in animals with little or no cerebral cortex and functioning in a more or less similar manner in higher forms. **genital o's**, the various internal and external organs that are concerned with reproduction (*organa genitalia* [NA]). **genital o's, external**, the pudendum and clitoris in the female (*partes genitales feminae externae* [NA]) and the scrotum and penis in the male (*partes genitales masculinae externae* [NA]). **genital o's, female**, the various organs in the female that are concerned with reproduction; see *organa genitalia feminae*. **genital o's, male**, the various organs in the male that are concerned with reproduction; see *organa genitalia masculina*. **o. of Giralde's**, paradidymis. **Golgi tendon o.**, a mechanoreceptor found in tendons of mammalian muscles; arranged in series with the muscle, it is sensitive to mechanical distortion induced by either passive stretch of the tendon or isometric contraction of the muscle and thus signals muscle tension, being the receptor responsible for the lengthening reaction, or clasp-knife reflex. Called also *tendon spindle*. **gustatory o.**, the organ concerned with the perception of taste; see *organum gustus* [NA]. **Jacobson's o.**, organum vomeronasale. **lateral line o's**, a system of sense organs arranged in longitudinal canals in the skin of fishes and amphibians which are sensitive to changes in pressure and current and to vibrations of low frequency and thus aid in localizing objects. **Marchand's o.**, see under *adrenal*. **o's of mastication**, the masticatory system; see under *system*. **Meyer's o.**, an area of circumvallate papillae on either side of the posterior part of the tongue. **olfactory o.**, the organ concerned with the perception of odors; see *organum olfactus* [NA]. **parapineal o.**, a median dorsal outgrowth of the pineal body in certain lower vertebrates, such as tailless amphibians, primitive fishes, and lizards, the principal cell type of which is an apparent photoreceptor. In some species, it may specialize to form an extracranial epiphyseal eye. Called also *parietal a.* **parenchymal o.**, **parenchymatous o.**, organon parenchymatosum. **parietal a.**, parapineal o. **primitive fat o.**, brown adipose tissue. **reproductive o's**, those concerned with reproduction; see *organa genitalia* [NA], under *organum*. **reproductive o's, female**, *organa genitalia feminae*; see under *organum*. **reproductive o's, male**, *organa genitalia masculina*; see under *organum*. **o. of Rosenmüller**, epophoron. **rudimentary o.**, 1. a primordium. 2. an imperfectly or incompletely developed organ. **o. of Ruffini**, brushes of Ruffini. **segmental o.**, the pronephros, mesonephros, and metanephros together. **sense o's, sensory o's**, *organa sensuum*. See under *organum*. **o. of shock, shock o.**, the organ which reacts in anaphylactic shock; those organs whose responses determine the nature and, to a large extent, the outcome of a given anaphylactic reaction. **o's of special sense**, *organa sensuum*; see under *organum*. **spiral o.**, organum spirale. **subcommissural o.**, a collection of columnar cells lining the roof of the caudal end of the third ventricle of the brain; thought to play a role in maintaining water and salt balance. **target o.**, the organ that is affected by a particular hormone. **terminal o.**, the organ situated at either end of a reflex neural arc. **urinary o's**, the organs that are concerned with the production and excretion of urine (*organa uropoetica*), including the kidneys, ureters, bladder, and urethra. **vestibulocochlear o's**, those structures outside the central nervous system which are concerned with vestibular and auditory function; see *organum vestibulocochleare* [NA]. **vestigial o.**, an undeveloped organ that, in the embryo or in some more or less remote ancestor, was well developed and functional. **o. of vision, visual o.**, organum visus. **vomeronasal o.**, organum vomeronasale. **Weber's o.**, utricle prostaticus. **o's of Zuckerkindl**, corpora paraaortica.

organa (or'gah-nah) plural of *organum* [L.] and *organon* [Gr.].

organacidia (or'gan-ah-sid'e-ah) the presence of an organic acid, especially in the stomach.

organella (or'gan-el'ah), pl. *organellae* [L.] organelle.

organellae (or'gan-el'e) plural of *organella*.

organelle (or/'gan-el') [L. *organella*] 1. a specific particle of membrane-bound organized living substance present in practically all eukaryotic cells, including mitochondria, the Golgi complex, endoplasmic reticulum, lysosomes, ribosomes, centrioles, and the cell center, as well as the plastids of plant cells. 2. one of the minute organs of protozoa concerned with such functions as locomotion, metabolism, or the like.

organic (or-'gan/'ik) [L. *organicus*; Gr. *organikos*] 1. pertaining to an organ or the organs. 2. having an organized structure. 3. arising from an organism. 4. pertaining to substances derived from living organisms. 5. denoting chemical substances containing carbon. 6. pertaining to or cultivated by the use of animal or vegetable fertilizers, rather than synthetic chemicals.

organicism (or-'gan/'i-sizm) 1. the theory that all symptoms are due to organic disease. 2. the theory that each of the various organs of the body has its own special constitution.

organicist (or-'gan/'i-sist) one who believes that the symptoms of disease are due to organic changes.

Organidin (or-'gan/'i-din) trademark for a preparation of iodinated glycerol.

organism (or/'gah-nizm) any individual living thing, whether animal or plant. **consumer o's**, the organisms of an ecosystem, plants or animals, that eat other plants or animals. **Glover's o.**, a gram-positive microorganism isolated by Glover from various types of malignant tumor. **nitrifying o's**, those nitrogen bacteria which are capable of oxidizing nitrites to nitrates. **nitrosifying o's**, those nitrogen bacteria which are capable of oxidizing ammonia to nitrites. **pleuropneumonia-like o's**, a group of organisms of the genus *Mycoplasma*; abbreviated PPLO. See *pleuropneumonia-like*.

organization (or/'gah-ni-'za'shun) 1. the process of organizing or of becoming organized. 2. the replacement of blood clots by fibrous tissue. 3. an organized body, group, or structure.

organize (or/'gah-niz) to provide with an organic structure; to form into organs.

organizer (or/'gah-niz'er) a part of an embryo which so influences some other part as to bring about and direct its histological and morphological differentiation. Parts developing as a result of induction, and inducing in their turn are classified as organizers of the second grade, third grade, and so on. Cf. *activator* (def. 2) and *inductor*. **nucleolar o.**, **nucleolus o.**, material responsible for organization of the nucleolus of a cell; it is thought to comprise slender strands of heterochromatin by which satellites are attached to the rest of the chromosome. **primary o.**, the dorsal lip region of the blastopore. **procentriole o.**, deuterosome. **secondary o.**, one of second grade, such as the optic cup, which exerts influence on the lens. **tertiary o.**, one of third grade, such as the tympanic ring, which exerts influence on the tympanic membrane.

organo- (or/'gah-no) [Gr. *organon* organ] a combining form denoting relationship to an organ.

organochlorine (or/'gah-no-'klo'rēn) any compound of chlorine and organic elements, as an organochlorine pesticide, e.g., DDT.

organofaction (or/'gah-no-'fak'shun) the formation and development of an organ.

organoferric (or/'gah-no-'fer'ik) containing iron and some organic compound.

organogel (or-'gan/'o-jel) a gel in which an organic liquid takes the place of water.

organogen (or-'gan/'o-jen) any of the chemical elements—carbon, hydrogen, oxygen, nitrogen, sulfur, phosphorus, and chlorine—characteristic of organic substances.

organogenesis (or/'gah-no-'jen'ē-sis) [*organo-* + Gr. *genesis* generation] the origin and development of organs.

organogenetic (or/'gah-no-'jē-net'ik) pertaining to organogenesis.

organogenic (or/'gah-no-'jen'ik) originating in an organ.

organogeny (or/'gah-noj'ē-ne) organogenesis.

organography (or-'gah-'nog/'rah-fe) [*organo-* + Gr. *graphein* to write] 1. the roentgenologic visualization of the organs of the body. 2. (*obs.*) a description of the organs of a living body.

organoid (or/'gah-noid) [*organ* + Gr. *eidos* form] 1. resembling an organ. 2. a structure which resembles an organ. **cytoplasmic o's**, structures present in all cells which are probably able to divide and thus perpetuate themselves, in contrast to lifeless cell inclusions. Organoids include mitochondria, fibrils, Golgi apparatus, and centrosomes.

organoleptic (or/'gah-no-'lep'tik) [*organo-* + Gr. *lambanein* to seize] 1. making an impression on an organ of special sense. 2. capable of receiving a sense impression.

organology (or-'gah-'nol/'o-je) [*organo-* + *-logy*] the sum of what is known regarding the organs of the body.

organoma (or-'gah-'no-'mah) a tumor composed of organs or definite portions of an organ, or characterized by the presence in it of definite organs, as a dermoid cyst.

organomegaly (or/'gah-no-'meg'ah-le) [*organo-* + Gr. *megas* large] enlargement of the viscera; visceromegaly.

organomercurial (or/'gah-no-'mer-'ku're-al) any mercury-containing organic compound, e.g., the diuretic mercaptomerin.

organometallic (or-'gah-'no-'mē-'tal'ik) consisting of a metal in combination with an organic radical.

organon (or/'gah-non), pl. *or'gana* [Gr.] a somewhat independent part of the body that performs a special function; see *organum*. **o. audi'tus**, organum vestibulocochleare. **or'gana genita'lia**, see under *organum*. **or'gana genita'lia mulie'bria**, see *organa genitalia feminina*, under *organum*. **or'gana genita'lia viril'ia**, see *organa genitalia masculina*, under *organum*. **o. gus'tus**, organum gustus. **or'gana oc'uli accesso'ria** see under *organum*. **o. olfac'tus**, organum olfactus. **o. parenchymato'sum**, a parenchymatous organ. **or'gana sen'suum**, see under *organum*. **o. spira'le** [Cor'tii], organum spirale. **or'gana uropoët'ica**, see *organa uropoietica*, under *organum*. **o. vi'sus**, organum visus. **o. vomeronasa'le** [Jacobson'i], organum vomeronasale.

organonomy (or/'gah-non/'o-me) [*organo-* + Gr. *nomos* law] the laws of organic life and of living organisms.

organopathy (or/'gah-nop'ah-the) [*organo-* + Gr. *pathos* disease] 1. organic disease. 2. organotherapy.

organopexia (or/'gah-no-'pek'se-ah) organopexy.

organopexy (or/'gah-no-'pek'se) [*organo-* + Gr. *pēxis* fixation] the surgical fixation of an organ, especially of the uterus.

organophilic (or/'gah-no-'fil'ik) [*organo-* + Gr. *philein* to love] organotropic.

organophilism (or-'gah-'nof'i-'lizm) organotropism.

organophosphate (or/'gan-'o-'fos'fāt) phosphate esterified to organic compounds such as glucose or sorbitol; see *organophosphorus*.

organophosphorus (or/'gah-no-'fos'fō-rus) a compound containing phosphorus bound to an organic molecule; many organophosphorus compounds are powerful acetylcholinesterase inhibitors and are used as insecticides.

organoscopy (or-'gah-'nos/'ko-pe) [*organo-* + Gr. *skopein* to examine] examination of the abdominal viscera by means of an endoscope inserted through an incision in the abdominal wall.

organotaxis (or/'gah-no-'tak'sis) [*organo-* + Gr. *taxis* arrangement] a tendency to selective migration to some particular organ.

organotherapy (or/'gah-no-'ther'ah-pe) [*organo-* + Gr. *therapeia* therapy] the treatment of disease by the administration of animal endocrine organs or their extracts; called also *Brown-Séquard's treatment*. See *opotherapy*. **heterologous o.**, organotherapy with substances that have no relation to the diseased organ of the patient. **homologous o.**, organotherapy by extracts of the organs of animals corresponding to the diseased organ of the patient.

organotrope (or-'gan/'o-trōp) an organotropic element or agent.

organotrophic (or/'gah-no-'trōf'ik) 1. relating to the nutrition of organs of the body. 2. deriving energy from the oxidation of organic compounds; said of bacteria.

organotropic (or/'gah-no-'trōp'ik) pertaining to or characterized by organotropism.

organotropism (or-'gah-'not/'ro-pizm) [*organo-* + Gr. *trōpē* a turning] the special affinity of chemical compounds or of pathogenic agents for particular tissues or organs of the body.

organotropy (or/'gan-'ot/'ro-pe) organotropism.

organ-specific (or/'gan-'spē-'sif'ik) restricted to, or having an effect only on, a particular organ, as an organ-specific antigen.

organule (or/'gan-'ül) an end-organ of sensory receptors, such as a taste bud.

organum (or/'gah-num), pl. *or'gana* [L.] [NA] an organ: a somewhat independent part of the body that is arranged according to a characteristic structural plan, and performs a special function or functions; it is composed of various tissues, one of which is primary in function. Called also *organon*. **or'gana genita'lia**, genital organs: the various internal and external organs that are concerned with reproduction; see Plate accompanying system. **or'gana genita'lia femini'na** [NA], female genital organs: the various organs in the female that are concerned with reproduction, including the ovary, uterine tube, uterus, vagina, labia, and clitoris. Called also *organa genitalia muliebria*. See Plate accompanying system. **or'gana genita'lia masculi'na** [NA], male genital organs: the various organs in the male that are concerned with reproduction, including the testis, epididymis, ductus deferens, seminal vesicle, ejaculatory duct, prostate, bulbourethral gland, and penis; called also *organa genitalia virilia*. See Plate accompanying system. **o. gus'tus** [NA], gustatory organ: the organ of taste, comprising the taste buds, most of which are found within the epithelial covering of the tongue. Called also *organon gustus*. **or'gana oc'uli accesso'ria** [NA], the accessory organs of the eye, including the ocular muscles and fascia, and the eyebrows, eyelids, conjunctiva, and lacrimal apparatus. Called also *adnexa oculi*. See Plate accompanying eye. **o. olfac'tus** [NA], olfactory organ: the specialized structures subserving the function of the sense of smell, including the olfactory region of the nasal mucosa containing the bipolar cells

of origin of the olfactory nerves, together with the olfactory glands; called also *organon olfactus*. **or'gana sen'suum** [NA], sense organs: organs that receive stimuli which give rise to sensations, i.e., organs which translate certain forms of energy into nerve impulses that are perceived as special sensations; they are characterized by highly specialized neuroreceptors and relationships, and include the visual, vestibulocochlear, olfactory, and gustatory organs. Called also *organs of special sense*. **o. spirale** [NA], spiral organ: the organ, resting on the basilar membrane in the cochlear duct, that contains the special sensory receptors for hearing; it consists of neuroepithelial hair cells and several types of supporting cells, including the inner and outer pillar cells, inner and outer phalangeal cells, border cells, and Hansen's cells. Called also *organon spirale* [Corti] and *organ of Corti*. **or'gana uropoët'ica** [NA], **or'gana uropoiet'ica**, the organs concerned with the production and excretion of urine, including the kidneys, ureters, bladder, and urethra; called also *urinary organs*. See Plate accompanying system. **o. vestibulocochlea're** [NA], vestibulocochlear organ: a collective term in official anatomical nomenclature applied to those structures outside the central nervous system that are concerned with balance and hearing, and comprising the internal, middle, and external ear. Called also *organon auditus*. See Plate accompanying ear. **o. visus** [NA], organ of vision: a collective term in official anatomical nomenclature applied to those structures outside the central nervous system that are concerned with vision, comprising the eyeball and its fibrous, vascular, and internal tunics, and the accessory organs of the eye. Called also *organon visus*. See Plate accompanying eye. **o. vomeronasa'le** [NA], vomeronasal organ: a short rudimentary canal just above the vomeronasal cartilage, opening in the side of the nasal septum and passing from there blindly upward and backward; called also *organon vomeronasale* [Jacobson] and *Jacobson's organ*.

orgasm (or'gasm) [Gr. *orgasmos* swelling, or *organ* to swell, to be lustful] the apex and culmination of sexual excitement.

orgotein (or'go-tēn) any of a group of water-soluble congeners derived from red blood cells, liver, and other tissues, of molecular weight about 33,000 with compact conformation maintained by about 4 gram-atoms of divalent metal; produced from beef liver as a copper-zinc mixed chelate having superoxide dismutation activity. Orgotein has anti-inflammatory properties and has been used as an antirheumatic.

Oribasius (or'i-ba'se-us) [325-403 A.D.] a famous physician and medical writer who became physician to the Emperor Julian. His *magnum opus* was an encyclopedia of medicine in seventy volumes, of which only some seventeen survive; these are invaluable for they contain extracts from the works of many important physicians of antiquity (e.g., Dioscorides, Galen, Antyllus).

orientation (o're-en-ta'shun) [L. *oriens* arising] the determination of the east point; hence, the determination of one's position with respect to space and time.

orifice (or'i-fis) [L. *orificium*] 1. the entrance or outlet of any cavity in the body. 2. any foramen, meatus, or opening. Called also *ostium* [NA] and *orificium*. **abdominal o. of uterine tube**, ostium abdominale tubae uterinae. **aortic o.**, the opening of the aorta in the left ventricle of the heart. **o. of aqueduct of vestibule**, external, apertura externa aqueductus vestibuli. **atrioventricular o.**, **auriculoventricular o.**, see *ostium atrioventriculare dextrum* and *ostium atrioventriculare sinistrum*. **canal o.**, root canal. **cardiac o.**, ostium cardiacum. **duodenal o. of stomach**, ostium pyloricum. **epiploic o.**, foramen epiploicum. **o. of female urethra**, external, ostium urethrae externum feminina. **hymenal o.**, ostium vaginae. **o. of male urethra**, external, ostium urethrae externum masculinae. **o. of maxillary sinus**, hiatus maxillaris. **mitral o.**, ostium atrioventriculare sinistrum. **pharyngeal o.**, ostium pharyngeum tubae auditivae. **pilosebaceous o's**, the openings of the hair follicles, giving egress to the secretion of the sebaceous glands whose ducts open into the follicles, and to the hairs. **pulmonary o.**, the opening of the pulmonary artery in the right ventricle of the heart. **o. of pulp canal**, foramen apicis dentis. **root canal o.**, an opening in the floor of the pulp chamber of a tooth, leading into a root canal. **o. of ureter**, ostium ureteris. **o. of urethra**, internal, ostium urethrae internum. **uterine o. of uterine tube**, ostium uterinum tubae uterinae. **o. of uterus**, external, ostium uteri. **vesicourethral o.**, ostium urethrae internum.

orificia (or'i-fish'e-ah) plural of *orificium*.

orificial (or'i-fish'al) pertaining to an orifice.

orificialist (or'i-fish'al-ist) one who treats disease by dilating or otherwise operating upon the external orifices of the body.

orificium (or'i-fish'e-um), pl. *orificia* [L.] an opening or orifice, especially the entrance or outlet of any cavity or tube. Called *ostium* [NA]. **o. exter'num isth'mi**, **o. exter'num u'teri**, ostium uteri. **o. hy'menis**, ostium vaginae. **o. inter'num isth'mi**, **o. inter'num u'teri**, the internal orifice of the cervix uteri, opening into the cavity of the uterus. **o. ure'teris**, ostium ureteris. **o. ure'thrae exter'num mulie'bris**, ostium urethrae externum feminina. **o. ure'thrae exter'num vir'ilis**, ostium urethrae externum masculinae.

o. ure'thrae inter'num, ostium urethrae internum. **o. vagi'nae**, ostium vaginae.

origin (or'i-jin) [L. *origo* beginning] the source or beginning of anything, especially the more fixed end or attachment of a muscle (as distinguished from its insertion), or the site of emergence of a peripheral nerve from the central nervous system.

Orimune (or'i-mūn) trademark for a preparation of live oral poliovirus vaccine.

Orinase (or'i-nās) trademark for a preparation of tolbutamide.

orinotherapy (o-ri'no-ther'ah-pe) [Gr. *oreinos* pertaining to mountains + *therapeia* treatment] treatment by living in high, mountainous regions.

ormetoprim (or-met'o-prim) chemical name: 2,4-diamino-5-(6-methylveratryl)pyrimidine; an antibacterial, C₁₄H₁₈N₄O₂.

Orn ornithine.

ornidazole (or-nid'ah-zōl) chemical name: α-(chloromethyl)-2-methyl-5-nitro-1*H*-imidazole-1-ethanol; an anti-infective, C₇H₁₀ClN₃O₃.

ornithine (or'nī-thin) an amino acid, α,δ-diaminovalerianic acid, NH₂(CH₂)₃·CH(NH₂)·CO₂H, it is produced in the urea cycle by the splitting off of urea from arginine and is itself converted into citrulline. On decomposition, it gives rise to putrescine.

Ornithodoros (or'nī-thod'o-ros) [Gr. *ornis*, *ornithos* bird + *doros* bag] a genus of argasid ticks, many species of which are the reservoirs and vectors of the spirochetes (*Borrelia*) of relapsing fevers. The chief vectors are: *O. as'perus* of Asia; *O. duge'si* of Mexico; *O. errat'icus* of Spain and North Africa; *O. gur'neyi* of Australia; *O. herm'si* of western United States; *O. moub'a'ta*, the tampan or tampan tick of South Africa; *O. norman'di* of Tunisia; *O. par'keri* of western United States; *O. ru'dis* of Central and South America; *O. savign'yi* of Africa, Arabia, and India; *O. tala'je* of the tropics of North and South America; *O. tartakov'skyi* in Russia; *O. tholozan'i* in Turkestan, Syria, and Palestine; *O. turica'ta* in Mexico, Texas, Arizona, Colorado, and California; *O. verrucosus* of North Caucasus. **O. coria'ceus**, the pajaroello, a venomous

Ornithodoros moubata (after Chandler).

tick of California whose bite causes painful swellings; it is not known to transmit disease.

Ornithonyssus (or'nī-tho-nis'us) a genus of mites; formerly called *Liponyssus*. **O. baco'ti**, the rat mite or tropical rat mite; a species whose bite may cause a painful dermatitis (rat-mite dermatitis), and which experimentally transmits murine typhus; formerly called *Leignathus bacoti* and *Liponyssus bacoti*. **O. bur'sa**, the tropical fowl mite, commonly found on chickens and wild birds or in their nests. **O. sylvia'rum**, the northern fowl mite, commonly a parasite of many domestic and wild fowl.

ornithosis (or'nī-tho'sis) [Gr. *ornis*, *ornithos* bird + *-osis*] a contagious disease of nonsittacine birds caused by a strain of *Chlamydia psittaci* and marked by respiratory and systemic infection. In man and psittacine birds, it is known as *psittacosis*.

oro- (o'ro) 1. [L. *os*, *oris* mouth] a combining form denoting relationship to the mouth. 2. [Gr. *oros* the watery part of the blood (serum), or whey] see *orrho-*.

orodiagnosis (or'o-di'ag-no'sis) (*obs.*) serum diagnosis.

orogranulocyte (o'ro-gran'u-lo-sit') [oro-(1) + *granulocyte*] any of the polymorphonuclear leukocytes suspended in the mucus layer on the free surfaces of oral tissues.

orogranulocytic (o'ro-gran'u-lo-sit'ik) pertaining to orogranulocytes.

oro-immunity (o'ro-i-mu'nī-te) [oro-(2) + *immunity*] passive immunity.

orokinase (o'ro-kin'ās) [oro-(1) + *kinase*] a kinase produced by the buccal glands of certain animals which converts inactive ptyalin into active ptyalin.

orolingual (o'ro-ling'gwal) [oro-(1) + L. *lingua* tongue] pertaining to the mouth and tongue.

oromaxillary (o'ro-mak'si-ler'e) pertaining to the mouth and the maxillary region.

oromeningitis (or'o-men'in-jī'tis) orrhomeningitis.

oronasal (o'ro-na'zal) [oro-(1) + L. *nasus* nose] pertaining to the mouth and nose.

oropharynx (o'ro-far'inks) [oro-(1) + *pharynx*] that division of the pharynx which lies between the soft palate and the upper edge of the epiglottis (pars oralis pharyngis [NA]).

Oropsylla (o'ro-sil'ah) a genus of fleas. **O. idahoensis**, a rodent flea of the western United States, implicated in the transmission of sylvatic plague. **O. monta'na**, former name for *Diamanus montanus*. **O. silantiew'i**, a flea of the Manchuria marmot or tarbagan, capable of transmitting plague.

orosomuroid (or'ō-so-mu'koid) α₁-acid glycoprotein, a glycoprotein occurring in blood plasma.

orotherapy (o'ro-ther'ah-pe) [oro(2) + Gr. *therapeia* treatment] 1. whey cure; the treatment of disease by administering whey. 2. serotherapy.

orotic aciduria (o-rot'ik-as'ī-du're-ah) orotic aciduria; see under *aciduria*.

Oroya fever (o-ro'yah) [*Oroya*, a region in Peru] see under *fever*.

orpanoxin (or'pah-nok'sin) chemical name: 5-(4-chlorophenyl)-β-hydroxy-2-furanpropanoic acid; an anti-inflammatory, C₁₅H₁₁ClO₄.

orphenadrine (or-fen'ah-drēn) chemical name: *N,N*-dimethyl-2-(*o*-methyl-*α*-phenylbenzyl)oxyethylamine. The *ortho*-methyl analogue of diphenhydramine, C₁₈H₂₃NO; it possesses antihistaminic, antitremor, and antispasmodic activities. Called also *mephénamine*. **o. citrate** [USP], the citrate salt of orphenadrine, C₁₈H₂₃NO·C₆H₅O₇, occurring as a white, crystalline powder; used as a skeletal muscle relaxant in acute spasm of voluntary muscles, regardless of location, especially post-traumatic, discogenic, and tension spasms, administered orally, intramuscularly, and intravenously. **o. hydrochloride**, the hydrochloride salt of orphenadrine, C₁₈H₂₃NO·HCl, occurring as a white crystalline powder; used in the treatment of parkinsonian and drug-induced extrapyramidal reactions, administered orally.

Orr treatment (method, technic) [Hiram Winnett Orr, American orthopedic surgeon, 1877–1956] see under *treatment*.

orrh- (or'o) [Gr. *orrhos* serum] a combining form denoting relationship to serum.

orrhodiagnosis (or'o-di'ag-no'sis) (*obs.*) serum diagnosis.

orrhoid immunity (or'o-i-mu'nī-te) [orrh- + *immunity*] passive immunity.

orrhology (or-ol'o-je) [orrh- + *-logy*] the scientific study of serums; serology.

orrhomeningitis (or'o-men'in-jī'tis) [orrh- + *meningitis*] inflammation of a serous membrane.

orrhoreaction (or'o-re-ak'shun) [orrh- + *reaction*] seroreaction.

orrhorrhea (or-o-re'ah) [orrh- + Gr. *rhoia* flow] (*obs.*) a watery or serous discharge.

orrhotherapeutic (or'o-ther'ah-pu'tik) pertaining to or of the nature of orrhoterapy.

orrhotherapy (or'o-ther'ah-pe) [orrh- + *therapy*] the therapeutic use of serums; serotherapy.

orris (or'is) 1. any of several species of herbs of the genus *Iris*, especially *I. florentina* L. (Iridaceae). 2. orris root: the peeled, dried, and powdered, fragrant root of *Iris florentina* and other species of *Iris*; used in dentifrices, toilet and dusting powders, perfumery, etc.

O.R.S. Orthopedic Research Society.

Orsi-Grocco method (or'se-grok'o) [Francesco Orsi, 1828–1890; Pietro Grocco, 1857–1916, Italian physicians] see under *method*.

orthergasia (or'ther-ga'ze-ah) [ortho- + Gr. *ergon* work] a condition of normal mental functioning and adjustment; euergasia.

orthesis (or-the'sis), pl. *orthes'es*. Orthosis.

orthetic (or-thet'ik) orthotic.

orthetics (or-thet'iks) orthotics.

orthetist (or-thē-tist) orthotist.

ortho- (or'tho) [Gr. *orthos* straight] a combining form meaning straight, normal, correct, etc. In chemistry, this prefix indicates an isomer; also a cyclic derivative which has two substituents in adjacent positions.

ortho-acid (or'tho-as'id) an acid containing as many hydroxyl groups as the valence of the acidulous element.

orthoarтеріотony (or'tho-ar'te'ne-o'to-ne) [ortho- + Gr. *arteria* artery + *tonos* tension] normal arterial pressure.

orthobiosis (or'tho-bi-o'sis) [ortho- + Gr. *biōsis* way of life] proper living; living in accordance with all the laws of health.

orthocephalic (or'tho-sē-fal'ik) [Gr. *orthos* straight + *kephale* head] having a head with a vertical index of 70.1 to 75.

orthocephalous (or'tho-sef'ah-lus) orthocephalic.

orthochorea (or'tho-ko-re'ah) [ortho- + *chorea*] choreic movements in the erect posture.

orthochromatic (or'tho-kro-mat'ik) 1. normally colored or stained. 2. denoting a photographic emulsion sensitive to all colors except red.

orthochromia (or'tho-kro-me-ah) [ortho- + Gr. *chrōma* color + *-ia*] normal hemoglobin content of the erythrocytes.

orthochromophil (or'tho-kro-mo-fil) [ortho- + Gr. *chrōma* color + *philein* to love] staining normally with neutral stains.

orthocrasia (or'tho-kra'se-ah) [ortho- + Gr. *krasis* a mixing + *-ia*] (*obs.*) a state in which the body reacts normally to ingested or injected drugs, proteins, etc.

orthocresol (or'tho-kre'sol) one of the three isomeric forms of cresol.

orthocytosis (or'tho-si-to'sis) [ortho- + *-cyte* + *-osis*] the presence of mature cells only in the blood.

orthodactylous (or'tho-dak'ti-lus) [ortho- + Gr. *daktylos* finger] having straight digits.

orthodentin (or'tho-den'tin) [ortho- + *dentin*] straight-tubed dentin, as seen in the teeth of mammals.

orthodeoxia (or'tho-de-ok'se-ah) accentuation of arterial hypoxemia in the erect position, improved by assumption of a recumbent position.

orthodiagram (or'tho-di'ah-gram) the print or record made by an orthodiagraph; the silhouette of an organ as traced in orthodiascopy.

orthodiagraph (or'tho-di'ah-graf) [ortho- + Gr. *dia* through + *graphein* to write] a radiographic apparatus for recording accurately the form and size of structures inside the body, doing away with the distortion of the ordinary roentgen-ray plate; called also *orthoskiagraph*.

orthodiagraphy (or'tho-di-ag'rah-fe) the use of the orthodiagraph; called also *orthoskiagraphy*.

orthodiascope (or'tho-di'ah-skōp) an instrument for orthodiascopy.

orthodiascopy (or'tho-di-as'ko-pe) undistorted fluoroscopy, especially the direct tracing of the silhouette of an organ (e.g., the heart) as projected on a fluoroscopic screen.

orthodichlorobenzene (or'tho-di-klo'ro-ben'zēn) an insecticide, C₆H₄Cl₂, used as a spray.

orthodigita (or'tho-dij'i-tah) [ortho- + L. *digitus* finger or toe] the art of correcting deformities of the toes and fingers.

orthodontia (or'tho-don'she-ah) orthodontics.

orthodontic (or'tho-don'tik) pertaining to the proper positioning and relationship of the teeth.

orthodontics (or'tho-don'tiks) [ortho- + Gr. *odous* tooth] that branch of dentistry which deals with the development, prevention, and correction of irregularities of the teeth and malocclusion, and with associated facial abnormalities. **corrective o.**, that phase of orthodontics which is concerned with the reduction or elimination of an existing malocclusion and its attendant sequelae. **interceptive o.**, that phase of orthodontics which is concerned with elimination of a condition which might lead to the development of malocclusion. **preventive o.**, that phase of orthodontics which is concerned with preservation of the integrity of what appears to be normal occlusion.

orthodontist (or'tho-don'tist) a dentist who specializes in orthodontics.

orthodontology (or'tho-don-to'l'o-je) orthodontics.

orthodromic (or'tho-drom'ik) [Gr. *orthodromein* to run straight forward] conducting impulses in the normal direction; said of nerve fibers. Cf. *antidromic*.

orthogenesis (or'tho-jen'ē-sis) [ortho- + *genesis*] 1. progressive evolution in a given direction, in contrast with variations in several directions. 2. the theory that the course of evolution is fixed and predetermined; monogenesis.

orthogenics (or'tho-jen'iks) [ortho- + Gr. *genikos* sexual] eugenics.

orthoglycemic (or'tho-gli-se'mik) [ortho- + Gr. *glykys* sweet + *haima* blood] having the normal amount of sugar in the blood.

Orthognatha (or-thog'nah-thah) a suborder of spiders (order Araneae) of temperate and tropical areas of the world; Theraphosidae and Dipluridae are families of medical importance.

orthognathia (or'thog-nath'e-ah) orthognathics.

orthognathic (or'thog-na'thik) 1. pertaining to orthognathics. 2. orthognathous.

orthognathics (or'thog-na'thiks) the science dealing with the cause and treatment of malposition of the bones of the jaw.

orthognathous (or-thog'nah-thus) [ortho- + Gr. *gnathos* jaw] having a gnathic index of less than 98.

orthograde (or'tho-grād) [ortho- + L. *gradi* to walk] characterized by walking with the body upright; said of bipeds. Cf. *pronograde*.

orthomelic (or'tho-me'lik) [ortho- + Gr. *melos* limb] correcting deformities of the limbs.

orthometer (or-thom'ē-ter) [ortho- + Gr. *metron* measure] an instrument for finding the relative protrusion of the two eyeballs.

orthomolecular (or'tho-mo-lek'u-lar) [ortho- + *molecular*] relating to or aimed at restoring the optimal concentrations and functions at the molecular level of the substances (e.g., vitamins) normally present in the body.

orthomorphia (or'tho-mor'fe-ah) [ortho- + Gr. *morphē* form] the surgical and mechanical correction of deformities.

orthomyxovirus (or'tho-mik'so-vi'rus) a subgroup of the myxoviruses that includes the viruses of human and animal influenza; cf. *paramyxovirus*.

orthoneutrophil (or'tho-nu'tro-fil) orthochromophil.

orthopaedic (or'tho-pe'dik) orthopedic.

orthopaedics (or''tho-pe'diks) orthopedics.

orthopantomograph (or''tho-pan'to-graf'') panoramic radiograph.

Orthopantomograph (or''tho-pan'to-mo-graf) trademark for the equipment used in panoramic radiography.

orthopedic (or''tho-pe'dik) [*ortho-* + Gr. *pais* child] pertaining to the correction of deformities of the musculoskeletal system; pertaining to orthopedics.

orthopedics (or''tho-pe'diks) [*ortho-* + Gr. *pais* child] that branch of surgery which is specially concerned with the preservation and restoration of the function of the skeletal system, its articulations and associated structures. **dental o.**, **dentofacial o.**, orthodontics; the correction of malformations of the face and jaws. **functional jaw o.**, utilization of muscle forces to effect changes in jaw position and tooth alignment by removable appliances, such as a function corrector or monobloc activator.

orthopedist (or''tho-pe'dist) an orthopedic surgeon.

orthopercussion (or''tho-per-kush'un) [*ortho-* + *percussion*] percussion in which the distal phalanx of the pleximeter finger is held perpendicularly to the chest wall.

Orthopercussion.

orthophenanthroline (or''tho-fe-nan'thro-lēn) a white powder, $C_{12}H_8N_2 \cdot H_2O$, used as an indicator.

orthophenolase (or''tho-fe'nol-ās) an enzyme in sweet potatoes which oxidizes catechol and orthocresol.

orthophony (or-thof'o-ne) [*ortho-* + Gr. *phōnē* voice] the direct and correct production of sound.

orthophoria (or''tho-fo're-ah) [*ortho-* + Gr. *pherein* to bear + *-ia*] the normal or proper placement of organs, especially the condition in which visual axes remain parallel after the visual fusional stimuli have been partially or entirely eliminated. **asthenic o.**, general weakness of the eye muscles.

orthophoric (or''tho-for'ik) pertaining to or marked by orthophoria.

orthophosphate (or''tho-fos'fāt) a salt of orthophosphoric acid; a compound of the type M_3PO_4 .

orthophrenia (or''tho-fre'ne-ah) [*ortho-* + Gr. *phrēn* mind + *-ia*] the condition of normal mental reactivity in social relations.

orthopia (or-tho'pe-ah) the prevention or correction of strabismus.

orthoplessimeter (or''tho-ple-sim'ē-ter) an instrument to take the place of the pleximeter finger in orthopercussion.

orthopnea (or''thop-ne'ah) [*ortho-* + Gr. *pnōia* breath] difficult breathing except in an upright position. Cf. *platypnea*. **two-pillow o.**, see under *position*.

orthopneic (or''thop-ne'ik) pertaining to or marked by orthopnea.

orthopod (or''tho-pod) orthopedist.

orthopraxis (or''tho-prak'sis) orthopraxy.

orthopraxy (or''tho-prak-se) [*ortho-* + Gr. *prassein* to make] the mechanical correction of deformities.

orthopsychiatry (or''tho-si-ki'ah-tre) [*ortho-* + *psychiatry*] that branch of psychiatry which deals with mental and emotional development, embracing child psychiatry and mental hygiene.

Orthoptera (or-thop'ter-ah) [*ortho-* + Gr. *pteron* wing] an order of biting insects which do not undergo metamorphosis; they include the grasshoppers, locusts, crickets, and cockroaches.

orthoptic (or-thop'tik) [*ortho-* + Gr. *optikos* of or for sight] correcting obliquity of one or both visual axes.

orthoptics (or-thop'tiks) a technique of eye exercises designed to correct the visual axes of eyes not properly coordinated for binocular vision.

orthoptist (or-thop'tist) an expert in orthoptics.

orthoptoscope (or-thop'to-skōp) [*ortho-* + Gr. *op-* to see + *sko-pein* to examine] an instrument for orthoptic or exercise treatment in anomalies of the ocular muscles.

orthorhombic (or''tho-rōm'bik) having three unequal axes intersected at right angles.

orthoroentgenography (or''tho-rent''gen-og'rah-fe) orthodiagraphy.

orthorrhachic (or''tho-rak'ik) [*ortho-* + Gr. *rhachis* spine] having a vertebral column with practically no curvature in the lumbar region; cf. *koilorrhachic* and *kytorrhachic*.

orthoscope (or''tho-skōp) [*ortho-* + Gr. *sko-pein* to examine] an apparatus which neutralizes the corneal refraction by means of a layer of water; it is used in examining the eye.

orthoscopic (or''tho-skop'ik) affording a correct and undistorted view.

orthoscopy (or-thos'ko-pe) examination of the eye by means of the orthoscope.

orthosis (or-tho'sis), pl. *ortho'ses* [Gr. *orthōsis* making straight] an orthopedic appliance or apparatus used to support, align, prevent, or correct deformities or to improve the function of movable parts of the body.

orthoskiagraph (or''tho-ski'ah-graf) orthodiagraph.

orthoskiagraphy (or''tho-ski-ag'rah-fe) orthodiagraphy.

orthostatic (or''tho-stat'ik) [*ortho-* + Gr. *statikos* causing to stand] pertaining to or caused by standing erect.

orthostatism (or''tho-stat'izm) an erect standing position of the body.

orthostereoscope (or''tho-ste're-o-skōp) an apparatus for stereoscopic radiography.

orthosympathetic (or''tho-sim''pah-thet'ik) a term applied to the sympathetic (thoracolumbar) division of the autonomic nervous system as contrasted with the parasympathetic (craniosacral) division.

orthotast (or''tho-tast) [*ortho-* + Gr. *tassein* to arrange] an apparatus for straightening curvatures of bones.

orthoterion (or''tho-te're-on) [Gr. *orthōtēr* one who sets straight] a device for use in straightening crooked limbs.

orthotherapy (or''tho-ther'ah-pe) [*ortho-* + *therapy*] treatment of disorders by correction of posture.

orthotic (or-thot'ik) serving to protect or to restore or improve function; pertaining to the use or application of orthoses.

orthotics (or-thot'iks) the field of knowledge relating to orthoses and their use.

orthotist (or''tho-tist) [Gr. *orthōtēr* a restorer or preserver] a person skilled in orthotics and practicing its application in individual cases.

ortho-tolueno-azo-beta-naphthol (or''tho-tol'u-ēn'o-az''o-ba'tah-naf'thol) a poisonous dye used in processing citrus fruits.

orthotonos (or-thot'o-nos) [*ortho-* + Gr. *tonos* tension] tetanic fixation of the head, body, and limbs in a rigid straight line.

orthotonus (or-thot'o-nus) orthotonos.

orthotopic (or''tho-top'ik) [*ortho-* + Gr. *topos* place] occurring at the normal place or upon the proper part of the body; in tissue transplantation, said of a graft transferred to a position formerly occupied by tissue of the same kind.

orthotypoid (or''tho-ti'foid) typhoid fever as distinguished from paratyphoid.

orthovoltage (or''tho-vol'tij) in x-ray therapy, voltage in the range of 140 to 400 kilovolts; cf. *supervoltage*.

Orthoxine (or-thok'sēn) trademark for preparations of methoxyphenamine.

orthopsia (or-throp'se-ah) [Gr. *orthros* the time just about day-break + *opsis* vision] the ability of the human eye to see better during dawn or twilight than in bright sunlight.

orthuria (or-thu're-ah) [*ortho-* + Gr. *ouron* urine + *-ia*] normal frequency of urination.

Oryza (o-ri'zah) [L.; Gr. *oryza* rice] a genus of cereal plants; *O. sativa* produces rice.

oryzenin (o-ri'zē-nin) [Gr. *oryza* rice] 1. an extractive from rice bran. 2. a glutenin from rice.

O.S. abbreviation for L. *oc'ulus sinis'ter*, left eye.

Os chemical symbol for osmium.

os¹ (os), gen. *o'ris*, pl. *o'ra* [L. "an opening, or mouth"] any orifice of the body; [NA] the mouth; the anterior or proximal opening of the digestive apparatus. See *mouth*. **o. exter'nūm u'teri**, ostium uteri. **o. of uterus**, external, ostium uteri.

os² (os), gen. *os'sis*, pl. *os'sa* [L.] bone; [NA] a general term which is qualified by the appropriate adjective to designate a specific type of bony structure or a specific segment of the skeleton. **o. acetab'uli**, acetabulum. **o. acromia'le**, a movable joint between the spine of the scapula and the epiphysis of the acromion. **o. acromia'le seconda'rium**, a round structure appearing in the roentgenogram just above the tuberosity of the humerus.

o. basila're, a term applied to the sphenoid and occipital bones. **o. bre've** [NA], short bone: any bone whose main dimensions are approximately equal. **o. cal'cis**, NA alternative of *calcaneus*. **o. capita'tum** [NA], capitate bone: the bone in the distal row of carpal bones lying between the trapezoid and hamate bones. **o. carpa'le dista'le pri'mum**, **o. trapezium**. **o. carpa'le dista'le quar'tum**, **o. hamatum**. **o. carpa'le dista'le secun'dum**, **o. trapezoideum**. **o. carpa'le dista'le ter'tium**, **o. capitatum**. **os'sa car'pi** [NA], carpal bones: the eight bones of the wrist (carpus), including the *o. capitatum*, *o. hamatum*, *o. lunatum*, *o. pisiforme*, *o. scaphoideum*, *o. trapezium*, *o. trapezoideum*, and *o. triquetrum*. **o. centra'le** [NA], central bone: an accessory bone sometimes found on the back of the carpus. **o. centra'le tar'si**, **o. naviculare**. **o. coc'cygis** [NA], coccygeal bone: the small bone caudad to the sacrum in man, formed by union of four (sometimes five or three) rudimentary vertebrae, and forming the caudal extremity of the vertebral column; called also *coccyx*. **o. coro'nae**, the small pastern bone of the horse. **o. costa'le** [NA], a rib bone. **o. cox'ae** [NA], the hip bone, which comprises the ilium, ischium, and pubis. **os'sa cra'nii** [NA], cranial bones: the bones of the cranium, or skull, including the occipital, sphenoidal, temporal, parietal, frontal, ethmoidal, lacrimal, and nasal bones, the concha nasalis, and vomer. **o. cuboi'deum** [NA], cuboid bone: a bone on the lateral side of the tarsus between the calcaneus and the fourth and fifth metatarsal bones. **o. cuneifor'me interme'dium** [NA], intermediate cuneiform bone: the intermediate and smallest of the three wedge-shaped tarsal bones located medial to the cuboid and between the navicular and the first three metatarsal bones; called also *o. cuneiforme secundum*. **o. cuneifor'me latera'le** [NA], lateral cuneiform bone: the most lateral of the three wedge-shaped tarsal bones located medial to the cuboid and between the navicular and the first three metatarsal bones; called also *o. cuneiforme tertium*. **o. cuneifor'me media'le** [NA], medial cuneiform bone: the medial and largest of the three wedge-shaped tarsal bones located medial to the cuboid and between the navicular and the first three metatarsal bones; called also *o. cuneiforme primum*. **o. cuneifor'me pri'mum**, **o. cuneiforme mediale**. **o. cuneifor'me secun'dum**, **o. cuneiforme intermedium**. **o. cuneifor'me ter'tium**, **o. cuneiforme laterale**. **os'sa digito'rum ma'nus** [NA], the 14 bones that compose the skeleton of the fingers; called also *phalanges digitorum manus* or *phalanges of fingers*. **os'sa digito'rum pe'dis** [NA], the 14 bones that compose the skeleton of the toes; called also *phalanges digitorum pedis* or *phalanges of toes*. **o. epitympan'icum**, a bone of very early fetal life which becomes the posterior portion of the squama that aids in forming the mastoid cells. **o. ethmoida'le** [NA], ethmoid bone: the cubical bone located between the orbits and consisting of the lamina cribrosa, the lamina perpendicularis, and the paired lateral masses. **os'sa extremita'tis inferio'ris**, *ossa membri inferioris*. **os'sa extremita'tis superio'ris**, *ossa membri superioris*. **os'sa fa'ciei** [NA], facial bones: the bones that constitute the facial part of the skull, including the maxilla, palatine bone, zygomatic bone, mandible, and hyoid bone. **o. fronta'le** [NA], frontal bone: a single bone that closes the front part of the cranial cavity and forms the skeleton of the forehead; it is developed from two halves, the line of separation sometimes persisting in adult life. **o. hama'tum** [NA], hamate bone: the medial bone in the distal row of carpal bones. **o. hyo'i'deum** [NA], hyoid bone: a horseshoe-shaped bone situated at the base of the tongue, just above the thyroid cartilage. **o. il'i'um** [NA], the ilium: the expansive superior portion of the hip bone (*os coxae*); it is a separate bone in early life. **o. in'cae**, **o. interparietale**. **o. incisi'vum** [NA], incisive bone: the portion of the maxilla that bears the incisor teeth. Developmentally it is the premaxilla, which in the human subsequently fuses with the maxilla proper to form the adult bone. In most other vertebrates it persists as an independent bone. **o. innomina'tum**, **o. coxae**. **o. intercuneifor'me**, an occasionally occurring bone situated between the medial and intermediate cuneiform bones. **o. interme'dium**, **o. lunatum**. **o. intermetatar'seum**, an occasionally occurring accessory bone situated between the proximal ends of the first and second metatarsal bones. **o. interparieta'le** [NA], interparietal bone: the part of the squama of the occipital bone that lies superior to the highest nuchal line when this portion remains separate throughout life. **o. is'chii** [NA], the ischium: the inferior dorsal portion of the hip bone (*os coxae*); it is a separate bone in early life. **o. lacrima'le** [NA], lacrimal bone: a thin scalelike bone at the anterior part of the medial wall of the orbit, articulating with the frontal and ethmoid bones and the maxilla and inferior nasal concha. **o. lon'gum** [NA], long bone: any bone whose length exceeds its breadth and thickness, as the bones of the limbs. **o. luna'tum** [NA], lunate bone: the bone in the proximal row of carpal bones lying between the scaphoid and triquetrum bones. **o. mag'num**, **o. capitatum**. **o. mastoi'deum**, *pars mastoidea ossis temporalis*. **os'sa mem'bri inferio'ris** [NA], the bones of the lower limb; called also *ossa extremitatis inferioris*. **os'sa mem'bri superio'ris** [NA], the bones of the upper limb; called also *ossa extremitatis superioris*. **os'sa metacarpa'lia I-V** [NA], metacarpal bones: the five cylindric bones of the hand, articul-

ing proximally with bones of the carpus and distally with the proximal phalanges of the fingers; numbered from that articulating with the proximal phalanx of the thumb to the most lateral one, articulating with the proximal phalanx of the little finger. **os metacarpale III**, the middle metacarpal bone, is characterized by the presence of the styloid process at its base. **os'sa metatarsa'lia I-V** [NA], metatarsal bones: the five bones that extend from the tarsus to the phalanges of the toes, being numbered in the same sequence from the most medial to the most lateral. **o. multan'gulum ma'jus**, **o. trapezium**. **o. multan'gulum mi'nus**, **o. trapezoideum**. **o. nasa'le** [NA], nasal bone: either of the two small, oblong bones that together form the bridge of the nose. **o. navicula're** [NA], navicular bone: the ovoid-shaped tarsal bone that is situated between the talus and the three cuneiform bones; called also *o. naviculare pedis*. **o. navicula're ma'nus**, **o. scaphoideum**. **o. navicula're pe'dis**, **o. naviculare**. **o. navicula're pedis retardat'um**, see *Kohler's bone disease* (def. 1), under *disease*. **o. no'vum**, Orell's name for new bone produced following the subperiosteal implantation of *os purum*. **o. occipita'le** [NA], occipital bone: a single trapezoid-shaped bone situated at the posterior and inferior part of the cranium, articulating with the two parietal and two temporal bones, the sphenoid bone, and the atlas; it contains a large opening, the foramen magnum. **o. orbicula're**, 1. *processus lenticularis incudis*. 2. *os pisiforme*. **os in os**, a radiation-induced injury appearing on roentgenograms as a vertebra within a vertebra. **o. palati'num** [NA], palatine bone: the irregularly shaped bone forming the posterior part of the hard palate, the lateral wall of the nasal fossa between the medial pterygoid plate and the maxilla, and the posterior part of the floor of the orbit. **o. parieta'le** [NA], parietal bone: either of the two quadrilateral bones forming part of the superior and lateral surfaces of the skull, and joining each other in the midline at the sagittal suture. **o. pe'dis**, the coffin bone of the horse. **o. pe'nis**, *baculum*. **o. perone'um**, a sesamoid bone sometimes formed in the tendon of the peroneus longus muscle. **o. pisifor'me** [NA], pisiform bone: the medial bone of the proximal row of carpal bones. **o. pla'num**, 1. [NA], flat bone: any bone whose thickness is slight, sometimes consisting of only a thin layer of compact bone, or two layers with intervening spongy bone and marrow; usually bent or curved, rather than flat. 2. *Lamina orbitalis ossis ethmoidalis*. **o. pneumat'icum** [NA], pneumatic bone: a bone that contains air-filled cavities or sinuses. **o. pri'api**, *baculum*. **o. pu'bis** [NA], pubic bone: the anterior inferior part of the hip bone (*os coxae*) on either side, articulating with its fellow in the anterior midline at the pubic symphysis; it is a separate bone in early life; called also *pubis*. **o. pu'rum**, Orell's name for bone freed from connective tissue and fat, used for bone grafting; see also *os novum*. **o. radia'le**, **o. scaphoideum**. **o. sa'crum** [NA], the sacrum: the wedge-shaped bone formed usually by five fused vertebrae that are lodged dorsally between the two hip bones (*ossa coxae*). **o. sca-phoi'deum** [NA], scaphoid bone: the most lateral bone of the proximal row of carpal bones; called also *o. naviculare manus*. **o. sedenta'rium**, *tuber ischiadicum*. **os'sa sesamoi'dea**, sesamoid bones: a type of short bone occurring mainly in the hands and feet, and found embedded in tendons and joint capsules. **os'sa sesamoi'dea ma'nus** [NA], the sesamoid bones of the hand. **os'sa sesamoi'dea pe'dis** [NA], the sesamoid bones of the foot. **o. sphenoida'le** [NA], sphenoid bone: a single irregular, wedge-shaped bone at the base of the skull, forming a part of the floor of the anterior, middle, and posterior cranial fossae. **o. subtibia'le**, an occasionally occurring bone found over the tip of the medial malleolus. **os'sa suprasterna'lia** [NA], suprasternal bones: ossicles occasionally occurring in the ligaments of the sternoclavicular articulation. **os'sa sutura'rum** [NA], sutural bones: small irregular bones in the sutures between the bones of the skull. **os'sa tarsi'alia**, *ossa tarsi*. **o. tarsi'le dista'le pri'mum**, **o. cuneiforme mediale**. **o. tarsi'le dista'le quar'tum**, **o. cuboideum**. **o. tarsi'le dista'le secun'dum**, **o. cuneiforme intermedium**. **o. tarsi'le dista'le ter'tium**, **o. cuneiforme laterale**. **os'sa tar'si** [NA], tarsal bones: the seven bones of the ankle (tarsus), including the calcaneus, *o. cuboideum*, *ossa cuneiformia intermedium*, *laterale*, and *mediale*, *o. naviculare*, and *talus*. **o. tar'si fibula're**, *calcaneus*. **o. tar'si tibia'le**, *talus*, def. 1. **o. tempora'le** [NA], temporal bone: one of the two irregular bones forming part of the lateral surfaces and base of the skull, and containing the organs of hearing. **o. tibia'le exter'num**, a small anomalous bone situated in the angle between the navicular bone and the head of the talus. **o. trape'zium** [NA], trapezium bone: the most lateral bone of the distal row of carpal bones; called also *o. multangulum majus*. **o. trapezoi'deum** [NA], trapezoid bone: the bone in the distal row of carpal bones lying between the trapezium and capitate bones; called also *o. multangulum minus*. **o. trigo'num tar'si** [NA], triangular bone of tarsus: an external tubercle at the back of the talus, sometimes occurring as a separate bone. **o. trique'trum** [NA], triquetrum bone: the bone in the proximal row of carpal bones lying between the lunate and pisiform bones; called also *triangular bone*. **o. un'guis**, *o. lacrimale*. **o. vesalia'num pe'dis**, vesalian bone: the proximal and external part of the tuberosity of the fifth metatarsal

bone. **os'sa Wor'mi**, ossa suturarum. **o. zygomat'icum** [NA], zygomatic bone: the quadrangular bone of the cheek, articulating with the frontal bone, the maxilla, the zygomatic process of the temporal bone, and the great wing of the sphenoid bone.

O.S.A. Optical Society of America.

osamine (ōs'ah-mēn) a sugar with an amino group replacing one of the hydroxyl groups, e.g., glucosamine.

osazone (o'sa-zōn) any of a series of compounds obtained by heating a sugar with phenylhydrazine and acetic acid; see *glucosazone*.

Osbil (os'bil) trademark for a preparation of iobenzamic acid.

oscedo (os-se'do) [L.] the act of yawning.

oscheal (os'ke-al) [Gr. *oscheon* scrotum] pertaining to the scrotum.

oscheitis (os'ke-i'tis) [*oscheo-* + *-itis*] inflammation of the scrotum.

oschelephantiasis (osk'el-ē-fan-ti'ah-sis) elephantiasis of the scrotum.

oscheo- (os'ke-o) [Gr. *oscheon* scrotum] a combining form denoting relationship to the scrotum.

oscheocele (os'ke-o-sēl'') [*oscheo-* + Gr. *kēlē* hernia, tumor] 1. tumor or swelling of the scrotum. 2. (*obs.*) scrotal hernia.

oscheohydrocele (os'ke-o-hi'dro-sēl) [*oscheo-* + *hydrocele*] hydrocele in the sac of a scrotal hernia.

oscheolith (os'ke-o-lith) [*oscheo-* + Gr. *lithos* stone] a concretion in the sebaceous glands of the scrotum.

oscheoma (os'ke-o'mah) [*oscheo-* + *-oma*] a tumor of the scrotum.

oscheoncus (os'ke-ong'kus) [*oscheo-* + Gr. *onkos* mass, bulk] oscheoma.

oscheoplasty (os'ke-o-plas'te) [*oscheo-* + Gr. *plassein* to mold] plastic surgery of the scrotum.

oschitis (os-ki'tis) oscheitis.

Oscillaria (os'i-la're-ah) a genus of algae.

oscillation (os'i-la'shun) [L. *oscillare* to swing] a backward and forward motion, like a pendulum; also vibration, fluctuation, or variation. **bradykinetic o.**, slow, recurring, choreiform movements seen in epidemic encephalitis.

oscillator (os'i-la'tor) an apparatus for producing oscillations; an electric circuit designed to generate alternating current at a particular frequency.

oscillo- (os'i-lo) [L. *oscillare* to swing] a combining form denoting relationship to oscillation.

oscillogram (o-sil'o-gram) the graphic record made by an oscillograph.

oscillograph (o-sil'o-graf) [*oscillo-* + Gr. *graphein* to write] an instrument for recording electric oscillations. Such an instrument, working on the plan of a string galvanometer, is used in recording the action of the heart.

oscillometer (os'i-lom'ē-ter) an instrument for measuring oscillations of any kind, such as changes in the volume of the arteries accompanying the heart beat.

oscillometric (os'i-lo-met'rik) pertaining to oscillometry or the oscillometer.

oscillometry (os'i-lom'ē-tre) the use of the string galvanometer or similar apparatus.

oscillopsia (os'i-lop'se-ah) [*oscillo-* + Gr. *opsis* vision + *-ia*] oscillating vision, a condition in which objects seem to move back and forth, to jerk, or to wiggle. It occurs in multiple sclerosis.

oscilloscope (ō-sil'o-skōp) [*oscillo-* + Gr. *skopein* to examine] an instrument that displays a visual representation of electrical variations on the fluorescent screen of a cathode-ray tube.

Oscillospira (os'sil-lo-spi'rah) a genus of Schizomycetes (order Caryophanales, family Oscillospiraceae).

Oscillospiraceae (os'sil-lo-spi-ra'se-e) a family of Schizomycetes (order Caryophanales), made up of motile or nonmotile cells occurring in filaments of varying lengths each containing a central chromatin body, and found as nonpathogenic parasites in the intestinal tract of vertebrates. It includes a single genus, *Oscillospira*.

osine (os'in) a substance, $\text{CH}_3 \cdot \text{N} : \text{C}_6\text{H}_5 : \text{CH} \cdot \text{O}$, obtained on the decomposition of scopolamine.

Oscinis pallipes (os'i-nis pal'i-pēz) *Hippelatus pallipes*.

oscitate (os'i-tāt) to yawn.

oscitation (os'i-ta'shun) [L. *oscitatio*] the act of yawning.

osculum (os'ku-lum), pl. *os'cula* [L.] a small aperture or minute opening.

-ose a suffix indicating that the substance is a carbohydrate.

Osgood-Haskins test (oz'good-haz'kinz) [Edwin Eugene Osgood, American physician, born 1899; Howard Davis Haskins, American physician, 1871-1933] see under *tests*.

Osgood-Schlatter disease (oz'good-shlat'er) [Robert Bayley Osgood, Boston orthopedist, born 1873; Carl Schlatter, surgeon in Zurich, 1864-1934] see under *disease*.

-osis a word termination denoting a process, especially a disease or morbid process, and sometimes conveying the meaning of abnormal increase. See also *-sis*.

Osler's disease, nodes, phenomenon, sign, triad (ōs'lerz) [Sir William Osler, Canadian-born physician, 1849-1919; successively professor of medicine in McGill University, the University of Pennsylvania, Johns Hopkins University, and the University of Oxford] see *hereditary hemorrhagic telangiectasia*, under *telangiectasia*, see *polycythemia vera*, and see under *node, phenomenon, sign, and triad*.

Osler-Vaquez disease (ōs'ler-vak-āz') [Sir William Osler; Louis Henri Vaquez, French physician, 1860-1936] polycythemia vera.

Osler-Weber-Rendu disease (os'ler-web'er-ron-duh') [Sir William Osler; Frederick Parkes Weber, British physician, 1863-1962; Henri Jules Louis Marie Rendu, French physician, 1844-1902] hereditary hemorrhagic telangiectasia.

Oslo meal (breakfast) [Oslo, Norway] see under *meal*.

osmate (oz'māt) a salt of osmic acid.

osmatic (oz-mat'ik) [Gr. *osmesthai* to smell] 1. pertaining to the sense of smell. 2. having a sense of smell; applied to a category of animals subdivided further into macrosmatic and microsmatic. Cf. *anosmatic*.

osmazome (oz'mah-zōm) [Gr. *osmē* odor + *zōmos* broth] a principle derivable from muscular fiber which gives the peculiar flavor and odor to roast meats and gravies.

osmesis (oz-me'sis) [Gr. *osmēsis* smelling] the act of smelling.

osmesthesia (oz'mes-the'ze-ah) [*osmo-* + Gr. *aisthēsis* perception] olfactory sensibility; ability to perceive and distinguish odors.

osmic (oz'mik) containing osmium.

osmicate (oz'mī-kāt) to stain or impregnate with osmic acid.

osmics (oz'miks) [Gr. *osmē* odor] the pure and applied science relating to the olfactory organs and the sense of smell, and to odoriferous organs and substances.

osmidrosis (oz'mī-dro'sis) [*osmo-*(1) + Gr. *hidrōs* sweat] bromhidrosis.

osmification (oz'mī-fi-ka'shun) treatment with osmium or osmic acid, as in histologic technic.

osmiophilic (oz'me-o-fil'ik) [*osmic* acid + Gr. *philein* to love] staining easily with osmium or osmic acid.

osmiophobic (oz'me-o-fō'bik) [*osmic* acid + *phobia*] resistant to staining with osmium or osmic acid.

Osmitol (oz'mī-trōl) trademark for a preparation of mannitol.

osmium (oz'me-um) [Gr. *osmē* odor; so named because of the odor of the vapor, OsO_4 , produced by oxidation of the element] 1. a very hard, gray, toxic, and nearly infusible metal; atomic number, 76; atomic weight, 190.2; symbol, Os. See *acid, osmic*. 2. a homeopathic trituration of metallic osmium. **o. tetroxide**, colorless or slightly yellow crystals or crystalline granules with a pungent odor, OsO_4 , used as a fixative in preparing histologic specimens.

osmo- (oz'mo) 1. [Gr. *osmē* smell] a combining form denoting relationship to odors. 2. [Gr. *ōsmos* impulse] a combining form denoting relationship to an impulse, or to osmosis.

osmoceptor (oz'mo-sep'tor) osmoreceptor.

osmodyspshoria (oz'mo-dis-fo're-ah) [*osmo-*(1) + *dys-* + Gr. *pherein* to bear] (*obs.*) an intense and abnormal dislike of certain odors.

osmol (oz'mōl) the standard unit of osmotic pressure, being equal to the gram molecular weight divided by the number of particles or ions into which a substance dissociates in solution. Written also *osmole*. See also *milliosmol*.

osmolagnia (oz'mo-lag'ne-ah) [*osmo-*(1) + Gr. *lagneia* lust] (*obs.*) sexual excitation produced by odor.

osmolality (oz'mo-lal'i-te) a property of a solution which depends on the concentration of the solute per unit of solvent.

osmolar (oz'mo'lar) pertaining to the concentration of osmotically active particles in solution.

osmolarity (oz'mo-lār'i-te) the concentration of osmotically active particles in solution.

osmole (oz'mōl) osmol.

osmology (oz-mol'o-je) 1. [Gr. *osmē* smell + *-logy*] osphresiology. 2. [Gr. *ōsmos* impulse + *-logy*] that branch of physics that treats of osmosis.

osmometer (oz-mom'ē-ter) 1. [Gr. *ōsmos* impulse + *metron* measure] a device for measuring osmotic force. 2. [Gr. *osmē* smell + *metron* measure] an instrument for measuring the acuteness of the sense of smell. **freezing-point o.**, an osmometer using freezing-point depression measurement for analysis of osmotic pressure (number of particles, molecules, or ions) of solutions. **Hepp o.**, an osmometer in which very small quantities of material can be used and a direct reading of the osmotic pressure may be made. **membrane o.**, an osmometer in which diffusion through a semipermeable membrane indicates the osmotic pressure of macromolecules (number of molecules or ions) in a solution.

osmonosology (oz''mo-no-sol'o-je) [*osmo*-(1) + *nosology*] the study of disorders of the sense of smell.

osmophilic (oz''mo-fil'ik) [*osmo*-(2) + Gr. *philein* to love] having an affinity for solutions with a high osmotic pressure.

osmophore (oz''mo-för) [*osmo*-(1) + Gr. *phoros* bearing] the group of atoms in a molecule of a compound which is responsible for its characteristic odor.

osmoreceptor (oz''mo-re-cep'tor) 1. [*osmo*-(2)] any of a group of specialized neurons in the supraoptic nuclei of the hypothalamus that are stimulated by increased osmolality (chiefly, increased sodium concentration) of the extracellular fluid; their excitation promotes the release of antidiuretic hormone by the posterior pituitary. 2. [*osmo*-(1) + L. *recipere* to receive, accept] a specialized sensory nerve ending sensitive to stimulation giving rise to the sensation of odors.

osmoregulation (oz''mo-reg'u-la'shun) maintenance of osmolality by a simple organism or body cell with respect to the surrounding medium.

osmoregulatory (oz''mo-reg'u-lah-to're) pertaining to osmoregulation.

osmoscope (oz''mo-sköp) [*osmo*-(1) + Gr. *skopein* to examine] an apparatus for attachment to the nose for intensifying the sense of smell and enabling the user to make quantitative and qualitative analyses of odor.

osmose (os'mös) to pass through a membrane by osmosis.

osmosis (oz-mo'sis, os-mo'sis) [Gr. *ōsmos* impulsion] the passage of pure solvent from a solution of lesser to one of greater solute concentration when the two solutions are separated by a membrane which selectively prevents the passage of solute molecules, but is permeable to the solvent.

osmosology (os''mo-sol'o-je) the science of osmosis.

osmostat (os'mo-stat'') the regulatory centers that control the osmolality of the extracellular fluid.

osmotaxis (os''mo-tak'sis) [*osmo*-(2) + Gr. *taxis* arrangement] the movement of cells as affected by the density of the liquid containing them.

osmotherapy (oz''mo-ther'ah-pe) [*osmo*-(2) + *therapy*] treatment by the intravenous injection of hypertonic solutions to produce dehydration.

osmotic (oz-mot'ik) pertaining to or of the nature of osmosis.

osmyl (oz'mil) an odor.

osone (o'sōn) a carbonyl sugar formed by heating an osazone with hydrochloric acid.

osphresio- (os-fre'ze-o) [Gr. *osphrēsis* smell] a combining form denoting relationship to odors.

osphresiolagnia (os-fre'ze-o-lag'ne-ah) [*osphresio-* + Gr. *lagneia* lust] (*obs.*) erotic stimulation produced by odors.

osphresiology (os''fre-ze-ol'o-je) [*osphresio-* + *-logy*] the sum of knowledge regarding odors and the sense of smell.

osphresimeter (os''fre-ze-om'ē-ter) [*osphresio-* + Gr. *metron* measure] an instrument for measuring the acuteness of the sense of smell.

osphresis (os-fre'sis) [Gr. *osphrēsis* smell] the sense of smell.

osphretic (os-fret'ik) pertaining to the sense of smell.

osphyarthrosis (os''fe-ar-thro'sis) inflammation of the hip joint.

osphyomyelitis (os''fe-o-mi'ē-li'tis) [Gr. *osphys* loin + *myelitis*] myelitis of the lumbar region of the spinal cord.

osphyotomy (os''fe-ot'o-me) [Gr. *osphys* loin + *tomē* a cutting] surgical incision through the loin.

ossa (os'ah) [L.] plural of *os*, bone. See *os*².

ossature (os'ah-tür) the arrangement of bones in the body or in a part.

osseine (os'e-in) the collagen of bone.

osselet (os'ē-let) an exostosis on the inner aspect of a horse's knee or on the lateral aspect of the fetlock.

ossealbumoid (os''ē-o-al'bu-moid) a protein derived from bone after hydration of the collagen.

osseaponeurotic (os''ē-o-ap'o-nu-rot'ik) pertaining to bone and the aponeurosis of a muscle.

osseocartilaginous (os''ē-o-kar'ti-laj'f-nus) pertaining to or composed of bone and cartilage.

osseofibrous (os''ē-o-fi'brus) made up of fibrous tissue and bone.

osseomucin (os''ē-o-mu'sin) the homogeneous ground substance which binds together the collagen and elastic fibrils of bony tissue.

osseomucoid (os''ē-o-mu'koid) a mucin existing in bone.

osseosonometer (os''ē-o-so-nom'ē-ter) an instrument used in osseosonometry.

osseosonometry (os''ē-o-so-nom'ē-tre) [L. *os*, *ossa* bone + *sonus* sound + Gr. *metron* measure] the measurement of the conduction of sound through bone.

osseous (os'e-us) [L. *osseus*] of the nature or quality of bone; bony.

ossicle (os'si-k'l) [L. *ossiculum*] a small bone. **Andernach's o's**, *ossa suturarum*. **auditory o's**, the malleus, incus, and stapes, of the middle ear; see *ossicula auditus*. **o's of Bertin**, see *concha sphenoidalis*. **epactal o's**, *ossa suturarum*. **episternal o's**, *ossa suprasternalia*. **intercalcar o's**, *ossa suturarum*. **Kerckring's o.**, a small bone of early life which becomes the basilar process of the occipital bone. **Riolan's o's**, small bones occasionally seen in the suture between the mastoid portion of the temporal bone and the occipital bone. **sphenoturbinal o's**, see *concha sphenoidalis*. **wormian o's**, *ossa suturarum*.

ossicula (ō-sik'u-lah) [L.] plural of *ossiculum*.

ossiclectomy (os''i-ku-lek'to-me) [*ossiculum* + Gr. *ektomē* excision] surgical removal of an ossicle, or of the ossicles, of the ear.

ossiculotomy (os''i-ku-lot'o-me) [*ossiculum* + Gr. *temnein* to cut] surgical incision of the bonelets (ossicles) of the ear.

ossiculum (ō-sik'u-lum), pl. *ossic'ula* [L.] [NA] a general term for a small bone, or ossicle. **ossic'ula audi'tus** [NA], auditory ossicles: the malleus, incus, and stapes, the small bones of the middle ear, which transmit the vibrations from the tympanic membrane to the oval window.

ossidesmosis (os''i-des-mo'sis) osteodesmosis.

ossiferous (ō-sif'er-us) [L. *os* bone + *ferre* to bear] producing bone.

ossific (ō-sif'ik) [L. *os* bone + *facere* to make] forming or becoming bone.

ossification (os''i-fi-ka'shun) [L. *ossificatio*] the formation of bone or of a bony substance; the conversion of fibrous tissue or of cartilage into bone or a bony substance. **cartilaginous o.**, ossification that occurs in and replaces cartilage. **ectopic o.**, a pathological condition in which bone arises in tissues not in the osseous system and in connective tissues usually not manifesting osteogenic properties. **endochondral o.**, cartilaginous o. **intramembranous o.**, ossification that occurs in and replaces connective tissue, as occurs in the calvaria and in periosteal bone formation. **metaplastic o.**, the development of bony substance in normally soft structures. **perichondral o.**, that which occurs in a layered manner beneath the perichondrium or, later, the periosteum. **periosteal o.**, a type of intramembranous bone formation.

ossifluence (ō-sif'lu-ens) softening of bony tissue.

ossiform (os'i-form) resembling bone.

ossifying (os'i-fi'ing) changing or developing into bone.

ossiphone (os'i-fōn) [L. *os*, *ossa* bone + Gr. *phōnē* voice] an apparatus for enabling deaf persons to hear by transmitting the sound from the instrument through the bony structure of the body.

ostalgia (os-tal'je-ah) ostealgia.

ostarthrititis (os''tar-thri'tis) osteoarthritis.

osteal (os'te-al) bony; osseous.

ostealbumoid (os''te-al'bu-moid) ossealbumoid.

ostealgia (os''te-al'je-ah) [Gr. *osteon* bone + *-algia*] pain in a bone or in the bones.

osteameba (os''te-ah-me'bah) a bone cell.

osteanabrosis (os''te-an'ah-bro'sis) [*osteo-* + Gr. *anabrōsis* eating up] atrophy of bone.

osteanagenesis (os''te-an'ah-jen'ē-sis) osteoanagenesis.

osteanaphysis (os''te-ah-naf'i-sis) [*osteo-* + Gr. *anaphyein* to reproduce] reproduction of bone.

ostearthrititis (os''te-ar-thri'tis) osteoarthritis.

ostearthrotomy (os''te-ar-throt'o-me) [*osteo-* + Gr. *arthron* joint + *temnein* to cut] excision of an articular end of a bone.

ostectomy (os-tek'to-me) [*osteo-* + Gr. *ektomē* excision] the excision of a bone or a portion of a bone.

osteectomy (os''te-ek'to-me) ostectomy.

osteectopia (os''te-ek-to'pe-ah) [*osteo-* + Gr. *ektopos* out of place + *-ia*] displacement of a bone.

osteectomy (os''te-ek'to-pe) osteectopia.

ostein (os'te-in) osseine.

osteite (os'te-īt) an independent bony element or center of ossification.

osteitis (os'te-i'tis) [*osteo-* + *-itis*] inflammation of a bone, involving the haversian spaces, canals, and their branches, and generally the medullary cavity, and marked by enlargement of the bone, tenderness, and a dull, aching pain. See also *osteomyelitis*. **acute o.**, osteomyelitis, usually of septic origin. **o. al-bumino'sa**, osteitis with accumulation of a sticky, albuminous liquid. **alveolar o.**, dry socket; see under *socket*. **carious o.**, osteomyelitis. **o. carno'sa**, *o. fungosa*. **caseous o.**, tuberculous caries of bone. **central o.**, endosteitis. **chronic o.**, central caries or bone abscess; often due to tuberculosis, sometimes syphilitic. **chronic nonsuppurative o.**, sclerosing nonsuppurative osteomyelitis. **o. conden'sans**, condensing o. **o. conden'sans generalisa'ta**, osteopoiikilosis. **o. conden'sans il'i**, a condition marked by an area of dense sclerosis on the iliac side of the sacroiliac joint. **condensing o.**, ostei-

tis with hard deposits of earthy salts in the affected bone; called also *formative o.* and *sclerosing o.* **cortical o.**, periostitis. **o. defor'mans**, a disease of bone marked by repeated episodes of increased bone resorption followed by excessive attempts at repair, resulting in weakened deformed bones of increased mass. There may be bowing of the long bones and deformation of flat bones; pain and pathological fractures are associated. When it affects the bones of the skull, deafness may result. Called also *Paget's disease*. **o. fibro'sa cys'tica**, **o. fibro'sa cys'tica generalisa'ta**, rarefying osteitis with fibrous degeneration and formation of cysts, and with the presence of fibrous nodules on the affected bones; it is due to marked osteoclastic activity secondary to hyperfunction of the parathyroid gland. Called also *Recklinghausen's* or *von Recklinghausen's disease of bone*. **o. fibro'sa dissemina'ta**, Albright's syndrome. **o. fibro'sa localisa'ta**, localized fibrous degeneration with weakening and deformity of a bone, as of the patella. **o. fibro'sa osteoplas'tica**, **o. fibrosa cystica**. **formative o.**, condensing **o. o. fragil'itans**, osteogenesis imperfecta. **o. fungo'sa**, chronic osteitis in which the haversian canals are dilated and filled with granulation tissue. **Garré's o.**, sclerosing nonsuppurative osteomyelitis. **o. granulo'sa**, **o. fungosa**. **gummatous o.**, a chronic form associated with syphilis. **localized alveolar o.**, dry socket; see under *socket*. **necrotic o.**, osteomyelitis. **o. ossif'icans**, condensing **o. parathyroid o.**, **o. fibrosa cystica**. **pedal o.**, inflammation of the pedal bone of the horse; called also *peditis*. **productive o.**, condensing **o. o. pu'bis**, 1. sclerosis of the pubic bones, in the region of the symphysis, usually observed as an incidental finding in roentgenography of the pelvis. 2. a symptom-producing inflammatory condition of the pubic bones in the region of the symphysis, which may be associated with surgical procedures on pelvic structures or with pregnancy, infection of the urinary tract, degenerative changes, rheumatic disease, or other conditions. **rarefying o.**, a bone disease in which the inorganic matter is lessened and the hard bone becomes cancellated. **sarcomatous o.**, former name for multiple myeloma. **sclerosing o.**, 1. sclerosing nonsuppurative osteomyelitis. 2. condensing osteitis. **secondary hyperplastic o.**, hypertrophic pulmonary osteoarthropathy. **o. tuberculo'sa cys'tica**, **o. tuberculo'sa mul'tiplex cystoi'des**, sarcoidosis. **vascular o.**, rarefying osteitis in which the spaces formed become occupied by blood vessels.

ostembryon (os-tem'bre-on) [*osteo-* + Gr. *embryon* fetus] ossification of a fetus.

ostempyrosis (os'tem-pi-e'sis) [*osteo-* + Gr. *empyrosis* suppuration] suppuration within a bone.

Ostensin (os-ten'sin) trademark for a preparation of trimethyldinum methosulfate.

osteo- (os'te-o) [Gr. *osteon* bone] a combining form denoting relationship to a bone or to the bones.

osteoacusis (os'te-o-ah-ku'sis) [*osteo-* + Gr. *akousis* hearing] bone conduction.

osteoanagenesis (os'te-o-an'ah-jen'ē-sis) [*osteo-* + Gr. *anagenesis*] regeneration of bone.

osteoanesthesia (os'te-o-an'es-the'ze-ah) the insensitiveness of bone.

osteoaneurysm (os'te-o-an'u-rizm) aneurysm in a bone.

osteoarthritis (os'te-o-ar-thri'tis) [*osteo-* + Gr. *arthron* joint + *-itis*] noninflammatory degenerative joint disease occurring chiefly in older persons, characterized by degeneration of the articular cartilage, hypertrophy of bone at the margins, and changes in the synovial membrane. It is accompanied by pain and stiffness, particularly after prolonged activity. Called also *degenerative arthritis*, *hypertrophic arthritis*, and *degenerative joint disease*. **o. defor'mans**, **endemic o.**, a condition endemic in portions of Russia, marked by thickening of the joints and softening of the articular ends of bones. **o. defor'mans endem'ica**, Kashin-Beck disease. **hyperplastic o.**, hypertrophic pulmonary osteoarthropathy. **interphalangeal o.**, a localized form of arthritis involving the finger joints, characterized by the formation of nodosities (Heberden's nodes) and degenerative changes with intermittent inflammatory episodes, and leading eventually to deformities and ankyloses.

osteoarthropathy (os'te-o-ar-throp'ah-the) [*osteo-* + *arthropathy*] any disease of the joints and bones. **familial o. of fingers**, Thiemann's disease. **hypertrophic pneumic o.**, hy-

limbs and the flat bones, and accompanied by a dorsal kyphosis and some affection of the joints. It is often secondary to chronic conditions of the lungs and heart. Called also *osteoarthropathie hypertrophiente pneumique* and *Marie-Bamberger disease*. **pulmonary o.**, hypertrophic pulmonary **o.** **secondary hypertrophic o.**, hypertrophic pulmonary **o.**

osteoarthrosis (os'te-o-ar-thro'sis) chronic arthritis of noninflammatory character.

osteoarthrotomy (os'te-o-ar-throt'o-me) osteoarthrotomy.

osteoarticular (os'te-o-ar-tik'u-lar) pertaining to or affecting bones and joints.

osteoblast (os'te-o-blast') [*osteo-* + Gr. *blastos* germ] a cell which arises from a fibroblast and which, as it matures, is associated with the production of bone.

osteoblastic (os'te-o-blas'tik) pertaining to or composed of osteoblasts.

osteoblastoma (os'te-o-blas-to'mah) [*osteoblast* + *-oma*] a benign, painful, rather vascular tumor of bone characterized by the formation of osteoid tissue and primitive bone; called also *giant osteoid osteoma*.

osteocachectic (os'te-o-kah-kek'tik) pertaining to or characterized by osteocachexia.

osteocachexia (os'te-o-kah-kek'se-ah) cachexia due to chronic bone disease; also chronic disease of bone.

osteocamp (os'te-o-kamp) an instrument for bending the femur straight following osteotomy.

osteocampsia (os'te-o-kamp'se-ah) [*osteo-* + Gr. *kamptein* to bend] curvature or bending of a bone, as in rickets.

osteocampsis (os'te-o-kamp'sis) osteocampsia.

osteoartilaginous (os'te-o-kar'ti-laj'i-nus) pertaining to or composed of bone and cartilage.

osteocoele (os'te-o-sēl) [*osteo-* + Gr. *kēlē* tumor] 1. bony tumor of the testis or scrotum. 2. a hernia containing bone.

osteocementum (os'te-o-se-men'tum) the hard bonelike tissue of the secondary cementum, usually found at the apical third of a tooth root.

osteochondral (os'te-o-kon'dral) pertaining to bone and cartilage; pertaining to a bone and its articular cartilage.

osteochondritis (os'te-o-kon-dri'tis) [*osteo-* + Gr. *chondros* cartilage + *-itis*] inflammation of both bone and cartilage. **calcaneal o.**, Haglund's disease. **o. defor'mans juveni'lis**, osteochondrosis of the caputular epiphysis of the femur; see *osteochondrosis*.

o. defor'mans juveni'lis dor'si, osteochondrosis of vertebrae; see *osteochondrosis*. **o. dis'secans**, osteochondritis resulting in the splitting of pieces of cartilage into the joint, particularly the knee joint or shoulder joint. **o. ischiopu'bica**, a condition observed in the roentgenogram, consisting of granular looking bodies at the junction of the ischium and os pubis in children. **o. necrot'icans**, a condition marked by necrosis and solution of continuity in the cartilage of the sesamoid bone of the great toe. **o. os'sis metacar'pi et metatar'si**, Thiemann's disease (q.v.) affecting both the fingers and toes.

osteochondrodysplasia (os'te-o-kon'dro-dis-pla'ze-ah) [*osteo-* + *chondro-* + *dys-* + Gr. *plassein* to form] any disorder of cartilage and bone growth.

osteochondrodystrophia (os'te-o-kon'dro-dis-tro'fe-ah) Morquio's syndrome. **o. defor'mans**, Morquio's syndrome.

osteochondrodystrophy (os'te-o-kon'dro-dys'tro-fe) Morquio's syndrome. **familial o.**, Morquio's syndrome.

osteochondrofibroma (os'te-o-kon'dro-fi-bro'mah) fibrosing osteochondroma.

osteochondrolysis (os'te-o-kon-drol'i-sis) osteochondritis dissecans.

osteochondroma (os'te-o-kon-dro'mah) [*osteo-* + Gr. *chondros* cartilage + *-oma*] osteoma blended with chondroma, a benign tumor consisting of projecting adult bone capped by cartilage. Called also *chondrosteoma*, *enchondroma petrificum*, and *osteoartilaginous exostosis*. **fibrosing o.**, a tumor containing the elements of osteoma, chondroma, and fibroma.

osteochondromatosis (os'te-o-don'dro-mah-to'sis) a condition marked by the presence of multiple osteochondromas. **synovial o.**, a rare condition in which cartilage bodies are formed in the synovial membrane of the joints, tendon sheaths, or bursae, later undergoing secondary calcification and ossification; some of the bodies may become detached and remain as viable, growing structures in the synovial spaces.

osteochondromyoxoma (os'te-o-kon'dro-mik-so'mah) osteochondroma blended with myxoma.

osteochondropathia (os'te-o-kon'dro-path'e-ah) osteochondropathy. **o. cretinoi'dea**, Lävén-Roth syndrome.

osteochondropathy (os'te-o-kon-drop'ah-the) [*osteo-* + Gr. *chondros* cartilage + *pathos* disease] any morbid condition affecting both bone and cartilage, or marked by abnormal enchondral ossification. **polyglucose (dextran) sulfate-induced o.**, an experimentally produced disorder of enchondral ossification characterized by a deficient formation of bone matrix in the metaphyses of long bones.

Osteoarthropathy (Homans).

peritrophic pulmonary **o.** **hypertrophic pulmonary o.**, symmetrical osteitis of the four limbs, chiefly localized to the phalanges and the terminal epiphyses of the long bones of the forearm and leg, sometimes extending to the proximal ends of the

osteochondrophyte (os''te-o-kon'dro-fit) [*osteo-* + Gr. *chondros* cartilage + *phyton* growth] osteochondroma.

osteochondrosarcoma (os''te-o-kon'dro-sar-ko'mah) sarcoma blended with osteoma and chondroma.

osteochondrosis (os''te-o-kon-dro'sis) a disease of the growth or ossification centers in children which begins as a degeneration or necrosis followed by regeneration or recalcification. Called also epiphyseal ischemic necrosis (q.v.). It may affect (1) the CALCANEUS (os calcis), a condition sometimes called *apophysitis*; (2) the CAPITULAR EPIPHYSIS (head) of the FEMUR, a condition known as *Legg-Calvé-Perthes disease*, *Perthes disease*, *Waldenström's disease*, *coxa plana*, and *pseudocoxalgia*; (3) the ILIUM; (4) the LUNATE (SEMILUNAR) BONE, known as *Kienböck's disease*; (5) HEAD of the SECOND METATARSAL BONE, known as *Freiberg's infraction*; (6) the NAVICULAR (TARSAL SCAPHOID), known as *Köhler's tarsal scaphoiditis*; (7) the TUBEROSITY of the TIBIA, called *Osgood-Schlatter disease*, *Schlatter's disease*; (8) the VERTEBRAE, called *Scheuermann's disease* or *kyphosis*, *juvenile kyphosis*, *vertebral epiphysitis*, and *kyphosis dorsalis juvenilis*. (9) the capitellum of the humerus, called *Panner's disease*. **o. deformans tib'iae**, aseptic necrosis of the medial condyle of the tibia, producing lateral bowing of the leg; called also *Blount's disease*, *nonrachitic bowleg*, and *tibia vara*.

osteochondrous (os''te-o-kon'drus) [*osteo-* + Gr. *chondros* cartilage] composed of bone and cartilage.

osteoclasia (os''te-o-kla'ze-ah) [*osteo-* + Gr. *klasis* a breaking + *-ia*] the absorption and destruction of bony tissue.

osteoclasia (os-te-ok'lah-sis) [*osteo-* + Gr. *klasis* a breaking] the surgical fracture or refracture of bones.

osteoclast (os''te-o-klast'') [*osteo-* + Gr. *klan* to break] 1. a large multinuclear cell associated with the absorption and removal of bone; osteoclasts become highly active in the presence of parathyroid hormone, causing increased bone resorption and release of bone salts (phosphorus and, especially, calcium) into the extracellular fluid. 2. an instrument for use in the surgical fracture or refracture of bones. **Collin's o.**, an osteoclast for fracturing a bone at any desired point. **Rizzoli's o.**, an osteoclast consisting of a rod on which are two sliding padded rings, and between these a padded plate that can be screwed down upon the part, thus fracturing the bone.

osteoclastic (os''te-o-klas'tik) pertaining to or of the nature of an osteoclast; destructive to bone.

osteoclastoma (os''te-o-klas-to'mah) giant cell tumor of bone.

osteoclasty (os''te-o-klas'te) osteoclasia.

osteocoma (os''te-o-kom'ah) [*osteo-* + Gr. *komma* fragment] any of the pieces or members of a series of bony structures, as a vertebra.

osteocope (os''te-o-köp'') [*osteo-* + Gr. *kopos* pain] a severe pain in a bone or in the bones, generally a symptom of syphilitic bone disease.

osteocopic (os''te-o-kop'ik) pertaining to or characterized by osteocope.

osteocranium (os''te-o-kra'ne-um) [*osteo-* + Gr. *kranion* cranium] the fetal cranium during its stage of ossification.

osteocystoma (os''te-o-sis-to'mah) [*osteo-* + *cystoma*] a bone cyst.

osteocyte (os''te-o-sit'') an osteoblast that has become embedded within the bone matrix, occupying a flat oval cavity (bone lacuna [q.v.]) and sending, through the canaliculi, slender cytoplasmic processes that make contact with processes of other osteocytes.

osteodentin (os''te-o-den'tin) [*osteo-* + *dentin*] dentin that resembles bone: seen in the teeth of certain fish and pathologically in other lower species, and in man, being produced by rapid formation of secondary dentin, with entrapment of cells.

osteodentinoma (os''te-o-den-ti-no'mah) an odontoma composed of bone and dentin.

osteodermis (os''te-o-der'me-ah) [*osteo-* + Gr. *derma* skin + *-ia*] osteoma cutis.

osteodesmosis (os''te-o-des-mo'sis) [*osteo-* + Gr. *desmos* tendon] 1. the formation of bone and tendon. 2. ossification of tendon.

osteodiastasis (os''te-o-di-as'tah-sis) [*osteo-* + Gr. *diastasis* separation] the separation of two adjacent bones.

osteodynia (os''te-o-din'e-ah) [*osteo-* + Gr. *odynē* pain] pain in a bone.

osteodysplasty (os''te-o-dis-plas'te) [*osteo-* + *dys-* + Gr. *plassein* to form] abnormal development of bone. **o. of Melnick and Needles**, a hereditary disorder, transmitted as an autosomal dominant trait, in which there are severe congenital bone abnormalities manifested by striking facies (exophthalmos, full cheeks, micrognathia), and malalignment of the teeth, flaring of the metaphyses of long bones, S-like curvature of the leg bones, irregular constrictions in the ribs, and sclerosis of the base of the skull.

osteodystrophia (os''te-o-dis-tro'fe-ah) osteodystrophy. **o. cystica**, osteitis fibrosa cystica. **o. fibrosa**, osteitis fibrosa cystica.

osteodystrophy (os''te-o-dis-tro-fe) defective bone formation. **Albright's hereditary o.**, pseudo-pseudohypoparathyroidism. **renal o.**, a condition resulting from chronic disease of the kid-

neys with onset usually in childhood. It is characterized by impaired renal function, by elevated serum phosphorus and low or normal serum calcium levels, and by stimulation of parathyroid function. The resultant bone disease includes a variable admixture of osteitis fibrosa cystica, osteomalacia, osteoporosis, and sometimes osteosclerosis. If the onset is in childhood, renal dwarfism may result.

osteectomy (os''te-o-ek'to-me) osteotomy.

osteochondroma (os''te-o-en''kon-dro'mah) osteochondroma.

osteopiphysis (os''te-o-pif'i-sis) [*osteo-* + *epiphysis*] any bony epiphysis.

osteofibrochondrosarcoma (os''te-o-fi''bro-kon''dro-sar-ko'mah) malignant mesenchymoma.

osteofibroma (os''te-o-fi-bro'mah) [*osteo-* + *fibroma*] a tumor containing both osseous and fibrous elements.

osteofibromatosis (os''te-o-fi''bro-mah-to'sis) polyostotic form of fibrous dysplasia of bone. **cystic o.**, Jaffe-Lichtenstein disease.

osteofluorosis (os''te-o-floo'o-ro'sis) skeletal changes, usually consisting of osteomalacia and osteosclerosis, caused by the chronic intake of excessive quantities of fluorides. See also *fluorosis*, def. 2.

osteogen (os''te-o-jen'') [*osteo-* + Gr. *gennan* to produce] the substance composing the inner layer of the periosteum, from which bone is formed.

osteogenesis (os''te-o-jén'ě-sis) [*osteo-* + Gr. *gennan* to produce] formation of bone; the development of the bones. **o. imperfecta**, an inherited condition, usually transmitted as an autosomal dominant trait, in which the bones are abnormally brittle and subject to fractures. In *o. imperfecta congenita* the fractures occur in intrauterine life and the child is born with deformities. In *o. imperfecta tarda* the fractures occur when the child begins to walk. The condition is usually attended by blue coloration of the sclera of the eyes (Lobstein's disease or syndrome) and sometimes also by otosclerotic deafness (Van der Hoeve's syndrome). Called also *fragilitas ossium*, *brittle bones*, *osteopsathyrosis*, and *hypoplasia of the mesenchyme*. **o. imperfecta cystica**, a disorder in which the marrow spaces contain myxomatous fibroid tissue, the x-ray showing cystic changes.

osteogenetic (os''te-o-jē-net'ik) forming bone; concerned in bone formation.

osteogenic (os''te-o-jen'ik) [*osteo-* + Gr. *gennan* to produce] derived from or composed of any tissue which is concerned in the growth or repair of bone.

osteogenous (os''te-o-jē-nus) osteogenic.

osteogeny (os''te-o-jē-ne) osteogenesis.

osteogram (os''te-o-gram) a semidiagram of the spine used as a record sheet for the charting of bone lesions.

osteography (os''te-o-gh'rah-fe) [*osteo-* + Gr. *graphein* to write] a description of the bones.

osteohalisteresis (os''te-o-hah-lis'ter-e'sis) [*osteo-* + Gr. *halssalt* + *sterein* to deprive] loss or deficiency of the mineral elements of bones.

osteohemachromatosis (os''te-o-hem''ah-kro'mah-to'sis) [*osteo-* + Gr. *haima* blood + *chrōma* color + *-osis*] a disease of animals marked by discoloration of the bone by blood pigment.

osteohydatidosis (os''te-o-hi'dah-tid-o'sis) hydatid disease of bone.

osteoid (os''te-oid) [*osteo-* + Gr. *eidos* form] 1. resembling bone. 2. the organic matrix of bone; young bone which has not undergone calcification.

osteolathyrism (os''te-o-lath'i-rizm) a skeletal disorder produced in laboratory animals by diets containing the sweet pea (*Lathyrus odoratus*) or its active principle, β -aminopropionitrile, or other aminonitriles. Characterized, in rats, by hernias, dissecting aortic aneurysms, lameness, of the hind legs, exostoses, and kyphoscoliosis and other skeletal deformities, apparently as the result of defective aging of collagen tissue.

osteolipochondroma (os''te-o-li-po''kon-dro'mah) osteochondroma with fatty elements.

osteolipoma (os''te-o-li-po'mah) lipoma with osseous metaplasia.

osteologia (os''te-o-lo'je-ah) osteology; in NA terminology it encompasses the nomenclature relating to the bones.

osteologist (os''te-ol'o-jist) a specialist in osteology.

osteology (os''te-ol'o-je) [*osteo-* + Gr. *logos* treatise] the scientific study of the bones; applied also to the body of knowledge relating to the bones.

osteolysis (os''te-ol'i-sis) [*osteo-* + Gr. *lysis* dissolution] dissolution of bone; applied especially to the removal or loss of the calcium of bone.

osteolytic (os''te-o-lit'ik) relating to, characterized by, or promoting osteolysis.

osteoma (os''te-o'mah) [*osteo-* + *-oma*] a tumor composed of bone tissue; a hard tumor of bonelike structure developing on a bone (*homoplastic o.*) and sometimes on other structures (*hetero-*

plastic o. **cavalryman's o.**, osteoma at the insertion of the adductor femoris longus muscle. **compact o.**, *o. durum*. **o. cutis**, a condition in which bone-containing nodules form on the skin; called also *osteodermia* and *osteosis cutis*. **o. du'rum**, *o. eburneum*, a tumor made up of hard bony tissue. **giant osteoid o.**, osteoblastoma. **o. medulla're**, an osteoma containing marrow spaces. **osteoid o.**, a small, benign but painful, circumscribed tumor of spongy bone occurring especially in the bones of the extremities and vertebrae, most often in young persons. **o. sarcomato'sum**, osteogenic sarcoma. **o. spongio'sum**, osteoma containing cancellated bone.

osteomalacia (os'te-o-mah-la'she-ah) [*osteo-* + *Gr. malakia* softness] a condition marked by softening of the bones (due to impaired mineralization, with excess accumulation of osteoid), with pain, tenderness, muscular weakness, anorexia, and loss of weight, resulting from deficiency of vitamin D and calcium. **bovine o.**, *aphosphorosis*. **hepatic o.**, osteomalacia as a complication of cholestatic liver disease, which may lead to severe bone pain and multiple fractures. **infantile o.**, **juvenile o.**, late rickets. **puerperal o.**, osteomalacia occurring as a consequence of exhaustion of skeletal stores of calcium and phosphorus by repeated pregnancies and lactation. **renal tubular o.**, osteomalacia occurring as a consequence of acidosis and hypercalciuria, resulting from inability to produce an acid urine or ammonia because of deficient activity of the renal tubules. **senile o.**, softening of bones in old age due to vitamin D deficiency.

osteomalacic (os'te-o-mah-la'sik) pertaining to or characterized by osteomalacia.

osteomalacosis (os'te-o-mal'ah-ko'sis) osteomalacia.

osteomatoid (os'te-o'mah-toid) resembling an osteoma.

osteomatosis (os'te-o-mah-to'sis) the formation of multiple osteomas.

osteomere (os'te-o-mēr') [*osteo-* + *Gr. meros* part] one of a series of similar bony structures, such as the vertebrae.

osteometry (os'te-o-mē'tre) [*osteo-* + *Gr. metron* measure] the measurement of bones.

osteomiosis (os'te-o-mi-o'sis) [*osteo-* + *Gr. meiosis* diminution] disintegration of bone.

osteomyelitic (os'te-o-mi'ē-lit'ik) marked by or characteristic of osteomyelitis.

osteomyelitis (os'te-o-mi'ē-li'tis) [*osteo-* + *Gr. myelos* marrow] inflammation of bone caused by a pyogenic organism. It may remain localized or may spread through the bone to involve the marrow, cortex, cancellous tissue, and periosteum. **concholin o.**, a condition seen in the workers in mother of pearl, probably due to the inhaled dust being deposited in the bone marrow. Cf. *coniosis*. **Garré's o.**, sclerosing nonsuppurative o. **malignant o.**, former name for multiple myeloma. **sclerosing nonsuppurative o.**, chronic idiopathic osteomyelitis involving the long bones, particularly the tibia and femur, and characterized by a diffuse inflammatory reaction, increased density and spindle-shaped sclerotic thickening of the cortex, and an absence of suppuration; called also *Garré's disease*, *osteitis*, or *osteomyelitis*, and *chronic nonsuppurative osteitis*. **typhoid o.**, osteomyelitis occurring as a concurrent or greatly delayed sequel of typhoid fever. **o. variolo'sa**, osteomyelitis due to, or occurring as a complication of, smallpox.

osteomyelodysplasia (os'te-o-mi'ē-lo-dis-pla'se-ah) [*osteo-* + *Gr. myelos* marrow + *dys-* + *plassein* to form] a condition characterized by thinning of the osseous tissue of bones and increase in size of the marrow cavities, attended with leukopenia and fever.

osteomyelography (os'te-o-mi'ē-log'rah-fe) roentgen visualization of bone marrow.

osteomyxochondroma (os'te-o-mik'so-kon-dro'mah) osteochondromyxoma.

osteon (os'te-on) [*osteo-* + *Gr. on* neuter ending] the basic unit of structure of compact bone, comprising a haversian canal and its concentrically arranged lamellae, of which there may be 4 to 20, each 3 to 7 microns thick, in a single (haversian) system; such units are directed mainly in the long axis of the bone.

osteone (os'te-ōn) osteon.

osteonecrosis (os'te-o-ne-kro'sis) [*osteo-* + *Gr. nekrosis* death] death, or necrosis, of bone.

osteoneuralgia (os'te-o-nu-ral'je-ah) [*osteo-* + *neuralgia*] neuralgia of a bone.

osteonosus (os'te-on'o-sus) [*osteo-* + *Gr. nosos* disease] disease of bone.

osteo-odontoma (os'te-o-o'don-to'mah) ameloblastic odontoma.

osteopath (os'te-o-path) a practitioner of osteopathy.

osteopathia (os'te-o-path'e-ah) any disease of a bone; called also *osteopathy*. **o. conden'sans**, myeloclerosis, def. 2. **o. conden'sans dissemina'ta**, **o. conden'sans general-isa'ta**, osteopoikilosis. **o. hemorrhag'ica infan'tum**, Moeller-Barlow disease. **o. hyperostot'ica congen'ita**, melorheostosis. **o. hyperostot'ica mul'tiplex infan'tilis**, diaphyseal dysplasia. **o. stria'ta**, an abnormality appar-

ent only on roentgen examination, and occurring only in cancellous bone; it is characterized by multiple condensations beginning at the epiphyseal line and extending into the diaphysis.

osteopathic (os'te-o-path'ik) pertaining to osteopathy.

osteopathology (os'te-o-pah-thol'o-je) any disease of bone.

osteopathy (os'te-op'ah-the) [*osteo-* + *Gr. pathos* disease] 1. any disease of a bone. 2. a system of therapy founded by Andrew Taylor Still (1828-1917) and based on the theory that the body is capable of making its own remedies against disease and other toxic conditions when it is in normal structural relationship and has favorable environmental conditions and adequate nutrition. It utilizes generally accepted physical, medicinal, and surgical methods of diagnosis and therapy, while placing chief emphasis on the importance of normal body mechanics and manipulative methods of detecting and correcting faulty structure. **alimentary o.**, hunger o. **disseminated condensing o.**, osteopoikilosis. **hunger o.**, disturbances of the skeletal system observed in famine areas, characterized by a reduction in the amount of normally calcified bone, and attributed to dietary deficiencies and associated hormonal dysfunction. **myelogenic o.**, any bone disease due to the impaired relation between the medullary and osseous tissues.

osteopecilia (os'te-o-pē-sil'e-ah) [*osteo-* + *Gr. poikilia* spottedness] osteopoikilosis.

osteopedion (os'te-o-pe'de-on) [*osteo-* + *Gr. paidion* child] lithopedion.

osteopenia (os'te-o-pe'ni-ah) [*osteo-* + *Gr. penia* poverty] reduced bone mass due to a decrease in the rate of osteoid synthesis to a level insufficient to compensate normal bone lysis. The term is also used to refer to any decrease in bone mass below the normal.

osteopenic (os'te-o-pen'ik) pertaining to osteopenia.

osteoperiosteal (os'te-o-per'i-os'te-al) pertaining to bone and its periosteum.

osteoperiostitis (os'te-o-per'i-os-ti'tis) [*osteo-* + *periostitis*] inflammation of a bone and its periosteum. Called also *periosteitis*. **alveolodental o.**, periodontitis.

osteopetrosis (os'te-o-pe'tro'sis) [*osteo-* + *Gr. petra* stone + *-osis*] a rare hereditary disease characterized by abnormally dense bone, probably due to faulty bone resorption. The disorder occurs in two forms: a severe autosomal recessive form occurring in infancy or childhood, and a benign autosomal dominant form occurring in adolescence or adulthood. In the recessive form, the proliferation of bone obliterates the marrow cavity, causing anemia, and the nerve foramina of the skull, causing compression of cranial nerves, which may result in deafness and blindness. Fractures are common in both forms. Called also *Albers-Schönberg disease*, *ivory bones*, and *marble bones*. **o. gallina'rum**, see *avian leukosis*, under *leukosis*.

osteophage (os'te-o-fāj) [*osteo-* + *Gr. phagein* to eat] osteoclast, def. 2.

osteophagia (os'te-o-fa'je-ah) [*osteo-* + *Gr. phagein* to eat] the eating of bone due to a craving for phosphorus.

osteophlebitis (os'te-o-fle-bi'tis) [*osteo-* + *Gr. phleps* vein + *-itis*] inflammation of the veins of a bone.

ostephone (os'te-o-fōn') [*osteo-* + *Gr. phōnē* voice] audiphone.

ostephony (os'te-o-fō-ne) [*osteo-* + *Gr. phōnē* voice.] the conduction of sounds by bone; bone conduction.

osteophore (os'te-o-fōr) [*osteo-* + *Gr. pherein* to carry] a bone-crushing forceps.

osteophyma (os'te-o-fi'mah) [*osteo-* + *Gr. phyma* growth] a tumor or outgrowth of a bone.

osteophyte (os'te-o-fit') [*osteo-* + *Gr. phyton* plant] a bony excrescence or osseous outgrowth.

osteophytosis (os'te-o-fi-to'sis) a condition characterized by the formation of osteophytes.

osteoplaque (os'te-o-plak) a layer of bone.

osteoplast (os'te-o-plast) [*osteo-* + *Gr. plastos* formed] osteoblast.

osteoplastic (os'te-o-plas'tik) 1. osteogenic. 2. pertaining to osteoplasty.

osteoplastica (os'te-o-plas'ti-kah) osteitis fibrosa cystica.

osteoplasty (os'te-o-plas'te) [*osteo-* + *Gr. plassein* to form] plastic surgery of the bones.

osteopoikilosis (os'te-o-poi'ki-lo'sis) [*osteo-* + *Gr. poikilos* mottled] a hereditary condition characterized by the presence of multiple sclerotic foci in the ends of long bones and scattered stippling in round and flat bones, usually without symptoms and diagnosed fortuitously by x-ray examination. It is transmitted as an autosomal dominant trait.

osteopoikilotic (os'te-o-poi'ki-lo'tik) pertaining to or characterized by osteopoikilosis.

osteoporosis (os'te-o-po-ro'sis) [*osteo-* + *Gr. poros* passage + *-osis*] abnormal rarefaction of bone, seen most commonly in the elderly. Depending on the extent of demineralization of bone, it may be accompanied by pain, particularly of the lower back; deformities, such as loss of stature; and pathological fractures. It may be idiopathic or secondary to other diseases, such as thyrotoxicosis.

adipose o., osteoporosis in which the enlarged spaces in bone are filled with fat. **o. circumscrip'ta cra'nii**, demineralization of the bones of the skull, characteristic of the destructive or osteolytic phase of Paget's disease; called also *Schüller's disease*. **o. of disuse**, decrease in bone substance as a result of lack of re-formation of laminae in the absence of functional stress which ordinarily leads to their replacement in new stress lines. **post-traumatic o.**, loss of bone substance following an injury in which there is damage to a nerve, sometimes due to an increased blood supply caused by the neurogenic insult, or to disuse secondary to pain.

osteoporotic (os'te-o-po-rot'ik) pertaining to or characterized by osteoporosis.

osteopsathyrosis (os'te-op-sath'i-ro'sis) [oste- + Gr. *psathyros* friable] osteogenesis imperfecta.

osteoradionecrosis (os'te-o-ra'de-o-ne-kro'sis) necrosis of bone following irradiation.

osteorrhagia (os'te-o-ra'je-ah) [oste- + Gr. *rhēgnynai* to burst out] hemorrhage from bone.

osteorrhaphy (os'te-or'ah-fe) [oste- + Gr. *rhaphe* suture] the suturing or wiring of bones.

osteosarcoma (os'te-o-sar-ko'mah) [oste- + *sarcoma*] osteogenic sarcoma. **telangiectatic o.**, an osteogenic sarcoma containing dilated capillaries.

osteosarcomatous (os'te-o-sar-ko'mah-tus) of the nature of osteosarcoma.

osteosclerosis (os'te-o-skle-ro'sis) [oste- + Gr. *sklērosis* hardening] the hardening or abnormal density of bone, as in eburnation and condensing osteitis. **o. congen'ita**, achondroplasia. **o. frag'ilis**, osteopetrosis. **o. frag'ilis generalisa'ta**, osteopoiikilosis. **o. myelofibrosis**, myelosclerosis, def. 2.

osteosclerotic (os'te-o-skle-rot'ik) pertaining to or characterized by osteosclerosis.

osteoscope (os'te-o-skōp) [oste- + Gr. *skopein* to examine] an instrument for testing a roentgen ray apparatus by examining a standard preparation of the bones of the forearm.

osteoseptum (os'te-o-sep'tum) [oste- + *septum*] the bony part of the nasal septum.

osteosis (os'te-o'sis) the formation of bony tissue, especially the infiltration of connective tissue with bone. **o. cu'tis**, see under *osteoma*. **o. ebur'nisans monomel'ica**, melorheostosis. **parathyroid o.**, osteitis fibrosa cystica.

osteostixis (os'te-o-stik'sis) [oste- + Gr. *stixis* puncture] surgical puncture of a bone.

osteosuture (os'te-o-su-tūr) [oste- + L. *sutura* suture] osteorrhaphy.

osteosynovitis (os'te-o-sin'o-vi'tis) synovitis together with osteitis of the neighboring bones.

osteosynthesis (os'te-o-sin'thē-sis) [oste- + Gr. *synthesis* a putting together] surgical fastening of the ends of a fractured bone by sutures, rings, plates, or other mechanical means.

osteotabes (os'te-o-ta'bēz) [oste- + L. *tabes* wasting] a disease, chiefly of infants, in which the cells of the bone marrow are destroyed and the marrow disappears.

osteotelangiectasia (os'te-o-tē-lan'je-ek-ta'se-ah) [oste- + *telangiectasia*] telangiectatic osteosarcoma.

osteothrombophlebitis (os'te-o-throm'bo-fle-bi'tis) inflammation extended through intact bone by a progressive thrombophlebitis of small venules, such as sometimes occurs in the mastoid bone.

osteothrombosis (os'te-o-throm-bo'sis) [oste- + *thrombosis*] thrombosis of the veins of a bone.

osteotome (os'te-o-tōm') [oste- + Gr. *tomē* a cut] a chisel-like knife for cutting bone.

osteotomoclasia (os'te-o-to'mo-kla'se-ah) osteotomoclasia.

osteotomoclasia (os'te-o-to-mok'lah-sis) [oste- + Gr. *tomos* section + *klasis* breaking] correction of curvature of bone by partial division with the osteotome, followed by forcible fracture.

osteotomy (os'te-ot'o-me) [oste- + Gr. *temnein* to cut] the surgical cutting of a bone. **angulation o.**, in midhumeral amputation, the bending of a small terminal of the humerus at a right angle to the bone shaft so as to provide a projection that locks the prosthesis to the bone. **block o.**, osteotomy in which a section of bone is removed. **cuneiform o.**, the removal of a wedge of bone. **cup-and-ball o.**, osteotomy in which the distal fragment is pointed and the proximal fragment is recessed. **displacement o.**, surgical division of a bone and shifting of the divided ends to change the alignment of the bone or to alter weight-bearing stresses. **hinge o.**, curvilinear cutting of a bone. **innominate o.**, pelvic osteotomy to deepen the acetabulum in congenital dislocation of the hip. **linear o.**, the sawing or linear cutting of a bone. **Lorenz's o.**, osteotomy of the neck of the femur by a V-shaped cutting of the femur so as to prevent displacement of the shaft. **Macewen's o.**, see under *operation*, def. 1. **pelvic o.**, pubiotomy. **subtrochanteric o.**, Gant's operation. **transtrochanteric o.**, division of the femur through the lesser trochanter for deformity about the hip joint.

osteotribe, osteotrite (os'te-o-trib'; os'te-o-trit') [oste- + Gr. *tribein* to rub] an instrument for rasping carious bone.

osteotrophy (os'te-ot'ro-fe) [oste- + Gr. *trophē* nutrition] nutrition of bone.

osteotylus (os'te-ot'y-lus) [oste- + Gr. *tylos* callus] the callus enclosing the end of a broken bone.

osteotympanic (os'te-o-tim-pan'ik) craniotympanic.

Ostertagia (os'ter-ta'je-ah) [Robert von *Ostertag*, German veterinarian, 1864-1940] a genus of attenuated nematode parasites belonging to the family Trichostrongylus, found mostly in cysts on the wall of the abomasum of cattle and other ruminants.

osthemia, osthexy (os-thek'se-ah; os'thek-se) [Gr. *osteon* bone + *hexis* condition] abnormal ossification.

ostia (os'te-ah) [L.] plural of *ostium*.

ostial (os'te-al) pertaining to an ostium.

ostuary (os'te-a-re) [L. *ostarius* pertaining to a door] (obs.) pertaining to an orifice.

ostitis (os-ti'tis) osteitis.

ostium (os'te-um), pl. *ostia* [L.] a door, or opening; used in anatomical nomenclature as a general term to designate an opening into a tubular organ, or between two distinct cavities within the body. Called also *orificium*, *orifice*, and *opening*. **o. abdomina'le tu'bae uteri'nae** [NA], abdominal orifice of uterine tube: the funnel-shaped opening by which the uterine tube communicates with the pelvic cavity. **o. aor'tae** [NA], the opening between the left ventricle and the aorta. **o. appen'dicis vermifor'mis** [NA], opening of vermiform appendix: the orifice between the vermiform appendix and the cecum. **o. arterio'sum cor'dis**, ostium atrioventriculare sinistrum. **o. atrioventricula're dex'trum** [NA], the opening between the right atrium and the right ventricle of the heart, guarded by the right atrioventricular valve; called also *o. venosum cordis*. **o. atrioventricula're sinis'trum** [NA], the opening between the left atrium and the left ventricle of the heart, guarded by the left atrioventricular valve; called also *o. arteriosum cordis* and *mitral orifice*. **o. cardi'acum** [NA], cardiac opening: the orifice between the esophagus and the cardiac part of the stomach. **coronary o.**, either of the two openings in the aortic sinus which mark the origin of the (left and right) coronary arteries. **o. ileoceca'le** [NA], **o. ileocaecocol'icum**, ileocecal opening: the orifice between the ileum and cecum. **o. inter'num u'teri**, *o. uterinum tubae uterinae*. **persistent o. pri'mum**, an endocardial cushion defect characterized by a cleft in the basal portion of the atrial septum, usually associated with cleft mitral valve. **o. pharyn'geum tu'bae auditi'vae** [NA], the pharyngeal opening of the auditory tube. **o. pri'mum**, an opening in the lowest aspect of the septum primum of the embryonic heart, posteriorly, in the neighborhood of the atrioventricular valve. **o. pylo'ricum** pyloric opening: the orifice between the stomach and the duodenum. **o. secun'dum**, an opening high in the septum primum of the embryonic heart, approximately where the foramen ovale will be later. **sinu'soidal o.**, any of the openings of the veins of Vieussens in the chambers of the heart. **sphenoidal o.**, *apertura sinus sphenoidalis*. **o. trun'ci pulmona'lis** [NA], opening of pulmonary trunk: the opening between the right ventricle (from the conus arteriosus portion) and the pulmonary trunk. **o. tympan'icum tu'bae auditi'vae** [NA], tympanic opening of auditory tube: the opening of the auditory tube on the carotid wall of the tympanic cavity. **o. ure'teris** [NA], the opening of the ureter in the bladder; called also *orificium ureteris*. **o. ure'thrae exter'num femini'nae** [NA], external orifice of female urethra: the opening of the urethra into the vestibule; it is surrounded by a sphincter of striated muscle derived from the bulbocavernosus muscle. Called also *orificium urethrae externum muliebris*. **o. ure'thrae exter'num masculi'nae** [NA], external orifice of male urethra: the slitlike opening of the urethra on the tip of the glans penis; called also *orificium urethrae externum virilis*. **o. ure'thrae inter'num** [NA], internal orifice of urethra: the opening between the bladder and the urethra; called also *orificium urethrae internum*. **o. u'teri** [NA], the external opening of the cervix of the uterus into the vagina; called also *orificium externum uteri* and *external orifice of uterus*. **o. uteri'num tu'bae uteri'nae** [NA], uterine orifice of uterine tube: the point at which the cavity of the uterine tube becomes continuous with that of the uterus. **o. vagi'nae** [NA], the external orifice of the vagina, situated just posterior to the external urethral orifice; called also *orificium vaginae*. **o. ve'nae cav'ae inferio'ris** [NA], the opening of the inferior vena cava into the right atrium of the heart; it is accompanied by a valve which, in the adult, is usually rudimentary. **o. ve'nae cav'ae superio'ris** [NA], the opening of the superior vena cava into the right atrium of the heart; it is unaccompanied by a valve. **ostia vena'rum pulmona'lium** [NA], the openings of the pulmonary veins (in the human, usually four) into the left atrium of the heart; they are unaccompanied by valves. **o. veno'sum cor'dis**, ostium atrioventriculare dextrum.

ostomate (os'to-māt) one who has undergone enterostomy or ureterostomy.

ostomy (os'to-me) a general term referring to any operation in

which an artificial opening is formed between two hollow organs or between one or more such viscera and the abdominal wall for discharge of intestinal contents or of urine.

ostosis (os-to'sis) osteogenesis.

ostraceous (os-tra'shus) [Gr. *ostrakon* shell] shaped like or resembling an oyster shell.

ostracosis (os'trah-ko'sis) [Gr. *ostrakon*, shell] bony change which takes on the consistency of oyster shell.

ostreasterol (os'tre-as'ter-ol) a solid sterol, C₂₉H₄₈O, present in oysters.

ostreotoxism (os'tre-o-tok-siz'mus) [Gr. *ostreon* oyster + *toxi-kon* poisoning] poisoning caused by the eating of contaminated oysters.

O.S.U.K. Ophthalmological Society of the United Kingdom.

Oswaldocruzia (oz-wal'do-kroo'ze-ah) [G. *Oswaldo Cruz*, Brazilian physician, 1872-1917] a genus of nematode parasites inhabiting the lungs and intestines of reptiles and batrachians.

OT 1. abbreviation for *old term* in anatomy. 2. old tuberculin.

ot- see *oto-*.

otagra (o-tag'rah) otalgia.

otalgia (o-tal'je-ah) [Gr. *otalgia*] pain in the ear; earache. **o. denta'lis**, reflex pain in the ear due to dental disease. **geniculate o.**, geniculate neuralgia. **o. intermit'tens**, otalgia of an intermittent type. **reflex o.**, otalgia dependent upon some lesion of the buccal cavity or nasopharynx. **secondary o.**, otalgia dependent on inflammation of the geniculate ganglion. **tabetic o.**, otalgia in *tabes dorsalis* due to degeneration of the nerve of Wrisberg.

otalgic (o-tal'jik) 1. pertaining to earache. 2. an earache remedy.

otaphone (o'tah-fōn) otophone.

OTC over the counter; applied to drugs not required by law to be sold on prescription only.

OTD organ tolerance dose; see under *dose*.

otic (o'tik) [Gr. *otikos*] pertaining to the ear; aural.

otibiosis (o'te-o-bi-o'sis) otobiosis.

Otiobius (o'te-o'be-us) *Otobius*.

otitic (o-tit'ik) pertaining to otitis.

otitis (o-ti'tis) [*ot-* + *-itis*] inflammation of the ear, which may be marked by pain, fever, abnormalities of hearing, hearing loss, tinnitus, and vertigo. **aviation o.**, barotitis media. **o. croupo'sa**, that which is associated with the formation of a fibrinous membrane. **o. desquamati'va**, otitis externa or media in which there are overdevelopment and desquamation of the cutaneous or mucous epithelium. **o. diphtherit'ica**, *o. croupo'sa*. **o. exter'na**, inflammation of the external auditory canal. **o. exter'na circumscrit'ta**, that which affects a limited area or areas. **o. exter'na diffu'sa**, that which affects the greater part of the meatus. **o. exter'na furunculo'sa**, furuncular *o.* **furuncular o.**, the formation of furuncles in the external meatus. **o. inter'na**, inflammation of the internal ear; labyrinthitis. **o. labyrin'thica**, labyrinthitis. **o. mastoi'dea**, otitis which involves the mastoid spaces. **o. me'dia**, inflammation of the middle ear; tympanitis. **o. me'dia, adhesive**, otitis media resulting in the formation of adhesions between the tympanic membrane and the bony walls of the middle ear or the ossicles. **o. media, secretory**, a painless accumulation of serous or mucoid fluid in the middle ear, resulting from obstruction of the eustachian tube, and causing conduction hearing loss. **o. media, serous**, that marked by serous effusion into the middle ear. **o. me'dia catarrha'lis acu'ta**, an acute catarrhal form. **o. me'dia catarrha'lis chron'ica**, a chronic catarrhal form of several subvarieties. **o. me'dia purulen'ta acu'ta**, an acute suppurative form. **o. me'dia purulen'ta chron'ica**, otorrhea. **o. me'dia sclerot'ica**, dry catarrh of the middle ear. **o. me'dia sero'sa**, one marked by a serous exudation. **o. me'dia suppurati'va**, suppurative inflammation of the middle ear. **o. me'dia vasomotor'ica**, otitis media of vasomotor origin. **mucosis o.**, **mucosus o.**, otitis media caused by *Streptococcus mucosus*. **o. mycot'ica**, that which is due to parasitic fungi. **parasitic o.**, otocariasis. **o. sclerot'ica**, that which is marked by hardening of the ear structures.

oto-, ot- [Gr. *ous*, *ōtos* ear] a combining form denoting relationship to the ear.

otocariasis (o'to-ak'ah-ri'ah-sis) [*oto-* + *acariasis*] infection of the ears of cats, dogs, and domestic rabbits with the mite *Otodectes*; called also *parasitic otitis*.

otoantritis (o'to-an-tri'tis) otitis involving the attic of the tympanum and the mastoid antrum.

otobiosis (o'to-bi-o'sis) infestation by *Otobius*.

Otobius (o-to'be-us) [*oto-* + Gr. *bios* manner of living] a genus of argasid ticks, the spinous ear ticks. The nymphs of *O. lagophilus* of rabbits and *O. megnini* of cattle and other domestic animals may attack the ears of man.

otoblennorrhea (o'to-blen'o-re'ah) [*oto-* + Gr. *blenna* mucus + *rhoia* flow] mucous discharge from the ear.

otocariasis (o'to-kah-ri'ah-sis) otocariasis.

Otocentor (o'to-sen'tor) *Anocentor*. **O. ni'tens**, *Anocentor nitens*.

otocephalus (o'to-sef'ah-lus) [*oto-* + Gr. *kephalē* head] an individual exhibiting otocephaly.

otocephaly (o'to-sef'ah-le) [*oto-* + Gr. *kephalē* head] a congenital malformation characterized by lack of a lower jaw and by ears that are united below the face.

otocerebritis (o'to-ser'ē-bri'tis) [*oto-* + *cerebritis*] inflammation of the brain dependent upon disease of the middle ear.

otocleisis (o'to-kli'sis) [*oto-* + Gr. *kleisis* closure] closure of the auditory passages.

otoconia (o'to-ko'ne-ah) [*oto-* + Gr. *konis* dust] statoconia.

otoconite (o-tok'o-nit) statoconium; see *statoconia*.

otoconium (o'to-ko'ne-um) [L.] singular of *otoconia*.

otocranial (o'to-kra'ne-al) pertaining to the otocranium.

otocranium (o'to-kra'ne-um) [*oto-* + Gr. *kranion* skull] 1. the chamber in the petrous bone that lodges the internal ear. 2. the auditory portion of the cranium; called also *petromastoid*.

otocyst (o'to-sist) [*oto-* + Gr. *kystis* sac, bladder] 1. the auditory vesicle of the embryo. 2. the auditory sac of some of the lower animals.

Otodectes (o'to-dek'tēz) [*oto-* + Gr. *dēktēs* a biter] a genus of mites; see *otocariasis*.

otodynia (o'to-din'e-ah) [*oto-* + Gr. *odynē* pain] otalgia.

otoencephalitis (o'to-en-sef'ah-li'tis) [*oto-* + *encephalitis*] inflammation of the brain due to an extension from an inflamed middle ear.

otoganglion (o'to-gang'gle-on) [*oto-* + Gr. *ganglion* ganglion] the otic ganglion.

otogenic (o'to-jen'ik) otogenous.

otogenous (o-toj'ē-nus) [*oto-* + Gr. *gennan* to produce] originating within the ear.

otography (o-tog'rah-fe) [*oto-* + Gr. *graphein* to write] a description of the ear.

otohemineurasthenia (o'to-hem'e-nu'ras-the'ne-ah) [*oto-* + *hemi-* + *neurasthenia*] nervous defect of hearing in one ear.

otolaryngology (o'to-lar'in-gol'o-je) that branch of medicine concerned with medical and surgical treatment of the head and neck, including the ears, nose, and throat.

otolite (o'to-lit) otolith.

otolith (o'to-lith) [*oto-* + Gr. *lithos* stone] 1. see *statoconia*. 2. a calcareous mass in the inner ear of vertebrates or the otocyst of invertebrates.

otolithiasis (o'to-lī-thi'ah-sis) the presence of calculi in the ear.

otologic (o'to-loj'ik) pertaining to otology.

otologist (o-tol'o-jist) a physician who specializes in otology.

otology (o-tol'o-je) [*oto-* + *-logy*] that branch of medicine which deals with the medical treatment and surgery of the ear, and its anatomy, physiology, and pathology.

otomastoiditis (o'to-mas'toid-i'tis) mastoiditis combined with otitis.

Oto-Microscope (o'to-mi'kro-skōp) trademark for an operating microscope especially devised to improve visualization of the surgical field in operations on the ear, providing both magnification of the structures and illumination of the area.

otomucormycosis (o'to-mu'kor-mi-ko'sis) mucormycosis affecting the ear.

otomyasthenia (o'to-mi'as-the'ne-ah) [*oto-* + Gr. *mys* muscle + *astheneia* weakness] a debilitated state of the ear muscles, interfering with the normal attenuation and selection of sounds.

Otomyces (o'to-mi'sēz) [*oto-* + Gr. *mykēs* fungus] a former name for a genus of fungi which infest the ear; now considered the same as *Aspergillus*. **O. hage'ni**, **O. purpu'reus**, species of uncertain classification, which were once found in the human ear. *O. purpureus* is probably identical with *Aspergillus nidulans*.

otomycosis (o'to-mi-ko'sis) [*oto-* + Gr. *mykēs* fungus] fungal infection of the external auditory meatus, marked by pruritus and exudative inflammation; there may be secondary bacterial infection. **o. aspergilli'na**, any ear disease caused by the presence of an aspergillus; see *myringomycosis*.

otomyiasis (o'to-mi'yah-sis) infestation of the ear by larvae.

otoneuralgia (o'to-nu-ral'je-ah) [*oto-* + *neuralgia*] neuralgic pain in the ear.

otoneurasthenia (o'to-nu'ras-the'ne-ah) [*oto-* + *neurasthenia*] neurasthenia due to ear disease.

otoneurologic (o'to-nu'ro-loj'ik) pertaining to those portions of the nervous system relating to the ear.

otoneurology (o'to-nu-rol'o-je) that branch of otology dealing especially with those portions of the nervous system related to the ear.

otopathy (o-top'ah-the) [*oto-* + Gr. *pathos* disease] any disease of the ear.

otopharyngeal (o'to-fah-rin'je-al) pertaining to the ear and pharynx.

otophone (o'to-fōn) [oto- + Gr. *phōnē* sound] 1. an external appliance used to aid the hearing; a hearing aid. 2. a tube used in the auscultation of the ear.

otoplasty (o'to-plas'te) [oto- + Gr. *plassein* to form] plastic surgery of the ear; the surgical correction of ear deformities and defects.

otopolypus (o'to-pol'i-pus) [oto- + *polypus*] a polyp of the ear.

otopyorrhea (o'to-pi'o-re'ah) [oto- + Gr. *pyon* pus + *rhein* to flow] a copious purulent discharge from the ear.

otopyosis (o'to-pi-o'sis) [oto- + Gr. *pyōsis* suppuration] a suppurative disease of the ear.

otor (o'tor) pertaining to the ear; aural.

otorhinolaryngology (o'to-ri'no-lar'in-gol'o-je) [oto- + Gr. *rhis* nose + *larynx* larynx + *-logy*] that branch of medicine concerned with medical and surgical treatment of the head and neck, including the ears, nose, and throat.

otorhinology (o'to-ri-nol'o-je) [oto- + Gr. *rhis* nose + *-logy*] that branch of medicine which treats of the nose and ear and their diseases.

otorrhagia (o'to-ra'je-ah) [oto- + Gr. *rhēgnynai* to burst forth] hemorrhage from the ear.

otorrhea (o'to-re'ah) [oto- + Gr. *rhoia* to flow] a discharge from the ear, especially a purulent one. **cerebrospinal fluid o.**, escape of cerebrospinal fluid through the external auditory meatus due to fracture of the temporal bone.

otosalpinx (o'to-sal'pink) [oto- + Gr. *salpinx* trumpet] the auditory tube (tuba auditiva [NA]).

otosclerosis (o'to-skle-ro'sis) [oto- + Gr. *sklērosis* hardening] a pathological condition of the bony labyrinth of the ear, in which there is formation of spongy bone (otospongiosis), especially in front of and posterior to the footplate of the stapes; it may cause bony ankylosis of the stapes, resulting in conductive hearing loss. Cochlear otosclerosis may also develop, resulting in sensorineural hearing loss.

otosclerotic (o'to-skle-rot'ik) characterized by otosclerosis.

otoscope (o'to-skōp) [oto- + Gr. *skopein* to examine] an instrument for inspecting or for auscultating the ear. **Brunton's o.**, an otoscope lighted by means of a funnel attached to the side. **Siegle's o.**, an otoscope which gives a view of the drum membrane when subjected to condensed or rarefied air. **Toynbee's o.**, a tube for insertion into the ear of the patient and of the observer for the purpose of auscultating the patient's ear during politization.

otoscopy (o-tos'ko-pe) examination of the ear by means of the otoscope.

otosis (o-to'sis) a false impression of sounds uttered by others.

otospongiosis (o'to-spon'je-o'sis) the formation of spongy bone in the bony labyrinth of the ear; see *otosclerosis*.

ototoxic (o'to-tok'sik) having a deleterious effect upon the eighth nerve, or upon the organs of hearing and balance.

ototoxicity (o'to-toks-i'si-te) the quality of being poisonous to or of exerting a deleterious effect upon the eighth nerve or upon the organs of hearing and balance.

Otrivin (o'tri-vin) trademark for preparations of xylometazoline hydrochloride.

Ott's test (ots) [Isaac Ott, American physiologist, 1847-1916] see under *tests*.

Otto disease, pelvis (ot'o) [Adolph Wilhelm Otto, German surgeon, 1786-1845] see under *disease* and *pelvis*.

O.U. abbreviation for L. *oculus uterque*, each eye.

ouabain (wah-ba'in) [USP] chemical name: 3β-[(6-deoxy-α-L-mannopyranosyl)oxy]1β,5β,11α,19-pentahydroxycard-20(22)-enolide octahydrate. A cardiac glycoside, C₂₉H₄₄O₁₂·8H₂O, obtained principally from the seeds of *Strophanthus gratus* (Wall & Hock.) Baill. (Apocynaceae), occurring as white crystals or crystalline powder, and having the same actions as digitalis but producing digitalization more rapidly; used in the treatment of acute congestive heart failure, nodal paroxysmal tachycardia, and atrial flutter, administered intravenously. Called also *G-strophanthin* or *strophanthin-G*.

Oudin current, resonator (oo-da') [Paul Oudin, French electrotherapist and roentgenologist, 1851-1923] see under *current* and *resonator*.

oulectomy (oo-lek'to-me) ulectomy.

oulitis (oo-li'tis) ulitis.

oulonitis (oo'lo-ni'tis) pulpitis.

oulorrhagia (oo'lo-ra'je-ah) ulorrhagia.

ounce (owns) [L. *uncia*] a measure of weight in both the avoirdupois and the apothecaries' system; abbreviation oz. The ounce avoirdupois is one sixteenth of a pound, or 437.5 grains (28.3495 gm.). The apothecaries' ounce is one twelfth of a pound, or 480 grains (31.103 gm.); symbol ℥. **fluid o.**, a unit of capacity (liquid measure) of the apothecaries' system, being 8 fluidrams, or the equivalent of 29.57 ml. Abbreviated fl.oz.

outbreeding (owt'brēd-ing) the mating of totally unrelated individuals, which frequently results in the production of offspring that show more vigor, as measured in terms of growth, survival, and fertility, than the parents (heterosis); called also *crossbreeding*.

outlet (owt'let) a means by which something escapes. **pelvic o.**, the lower aperture of the pelvis (apertura pelvis inferior [NA]).

outpatient (owt'pa-shent) a patient who comes to the hospital, clinic, or dispensary for diagnosis and/or treatment but does not occupy a bed.

outpocketing (owt-pok'et-ing) evagination.

outpouching (owt'powch'ing) the obtrusion of a layer or part to form a pouch; evagination.

output (owt'poot) the yield, or the total of anything produced by any functional system of the body. **cardiac o.**, the effective volume of blood expelled by either ventricle of the heart per unit of time (usually volume per minute); it is equal to the stroke output multiplied by the number of beats per the time unit used in the computation. **energy o.**, the energy a body is able to manifest in work or activity. **stroke o.**, the amount of blood ejected by a ventricle at each beat of the heart. **urinary o.**, the amount of urine excreted by the kidneys.

ova (o'vah) [L.] plural of *ovum*.

oval (o'val) [L. *ovalis*] egg shaped; having the outline of the long section of an egg.

ovalbumin (o'val-bu'min) [L. *ovum* egg + *albumin*] an albumin obtainable from the whites of eggs.

ovalocytary (o'vah-lo-si'ter-e) elliptocytary.

ovalocyte (o'vah-lo-sit'') elliptocyte.

ovalocytosis (o-val'o-si-to'sis) elliptocytosis.

ovarialgia (o-va're-al'je-ah) oophoralgia.

ovarian (o-va're-an) pertaining to an ovary or ovaries.

ovariectomy (o'va-re-ek'to-me) oophorectomy.

ovario- (o-va're-o) [L. *ovarium* ovary] a combining form denoting relationship to the ovary.

ovariocele (o-va're-o-sē'l') [ovario- + Gr. *kēlē* hernia] hernial protrusion of an ovary.

ovariocentesis (o-va're-o-sen-te'sis) [ovario- + Gr. *kentēsis* puncture] surgical puncture of an ovary.

ovariocyesis (o-va're-o-si-e'sis) [ovario- + Gr. *kyēsis* pregnancy] ovarian pregnancy.

ovariodysneuria (o-va're-o-dis-nu're-ah) [ovario- + *dys-* + Gr. *neuron* nerve + *-ia*] neuralgic pain in the ovary.

ovariogenic (o-va're-o-jen'ik) arising in the ovary.

ovariohysterectomy (o-va're-o-his'ter-ek'to-me) oophorohysterectomy.

ovariopathy (o-va're-op'ah-the) [ovario- + Gr. *pathos* disease] ovarian disease.

ovariopexy (o-va're-o-pek'se) [ovario- + Gr. *pēxis* fixation] the operation of elevating and fixing an ovary to the abdominal wall.

ovariorrhesis (o-va're-o-rek'sis) [ovario- + Gr. *rhēxis* rupture] rupture of an ovary.

ovariosalpingectomy (o-va're-o-sal'pin-jek'to-me) surgical removal of an ovary and oviduct.

ovariostomy (o-va're-os'to-me) oophorostomy.

ovariotestis (o-va're-o-tes'tis) ovotestis.

ovariotherapy (o-va're-o-ther'ah-pe) ootherapy.

ovariotomy (o-va're-ot'o-me) [ovario- + Gr. *tomē* a cutting] surgical removal of an ovary, or removal of an ovarian tumor.

abdominal o., ovariectomy performed through the abdominal wall. **vaginal o.**, ovariectomy performed through the vagina.

ovariotubal (o-va're-o-tu'bal) pertaining to the ovary and uterine tube.

ovaritis (o'vah-ri'tis) oophoritis.

ovarium (o-va're-um), pl. *ovaria* [L.] [NA] the ovary or female gonad: one of the two sexual glands in which the ova are formed. It is a flat oval body along the lateral wall of the pelvic cavity, attached to the posterior surface of the broad ligament. It consists of stroma and ovarian follicles in various stages of maturation, and is covered by a modified peritoneum. **o. masculi'num**, appendix testis.

ovariotherapy (o'vah-ro-ther'ah-pe) ootherapy.

ovary (o'vah-re) the female gonad: one of the two sexual glands in which the ova are formed; see *ovarium*. **adenocystic o.**, an ovary containing numerous small serous cysts. **oyster o's**, hypertrophied, edematous ovaries usually seen in hydatidiform mole. **polycystic o.**, an ovary containing multiple, small follicular cysts filled with yellow or blood-stained, thin serous fluid; the condition may lead to the full-blown Stein-Leventhal syndrome.

ovaserum (o'vah-se'rum) an antiserum found on immunizing with egg albumin.

OVD occlusal vertical dimension; see *vertical dimension*, under *dimension*.

overbite (o'ver-bit) that condition in which the incisal ridges of the maxillary anterior teeth extend below the incisal ridges of the

mandibular anterior teeth when the jaws are in habitual occlusion. Cf. *overjet*. **horizontal o.**, see *overjet*. **vertical o.**, see *overbite*.

overclosure (o'vər-klo'sur) that condition in which the mandible raises too far before the teeth make contact, owing to the loss of occlusal vertical dimension. **reduced interarch distance o.**, an occlusal vertical dimension resulting in excessive interocclusal distance when the mandible is in rest position and in reduced interridge distance when the teeth are in contact.

overcompensation (o'vər-kom'pen-sa'shun) excessive compensation, especially an excessive drive for dominance to offset feelings of inferiority.

overcorrection (o'vər-ko-rek'shun) the use of too powerful lenses in correcting defect of vision.

overdenture (o'vər-den'chur) a complete denture supported both by soft tissue (mucosa) and by a few remaining natural teeth that have been altered, as by insertion of a long or short coping, to permit the denture to fit over them; called also *overlay denture*.

overdetermination (o'vər-de-ter'mi-na'shun) in psychoanalysis, the unconscious mechanism through which every mental symptom or every element of a dream is determined by more than one association; i.e., every element of the dream or symptom is the result of many factors.

overdose (o'vər-dōs") 1. to administer an excessive dose. 2. an excessive dose.

overdosage (o'vər-do'sij) 1. the administration of an excessive dose. 2. the condition resulting from an excessive dose.

overdrive (o'vər-driv) in cardiology, the process of increasing the heart rate to overcome ectopic heart rhythms; done by the use of drugs or electrical pacemakers.

overeruption (o'vər-e-rup'shun) supraclusion.

overextension (o'vər-eks-ten'shun) extension, as of a limb, beyond the normal limit.

overflow (o'vər-flo) the continuous escape of a fluid, as of the tears or the urine.

overgrafting (o'vər-graft'ing) the application of a second skin graft over a previously healed graft from which the epithelium has been removed, as a means of reinforcing split thickness grafts.

overgrowth (o'vər-grōth) excessive growth of a part, due either to increase in size of the constituent cells (hypertrophy) or to an increase in their number (hyperplasia).

overhang (o'vər-hang) the extension, over the margins of a tooth cavity, of an excessive amount of filling material.

overhydration (o'vər-hi-dra'shun) a state of excess fluids in the body.

overinflation (o'vər-in-fla'shun) excessive inflation or expansion, as of the lungs; hyperinflation. **nonobstructive pulmonary o.**, compensatory emphysema. **obstructive pulmonary o.**, localized obstructive emphysema.

overjet (o'vər-jet) that condition in which the incisal or buccal cusp ridges of the maxillary teeth extend labially or buccally to the incisal margins and ridges of the mandibular teeth when the jaws are in habitual occlusion. Cf. *overbite*.

overlap (o'vər-lap) anything that extends over and partially covers something else. **horizontal o.**, the projection of the upper anterior and/or posterior teeth beyond their antagonists in a horizontal direction. **vertical o.**, 1. the extension of the upper teeth over the lower teeth in a vertical direction when the opposing posterior teeth are in contact in centric occlusion. 2. the distance that teeth lap over their antagonists vertically. 3. the relationship of the maxillary incisors to the mandibular incisors when the incisal edges pass each other in centric occlusion.

overlay (o'vər-la) an increment; a later addition superimposed upon an already existing mass, state, or condition. **emotional o.**, psychogenic o. **psychogenic o.**, the emotionally determined increment to an existing symptom or disability which has been of an organic or of a physically traumatic origin.

overproductivity (o'vər-pro'duk-tiv'i-te) mental activity characterized by volubility, psychomotor activity, flights of ideas, incoherence, destructiveness, noisiness, etc.

overreaching (o'vər-rēch'ing) an error of gait in the horse, in which the toe of the hind hoof strikes the heel of the forefoot.

overresponse (o'vər-re-spons") abnormally intense response or reaction to a stimulus.

overriding (o'vər-rid'ing) the slipping of either part of a fractured bone past the other.

overstain (o'vər-stān) to stain a tissue excessively, so that certain elements may be properly stained when the excess of stain is washed out.

overstrain (o'vər-strān) an abnormal degree of fatigue brought about by activity; it is intermediate between fatigue and actual exhaustion.

overstress (o'vər-stres) excessive activity resulting in overstrain.

overtoe (o'vər-to) hallux varus in which the great toe overlies its fellows.

overtone (o'vər-tōn) any whole number multiple of a fundamental tone. **psychic o.**, the consciousness of a fringe or halo of associated relations which surrounds every image presented to the mind.

overtransfusion (o'vər-trans-fu'shun) overloading of the circulation by excessive transfusion of blood or other fluid.

overventilation (o'vər-ven'ti-la'shun) hyperventilation.

overweight (o'vər-wāt) excessive increase in adipose tissue (obese overweight) or in muscle and skeletal tissue (muscular overweight).

ovi- see *ovo-*.

ovi (o'vi) [L.] genitive of *ovum*. **o. albu'min** [L.], the white of hens' eggs. **o. vitel'lus** [L.], the yolk of hens' eggs.

ovicide (o'vi-sid) an agent destructive to the ova of certain organisms.

oviducal (o'vi-du-kal) pertaining to the oviducts.

oviduct (o'vi-dukt) [*ovi-* + L. *ductus* duct] 1. a passage through which ova leave the maternal organism or pass to an organ which communicates with the exterior of the body. 2. a uterine tube (tuba uterina [NA]).

oviductal (o'vi-dukt'al) pertaining to an oviduct.

oviferous (o-vif'er-us) [*ovi-* + L. *ferre* to bear] producing ova.

oviform (o'vi-form) [*ovi-* + L. *forma* shape] egg-shaped; ovoid.

ovigenesis (o'vi-jen'ē-sis) [*ovi-* + Gr. *gennan* to produce] oogenesis.

ovigenetic (o'vi-jē-net'ik) oogenetic.

ovigenic (o'vi-jen'ik) oogenic.

ovigenous (o-vij'ē-nus) oogenic.

ovigerum (o'vi-jerm) [*ovi-* + L. *germen* a bud] a cell which develops into an ovum.

ovigerous (o-vij'er-us) [*ovi-* + L. *gerere* to bear] producing or containing ova.

ovination (o'vi-na'shun) [L. *ovinus* of a sheep] inoculation with the virus of sheep-pox.

ovine (o'vin) [L. *ovinus* of a sheep] pertaining to, characteristic of, or derived from sheep.

ovinia (o-vin'e-ah) [L. *ovis* sheep] sheep-pox.

oviparity (o'vi-par'i-te) the quality of being oviparous.

oviparous (o-vip'ah-rus) [*ovi-* + L. *parere* to bring forth, produce] producing eggs from which the young are hatched outside the body of the maternal organism. Cf. *ovoviviparous* and *viviparous*.

oviposition (o'vi-po-zish'un) [*ovi-* + L. *ponere* to place] the act of laying or depositing eggs.

ovipositor (o'vi-pos'i-tor) a specialized organ by means of which many female insects deposit their eggs in various plant structures or in the soil.

ovisac (o'vi-sak) [*ovi-* + L. *saccus* bag] a graafian follicle (folliculi ovarici vesiculosi [NA]).

ovist (o'vist) one who believes that the undeveloped embryo exists preformed in the ovum. Cf. *animalculist*.

ovium (o've-um) the mature ovum.

ovo-, ovi- [L. *ovum* egg] combining form denoting relationship to an egg, or to ova. See also words beginning *oo-*.

ovocenter (o'vo-sen'ter) oocenter.

ovocyte (o'vo-sit) oocyte.

ovoflavin (o'vo-fla'vin) [L. *ovum* egg + *flavus* yellow] riboflavin derived from eggs.

ovogenesis (o'vo-jen'ē-sis) oogenesis.

ovoglobulin (o'vo-glob'u-lin) the globulin of white of egg.

ovogonium (o'vo-go'ne-um) oogonium.

ovoid (o'void) [*ovo-* + Gr. *eidōs* form] egg-shaped.

ovolysin (o-vol'i-sin) [*ovo-* + *lysin*] a lysin that acts on egg albumin.

ovolytic (o'vo-lit'ik) splitting up egg albumin.

ovomucin (o'vo-mu'sin) a glycoprotein from the white of egg.

ovomucoid (o'vo-mu'koid) [*ovo-* + *mucoid*] a mucus-like principle derivable from egg white.

ovoplasm (o'vo-plazm) [*ovo-* + Gr. *plasma* anything formed] the protoplasm of an unfertilized ovum.

ovoprecipitin (o'vo-pre-sip'i-tin) a precipitin specific for the egg albumin.

ovoserum (o'vo-se'rum) the serum of an animal into which an egg albumin has been injected. This serum will precipitate the albumin from eggs of the same species as those from which the injection was made.

ovotestis (o'vo-tes'tis) a gonad containing both testicular and ovarian tissue.

ovotherapy (o'vo-ther'ah-pe) therapeutic use of ovarian extract, especially extract from the corpus luteum.

ovotransferrin (o'vo-trans-fer'in) an iron-binding protein in egg white having the same properties as transferrin.

ovoverdin (o'vo-ver'din) [*ovo-* + Fr. *verd* green] the green pigment of the chromoprotein of crawfish eggs.

ovovitelin (o'vo-vi-tel'in) vitellin.

ovoviviparity (o'vo-viv'i-par'i-te) the quality of being ovoviviparous.

ovoviviparous (o'vo-vi-vip'ah-rus) [ovo + L. *vivus* alive + *parere* to be forth, produce] bearing living young that hatch from large, yolk-filled eggs inside the body of the maternal organism, the embryo being nourished by food stored in the egg; said of lizards, etc. Cf. *oviparous* and *viviparous*.

Ovrette (ov-ret') trademark for a preparation of norgestrel.

ovula (ov'u-lah) [L.] plural of *ovulum*.

ovular (o'vu-lar) pertaining to an ovule or an ovum.

ovulase (o'vu-lās) an enzyme once thought to be present in ova and to stimulate karyokinesis.

ovulation (o'vu-la'shun) the discharge of a secondary oocyte from a vesicular follicle of the ovary. **amenstrual o.**, that which occurs in the absence of menstrual bleeding. **anestrous o.**, that which occurs in animals unaccompanied by other events of estrus. **paracyclic o.**, supplementary o. **supplementary o.**, an extra ovulation in a particular estrous cycle; called also *paracyclic o.*

ovulatory (ov'u-lah-to're) pertaining to ovulation.

ovule (o'vül) [L. *ovulum*] 1. the ovum within the graafian follicle. 2. any small, egglike structure. 3. the megasporangium enclosed within one or more integuments which, after fertilization, becomes a plant seed. **graafian o's**, follicular ovarici vesiculosi. **Naboth's o's**, Naboth's follicles. **primitive o.**, **primordial o.**, a rudimentary ovum within the ovary.

ovulogenous (o'vu-loj'ē-nus) producing or developing from an ovule or ovum.

ovulum (ov'u-lum), pl. *ov'ula* [L. dim. of *ovum*] 1. ovum (def. 2). 2. any small, egglike structure. **ov'ula nabo'thi** ["Naboth's ovules"], Naboth's follicles.

ovum (o'vum), pl. *o'va*, gen. *o'vi* [L.] 1. the female reproductive cell which, after fertilization, develops into a new member of the same species (von Baer, 1827); an egg. 2. [NA] the human ovum: a round cell about 0.1 mm. in diameter, produced in the ovary, where there is deposited around it a noncellular covering (*olemma*; *zona pellucida*; *zona radiata*). It consists of protoplasm which contains some yolk, enclosed by a thin cell wall (*vitelline membrane*). There is a large nucleus (*germinal vesicle*), within which is a nucleolus (*germinal spot*). By extension, the word is also used to designate any early stage of the conceptus, when the embryo itself constitutes a tiny and insignificant part of the whole. **alecithal o.**, one with only a small amount of yolk, or almost no

Human ovum.

yolk, as in the ova of mammals and many of the invertebrates; called also *oligolecithal o.* **blighted o.**, a fertilized ovum in which development has become arrested, and abnormality or degeneration is evident. **Bryce-Teacher o.**, a human ovum which was thought to be the youngest known ovum at the time of its study in 1908; now known to be a pathological specimen. **centrolecithal o.**, one in which the yolk is centrally located, and surrounded by a peripheral layer of cytoplasm, as the ova of arthropods. **cleidoic o.**, one which possesses within itself sufficient nutritive material for the production of a complete embryo and so needs to absorb nothing from its environment except oxygen, as a bird's egg. **ectolecithal o.**, one in which the yolk is situated peripherally. **Hertig-Rock ova**, 34 fertilized ova, ranging from 1 to 17 days of age, 21 of which were normal, and 13 abnormal to one degree or another; discovered between 1938 and 1953, they constitute the only series of such early human conceptuses in existence. **holoblastic o.**, one that undergoes total cleavage. **isolecithal o.**, one with yolk evenly distributed throughout the cytoplasm. **macrolecithal o.**, one with much yolk. **Mateer-Streeter o.**, a fertilized ovum about 18 days old, first described in 1920. **medialecithal o.**, one with a medium amount of yolk. **megalecithal o.**, macrolecithal o. **meroblastic o.**, one that undergoes partial cleavage. **mi-**

crolecithal o., **microlecithal o.** **Miller o.**, a fertilized ovum 10 or 11 days old, first described in 1913. **miolecithal o.**, one containing little yolk. **oligolecithal o.**, alecithal o. **permanant o.**, an ovum ready for fertilization. **Peters' o.**, a fertilized ovum about 13 or 14 days old, first described in 1899. **primitive o.**, **primordial o.**, an egg cell very early in its development. **teleolecithal o.**, one in which the yolk is increasingly concentrated toward one pole.

Owen's lines (o'enz) [Sir Richard Owen, English anatomist and paleontologist, 1804-1892] see under *line*.

oxacillin sodium, (oks'ah-sil'in) [USP] chemical name: [2S-(2 α ,5 α ,6 β)]-3,3-dimethyl-6-[[[5-methyl-3-phenyl-4-isoxazolyl]carbonyl]amino]-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid monosodium salt monohydrate. A semisynthetic penicillinase-resistant penicillin, $C_{19}H_{18}N_2NaO_6S \cdot H_2O$, occurring as a fine, white, crystalline powder; used primarily in the treatment of infections due to penicillinase-resistant staphylococci, administered orally, intramuscularly, or intravenously.

Oxaine (ok'sān) trademark for a preparation of oxethazaine.

oxalaldehyde (ok'sal-al'dē-hid) glyoxal.

oxalate (ok'sah-lāt) a salt of oxalic acid. **ammonium o.**, odorless crystals or white granules, $(NH_4)_2C_2O_4$, formed by evaporation of the product obtained by the reaction of equivalent amounts of ammonia solution and oxalic acid. **balanced o.**, a mixture of ammonium and potassium oxalates in a 3:2 ratio, used as an anticoagulant in the collection of blood for laboratory examination. **calcium o.**, a salt of oxalic acid which, when formed in high concentrations in the urine, may lead to formation of urinary calculi. **potassium o.**, colorless, odorless crystals, $K_2C_2O_4 \cdot H_2O$, used extensively as a reagent. **sodium o.**, white, odorless, crystalline powder, $Na_2C_2O_4$, formerly used as an anticoagulant in collection of blood for laboratory examination.

oxalated (ok'sah-lāt'ed) treated with oxalate solution.

oxalation (ok'sah-la'shun) treatment with oxalate solution.

oxalemia (ok'sah-le'me-ah) [oxalate + Gr. *haima* blood + *-ia*] the presence of an excess of oxalates in the blood.

Oxalid (ok'sah-lid) trademark for a preparation of oxyphenbutazone.

oxalism (ok'sal-izm) poisoning by oxalic acid or an oxalate.

oxaloacetate (oks'ah-lo-as'ē-tāt) a salt of oxaloacetic acid; in biochemistry the term is often used interchangeably with oxaloacetic acid (see under *acid*).

oxalosis (ok'sah-lo'sis) generalized deposition of calcium oxalate in renal and extrarenal tissues, as may occur in primary hyperoxaluria.

oxaluria (ok'sah-lu're-ah) hyperoxaluria.

oxalyl (ok'sah-lil) the divalent group, $(CO)_2$, formed from oxalic acid by the loss of two hydroxyl groups.

oxalylurea (ok'sah-lil-u're-ah) 1. oxaluric acid. 2. parabanic acid.

oxamide (ok-sam'id) the diamide of oxalic acid, $NH_2 \cdot CO \cdot CO \cdot NH_2$. It will give the biuret reaction.

oxamniquine (oks-am'ni-kwin) chemical name: 1,2,3,4-tetrahydro-2-[(1-methylethyl)amino]methyl-7-nitro-6-quinolinemethanol. An antischistosomal, $C_{14}H_{21}N_3O_3$, especially effective against *Schistosoma mansoni*.

oxanamide (ok-san'ah-mid) chemical name: 2,3-epoxy-2-ethylhexanamide. Tasteless, odorless, white crystals, $C_8H_{15}NO_2$, used as a tranquilizer.

oxandrolone (ok-san'dro-lōn) [USP] chemical name: 17 β -hydroxy-17-methyl-2-oxa-5 α -androstane-3-one. An androgenic steroidal lactone, $C_{19}H_{30}O_3$, which promotes retention of nitrogen, potassium, and phosphorus, and is used to accelerate anabolism and/or to arrest excessive catabolism.

oxantel pamoate (oks'an-tel) chemical name: (E)-3-[2-(1,4,5,6-tetrahydro-1-methyl-2-pyrimidinyl)ethenyl]phenol 4,4'-methylenebis[3-hydroxy-2-naphthalenecarboxylate] (2:1) (salt); an antelmintic effective against *Trichuris*, $(C_{13}H_{15}N_2O)_2 \cdot C_{23}H_{16}O_6$.

oxapropin (ok'sah-pro'zin) chemical name: 4,5-diphenyl-2-oxazolepropanoic acid; an anti-inflammatory, $C_{18}H_{15}NO_3$.

oxarbazole (ok-sar'bah-zōl) chemical name: 9-benzoyl-2,3,4,9-tetrahydro-6-methoxy-1H-carboxole-3-carboxylic acid; an antiasthmatic, $C_{21}H_{19}NO_4$.

oxatamide (ok-sa'to-mid) chemical name: 1-[3-[4-(diphenylmethyl)-1-piperazinyl]propyl]-1,3-dihydro-2H-benzimidazol-2-one; an antiallergic and antiasthmatic, $C_{27}H_{30}N_4O$.

oxazepam (oks-az'ē-pam) [USP] chemical name: 7-chloro-1,3-dihydro-5-hydroxy-5-phenyl-2H-1,4-benzodiazepin-2-one. One of the benzodiazepine tranquilizers, $C_{15}H_{11}ClN_2O_2$, occurring as a creamy white to pale yellow powder. It is used orally as a sedative in the treatment of anxiety, especially in the elderly, and may be used as an adjunct for acute withdrawal symptoms in chronic alcoholics.

oxethazaine (ok-seth'ah-zān) chemical name: 2,2'-(2-hydroxyethylimino)-bis-[N- α , α -dimethylphenethyl]-N-methylacetamide. A topical anesthetic, $C_{26}H_{41}N_3O_3$, which has been administered orally to relieve gastric distress.

oxetorone fumarate (ok-set/o-rōn) chemical name: 3-benzofuro[3,2-c][1]benzoxepin-6(12*H*)-ylidene-*N,N*-dimethyl-1-propylamine(*E*)-2-butenedioate (1:1); an analgesic specific in migraine, $C_{21}H_{21}NO_2 \cdot C_4H_4O_4$.

oxendazole (oks-fen'dah-zōl) chemical name: [5-(phenylsulfinyl)-1*H*-benzimidazol-2-yl]carbamic acid methyl ester; an anthelmintic, $C_{15}H_{13}N_3O_3S$.

oxgall (oks'gawl) see *ox bile extract*, under *extract*.

oxibendazole (ok'si-ben'dah-zōl) chemical name: (5-propoxy-1*H*-benzimidazol-2-yl)carbamic acid methyl ester; a veterinary anthelmintic, $C_{12}H_{15}N_3O_3$.

oxidant (ok'si-dant) the electron acceptor in an oxidation-reduction (redox) reaction.

oxidase (ok'si-dās) any of a class of (metalloprotein) enzymes that catalyze the reduction of molecular oxygen independently of hydrogen peroxide. **amine o.**, monoamine o. **amino acid o.**, an enzyme that catalyzes the oxidative removal of alpha amino groups; it is a flavoprotein occurring in two forms: one reacting with L-amino acid, the other with D-amino acid. **ascorbate o.**, **ascorbic acid o.**, L-ascorbate:oxygen oxidoreductase. An enzyme found in squash and other vegetables which catalyzes the oxidation of 2 L-ascorbic acid to dehydroascorbic acid. **di-amine o.**, diamine:oxygen oxidoreductase (deaminating). An enzyme that catalyzes the change of diamines into the corresponding aldehydes, ammonia, and peroxide; it also oxidizes histamine. **p-diphenol o.**, p-diphenol oxygen oxidoreductase. An enzyme occurring in the latex of lac trees and in many vegetables; it oxidizes the latex to Japanese lacquer and many phenols to ortho- and para-quinones; called also *laccase*. **direct o.**, an oxidase that causes the direct transference of oxygen from the air. **dopa o.**, see *dopa-oxidase*. **glucose o.**, β -D-glucose:oxygen oxidoreductase. A toxic antibiotic flavoprotein from *Penicillium notatum* that catalyzes the oxidation of glucose to gluconic acid; called also *glucose aerodehydrogenase*, *notatin*, *penatin*, and *penicillin B*. **hypoxanthine o.**, xanthine o. **indirect o.**, an oxidase that acts only with a peroxide. **indophenol o.**, cytochrome o. **monamine o.**, monoamine:oxygen oxidoreductase (deaminating). A cuproprotein enzyme that catalyzes the oxidation of amines into the corresponding aldehydes, ammonia, and hydrogen peroxide; called also *amine o.* **monophenyl o.**, tyrosinase. **primary o.**, direct o. **tyramine o.**, tyrosinase. **xanthine o.**, xanthine:oxygen oxidoreductase. A flavoprotein enzyme that catalyzes the oxidation of various purine bases, including xanthine and hypoxanthine, as well as pterins and aldehydes. Called also *hypoxanthine o.*

oxidation (ok'si-da'shun) the act of oxidizing or state of being oxidized. Chemically it consists in the increase of positive charges on an atom or the loss of negative charges. Most biological oxidations are accomplished by the removal of a pair of hydrogen atoms (dehydrogenation) from a molecule. Such oxidations must be accompanied by reduction of an acceptor molecule. *Univalent o.* indicates loss of one electron; *divalent o.*, the loss of two electrons. **beta o.** (β -oxidation), oxidation of a fatty acid at the beta carbon atom, the second carbon from the carboxyl group, with the result that the two end carbons are split off as acetic acid (acetylcoenzyme A) and with the formation of a fatty acid containing two less carbon atoms. **biological o.**, the enzymatic process by which food is metabolized, resulting in the release of energy. See also *oxidation*. **coupled o.**, the enzymatic oxidation of two donor molecules, with the incorporation of oxygen into one of the donors.

oxidation-reduction (ok'si-da'shun-re-duk'shun) the chemical reaction whereby electrons are removed (oxidation) from atoms of the substance being oxidized and transferred to atoms being reduced (reduction). Called also *redox*.

oxide (ok'sid) [L. *oxidum*] any compound of oxygen with an element or radical. **arsenous o.**, arsenic trioxide. **diethyl o.**, ether (def. 2).

oxidize (ok'si-diz) to combine or cause to combine with oxygen, or to lose electrons. See *oxidation*.

oxidopamine (oks'i-do'pah-mēn) chemical name: 5-(2-aminoethyl-1,2,4-benzenetriol), $C_8H_{11}NO_3$; an ophthalmic adrenergic.

oxidoreductase (ok'si-do-re-duk'tās) a class of enzymes that catalyze the reversible transfer of electrons from one substance to another (oxidation-reduction, or redox reaction). It includes dehydrogenases, reductases, oxidases, transhydrogenases, peroxidases, and oxygenases.

oxidosis (ok'si-do'sis) acidosis.

oxifungin hydrochloride (ok'si-fun'gin) chemical name: 1,2-dihydro-3-(phenoxyethyl)pyrido[3,4-e]-1,2,4-triazine monohydrochloride; an antifungal, $C_{13}H_{12}N_4O \cdot HCl$.

oxigram (ok'si-gram) (*obs.*) oxyhemogram.

oxilorphin (ok'sil-or'fan) chemical name: 17-(cyclopropylmethyl)morphinan-3,14-diol; a narcotic antagonist, $C_{20}H_{27}NO_2$.

oxim, **oxime** (ok'sim) any of a series of compounds formed by the action of hydroxylamine upon an aldehyde or a ketone.

oximeter (ok-sim'ē-ter) a photoelectric device for determining the oxygen saturation of the blood. **ear o.**, an oximeter for attachment to the ear, by which oxygen saturation of the blood

flowing through the ear can be determined. **intracardiac o.**, an instrument for measuring the concentration of oxygen or dye in blood within the heart; see also *oxygen gas analyzer*, under *analyzer*. **whole blood o.**, an oximeter for determination of oxygen saturation of removed specimens of blood.

oximetry (ok-sim'ē-ter) determination of the oxygen saturation of arterial blood by means of bichromate photoelectric colorimetry.

oximinotransferase (ok-sim'i-no-trans'fer-ās) an enzyme that catalyzes the transfer of oxime from pyruvateoxime to form pyruvate and acetoxime; called also *transoximinase*.

oxiperomide (ok'se-per'o-mid) chemical name: 1,3-dihydro-1-[1-(2-phenoxyethyl)-4-piperidinyl]-2*H*-benzimidazol-2-one; a dopamine-receptor antagonist, $C_{20}H_{23}N_3O_2$, used as a tranquilizer.

oxiramide (ok-sēr'ah-mid) chemical name: *cis*-(+)-*N*-[4-(2,6-dimethyl-1-piperidyl)butyl]- α -phenoxybenzeneacetamide; a cardiac depressant, $C_{25}H_{31}N_2O_2$, with antiarrhythmic activity.

axisuran (ok'se-sur'an) chemical name: (methylsulfinyl)methyl-2-pyridyl ketone; an antineoplastic, $C_8H_9NO_2S$.

oxogestone phenpropionate (ok'so-jes'tōn) chemical name: 20 β -hydroxy-19-norpregn-4-en-3-one hydrocinnamate; a progestin, $C_{29}H_{38}O_3$.

oxonemia (ok'so-ne'me-ah) [L. *oxone* acetone + Gr. *haima* blood + *-ia*] (*obs.*) acetonemia.

oxonium (ok-so'ne-um) containing tetravalent basic oxygen.

oxonuria (ok'so-nu're-ah) (*obs.*) acetonuria.

oxophenarsine hydrochloride (ok'so-phen-ar'sin) chemical name: 2-amino-arsenophenol hydrochloride. An arsenical, $C_6H_4AsNO_2 \cdot HCl$, with antispasmodic and antitrypanosomal properties; rarely used in the treatment of syphilis and trypanosomiasis, administered intravenously.

5-oxoproline (ok'so-pro'lēn) a ninhydrin-negative, acidic lactam of glutamic acid occurring at the N-terminus of several peptides and proteins. Called also *pyroglutamic acid* or *pyroglutamate*.

5-oxoprolinuria (ok'so-pro'lin-u're-ah) an inborn error of metabolism marked by abnormally increased levels of 5-oxoproline in the urine, metabolic acidosis, and an increase in the rate of hemolysis; neurological symptoms may also occur. Called also *pyroglutamic aciduria*.

oxozone (ok'so-zōn) a hypothetical allotropic form of oxygen, O_4 , supposed to be present in ozone.

oxpentifylline (oks'i-pin-tif'i-lēn) pentoxifylline.

oxprenolol hydrochloride (oks-pren'o-lōl) chemical name: 1-[(1-methylethylamino)-3-[2-(2-propenyloxy)-2-propanol hydrochloride]; a beta-adrenergic blocking agent, $C_{15}H_{23}NO_3 \cdot HCl$, having the same actions as propranolol (q.v.).

Oxsoralen (ok-sor'ah-len) trademark for preparations of methoxsalen.

oxtriphylline (oks-trif'i-lēn) [NF] chemical name: 2-hydroxy-*N,N,N*-trimethylethanaminium salt with 3,7-dihydro-1,3-dimethyl-1*H*-purine, 2,6-dione. A compound of choline and theophylline, $C_{12}H_{21}N_5O_3$, occurring as a white crystalline powder, having the same actions as the parent compound; used chiefly as a bronchodilator, administered orally. Called also *choline theophyllinate* and *theophylline choline*.

oxy- [Gr. *oxys* keen] a combining form meaning (a) sharp, quick, or sour, or (b) denoting the presence of oxygen in a compound.

oxyachrestia (ok'se-ah-kres'te-ah) [oxy- + a neg. + Gr. *chrēsis* use] a condition of defective supply of glucose to the neurons, which is the cause of hypoglycemic coma.

oxyacoia (ok'se-ah-koi'ah) oxyecia.

oxybenzene (ok'se-ben'zēn) phenol.

oxybenzone (ok'se-ben'zōn) [USP] chemical name: (2-hydroxy-4-methoxyphenyl)phenylmethanone. A sunscreensing agent, $C_{14}H_{12}O_3$, occurring as a white to off-white powder; applied topically to the skin.

oxyblepsia (ok'se-blep'se-ah) [oxy- + Gr. *blepsis* vision + *-ia*] unusual acuity of vision.

oxybutynin chloride (ok'se-bu'ti-nin) chemical name: 4-(diethylamino)-2-butyl- α -phenylcyclohexaneglycolate. An anticholinergic, $C_{22}H_{31}NO_3 \cdot HCl$, which has a direct antispasmodic effect on smooth muscle; used in the treatment of uninhibited neurogenic bladder and reflex neurogenic bladder, administered orally.

oxybutyria (ok'se-bu-tir'e-ah) [oxybutyric acid + Gr. *ouron* urine + *-ia*] the presence of hydroxybutyric acid in urine.

oxybutyricacidemia (ok'se-bu-tir'ik-as'i-de'me-ah) oxybutyria.

oxycalorimeter (ok'se-kal-o-rim'ē-ter) Benedict's apparatus for determining the caloric value of food by burning a sample in a combustion chamber and measuring the volume of oxygen consumed.

oxycanthine (ok-se-kan'thin) a white alkaloid, $C_{37}H_{40}O_6N_2$, from the root of *Berberis vulgaris*, the barberry; said to paralyze and irritate the brain and spinal cord.

Oxycel (ok'si-sel) trademark for preparations of oxidized cellulose.

oxycephalia (ok'se-sē-fa'le-ah) oxycephaly.

oxycephalic (ok'se-sē-fal'ik) pertaining to or characterized by oxycephaly.

oxycephalous (ok'se-sef'ah-lus) oxycephalic.

oxycephaly (ok'se-sef'ah-le) [oxy- + Gr. *kephalē* head] a condition in which the top of the head is pointed or conical owing to premature closure of the coronal and lambdoid sutures. Called also *acrocephaly*, *hypsiccephaly*, *turriccephaly*, *steeple head* or *skull*, and *tower head* or *skull*.

Oxycephaly, showing in black the sites of premature closure of cranial sutures.

oxychloride (ok'se-klo'rid) an element or radical combined with oxygen and chlorine.

oxychlorosene (ok'se-klor'o-sēn) the hypochlorous acid complex of a mixture of the phenyl sulfonate derivatives of aliphatic hydrocarbons, $C_{20}H_{34}O_3S \cdot HOCl$, having actions similar to those of chlorine; used as a topical anti-infective. **O. sodium**, the sodium salt of oxychlorosene, used like the base.

oxycholine (ok'se-ko'lin) muscarine.

oxychromatic (ok'se-kro-mat'ik) [oxy- + Gr. *chrōma* color] staining with acid dyes; acidophilic.

oxychromatin (ok'se-kro'mah-tin) [oxy- + *chromatin*] that part of the chromatin that stains with acid aniline dyes; called also *lanthanin*.

oxycinesia (ok'se-si-ne'ze-ah) [oxy- + Gr. *kinēsis* movement + -ia] pain on motion.

oxycodone hydrochloride (ok'se-ko'dōn) chemical name: 4,5 α -epoxy-14-hydroxy-3-methoxy-17-methylmorphinan-6-one. A morphine derivative, $C_{18}H_{21}NO \cdot HCl$, used as a narcotic analgesic.

oxycyanide (ok'se-si'ah-nid) the oxide of any binary compound of cyanogen.

oxydase (ok'se-dās) oxidase.

oxydendron (ok'se-den'dron) [oxy- + Gr. *dendron* tree] a homeopathic remedy prepared from the leaves of *Oxydendrum arboreum*, an ericaceous tree of North America.

oxydesis (ok'se-de'sis) [oxy- + Gr. *desis* binding] (obs.) the acid-binding power especially of the blood. In the latter it represents the greatest amount of HCl (one hundredth normal) that can be added to oxalated blood without clumping the erythrocytes.

oxydetic (ok'se-det'ik) (obs.) pertaining to acid-binding power, especially of blood.

oxydoreductase (ok'sē-do-re-duk'tās) oxidoreductase.

oxyecoa (ok'se-e-koi'ah) [oxy- + Gr. *akoē* hearing + -ia] morbid acuteness of the sense of hearing.

oxyesthesia (ok'se-es-the'ze-ah) [oxy- + Gr. *aisthesis* perception + -ia] morbid or abnormal acuteness of the senses. Cf. *hyperesthesia*.

oxyetherotherapy (ok'se-e'ther-o-ther'ah-pe) [oxy- + *ether* + Gr. *therapeia* medical treatment] treatment by the inhalation of ether vapor which is carried along by a current of oxygen; formerly used in pulmonary infection and in whooping cough.

oxygen (ok'si-jen) [Gr. *oxys* sour + *gennan* to produce] a gaseous element existing free in the air and in combination in most nonelementary solids, liquids, and gases; atomic number, 8; atomic weight, 15.999; symbol, O. Oxygen exists in three isotopes, with atomic weights of 16, 17 and 18 (heavy oxygen). Oxygen constitutes 20 per cent by weight of the atmospheric air; it is the essential agent in the respiration of plants and animals and, although noninflammable, is necessary to support combustion. It forms the characteristic constituent of ternary acids. It is administered by inhalation in some pulmonary and cardiac disorders. **excess O.**, the quantity of oxygen used over and above the resting requirements of the body. **heavy O.**, an isotope of oxygen of atomic weight 18. **high pressure O.**, hyperbaric O. **hyperbaric O.**, high-pressure oxygen, i.e., oxygen under greater than atmo-

spheric pressure. **molecular O.**, oxygen whose atoms are joined in pairs, as in the atmosphere; symbol O_2 .

oxygenase (ok'si-jē-nās") any of the enzymes of the oxidoreductase class that catalyze the incorporation of both atoms of molecular oxygen into the substrate.

oxygenate (ok'si-jē-nāt) to add oxygen to.

oxygenation (ok'si-jē-na'shun) the act, process, or result of oxygenating.

oxygenator (ok'si-jē-na'tor) a device which mechanically oxygenates venous blood extracorporeally. It is used in combination with one or more pumps for maintaining circulation during open heart surgery and for assisting the circulation in patients seriously ill with some cardiac and pulmonary disorders. **bubble O.**, a device in which pure oxygen is bubbled through an extracorporeal reservoir of blood, either directly or through a filter. **disk O.**, rotating disk O. **film O.**, a device, encased in a container of oxygen, which makes possible the production of a thin film of blood to facilitate the exchange of gases; see *rotating disk O.* and *screen O.* **membrane O.**, a device, usually consisting of a connected series of flat bags made of semipermeable material, such as cellophane, Teflon, or Silastic, encased in a container of oxygen. The exchange of gases between the blood in the bags and the oxygen in the container occurs across the membrane. **pump-O.**, see *pump-oxygenator*. **rotating disk O.**, a type of film oxygenator in which parallel disks in series rotate through an extracorporeal pool of venous blood in a container of oxygen; gaseous exchange occurs between the thin film of blood on the exposed surfaces of the disks and the oxygen in the container. **screen O.**, a type of film oxygenator in which the venous blood is passed over a series of screens in a container of oxygen, gaseous exchange taking place in the thin film of blood produced on the screens.

oxygenic (ok'si-jen'ik) containing oxygen.

oxygeusia (ok'si-gu'se-ah) [oxy- + Gr. *geusis* taste + -ia] unusual acuteness of the sense of taste.

oxyhematoporphyrin (ok'se-hem'ah-to-por'fi-rin) a pigment sometimes found in the urine, closely allied to hematoporphyrin.

oxyheme (ok'se-hēm) heme.

oxyhemochromogen (ok'se-he'mo-kro'mo-jen) heme.

oxyhemocyanine (ok'se-he'mo-si'ah-nin) hematoxyanine charged with oxygen.

oxyhemoglobin (ok'se-he'mo-glo'bin) hemoglobin that contains bound O_2 , a compound formed from hemoglobin on exposure to alveolar gas in the lungs, with formation of a covalent bond with oxygen and without change of the charge of the ferrous state.

oxyhemogram (ok'se-he'mo-gram) (obs.) a graphic record of the oxygen saturation of the blood as determined by use of the oxyhemograph.

oxyhemograph (ok'se-he'mo-graf) [oxygen + Gr. *haima* blood + *graphein* to write] (obs.) an apparatus for determining the oxygen content of the blood, by photoelectric registration of changes in the spectroscopic properties of hemoglobin.

oxyhydrocephalus (ok'se-hi'dro-sef'ah-lus) hydrocephalus in which the top of the head assumes a pointed shape.

oxyhyperglycemia (ok'se-hi'per-gli-se'me-ah) a condition in which there is slight glycosuria and an oral glucose tolerance curve which rises about 180–200 mg. per 100 ml. but returns to fasting values $2\frac{1}{2}$ hours after ingestion of the glucose.

oxyiodide (ok'se-i'o-did) an element or radical combined with oxygen and iodine.

oxykrinin (ok-se-krin'in) secretin.

oxylalia (ok-se-la'le-ah) [oxy- + Gr. *lalein* to talk + -ia] swiftness of speech.

Oxylone (ok'si-lōn) trademark for a preparation of fluorometholone.

oxyluciferin (ok-se-lu-sif'er-in) the product of the oxidation of luciferin catalyzed by luciferase.

oxymetazoline hydrochloride (ok'se-met-az'o-lēn) [USP] chemical name: 3-[(4,5-dihydro-1H-imidazol-2-yl)methyl]-6-(1,1-dimethylethyl)-2,4-dimethylphenol monohydrochloride. An adrenergic, $C_{16}H_{24}N_2O \cdot HCl$, occurring as a white to nearly white, crystalline powder; used topically as a vasoconstrictor to reduce swelling and congestion of the nasal mucosa.

oxymetholone (ok'se-meth'o-lōn) [NF] chemical name: 17 β -hydroxy-2-(hydroxymethylene)-17 α -methyl-5 α -androstan-3-one. An anabolic-androgenic steroid, $C_{21}H_{32}O_3$, occurring as a white to creamy white, crystalline powder; administered orally.

oxymetry (ok-sim'ē-tre) oximetry.

oxymorphone hydrochloride (ok'se-mor'fōn) [USP] chemical name: 4,5 α -epoxy-3,14-dihydroxy-17-methylmorphinan-6-one hydrochloride. A semisynthetic compound, $C_{18}H_{19}NO_4 \cdot HCl$, occurring as a white or slightly off-white, odorless powder; used as a narcotic analgesic.

oxymyoglobin (ok'se-mi'o-glo'bin) a compound formed from myoglobin on exposure to atmospheric conditions, with formation

of a covalent bond with oxygen and without change of the charge of the ferrous state.

oxymyohematin (ok''se-mi''o-hem''ah-tin) oxidized myohematin from muscle.

oxynervon (ok''se-ner''von) a cerebroside isolated from the brain.

oxyneurine (ok''se-nu''rin) betaine.

oxynitrilase (ok''se-ni''tril-ās) an enzyme that splits mandelonitrile to benzaldehyde and HCN.

oxyntic (ok-sin''tik) [Gr. *oxynō* to make acid] secreting acid, as the parietal (oxyntic) cells.

oxyopia (ok''se-o''pe-ah) [oxy- + Gr. *ōpē* sight + -ia] acuteness of vision.

oxyopter (ok''se-op''ter) [oxy- + Gr. *ōps* vision] a unit of measurement of visual acuity, being the reciprocal value of the visual angle expressed in degrees. An oxyopter (1 degree) is equivalent to 60 Snellen units (60') and corresponds to the counting of fingers at 1 meter (De Blaskovics).

oxyosis (ok''se-o''sis) [oxy- + -osis] acidosis.

oxyosmia (ok''se-os''me-ah) [oxy- + Gr. *osmē* odor + -ia] acuteness of the sense of smell.

oxyosphresia (ok''se-os-fre''ze-ah) [oxy- + Gr. *osphrēsis* smell + -ia] unusual acuteness of the sense of smell.

oxyparaplastin (ok''se-par''ah-plas'tin) the oxyphil part of paraplastin.

oxypathia (ok''se-pa''the-ah) acuteness of sensation. See *hyperesthesia*.

oxyperitoneum (ok''se-per''i-to-ne''um) injection of oxygen into the peritoneal cavity.

oxypertine (ok''se-per''tēn) chemical name: 5,6-dimethoxy-2-methyl-3-(2-(4-phenyl-1-piperazinyl)ethyl)indole; an antidepressant, C₂₃H₂₉N₃O₂.

oxyphenbutazone (ok''se-fen-bu''tah-zōn) [USP] chemical name: 4-butyl-1-(4-hydroxyphenyl)-2-phenyl-3,5-pyrazolidinedione monohydrate. A derivative of phenylbutazone, C₁₉H₂₀N₂O₃·H₂O, having similar anti-inflammatory, analgesic, and antipyretic actions; administered orally in the treatment of arthritis, gout, and similar conditions.

oxyphenacyclimine hydrochloride (ok''se-fen-si''klī-mēn) [USP] chemical name: α-cyclohexyl-α-hydroxybenzeneacetic acid (1,4,5,6-tetrahydro-1-methyl-2-pyrimidinyl)methyl ester monohydrochloride. An anticholinergic, C₂₀H₂₈N₂O₃·HCl, occurring as a white, crystalline powder, having antispasmodic, antisecretory, and antimotility activities; used especially in the treatment of peptic ulcer and spasm of the gastrointestinal tract, administered orally.

oxyphenisatin (ok''se-fē-ni''sah-tin) chemical name: 3,3-bis(4-hydroxyphenyl)-1,3-dihydro-2H-indol-2-one. A cathartic, C₂₀H₁₅NO₃, occurring as a white, crystalline powder; administered as an enema to cleanse the bowel before surgery or colon examination.

o. acetate, the diacetyl derivative of oxyphenisatin, C₂₄H₁₉NO₅, occurring as a white, crystalline powder; used as a cathartic, administered orally.

oxyphenonium bromide (ok''se-fē-no''ne-um) chemical name: 2-[cyclohexylhydroxyphenylacetyl]oxy-N,N-diethyl-N-methylethanaminium bromide. A quaternary ammonium anticholinergic, C₂₁H₃₄BrNO₃, occurring as a white, crystalline powder having antisecretory, antispasmodic, and antimotility activities; used in the treatment of peptic ulcer and other gastrointestinal disorders in which hypermotility and spasm are a feature, administered orally.

oxyphenylethylamine (ok''se-fen''il-eth''il-am'in) tyramine.

oxyphil (ok'se-fil) 1. Hürthle cell. 2. oxyphilic.

oxyphilic (ok''se-fil''ik) [oxy- + Gr. *philein* to love] stainable with an acid dye.

oxyphilous (oks-iff''i-lus) oxyphilic.

oxyphonia (ok''se-fo''ne-ah) [Gr. *oxyphōnia*] an abnormally sharp quality or pitch of the voice.

oxyphorase (ok''se-for''ās) an oxygen-carrying enzyme.

oxyplasm (ok''se-plazm) the oxyphil part of the cytoplasm.

oxypurinase (ok''se-pu''ri-nās) an enzyme that oxidizes oxypurines.

oxypurine (ok''se-pu''rin) a purine containing oxygen. The oxypurines include hypoxanthine or monoxypurine, xanthine or dioxypurine, and uric acid or trioxypurine.

oxypurinol (ok''se-pūr''i-nol) chemical name: 1H-pyrazolo[3,4-d]pyrimidine-4,6-diol; the active metabolite of allopurinol, a xanthine oxidase inhibitor, C₅H₄N₄O₂.

oxyrenin (ok''se-re''nin) a term suggested for the hypertensive substance produced by the oxidation of renin.

oxyrhine (ok''se-rin) [oxy- + Gr. *rhīs* nose] having a sharp-pointed nose.

oxyrygmia (ok''se-ri-g''me-ah) [oxy- + Gr. *erygmōs* eructation] (obs.) acid eructation.

oxysalt (ok'se-sawlt) any salt of an oxacid.

oxysantonin (ok''se-san''to-nin) a compound formed in the body from ingested santonin.

Oxyspirura (ok''se-spi-roo''rah) a genus of nematode parasites of the superfamily Spiruroidea. **O. manso'ni**, a species found beneath the nictitating membrane of chickens and other fowl in Asia, Africa, Australia, South America, Samoa, and in the United States in Florida, Texas, Louisiana, and Hawaii.

oxytalan (oks-it''ah-lan) a connective tissue fiber found typically in the periodontal membranes of man and certain other animals, including monkeys. It is stained with aldehyde fuchsin after appropriate oxidation. On electron microscopic examination, fibrillar and amorphous components are revealed.

oxytalanolysis (oks-it''ah-lan-ol''i-sis) destruction of oxytalan fibers.

oxytetracycline (ok''se-tet''rah-si''klēn) [USP] chemical name: 4-(dimethyl-amino)-1,4,4a,5a,6,11,12a-octahydro-3,5,6,10,12a-hexahydroxy-6-methyl-1,11-dioxo-2-naphthacenecarboxamide. A broad-spectrum antibiotic of the tetracycline group, produced by *Streptomyces rimosus*, C₂₂H₂₄N₂O₉·2H₂O, occurring as a yellow crystalline powder, and used chiefly as an antibacterial, administered intramuscularly. **o. calcium** [USP], the calcium salt of oxytetracycline, C₄₄H₄₈CaO₁₈, occurring as a yellow to light brown, crystalline powder; used as an antibacterial, administered orally. **o. hydrochloride** [USP], the monohydrochloride salt of oxytetracycline, C₂₂H₂₄N₂O₉·HCl, occurring as a yellow, crystalline powder; used as an antibacterial and antirickettsial, administered orally and by intravenous infusion.

oxytocia (ok-se-to''se-ah) [oxy- + Gr. *tokos* birth + -ia] rapid labor.

oxytocic (ok-se-to''sik) 1. pertaining to, characterized by, or promoting oxytocia. 2. an agent that hastens evacuation of the uterus by stimulating contractions of the myometrium.

oxytocin (ok''se-to''sin) 1. an octapeptide, one of two hormones formed by the neuronal cells of the hypothalamic nuclei and stored in the posterior lobe of the pituitary, the other being vasopressin. It has uterine-contracting and milk-ejection actions. 2. the same oxytocic principle obtained synthetically or from the posterior pituitary of domestic animals, prepared in accordance with USP standards; it is administered intramuscularly or by intravenous infusion to induce active labor, increase the force of contractions in labor, contract uterine muscle after delivery of the placenta, control postpartum hemorrhage, and stimulate milk ejection. Often used in veterinary medicine to stimulate the letdown of milk in cows and heifers affected with agalactia. **o. citrate**, the citrate salt of oxytocin, C₄₈H₈₆N₁₂O₁₂S₂·C₆H₈O₇, used to initiate or stimulate labor in selected patients, administered buccally.

oxytropism (oks-it''ro-pizm) [oxygen + Gr. *trepein* to turn] response of living cells to the stimulus of oxygen.

oxytuberculin (ok''se-tu-ber''ku-lin) a tuberculin from cultures of an extremely virulent bacillus, modified by oxidation.

oxyuria (ok''se-u''re-ah) oxyuriasis.

oxyuriasis (ok''se-u-ri''ah-sis) infection with *Enterobius vermicularis* (in humans) or with other oxyurids; enterobiasis.

oxyuricide (ok''se-u''ri-sid) [oxyuris + L. *caedere* to kill] an agent that destroys oxyurids.

oxyurid (ok-se-u''rid) a pinworm, seatworm, or threadworm; any individual organism of the superfamily Oxyuroidea.

oxyurifuge (ok''se-u''ri-fū) [oxyuris + L. *fugare* to put to flight] an agent that promotes the expulsion of oxyurids.

oxyuriasis (ok''se-u''re-o''sis) oxyuriasis.

Oxyuris (ok''se-u''ris) [Gr. *oxys* sharp + *oura* tail] a genus of intestinal nematode worms of the superfamily Oxyuroidea. **O. e'qui**, the largest known species of pinworm, found in the horse, mainly in the cecum, colon, and rectum. **O. incog'nita**, a name given to certain ova found in human stools; possibly identical with *Heterodera radicola*. **O. vermicularis**, *Enterobius vermicularis*.

oxyuroid (ok-se-u''roid) oxyurid.

Oxyuroidea (ok''se-u''roi-de'ah) the oxyurids: a superfamily of small nematodes, the threadworms or pinworms, characterized by the presence of phasmids and a bulbous esophagus. They are usually found as parasites in the cecum and colon of vertebrates, but may also infect invertebrates, including insects. *Enterobius vermicularis* is the only oxyurid commonly infecting man. In some systems of classification, Oxyuroidea is considered to be an order.

oz. ounce.

ozena (o-ze''nah) [Gr. *ozaina* a fetid polypus in the nose] an atrophic rhinitis marked by a thick mucopurulent discharge, mucosal crusting, and fetor. **o. laryng'is**, a condition of the larynx associated with a foul-smelling discharge usually related to atrophic rhinitis.

ozenous (o'zē-nus) pertaining to or of the nature of ozena.

ozolinone (o-zo''li-nōn) chemical name: (Z)-[3-methyl-4-oxo-5-(1-piperidinyl)-2-thiazolidinylidene]acetic acid; a diuretic, C₁₁H₁₆N₂O₃S.

ozonator (o'zo-nāt''or) an instrument for generating ozone.

ozone (o'zōn) [Gr. *ozē* stench] a bluish explosive gas or blue liquid, which is an allotropic and more active form of oxygen, O₃; antiseptic and disinfectant. It is formed when oxygen is exposed to the silent discharge of electricity, and is both irritating and toxic in the pulmonary system. **o-ether**, a mixture of ethylic ether, hydrogen peroxide, and alcohol, used as an antiseptic and for whooping cough and diabetes.

ozonide (o'zo-nid) a compound of an olefin and ozone, the union taking place at the double bond.

ozonize (o'zo-niz) to impregnate with ozone.

P

P chemical symbol for *phosphorus*.

P. abbreviation for *position*, *presbyopia*, L. *proximum* (near), L. *pugil'us* (handful), *pulse*, *pupil*, and L. *pon'dere* (by weight).

P₁ symbol for *parental generation*.

P₂ pulmonic second sound.

³²P chemical symbol for the radioactive isotope of phosphorus of atomic mass 32; also written P³² and P 32.

p symbol for (1) the short arm of a chromosome or (2) the frequency of the more common allele of a pair.

p- chemical abbreviation for *para-*.

P.A. physician assistant.

Pa 1. chemical symbol for *protactinium*. 2. symbol for *pascal*.

Paas' disease (pahz) [H. R. Paas, German physician] see under *disease*.

PAB, PABA para-aminobenzoic acid; see under *acid*; see *aminobenzoic acid*, under *acid*.

Pabanol (pah'ah-nol) trademark for a preparation of aminobenzoic acid.

pabular (pah'u-lar) pertaining to or of the nature of pabulum.

pabulin (pah'u-lin) the fatty and albuminous products of digestion which appear in the blood after eating.

pabulum (pah'u-lum) [L.] food or aliment.

Pacatal (pah'ah-tal) trademark for a preparation of mepazine.

pacchionian depressions, foramen, granulations (bodies, glands) (pah'ke-o-ne-an) [Antonio Pacchioni, an Italian anatomist, 1665-1726] see *foveolae granulares, foramen diaphragmatis [sellae], and granulationes arachnoideales*.

pacemaker (pah'smak-er) an object or substance that influences the rate at which a certain phenomenon occurs; often used alone to indicate the natural cardiac pacemaker or an artificial cardiac pacemaker. In biochemistry, a substance whose rate of reaction sets the pace for a series of interrelated reactions. **artificial p.**, see *cardiac p.*, *artificial*. **asynchronous p.**, an implanted cardiac pacemaker in which the induced ventricular rhythm is independent of the atrium; it is usually set at a fixed rate of ventricular stimulation. **cardiac p.**, the group of cells rhythmically initiating the heart beat, characterized physiologically by a slow loss of membrane potential during diastole. Usually the pacemaker site is the sinoatrial node. **cardiac p., artificial**, a device designed to stimulate, by electrical impulses, contraction of the heart muscle at a certain rate; used particularly in heart block or in absence of normal function of the sinoatrial node; it may be connected from the outside or implanted within the body. Popularly called *pacemaker*. **Chardack-Greatbatch p.**, an implanted asynchronous cardiac pacemaker, with the cardiac electrodes sewn into the myocardium. **cilium p.**, the biological regulator which controls the frequency of the beat of the cilia of cells by determining the rate of contraction and excitation. **demand p.**, an implanted cardiac pacemaker in which the generator stimulus is inhibited for a set interval (refractory period) by a signal derived from depolarization (normal or ectopic), thus minimizing the risk of pacemaker-induced ventricular fibrillation.

ectopic p., any biological cardiac pacemaker other than the sinus node. **external p.**, an artificial cardiac pacemaker located outside the body with output wires connected to circular chest electrodes, with a wire sewn directly into the heart, or with an electrode inserted through an intravenous catheter. **fixed-rate p.**, an implanted cardiac pacemaker in which the generator stimulates the heart at a predetermined rate, regardless of the heart's rhythm. **gastric p.**, a saddle-shaped area of the greater curvature of the stomach at the junction of its proximal and middle thirds, where originate electric potentials which regulate the frequency of gastric contractions. **p. of heart, cardiac p.** **implanted p.**, a cardiac pacemaker implanted into the subcutaneous tissue; called also *internal p.* **Nathan p.**, a synchronous pacemaker. **radio-frequency p.**, a cardiac pacemaker consisting of an antenna coil cemented to the skin and a subcutaneously implanted receiving coil with an electrode inserted into the ventricular myocardium. Pulses from a light-

ozonizer (o'zo-niz'er) (*obs.*) an apparatus for applying ozone to wounds, sinuses, etc.

ozonometer (o'zo-nom'ē-ter) [*ozone* + Gr. *metron* measure] an instrument for estimating the ozone in the air.

ozonophore (o-zo'no-fōr) [*ozone* + Gr. *phoros* bearing] 1. one of the granular elements of cell cytoplasm. 2. a red blood cell.

ozonoscope (o-zo'no-skōp) [*ozone* + Gr. *skopein* to examine] an instrument for studying ozone and its effects.

ozostomia (o'zo-sto'me-ah) [Gr. *ozē* stench + *stoma* mouth + *-ia*] foulness of the breath.

weight radio transmitter carried by the patient are transmitted to the pacemaker. **synchronous p.**, an implanted cardiac pacemaker that synchronizes the electromechanical events in the atrium with those of the ventricle; the pacemaker stimulates the ventricle when triggered by the P wave from the atrium. **transvenous catheter p.**, an external cardiac pacemaker connected to the heart by an electrode inserted through a catheter. **wandering p.**, a condition in which the site of origin of the impulses controlling the heart rate shifts from the head of the sinoatrial node to a lower part of the node or to another part of the atrium.

pachismus (pah-kiz'mus) [Gr. *pachys* thick] thickening.

pachonychia (pah'o-nik'e-ah) pachyonychia.

pachy- [Gr. *pachys* thick, clotted] a combining form meaning thick.

pachyacria (pah'e-a'kre-ah) [*pachy-* + Gr. *akron* end + *-ia*] a condition characterized by enlargement of the soft parts of the extremities.

pachyblepharon (pah'e-blef'ah-ron) [*pachy-* + Gr. *blepharon* eyelid] a thickening of the eyelid, chiefly near the border.

pachyblepharosis (pah'e-blef'ah-ro'sis) pachyblepharon.

pachycephalia (pah'e-sē-fa'le-ah) pachycephaly.

pachycephalic (pah'e-sē-fal'ik) pertaining to or characterized by pachycephaly.

pachycephalous (pah'e-sef'ah-lus) pachycephalic.

pachycephaly (pah'e-sef'ah-le) [*pachy-* + Gr. *kephalē* head] abnormal thickness of the bones of the skull, as in acromegaly.

pachycheilia (pah'e-ki'le-ah) [*pachy-* + Gr. *cheilos* lip + *-ia*] thickening of the lips.

pachycholia (pah'e-ko'le-ah) [*pachy-* + Gr. *cholē* bile + *-ia*] (*obs.*) abnormal thickness of the bile.

pachychromatic (pah'e-kro-mat'ik) [*pachy-* + Gr. *chrōma* color] having thick chromatin threads.

pachychymia (pah'e-kim'e-ah) [*pachy-* + Gr. *chymos* juice + *-ia*] (*obs.*) undue thickness of the chyme.

pachycolpismus (pah'e-kol-piz'mus) [*pachy-* + Gr. *kolpos* vagina] pachyvaginitis.

pachydactylia (pah'e-dak-til'e-ah) pachydactyly.

pachydactyly (pah'e-dak'til-le) [*pachy-* + Gr. *daktylos* finger] abnormal enlargement of the fingers and toes.

pachyderma (pah'e-der'mah) [*pachy-* + Gr. *derma* skin] abnormal thickening of the skin. **p. circumscrip'ta**, **p. laryn'gis**, localized warty epithelial thickenings on the larynx. **p. verruco'sa**, a condition characterized by papillomatous growths on the vocal cords. **p. vesi'cae**, a dry, thickened condition of the mucous membrane of the bladder.

pachydermatocele (pah'e-der-mat'o-sēl) [*pachy-* + Gr. *derma* skin + *kēlē* tumor] plexiform neuroma which attains large dimensions and produces a condition resembling elephantiasis; called also *elephantiasis neuromatosa*.

pachydermatous (pah'e-der'mah-tus) thick-skinned.

pachydermic (pah'e-der'mik) (*obs.*) characterized by abnormal thickness of the skin.

pachydermoperiostosis (pah'e-der'mo-per'e-os-to'sis) a condition characterized by thickening of the skin of the face and scalp, thickening of the bones of the distal parts of the limbs, and clubbing of the fingers and toes (acropachy). When it occurs secondary to severe pulmonary disease, it is probably synonymous with hypertrophic pulmonary osteoarthropathy (q.v.). Called also *Touraine-Salente-Golé syndrome*.

pachyglossia (pah'e-glos'e-ah) [*pachy-* + Gr. *glōssa* tongue + *-ia*] abnormal thickness of the tongue.

pachygnathous (pah-kig'nah-thus) [*pachy-* + Gr. *gnathos* jaw] having a large jaw.

pachygyria (pah'e-ji're-ah) [*pachy-* + *gyrus* + *-ia*] macrogyria.

pachyhemia (pah'e-he'me-ah) pachyemia.

pachyleptomeningitis (pak''e-lep''to-men''in-ji'tis) [*pachy-* + Gr. *leptos* thin + *mēninx* membrane + *-itis*] inflammation of the dura and pia together.

pachymeninges (pak''e-me-nin''jēz) plural of *pachymeninx*.

pachymeningitis (pak''e-men''in-ji'tis) [*pachy-* + Gr. *mēninx* membrane + *-itis*] inflammation of the dura mater; the symptoms of the disease resemble those of meningitis. Cf. *leptomeningitis*. **cerebral p.**, inflammation of the dura of the brain. **circumscribed p.**, pachymeningitis limited to a definite area of the dura. **external p.**, inflammation of the outer layers of the dura. **hemorrhagic internal p.**, pachymeningitis associated with dural hematoma. **internal p.**, that which affects the inner layer of the dura. **p. intralamella'ris**, intradural abscess. **purulent p.**, abscess on the dura mater. **serous internal p.**, the so-called external hydrocephalus. **spinal p.**, inflammation of the dura of the spinal column. **syphilitic p.**, that which is caused by syphilis.

pachymeningopathy (pak''e-men''in-gop''ah-the) [*pachymeninx* + Gr. *pathos* disease] any noninflammatory disease of the dura mater.

pachymeninx (pak''e-me'ninks), pl. *pachymeninx'es* [*pachy-* + Gr. *mēninx* membrane] the dura mater.

pachymucosa (pak''e-mu-ko'sa) [*pachy-* + *mucosa*] abnormal thickening of the mucosa. **p. al'ba**, leukoplakia with thickening of the mucous membrane.

pachynema (pak''e-ne'mah) [*pachy-* + Gr. *nēma* thread] a postsynaptic stage of mitosis in which the chromatin is in the form of thick spireme threads.

pachynesis (pak''e-ne'sis) thickening and swelling of a chondriosome.

pachynsis (pah-kin'sis) [Gr.] a thickening, especially an abnormal thickening.

pachytic (pah-kin'tik) pertaining to or characterized by abnormal thickening.

pachyonychia (pak''e-o-nik'e-ah) [*pachy-* + Gr. *onyx* nail + *-ia*] thickening of the nails. **p. congen'ita**, a rare, congenital, dominantly inherited disorder, characterized by excessive thickening of the nails that progresses to produce onychogryposis, hyperkeratosis of the palms, soles, knees, and elbows, leukoplakia of the oral mucous membranes, and, usually, hyperhidrosis of the hands and feet; widespread, tiny cutaneous horns may occur and bullae may develop on the palms and soles. Called also *Jadassohn-Lewandowsky syndrome*.

pachyostosis (pak''e-os-to'sis) [*pachy-* + Gr. *osteon* bone + *-osis*] a benign form of hypertrophy of the bones; found particularly in aquatic animals.

pachyotia (pak''e-o'she-ah) [*pachy-* + Gr. *ous* ear] (*obs.*) marked thickness of the auricles of the ears.

pachypelvipерitonitis (pak''e-pel''ve-per''i-to-ni'tis) [*pachy-* + *pelvis* + *peritonitis*] pelvic peritonitis with thickening of the affected parts.

pachyperioosteoderma (pak''e-per''e-os''te-o-der'mah) pachydermoperiostosis.

pachyperiostitis (pak''e-per''e-os-ti'tis) periostitis of long bones resulting in abnormal thickness of the bones.

pachyperitonitis (pak''e-per''i-to-ni'tis) [*pachy-* + *peritonitis*] peritonitis with thickening of the affected membrane.

pachypleuritis (pak''e-ploo-ri'tis) [*pachy-* + *pleuritis*] fibrothorax.

pachypodous (pah-kip'o-dus) [*pachy-* + Gr. *pous* foot] having abnormally thick feet.

pachyrhizid (pak''ir-i'zid) a poisonous glycoside from *Pachyrhizus angulatus*, a plant of various tropical regions.

pachysalpingitis (pak''e-sal''pin-ji'tis) [*pachy-* + Gr. *salpinx* tube + *-itis*] chronic interstitial inflammation of the muscular coat of the oviduct, producing thickening; called also *mural salpingitis* and *parenchymatous salpingitis*.

pachysalpingo-ovaritis (pak''e-sal-ping''go-o''var-i'tis) chronic parenchymatous inflammation of the ovary and oviduct.

pachysoma (pak''e-so'me-ah) [*pachy-* + Gr. *sōma* body] abnormal thickening of parts of the body.

pachytene (pak''e-tēn) [Gr. *pachytēs* thickness] in meiosis (q.v.), the stage following synapsis (zygotene) in which the homologous chromosome threads (synaptonemal complex) shorten, thicken, and continue to intertwine, and each of the conjoined (bivalent) chromosomes separate into two sister chromatids, which are held together by a centromere, to form a tetrad. During this phase the chromatids break up and corresponding regions of the nonsister chromatids of the paired chromosomes are exchanged in a process known as crossing over. See also *diplotene*, *leptotene*, and *zygotene*.

pachyvaginalitis (pak''e-vaj''i-nal-i'tis) [*pachy-* + *vaginalitis*] inflammatory thickening of the tunica vaginalis of the testis.

pachyvaginitis (pak''e-vaj''i-ni'tis) [*pachy-* + *vaginitis*] chronic vaginitis with thickening of the vaginal walls. **cystic p.**, emphysematous vaginitis.

pacing (pās'ing) setting of the pace, or regulation of the rate of.

cardiac p., regulation of the rate of contraction of the heart muscle by an artificial cardiac pacemaker.

Pacini's corpuscles (pah-che'nēz) [Filippo Pacini, Italian anatomist, 1812-1883] see under *corpuscle*.

pacinian corpuscles (pah-sin'e-an) [named for Filippo Pacini] see under *corpuscle*.

Paci's operation (pah'chēz) [Agostino Paci, Pisa surgeon] see under *operation*.

pack (pak) 1. treatment by wrapping a patient in blankets or sheets or a limb in towels, wet or dry and either hot or cold; also the blankets, sheets, or towels used for this purpose. 2. a tampon. **cold p.**, the wrapping of a patient in blankets, sheets, or towels dipped in cold water before application. **dry p.**, dry, hot blankets or towels for wrapping the body or an extremity. **full p.**, one which encloses the entire body. **half p.**, a pack applied from the axillae to below the knees. **hot p.**, the hot blankets or towels, wet or dry, for wrapping the body or an extremity. **ice p.**, a folded towel filled with crushed ice, often used in place of an icebag. **Mikulicz p.**, layers of mesh or gutta-percha sewn together at the edges, packed with strips of gauze, often placed in a denuded pelvic area to wall off the unperitonealized surfaces but also used for packing off abdominal viscera to improve operative exposure. **one sheet p.**, a wet pack consisting of only one large sheet. **partial p.**, a wet pack covering only a portion of the body. **periodontal p.**, a mixture which usually consists of a zinc oxide powder and eugenol liquid, applied to the gingiva around the teeth after surgical periodontal procedures, such as gingivectomy, to protect the tissues during the healing process. **salt p.**, a wet pack utilizing sheets or blankets wrung out after immersion in salt water. **three-quarters p.**, a wet pack extending upward from the toes as far as the axillae. **throat p.**, a moistened gauze pack used as a posterior pharyngeal seal around a non-cuffed endotracheal tube. **wet p.**, **wet-sheet p.**, wet blankets or sheets, hot or cold, for wrapping an extremity or the entire body.

packer (pak'er) an instrument for introducing dressing into the uterus or vagina, or into another body cavity or wound.

packing (pak'ing) 1. the act of filling a wound or cavity with gauze, sponges, pads, or other material. 2. the material used for filling a cavity.

pad (pad) a cushion-like mass of soft material. **abdominal p.**, a pad for the absorption of discharges from abdominal wounds; also for packing off abdominal viscera to improve exposure during surgical procedures. **dinner p.**, a pad placed over the stomach before a plaster jacket is applied. The pad is then removed, leaving space under the jacket to take care of expansion of the stomach after eating. **fat p.**, 1. sucking pad. 2. a large pad of fat lying behind and below the patella, between the patellar ligament, the head of the tibia and the femoral condyles; called also *infrapatellar* and *retropatellar fat pad*. **gum p's**, edentulous segments of the maxilla and the mandible that correspond to the underlying primary teeth. **kidney p.**, a pad held in place by a belt or corset for the support of a movable kidney. **knuckle p's**, nodules about the size of a split pea on the dorsal surface of the interphalangeal joints, consisting of new growths of fibrous tissue, with thickening of the dermis and epidermis, and frequently associated with camptodactyly and Dupuytren's contracture; they are probably of genetic origin. **Mikulicz's p.**, a pad composed of layers of folded gauze; used in surgical procedures. **occlusal p.**, a pad which covers the occlusal surface of a tooth. **Passavant's p.**, see under *bar*. **periarterial p.**, see *juxtaglomerular cells*, under *cell*. **retromolar p.**, a cushion-like mass of tissue situated at the distal termination of the mandibular residual ridge, immediately distal to the last mandibular molar in vivo. **sucking p.**, **suctorial p.**, a lobulated mass of fat which occupies the space between the masseter and the external surface of the buccinator; it is well developed in infants. Called also *fatty ball of Bichat*, *fat pad*, *corpus adiposum buccae* [NA], and *adipose body of cheek*.

Padgett's dermatome (paj'gets) [Earl Calvin Padgett, American surgeon, 1893-1946] see under *dermatome*.

padimate A (pad'i-māt) chemical name: 4-(dimethylamino)-benzoic acid pentyl ester; an ultraviolet screen, C₁₄H₂₁NO₂.

padimate O (pad'i-mat) chemical name: 4-(dimethylamino)-benzoic acid 2-ethylhexyl ester; an ultraviolet screen, C₁₄H₂₇NO₂.

P. ae. abbreviation for L. *par'tes aequa'les*, equal parts.

pae- for words beginning thus, see also those beginning *pe-*.

Paecilomyces (pe-sil''o-mi'sēz) a genus of soil-inhabiting imperfect fungi of the family Moniliaceae, order Moniliales, morphologically resembling *Penicillium*, and often isolated as contaminants of skin and sputum. See *cladiosis*.

paed-, paedo-, etc. for words beginning thus, see those beginning *ped-*, *pedia-*, *pedio-*, *pedo-*.

Paederus (pe'der-us) a genus of blistering beetles of South America, Asia, and Africa, from which pederin has been isolated.

PAF platelet activating factor.

Pagenstecher's circle, ointment, linen, thread (pah'-gen-stek''erz) [Alexander Pagenstecher, German ophthalmologist,

1828–1879] see under *circle*, *linen*, and *thread*, and see *yellow mercuric oxide*, under *mercuric*.

Paget's abscess, etc. (paj'ets) [Sir James Paget, English surgeon, 1814–1899] see under *abscess*, *cell*, *disease*, *necrosis*, and *tests*.

pagetic (pah-jet'ik) affected with or relating to Paget's disease (osteitis deformans).

pagetoid (paj'ē-toid) resembling Paget's disease; characteristic of Paget's disease.

Pagitane (paj'i-tān) trademark for a preparation of cycrimine hydrochloride.

pagon (pag'on) [Gr. *pagos* frost] the plant and animal organisms occurring in ice.

pagophagia (pa'go-fa'je-ah) [Gr. *pagos* frost + *phagein* to eat] the ingestion of extraordinary amounts of ice, probably related to iron lack.

pagoplexia (pa'go-plek'se-ah) [Gr. *pagos* frost + *plēgē* stroke] frostbite.

-pagus [Gr. *pagos* that which is fixed or firmly set] a word termination denoting a monster composed of symmetrical twins conjoined at the site indicated by the stem to which it is affixed, as *craniopagus*, *pygopagus*, *thorocopagus*.

PAH, PAHA para-aminohippuric acid; see *aminohippuric acid*, under *acid*.

Pahvant Valley fever, plague (pah'vant) [*Pahvant*, a valley in Utah] tularemia.

pain (pān) [L. *poena, dolor*; Gr. *algos, odyne*] a more or less localized sensation of discomfort, distress, or agony, resulting from the stimulation of specialized nerve endings. It serves as a protective mechanism insofar as it induces the sufferer to remove or withdraw from the source. **bearing-down p.**, pain accompanying uterine contractions during the second stage of labor. **boring p.**, a sensation as of being pierced with a long, slender, twisting object; called also *terebrant p.* **Brodie's p.**, pain induced by folding the skin near a joint affected with neuralgia. **central p.**, pain due to a lesion in the central nervous system. **Charcot's p's**, rheumatism of a testicle. **dilating p's**, those of the first stage of labor. **expulsive p's**, those of the second stage of labor. **false p's**, ineffective pains which resemble labor pains, but which are not accompanied by effacement and dilatation of the cervix. **fulgurant p's**, lightning p's. **gas p's**, pains caused by distention of the stomach or intestines by accumulations of air or other gases, occurring as a result of ingestion of gas-forming foods. **girdle p.**, a painful sensation as of a cord about the waist. **growing p's**, recurrent quasi-rheumatic limb pains peculiar to early youth. **heterotopic p.**, referred pain. **homotopic p.**, pain that is felt at the point of injury. **hunger p.**, pain coming on at the time for feeling hunger for the next meal; it is a symptom of gastric disorder. **ideogenous p.**, pain caused by an erroneous idea; mentally produced pain. **imperative p.**, a persisting painful sensation felt in psychasthenia. **intermenstrual p.**, pain occurring during the period between the menses, usually about half way, accompanying extrusion of the ovum. **jumping p.**, a peculiar pain in joint diseases when the bone is laid bare by ulceration of the cartilage. **labor p's**, the rhythmic pains of increasing severity and frequency, caused by contractions of the uterus during childbirth. **lancinating p.**, a sharp, darting pain. **lightning p's**, the cutting and intense darting pains of tabes dorsalis; called also *fulgurant p's* and *shooting p's*. **middle p.**, intermenstrual pain. **mind p.**, psychalgia, def. 2. **osteocopic p.**, osteocope. **phantom limb p.**, pain felt as though arising in an absent (amputated) limb; see under *limb*. **postprandial p.**, abdominal pain occurring after eating a meal. **premonitory p's**, mild uterine contractions before the beginning of true labor. **referred p.**, pain felt in a part other than that in which the cause that produced it is situated. **rest p.**, a continuous burning pain of the distal portion of the lower limb, usually the forefoot, which begins or is aggravated after reclining and is relieved by sitting or standing; it is due to ischemia. **root p.**, pain caused by disease of the sensory nerve roots and felt in the cutaneous areas supplied by the affected roots. **shooting p's**, lightning p's. **soul p.**, psychalgia, def. 2. **spot p's**, pains which seem like patches on the integument. **starting p's**, pain and muscular spasm in the early stages of sleep. **terebrant p.**, **terebrating p.**, boring p. **wandering p.**, a pain which repeatedly changes its location.

paint (pānt) 1. a liquid designed for application to the surface, as of the body or a tooth. 2. to apply a liquid to a specific area as a remedial or protective measure. **Castellani's p.**, carbolfuchsin solution.

pair (pār) a combination of two related, similar, or identical entities or objects. **base p.**, either of the two pairs—guanine and cytosine, adenine and thymine—of purine-pyrimidine bases joined by hydrogen bonds that make up DNA. In RNA, uracil replaces thymine. **buffer p.**, a buffer system consisting of a weak acid and its conjugate base.

pairing (pār'ing) the act or process of joining into pairs. In transplantation immunology, the process of selecting a compatible donor and host, usually by typing or matching. **base p.**, the coalescing of purines and pyrimidines by forming hydrogen bonds;

see under *pair*. **somatic p.**, the close association of homologous pairs of polytene chromosomes, as in meiotic prophase; such chromosomes are considered to be in a permanent prophase.

pajaroello (pah-hah-ro-el'yo) *Ornithodoros coriaceus*.

Pajot's hook, law, maneuver, method (pahzh-ōz') [Charles Pajot, French obstetrician, 1816–1896] see under the nouns.

pakurin (pak'u-rin) an arrow poison derived from the sap of a tree in Colombia; it has a digitalis-like action on the heart.

Pal's stain (pahlz) [Jacob Pal, Vienna clinician, 1863–1936] see *Table of Stains*.

Palade (pal-ād'), George Emil. American cytologist, born in Rumania in 1912; co-winner, with Albert Claude and Christian R. de Duve, of the Nobel prize in medicine or physiology for 1974, for his work on mitochondria, ribosomes, and microsomes.

palae- for words beginning thus, see those beginning *pale-*.

palata (pal-ah'tah) [L.] plural of palatum.

palatal (pal'ah-tal) pertaining to the palate; sometimes used to designate the lingual surface of a maxillary tooth.

palate (pal'at) the partition separating the nasal and oral cavities; see *palatum* [NA]. **artificial p.**, a prosthetic device used to close a cleft palate. **bony p.**, **bony hard p.**, the osseous framework of the hard palate (*palatum osseum* [NA]). **cleft p.**, a palate having a congenital fissure in the median line, which may range from a simple cleft in the uvula to a cleft involving the uvula and hard palate; the latter cleft may extend anteriorly unilaterally or bilaterally (never in the midline) through the alveolar ridge. **falling p.**, 1. an abnormally elongated uvula. 2. a palate that has lost neuromuscular control. **gothic p.**, an unusually high and pointed hard palate. **hard p.**, the anterior, rigid portion of the palate; see *palatum durum* [NA]. **pendulous p.**, uvula. **premaxillary p.**, primary p. **primary p.**, that portion of the palate contributed by the median nasal process. **secondary p.**, the palate proper, formed by fusion of the lateral palatine processes. **smoker's p.**, a condition of the palate occurring in heavy smokers, particularly pipe smokers, characterized by a diffusely erythematous or whitened "cobblestone" surface with multiple inflamed orifices of mucous gland ducts. **soft p.**, the posterior, fleshy part of the palate; see *palatum molle* [NA].

palatograph (pal'at-graf) palatograph.

palatiform (pah-lat'i-form) [L. *palatum* palate + *forma* form] resembling the palate.

palatine (pal'ah-tin) [L. *palatinus*] pertaining to the palate.

palatitis (pal'ah-ti'tis) 1. inflammation of the palate. 2. lam-pas.

palato- [L. *palatum* palate] a combining form denoting relationship to the palate; sometimes used instead of *linguo-* in terms referring to the lingual surface of maxillary teeth.

palatoglossal (pal'ah-to-glos'al) pertaining to the palate and tongue.

palatognathous (pal'ah-tog'nah-thus) [*palato-* + Gr. *gnathos* jaw] having a congenitally cleft palate.

palatograph (pal'ah-to-graf) [*palato-* + Gr. *graphein* to write] an instrument to record the movements of the palate in speech.

palatography (pal'ah-tog'rah-fe) the making of graphic records of the movements of the palate in speech.

palatomaxillary (pal'ah-to-mak'si-ler'e) pertaining to the palate and the maxilla.

palatomyograph (pal'ah-to-mi'o-graf) [*palato-* + Gr. *mys* muscle + *graphein* to write] an instrument used in registering palatal movements.

palatonasal (pal'ah-to-na'zal) [*palato-* + L. *nasus* nose] pertaining to the palate and nose.

palatopagus (pal'ah-top'ah-gus) [*palato-* + Gr. *pagos* that which is firmly set] symmetrical twins conjoined at the palate.

palatopharyngeal (pal'ah-to-fah-rin'je-al) pertaining to the palate and pharynx.

palatoplasty (pal'ah-to-plas'te) [*palato-* + Gr. *plassein* to form] plastic reconstruction of the palate, including cleft palate operations.

palatoplegia (pal'ah-to-ple'je-ah) [*palato-* + Gr. *plēgē* stroke] paralysis of the palate.

palatoproximal (pal'ah-to-prok'si-mal) pertaining to the palatal (lingual) and proximal surface of a maxillary tooth.

palatorrhaphy (pal'ah-tor'ah-fe) surgical correction of a cleft palate, the cleft involving the soft palate and the soft tissues over the hard palate; cf. *staphylorrhaphy*.

palatosalpingeus (pal'ah-to-sal-pin'je-us) [*palato-* + Gr. *salpinx* tube] musculus tensor veli palatini.

palatoschisis (pal'ah-tos'ki-sis) [*palato-* + Gr. *schisis* cleft] cleft palate.

palatostaphylinus (pal'ah-to-staf'i-li-nus) [*palato-* + Gr. *staphylē* uvula] a muscular slip going to the uvula.

palatouvularis (pal'ah-to-u'vu-la'ris) [*palato-* + L. *uvula* uvula] musculus uvulae.

palatum (pal-ah'tum), pl. *pala'ta* [L.] [NA] the palate: the parti-

tion separating the nasal and oral cavities, consisting anteriorly of a hard bony part and posteriorly of a soft fleshy part. **p. du'-rum** [NA], the hard palate: the anterior part of the palate, characterized by an osseous framework, covered superiorly by mucous membrane of the nasal cavity and, on its oral surface, by mucoperiosteum. **p. du'-rum os'seum**, **p. osseum**. **p. fis'-sum**, cleft palate. **p. mol'le** [NA], the soft palate: the fleshy part of the roof of the mouth, extending from the posterior edge of the hard palate; from its free inferior border is a projection of variable length, the uvula. Called also *velum palatinum* [NA alternative]. **p. ogiva'le**, gothic palate. **p. os'seum** [NA], bony palate: the bony part of the anterior two-thirds of the roof of the mouth, formed by the palatine processes of the maxillae and the horizontal plates of the palatine bones. Called also *p. durum osseum* or *bony hard palate*.

paleencephalon (pa'le-en-sef'ah-lon) [*paleo-* + Gr. *enkephalos* brain] the (phylogenetically) old brain; all of the brain except the cerebral cortex and its dependencies.

paleo- [Gr. *palaio* old] a combining form meaning old.

paleocerebellar (pa'le-o-ser'ē-bel'ar) pertaining to or affecting the paleocerebellum.

paleocerebellum (pa'le-o-ser'ē-bel'um) [*paleo-* + *cerebellum*] a term applied originally to the phylogenetically older parts of the cerebellum, including the flocculonodular lobe; now applied specifically to those parts whose afferent inflow is predominantly supplied by spinocerebellar fibers, including in man the lingula, lobulus centralis, culmen, pyramis, and uvula of the vermis, and the tonsils of the hemispheres.

paleocinetic (pa'le-o-si-net'ik) paleokinetic.

paleocortex (pa'le-o-kor'teks) paleopallium.

paleoencephalon (pa'le-o-en-sef'ah-lon) paleencephalon.

paleogenesis (pa'le-o-jen'ē-sis) palingenesis, def. 2.

paleogenetic (pa'le-o-jē-net'ik) [*paleo-* + Gr. *gennan* to produce] originated in the past; not newly acquired. Said of traits, structures, etc., of species.

paleokinetic (pa'le-o-ki-net'ik) [*paleo-* + Gr. *kinētikos* pertaining to motion] old kinetic; a term applied to the nervous motor mechanism concerned in automatic associated movements. It is under the control of the corpus striatum and represents a primitive (that is, early developed) type of motor control. Cf. *archeokinetic* and *neokinetic*.

paleologic (pa'le-o-loj'ik) a type of abnormal reasoning in which, because two unlike things share a common property, the two are equated.

paleoneurology (pa'le-o-nu-rol'o-je) the study of the evidence of nervous systems of fossil animals.

paleontology (pa'le-on-tol'o-je) [*paleo-* + Gr. *ōn* existing + *-logy*] the sum of knowledge regarding the early forms of life upon the earth.

paleopallium (pa'le-o-pal'e-um) [*paleo-* + L. *pallium* mantle] that portion of the pallium (cerebral cortex) which, with the archipallium, develops in association with the olfactory system and which is phylogenetically older and less stratified than the neopallium. It is composed chiefly of the piriform cortex and parahippocampal gyrus. Called also *paleocortex*.

paleopathology (pa'le-o-pah-thol'o-je) [*paleo-* + *pathology*] the study of disease in bodies preserved from ancient times, such as mummies.

paleophrenia (pa'le-o-fre'ne-ah) [*paleo-* + Gr. *phrēn* mind + *-ia*] a term suggested as a substitute for schizophrenia on the basis that the disorder represents a regression to childhood level.

paleopsychology (pa'le-o-si-kol'o-je) [*paleo-* + *psychology*] the study of mental phenomena which are based on primitive or ancestral mentality.

paleosensation (pa'le-o-sen-sa'shun) [*paleo-* + *sensation*] the sensation of severe pain and marked variations of temperature, as compared with phylogenetically newer sensations such as those of light touch and moderate variations of temperature and the epicritic sensations.

paleostriatal (pa'le-o-stri-a'tal) pertaining to the paleostriatum.

paleostriatum (pa'le-o-stri-a'tum) [*paleo-* + *striatum*] the phylogenetically older part of the corpus striatum represented by the globus pallidus. Cf. *neostriatum*.

paleothalamus (pa'le-o-thal'ah-mus) [*paleo-* + *thalamus*] old thalamus; a term applied occasionally to the phylogenetically older part of the thalamus, i.e., the medial portion which lacks reciprocal connections with the neopallium.

pali-, palin- [Gr. *palin* backward, or again] a combining form meaning again, often denoting pathologic repetition.

palicinesia (pal'e-si-ne'se-ah) palikinesia.

palikinesia (pal'e-ki-ne'se-ah) [*pali-* + Gr. *kinēsis* movement] pathologic repetition of movements.

palilalia (pal'i-la'le-ah) [*pali-* + Gr. *lalein* to babble] a condition characterized by the repetition of a phrase or word with increasing rapidity.

palin- see *pali-*.

palindromia (pal'in-dro'me-ah) [Gr. *palindromia* a running back] the recurrence of a disease.

palindromic (pal'in-dro'mik) returning; recurrent.

palinesthesia (pal'in-es-the'ze-ah) [*palin-* + Gr. *aisthēsis* sensation] the rapid termination of the anesthetic state and the restoration to consciousness of a person under general anesthesia: it may be induced by the injection of weak hydrochloric acid; now discontinued because it is ineffective and harmful.

palingenesis (pal'in-jen'ē-sis) [*palin-* + Gr. *genesis* birth] 1. the regeneration or restoration of a lost part. 2. the appearance of ancestral characters in successive generations. Cf. *cenogenesis*.

palingraphia (pal'in-gra'fe-ah) [*palin-* + Gr. *graphein* to write] pathologic repetition of letters, words, or parts of words in writing.

palinmnesis (pal'in-ne'sis) [*palin-* + Gr. *-mnēsis* memory] memory for past events or experiences.

palinopsia (pal'in-op'se-ah) [*palin-* + Gr. *opsis* vision + *-ia*] visual perseveration; the continuance of a visual sensation after the stimulus is gone.

palinphrasia (pal'in-fra'ze-ah) [*palin-* + Gr. *phrasis* speech + *-ia*] pathologic repetition, in speaking, of words or phrases.

paliphrasia (pal'e-fra'ze-ah) palinphrasia.

palladium (pah-la'de-um) [L.] 1. a rare, hard, inert metal resembling platinum; symbol, Pd; specific gravity, 12.16; atomic number, 46; atomic weight, 106.4. It is comparatively light in weight and of a neutral color and is used for dentures and orthodontic appliances. 2. a homeopathic preparation of the same metal.

pallanesthesia (pal'an-es-the'ze-ah) [Gr. *pallein* to shake + *anesthesia*] loss of vibration senses; insensibility to the vibrations of a tuning fork.

pallesthesia (pal'es-the'ze-ah) [Gr. *pallein* to shake + *aisthēsis* perception] sensibility to vibrations; the peculiar vibrating sensation felt when a vibrating tuning-fork is placed against a subcutaneous bony prominence of the body. Called also *bone sensibility*.

pallesthetic (pal'es-thet'ik) pertaining to pallesthesia, or vibration sense.

pallhypesthesia (pal'hi-pes-the'ze-ah) [Gr. *pallein* to shake + *hypo* under + *aisthēsis* perception] diminished sensibility to vibrations.

pallial (pal'e-al) pertaining to the pallium.

palliate (pal'e-āt) to reduce the severity of; to relieve.

palliative (pal'e-a'tiv) [L. *palliatus* cloaked] 1. affording relief, but not cure. 2. an alleviating medicine.

pallidal (pal'i-dal) pertaining to the globus pallidus.

pallidectomy (pal'i-dek'to-me) surgical excision of the globus pallidus or extirpation of it by other means (chemopallidectomy).

pallidin (pal'i-din) a suspension made from the lung of congenital syphilis, rich in *Treponema pallidum*; used in cutaneous test for syphilis. See under *reaction*.

pallidoansection (pal'i-do-an-sek'shun) surgical section of the globus pallidus and ansa lenticularis.

pallidoansotomy (pal'i-do-an-sot'o-me) production of lesions in the globus pallidus and ansa lenticularis.

pallidofugal (pal'i-dof'u-gal) [*pallidum* + L. *fugere* to flee] conducting impulses away from the globus pallidus.

pallidoidosis (pal'i-doi-do'sis) rabbit syphilis.

pallidotomy (pal'i-dot'o-me) [*pallidum* + Gr. *tomē* a cutting] a stereotaxic surgical technique for producing lesions in the globus pallidus for treatment of extrapyramidal disorders.

pallidum (pal'i-dum) [L. "pale"] globus pallidus.

pallium (pal'e-um) [L. "cloak"] [NA] the cerebral cortex (q.v.) as viewed in its entirety, i.e., the mantle of gray matter covering both cerebral hemispheres. It is divided into the archipallium, paleopallium, and neopallium (some classifications include the paleopallium with the archipallium, and both are often loosely termed the rhinencephalon). Also, the cerebral cortex during its period of development.

pallor (pal'or) [L.] paleness; absence of the skin coloration.

palm (palm) [L. *palma*] 1. the hollow of the hand (palma manus [NA]). 2. any of various, chiefly tropical trees, the palm trees. **handball p.**, contusion of the palm of the hand occurring in handball players.

palma (pal'mah), pl. *pal'mae* [L.] 1. the palm. 2. the palm tree. **p. ma'nus** [NA], the palm, or flexor surface, of the hand. **pal'mae plica'tae**, the branching folds of the mucosa of the vagina.

palmae (pal'me) [L.] plural of *palma*.

palmanesthesia (pal'man-es-the'ze-ah) [Gr. *palmos* vibration + *anesthesia*] pallanesthesia.

palmar (pal'mar) [L. *palmaris*; *palma* palm] pertaining to the palm.

palmaris (pal-ma'ris) palmar; [NA] a general term designating relationship to the palm of the hand.

palmature (pal'mah-tūr) [L. *palma* palm] a webbed state of the fingers.

palmellin (pal-mel'in) a red pigment from the fresh-water alga *Palmella cruenta*.

palmesthesia (pal'mes-the'ze-ah) pallesthesia.

palmesthetic (pal'mes-thet'ik) pallesthetic.

palmital (pal'mī-tal) an aldehyde lipid, the aldehyde form of palmitate; see *plasmalogen*.

palmitate (pal'mī-tāt) hexadecanoate: the ionic form of palmitic acid, the most abundant fatty acid in man.

palmitin (pal'mī-tin) a crystallizable and saponifiable fat, $C_{51}H_{101}O_2$, from various fats and oils; glycerol tripalmitate.

palmitone (pal'mī-tōn) a crystalline compound, $CH_3(CH_2)_{14}CO\cdot(CH_2)_{14}\cdot CH_3$, obtained when palmitic acid is distilled with lime.

palmus (pal'mus) [Gr. *palmos* a quivering motion] 1. palpitation. 2. saltatory spasm.

palp (palp) a sensory or feeding appendage, especially one of the jointed sensory appendages attached to the mouth of arthropods.

palpable (pal'pah-b'l) perceptible by touch.

palpate (pal'pāt) [L. *palpare* to touch] to examine by the hand; to feel.

palpation (pal-pa'shun) [L. *palpatio*] the act of feeling with the hand; the application of the fingers with light pressure to the surface of the body for the purpose of determining the consistence of the parts beneath in physical diagnosis. **bimanual p.**, examination with both hands. **light touch p.**, light palpation of the surface of the abdomen and thorax with the tip of a finger for the purpose of finding the outlines of the organs.

palpatometry (pal'pah-tom'ē-tre) [*palpation* + Gr. *metron* measure] measurement of the amount of pressure that can be borne without causing pain.

palpatopercussion (pal'pah-to-per-kush'un) palpation combined with percussion.

palpebra (pal'pē-brah), pl. *pal'pebrae* [L.] eyelid; either of the two movable folds that protect the anterior surface of the eyeball. **p. inferior** [NA], the lower eyelid: the lower of the two movable folds protecting the anterior surface of the eyeball. **p. superior** [NA], the upper eyelid: the upper of the two movable folds protecting the anterior surface of the eyeball. **p. tertius**, nictitating membrane.

palpebrae (pal'pē-bre) [L.] plural of *palpebra*.

palpebral (pal'pē-bral) [L. *palpebralis*] pertaining to an eyelid.

palpebralis (pal'pē-bra'lis) [L.] pertaining to an eyelid.

palpebrate (pal'pē-brāt) [L. *palpebrare* to wink] 1. to wink. 2. having eyelids.

palpebration (pal'pē-bra'shun) [L. *palpebratio*] 1. the act of winking. 2. abnormally frequent winking.

palpebritis (pal'pē-bri'tis) blepharitis.

palpitation (pal'pī-ta'shun) [L. *palpitatio*] a subjective sensation of an unduly rapid or irregular heart beat.

palsy (paw'lze) paralysis. **Bell's p.**, unilateral facial paralysis of sudden onset, due to lesion of the facial nerve and resulting in characteristic distortion of the face. **birth p.**, see under *paralysis*. **brachial p.**, see under *paralysis*. **bulbar p.**, see under *paralysis*. **cerebral p.**, a persisting qualitative motor disorder appearing before the age of three years, due to a nonprogressive damage to the brain. **crossed leg p.**, palsy of the peroneal nerve caused by sitting with one leg crossed over the other. **diver's p.**, decompression sickness. **Erb's p.**, see under *paralysis*. **facial p.**, Bell's p. **hammer p.**, a variety caused by hard work with the hammer. **ischemic p.**, see under *paralysis*. **Klumpke's p.**, see under *paralysis*. **Landry's p.**, acute febrile polyneuritis. **printer's p.**, a condition observed in printers due to chronic antimony poisoning, and marked by neuritis with paralysis, pain in the pubes, and papular eruption. **progressive supranuclear p.**, pseudobulbar paralysis. **pseudobulbar p.**, see under *paralysis*. **radial p.**, see under *paralysis*. **Saturday night p.**, musculospiral paralysis. **scribblers' p.**, writers' cramp. **shaking p.**, paralysis agitans. **spastic bulbar p.**, pseudobulbar paralysis. **tardy median p.**, carpal tunnel syndrome. **Todd's p.**, see under *paralysis*. **transverse p.**, crossed paralysis. **wasting p.**, spinal muscular atrophy.

Paltauf's dwarf, nanism (dwarfism) (pahl'towfz) [Arnold Paltauf, Austrian specialist in forensic medicine, 1860-1893] see *pituitary dwarf*, under *dwarf*, and see under *nanism*.

paludal (pal'u-dal) [L. *palus* marsh] pertaining to or arising from marshes.

paludism (pal'u-dizm) malaria.

Paludrine (pal'u-drin) trademark for a preparation of proguanil hydrochloride.

palustral (pah-lus'tral) [L. *paluster* marshy] 1. paludal; pertaining to marshes. 2. malarial.

2-PAM pralidoxime.

pamaquine (pam'ah-kwin) chemical name: 6-methoxy-8-(1-methyl-4-diethylamino)butylaminoquinoline. A toxic antimalarial compound, $C_{18}H_{25}N_3O_2$, derived from 8-aminoquinoline, which was discovered in Germany in 1924. It destroys the exoerythro-

cytic forms of human malarial parasites; now largely replaced by primaquine. Called also *Fourneau 694* or *710*. **p. naphthoate**, the methylene-bis- β -hydroxynaphthoate of pamaquine base, $C_{42}H_{48}N_6O_8$, occurring as a yellow to orange yellow powder; now largely replaced as an antimalarial by primaquine.

pamatolol sulfate (pam'ah-to'lōl) chemical name: (+)-[2-[4-[2-hydroxy-3-[(1-methylethylamino)propoxy]phenyl]ethyl] carbamic acid methyl ester sulfate (salt); an antiadrenergic (β -receptor), $(C_{16}H_{26}N_2O_4)_2 \cdot H_2SO_4$.

Pamine (pam'en) trademark for preparations of methscopolamine bromide.

Pamisyl (pam'i-sil) trademark for preparations of aminosalicic acid.

pamoate (pam'oh-āt) USAN contraction for 4,4'-methylenebis-[3-hydroxy-2-naphthoate].

pampiniform (pam-pin'i-form) [L. *pampinus* tendril + *forma* form] shaped like a tendril.

pampinocele (pam-pin'o-sēl) [L. *pampinus* tendril + Gr. *kēlē* tumor] varicocele.

pamphlegia (pam-ple'je-ah) [Gr. *pan* all + *plēgē* stroke] total paralysis.

Pan (pan) the genus of primates containing the chimpanzee and gorilla.

pan- [Gr. *pan* all] prefix signifying all.

Panacea (pan'ah-se'ah) [Gr. *Panakeia*] one of two sisters, the other being Hygieia, who were the daughters of Aesculapius and, according to legend, assisted in the rites and fed the sacred snakes in the early Greek temples of healing.

panacea (pan'ah-se'ah) [Gr. *panakeia*] 1. a universal remedy. 2. an ancient name for a healing herb or its juice.

panagglutinable (pan'ah-gloo'ti-nah-b'l) agglutinable with every type of blood serum from the same species, e.g., red blood cells agglutinable with sera of all human blood groups.

panagglutination (pan'ah-gloo'ti-na'shun) agglutination (e.g., of red blood cells) by the serum of all blood groups of the same species.

panagglutinin (pan'ah-gloo'ti-nin) [*pan-* + *agglutinin*] an agglutinin which agglutinates the red blood cells of all blood groups in the same species.

panangiitis (pan'an-je-i'tis) [*pan-* + Gr. *angeion* vessel + *-itis*] inflammation involving all the coats of the vessel. **diffuse necrotizing p.**, panangiitis with extensive involvement of the blood vessels.

panaris (pan'ah-ris) paronychia. **analgesic p.**, Morvan's disease.

panaritium (pan'ah-rish'e-um) [L.] (obs.) paronychia. **p. anal'gicum**, Morvan's disease.

panarteritis (pan'ar-tē-ri'tis) diffuse arterial disease; periarteritis nodosa.

panarthrit (pan'ar-thri'tis) [*pan-* + Gr. *arthron* joint] inflammation of all the joints or of all the structures of a joint.

Panas' operation (pan-ahz') [Photinos Panas, French ophthalmologist, 1832-1903] see under *operation*.

panasthenia (pan'as-the'ne-ah) [*pan-* + a neg. + Gr. *sthenos* strength] a term suggested as a substitute for neurasthenia.

panatroph (pan-at'ro-fe) [*pan-* + *atrophy*] atrophy affecting several parts; general atrophy.

panautonomic (pan-aw'to-no-mik) pertaining to or affecting the entire autonomic (sympathetic and parasympathetic) nervous system.

panblastic (pan-blas'tik) [*pan-* + Gr. *blastos* germ] pertaining to each of the layers of the blastoderm.

pancarditis (pan'kar-di'tis) [*pan-* + Gr. *kardia* heart] diffuse inflammation of the heart, involving the pericardium, myocardium, and endocardium.

panchontee (pan-shon-te') a gum from *Bassia elliptica*, a tree of India; it resembles gutta-percha.

panchrest (pan'krest) [Gr. *panchrēstos* useful for everything] a panacea, or remedy, for every disease.

panchromatic (pan'kro-mat'ik) [*pan-* + *chromatic*] sensitive to all colors; applied to photographic emulsions.

panchromia (pan-kro'me-ah) the condition of staining with various dyes.

Pancoast's suture (pan'kōsts) [Joseph Pancoast, American surgeon, 1805-1882] see under *suture*.

Pancoast's syndrome, tumor [Henry Khunrath Pancoast, Philadelphia radiologist, 1875-1939] see under *syndrome*, and see *pulmonary sulcus tumor*, under *tumor*.

pancolectomy (pan'ko-lek'to-me) excision of the entire colon with creation of an ileostomy.

pancrealgia (pan'kre-al'je-ah) pancreaticalgia.

pancreas (pan'kre-as), pl. *pan'creata* [Gr. *pan* all + *kreas* flesh] a large, elongated, racemose gland situated transversely behind the stomach, between the spleen and the duodenum. Its right extremity, the *head*, is the larger, and directed downward; the left extremity, or *tail*, is transverse, and terminates close to the spleen.

The external secretion or juice of the pancreas, which passes into the duodenum through the pancreatic duct, contains a variety of digestive enzymes. An internal secretion, insulin, produced in the beta cells, is concerned with the regulation of carbohydrate metabolism. Glucagon, a glycogenolytic-hyperglycemic factor, is produced in the alpha cells. Both the alpha and beta cells, along with the delta cells, form aggregates known as islets of Langerhans, scattered throughout the pancreas. **aberrant p.**, an exclave of pancreatic tissue occurring most commonly as a firm yellow nodule in the stomach, duodenum, or jejunum, but encountered also in other sites. **p. accessorium** [NA], **accessory p.**, an inconstant separate part of the head of the pancreas, usually an unattached uncinat process. **annular p.**, a developmental anomaly in which the pancreas forms a ring entirely surrounding the duodenum. **Aselli's p.**, an assemblage of lymphatic glands at the root of the mesentery, especially in carnivora. **p. divi'sum**, a developmental anomaly in which the pancreas is present as two separate structures, each with its own duct. **dorsal p.**, an embryonic outpocketing from the entodermal lining of the gut on the dorsal wall cephalad to the level of the hepatic diverticulum, which forms much of the pancreas and its functional duct. **lesser p.**, the small, partially detached portion of the pancreas lying dorsad to its head (processus uncinatus pancreatis [NA]; called also *Willis' p.* and *Winslow's p.* **ventral p.**, an embryonic outpocketing from the entodermal lining of the gut on the ventral wall, in the caudal angle between the gut and the hepatic diverticulum, which forms part of the pancreas and the stem of its functional duct. **Willis' p.**, **Winslow's p.**, lesser pancreas.

pancreata (pan-kre'ah-tah) [Gr.] plural of *pancreas*.

pancreatalgia (pan'kre-ah-tal'je-ah) [*pancreas* + *-algia*] pain in the pancreas.

pancreatotomy (pan'kre-ah-tek'to-me) [*pancreas* + Gr. *ektomē* excision] surgical removal of the pancreas.

pancreathelcosis (pan'kre-ath'el-ko'sis) [*pancreas* + Gr. *helkōsis* ulceration] (*obs.*) ulceration of the pancreas.

pancreatic (pan'kre-at'ik) [L. *pancreaticus*] pertaining to the pancreas.

pancreatico- a combining form denoting relationship to the pancreatic duct.

pancreaticoduodenal (pan'kre-at'i'ko-du'o-de'nal) pertaining to the pancreas and duodenum.

pancreaticoduodenostomy (pan'kre-at'i'ko-du'o-de-nos'to-me) surgical anastomosis of the pancreatic duct, or the divided end of the transected pancreas, with the duodenum.

pancreaticoenterostomy (pan'kre-at'i'ko-en'ter-os'to-me) surgical anastomosis of the pancreatic duct, or the divided end of the transected pancreas, with the intestine.

pancreaticogastrostomy (pan'kre-at'i'ko-gas-tros'to-me) surgical anastomosis of the pancreatic duct, or the divided end of the transected pancreas, with the stomach.

pancreaticojejunosomy (pan'kre-at'i'ko-je'ju-nos'to-me) surgical anastomosis of the pancreatic duct, or the divided end of the transected pancreas, with the jejunum.

pancreaticosplenic (pan'kre-at'i'ko-splen'ik) pertaining to the pancreas and spleen.

pancreatin (pan'kre-ah-tin) [USP] a substance obtained from the pancreas of the hog or the ox, which contains enzymes, chiefly amylase, protease, and lipase, and having the same action as do the enzymes of the pancreatic juice; used as a digestive aid in conditions of pancreatic insufficiency, and also to peptonize milk and other foods.

pancreatism (pan'kre-ah-tizm") activity of the pancreas.

pancreatitis (pan'kre-ah-ti'tis) acute or chronic inflammation of the pancreas, which may be asymptomatic or symptomatic, and which is due to autodigestion of a pancreatic tissue by its own enzymes. It is caused most often by alcoholism or biliary tract disease; less commonly it may be associated with hyperlipemia, hyperparathyroidism, abdominal trauma (accidental or operative injury), vasculitis, or uremia. **acute p.**, a form characterized by sudden onset of abdominal pain, nausea, and vomiting. **acute hemorrhagic p.**, a condition due to autolysis of pancreatic tissue caused by the escape of enzymes into its substance, resulting in hemorrhage into the parenchyma and surrounding tissues. Blood staining of the lateral abdominal wall (Grey Turner's sign) or periumbilical area (Cullen's sign) may result. **calcereous p.**, pancreatitis accompanied by the formation of calculi; pancreatic calcification is usually associated with exocrine insufficiency and diabetes mellitus. **centrilobar p.**, pancreatitis located around the branches of the pancreatic duct. **chronic p.**, a form marked usually by chronic abdominal pain and by progressive fibrosis and loss of exocrine (steatorrhea) and endocrine (diabetes mellitus) function; recurrent attacks of acute pancreatitis (*chronic relapsing p.*) are often superimposed. **chronic relapsing p.**, see *chronic p.* **interstitial p.**, pancreatitis in which there is overgrowth of the inter- and intra-acinar connective tissue and frequently a corresponding atrophy of the glandular tissue. **perilobar p.**, fibrosis of the pancreas

surrounding collections of atrophic acini. **purulent p.**, purulent inflammation of the pancreas.

pancreato- a combining form denoting relationship to the pancreas.

pancreatoduodenectomy (pan'kre-ah-to-du'o-dē-nek'to-me) excision of the head of the pancreas along with the encircling loop of the duodenum.

pancreatoduodenostomy (pan'kre-ah-to-du'o-dē-nos'to-me) pancreaticoduodenostomy.

pancreatoenterostomy (pan'kre-ah-to-en'ter-os'to-me) pancreaticoenterostomy.

pancreatogenic (pan'kre-ah-to-jen'ik) pancreaticogenous.

pancreatogenous (pan'kre-ah-toj'ē-nus) arising in or from the pancreas.

pancreatogram (pan'kre-at'o-gram) the x-ray film produced by pancreatography.

pancreatography (pan'kre-ah-tog'rah-fe) roentgenography of the pancreas performed during surgical exploration, a water-soluble contrast medium being injected into the pancreatic duct and the film being made while the abdomen is open. **endoscopic retrograde p.**, that in which the radiopaque medium is injected into the pancreatic duct at the ampulla of Vater via a cannula introduced through a fiberoptic endoscope.

pancreatoid (pan-kre'ah-toid) resembling the pancreas.

pancreatolipase (pan'kre-ah-to-lip'ās) pancreatic lipase.

pancreatolith (pan'kre-at'o-lith) [*pancreas* + Gr. *lithos* stone] a pancreatic calculus.

pancreatolithectomy (pan'kre-ah-to-lī-thek'to-me) [*pancreatolith* + Gr. *ektomē* excision] excision of a calculus from the pancreas.

pancreatolithiasis (pan'kre-ah-to-lī-thi'ah-sis) the presence of calculi in the ductal system or parenchyma of the pancreas.

pancreatolithotomy (pan'kre-ah-to-lī-thot'o-me) [*pancreatolith* + Gr. *tomē* a cutting] incision of the pancreas for the removal of a calculus.

pancreatolysis (pan'kre-ah-to-lī-sis) pancreolysis.

pancreatolytic (pan'kre-ah-to-lit'ik) pancreolytic.

pancreatotomy (pan-kre-at'o-me) pancreatotomy.

pancreatoncus (pan'kre-ah-ton'kus) [*pancreas* + Gr. *onkos* mass] a tumor of the pancreas.

pancreatopathy (pan'kre-ah-top'ah-the) [*pancreas* + Gr. *pathos* disease] any disease of the pancreas.

pancreatotomy (pan'kre-ah-tot'o-me) [*pancreas* + Gr. *tomē* a cutting] incision of the pancreas.

pancreatotropic (pan-kre'ah-to-trop'ik) [*pancreas* + Gr. *tropē* a turning] having an affinity for or an influence on the pancreas.

pancreatropic (pan'kre-ah-trop'ik) pancreatotropic.

pancrectomy (pan'kre-ek'to-me) pancreatotomy.

pancrelipase (pan'kre-li'pās) [USP] a standardized preparation of hog pancreas, containing enzymes, principally lipase, with amylase and protease, and having the same actions as those of the pancreatic juice; used as a digestive aid in conditions of pancreatic insufficiency.

pancreolithotomy (pan'kre-o-lī-thot'o-me) pancreatolithotomy.

pancreolysis (pan'kre-ol'ī-sis) [*pancreas* + Gr. *lysis* dissolution] destruction of pancreatic tissue by pancreatic enzymes.

pancreolytic (pan'kre-o-lit'ik) pertaining to or producing pancreolysis.

pancreopathy (pan'kre-op'ah-the) [*pancreas* + Gr. *pathos* disease] any disease of the pancreas.

pancreoprivic (pan'kre-o-priv'ik) lacking a pancreas.

pancreotherapy (pan'kre-o-ther'ah-pe) therapeutic use of pancreas tissue or of extracts of the pancreas containing digestive enzymes; pancreatic replacement therapy, used in pancreatic insufficiency with malabsorption.

pancreatropic (pan'kre-o-trop'ik) pancreatotropic.

pancreozymin (pan'kre-o-zi'min) a hormone of the duodenal mucosa which stimulates the external secretory activity of the pancreas, especially its production of amylase; identical with cholecystokinin (q.v.).

pancuronium bromide (pan'ku-ro-ne-um) chemical name: 1,1'-(2,3,5a,16β,17β)-3,17-bis(acetyloxy)androstane-2,16-diyl]-bis[1-methyl]piperidinium dibromide. A nondepolarizing skeletal muscle relaxant, C₃₅H₆₀Br₂N₂O₄, with curariform action; used as an adjunct to anesthesia, and may be used to facilitate mechanical ventilation, administered intravenously.

pancystitis (pan'sis-ti'tis) cystitis involving the entire thickness of the wall of the urinary bladder, as occurs in interstitial cystitis.

pancytopenia (pan'si-to-pe'ne-ah) [*pan-* + *-cyte* + Gr. *penia* poverty] deficiency of all cell elements of the blood; aplastic anemia. **congenital p.**, Fanconi's syndrome, def. 1. **Fanconi's p.**, Fanconi's syndrome, def. 1.

pandemic (pan-dem'ik) [*pan-* + Gr. *dēmos* people] 1. widely ep-

idemic; distributed throughout a region or continent, or globally.
2. a widespread epidemic disease.

pandemicity (pan/'dē-mis/'i-te) the state of being epidemic and widely spread.

Pander's islands, layer, nucleus (pan/'derz) [Heinrich Christian Pander, German anatomist, 1794–1865] see under *island* and *layer*, and see *nucleus subthalamicus*.

pandiculation (pan/'dik-u-la/'shun) [L. *pandiculari* to stretch one's self] the act of stretching and yawning.

Pándy's test (reaction) (pan/'dēz) [Kálmán Pándy, Hungarian neurologist, born 1868] see under *tests*.

panel (pan/'el) a list of names, a number of individuals participating in a specific discussion or activity, especially a list of names of the medical men who are willing to care for insured persons for a stipulated yearly fee under the system of medical insurance carried on by insurance groups under the supervision of the government in Great Britain, or the list of the insured persons assigned as clients to a physician under the British National Health Insurance Act. **personality p.** (obs.), a list of the aspects of a person's constitution with reference to his predisposition to particular types of diseases.

panelectroscope (pan/'e-lek/'tro-skōp) an instrument for examining by electrical illumination the various organs of the body, as the stomach, rectum, urethra, etc.

panencephalitis (pan/'en-sef/'ah-li/'tis) encephalitis, probably of viral origin, which produces intranuclear or intracytoplasmic inclusion bodies of type A (Cowdry's classification), which result in parenchymatous lesions affecting the gray and white matter of the brain simultaneously. **Pette-Döring p.**, a form of subacute encephalitis characterized by involvement of both the gray and white matter of the brain, and with a predilection for the basal ganglia. **subacute sclerosing p.**, a rare and devastating form of leukoencephalitis usually affecting children and adolescents. Insidious in onset, it characteristically produces progressive cerebral dysfunction over a course of several weeks or months and death within a year. Pathologically, in addition to the lesions of the white matter, there are demyelination and intranuclear inclusion bodies in nerve cells and oligodendroglia, suggesting a viral etiology. Called also *Dawson's encephalitis*, *subacute inclusion body encephalitis*, *subacute sclerosing leukoencephalopathy*, and *van Bogaert's encephalitis* or *sclerosing leukoencephalitis*.

panendography (pan/'en-dog/'rah-fe) the recording of events observed through a panendoscope.

panendoscope (pan-en/'do-skōp) a cystoscope that permits wide-angle viewing of the urinary bladder. **oral p.**, an illuminated tubular device that permits visual observation and audiovisual recording of the larynx and vocal cords during production of speech sounds.

panendoscopy (pan/'en-dos/'ko-pe) observation by means of a panendoscope.

panepizootic (pan-ep/'i-zo-ot/'ik) 1. attacking almost all the animals in a fairly large area; said of disease. 2. a widely diffused and rapidly spreading animal disease.

panesthesia (pan/'es-the/'ze-ah) [pan- + Gr. *aisthēsis* perception] the sum of the sensations experienced.

panesthetic (pan/'es-thet/'ik) relating to panesthesia.

Paneth's cells (pah/'nāts) [Josef Paneth, German physician, 1857–1890] see under *cell*.

pang (pang) a sudden, piercing pain. **breast p.**, angina pectoris. **brow p.**, 1. supraorbital neuralgia. 2. hemicrania (def. 1).

pangamate (pan/'gah-māt) any salt of pangamic acid.

pangen (pan/'jen) [pan- + Gr. *gennan* to produce] one of the hypothetical units of idioplasm.

pangeneses (pan-jen/'ē-sis) [pan- + *genesis*] the doctrine that in reproduction each cell of the parent body is represented by a particle; the hypothesis that all the units or cells of the body reside in the blood as gemmules, multiply by division, and throw off atoms which are transmitted to the offspring, accounting for the hereditary transmission of acquired mental habits and other phenomena of heredity; the theory implying that the whole organism, in the sense of every atom or unit, reproduces itself.

panglossia (pan-glos/'e-ah) [Gr. *panglōssia*] abnormal or pathologic garrulity.

Pangonia (pan-go/'ne-ah) a genus of flies, the zimbs of Ethiopia, which are exceedingly annoying to man and animals.

panhematopenia (pan-hem/'ah-to-pe/'ne-ah) [pan- + Gr. *haima* blood + *penia* poverty] pancytopenia. **primary splenic p.**, a form of hypersplenism of unknown etiology, marked by indiscriminate elimination of all circulating elements of the blood. Whether such an entity exists, as such, is moot, since the hypersplenism may be a manifestation of an underlying systemic disease.

Panheprin (pan-hep/'rin) trademark for a preparation of heparin sodium.

panhydrometer (pan/'hi-drom/'ē-ter) [pan- + *hydrometer*] an instrument for ascertaining the specific gravity of any liquid.

panhyperemia (pan/'hi-per-e/'me-ah) [pan- + *hyperemia*] general plethora.

panhypogonadism (pan-'hi-'po-go/'nad-izm) underdevelopment of all the genital tissues due to abnormally decreased functional activities of the gonads.

panhypopituitarism (pan-'hi-'po-pi-'tu/'tar-izm) generalized hypopituitarism due to absence or damage to the pituitary gland, which, in its complete form, leads to absence of gonadal function and insufficiency of thyroid and adrenal function. Dwarfism, regression of secondary sex characteristics and loss of libido, weight loss, fatigability, bradycardia, hypotension, depression, and many other manifestations may occur. When cachexia is a prominent feature, it is called *hypophyseal* or *pituitary cachexia*, and *Simmonds' disease*. **prepubertal p.**, pituitary dwarfism.

panhysterectomy (pan/'his-ter-ek/'to-me) [pan- + Gr. *hystera* uterus + *ektomē* excision] complete extirpation of the uterus and cervix; total hysterectomy.

panhystero-oophorectomy (pan-'his/'ter-o-o/'of-o-rek/'to-me) excision of the body of the uterus, cervix, and ovary.

panhysterosalpingectomy (pan-'his/'ter-o-sal/'pin-jek/'to-me) excision of the body of the uterus, cervix, and uterine tube.

panhysterosalpingo-oophorectomy (pan-'his/'ter-o-sal/'ping-go-o/'of-o-rek/'to-me) excision of the uterus, cervix, uterine tube, and ovary.

panic (pan/'ik) extreme and unreasoning fear and anxiety. **acute homosexual p.**, **homosexual p.**, an acute reaction due to unconscious conflicts involving homosexuality, marked by severe anxiety, excitement, great activity, sometimes accompanied by auditory hallucinations accusing the patient of homosexual practices or inclinations, and frequently assaultiveness. Called also *Kempf's disease*.

panimmunity (pan/'i-mu/'ni-te) [pan- + *immunity*] immunity to several infections caused by bacteria and viruses.

panis (pa/'nis) [L.] bread.

Panizza's plexus (pan-id/'zaz) [Bartolomeo Panizza, Professor of anatomy at Pavia, 1785–1867] see under *plexus*.

panleukopenia (pan/'lu-ko-pe/'ne-ah) a viral disease of cats, characterized by leukopenia and marked by inactivity, refusal of food, diarrhea, and vomiting. Called also *infectious feline agranulocytosis*, *feline* or *cat enteritis*, *cat distemper*, and *cat plague*.

panmeristic (pan/'mer-is/'tik) [pan- + Gr. *meros* part] pertaining to the protoplasm of ova, made up of independent units or pangens.

panmixia (pan-mik/'se-ah) [pan- + Gr. *mignynai* to mix] panmixis.

panmixis (pan-mik/'sis) [pan- + Gr. *mignynai* to mix] random mating.

Panmycin (pan-mi/'sin) trademark for preparations of tetracycline.

panmyeloid (pan-mi/'ē-loid) pertaining to all the elements of the bone marrow.

panmyelopathia (pan-'mi-'ē-lo-path/'e-ah) panmyelopathy.

panmyelopathy (pan-'mi-'ē-lo-path/'e-ah) [pan- + Gr. *myelos* marrow + *pathos* disease] a pathologic condition of all the elements of the bone marrow. **constitutional infantile p.**, Fanconi's syndrome, def. 1.

panmyelophthisis (pan-mi/'ē-lof/'thi-sis) [pan- + Gr. *myelos* marrow + *phthisis* wasting] 1. aplastic anemia. 2. (obs.) aleukia hemorrhagica.

panneuritis (pan-'nu-ri/'tis) [pan- + Gr. *neuron* nerve + *-itis*] (obs.) multiple or general neuritis. **p. epidem'ica**, beriberi.

panniculalgia (pah-nik/'u-lal/'je-ah) adiposalgia.

panniculectomy (pah-nik/'u-lek/'to-me) surgical excision of the abdominal apron of superficial fat in the obese.

panniculitis (pah-nik/'u-li/'tis) inflammation of the panniculus adiposus. **LE p.**, a form of lupus erythematosus in which non-tender firm nodules 1 to 4 cm. in diameter occur in the panniculus adiposus, usually beneath relatively normal-appearing skin. Infrequently, the lesions may ulcerate. Systemic involvement is common. See also *lupus erythematosus profundus*. **nodular non-suppurative p.**, **relapsing febrile nodular nonsuppurative p.**, a disease marked by fever and the formation of crops of tender nodules in the subcutaneous fatty tissues; called also *Weber-Christian p.*, *disease*, or *syndrome*. **subacute nodular migratory p.**, a variety of nodular vasculitis, closely resembling erythema induratum, occurring on the legs of women; it is distinguished principally by its "migration," i.e., the coalescence and clearing of the lesions and the appearance of new lesions nearby. **Weber-Christian p.**, relapsing febrile nodular non-suppurative p.

panniculus (pah-nik/'u-lus), pl. *panniculi* [L., dim. of *pannus* cloth] a layer of membrane. **p. adipo'sus** [NA], the subcutaneous fat: a layer of fat underlying the corium, or dermis. Called also *pannus*. **p. carno'sus**, a thin muscular layer within the superficial fascia of animals with a hairy coat; in man it is represented mainly by the platysma myoides.

pannus (pan/'us) [L. "a piece of cloth"] 1. superficial vasculariza-

tion of the cornea with infiltration of granulation tissue. 2. an inflammatory exudate overlying the lining layer of synovial cells on the inside of a joint, usually occurring in patients with rheumatoid arthritis or related articular rheumatism, and sometimes resulting in fibrous ankylosis of the joint. 3. panniculus adiposus. **allergic p.**, pannus of the cornea as a result of allergy. **p. cara'teus**, pinta. **p. carno'sus**, **p. cras'sus**, pannus of the cornea characterized by extremely dense opacity. **degenerative p.**, **p. degenerati'vus**, a connective-tissue growth between the epithelium of the cornea and Bowman's membrane. **glaucomatous p.**, degeneration and desquamation of corneal epithelium due to edema in advanced glaucoma. **inflammatory p.**, pannus which contains inflammatory cells and replaces Bowman's membrane. **phlyctenular p.**, pannus associated with phlyctenular keratitis, the vascularization running all the way around the periphery of the limbus and extending toward the center. **p. sic'cus**, pannus of the cornea associated with dryness of the cornea and conjunctiva. **p. ten'uis**, pannus of the cornea in which the opacity is very slight. **p. trachomato'sus**, pannus occurring secondarily to trachoma, the small fine branching vessels always appearing at the upper limbus and running down under the epithelium into the cornea.

panodic (pah-nod'ik) panthodic.

panophobia (pan'o-fo'be-ah) panphobia.

panophthalmia (pan'of-thal'me-ah) panophthalmitis.

panophthalmitis (pan'of-thal-mi'tis) [*pan-* + Gr. *ophthalmos* eye + *-itis*] inflammation of all the structures or tissues of the eye.

panoptic (pan-op'tik) [*pan-* + Gr. *optikos* of or for vision] rendering everything visible; said of a stain which differentiates all the tissues of a specimen. See *Giemsa's stain*, under *stain*.

panoptosis (pan'op-to'sis) [*pan-* + Gr. *ptōsis* falling] (*obs.*) general ptosis of the abdominal organs.

panosteitis (pan'os-te-i'tis) [*pan-* + Gr. *osteon* bone + *-itis*] inflammation of every part of a bone.

panostitis (pan'os-ti'tis) panosteitis.

panotitis (pan'o-ti'tis) [*pan-* + Gr. *ous* ear + *-itis*] an inflammation of all the parts or structures of the ear.

panphobia (pan-fo'be-ah) fear of everything; a vague morbid dread of some unknown evil.

panplegia (pan-ple'je-ah) pamplegia.

panproctoclectomy (pan-prok'to-ko-lek'to-me) excision of the entire rectum and colon, with creation of an ileal stoma for elimination of the feces.

Pansch's fissure (pansh'ez) [Adolf Pansch, German anatomist, 1841-1887] see under *fissure*.

pansclerosis (pan'skle-ro'sis) [*pan-* + Gr. *sklērosis* hardening] complete induration of a part or organ.

panseptum (pan-sep'tum) the entire nasal septum, including bony and cartilaginous parts.

pansinuitis (pan'si-nu-i'tis) pansinusitis.

pansinusectomy (pan'si-nus-ek'to-me) excision of the diseased membrane of all of the paranasal sinuses on one side.

pansinusitis (pan'si-nu-si'tis) [*pan-* + *sinus* + *-itis*] inflammation involving all of the paranasal sinuses on one side.

panspermatism (pan-sper'mah-tizm) panspermia.

panspermia (pan-sper'me-ah) [*pan-* + Gr. *sperma* seed + *-ia*] 1. the doctrine that disease germs and bacteria are everywhere present. 2. biogenesis.

pansphygmograph (pan-sfig'mo-graf) [*pan-* + Gr. *sphygmōs* pulse + *graphein* to record] a device for recording cardiac, pulse, and chest movements at the same time.

Panstrongylus (pan-stron'ji-lus) a genus of cone-nosed bugs of the family Reduviidae, species of which are vectors of *Trypanosoma*. **P. genicula'tus**, a vector of *Trypanosoma cruzi* in Panama and Brazil. **P. infes'tans**, *Triatoma infestans*. **P. megis'tus**, an important vector of *Trypanosoma cruzi* in Brazil. It frequently bites the face and so is called barbiero by the natives. Formerly called *Triatoma megista*.

Panstrongylus megistus (female).

pant- see *panto-*.

pantachromatic (pan'tah-kro-mat'ik) [*pant-* + *achromatic*] entirely achromatic.

pantalga (pan-tal'je-ah) [*pant-* + *-algis*] pain over the whole body.

pantamorphia (pan'tah-mor'fe-ah) [*pant-* + Gr. *amorphia* shapelessness] complete or general deformity.

pantamorphic (pan'tah-mor'fik) formless.

pantanencephaly (pan'tan-en-sef'ah-le) [*pant-* + *an* neg. + Gr. *enkephalos* brain] complete absence of the brain in a fetus.

pantankyloblepharon (pan-tang'ki-lo-blef'ah-ron) [*pant-* + Gr. *ankylē* noose + *blepharon* lid] general adhesion of the eyelids to the eyeball and to each other.

pantatrophia (pan'tah-tro'fe-ah) [*pant-* + Gr. *atrophia* atrophy] general or complete malnutrition.

pantatroph (pan-tat'ro-fe) pantatrophia.

Pantheric (pan-ter'ik) trademark for a preparation of pancreatin.

pantetheine (pan-tē-the'in) a naturally occurring amide of pantothenic acid and β-mercaptoethanolamine; it is an intermediate in the biosynthesis of CoA, a growth factor for *Lactobacillus bulgaricus*, and a cofactor in certain enzyme complexes (e.g., in fatty acid or polypeptide synthesis).

panthenol (pan'thē-nōl) chemical name: 2,4-dihydroxy-N-(3-hydroxypropyl)-3,3-dimethylbutanamide. The alcohol derivative of pantothenic acid, C₈H₁₉NO₄, which is converted in the body to pantothenic acid, a member of the B-complex vitamins. Called also *pantothenyl alcohol* and *pantothenol*. The term is sometimes used to refer to the D⁺ form of panthenol; see *dexpanthenol*.

pantherapist (pan-ther'ah-pist) [*pan-* + Gr. *therapeia* treatment] a practitioner who is ready to draw his information from any and every source.

panthodic (pan-thod'ik) [*pan-* + Gr. *hodos* way] radiating in every direction; said of nerve impulses.

Pantholin (pan'tho-lin) trademark for a preparation of calcium pantothenate.

panting (pant'ing) swift and shallow breathing with a fast respiratory frequency and small tidal volume.

panto-, pant- [Gr. *pas*, *pantos* all] combining form meaning all, the whole.

pantochromism (pan'to-kro'mizm) [*panto-* + Gr. *chrōma* color] the phenomenon of existing in two or more differently colored forms, as a salt.

pantogamy (pan-tog'ah-me) [*panto-* + Gr. *gamos* marriage] promiscuous sexual intercourse.

pantograph (pan'to-graf) [*panto-* + Gr. *graphein* to write] an instrument for copying a plane figure to any desired scale.

pantomographic (pan-to'mo-graf'ik) pertaining to pantomography.

pantomography (pan'to-mog'rah-fe) a method of body-section roentgenography for visualization of curved surfaces at any depth.

pantomorphia (pan'to-mor'fe-ah) [*panto-* + Gr. *morphē* form + *-ia*] 1. general or perfect symmetry. 2. ability to assume various shapes, as an ameba.

pantomorphic (pan'to-mor'fik) able to assume any shape.

Pantopaque (pan-to-pāk') trademark for a preparation of iophendylate.

pantophobia (pan'to-fo'be-ah) [*panto-* + *phobia*] panphobia.

pantophobic (pan'to-fo'bik) characterized by pantophobia.

pantoscopic (pan'to-skop'ik) [*panto-* + Gr. *skopein* to examine] adapted to view both near and distant objects; a term applied to bifocal lenses.

pantothen (pan'to-then) pantothenic acid.

pantothenate (pan-to'then-āt) a salt of pantothenic acid.

pantothenol (pan'to-the'nōl) 1. panthenol. 2. dexpanthenol.

pantotropic (pan'to-trop'ik) pantropic.

pantropic (pan-trop'ik) [*pan-* + Gr. *tropea* a turning] having an affinity for many tissues; capable of attacking derivatives of any of the three embryonic layers.

panturbinat (pan-ter'bi-nāt) the entire structure of a nasal concha, including bone and soft tissue.

Panum's casein (pah'nōōmz) [Peter Ludvig Panum, Danish physiologist, 1820-1885] serum globulin.

panus (pa'nus) [L. "swelling"] a lymphatic gland inflamed but not suppurating.

panuveitis (pan'u-ve-i'tis) inflammation of the entire uveal tract.

Panwarfin (pan-war'fin) trademark for a preparation of warfarin sodium.

panzerherz (pan'zer-herz) [Ger.] armored heart; see under *heart*.

panzootic (pan'zo-ot'ik) [*pan-* + Gr. *zōon* animal] occurring pandemically among animals.

pap (pap) any soft food, as bread soaked in milk.

Pap test (pap) Papanicolaou's test; see under *tests*.

papain (pah-pa'in, pah-pi'in) a crystalline proteolytic enzyme from the latex of the papaw, *Carica papaya* L. (Caricaceae), which catalyzes the hydrolysis of proteins and polypeptides to amino acids. It has a wide substrate specificity and is active in a broad

pH range. Papain is the main constituent of meat tenderizers and is used in the brewing industry to chillproof beer. In medicine, it is used as a protein digestant and as a topical application for enzymatic débridement and promotion of normal healing of surface lesions.

Papanicolaou's stain, test (pap'ah-nik'o-la'ōōz) (George Nicolas Papanicolaou, Greek physician, anatomist, and cytologist in the United States, 1883–1962) see *Table of Stains*, and under *tests*.

Papaver (pah-pav'er) a genus of herbs of the family Papaveraceae, or poppies. *P. somniferum*, a pink to purplish-pink and purple species, and its variety *album*, a silvery white species, are the source of opium. The unripe capsules when scarified yield a white latex which when dried is known as crude opium. It contains the opium alkaloids (morphine, codeine, etc.), which are used as narcotics and analgesics. The poppy seeds, devoid of the alkaloids, are used as a condiment on baked products. *P. orientalis* is the source of isothebaine.

papaverine hydrochloride (pah-pav'er-in) [USP] chemical name: 1-[(3,4-dimethoxyphenyl)methyl]-6,7-dimethoxyisoquinoline hydrochloride. The hydrochloride salt of an opium alkaloid, $C_{20}H_{21}NO_4 \cdot HCl$, which also may be synthesized, occurring as white crystals or as a white, crystalline powder; used as a smooth muscle relaxant, especially in the treatment of cerebral and peripheral ischemia associated with arterial spasm and myocardial ischemia complicated by arrhythmias, administered orally and intramuscularly.

papaw (pah-paw') 1. a large herbaceous plant, the papaya, *Carica papaya* L. (Caricaceae) of Southern United States; also its fruit. The fruit contains papain, a proteolytic enzyme. 2. paw-paw; the tree *Asimina triloba* (L.) Duval (Annonaceae), which has edible fruit, although ingestion may cause severe skin irritation in sensitive persons.

papaya (pah-pa'yah) papaw, def. 1.

papayotin (pap'a-yo'tin) papain.

paper (pa'per) a substance manufactured in thin sheets, prepared from wood, rags, or other fibrous substance which has first been reduced to a pulp. **alkalin p.**, filter paper dipped in an alcoholic solution of alkalin; alkalis turn it blue, acids red. **amboceptor p.**, filter paper saturated with amboceptor serum; used in the Noguchi test for syphilis. **aniline acetate p.**, filter paper dipped into a mixture of aniline, water, and glacial acetic acid, and then dried. **antigen p.**, filter paper saturated with antigen solution; used in the Noguchi test for syphilis. **articulating p.**, carbon paper to be placed between the upper and lower teeth and bitten on, to record the contact relationships of the teeth. **asthma p.**, niter p. **azolitmin p.**, filter paper saturated with a solution of azolitmin; acids turn it from purple to bright red, alkalis turn it blue. **bibulous p.**, a paper which absorbs water readily. **biuret p.**, filter paper previously dipped in Gies' biuret reagent, dried, and cut into strips. **blue litmus p.**, see *litmus p.* **Congo red p.**, wet filter paper with a 0.2 per cent solution of Congo red in water, dry, and cut in strips. **filter p.**, a porous, unsized paper used as a filter. **lacmoid p.**, blotting paper impregnated with lacmoid; used in testing for alkalinity or acidity. **litmus p.**, bibulous paper impregnated with a solution of litmus, dried, and cut into strips. If slightly alkaline the paper is blue, and is used as a test for acids, which turn it red; if slightly acid it is red and alkalis turn it blue. **niter p.**, paper impregnated with potassium nitrate, ignited and used as a moxa or by inhalation in asthma; called also *saltpeter p.* **occluding p.**, articulating p. **potassium nitrate p.**, niter p. **red litmus p.**, see *litmus p.* **saltpeter p.**, niter p. **test p.**, paper that is impregnated with litmus or other indicator. **turmeric p.**, paper dyed yellow with turmeric; alkalis turn it brown.

papescant (pah-pes'ent) having the consistence of pap.

papilla (pah-pil'ah), pl. *papillae* [L.] a small nipple-shaped projection or elevation; [NA] a general term for such a structure. **acoustic p.**, organum spirale. **arcuate papillae of tongue**, papillae filiformes. **Bergmeister's p.**, a small mass of neuroglial cells in the center of the embryonic optic disk, surrounding the bulb of the hyaloid artery. Also, a congenital anomaly consisting of a glial veil attached to the anterior aspect of the optic disk, resulting from glial proliferation around the remnants of the posterior part of the hyaloid vessel system. **bile p.**, p. duodeni major. **calciform papillae**, **capitate papillae**, papillae vallatae. **circumvallate papillae**, papillae vallatae. **clavate papillae**, papillae fungiformes. **papillae con'icae** [NA], **conical papillae**, sparsely scattered large elevations on the tongue surface, often considered as a modified type of filiform papillae. **conical papillae of tongue**, of Soemmering, papillae filiformes. **conoid papillae of tongue**, papillae conicae. **papillae co'rii** [NA], **papillae of corium**, conical extensions of the collagen fibers, the capillary blood vessels, and sometimes the nerves of the corium into corresponding spaces among the downward- or inward-projecting rete ridges on the under surface of the epidermis. On the forehead and ear these are lacking; on the face, neck, and pubes the relations are reversed and "rete pegs" extend inward or downward into spaces among a network of dermal ridges. Called also *dermal papillae* and *skin papillae*. **corolliform papil-**

lae of tongue, papillae filiformes. **dental p.**, **dentinal p.**, p. dentis. **p. den'tis** [NA], the small mass of condensed mesenchyme capped by each of the enamel organs. **dermal papillae**, papillae corii. **duodenal p.**, **major**, p. duodeni major. **duodenal p.**, **minor**, p. duodeni minor. **p. duode'ni ma'jor** [NA], major duodenal papilla: a small elevation at the site of the opening of the conjoined common bile duct and pancreatic duct into the lumen of the duodenum. Called also p. *duodeni* [Santorini]. See also p. *duodeni minor*. **p. duode'ni mi'nor** [NA], minor duodenal papilla: a small elevation at the site of the opening of the accessory pancreatic duct into the lumen of the duodenum. See also p. *duodeni major*. **p. duode'ni** [Santorini], p. duodeni major. **filiform papillae**, **papillae filifor'mes** [NA], threadlike elevations that cover most of the tongue surface. **papillae folia'tae** [NA], **foliate papillae**, parallel mucosal folds on the margins of the tongue at the junction of its body and root. **fungiform papillae**, **papillae fungifor'mes** [NA], knoblike projections on the tongue, scattered singly among the filiform papillae. **gingival p.**, septal gingiva; the triangular pad of gingiva filling the space between the proximal surfaces of two adjacent teeth; called also *interdental p.* **gustatory papillae**, papillae linguales. **hair p.**, p. pili. **p. incisi'va** [NA], **incisive p.**, a rounded projection at the anterior end of the raphe of the palate. **interdental p.**, gingival p. **interproximal p.**, the cone-shaped projection of the gingiva filling the interdental spaces between adjacent teeth up to the contact areas as viewed from the labial, buccal, or lingual aspect. **lacrimal p.**, p. *lacrima'lis* [NA], a papilla in the conjunctiva near the medial angle of the eye. **papillae lacrima'les**, see p. *lacrimalis*. **lenticular papillae**, **papillae lenticula'res**, a series of papillae of the tongue resembling, but less elevated than, the fungiform papillae. **lingual papillae**, **papillae lingua'les** [NA], the filiform, fungiform, vallate, foliate, and conical papillae of the tongue. **major duodenal p.**, p. duodeni major. **p. mam'mae** [NA], **mammary p.**, nipple of the breast: the pigmented projection on the anterior surface of the mammary gland, surrounded by the areola. The lactiferous ducts open onto it. **medial papillae of tongue**, papillae fungiformes. **minor duodenal p.**, p. duodeni minor. **p. ner'vi op'tici**, discus nervi optici. **obtuse papillae of tongue**, papillae fungiformes. **optic p.**, discus nervi optici. **palatine p.**, p. incisiva. **parotid p.**, p. *paroti'dea* [NA], the small papilla marking the orifice of the parotid duct in the mucous membrane of the cheek. **p. pi'li** [NA], hair papilla: the fibrovascular mesodermal papilla enclosed within the hair bulb. **renal papillae**, **papillae rena'les** [NA], the blunted apices of the renal pyramids, which project into the renal sinus. **p. of Santorini**, p. duodeni major. **simple papillae of tongue**, papillae filiformes. **skin papillae**, papillae corii. **small papillae of tongue**, papillae filiformes. **p. spira'lis**, organum spirale. **sublingual p.**, caruncula sublingualis. **tactile papillae**, corpuscula tactus. **urethral p.**, a slight elevation in the vestibule of the vagina on which is situated the external orifice of the urethra. **papillae valla'tae** [NA], **vallate papillae**, the largest papillae of the tongue, 8 to 12 in number, arranged in the form of a V in front of the sulcus terminalis of the tongue. **p. of Vater**, p. duodeni major. **villous papillae of tongue**, papillae filiformes.

papillae (pah-pil'e) [L.] plural of *papilla*.

papillary (pap'i-ler'e) pertaining to or resembling a papilla, or nipple.

papillate (pap'i-lāt) marked by nipple-like elevations.

papillectomy (pap'i-lek'to-me) [*papilla* + Gr. *ektomē* excision] excision of a papilla, especially removal of one or more engorged papillae from a kidney for the cure of hematuria.

papilledema (pap'il-ē-de'mah) choked disk; edema of the optic disk (papilla), most commonly due to increased intracranial pressure, malignant hypertension, or thrombosis of the central retinal vein.

papilliferous (pap'i-lif'er-us) [*papilla* + L. *ferre* to bear] bearing papillae.

papilliform (pah-pil'i-form) [*papilla* + L. *forma* shape] shaped like a papilla.

papillitis (pap'i-li'tis) [*papilla* + *-itis*] inflammation of the optic papilla (disk); see *optic neuritis*, under *neuritis*. **necrotizing p.**, **necrotizing renal p.**, renal papillary necrosis.

papilloadenocystoma (pah-pil'o-ad'ē-no-sis-to'mah) papillary cystadenoma.

papillocarcinoma (pah-pil'o-kar'si-no'mah) papillary carcinoma.

papilloma (pap'i-lo'mah) [*papilla* + *-oma*] a branching or lobulated benign tumor derived from epithelium. **p. acumina'tum** (obs.), condyloma acuminatum. **basal cell p.**, seborrheic keratosis. **cockscorn p.**, papilloma of the uterine cervix that occurs during pregnancy and regresses following delivery; it is a small, red lesion that projects above the surrounding mucosa and resembles a cockscorn. **cutaneous p.**, see under *tag*. **fibroepithelial p.**, a papilloma containing extensive fibrous tissue; fibropapilloma. **hirsutoid p's of penis**, pearly penile

papules. **Hopmann's p.**, Hopmann's polyp. **intracanalicular p.**, a warty, nonmalignant growth within the substance of certain glands, especially of the breast. **intracystic p.**, a papilloma formed within a cystic adenoma. **rabbit p.**, a viral disease of rabbits marked by the formation of horny warts. These papillomas were the first mammalian tumors shown to be induced by a virus (by Shope in 1933) and the first to be transmitted by purified viral DNA. Called also *Shope p.* **rabbit oral p.**, a viral disease of wild rabbits, characterized by the appearance of nodules on the lower surface of the tongue. **Shope p.**, rabbit p. **villous p.**, a papilloma in which the papillary processes are slender and elongated, occurring usually in the urinary bladder or mammary gland, or as an outgrowth from the choroid plexus in a lateral ventricle of the brain.

papillomatosis (pap/'i-lo/'mah-to/'sis) the development of multiple papillomas. **confluent and reticulated p.**, a genetically determined, profuse papular eruption often occurring in the midline of the trunk and the elbow flexures, usually affecting girls at puberty or soon after. Initially, the lesions are discrete, but later become partially confluent warty papules 3 to 5 mm. in diameter; once established, the condition may remain unchanged for years. Called also *Gougerot-Carteaud syndrome*.

papillomatous (pap/'i-lo/'mah-tus) of the nature of a papilloma.

papillomavirus (pap/'i-lo/'mah-vi/'rus) any of a subgroup of the papovaviruses causing papillomata in humans and in rabbits, cows, dogs, pigs, and various other animals. Cf. *polyomavirus*. **malignant p. of Degos**, malignant atrophic papulosis.

papilloretinitis (pah-pil/'o-ret/'i-ni/'tis) inflammation of the optic papilla extending to the retina.

papilosphincterotomy (pap/'il-lo-sfing/'ter-ot/'o-me) surgical division of the sphincter of the major duodenal papilla (Oddi's sphincter).

papillotome (pap/'i-lo-tōm/') a cutting instrument for incising the papilla of Vater.

papillotomy (pap/'i-lot/'o-me) incision of a papilla, as of a duodenal papilla.

Papin's digester (pah-paz/') [Denis Papin, French physicist, 1647-1714] an apparatus for subjecting substances to the action of water at a heat greater than the boiling point.

papoid (pap/'oid) a commercial preparation of papain.

papovavirus (pap/'o-vah-vi/'rus) [from papilloma, polyoma, and vacuolating agent + virus] any of a group of relatively small, morphologically similar, ether-resistant DNA viruses, many of which are oncogenic or potentially oncogenic; the group includes the papillomaviruses and polyomaviruses.

Pappenheim's stain (pahp/'en-himz) [Artur Pappenheim, German physician, 1870-1916] see *Table of Stains*.

papose (pap/'pōs) having a downy surface.

pappus (pap/'pus) [L.; Gr. *pappos*] 1. (obs.) the first downy growth of the beard. 2. the lanugo.

paprika (pap-re/'kah) the fruit of *Capsicum annuum* and a condiment prepared from it; it is rich in vitamin C.

papular (pap/'u-lar) [L. *papularis*] consisting of, characterized by, or pertaining to a papule.

papulation (pap/'u-la/'shun) the production of papules.

papule (pap/'ul) [L. *papula*] a small circumscribed, superficial, solid elevation of the skin. **dry p.**, the papule of chancre.

moist p., **mucous p.**, **condyloma acuminatum**. **pearly penile p's**, numerous pearly white papules 1 to 2 mm. in diameter on the coronal edge of the glans penis; called also *hirsutoid papillomas of penis* and *papillomatosis coronae penis*. **prurigo p.**, the characteristic lesion of prurigo, a dome-shaped papule with a small vesicle on top; the vesicle is usually removed immediately by scratching so that a crusted or lichenified papule is most often seen. **split p's**, fissured papular syphilides sometimes seen at the corners of the mouth.

papuloerythematous (pap/'u-lo-er/'ē-them/'ah-tus) marked by papules on an erythematous surface.

papuloid (pap/'u-loid) resembling a papule; papular.

papulopustular (pap/'u-lo-pus/'tu-lar) characterized by the presence of papules and pustules.

papulosis (pap-'u-lo/'sis) a state marked by the presence of multiple papules. **lymphomatoid p.**, an eruption of hemorrhagic papules on the skin, the lesions constantly involuting as new ones are formed. Histologically, there are clusters of large mononuclear cells in the mid and upper dermis. **malignant p.**, **malignant atrophic p.**, a progressive, often fatal, scarring, papular, atrophic, endovascularitis affecting the skin, gastrointestinal tract, and rarely the brain, eye, or kidney; usually occurring in young males, it is characterized clinically by the formation of umbilicated cutaneous papules leaving porcelain-colored depressed scars, mostly on the trunk. Called also *Degos' syndrome or disease*.

papulosquamous (pap/'u-lo-skwa/'mus) both papular and scaly; used to denote a group of dermatoses so characterized, including psoriasis, pityriasis rosea, lichen planus, seborrheic dermatitis, and parapsoriasis.

papulovesicular (pap/'u-lo-ve-sik/'u-lar) characterized by the presence of papules and vesicles.

papyraceous (pap/'i-ra/'shus) [L. *papyraceus*] like paper; chartaceous.

Paquelin's cautery (pah/'kē-lanz/') [Claude André Paquelin, French physician, 1836-1905] see under *cautery*.

par (par) [L.] pair.

para (par/'ah) [L. *parere* to bring forth, to bear] a woman who has produced viable young regardless of whether the child was living at birth. Used with Roman numerals to designate the number of pregnancies that have resulted in the birth of viable offspring, as *para 0* (none—nullipara), *para I* (one—primipara), *para II* (two—secundipara), *para III* (three—tripara), *para IV* (four—quadrupara), etc. The number is not indicative of the number of offspring produced in event of a multiple birth. Cf. *gravidia*.

para- [Gr. *para* beyond] a prefix meaning beside, beyond, accessory to, apart from, against, etc. In chemistry, the prefix indicates the substitution in a derivative of the benzene ring of two atoms linked to opposite carbon atoms in the ring. The abbreviation is *p-*.

para-actinomycosis (par/'ah-ak/'ti-no-mi-'ko/'sis) pseudoactinomycosis.

para-agglutinin (par/'ah-ah-gloo/'ti-nin) a partial agglutinin.

para-albuminemia (par/'ah-al-bu/'mī-ne/'me-ah) bisalbuminemia.

para-aminobenzenesulfonamide sulfanilamide.

para-aminobenzoate (par/'ah-am/'i-no-ben/'zo-āt) a salt of para-aminobenzoic acid.

para-aminohippurate (par/'ah-am/'i-no-hip/'u-rāt) a salt of para-aminohippuric acid.

para-analgesia (par/'ah-an/'al-je/'ze-ah) analgesia of the lower part of the body, including the lower limbs.

para-anesthesia (par/'ah-an/'es-the/'ze-ah) anesthesia of the lower part of the body and of the legs.

para-appendicitis (par/'ah-ah-pen/'dī-si/'tis) inflammation of tissues adjacent to the vermiform appendix.

parabion (par-ab/'e-on) parabiont.

parabiont (par-ab/'e-ont) [*para-* + Gr. *bioun* to live] one of two or more organisms living in a condition of parabiosis.

parabiosis (par/'ah-bi-'o-'sis) [*para-* + Gr. *biōsis* living] 1. the union of two individuals, as of joined twins, or of experimental animals by surgical operation. 2. temporary suppression of conductivity and excitability in a nerve. **dialytic p.**, the circulation of the blood of two individuals through a dialyzer, separated by a membrane which permits the removal of harmful material from the recipient's blood and the contribution of essential factors from the donor's blood. **vascular p.**, the crossing of the circulation between two individuals by anastomosis of blood vessels.

parabiotic (par/'ah-bi-'ot/'ik) pertaining to or characterized by parabiosis.

parablast (par/'ah-blast) [*para-* + Gr. *blastos* germ] that part of the mesoblast from which the blood vessels, lymphatics, etc., are developed.

parablasiastic (par/'ah-blas/'tik) pertaining to the parablast.

parablepsia (par-ah-blep/'se-ah) [*para-* + Gr. *blepsis* vision + *-ia*] false or perverted vision.

parabolus (pah-rab/'o-lus), pl. *parab'oli* [Gr. *parabolos* venture-some] in medieval medicine, an agent of the church who sought out the indigent sick for care and treatment.

parabulia (par/'ah-bu/'le-ah) [*para-* + Gr. *boulē* will + *-ia*] perversion of the will, as when an individual intends to perform a particular action but halts and substitutes either an opposite action or an unrelated alternative.

paracarbinoxamine (par/'ah-kar/'bin-ok/'sah-min) carbinoxamine.

paracardiac (par/'ah-kar/'de-ak) beside the heart.

paracarmine (par/'ah-kar/'min) a staining medium consisting of carminic acid, calcium chloride, and alcohol.

paracasein (par/'ah-ka/'se-in) the chemical product of the action of rennin on casein; see *casein*.

paracele (par/'ah-sēl) paraceole.

paracellulose (par/'ah-sel/'u-lōs) a kind of cellulose found in the pith of plants.

paracelsian (par/'ah-sel/'se-an) pertaining to or named for Paracelsus.

Paracelsus (par-ah-sel/'sus) [Philippus Aureolus Theophrastus Bombastus von Hohenheim] (1493-1541) a famous Swiss physician and alchemist; a controversial figure whose alchemical researches led to the introduction of such substances as lead, sulfur, iron, and arsenic into pharmaceutical chemistry. Although he was far ahead of his time in many of his observations (e.g., on metabolic and on occupational diseases), much of his thinking was made obscure by his mystic religiosity.

paracenesesthesia (par/'ah-se/'nes-the/'ze-ah) [*para-* + *cenesthesia*] any abnormality of the general sense of well being. Cf. *cenesthesiopathy*.

paracentesis (par'ah-sen-te'sis) [*para-* + Gr. *kentēsis* puncture] surgical puncture of a cavity for the aspiration of fluid. **abdominal p.**, **p. abdom'inis**, paracentesis of the abdominal cavity. **aqueous p.**, puncture of the cornea, as in certain operations on the cornea; called also *keratocentesis* and *keratonyxis*. **p. bul'bi**, puncture of the eyeball. **p. cap'itis**, puncture of the cranium for the removal of effusion in hydrocephalus. **p. cor'dis**, puncture of the heart. **p. oc'uli**, **p. bulbi**. **p. pericar'dii**, puncture of the pericardial sac. **p. pulmo'nis**, puncture of the lung. **p. thora'cis**, thoracentesis. **p. tu'ni-cae vagina'lis**, puncture of the tunica vaginalis. **p. tym'pani**, incision of the tympanic membrane for drainage or irrigation. **p. vesi'cae**, puncture of the bladder wall.

paracetic (par'ah-sen-tet'ik) pertaining to or accomplished by paracentesis.

paracentral (par'ah-sen'tral) near a center.

paracephalus (par'ah-sef'ah-lus) [*para-* + Gr. *kephalē* head] a fetus with a rudimentary or misshapen head, imperfect sense organs, and defective trunk or limbs.

paracerebellar (par'ah-ser'ē-bel'ar) pertaining to the lateral part of the cerebellum.

paracetaldehyde (par-as'et-al'de-hid) paraldehyde.

paracetamol (par-as'et-am'ol) acetaminophen.

parachloralose (par'ah-klo'ral-ös) a substance, $C_6H_{12}Cl_3O_8$, in iridescent plates, formed by a combination of dextrose and chloral.

parachloramine (par'ah-klör'ah-men) meclizine.

parachlorophenol (par'ah-klo'ro-fe'no) [USP] chemical name: 4-chlorophenol. An antibacterial, C_6H_4ClO , occurring as white to pink crystals, effective against most gram-negative organisms; used as a topical anti-infective. **camphorated p.** [USP], a preparation of 33 to 37 per cent parachlorophenol and 63 to 67 per cent camphor; used as a dental anti-infective, applied topically to the root canals and the periapical region.

paracholera (par'ah-kol'er-ah) a disease resembling Asiatic cholera, but caused by an organism other than the *Vibrio cholerae*.

paracholesterin (par'ah-ko-les'ter-in) a form of sterol occurring in vegetable tissue, probably related to sitosterol or phytosterol.

paracholia (par'ah-ko'le-ah) [*para-* + Gr. *cholē* bile + *-ia*] (obs.) disordered bile secretion.

parachordal (par'ah-kor'dal) [*para-* + Gr. *chordē* cord] situated beside the notochord; see *parachordal cartilages*, under *cartilage*.

Parachordodes (par'ah-kor-do'dēz) a genus of Gordiacea. A few cases of infection with this worm have been reported. *P. pustilo'sus*, from Italy. *P. tolosa'nus*, from France and from Italy. *P. viola'ceus*, from Italy, one specimen taken from the throat.

parachromatin (par'ah-kro'mah-tin) a chromatophil substance contained in the finer part of the nuclear substance, as in the nucleoplasm of the spindle in karyokinesis.

parachromatism (par'ah-kro'mah-tizm) [*para-* + Gr. *chrōma* color] color blindness; incorrect perception of colors.

parachromatopsia (par'ah-kro'mah-top'se-ah) [*para-* + Gr. *chrōma* color + *opsis* vision + *-ia*] color blindness.

paracinesia (par'ah-si-ne'se-ah) parakinesia.

paracinesis (par'ah-si-ne'sis) parakinesis.

paraclinical (par'ah-klin'i-k'l) pertaining to abnormalities (e.g., morphological or biochemical) underlying clinical manifestations (e.g., chest pain or fever).

paracnemis, **paracnemidion** (par'ak-ne'mis; par'ak-ne-mi-d'e-on) [*para-* + Gr. *knēmē* shin] the fibula.

Paracoccidioides brasiliensis (par'ah-kok-sid'e-o'i'dēz, brah-sil'e-en'sis) an imperfect fungus of the family Moniliaceae, order Moniliales, which is the etiologic agent of paracoccidioidomycosis. The organisms proliferate multiple budding yeast cells in the tissues, and produce white aerial mycelia and single or double conidia in media at 25° C. or in soil. Called also *Blastomyces brasiliensis*.

paracoccidioidomycosis (par'ah-kok-sid'e-o'i'do-mi-ko'sis) an often fatal infection caused by *Paracoccidioides brasiliensis*. The primary infection begins in the lungs and spreads to the mucocutaneous areas, particularly the buccal mucosa, and may extend to the adjacent skin, tonsils, gastrointestinal lymphatics, liver, and spleen. Called also *Almeida's* or *Lutz-Splendore-Almeida disease*, *Brazilian* or *South American blastomycosis*, and *paracoccidioid granuloma*.

paracele (par'ah-sēl) [*para-* + Gr. *kōilos* hollow] (obs.) a lateral ventricle of the brain.

paracolitis (par'ah-ko-li'tis) inflammation of the outer coat of the colon.

Paracolobactrum (par'ah-ko'lo-bak'trum) a name once proposed for a genus of microorganisms of the tribe Escherichieae, family Enterobacteriaceae, order Eubacteriales, made up of short rods, characterized by a delayed (3 to 14 days) fermentation of lactose, and which are found in the intestinal tracts of animals, including man, and in surface waters, soil, and grains.

paracolpitis (par'ah-kol-pi'tis) [*para-* + Gr. *kolpos* vagina + *-itis*] inflammation of the tissues around the vagina.

paracolpium (par'ah-kol'pe-um) [*para-* + Gr. *kolpos* vagina] the connective and other tissues that surround the vagina.

paracone (par'ah-kōn) [*para-* + Gr. *kōnos* cone] the mesiobuccal cusp of any upper molar.

paraconid (par'ah-ko'nid) a lingual cusp of a lower molar in lower mammals.

paracousis (par'ah-koo'sis) paracusis.

paracoxalgia (par'ah-kok-sal'je-ah) a condition marked by pain simulating that of coxitis.

paracresol (par'ah-kre'sol) 1. one of the three isomeric forms or recognized varieties of cresol; see *cresol*. 2. a patented soluble and nearly odorless preparation of cresol: disinfectant.

paracrine (par'ah-krin) denoting the influence of the secretion of one kind of endocrine cell on that of another kind which is not the normal target cell.

paracrystals (par'ah-kris'tals) imperfect crystals, such as the "crystals" of tobacco mosaic virus which have only two dimensional symmetry instead of three dimensional.

paracusia (par'ah-ku'se-ah) paracusis. **p. a'cris**, intense and incessant acuity of hearing. **p. duplica'ta**, diplacusis. **p. lo'ci**, inability to locate correctly the origin of sounds. **p. willisia'na**, paracusis of Willis.

paracusis (par'ah-ku'sis) any perversion of the sense of hearing. **p. of Willis**, ability to hear best in a loud din (Thomas Willis, 1672).

paracyesis (par'ah-si-e'sis) [*para-* + Gr. *kyēsis* pregnancy] (obs.) ectopic pregnancy.

paracystic (par'ah-sis'tik) [*para-* + Gr. *kystis* bladder] situated near the bladder.

paracystitis (par'ah-sis-ti'tis) [*para-* + Gr. *kystis* bladder + *-itis*] inflammation of the tissues around the bladder.

paracystium (par'ah-sis'te-um) [*para-* + Gr. *kystis* bladder] the connective and other tissues around the bladder.

paracytic (par'ah-sit'ik) [*para-* + *-cyte*] denoting cell elements present in the blood or other part of the organism, but enthetic or not normal to it.

paradental (par'ah-den'tal) 1. having some connection with or relation to the science or practice of dentistry. 2. periodontal.

paradentitis (par'ah-den-ti'tis) periodontitis.

paradentium (par'ah-den'she-um) periodontium.

paradentosis (par'ah-den-to'sis) periodontosis.

paraderm (par'ah-derm) [*para-* + Gr. *derma* skin] the part of the vitellus of the ovum that furnishes cells which contribute to the body of the embryo.

paradidymal (par'ah-did'i-mal) 1. pertaining to the paradidymis. 2. beside the testis.

paradidymis (par'ah-did'i-mis) [*para-* + Gr. *didymos* testis] [NA] a body made up of a few convoluted tubules in the anterior part of the spermatic cord, considered to be a remnant of the mesonephros; called also *organ of Giralde's*, *parepididymis*, and *massa innominata*.

paradimethylaminobenzaldehyde (par'ah-di-meth'il-am'-i-no-ben-zal'de-hid) white or pale yellow crystals or crystalline powder, $(CH_3)_2NC_6H_4CHO$, used in the preparation of Ehrlich's aldehyde reagent and in the determination of urobilinogen and porphobilinogen.

Paradione (par'ah-di'ōn) trademark for preparations of paramethadione.

paradiphenylbiuret (par'ah-di-fen'il-bi'u-ret) a substance, $NH(CO \cdot NH \cdot C_6H_4O)_2$, transformed into benzoic acid in the body.

paradipsia (par'ah-dip'se-ah) [*para-* + Gr. *dipsa* thirst + *-ia*] a perverted appetite for fluids, which are ingested without relation to bodily need.

paradox (par'ah-doks) [Gr. *paradoxos* incredible] a statement which seems to be, though it may not be, absurd or self-contradictory. **p. of Kretz**, while the injection of an accurately neutralized toxin-antitoxin mixture produces no adverse effects in a normal animal, the reverse is the case in an animal that has previously been actively immunized with toxin. **Opie p.**, necrotizing local anaphylaxis sometimes acts as a specific protective mechanism. **Weber's p.**, the elongation of a muscle which has been so stretched that it cannot contract.

paradoxical (par'ah-dok'se-kal) occurring at variance with the normal rule.

paradyseutery (par'ah-dis'en-ter'e) a diarrhea resembling mild dysentery; see *Shigella flexneri*.

paraecrisis (par'ah-ek'ri-sis) [*para-* + Gr. *ekkrisis* excretion] disordered secretion or excretion.

paraepilepsy (par'ah-ep'i-lep-se) minor focal epilepsy.

paraequilibrium (par'ah-e'kwī-lib're-um) vertigo due to disturbance of the vestibular apparatus of the ear.

paraesophageal (par'ah-ē-sof'ah-je'al) alongside, near, or about the esophagus.

parafalx (par'ah-falks') situated near the falx cerebri or falx cerebelli.

Par. aff. abbreviation for *L. pars affecta*, the part affected.

paraffin (par'ah-fin) [*L. parum* little + *affinis* akin] 1. [NF] a purified mixture of solid hydrocarbons obtained from petroleum, occurring as an odorless, tasteless, colorless or white, more or less translucent mass; used as a stiffening agent in pharmaceutical preparations. 2. alkane. **chlorinated p.**, paraffin which has been reacted with chlorine to replace some of the hydrogen atoms with chlorine atoms. **hard p.**, paraffin which has a high melting point. **liquid p.**, mineral oil. **liquid p., light**, light mineral oil. **pliable p.**, a mixture of paraffin and other ingredients, used as a nonabsorbent protective dressing for burns and other wounds. **soft p., white**, white petrolatum. **soft p., yellow**, petrolatum.

paraffinoma (par'ah-fi-no'mah) a chronic granuloma produced by prolonged continuous exposure to the irritation of paraffin.

Parafilaria multipapillosa (par'ah-fi-la're-ah mul'te-pap'i-lo'sah) a parasitic worm causing dermatorrhagia parasitica.

Paraflex (par'ah-fleks) trademark for a preparation of chlorzoxazone.

paraflocculus (par'ah-flok'u-lus) accessory flocculus.

paraformaldehyde (par'ah-for-mal'de-hid) a white, crystalline polymer of formaldehyde.

Parafossarulus (par'ah-fos-sar'u-lus) a genus of fresh-water snails. **P. manchou'ricus**, a species found throughout the Orient that is the foremost intermediate host of *Clonorchis sinensis* in Japan and the second most important in China, and also a carrier of *Opisthorchis felinus* and *Echinocasmus perfoliatus*.

parafunction (par'ah-funk'shun) disordered or perverted function.

parafunctional (par'ah-funk'shun-al) characterized by perverted or abnormal function.

paragrammacism (par'ah-gam'ah-sizm) [*para-* + *Gr. gamma*, the Greek letter G] the faulty utterance of *g*, *k*, and *ch* sounds.

paraganglia (par'ah-gang'gle-ah) plural of *paraganglion*.

paraganglioma (par'ah-gang'gle-o'mah) a tumor of the tissue composing the paraganglia. **medullary p.**, pheochromocytoma. **nonchromaffin p.**, chemodectoma.

paraganglion (par'ah-gang'gle-on), pl. *paraganglia*. A collection of chromaffin cells, which are derived from neural ectoderm, occurring outside of the adrenal medulla, most commonly near the sympathetic ganglia and in relation to the aorta and its branches. Most, if not all, of the paraganglia secrete epinephrine (or norepinephrine). Called also *chromaffin* or *pheochrome bodies*.

paragelatinose (par'ah-jel'ah-tös) a substance obtained by boiling gelatin.

paragenitalis (par'ah-jen'i-ta'lis) [*para-* + *L. genitalis* genital] 1. in lower vertebrates, the urinary part of the mesonephros, caudal to the genital part. 2. in higher animals, the paradidymis or paraoophoron.

parageusia (par'ah-gu'se-ah) [*para-* + *Gr. geusis* taste + *-ia*] 1. perversion of the sense of taste. 2. a bad taste in the mouth.

parageusic (par'ah-gu'sik) pertaining to or characterized by parageusia.

paragglutination (par'ah-gloo'ti-na'shun) group agglutination.

paraglobulin (par'ah-glob'u-lin) a globulin from blood serum, blood cells, lymph, and various connective tissues; called also *fibroplastin*, *fibrinoplastin*, and *serum globulin*.

paraglobulinuria (par'ah-glob'u-li-nu're-ah) [*paraglobulin* + *Gr. ouron* urine + *-ia*] the discharge of paraglobulin in the urine.

paraglossia (par'ah-glos'e-ah) [*para-* + *Gr. glōssa* tongue + *-ia*] inflammation of the oral tissues under the tongue.

paraglossitis (par'ah-glo-si'tis) paraglossia.

paragnathus (par-ag'nah-thus) [*para-* + *Gr. gnathos* jaw] 1. a fetus with a supernumerary jaw. 2. a parasitic fetus attached laterally to the jaw of the autosome.

paragnosis (par'ag-no'sis) [*para-* + *Gr. gnōsis* knowledge] diagnosis, after death, based on contemporaneous accounts of the diseases which affected historical characters.

paragonimiasis (par'ah-gon'i-mi'ah-sis) the state of being infected with flukes of the genus *Paragonimus*. See individual species.

paragonimosis (par'ah-gon'i-mo'sis) paragonimiasis.

Paragonimus (par'ah-gon'i-mus) [*para-* + *Gr. gonimos* productive; having generative power] a genus of trematode parasites; they have two invertebrate hosts, the first a snail (*Semisulcospira*, etc.) and the second a crab or crayfish (*Potamon*, *Eriocheir*, etc.). **P. africa'nus**, a species of the Congo and Cameroons that parasitizes man and carnivores. **P. heterotre'ma**, a species infecting man in Thailand and China. **P. kellicot'ti**, a species closely allied to *P. westermanni*, found in cats, dogs, and hogs in the United States. **P. rin'geri**, *P. westermanni*. **P. wester-**

man'i, the lung fluke, an oval or pear-shaped fluke of a pinkish or reddish brown color, found in cysts in the lungs and sometimes in the pleura, liver, abdominal cavity, and elsewhere. It causes the disease known as parasitic or oriental hemoptysis. It occurs especially in Asiatic countries, and infects lower animals as well as man; infection is acquired through ingestion of infected freshwater crabs or crayfish. Called also *Distoma westermanni*, *D. ringeri*, and *D. pulmonale*.

Paragordius (par'ah-gor'de-us) a genus of the class Nematomorpha. Human infection with *P. cintus*, *P. tricuspidatus*, and *P. varius* has been reported.

paragrammatism (par'ah-gram'ah-tizm) impairment of speech, with confusion in the use and order of words and grammatical forms.

paragranuloma (par'ah-gran'u-lo'mah) the most benign form of Hodgkin's disease, which is largely confined to the lymph nodes.

paragraphia (par'ah-gra'fe-ah) [*para-* + *Gr. graphein* to write + *-ia*] a disorder in which the patient makes mistakes in spelling or writes one word in place of another.

parahemophilia (par'ah-he'mo-fil'e-ah) a hemorrhagic tendency due to deficiency of coagulation Factor V; it varies greatly in intensity and is inherited as an autosomal recessive trait.

parahepatic (par'ah-he-pat'ik) [*para-* + *Gr. hēpar* liver] beside the liver.

parahepatitis (par'ah-hep'ah-ti'tis) perihepatitis.

paraheredit (par'ah-he-red'i-te) the alleged transmission of characters not from mother cell to daughter cell but through an external medium from affected cell to normal cell.

parahormone (par'ah-hor'mōn) [*para-* + *hormone*] a substance, not a true hormone, which has a hormone-like action in controlling the functioning of some distant organ.

parahypnosis (par'ah-hip-no'sis) [*para-* + *Gr. hypnos* sleep] abnormal or perverted sleep, as in hypnotism or somnambulism.

parahypophysis (par'ah-hi-poff'i-sis) an accessory pituitary body.

parakeratosis (par'ah-ker'ah-to'sis) persistence of the nuclei of the keratinocytes into the stratum corneum (horny layer) of the skin. Parakeratosis is normal in the epithelium of true mucous membrane of the mouth and vagina. **p. ostra'cea**, p. scutularis. **p. scutula'ris**, an extremely rare disease of the legs and scalp marked by the formation of hard, cuplike or shieldlike crusts which envelop the hairs and send up incrustations around the hairs. **p. variega'ta**, 1. pityriasis lichenoides et varioliformis acuta. 2. poikiloderma atrophicans vasculare.

parakinesia (par'ah-ki-ne'se-ah) [*para-* + *Gr. kinēsis* motion + *-ia*] perversion of motor function resulting in strange and unnatural movements. In ophthalmology, irregular action of an individual ocular muscle.

parakinetic (par'ah-ki-net'ik) pertaining to or characterized by parakinesia.

Paral (pah-ral') trademark for preparations of paraldehyde.

paralalia (par'ah-la'le-ah) [*para-* + *Gr. lalia* speech] any disturbance of the faculty of speech, especially the production of a vocal sound different from the one desired, or the substitution in speech of one letter for another. **p. litera'lis**, impairment of the power to utter the sounds of certain letters.

paralambdacism (par'ah-lam'dah-sizm) [*para-* + *Gr. lambdakismos*] the faulty utterance of *l* sounds, or the substitution of other sounds for *l*.

paralbumin (par'al-bu'min) [*para-* + *albumin*] an albumin or protein substance found in ovarian cysts.

paraldehyde (par-al'dē-hid) [USP] chemical name: 2,4,6-trimethyl-1,3,5-trioxane. A polymerization product of acetaldehyde, C₆H₁₂O, occurring as a colorless, transparent liquid and having rapid-acting sedative and hypnotic properties; used to control insomnia, excitement, agitation, delirium, and convulsions, administered rectally and intramuscularly and by intravenous infusion.

paraldehydism (par-al'de-hid'izm) a condition produced by excessive use of paraldehyde; paraldehyde poisoning.

paralepsy (par'ah-lep'se) psycholepsy.

paralexia (par'ah-lek'se-ah) [*para-* + *alexia*] impairment of the power of reading, marked by the transposition of words and syllables into meaningless combinations.

paralexical (par'ah-lek'sik) pertaining to or affected with paralexia.

paralgesia (par'al-je'se-ah) [*para-* + *Gr. algēsis* sense of pain + *-ia*] any condition marked by abnormal and painful sensations; a painful paresthesia.

paralgesic (par'al-je'sik) pertaining to or affected with paralgesia.

paralgia (par'al'je-ah) paralgesia.

paralinin (par'ah-li'nin) [*para-* + *linin*] karyolymph.

parallactic (par'ah-lak'tik) pertaining to parallax.

parallagma (par'ah-lag'mah) [*Gr.*] displacement of a bone or of the fragments of a broken bone.

parallax (par'ah-laks) [Gr. "in turn"] an apparent displacement of an object due to a change in the observer's position. **binocular p.**, the seeming difference in position of an object as seen separately by one eye and then by the other, the head remaining stationary. **crossed p.**, binocular parallax in which the object viewed seems to move away from the open eye. **direct p.**, binocular parallax in which the object viewed seems to move toward the open eye. **heteronymous p.**, crossed p. **homonymous p.**, direct p. **vertical p.**, binocular parallax in which the object seen seems to move vertically.

parallelism (par'ah-lel'izm) the doctrine that mental processes and brain processes run side by side and that they do not interact. Cf. *automatism*, def. 2.

parallelometer (par'ah-lel-om'è-ter) [*parallel* + Gr. *metron* measure] an instrument used in artificial denture work to determine the exactness of the parallel relationship of lines and surfaces.

parallergia (par'ah-ler'je-ah) parallergy.

parallergic (par'ah-ler'jik) pertaining to or marked by parallergy.

parallerin (par-al'er-jin) an antigen which produces a parallergic reaction.

parallergy (par-al'er-je) a condition in which an allergic state, produced by specific sensitization, predisposes the body to react to other allergens with clinical manifestations that differ from the original reaction.

paralogia (par'ah-lo'je-ah) [*para* + Gr. *logos* reason + *-ia*] a disordered state of the reason; impairment of the reasoning power marked by illogical or delusional speech. **thematic p.**, a perversion of the mind in which the patient dwells unduly upon one subject.

paralogism (pah-ral'o-jizm) the use of meaningless or illogical language by the psychotic.

paralogy (pah-ral'o-je) 1. paralogia. 2. anatomical similarity that has no phylogenetic or functional implication.

paralyses (pah-ral'i-séz) plural of *paralysis*.

paralysis (pah-ral'i-sis), pl. *paralyses* [*para* + Gr. *lyein* to loosen] loss or impairment of motor function in a part due to lesion of the neural or muscular mechanism; also, by analogy, impairment of sensory function (sensory paralysis). In addition to the types named below, paralysis is further distinguished as *traumatic*, *syphilitic*, *toxic*, etc., according to its cause; or as *obturator*, *ulnar*, etc., according to the nerve, part, or muscle specially affected. For other varieties see also under *hemiplegia*, *palsy*, *paraplegia*, and *paresis*. **abducens p.**, paralysis of the external rectus muscle of the eye due to lesion of the abducens nerve, with internal strabismus and diplopia. **abducens-facial p.**, congenital, Möbius' syndrome. **p. of accommodation**, paralysis of the ciliary muscles so as to prevent accommodation of the eye. **acoustic p.**, nerve deafness. **acute ascending spinal p.**, acute febrile poliomyelitis. **acute atrophic p.**, see *poliomyelitis*. **acute bulbar p.**, bulbar paralysis usually caused by acute vascular lesions of the brain, most commonly hemorrhage or thrombosis; called also *acute bulbar poliomyelitis*. **acute infectious p.**, epidemic poliomyelitis. **acute wasting p.**, see *poliomyelitis*. **p. ag'itans**, a form of parkinsonism of unknown etiology usually occurring in late life, although a juvenile form has been described. It is a slowly progressive disease characterized by masklike facies, a characteristic tremor of resting muscles, a slowing of voluntary movements, a festinating gait, peculiar posture, and weakness of the muscles. There may be excessive sweating and feelings of heat. Pathologically, there is degeneration within the nuclear masses of the extrapyramidal system and a characteristic loss of melanin-containing cells from the substantia nigra and a corresponding reduction in dopamine levels in the corpus striatum. Called also *Parkinson's disease* and *shaking palsy*. **p. ag'itans, juvenile (of Hunt)**, a condition developing in early life, usually familial but occasionally occurring sporadically, marked by increased muscle tonus with the characteristic attitude and facies of paralysis agitans, due to progressive degeneration of the globus pallidus; involvement of the substantia nigra and pyramidal tracts may occur. Called also *paleostriatal syndrome*, *pallidal atrophy*, *pallidal syndrome*, and *Ramsay Hunt syndrome*. **alcoholic p.**, paralysis caused by habitual drunkenness. **alternate p.**, alternating p., alternate hemiplegia. **ambiguo-accessorius p.**, Schmidt's syndrome. **ambiguo-accessorius-hypoglossal p.**, Jackson's syndrome. **ambiguo-hypoglossal p.**, Tapia's syndrome. **ambiguospinothalamic p.**, Avellis' syndrome. **anesthesia p.**, paralysis following anesthesia. **anterior spinal p.**, anterior poliomyelitis. **arsenical p.**, paralysis due to arsenical poisoning. **ascending p.**, spinal paralysis that progresses cephalad. **association p.**, bulbar p. **asthenic bulbar p.**, myasthenia gravis pseudoparalytica. **asthenobulbospinal p.**, myasthenia gravis. **atrophic spinal p.**, anterior poliomyelitis. **Avellis's p.**, see under *syndrome*. **Bell's p.**, see under *palsy*. **bilateral p.**, diplegia; paralysis on both sides. **birth p.**, paralysis due to injury received at birth. **brachial p.**, paralysis of an arm from lesion of the brachial plexus; see *Erb-Duchenne p.* and *Klumpke-Dejerine p.* **brachiofacial p.**,

paralysis affecting the face and an arm. **Brown-Séquard's p.**, 1. Brown-Séquard's syndrome. 2. a flaccid paralysis seen in disorders of the urinary tract. **bulbar p.**, paralysis due to changes in the motor centers of the medulla oblongata; a chronic, usually fatal disease, most commonly affecting persons over 50 years old but also occurring in the course of amyotrophic lateral sclerosis, syringobulbia, and multiple sclerosis. It is marked by progressive paralysis and atrophy of the muscles of the lips, tongue, mouth, pharynx, and larynx, and is due to degeneration of the nerve nuclei of the floor of the fourth ventricle. Called also *labioglossopharyngeal p.*, *labioglossolaryngeal p.*, and *Duchenne's p.* **bulbospinal p.**, myasthenia gravis. **cage p.**, a complex nutritional deficiency sometimes seen in captive primates, which is said to resemble osteomalacia. **central p.**, any paralysis due to a lesion of the brain or spinal cord. **centrocapsular p.**, that which is due to lesions of the internal capsule. **cerebral p.**, any paralysis due to an intracranial lesion; see *cerebral palsy*, under *palsy*. **Chastek p.**, progressive ataxia and paralysis in silver foxes due to thiamine deficiency following the substitution of raw fish for meat in the diet. **circumflex p.**, paralysis of the circumflex nerve. **complete p.**, entire loss of motion, sensation, and function. **compression p.**, paralysis caused by pressure on a nerve, as by a crutch or during sleep. **congenital abducens-facial p.**, Möbius syndrome. **congenital oculofacial p.**, Möbius syndrome. **conjugate p.**, loss of ability to perform some of the parallel ocular movements. **cortical p.**, paralysis dependent upon a lesion of the brain cortex. **creeping p.**, tabes dorsalis. **crossed p.**, **cruciate p.**, paralysis affecting one side of the face and the opposite side of the body. **crural p.**, that which chiefly affects the thigh or thighs. **crutch p.**, paralysis of one or both arms, due to pressure of the crutch in the axilla. **Cruveilhier's p.**, progressive muscular atrophy. **decubitus p.**, paralysis due to pressure on a nerve from lying for a long time in one position. **Dejerine-Klumpke p.**, Klumpke's p. **diaphragmatic p.**, unilateral paralysis of the diaphragm. **diphtheric p.**, **diphtheritic p.**, a partial paralysis which often follows diphtheria, chiefly affecting the soft palate and throat muscles. **divers' p.**, paralysis occurring as a result of too rapid reduction of pressure on deep-sea divers. **Duchenne's p.**, 1. bulbar paralysis. 2. Erb-Duchenne paralysis. **Duchenne-Erb p.**, Erb-Duchenne p. **emotional p.**, paralysis with emotional excitement occurring in hysterical persons. **epidemic infantile p.**, epidemic poliomyelitis. **Erb's p.**, 1. Erb-Duchenne paralysis. 2. Erb's spastic paraplegia. 3. pseudohypertrophic muscular dystrophy. **Erb-Duchenne p.**, the upper-arm type of brachial paralysis; paralysis of the upper roots of brachial plexus due to destruction of the fifth and sixth cervical roots and characterized by absence of involvement of the small hand muscles. **essential p.**, see *poliomyelitis*. **facial p.**, weakening or paralysis of the facial nerve, as in Bell's palsy. **false p.**, pseudoparalysis. **familial periodic p.**, a rare dominantly inherited disorder, marked by recurring attacks of rapidly progressive flaccid paralysis, which may be associated with a fall in (*hypokalemic periodic p.*), a rise in (*hyperkalemic periodic p.*), or normal (*normokalemic periodic p.*) serum potassium levels. **Felton's p.**, a specific loss of immunologic reactivity to pneumococcal polysaccharides after exposure to large doses. **Féréol-Graux p.**, see under *palsy*. **flaccid p.**, paralysis with loss of tone of the muscles of the paralyzed part and absence of tendon reflexes. Cf. *spastic p.* **fowl p.**, Marek's disease. **functional p.**, a temporary paralysis which is apparently not caused by a nerve lesion. **p. of gaze**, paralysis due to pathological processes which implicate the supranuclear oculomotor centers or pathways, and result in either lateral or vertical gaze paralysis. **general p.**, **general p. of the insane**, dementia paralytica. **ginger p.**, Jamaica ginger p. **glossolabial p.**, **glossopharyngolabial p.**, bulbar p. **Gubler's p.**, alternate hemiplegia. **hereditary cerebrospinal p.**, (hemiplegia, diplegia, paraplegia, or tetraplegia), a hereditary condition which develops usually in early middle life, characterized by gradually developing paralyses which may be manifest in the upper or lower extremities, in the two extremities, or one side, or in all four extremities. **histrionic p.**, paralysis of certain muscles of the face, producing a facial expression of some emotion. **hyperkalemic periodic p.**, see *familial periodic p.* **hypoglossal p.**, paralysis due to a lesion of the hypoglossal nucleus or the hypoglossal nerve at any point. **hypokalemic periodic p.**, see *familial periodic p.* **hysterical p.**, apparent loss of power of movement in a part seen in hysteria, in the absence of a neurological cause. **immune p.**, **immunological p.**, the absence of immune response to a specific antigen, usually induced with very large doses of antigen; see *immunological tolerance*, under *tolerance*. **incomplete p.**, partial paralysis or paresis. **Indian bow p.**, paralysis of the thyroarytenoid muscles. **infantile p.**, see *poliomyelitis*. **infantile, cerebral, ataxic p.**, a condition which is dependent upon faulty development of the frontal regions of the brain, is present at birth, affects all extremities, and is not definitely progressive; called also *diataxia infantilis cerebialis* and *cerebral diataxia*. **infantile cerebrocerebellar diplegic p.**, a condition developing in infants, affecting all extremities, and due to combined failure of development or destruction of the recipro-

cating portions of the cerebrum and the cerebellum. **infantile spastic p.**, cerebral palsy. **infantile spinal p.**, spinal paralytic poliomyelitis. **infectious bulbar p.**, pseudorabies. **internuclear p.**, see under *ophthalmoplegia*. **ischemic p.**, local paralysis due to an impairment of the circulation, as in certain cases of embolism or thrombosis; called also *Volkman's ischemic paralysis*. **jake p.**, Jamaica ginger p. **Jamaica ginger p.**, paralysis of the extremities, especially of the legs, following the use of Jamaica ginger as a beverage; called also *jake paralysis*, *jake neuritis*, *ginger paralysis*, *Jamaica ginger polyneuritis*. **juvenile p.**, general paralysis in young persons. **Klumpke's p.**, **Klumpke-Dejerine p.**, the lower-arm type of brachial paralysis; atrophic paralysis of the muscles of the arm and hand, from lesion of the eighth cervical and first dorsal nerves. It often occurs in infants delivered by breech extraction. **Kussmaul's p.**, **Kussmaul-Landry p.**, acute febrile polyneuritis. **labial p.**, **labioglossolaryngeal p.**, **labioglossopharyngeal p.**, bulbar p. **lambing p.**, pregnancy toxemia in ewes. **Landry's p.**, acute febrile polyneuritis. **laryngeal p.**, paralysis of one of the laryngeal muscles. **lead p.**, paralysis caused by lead poisoning, due to a peripheral neuritis, and marked by wristdrop. **lingual p.**, paralysis of the tongue. **Lissauer's p.**, an apoplectic type of dementia paralytica. **local p.**, paralysis of one muscle or of a group of muscles. **masticatory p.**, paralysis of the muscles of mastication. **medullary tegmental p's**, paralyzes due to lesions of the medullary tegmentum: they include alternate hemiplegia, *Tapia's syndrome*, *syndrome of Babinski-Nageotte*, and *Cestan's syndrome*. **Millard-Gubler p.**, see under *syndrome*. **mimetic p.**, paralysis of the facial muscles. **mixed p.**, combined motor and sensory paralysis. **motor p.**, paralysis of voluntary muscles. **musculospiral p.**, paralysis of the extensor muscles of the wrist and fingers, most often due to compression of the musculospiral (radial) nerve, and, depending upon the site of the nerve injury, sometimes accompanied by weakness of extension of the elbow; called also *radial p.* and *Saturday night palsy*. **myopathic p.**, paralysis due to disease of the muscle itself. **narco-sis p.**, paralysis during anesthesia, caused by pressure, cold, curare, etc. **normokalemic periodic p.**, see *familial periodic p.* **p. notario/rum**, writers' cramp. **nuclear p.**, any paralysis due to a lesion in a nucleus of origin. **obstetric p.**, birth p. **ocular p.**, see *amaurosis*, *cycloplegia*, and *ophthalmoplegia*. **oculofacial p.**, **congenital**, *Möbius' syndrome*. **oculomotor p.**, paralysis of the oculomotor nerve. **organic p.**, paralysis due to lesion of nerve tissue. **parotitic p.**, paralysis accompanying mumps. **parturient p.**, milk fever, def. 4. **periodic p.**, a recurrent paralysis; see also *familial periodic p.* **peripheral p.**, loss of power due to some lesion of the nervous mechanism between the nucleus of origin and the muscle. **peroneal p.**, crossed leg palsy. **phonetic p.**, paralysis of the muscles of speech. **postdiphtheric p.**, diphtheric paralysis. **posthemiplegic p.**, residual weakness after a stroke. **posticus p.**, paralysis of the posterior cricothyroid muscle. **Pott's p.**, see under *paraplegia*. **pressure p.**, paralysis, generally temporary, caused by pressure on a nerve trunk. **progressive bulbar p.**, see *bulbar p.* **pseudobulbar p.**, spastic weakness of the muscles innervated by the cranial nerves, i.e., the muscles of the face, pharynx, and tongue, due to bilateral lesions of the corticospinal tract; it is often accompanied by uncontrolled weeping or laughing. Called also *supranuclear p.* and *spastic bulbar palsy*. **pseudohypertrophic muscular p.**, see under *dystrophy*. **psychic p.**, hysterical p. **radial p.**, 1. musculospiral p. 2. a condition usually affecting horses, but also other domestic animals, in which paralysis of certain muscles of the elbow and knee occurs as a result of injury to the radial nerve. Called also *dropped elbow*. **Ramsay Hunt p.**, juvenile paralysis agitans. **range p.**, *Marek's disease*. **reflex p.**, one ascribable to peripheral irritation; in some cases secondary changes occur in the spinal cord, and the paralysis ceases to be truly reflex. **Remak's p.**, paralysis of the extensor muscles of the fingers and wrist; called also *Remak's type*. **rucksack p.**, a disorder of motor and sensory function of the upper extremities as a result of damage to the brachial plexus caused by the wearing of backpack. **Saturday night p.**, musculospiral p. **sensory p.**, loss of sensation resulting from a morbid process. **serum p.**, peripheral nerve paralysis following administration of serum. **spastic p.**, paralysis marked by spasticity of the muscles of the paralyzed part and increased tendon reflexes, due to upper motor neuron lesions. Cf. *flaccid p.* **spastic spinal p.**, lateral sclerosis of the spinal cord. **spinomuscular p.**, paralysis due to lesion of the gray matter of the spinal cord, or the nerves originating therefrom. **supranuclear p.**, pseudobulbar p. **tick p.**, a progressive ascending flaccid motor paralysis which follows the bite of certain ticks (*Dermacentor andersoni*) in children and in domestic animals in Oregon, British Columbia, and other parts of the world. A similar paralysis sometimes follows the bites of species of *Ixodes*, *Haemaphysalis*, and *Rhipicephalus*. **Todd's p.**, postepileptic hemiplegia or monoplegia lasting for a few minutes or hours, or occasionally for several days, after the epileptic attack. **trigeminal p.**, paralysis due to a lesion of the trigeminal (fifth) nerve, marked by sensory loss in the face and weakness of the muscles of mastication. **p. vacil/lans**, cho-

rea. **vasomotor p.**, cessation of vasomotor control. **Volkman's ischemic p.**, ischemic p. **waking p.**, a form of hypnagogic helplessness that follows waking, especially in some cases of narcolepsy. **wasting p.**, spinal muscular atrophy. **Weber's p.**, see under *syndrome*. **Werdnig-Hoffmann p.**, a hereditary, progressive, infantile form of muscular atrophy, transmitted as an autosomal recessive trait, usually occurring in siblings rather than in successive generations, and resulting from degeneration of the anterior horn cells of the spinal cord. It is marked by early onset (usually at about six months of age, but sometimes in fetal life), hypotonia and wasting of the muscles, complete flaccid paralysis, and death, usually in early life. Called also *familial spinal muscular atrophy*, *Hoffmann-Werdnig syndrome*, and *progressive spinal muscular atrophy of infants*. Cf. *Kugelberg-Welander disease*. **writers' p.**, writers' cramp.

paralysis (par'ah-liz'or) paralyzer.

paralyssa (par'ah-lis'ah) rabies occurring in Central and South America caused by the bite of vampire bats.

paralytic (par'ah-lit'ik) [Gr. *paralytikos*] 1. affected with or pertaining to paralysis. 2. a person affected with paralysis.

paralytogenic (par'ah-lit'o-jen'ik) causing paralysis.

paralyzant (par'ah-liz'ant) 1. causing paralysis. 2. an agent that paralyzes.

paralyze (par'ah-liz) to put into a state of paralysis.

paralyzer (par'ah-liz'er) a substance which hinders or prevents a chemical reaction; an inhibitor.

paramagnetic (par'ah-mag-net'ik) characterized by or exhibiting paramagnetism.

paramagnetism (par'ah-mag'ne-tizm) [*para-* + Gr. *magnēs magnet*] the property of being attracted by a magnet, and of assuming a position parallel to that of a magnetic force, but not of becoming permanently magnetized.

paramania (par'ah-ma'ne-ah) [*para-* + *mania*] a form of parathymia in which one manifests joy by complaining.

paramastigote (par'ah-mas'ti-gōt) [*para-* + Gr. *mastix* lash] having an accessory flagellum by the side of a larger one.

paramastitis (par'ah-mas-ti'tis) [*para-* + Gr. *mastos* mamma + *-itis*] inflammation of the tissues around the mammary gland.

paramastoid (par'ah-mas'toid) near the mastoid process.

paramastoiditis (par'ah-mas'toid-i'tis) inflammation of the temporal bone in mastoiditis.

paramental (par'ah-me-a'tal) situated near or around a meatus.

paramecia (par'ah-me'se-ah) plural of *paramecium*.

paramecin (par'ah-me'sin) an antibiotic compound secreted by a specially developed strain of paramecia; it is destructive to other strains of paramecia.

Paramecium (par'ah-me'she-um) [Gr. *paramēkēs* oblong] a genus of holotrichous ciliate protozoa (subclass Euciliatia) of elongated form. Certain strains have been employed in the protozoan test. See under *tests*. **P. coli**, *Balantidium coli*.

paramecium (par'ah-me'she-um), pl. *parame'cia*. An organism belonging to the genus *Paramecium*.

paramedian (par'ah-me'de-an) [*para-* + L. *medianus* median] situated near the midline or midplane.

paramedical (par'ah-med'i-kal) having some connection with or relation to the science or practice of medicine; adjunctive to the practice of medicine in the maintenance or restoration of health and normal functioning. Paramedical workers include physical, occupational, and speech therapists, medical social workers, pharmacists, technicians, and so on.

paramenia (par'ah-me'ne-ah) [*para-* + Gr. *mēniaia* menses] disordered or difficult menstruation.

parameningococcus (par'ah-me-ning'go-kok'us) a microorganism resembling the meningococcus, differing only in its serum reactions.

parameniscitis (par'ah-me-ni-si'tis) inflammation of the parameniscus.

parameniscus (par'ah-me-nis'kus) the structure or area around the menisci (semilunar fibrocartilages) of the knee.

paramesial (par'ah-me'se-al) [*para-* + Gr. *mesos* middle] paramedian.

parameter (pah-ram'ē-ter) [Gr. *parametrein* to measure one thing by another] 1. a variable whose measure is indicative of a quantity or function that cannot itself be precisely determined by direct methods; e.g., blood pressure and pulse rate are parameters of cardiovascular function, and the level of glucose in blood and urine is a parameter of carbohydrate metabolism. 2. a distinguishing feature that is subject to measurement, either directly or indirectly.

paramethadione (par'ah-meth'ah-di'ōn) [USP] chemical name: 5-ethyl-3,5-dimethyl-2,4-oxazolidinedione. An anticonvulsant, C₇H₁₁NO₃, occurring as a clear, colorless liquid, used especially in the treatment of petit mal epilepsy, administered orally.

paramethasone acetate (par'ah-meth'ah-sōn) [USP] chemical name: 21-(acetyloxy)-6α-fluoro-11β,17-dihydroxy-16α-methyl-

pregna-1,4-diene-3,20-dione. A glucocorticoid, $C_{24}H_{34}FO_6$, occurring as a fluffy, white to creamy white, crystalline powder; used chiefly for its anti-inflammatory and antiallergic actions, administered orally.

parametrial (par'ah-me'tre-al) 1. pertaining to the parametrium. 2. parametric¹.

parametric¹ (par'ah-met'rik) [*para-* + Gr. *mētra* uterus] situated near the uterus; parametrial.

parametric² (par'ah-met'rik) [*para-* + *meter*] pertaining to or defined in terms of a parameter.

parametric (par'ah-mē-trī'tik) pertaining to parametritis.

parametritis (par'ah-mē-trī'tis) inflammation of the parametrium. **posterior p.**, inflammation of the cellular tissue around the uterosacral ligaments.

parametrium (par'ah-me'tre-um) [*para-* + Gr. *mētra* uterus] [NA] the extension of the subserous coat of the supracervical portion of the uterus laterally between the layers of the broad ligament.

paramidoacetophenone (par-am'i-do-as'ē-to-fe'nōn) $NH_2 \cdot C_6H_4 \cdot CO \cdot CH_3$; used in Ehrlich's diazo reaction.

paramimia (par'ah-mim'e-ah) [*para-* + Gr. *mīmēsis* imitation] a condition in which signs are misused in expressing thoughts; the use of wrong or improper gestures in speaking.

paramitome (par'ah-mi'tōm) [*para-* + Gr. *mitos* thread] hyaloplasm, def. 1.

paramnesia (par'am-ne'ze-ah) [*para-* + *amnesia*] 1. perversion of memory in which the person believes that he remembers events or circumstances which never happened; called also *retrospective falsification*. 2. a state in which words are remembered, but are used without a comprehension of their meaning.

Paramoeba (par'ah-me'ba) see *Craigia*.

paramolar (par'ah-mo'lar) a supernumerary tooth appearing adjacent to a molar tooth.

Paramonostomum parvum (par'ah-mo-nos'to-mum par'vum) a trematode infecting ducks and chickens in North America.

paramphistomiasis (par-am'fe-sto-mi'ah-sis) invasion of the body by trematode parasites of the order Paramphistomatoidea, particularly *Watsonius watsoni* and *Gastroduiscoides hominis*.

Paramphistomum (par'am-fis'to-mum) a genus of flukes. **P. cervi**, a species found in the rumen and reticulum of sheep, goats, cattle, and other ruminants. Formerly called *amphistoma conicum* and *Fasciola cervi*.

paramucin (par'ah-mu'sin) a colloid substance found in ovarian cysts, which differs from mucin and pseudomucin in the fact that it reduces Fehling's solution before boiling with acid.

paramusia (par'ah-mu'ze-ah) [*para-* + Gr. *mousa* music + *-ia*] perversion or partial loss of the power of correct musical expression.

paramutable (par'ah-mu'tah-b'l) the condition (of an allele) of being subject to paramutation.

paramutagenic (par'ah-mu'tah-jen'ik) denoting an allele that causes paramutation in another allele.

paramutation (par'ah-mu-ta'shun) a permanent transmissible change in an allele after passage through a heterozygote.

paramyelin (par'ah-mi'ē-lin) a mono-aminomonophosphatid from brain substance.

paramyloidosis (par'am'i-loi-do'sis) accumulation of an atypical form of amyloid in tissues.

paramylum (pah-ram'i-lum) a carbohydrate storage compound present in the euglenoids, chemically distinct from both starch and glycogen.

paramyoclonus (par'ah-mi-ok'lo-nus) [*para-* + Gr. *mys* muscle + *klonos* turmoil] a condition characterized by myoclonic contractions of various muscles. **p. mul'tiplex**, a condition occurring more often in males than in females, characterized by sudden shocklike contractions affecting first the proximal muscles of the arms and the shoulder girdle, with any muscles of the limbs and trunk being involved later, and finally involving the face and bulbar muscles.

paramyosin (par'ah-mi'o-sin) a muscle protein found in the catch muscle fibers of mollusks and annelids; it has a molecular weight of about 137,000 and shows pronounced symmetry; called also *tropomyosin A*.

paramyosinogen (par'ah-mi'o-sin'o-jen) a protein resembling myosinogen (myogen) derived from muscle plasma.

paramyotone (par'ah-mi'o-tōn) paramyotonus.

paramyotonia (par'ah-mi'o-to'ne-ah) [*para-* + Gr. *mys* muscle + *tonos* tension + *-ia*] a disease marked by tonic spasms due to disorder of muscular tonicity, especially a hereditary and congenital affection. **ataxia p.**, muscular spasm with slight ataxia on attempting to move. **p. congen'ita**, myotonia congenita. **symptomatic p.**, temporary stiffness on starting to walk, seen in paralysis agitans.

paramyotonus (par'ah-mi-ot'o-nus) a condition marked by tonic muscular spasm.

paramyxovirus (par'ah-mik'so-vi'rus) a subgroup of the

myxoviruses, including the viruses of human and animal parainfluenza, mumps, and Newcastle disease; it may also include the viruses of measles, canine distemper, rinderpest, the rubella and pneumonia virus of mice, and the respiratory syncytial virus. Cf. *orthomyxovirus*.

paranalgesia (par'an-al-je'se-ah) analgesia of the lower extremities.

paranea (par'ah-ne'ah) paranoia.

paranephric (par'ah-nef'rik) 1. near the kidney. 2. pertaining to the adrenal gland.

paranephritis (par'ah-nē-fri'tis) [*para-* + Gr. *nephros* kidney + *-itis*] 1. inflammation of the paranephros. 2. inflammation of the connective tissue around and near the kidney. **lipomatous p.**, lipomatous nephritis.

paranephroma (par'ah-nē-fro'mah) a tumor of the adrenal gland.

paranephros (par'ah-nef'ros), pl. *paraneph'roi* [*para-* + Gr. *nephros* kidney] an adrenal gland.

para-anesthesia (par'an-es-the'ze-ah) para-anesthesia.

paraneural (par'ah-nu'ral) [*para-* + Gr. *neuron* nerve] beside or alongside a nerve.

parangi (pah-ran'je) Ceylonese name for yaws.

para-nitrosulfathiazole (par'ah-ni'tro-sul'fah-thi'ah-zōl) chemical name: *p*-nitro-*N*-2-thiazolylbenzenesulfonamide. A sulfonamide, $C_9H_7N_3O_4S_2$, occurring as a yellow powder; used as an antibacterial in the treatment of nonspecific ulcerative colitis and of proctitis, administered by rectal injection.

paranoia (par'ah-noi'ah) [*para-* + Gr. *nous* mind + *-ia*] a chronic, slowly progressive mental disorder (personality disorder) characterized by the development of ambitions or suspicions into systematized delusions of persecution and grandeur which are built up in a logical form. The condition does not appear to interfere with the rest of the personality and thinking. Cf. *paranoid schizophrenia*. **acute hallucinatory p.**, paranoia in which hallucinations are combined with the delusions. **alcoholic p.**, a paranoic condition developing in chronic alcoholism. **p. hallucinato'ria**, acute hallucinatory paranoia. **heboid p.**, paranoid schizophrenia, or paranoia with schizoid features. **litigious p.**, paranoia characterized by a tendency to go to law for imaginary causes. **querulous p.**, paranoia marked by querulousness.

paranoiic (par'ah-noi'ak) an individual exhibiting paranoia.

paranoic (par'ah-no'ic) pertaining to or characterized by paranoia.

paranoid (par'ah-noid) resembling paranoia.

paranoidism (par'ah-noid'izm) a state resembling paranoia.

paranomia (par'ah-no'me-ah) [*para-* + Gr. *onoma* name + *-ia*] aphasia characterized by inability to name objects felt (*myotactic p.*) or seen (*visual p.*).

paranormal (par'ah-nor'mal) beyond the normal or natural; said of phenomena such as extrasensory perception.

paranosic (par'ah-no'sik) pertaining to paranosia.

paranosia (par'ah-no'sis) [*para-* + Gr. *nosos* disease] the primary advantage that is to be gained by illness. Cf. *epinosia*.

paranuclear (par'ah-nu'kle-ar) 1. beside a nucleus. 2. pertaining to a paranucleus.

paranucleolus (par'ah-nu-kle'o-lus) a small basophil body in the enclosing sac of the cell nucleus.

paranucleus (par'ah-nu'kle-us) [*para-* + *nucleus*] a body resembling the nucleus, sometimes seen in the cell cytoplasm near the nucleus.

paraomphalic (par'ah-om-fal'ik) [*para-* + Gr. *omphalos* navel] alongside the umbilicus.

paraoperative (par'ah-op'er-a'tiv) pertaining to the accessories essential to operative surgery, such as care of instruments and gloves, sterilization, etc.

paraoral (par'ah-o'ral) administered by some other route than by the mouth; said of medication.

paraosmia (par'ah-os'me-ah) parosmia.

parapancreatic (par'ah-pan'kre-at'ik) situated near the pancreas.

paraparesis (par'ah-par'ē-sis) [*para-* + Gr. *paresis* paralysis] a partial paralysis of the lower extremities.

parapedesis (par'ah-pē-de'sis) [*para-* + Gr. *pēdesis* a leaping] passage of body substances into channels not normally conveying them, as of bile pigments into the blood capillaries.

paraperitoneal (par'ah-per'i-to-ne'al) near the peritoneum.

parapestis (par'ah-pes'tis) ambulatory plague.

paraphasia (par'ah-fa'ze-ah) [*para-* + *aphasia*] partial aphasia in which the patient employs wrong words, or uses words in wrong and senseless combinations (*choresic p.*). **central p.**, partial aphasia due to brain lesion. **literal p.**, the replacement of one or more sounds in otherwise correct words. **verbal p.**, the substitution of one correct word or phrase for another, sometimes related in meaning and sometimes completely unrelated.

paraphasic (par'ah-fa'sik) characterized by paraphasia.

paraphasis (pah-raf'ah-sis) an evagination of the membranous roof of the telencephalon in front of the velum transversum in certain vertebrate brains.

paraphemia (par'ah-fe'me-ah) [*para-* + Gr. *phēmē* speech + *-ia*] aphasia marked by the employment of the wrong words.

paraphenylenediamine (par'ah-fen'il-ēn-di-am'in) a dye, $C_{10}H_8(NH_2)_2$, whose hydrochloride dyes the hair black, but may cause delayed contact-type hypersensitivity.

paraphia (par-a'fe-ah) [*para-* + Gr. *haphē* touch + *-ia*] a perversion of the sense of touch.

paraphilia (par'ah-fil'e-ah) [*para-* + Gr. *philein* to love + *-ia*] aberrant sexual activity; sexual deviation; expression of the sexual instinct in practices which are socially prohibited or unacceptable, or biologically undesirable.

paraphiliac (par'ah-fil'e-ak) 1. pertaining to paraphilia. 2. an individual exhibiting paraphilia; a sexual deviant.

paraphimosis (par'ah-fi-mo'sis) [*para-* + Gr. *phimoun* to muzzle + *-osis*] retraction of phimotic foreskin, causing a painful swelling of the glans that, if severe, may cause dry gangrene unless corrected. See also *phimosis*.

paraphobia (par'ah-fo'be-ah) [*para-* + Gr. *phobos* fear + *-ia*] a mild phobia.

paraphonia (par'ah-fo'ne-ah) [*para-* + Gr. *phōnē* voice + *-ia*] morbid alteration of the voice; partial aphonia. **p. pu'berum**, the change in the male voice at the time of puberty.

paraphora (par-a'fo-rah) [*para-* + Gr. *pherein* to bear] a slight mental disorder.

paraphrasia (par'ah-fra'ze-ah) [*para-* + *aphrasia*] partial aphrasia; speech defect marked by disorderly arrangement of spoken words.

paraphrenia (par'ah-fre'ne-ah) [*para-* + Gr. *phrēn* mind + *-ia*] 1. Kraepelin's term for a small group of psychoses now classified as paranoid states, i.e., conditions classified between true paranoia and paranoid schizophrenia. 2. Freud's term for schizophrenia. 3. paraphrenitis. **p. confab'ulans**, paraphrenia distinguished by falsifications of memory. **p. expansi'va**, paraphrenia marked by delusions of grandeur, exalted mood, and mild excitement. **p. phantas'tica**, paraphrenia with somewhat unsystematized delusions. **p. systemat'ica**, paraphrenia with rigidly systematized delusions of persecution and no intellectual deterioration.

paraphrenic (par'ah-fre'nik) 1. pertaining to or characterized by paraphrenia. 2. an individual exhibiting paraphrenia.

paraphrenitis (par'ah-fre-ni'tis) [*para-* + Gr. *phrēn* diaphragm + *-itis*] inflammation of the diaphragm, or, more correctly, of the parts around it.

paraphronia (par'ah-fro'ne-ah) a condition of abnormal mentality marked by change in disposition and character.

paraphyseal (par'ah-fiz'e-al) pertaining to the paraphysis.

paraphysis (pah-raf'i-sis) [Gr. "offshoot"] 1. a thin-walled derivative of the roof plate of the telencephalon, present only temporarily in the human embryo and fetus; called also *paraphyseal body*. 2. a sterile thread alongside the spore sac or sexual organs in the hymenial layer of some fungi, especially ascomycetes; also found in mosses and ferns.

parapineal (par'ah-pi'ne-al) pertaining to the parapineal organ of certain lower vertebrates.

paraplast (par'ah-plaz'm) [*para-* + Gr. *plasma* something formed] 1. hyaloplasm (def. 1). 2. an abnormal growth.

paraplastic (par'ah-plaz'mik) pertaining to paraplast.

paraplastic (par'ah-plas'tik) [*para-* + Gr. *plassein* to mold] exhibiting a perverted formative power; of the nature of a paraplast.

paraplastin (par'ah-plas'tin) a substance resembling parachromatin in the cytoplasm and nucleus of a cell.

paraplectic (par'ah-plek'tik) [Gr. *paraplēktikos*] paraplegic.

paraplegia (par'ah-ple'je-ah) [*para-* + Gr. *plēgē* stroke + *-ia*] paralysis of the legs and lower part of the body. **alcoholic p.**, paraplegia due to chronic alcoholism, and probably dependent upon peripheral neuritis. **ataxic p.**, subacute combined degeneration of spinal cord; see under *degeneration*. **cerebral p.**, that which is due to a bilateral lesion. **Erb's spastic p.**, **Erb's syphilitic spastic p.**, an uncommon form of meningo-vascular syphilis marked by progressive spasticity and weakness of the legs, paraplegia, muscular atrophy, paresthesia, increased knee and ankle reflexes, and incontinence. Called also *cerebrospinal syphilis*, *Erb's paralysis*, *Erb-Charcot disease*, and *syphilitic paraplegia*. **flaccid p.**, paraplegia with loss of muscle tone of the paralyzed part and absence of tendon reflexes. Cf. *spastic p.* See under *paralysis*. **peripheral p.**, that which is due to a lower motor neuron lesion. **Pott's p.**, that which is due to vertebral caries or spinal tuberculosis; called also *Pott's paralysis*. **reflex p.**, paralysis of the lower limbs due to peripheral irritation of the nerve centers. **senile p.**, a form marked by tonic spasm of the paralyzed muscles, with increased reflex irritability; it is usually caused by transverse lesions of the spinal cord or by anterolateral sclerosis. Called also *tetanioid p.* **spastic p.**, par-

aplegia marked by spasticity of the muscles of the paralyzed part and increased tendon reflexes, due to damage to the corticospinal tract. Cf. *flaccid p.* **spastic p.**, **congenital**, spastic p., infantile. **spastic p.**, **infantile**, spastic paralysis occurring in early childhood, due to injuries in birth, cerebral hemorrhage before birth, or abnormal development of the brain. **spastic p.**, **primary**, a form of spastic paraplegia said to be due to primary degeneration in the pyramidal tracts. **p. supe'rior**, paralysis of both arms. **syphilitic p.**, Erb's spastic p. **toxic p.**, paraplegia due to poisons in the blood.

paraplegic (par'ah-plej'ik) pertaining to or of the nature of paraplegia; by extension, sometimes used to designate an individual affected with paraplegia.

paraplegiform (par'ah-plej'i-form) resembling paraplegia.

parapleuritis (par'ah-plu-ri'tis) [*para-* + Gr. *pleura* side + *-itis*] inflammation in the wall of the chest.

paraplexus (par'ah-plek'sus) [*para-* + *plexus*] (*obs.*) the chorooid plexus of the lateral ventricle.

parapneumonia (par'ah-nu-mo'ne-ah) a disease resembling pneumonia clinically.

parapophysis (par'ah-poff'i-sis) [*para-* + *apophysis*] the lower transverse process of a vertebra (processus transversus vertebrae [NA]), or its homologue.

parapoplexy (par'ah-o-plek'se) [*para-* + *apoplexy*] a condition resembling apoplexy.

parapraxia (par'ah-prak'se-ah) [*para-* + Gr. *praxis* doing + *-ia*] 1. irrational behavior. 2. inability to perform purposive movements properly, e.g., a slip of the tongue or misplacement of an article.

parapraxis (par'ah-prak'sis) parapraxia.

paraproctitis (par'ah-prok-ti'tis) [*paraproctium* + *-itis*] inflammation of the paraproctium; perirectal inflammation.

paraproctium (par'ah-prok'she-um) [*para-* + Gr. *prōktos* anus] the tissues that surround the rectum and the anus.

paraprofessional (par'ah-pro-fesh'un-al) 1. a person who is specially trained in a particular field or occupation to assist a professional, such as a physician or some other professional. 2. allied health professional. 3. pertaining to a paraprofessional.

paraprostatitis (par'ah-pros'tah-ti'tis) inflammation of the tissues near the prostate gland.

paraprotein (par'ah-pro'te-in) immunoglobulin produced by a clone of neoplastic plasma cells proliferating abnormally. Those derived from any individual patient are of a single immunoglobulin class, subclass, and (in humans) light chain (κ or γ) type. On electrophoresis of serum, they are normally demonstrable as a sharply localized band. Paraproteins include myeloma proteins, cryoglobulins, and the IgM of Waldenström's macroglobulinemia.

paraproteinemia (par'ah-pro'te-in-e'me-ah) presence in the blood of a paraprotein, such as a cryoglobulin or a macroglobulin, in amounts not normally observed.

parapsia (par-ap'se-ah) parapsis.

parapsis (par-ap'sis) [*para-* + Gr. *hapsis* touch] perversion of the sense of touch; paraphia.

parapsoriasis (par'ah-so-ri'ah-sis) a name applied by Brocq to a group of maculopapular scaly erythrodermas of slow development. They are marked by persistent red, scaling patches or papules devoid of subjective symptoms and resistant to treatment. There are three principal forms, the guttate, lichenoid, and patchy. **p. acu'ta**, **acute p.**, pityriasis lichenoides et varioliformis. **p. atro'phicans**, pityriasis lichenoides et varioliformis acuta. **p. gutta'ta**, **guttate p.**, p. lichenoides chronica. **p. lichenoi'des chron'ica**, a relatively benign, chronic, scaly, papular skin disorder occurring at any age and not much helped by any treatment. Called also *p. guttata*, *p. varioliformis chronica*. **p. en plaques**, a chronic eruption of slightly scaly erythematous patches on the trunk or extremities, with little or no itching; the risk of evolution into mycosis fungoides rises with itchiness and the amount of infiltration. Called also *xanthoerythrodermia persans*. **p. variolifor'mis**, pityriasis lichenoides et varioliformis acuta. **p. variolifor'mis chron'ica**, p. lichenoides chronica.

parapsychology (par'ah-si-kol'o-je) [*para-* + *psychology*] a branch of psychology dealing with those psychical effects and experiences which appear to fall outside the scope of physical law, e.g., telepathy and clairvoyance.

parapyknomorphous (par'ah-pik'no-mor'fus) [*para-* + Gr. *pyknos* compact + *morphē* form] neither pyknomorphous nor apyknomorphous, but between the two; staining moderately well. Said of certain nerve cells.

parapyramidal (par'ah-pi-ram'i-dal) beside or near a pyramid.

paraquat (par'a-kwat) a poisonous dipyrilidium compound whose dichloride and dimethylsulfate salts are used as contact herbicides. Contact with concentrated solutions causes irritation of the skin, cracking and shedding of the nails, and delayed healing of cuts and wounds. After ingestion of large doses, renal and hepatic failure may develop, followed by pulmonary insufficiency.

paraqueduct (par-ak'-we-dukht) (*obs.*) a lateral extension of the cerebral aqueduct.

pararabin (pah-rar'-ah-bin) a carbohydrate residuum identified by Reichardt (1875) and obtained by depriving agar of its nitrogen (Bordet-Zung, 1914).

parareaction (par'-ah-re-ak'shun) Meyer's term for paranoia and paranoid states.

pararectal (par'-ah-rek'tal) beside the rectum.

parareducine (par'-ah-re-du'sin) [*para-* + *reducin*] a leuko-maine found in the urine.

parareflexia (par'-ah-re-flek'se-ah) any disorder or derangement of the reflexes.

pararenal (par'-ah-re'nal) beside the kidney.

pararhizoclasia (par'-ah-ri'zo-kla'se-ah) [*para-* + Gr. *rhiza* root + *klasis* destruction + *-ia*] inflammatory destruction of the deep layers of the alveolar process and the periodontal membrane around the roots of a tooth. Cf. *perirhizoclasia*.

pararhotacism (par'-ah-ro'tah-sizm) [*para-* + Gr. *rhō* the Greek letter *η*] imperfect pronunciation of the sound of the letter *r*.

pararosaniline (par'-ah-ro-zan'i-lin) a basic dye, triaminotriphenylmethane chloride; generally, the chief constituent of basic fuchsin. **p. pamoate**, chemical name: α -(*p*-aminophenyl)- α -(4-imino-2,5-cyclohexadien-1-ylidene)-*p*-toluidine-4',4'-methylenebis(3-hydroxy-2-naphthoate) (2:1) dihydrate; an antischistosomal, [(C₁₈H₁₈N₃)₂·C₂₂H₁₄O₆·2H₂O].

pararrhythmia (par'-ah-rith'me-ah) parasystole.

pararthria (par-ar'thre-ah) [*para-* + Gr. *arthron* articulation] disordered or imperfect utterance of speech.

Parasaccharomyces (par'-ah-sak'-ah-ro-mi'sēz) *Candida*.

parasacral (par'-ah-sa'kral) situated near the sacrum.

Parasal (par'-ah-sal) trademark for preparations of aminosalic acid.

parasalpingeal (par'-ah-sal-pin'je-al) situated beside or in the wall of the fallopian or uterine tube.

parasalpingitis (par'-ah-sal-pin-jit'is) [*para-* + Gr. *salpinx* tube + *-itis*] inflammation of the tissues around a fallopian or uterine tube.

parascapular (par'-ah-skap'u-lar) near the scapula.

Parascaris (par-as'kar-is) a genus of nematode worms of the family Ascarididae. **P. equorum**, a species found in horses.

parascarlatina (par'-ah-skar'lah-ti'nah) Duke's disease.

parascarlet (par'-ah-skar'let) Duke's disease.

parasecretion (par'-ah-se-kre'shun) any disorder or derangement of secretion; also, hypersecretion.

parasellar (par'-ah-sel'ar) near or around the sella turcica.

parasexual (par'-ah-seks'u-al) accomplished by other than sexual means, as by genetic study of *in vitro* somatic cell hybrids rather than by pedigree studies.

parasexuality (par'-ah-seks'u-al'i-te) perverted sexuality.

parasigmatism (par'-ah-sig'mah-tizm) [*para-* + Gr. *sigma* the Greek letter ς] imperfect pronunciation of *s* and *z* sounds.

parasinoid (par'-ah-si-noi'dal) [*para-* + *sinus*] situated along the course of a sinus.

parasite (par'-ah-sit) [Gr. *parasitos*] 1. a plant or animal which lives upon or within another living organism at whose expense it obtains some advantage. See *symbiosis*. 2. the smaller, less complete component of asymmetrical conjoined twins, which is attached to and dependent on the autosite. **accidental p.**, an organism parasitizing an animal other than the usual host, as *Dirofilaria* in man. **allantoic p.**, a twin embryonic parasite in which the weaker member takes its blood supply from the stronger through its umbilical circulation. **animal p.**, any parasite that is a member of the animal kingdom, including many protozoa, helminths, annelids, arthropods, etc. **celozoic p.**, a parasite which lives in a body cavity. **cytozoic p.**, a parasite which lives in body cells, as a plasmodium. **diheteroxenic p.**, a parasite which requires two intermediate hosts. **ectophytic p.**, a plant ectoparasite. **ectozoic p.**, an animal ectoparasite. **endophytic p.**, a plant endoparasite. **entozoic p.**, a parasite which lives in the lumen of the intestine. **eurytrophic p.**, an ectoparasite which can feed on various hosts. **facultative p.**, an organism which may be parasitic upon another but which is capable of independent existence. **hematozoic p.**, a parasite which lives in the blood. **incidental p.**, accidental p. **intermittent p.**, a parasite which lives in its host only at times, being free living during the interval; called also *occasional p.* **karyozoic p.**, a parasite which lives in cell nuclei. **malarial p.**, *Plasmodium*. **obligatory p.**, a parasite which cannot live apart from its host. **occasional p.**, intermittent p. **periodic p.**, a parasite that resides in its host for short periods. **permanent p.**, a parasite which lives in its host from early life until maturity or death. **plant p.**, any parasite of the vegetable kingdom. **specific p.**, one normal to its current host. **spurious p.**, an organism which is parasitic on hosts other than man, but which may pass through the human body without causing harm. **stenotrophic p.**, an ectoparasite which can feed on one host only. **temporary p.**, a para-

site which lives free of its host during part of its life cycle. **teratoid p.**, a fetal parasite which appears as a tumor-like mass. **vegetable p.**, any parasite of the vegetable kingdom, such as a fungus.

parasitemia (par'-ah-si-te'me-ah) the presence of parasites (especially malarial parasites) in the blood.

parasitic (par'-ah-sit'ik) [Gr. *parasitikos*] pertaining to, of the nature of, or caused by a parasite.

parasitocidal (par'-ah-sit'i-si'dal) destructive to parasites.

parasiticide (par'-ah-sit'i-sid) [L. *parasitus* a parasite + *caedere* to kill] 1. destructive to parasites. 2. an agent that is destructive to parasites.

parasitifer (par'-ah-sit'i-fer) [*parasite* + L. *ferre* to bear] an organism which serves as the host of a parasite.

parasitism (par'-ah-si'tizm) 1. symbiosis in which one population (or individual) adversely affects the other, but cannot live without it. 2. infection or infestation with parasites.

parasitization (par'-ah-sit'i-za'shun) infection or infestation with a parasite.

parasitogenic (par'-ah-si'to-jen'ik) [Gr. *parasitos* parasite + *gennan* to produce] caused by parasites.

parasitoid (par'-ah-si'toid) resembling a parasite.

parasitologist (par'-ah-si-tol'o-jist) an expert in parasitology.

parasitology (par'-ah-si-tol'o-je) [Gr. *parasitos* parasite + *-logy*] the science or study of parasites and parasitism.

parasitosis (par'-ah-si-to'sis) infection or infestation with parasites.

parasitotrope (par'-ah-si'to-trōp) parasitotropic.

parasitotropic (par'-ah-si'to-trop'ik) [*parasite* + Gr. *trepein* to turn] having special affinity for parasites.

parasitotropism (par'-ah-si-tot'ro-pizm) parasitotropy.

parasitotropy (par'-ah-si-tot'ro-pe) the affinity of a drug for infective parasites.

parasoma (par'-ah-so'mah) paranucleus.

parasomnia (par'-ah-som'ne-ah) a state in which there is no response to stimuli, verbal or mental, except that of a reflex nature.

paraspadias (par'-ah-spa'de-as) [*para-* + Gr. *spadon* a rent] a developmental anomaly in which the urethra opens upon one side of the penis.

paraspasm (par'-ah-spazm) [L. *paraspasmus*; Gr. *paraspasmos*] spasm of the corresponding muscles on both sides of the body.

paraspasmus (par'-ah-spaz'mus) paraspasm. **p. faciale**, a painless motor disturbance affecting both sides of the face.

paraspecific (par'-ah-spē-sif'ik) having curative properties in addition to the specific one.

Paraspirillum (par'-ah-spi-ril'um) a genus of microorganisms of the family Spirillaceae, suborder Pseudomonadineae, order Pseudomonadales, made up of spiral or S-shaped cells having a well-marked thickening at the middle and tapering toward the ends. The type species is *P. vej dov'skii*.

parasplenic (par'-ah-sple'nik) beside the spleen.

parasternal (par'-ah-ster'nal) [*para-* + Gr. *sternon* sternum] situated beside the sternum.

parasthenia (par'-as-the'ne-ah) [*para-* + Gr. *sthenos* strength + *-ia*] a condition of organic tissue causing it to function at abnormal intervals.

parastruma (par'-ah-stroo'mah) a goiter-like enlargement of a parathyroid gland or glands.

parasuicide (par'-ah-soo'i-sid) an apparent attempt at suicide, as by self-poisoning or self-mutilation, in which death is not the desired outcome.

parasymphathetic (par'-ah-sim'pah-thet'ik) of or pertaining to that division of the autonomic nervous system made up of the ocular, bulbar, and sacral divisions; see under *system*.

parasymphathicotonia (par'-ah-sim-path'ē-ko-to'ne-ah) vagotonia.

parasymphathin (par'-ah-sim'pah-thin) a hypothetical product given off when a cranial autonomic nerve is stimulated, and having stimulating action on the parasympathetic nervous system.

parasymphatholytic (par'-ah-sim'pah-tho-lit'ik) [*parasympathetic* + Gr. *lytikos* dissolving] 1. producing effects resembling those of interruption of the parasympathetic nerve supply to a part. 2. an agent that opposes the effects of impulses conveyed by the parasympathetic nerves. Called also *anticholinergic*.

parasymphathomimetic (par'-ah-sim'pah-tho-mi-met'ik) [*parasympathetic* + Gr. *mimētikos* imitative] 1. producing effects resembling those of stimulation of the parasympathetic nerve supply to a part. 2. an agent that produces effects similar to those produced by stimulation of the parasympathetic nerves. Called also *cholinergic*.

parasynanche (par'-ah-sin'an-ke) [Gr. *parasynanche*] inflammation of a parotid gland or of the throat muscles.

parasynapsis (par'-ah-si-nap'sis) [*para-* + Gr. *synapsis* conjunc-

tion] the union of chromosomes side by side during meiosis. Cf. *telosynapsis*.

parasyndesis (par'ah-sin-de'sis) parasygnapsis.

parasyovitis (par'ah-sin'o-vi'tis) [*para-* + *synovitis*] inflammation of the tissues about a synovial sac.

parasyphilis (par'ah-sif'i-lis) a disease condition following and partly due to syphilis, but not itself syphilitic.

parasyphilitic (par'ah-sif'i-lit'ik) pertaining to a sequel or result of syphilis, but not to syphilis itself.

parasyphilosis (par'ah-sif'i-lo'sis) parasyphilis.

parastole (par'ah-sis-to-le) [*para-* + Gr. *systolē* contraction] a cardiac irregularity attributed to the interaction of two foci that independently initiate cardiac impulses at different rates; as a rule, one of these foci is the sinoatrial node (the normal pacemaker), and the ectopic focus is usually in the ventricle. Each focus, and thus each rhythm, is protected from the influence of the other.

paratarsium (par'ah-tar'se-um) [*para-* + *tarsus*] the side of the tarsus of the foot.

paratenic (par'ah-ten'ik) denoting an intermediate host, sometimes called transfer host, of a parasite that is not essential to (neither hindering nor hastening) the completion of the parasite's life cycle.

paratenon (par'ah-ten'on) [*para-* + Gr. *tenōn* tendon] the fatty areolar tissue filling the interstices of the fascial compartment in which a tendon is situated.

paratereseomania (par'ah-ter-e'se-o-ma'ne-ah) [Gr. *paratēresis* observation + *mania* madness] a mania for seeing new sights.

paratherapeutic (par'ah-ther'ah-pu'tik) (*obs.*) iatrogenic.

parathion (par'ah-thi'on) chemical name: diethyl-*p*-nitrophenyl thiophosphate. An agricultural insecticide, C₁₀H₁₄NO₃PS, highly toxic to humans and animals.

parathormone (par'ah-thor'mōn) parathyroid hormone.

parathymia (par'ah-thi'me-ah) [*para-* + Gr. *thymos* spirit] a perverted, contrary, or inappropriate mood.

parathyroid (par'ah-thi'roid) [*para-* + *thyroid*] 1. situated beside the thyroid gland. 2. one of the parathyroid glands; see under *gland*. 3. [USP] a sterile preparation of the water-soluble principle(s) of the parathyroid glands; administered parenterally as an antihypocalcemic, especially in the treatment of hypoparathyroidism with tetany.

parathyroidal (par'ah-thi-roi'dal) pertaining to the parathyroid glands.

parathyroidectomy (par'ah-thi'roid-ek'to-miz) to deprive of the parathyroid glands by surgical removal.

parathyroidectomy (par'ah-thi'roid-ek'to-me) [*parathyroid* + Gr. *ektomē* excision] excision of a parathyroid gland.

parathyroidin (par'ah-thi-roi'din) an extract of the parathyroid glands. It increases absorption of calcium from the gut, increases resorption of calcium and phosphorus from bone, and increases reabsorption of calcium and excretion of phosphorus by the kidney.

parathyroidoma (par'ah-thi'roi-do'mah) parathyroid adenoma or carcinoma.

parathyropathy (par'ah-thi-rop'ah-the) any disease of the parathyroid glands.

parathyroprival (par'ah-thi'ro-pri'val) pertaining to or caused by absence of the parathyroid glands.

parathyroprivia (par'ah-thi-rop'ri-ve-ah) the condition resulting from the removal of the parathyroid glands.

parathyroprivic (par'ah-thi'ro-pri'vik) parathyroprival.

parathyroprivous (par'ah-thi-rop'ri-vus) parathyroprival.

parathyrotoxicosis (par'ah-thi'ro-tok'si-ko'sis) an acute form of parathyroid intoxication; a morbid condition resulting from overactivity of the parathyroid glands.

parathyrotrophic (par'ah-thi-ro-trof'ik) parathyrotropic.

parathyrotropic (par'ah-thi-ro-trop'ik) having an affinity for the parathyroid glands.

paratoloid, paratoloidin (par'ah-to'loid; par'ah-to-loi'din) Koch's lymph, or tuberculin; see *tuberculin*.

paratonia (par'ah-to'ne-ah) [*para-* + Gr. *tonos* tension + *-ia*] a disorder of tone or tension.

paratope (par'ah-tōp) [*para* + Gr. *topos* a place] the site on the molecule of an antibody which attaches to an antigen; an antibody combining site. Cf. *epitope*.

paratose (par'ah-tōs) an unusual sugar found to be a polysaccharide somatic antigen of *Salmonella* species.

paratrachoma (par'ah-tra'h-ko'mah) [*para-* + *trachoma*] a conjunctivitis resembling trachoma, caused by the genital inclusion virus. See *inclusion blennorrhoea*, under *blennorrhoea*.

paratrimma (par'ah-trim'ah) [*para-* + Gr. *tribein* to rub] (*obs.*) 1. irritation; chafing. 2. intertrigo, especially between the buttocks.

paratripsis (par'ah-trip'sis) 1. (*obs.*) irritation or chafing. 2. suppression of tissue waste.

paratriptic (par'ah-trip'tik) 1. (*obs.*) pertaining to chafing. 2. pertaining to or preventing waste of body tissue. 3. an agent that prevents the waste of body tissue.

paratrophic (par'ah-trof'ik) [*para-* + Gr. *trophē* nutrition] requiring living material or complex protein matter for food. Cf. *metatrophic*.

paratrophy (par-at'ro-fe) [*para-* + Gr. *trophē* nutrition] dystrophy.

paratuberculosis (par'ah-tu-ber'ku-lo'sis) 1. a disease resembling tuberculosis but not due to *Mycobacterium tuberculosis*. 2. John's disease.

paratuberculous (par'ah-tu-ber'ku-lus) having an indirect relation to tuberculosis; due to conditions produced by tuberculosis; pertaining to paratuberculosis.

paratype (par'ah-tip) any strain of bacteria, other than the holotype, that is specifically stated to be the one on which the original description of the taxon was based.

paratyphilitis (par'ah-tif-li'tis) [*para-* + Gr. *typhlos* blind + *-itis*] inflammation of the postperitoneal tissue of the cecum.

paratyphoid (par'ah-ti'foid) a term used originally for enteritis due to *Salmonella* species other than *S. typhosa*, and regarded as milder than typhoid. Properly used only as a generic term for infection due to *Salmonella* of all groups (principally B-E) except *S. typhosa*. Called also *Brion-Kayser disease*, *enteric fever*, *paratyphoid fever*, and *Schottmüller's disease*.

paratypic (par'ah-tip'ik) paratypical.

paratypical (par'ah-tip'i-kal) differing from the type.

paraumbilical (par'ah-um-bil'i-kal) alongside the umbilicus.

paraungual (par'ah-ung'gwal) [*para-* + L. *unguis* nail] near or beside a nail.

paraurethra (par'ah-u-re'thrah) an accessory urethral canal.

paraurethral (par'ah-u-re'thral) near the urethra.

paraurethritis (par'ah-u're-thri'tis) inflammation of the tissues near the urethra.

parauterine (par'ah-u'ter-in) alongside the uterus.

paravaccinia (par'ah-vak-sin'e-ah) an eruption of red hemispherical tubercles which sometimes follows vaccination, but which is not vaccinal in nature.

paravaginal (par'ah-vaj'i-nal) beside or alongside of the vagina.

paravaginitis (par'ah-vaj'i-ni'tis) inflammation of the tissue about the vagina.

paravenous (par'ah-ve'nus) beside a vein.

paravertebral (par'ah-ver'tē-bral) beside the vertebral column.

paravitaminosis (par'ah-vi'tah-mī-no'sis) a vitamin deficiency disorder without specific lesions.

paraxial (par-ak'se-al) [*para-* + *axis*] situated alongside an axis.

paraxon (par-ak'son) [*para-* + *axon*] a collateral branch of an axon.

Parazoa (par-ah-zo'ah) a subdivision of Metazoa comprising the sponges, i.e., multicellular animals having incipient tissues, but no mouth or digestive tract or organ systems. Cf. *Eumetazoa*.

parazone (par'ah-zōn) one of the white bands alternating with the dark bands (diazones) in the layers of enamel prisms and seen in cross-section of a tooth.

parazon (par'ah-zōn) [*para-* + Gr. *zōon* animal] (*obs.*) an animal organism parasitic upon or within an animal; animal parasite.

parbenidazole (par-ben'dah-zōl) chemical name: (5-butyl-1*H*-benzimidazol-2-yl)carbamic acid methyl ester; a veterinary antelmintic with nematocidal action, C₁₃H₁₇N₃O₂.

parconazole hydrochloride (par-ko'nah-zōl) chemical name: *cis*-1-[[2-(2,4-dichlorophenyl)-4-[(2-propynyloxy)methyl]-1,3-dioxolan-2-yl]methyl]-1*H*-imidazole monohydrochloride; an antifungal, C₁₇H₁₆Cl₂N₂O₃·HCl.

Paré (par-ā'), Ambroise (1510-1590). A French surgeon, the most celebrated surgeon of the Renaissance, who reformed the treatment of gunshot wounds by abolishing cauterization with boiling oil. He also practiced ligation of arteries after amputation, and re-introduced podalic version into obstetrics. His famous aphorism, *Je le pansay, et Dieu le guarit* ("I dressed him and God healed him"), first appeared in 1585, in the fourth edition of his collected works.

parectasia (par'ek-ta'se-ah) parectasis.

parectasis (par-ek'tah-sis) [*para-* + Gr. *ektasis* extension] excessive stretching or distention of a part or organ.

parectropia (par'ek-tro'pe-ah) [*para-* + Gr. *ek* out + *tropos* a turning] apraxia.

Paredrine (par'ah-drēn) trademark for preparations of hydroxyamphetamine hydrobromide.

paregoric (par'ē-gor'ik) [Gr. *parēgorikos* consoling] [USP] a preparation of powdered opium, anise oil, benzoic acid, camphor, diluted alcohol, and glycerin, each 100 ml. of which yields 35-45 mg. of anhydrous morphine; used as an antiperistaltic, especially

in the treatment of diarrhea, administered orally. Formerly called *camphorated opium tincture*.

paregorism (par'ē-gor'izm) addiction to paregoric.

pareidolia (par'i-do'le-ah) [*para-* + Gr. *eidōlon* phantom + *-ia*] an illusion in which visual images are given a fantastic interpretation.

parelectronic (par'e-lek'tro-nom'ik) giving no response to electromotive stimuli.

parelectromy (par'e-lek-tron'o-me) [*para-* + *electric* + Gr. *nomos* law] a condition in which there is a decrease in strength of an electric current passed through a muscle.

pareleidin (par'el-e'i-din) the keratin of epidermal cells derived from eleidin of the stratum lucidum.

parencephalia (par'en-sē-fa'le-ah) [*para-* + Gr. *enkephalos* brain + *-ia*] congenital defect of the brain.

parencephalocele (par'en-sef'ah-lo-sēl) [*parencephalon* + Gr. *kēlē* hernia] hernial protrusion of the cerebellum.

parencephalon (par'en-sef'ah-lon) [*para-* + Gr. *enkephalos* brain] the cerebellum.

parencephalous (par'en-sef'ah-lus) [*para-* + Gr. *enkephalos* brain] having a congenital deformity of the brain.

parenchyma (pah-reng'kī-mah) [Gr. "anything poured in beside"] the essential elements of an organ; used in anatomical nomenclature as a general term to designate the functional elements of an organ, as distinguished from its framework, or stroma. **p. of lens**, *substantia lentis*. **p. tes'tis** [NA], **p. of testis**, the seminiferous tubules, which are located within the lobules of the testis.

parenchymal (pah-reng'kī-mal) pertaining to or of the nature of parenchyma.

parenchymatitis (par'eng-kim'ah-ti'tis) inflammation of a parenchyma.

parenchymatous (par'eng-kim'ah-tus) pertaining to or of the nature of parenchyma.

parenchymula (par'eng-kim'u-lah) the embryonic stage next succeeding that called the closed blastula.

Parendomyces (par'en-do-mi'sēz) a former genus of yeastlike fungi, species of which have now been included in the genus *Candida*.

Parengen (pah-ren'o-jen) trademark for a preparation of fibrinogen (def. 2).

parental (pah-ren'tal) of, pertaining to, or derived from the parents.

parenteral (pah-ren'ter-al) [*para-* + Gr. *enteron* intestine] not through the alimentary canal but rather by injection through some other route, as subcutaneous, intramuscular, intraorbital, intracapsular, intraspinal, intrasternal, intravenous, etc.

parapicoele (par-ep'i-sēl) (*obs.*) either of the lateral recesses of the fourth ventricle of the brain.

parepididymis (par'ep-i-did'i-mis) paradidymis.

parepigastic (par'ep-i-gas'trik) near the epigastrium.

parergasia (par'er-ga'ze-ah) [*para-* + Gr. *ergasia* work] 1. Kraepelin's term for perverted functioning, such as closing the eyes instead of putting out the tongue. 2. Meyer's term for personality twist reactions such as schizophrenia.

parergastic (par'er-gas'tik) [*para-* + Gr. *ergon* work] Meyer's term for psychic disorders marked by twist reactions, i.e., incongruities, oddities, mannerisms, or fantastic or passivity projections (schizophrenia and paranoia).

paresis (pah-re'sis, par'ē-sis) [Gr. "relaxation"] slight or incomplete paralysis; often used alone to mean general paresis (dementia paralytica). **galloping p.**, an acutely and rapidly progressing paresis. **general p.**, dementia paralytica. **juvenile p.**, a form of general paresis occurring in children as a result of congenital syphilis. **stationary p.**, paresis which has become arrested.

Parest (par'est) trademark for a preparation of methaqualone hydrochloride.

paresthesia (par'es-the'ze-ah) [*para-* + Gr. *aisthēsis* perception] morbid or perverted sensation; an abnormal sensation, as burning, prickling, formication, etc. **Berger's p.**, paresthesia in young persons of one or both lower limbs, accompanied by weakness, but without objective symptoms. **Bernhardt's p.**, meralgia paresthetica. **visceral p.**, an abnormal sensation referred to some viscous; not a mere excess or defect of a normal visceral sensation.

paresthetic (par'es-thet'ik) pertaining to or marked by paresthesia.

paretic (pah-ret'ik) pertaining to or affected with paresis.

parfocal (par-to'kal) [L. *par* equal + *focus* hearth] retaining correct focus on changing powers in microscopy.

pargylene hydrochloride (par'gi-lēn) [USP] chemical name: *N*-methyl-*N*-2-propynylbenzylamine hydrochloride. An antihypertensive, C₁₁H₁₃N·HCl, occurring as a white or practically white crystalline powder; administered orally.

Parham band (pahr'am) [F. W. Parham, New Orleans surgeon, 1885–1927] see under *band*.

parhedonia (par'he-do'ne-ah) Freud's name for the abnormalities of sexuality, such as the obsessive desire to see, to exhibit, or to touch the sexual organs of oneself or another.

parhormone (par-hor'mōn) any metabolic substance of the body which influences the functions of other organs or tissues. For example, carbon dioxide.

parica (par'i-kah') a narcotic snuff prepared from the leguminous seeds of *Piptadenia* (*Anadenanthera*) species, a tree of Brazil. The seeds contain dimethyltryptamine and related psychotomimetic indole alkaloids. Called also *cohoba*.

paricine (pah-ris'in) a quinoline alkaloid, C₁₆H₁₈ON₂, from the bark of *Cinchona succirubra* Parvon. (Rubiaceae), red bark cinchona.

paries (pa're-ez), pl. *pari'etes* [L.] a wall; [NA] a general term for the wall of an organ or body cavity. **p. ante'rior vagi'nae** [NA], the wall of the vagina that is intimately associated with the posterior wall of the bladder and urethra. **p. ante'rior ventric'uli** [NA], the wall of the stomach that is directed toward the ventral surface of the body. **p. carot'icus ca'vi tym'pani** [NA], the anterior wall of the tympanic cavity, related to the carotid canal in which is lodged the internal carotid artery. **p. exter'nus duc'tus cochlea'ris** [NA], the external wall of the cochlear duct, adjacent to the outer wall of the cochlea. **p. infe'rior or'bitae** [NA], the inferior wall of the orbit, formed by the orbital surfaces of the maxilla and the zygomatic and palatine bones; called also *floor of orbit*. **p. jugula'ris ca'vi tym'pani** [NA], the floor of the tympanic cavity, which is in intimate relation with the jugular fossa, which lodges the bulb of the internal jugular vein. **p. labyrin'thicus ca'vi tym'pani** [NA], the medial wall of the tympanic cavity. **p. latera'lis or'bitae** [NA], the lateral wall of the orbit, formed by the orbital surfaces of the great wing of the sphenoid bone, the zygomatic bone, and the zygomatic process of the frontal bone. **p. mastoi'deus ca'vi tym'pani** [NA], the posterior wall of the tympanic cavity, related to the mastoid portion of the temporal bone. **p. media'lis or'bitae** [NA], the medial wall of the orbit, formed by parts of the maxillary, lacrimal, ethmoid, and sphenoid bones. **p. membrana'ceus bron'chi** [NA], that part of the wall of the smaller bronchi where the cartilage is deficient. **p. membrana'ceus ca'vi tym'pani** [NA], the outer, or lateral, wall of the tympanic cavity, formed mainly by the tympanic membrane. **p. membrana'ceus tra'cheae** [NA], the posterior part of the wall of the trachea where the cartilaginous rings are deficient. **p. poste'rior vagi'nae** [NA], the wall of the vagina that is intimately associated with the anterior wall of the rectum. **p. poste'rior ventric'uli** [NA], the wall of the stomach that is directed toward the back of the body. **p. supe'rior or'bitae** [NA], the superior wall of the orbit, formed chiefly by the orbital plate of the frontal bone and by the orbital surface of the lesser wing of the sphenoid bone; called also *roof of orbit*. **p. tegmenta'lis ca'vi tym'pani** [NA], the roof of the tympanic cavity, related to part of the petrous portion of the temporal bone. **p. tympan'icus duc'tus cochlea'ris** [NA], tympanic wall of cochlear duct: the wall of the cochlear duct that separates it from the scala tympani, composed of the osseous spiral laminae and the basilar membrane. **p. ves-tibula'ris duc'tus cochlea'ris** [NA], vestibular wall of cochlear duct: the thin anterior wall of the cochlear duct, which separates it from the scala vestibuli; called also *membrana spiralis ductus cochlearis* [NA alternative] or *spiral membrane of cochlear duct*.

parietal (pah-ri'ē-tal) [L. *parietalis*] 1. of or pertaining to the walls of a cavity. 2. pertaining to or located near the parietal bone, as the parietal lobe.

parietes (pah-ri'ē-tēz) [L.] plural of *paries*.

parietitis (pah-ri'ē-ti'tis) inflammation of the wall of an organ.

parietofrontal (pah-ri'ē-to-fron'tal) pertaining to the parietal and frontal bones, gyri, or fissures.

parietography (pah-ri'ē-tog'rah-fe) roentgenographic visualization of the walls of an organ. **gastric p.**, roentgenographic visualization of the stomach wall by special technique, as a means of detecting early gastric neoplasm.

parieto-occipital (pah-ri'ē-to-ok-sip'i-tal) pertaining to the parietal and occipital bones or lobes.

parietosphenoid (pah-ri'ē-to-sfe'noid) pertaining to the parietal and sphenoid bones.

parietosplanchnic (pah-ri'ē-to-splank'nik) parietovisceral.

parietosquamosal (pah-ri'ē-to-skwah-mo'sal) pertaining to the parietal bone and the squamous portion of the temporal bone.

parietotemporal (pah-ri'ē-to-tem'po-ral) pertaining to the parietal and temporal bones or lobes.

parietovisceral (pah-ri'ē-to-vis'er-al) both parietal and visceral; pertaining to the walls of a cavity and the viscera within it.

Parinaud's oculoglandular syndrome (conjunctivitis), ophthalmoplegia (pah-ri-nōz') [Henri Parinaud, French ophthalmologist, 1844–1905] see under *ophthalmoplegia* and *syndrome*.

pari passu (pa're pas'u) [L., "at equal pace"] coincidentally with; to the same proportion or degree.

parity (par'i-te) 1. [L. *parere* to bring forth, produce] para; the condition of a woman with respect to her having borne viable offspring. Cf. *gravidity*. 2. [L. *par* equal] equality; close correspondence or similarity.

Park's aneurysm (parks) [Henry Park, English surgeon, 1744–1831] see under *aneurysm*.

Parker's fluid (park'erz) [George Howard Parker, American zoologist, 1864–1955] see under *fluid*.

Parker's incision (park'erz) [William Parker, New York surgeon, 1800–1884] see under *incision*.

Parkinson's disease, facies (sign) (par'kin-sunz) [James Parkinson, English physician, 1755–1824] see *paralysis agitans*, and under *facies*. See also *parkinsonism*.

parkinsonian (par'kin-sun'e-an) pertaining to parkinsonism.

parkinsonism (par'kin-sun-izm") a group of neurological disorders characterized by hypokinesia, tremor, and muscular rigidity. See *parkinsonian syndrome*, under *syndrome*, and see *paralysis agitans* (Parkinson's disease). **postencephalitic p.**, parkinsonian syndrome.

parlodion (par-lo'de-on) collodion in a shredded form, used as an embedding medium in microscopical technique.

Parnate (par'nāt) trademark for a preparation of tranlycypromine sulfate.

paroccipital (par'ok-sip'i-tal) [*para-* + L. *occiput* occiput] near the occipital bone.

parodontal (par'o-don'tal) situated near or beside a tooth.

parodontid (par'o-don'tid) [*para-* + Gr. *odous* tooth] a tumor on the gingiva.

parodontitis (par'o-don-ti'tis) periodontitis.

parodontium (par'o-don'she-um) periodontium.

parodontopathy (par'o-don-top'ah-the) periodontopathy.

parodontosis (par'o-don-to-sis) periodontosis.

parolivary (par-ol'i-var'e) [*para-* + *olivary*] situated near the olive or olivary nucleus.

paramomycin (par'o-mo-mi'sin) chemical name: O-2,6-diamino-2,6-dideoxy-β-L-idopyranosyl-(1→3)-O-β-D-ribofuranosyl-(1→5)-O-[2-amino-2-deoxy-α-D-glucopyranosyl-(1→4)]-2-deoxystreptamine. An aminoglycoside antibiotic, C₂₃H₄₅N₅O₁₄, derived from *Streptomyces rimosus* var. *paramomycinus*, which is effective against a wide variety of gram-negative, gram-positive, and acid-fast bacteria. **p. sulfate** [USP], the sulfate salt of paramomycin, C₂₃H₄₅N₅O₁₄·xH₂SO₄, occurring as a creamy white to yellow, amorphous powder; used orally as an antiamebic.

paromphalocoele (par'om-fal'o-sēl) [*para-* + Gr. *omphalos* navel + *kēlē* hernia] hernia situated near the navel.

paroniria (par'o-ni're-ah) [*para-* + Gr. *oneiros* dream + *-ia*] morbid dreaming.

paronychia (par'o-nik'e-ah) [*para-* + Gr. *onyx* nail + *-ia*] inflammation involving the folds of tissue surrounding the finger-nail. Cf. *felon* and *eponychia*, and see *onychia*. **herpetic p.**, a herpesvirus infection marked by pyogenic and vesicular paronychia, occurring in hospital workers. **p. tendino'sa**, septic inflammation of the sheath of the tendon of a finger.

paronychial (par'o-nik'e-al) of or pertaining to paronychia; of or pertaining to the nail folds, as a paronychial wart.

paroorchoric (par'o-o-fo'ri) pertaining to the paroophoron.

paroophoritis (par'o-o-fo-ri'tis) 1. inflammation of the paroophoron. 2. inflammation of the tissues about the ovary.

paroophoron (par'o-o-fo'o-ron) [*para-* + Gr. *ōon* egg + *pherein* to bear] [NA] an inconstantly present small group of coiled tubules between the layers of the mesosalpinx, being a remnant of the excretory part of the mesonephros.

parophthalmia (par'of-thal'me-ah) [*para-* + Gr. *ophthalmos* eye + *-ia*] inflammation of the connective tissue around the eye.

parophthalmomcus (par'of-thal-mong'kus) [*para-* + Gr. *ophthalmos* eye + *onkos* mass] a tumor situated near the eye.

paropsis (par-op'sis) [*para-* + Gr. *opsis* vision] disorder of the sense of vision.

parorchidium (par'or-kid'e-um) [*para-* + Gr. *orchis* testicle] misplacement of a testis or testes.

parorchis (par-or'kis) the epididymis.

parorexia (par'o-rek'se-ah) [*para-* + Gr. *orexis* appetite] perversion of the appetite, with craving for special articles of diet or for articles that are not suitable for food.

parosmia (par-oz'me-ah) [*para-* + Gr. *osmē* smell] any disease or perversion of the sense of smell.

parosphresia (par'os-fre'ze-ah) [*para-* + Gr. *osphrēsis* smelling + *-ia*] disorder or perversion of the sense of smell.

parosphresis (par'os-fre'sis) parosphresia.

parosteal (par-os'te-al) pertaining to the outer surface of the periosteum.

parosteitis (par'os-te-i'tis) [*para-* + *osteitis*] inflammation of the tissues around a bone.

parosteosis (par'os-te-o'sis) [*para-* + Gr. *osteon* bone + *-osis*] ossification of the tissues outside of the periosteum.

parostitis (par'os-ti'tis) parosteitis.

parostosis (par'os-to'sis) parosteosis.

parotic (pah-rot'ik) [*para-* + Gr. *ous* ear] situated or occurring near the ear.

parotid (pah-rot'id) [*para-* + Gr. *ous* ear] situated or occurring near the ear, as the parotid gland.

parotidean (pah-rot'i-de'an) pertaining to the parotid gland.

parotidectomy (pah-rot'i-dek'to-me) [*parotid* + Gr. *ektomē* excision] excision of the parotid gland.

parotiditis (pah-rot'i-di'tis) parotitis.

parotidoscirrhus (pah-rot'i-do-skir'us) [*parotid* + Gr. *skirrhos* hardness] hardening of the parotid gland.

parotidosclerosis (pah-rot'i-do-skle-ro'sis) hardening of the parotid gland.

parotin (par-o'tin) a proteinaceous factor extractable from human parotid gland, which supposedly has hormonal properties; in rabbits, it promotes mesenchymal growth and calcification of teeth, lowers serum calcium levels, and affects the leukocyte count.

parotitic (par'o-tit'ik) pertaining to parotitis.

parotitis (par'o-ti'tis) inflammation of the parotid gland caused by viruses, such as the mumps virus and coxsackievirus, and by bacteria, including *Staphylococcus aureus*, *Pneumococcus*, and *Streptococcus*. **celiac p.**, inflammation of the parotid gland after abdominal disease or injury. **epidemic p.**, mumps. **p. phlegmono'sa**, parotitis that goes on to suppuration. **post-operative p.**, an acute parotitis due to infection (usually with staphylococci) of the parotid gland following a surgical procedure; it is marked by rapid onset, frequently with severe pain and rapid swelling of the glands, and by trismus, low-grade fever, headache, malaise, and leukocytosis. It affects generally debilitated patients, usually middle-aged or older, suffering from dehydration, suppression of salivary secretion, vomiting, or mouth-breathing. **staphylococcal p.**, postoperative parotitis caused by staphylococci.

parous (pa'rus) [L. *parere* to bring forth, produce] having borne one or more viable offspring.

parovarian (par'o-va're-an) 1. situated beside the ovary. 2. pertaining to the paroovarium (epoophoron).

parovariotomy (par'o-va're-ot'o-me) [*paroovarium* + Gr. *tomē* a cutting] excision of a paroophoritic cyst.

parovarit (par'o-vah-ri'tis) inflammation of the paroovarium (epoophoron).

paroovarium (par'o-va're-um) [*para-* + L. *ovarium* ovary] epoophoron.

paroxia (pah-rok'se-ah) (*obs.*) pica.

paroxysm (par'ok-sizm) [Gr. *paroxysmos*] 1. a sudden recurrence or intensification of symptoms. 2. a spasm or seizure.

paroxysmal (par'ok-siz'mal) recurring in paroxysms.

Parpanit (par-pan'it) trademark for a preparation of caramiphen hydrochloride.

Parrot's atrophy of newborn, disease (pseudoparalysis), sign (node), ulcer (par-ōz') [Jules Marie Parrot, French physician, 1839–1883] see *marasmus*, see *syphilitic pseudoparalysis*, under *pseudoparalysis*, and see under *sign* and *ulcer*.

Parry's disease (pär'ēz) [Caleb Hillier Parry, English physician, 1755–1822] Graves' disease.

pars (parz), pl. *par'tes* [L.] a division or part; [NA] a general term for a particular portion of a larger area, organ, or structure. **p. abdomina'lis esoph'agi** [NA], the part of the esophagus below the diaphragm, joining the stomach. **p. abdomina'lis et pelvi'na syste'matis autonom'ici** [NA], **p. abdomina'lis et pelvi'na syste'matis sympath'ici**, the portion of the autonomic nervous system contained within the abdomen and pelvis. Its parasympathetic components (vagus nerves) arise from the medulla oblongata and sacral spinal cord; its sympathetic components from the thoracic and upper lumbar cord. **p. abdomina'lis mus'culi pectora'lis majo'ris** [NA], the portion of the pectoralis major muscle originating from the aponeurosis of the obliquus externus abdominis. **p. abdomina'lis oesoph'agi**, p. abdominalis esophagi. **p. abdomina'lis ure'teris** [NA], that portion of the ureter extending from the kidney to the terminal line of the pelvis. **p. ala'ris mus'culi nasa'lis** [NA], dilator muscle of nose: the part of the nasal muscle that arises from the maxilla below the nose and inserts into the ala nasi. **p. alveola'ris mandib'ulae** [NA], the superior portion of the body of the mandible, which contains sockets for the teeth. **p. amor'pha**, the spherical, finely granular body surrounded by the nucleolus of the nucleolus. **p. ana'lis rec'ti**, canal analis. **p. ante'rior commis-su'rae anterio'ris cer'ebri** [NA], the part of the anterior cerebral commissure that interconnects the two olfactory bulbs; it is rudimentary in man. **p. ante'rior fa'ciei diaphrag-mat'icae hep'atis** [NA], the portion of the diaphragmatic surface of the liver that is directed toward the ventral surface of the body. **p. ante'rior lob'uli quadrangula'ris**, the anterior

portion of the quadrangular cerebellar lobule. **p. ante'rior rhinenceph'ali**, the anterior part of the rhinencephalon. **p. anula'ris vagi'nae fibro'sae digito'rum ma'nus** [NA], annular ligaments of fingers: a strong transverse band of fibrous tissue in the vagina fibrosa of the fingers, crossing the flexor tendons at the level of the upper half of the proximal phalanx. **p. anula'ris vagi'nae fibro'sae digito'rum pe'dis** [NA], annular ligaments of toes: a fibrous band in the toes resembling those of similar name in the fingers. **p. ascen'dens duode'ni** [NA], the terminal part of the duodenum, ending at the duodenojejunal flexure. **p. basila'ris fascic'uli pedunculomamilla'ris**, fibers in the basal or ventral part of the mamillary peduncle which connect the mamillary body and interpeduncular region. **p. basila'ris os'sis occipita'lis** [NA], a quadrilateral plate of the occipital bone that projects superiorly and anteriorly from the foramen magnum. **p. basila'ris pon'tis**, former NA term for *p. ventralis pontis*. **p. bucca'lis hypophys'eos**, Rathke's pouch. **p. buccopharyn'gea mus'culi constricto'ris pharyn'gis superio'ris** [NA], buccopharyngeal muscle: the part of the constrictor pharyngis superior muscle arising from the pterygomandibular raphe; called also *musculus buccopharyngeus*. **p. cae'ca oc'uli**, discus nervi optici. **p. cae'ca ret'inae**, the parts of the retina that are not sensitive to light, namely, the pars ciliaris retinae and pars iridica retinae. **p. calcaneocuboi'dea ligamen'ti bifurca'ti**, ligamentum calcaneocuboideum. **p. calcaneonavicular'is ligamen'ti bifurca'ti**, ligamentum calcaneonaviculare. **p. cardi'aca ventric'uli** [NA], the part of the stomach immediately adjacent to and surrounding the gastric opening of the esophagus, distinguished only by the presence of the cardiac glands, and lacking acid (parietal) and pepsin (chief) cells. Called also *cardia*. **p. cartilagin'ea sep'ti na'si** [NA], cartilaginous part of nasal septum: the plate of cartilage forming the anterior part of the nasal septum; called also *septum cartilagineum nasi*. **p. cartilagin'ea tu'bae auditi'vae** [NA], the part of the auditory tube that is chiefly supported by the tubal cartilage; it extends from the pars ossea to the pharyngeal orifice of the auditory tube. **p. caverno'sa ure'threa vir'ilis**, *p. spongiosa urethrae masculinae*. **p. centra'lis ventric'uli latera'lis cer'ebr'i** [NA], the part of the lateral ventricle found within the parietal lobe of the cerebrum; it communicates with the anterior, posterior, and inferior horns. **p. cephal'ica et cervica'lis syste'matis autonom'ici** [NA], *p. cephal'ica et cervica'lis syste'matis sympath'ici*, the portion of the autonomic nervous system contained in the head and neck. Its sympathetic components arise from the upper thoracic cord, and are relayed by cervical sympathetic ganglia; its parasympathetic components arise from the brain stem via oculomotor, facial, glossopharyngeal, vagus, and accessory nerves, and are relayed by way of ciliary, pterygopalatine, otic, submandibular, and intrinsic ganglia. **p. ceratopharyn'gea mus'culi constricto'ris pharyn'gis me'dii** [NA], ceratopharyngeal muscle: the portion of the constrictor pharyngis medius muscle arising from the greater cornu of the hyoid bone; called also *musculus ceratopharyngeus*. **p. cervica'lis esoph'agi** [NA], the part of the esophagus that is located in the cervical region, related anteriorly to the trachea and the recurrent laryngeal nerves, posteriorly to the longus colli muscle and vertebral column, and laterally to the lobes of the thyroid gland and the common carotid arteries. **p. cervica'lis medul'lae spina'lis** [NA], that part of the spinal cord lodged within the cervical part of the vertebral canal and giving rise to the eight pairs of cervical spinal nerves. **p. cervica'lis oesoph'agi**, *p. cervicalis esophagi*. **p. cervica'lis syste'matis sympath'ici**, see *p. cephalica et cervicalis systematis autonomici*. **p. chondropharyn'gea mus'culi constricto'ris pharyn'gis me'dii** [NA], chondropharyngeal muscle: the portion of the constrictor pharyngis medius muscle arising from the lesser cornu of the hyoid bone; called also *musculus chondropharyngeus*. **p. cilia'ris ret'inae** [NA], the two layers of epithelium lining the basal lamina of the ciliary body. **p. clavicula'ris mus'culi pectora'lis majo'ris** [NA], the portion of the pectoralis major muscle originating from the clavicle. **p. cochlea'ris ner'vi octa'vi** [NA], the cochlear nerve: the part of the eighth cranial nerve concerned with hearing, consisting of fibers that arise from bipolar cells in the spiral ganglion and have their receptors in the spiral organ of the cochlea; called also *nervus cochleae*. **p. convolu'ta lob'uli cortica'lis re'nis** [NA], the part of the renal cortex surrounding the intracortical prolongations of the renal pyramids and composed of convoluted tubules. **par'tes corpo'ris huma'ni** [NA], the category in anatomical nomenclature embracing the names of the various parts of the human body, from head to foot. **p. costa'lis diaphrag'matis** [NA], the part of the respiratory diaphragm arising from the inner surfaces of the ribs and their cartilages. **p. cricopharyn'gea mus'culi constricto'ris pharyn'gis inferio'ris** [NA], cricopharyngeal muscle: the portion of the constrictor pharyngis inferior muscle arising from the cricoid cartilage; called also *musculus cricopharyngeus*. **p. crucifor'mis vagi'nae fibro'sae digito'rum ma'nus** [NA], cruciate ligaments of fingers: one of the diagonal bundles of the fascia of the fingers which cross each other on the dorsal

surface of each digit at the level of the distal end of the proximal phalanx; called also *ligamenta cruciata digitorum manus*. **p. crucifor'mis vagi'nae fibro'sae digito'rum pe'dis** [NA], cruciate ligaments of toes: one of the bundles of fascial fibers in the toes resembling those of similar name in the fingers; called also *ligamenta cruciata digitorum pedis*. **p. cupula'ris reces'sus epitympan'ici** [NA], cupular space: the part of the epitympanic recess above the head of the malleus. **p. descen'dens duode'ni** [NA], the part of the duodenum between the superior and inferior parts, into which the bile and pancreatic ducts open. **p. dex'tra faci'ei diaphragmat'icae hep'atis** [NA], the portion of the diaphragmatic surface of the liver that is directed toward the right side of the body. **p. dista'lis lo'bi anterio'ris hypophys'eos** [NA], see *pituitary gland*, under *gland*. **p. dorsa'lis pon'tis** [NA], the tegmental part of the pons, which resembles the medulla oblongata in structure and is continuous with the tegmentum of the mesencephalon. **p. feta'lis placen'tae** [NA], fetal placenta: the nonmaternal part of the placenta, derived not from the fetus but from the trophoblast that envelops the fetus; from within outward, it consists of amnion, chorionic plate, and chorionic villi. Called also *placenta foetalis*. **p. fibro'sa**, the portion of the nucleolus containing chiefly filaments. **p. flac'cida membra'nae tym'pani** [NA], the small portion of the tympanic membrane, between the malleolar folds. **p. fronta'lis cap'sulae inter'nae**, *crus anterius capsulae internae*. **p. fronta'lis coro'nae radia'tae**, the portion of the corona radia'ta contained within a frontal lobe of the brain. **p. fronta'lis oper'culi**, *operculum frontale*. **p. fronta'lis radiatio'nis corpo'ris callo'si**, the frontal part of the radiatio corporis callosi, composed of fibers sweeping forward from the genu into the frontal lobe. **p. functiona'lis**, *stratum functionale*. **par'tes genita'les exter'nae mulie'bres**, *partes genitales femininae externae*. **par'tes genita'les exter'nae vir'iles**, *partes genitales masculinae externae*. **par'tes genita'les femini'nae exter'nae** [NA], the external genitalia of the female, comprising the pudendum femininum, clitoris, and urethra femininum; called also *partes genitales externae muliebres*. **par'tes genita'les masculi'nae exter'nae** [NA], the external genitalia of the male, comprising the penis, scrotum, and urethra masculina; called also *partes genitales externae viriles*. **p. gla'bra**, a smooth zone or area, such as the outer smooth zone of the lip appearing early in its embryonic development. **p. glossopharyn'gea mus'culi constricto'ris pharyn'gis superio'ris** [NA], glossopharyngeal muscle: the part of the constrictor pharyngis superior muscle arising from the side of the root of the tongue. **p. granulo'sa**, the portion of the nucleolus containing chiefly granules. **p. gris'ea hypothal'ami**, the gray matter, i.e., nuclear masses, of the hypothalamus. **p. horizonta'lis duode'ni** [NA], that part of the duodenum situated between the descending and ascending parts, crossing from right to left ventral to the third lumbar vertebra; called also *p. inferior duodeni* [NA alternative] or *inferior part of duodenum*. **p. horizonta'lis os'sis palati'ni**, *lamina horizontalis ossis palatini*. **p. ili'aca lin'ae termina'lis**, *linea arcuata ossis ilii*. **p. infe'rior duode'ni**, NA alternative for *p. horizonta'lis duodeni*. **p. infe'rior fos'sae rhomboi'deae**, a space at the lower part of the floor of the fourth ventricle of the brain, between the restiform bodies. **p. infe'rior gy'ri fronta'lis me'dii**, the inferior portion of the middle frontal gyrus. **p. infe'rior par'tis vestibula'ris ner'vi octa'vi** [NA], the inferior of the branches into which the vestibular part of the eighth cranial nerve divides peripherally; it gives rise to the posterior ampullar and saccular nerves. **p. inflex'a**, the bar of a horse's hoof. **p. infraclavicula'ris plex'us brachia'lis** [NA], the part of the brachial plexus that lies in the axilla, below the level of the clavicle. In it arise the medial and lateral pectoral, musculocutaneous, medial brachial cutaneous, medial antebrachial cutaneous, median, ulnar, radial, subscapular, thoracodorsal, and axillary nerves. **p. infundibula'ris lo'bi anterio'ris hypophys'eos** [NA], see *pituitary gland*, under *gland*. **p. intercartilagin'ea ri'mae glot'tidis** [NA], the part of the rima glottidis between the arytenoid cartilages; called also *interarytenoid space*. **p. interme'dia fos'sae rhomboi'deae**, the middle part of the rhomboid fossa. **p. interme'dia lo'bi anterio'ris hypophys'eos** [NA], see *pituitary gland*, under *gland*. **p. intermembrana'cea ri'mae glot'tidis** [NA], the part of the rima glottidis between the vocal folds. **p. interstia'lis tu'bae uteri'nae**, *pars uterina tubae uterinae*. **p. irid'ica ret'inae** [NA], the two layers of pigmented epithelium lining the posterior part of the iris. **p. labia'lis mus'culi orbicula'ris o'ris** [NA], the part of the orbicular muscle of the mouth whose fibers are restricted to the lips. **p. lacrima'lis mus'culi orbicula'ris oc'uli** [NA], the part of the orbicularis oculi muscle that arises from the posterior lacrimal ridge of the lacrimal bone, to become continuous with the palpebral portion. **p. laryn'gea pharyn'gis** [NA], laryngopharynx: the portion of the pharynx that lies below the upper edge of the epiglottis and opens into the larynx and esophagus. **p. latera'lis ar'cus longitudina'lis pe'dis** [NA], that part of the longitudinal arch of the foot formed by the calcaneus, the cuboid bone, and the lateral two metatarsal bones.

p. latera'lis musculo'rum intertransversario'rum postero'rum cer'vicis [NA], the lateral part of the posterior intertransverse muscles of the neck. **p. latera'lis os'sis occipita'lis** [NA], lateral part of occipital bone: one of the paired parts of the occipital bone which form the lateral boundaries of the foramen magnum, each being prominently characterized by the presence of one of the occipital condyles. **p. latera'lis os'sis sa'cri** [NA], the part or mass of the sacrum on either side lateral to the dorsal and pelvic sacral foramina; called also *lateral mass of sacrum*. **p. li'bera colum'nae for'nicis**, the postcommissural component of the columns of the fornix. **p. lumba'lis diaphrag'matis** [NA], the portion of the respiratory diaphragm that arises from the lumbar vertebrae, comprising the right and left diaphragmatic crura, the right crus arising from the upper three or four vertebrae, and the left from the upper two or three. **p. lumba'lis medul'lae spina'lis** [NA], that part of the spinal cord lodged within the lower thoracic part of the vertebral canal (in adults) and giving rise to the five pairs of lumbar spinal nerves. **p. mamilla'ris hypothal'ami**, the mamillary bodies. **p. margina'lis mus'culi orbicula'ris o'ris** [NA], the part of the orbicular muscle of the mouth whose fibers blend with those of adjacent muscles. **p. margina'lis sul'ci cin'guli**, the portion of the cingulate gyrus that turns off at a right angle and is directed toward the dorsal margin of the cerebral hemisphere. **p. mastoi'dea os'sis tempora'lis**, mastoid bone: the posterior portion of the petrous part of the temporal bone, bounded anteriorly by the external acoustic meatus and articulating superiorly with the parietal bone and posteriorly with the occipital bone. **p. media'lis ar'cus longitudina'lis pe'dis** [NA], that part of the longitudinal arch of the foot formed by the calcaneus, talus, and the navicular, cuneiform, and first three metatarsal bones. **p. media'lis musculo'rum intertransversario'rum postero'rum cer'vicis** [NA], the medial part of the posterior intertransverse muscles of the neck. **p. mediastina'lis faci'e'i media'lis pulmo'nis** [NA], the part of the medial surface of each lung that is adjacent to the mediastinum. **p. membrana'cea sep'ti atrio'rum**, **p. membrana'cea septi interventricularis cordis**. **p. membrana'cea sep'ti interventricularis cor'dis** [NA], the very small, completely membranous area of the interventricular septum of the heart; situated near the root of the aorta, it can be viewed between the opposed margins of the right and posterior semilunar valves of the aorta. Called also *septum membranaceum ventriculorum cordis*. **p. membrana'cea sep'ti na'si** [NA], membranous septum of nose: the anterior inferior part of the nasal septum, beneath the cartilaginous part; it is composed of skin and subcutaneous tissues. Called also *septum membranaceum nasi*. **p. membrana'cea ure'thrae masculi'nae** [NA], **p. membrana'cea ure'thrae viri'lis**, the portion of the male urethra between the pars prostatica and pars spongiosa, and traversing the urogenital diaphragm and the deep perineal space. **p. mo'bilis sep'ti na'si** [NA], mobile part of nasal septum: the part of the nasal septum at the apex of the nose, formed by skin, subcutaneous tissue, and the greater alar cartilages; called also *septum mobile nasi*. **p. muscula'ris sep'ti interventricularis cor'dis** [NA], the thick muscular partition forming the greater part of the septum between the ventricles of the heart; called also *septum musculare ventriculorum cordis*. **p. mylopharyn'gea mus'culi constricto'ris pharyn'gis superio'ris** [NA], the part of the constrictor pharyngis superior muscle arising from the mylohyoid ridge of the mandible; called also *musculus mylopharyngeus*. **p. nasa'lis os'sis fronta'lis** [NA], the small, irregularly shaped process that projects downward from the medial part of the squama of the frontal bone to articulate with the nasal bones and the frontal processes of the maxillae. Called also *prefrontal bone* and *nasal process of frontal bone*. **p. nasa'lis pharyn'gis** [NA], nasopharynx: the part of the pharynx that lies above the level of the soft palate. **p. nervo'sa hypophys'eos**, see *pituitary gland*, under *gland*. **p. obli'qua mus'culi cricothyroidi** [NA], the fibers of the cricothyroid muscle that are inserted into the inferior horn, caudal margin, and inner surface of the thyroid cartilage. **p. occipita'lis cap'sulae inter'nae**, crus posterior capsulae interna. **p. occipita'lis coro'nae radia'tae**, the part of the corona radiata contained within the occipital lobe. **p. occipita'lis radiatio'nis corpo'ris callo'si**, the occipital part of the radiatio corporis callosi, composed of fibers from the splenium bending backward toward the occipital pole. **p. opercula'ris gy'ri fronta'lis inferio'ris**, former NA term for the part of the inferior frontal lobe adjacent to the parietal lobe and overhanging the insula. **p. op'tica hypothal'ami** (*obs.*), the optic chiasma and tracts. **p. op'tica ret'inae** [NA], the part of the retina that contains receptors sensitive to light, extending posteriorly from the ora serrata on the inner surface of the choroid and continuous at the optic disk with the optic nerve; it consists of an outer pigmented stratum and an inner, multilayered cerebral stratum. **p. ora'lis pharyn'gis** [NA], the division of the pharynx lying between the soft palate and the upper edge of the epiglottis; called also *oropharynx*. **p. orbita'lis glan'dulae lacrima'lis** [NA], the main part of the lacrimal gland, limited in front by the orbicularis muscle and the orbital septum; called also *glandulae lacrimalis superior*. **p.**

orbita'lis gy'ri fronta'lis inferio'ris, former NA term for the part of the inferior frontal gyrus rostral to the anterior branch of the lateral cerebral sulcus. **p. orbita'lis mus'culi orbicula'ris oc'uli** [NA], the part of the orbicularis oculi muscle that arises from the medial margin of the orbit and surrounds it and the palpebral part of the muscle, inserting near the site of origin. **p. orbita'lis os'sis fronta'lis** [NA], the horizontally placed part of the frontal bone that forms the greater part of the roof of the orbit and of the floor of the anterior cranial fossa; it is separated from its fellow of the other side by the ethmoid incisura. Called also *orbital plate of occipital bone*. **p. os'sea sep'ti na'si** [NA], the bony part of the nasal septum, composed posterosuperiorly of the perpendicular plate of the ethmoid bone and posteroinferiorly of the vomer. **p. os'sea tu'bae auditivae** [NA], the part of the auditory tube that lies within the temporal bone, extending from the tympanic orifice to the pars cartilaginea of the auditory tube. **p. palpebra'lis glan'dulae lacrima'lis** [NA], the part of the lacrimal gland that projects laterally into the upper eyelid; called also *glandula lacrimalis inferior*, and *Rosenmüller's gland* or *node*. **p. palpebra'lis mus'culi orbicula'ris oc'uli** [NA], palpebral part of orbicularis oculi muscle: the part of the orbicularis oculi muscle that is contained in the eyelids, originating from the medial palpebral ligament and inserting in the lateral canthus. **p. parasymphath'ica syste'matis nervo'si autonom'ici** [NA], the craniosacral division of the autonomic nervous system, its preganglionic fibers traveling with cranial nerves III, VII, IX, X, and XI, and with the second to fourth sacral ventral roots; it innervates the heart, the smooth muscle and glands of the head and neck, and the thoracic, abdominal, and pelvic viscera. The ganglion cells with which these fibers synapse are in or near the organs innervated. Called also *parasympathetic nervous system*. **p. parieta'lis coro'nae radia'tae**, the part of the corona radiata contained in the parietal lobe. **p. parieta'lis oper'culi**, operculum frontoparietale. **p. parieta'lis radiatio'nis corpo'ris callo'si**, the fibers of the radiatio corporis callosi passing into the parietal lobe. **p. pelvi'na syste'matis sympath'ici**, see *p. abdominalis et pelvina systematis autonomici*. **p. pelvi'na ure'teris** [NA], the portion of the ureter that extends from the terminal line of the pelvis to the urinary bladder. **p. perpendicularis os'sis palati'ni**, lamina perpendicularis ossis palatini. **p. petro'sa os'sis tempora'lis** [NA], petrous portion of temporal bone: a pyramid of dense bone located at the base of the cranium; one of the three parts of the temporal bone, it houses the organ of hearing. **p. pharyn'gea lo'bi anterioris hypophys'eos** [NA], the portion of the pituitary gland formed from Rathke's pouch. **p. pla'na cor'poris cilia'ris**, orbiculus ciliaris. **p. plica'ta cor'poris cilia'ris**, corona ciliaris. **p. poste'rior commissu'rae antero'ris cer'e'bri** [NA], the part of the anterior cerebral commissure that interconnects the middle and inferior temporal gyri, the parahippocampal gyri, and the amygdaloid bodies of the two sides. **p. poste'rior faci'e'i diaphragmat'icae hep'atis** [NA], the portion of the diaphragmatic surface of the liver that is directed toward the dorsal surface of the body; called also *facies posterior hepatis*. **p. poste'rior lob'uli quadrangula'ris**, the posterior portion of the quadrangular cerebellar lobule. **p. poste'rior rhinenceph'ali**, the posterior portion of the rhinencephalon. **p. pri'ma radi'cis ner'vi facia'lis** (*obs.*), the ascending part of the root of the facial nerve. **p. profun'da glan'dulae parot'idis** [NA], that part of the parotid gland located deep to the facial nerve. **p. profun'da mus'culi masse'teris** [NA], the deep portion of the masseter muscle, the fibers of which arise from the medial surface of the zygomatic arch and the fascia over the temporal muscle, and are directed vertically downward. **p. profun'da mus'culi sphinc'teris a'ni exter'ni** [NA], the part of the sphincter ani externus muscle that surrounds the upper part of the anal canal. **p. prostat'ica ure'thrae masculi'nae** [NA], **p. prostat'ica ure'thrae viri'lis**, the part of the male urethra that passes through the prostate. **p. pterygopharyn'gea mus'culi constricto'ris pharyn'gis superio'ris** [NA], pterygopharyngeal muscle: the part of the constrictor pharyngis superioris muscle arising from the caudal part and hamulus of the medial pterygoid plate; called also *musculus pterygopharyngeus*. **p. pu'bica lin'ae termina'lis**, the pubic part of the terminal line of the pelvis. **p. pylo'rica ventric'uli** [NA], the caudal one-third of the stomach, consisting of the pyloric antrum and canal, and distinguished by the presence of the pyloric glands and by the absence of parietal cells. **p. quadra'ta** [NA], the quadrilateral portion of the medial segment of the left hepatic lobe. **p. radia'ta lob'uli cortica'lis re'nis** [NA], any of the intracortical prolongations of the renal pyramids; called also *processus Ferreini lobuli corticalis renis* and *pyramid of Ferrein*. **p. rec'ta mus'culi cricothyroidi** [NA], the fibers of the cricothyroid muscle that are inserted into the caudal margin of the thyroid cartilage. **p. retrolentifor'mis cap'sulae inter'nae** [NA], that part of the internal capsule resting on the lateral surface of the thalamus behind the lentiform nucleus, and containing the posterior thalamic radiation. **p. sacra'lis lin'ae termina'lis**, the sacral part of the terminal line of the pelvis. **p. secun'da radi'cis ner'vi facia'lis** (*obs.*), the

second portion of the root of the facial nerve. **p. spongio'sa ure'thrae masculi'nae** [NA], the portion of the male urethra found within the corpus spongiosum of the penis; called also **p. cavernosa ure'thrae virilis**. **p. squamo'sa os'sis tempora'lis** [NA], squamous part of temporal bone; the flat, scalelike, anterior and superior portion of the temporal bone; called also *squama temporalis*. **p. sterna'lis diaphrag'matis** [NA], the portion of the diaphragm that arises from the inner aspect of the xiphoid process of the sternum. **p. sternocosta'lis mus'culi pectora'lis majo'ris** [NA], the portion of the pectoralis major muscle that originates from the sternum and the ribs. **p. subcuta'nea mus'culi sphinc'teris a'ni exter'ni** [NA], the part of the sphincter ani externus muscle that surrounds the lowermost portion of the anal canal. **p. subfronta'lis sul'ci cin'guli**, the portion of the cingulate sulcus under the superior frontal gyrus. **p. sublentifor'mis cap'sulae inter'nae** [NA], the part of the internal capsule lying ventral to the back part of the lentiform nucleus, and containing the temporo-pontile, geniculocalcarine, and auditory radiation fibers. **p. superficia'lis glan'dulae parot'idis** [NA], that part of the parotid gland located superficial to the facial nerve. **p. superficia'lis mus'culi masse'teris** [NA], the superficial portion of the masseter muscle, the fibers of which arise from the anterior part of the zygomatic arch and are directed downward and backward. **p. superficia'lis mus'culi sphinc'teris a'ni exter'ni** [NA], the part of the sphincter ani externus muscle that lies just deep to the pars subcutanea, extending farther toward the rectum. **p. supe'rior duode'ni** [NA], the part of the duodenum adjacent to the pylorus, forming the superior flexure; called also *duodenal cap*. **p. supe'rior faci'ei diaphragmat'icae hep'atis** [NA], the portion of the diaphragmatic surface of the liver that is directed cranially. **p. supe'rior fos'sae rhomboi'deae**, the superior portion of the rhomboid fossa. **p. supe'rior gy'ri fronta'lis me'dii**, the superior portion of the middle frontal gyrus. **p. supe'rior par'tis vestibula'ris ner'vi octa'vi** [NA], the superior of the branches into which the vestibular part of the eighth cranial nerve divides peripherally; it gives rise to the utricular, anterior ampullar, and lateral ampullar nerves. **p. supraclavicu'laris plex'us brachia'lis** [NA], the part of the brachial plexus lying in the cervical region above the level of the clavicle, in which arise the dorsal scapular, long thoracic, and suprascapular nerves, and the nerve to the subclavius muscle. **p. sympath'ica syste'matis nervo'si autonom'ici** [NA], sympathetic nervous system: the portion of the autonomic nervous system that receives its fibers of connection with the central nervous system through the thoracolumbar outflow of visceral efferent fibers. These fibers (preganglionic) arise from cells in the thoracic and upper lumbar levels of the spinal cord, leave by way of ventral roots, and, by way of rami communicantes, enter sympathetic trunks, where some synapse with ganglion cells. The fibers (postganglionic) of these ganglion cells return to spinal nerves by way of rami communicantes to supply the blood vessels, smooth muscle, and glands of the trunk and limbs, or go as visceral branches to the blood vessels, smooth muscles, and glands of the head and neck, and the viscera of the thorax, abdomen, and pelvis. Some preganglionic fibers pass through the sympathetic trunks and synapse in the prevertebral ganglia; postganglionic fibers from those ganglia supply adjacent viscera. Called also *thoracolumbar or thoracolumbar division*. **p. tec'ta colum'nae for'nicis**, the crura of the fornix. **p. tegmenta'lis fascic'uli pedunculomamilla'ris**, former term for a tegmental component of the mamillary peduncle. **p. tempora'lis coro'nae radia'tae**, the part of the corona radiata contained in the temporal lobe. **p. tempora'lis oper'culi**, operculum temporale. **p. tempora'lis radiatio'nis cor'poris callo'si**, the fibers of the radiatio corporis callosi passing into the temporal lobe. **p. ten'sa membra'nae tym'pani** [NA], the larger portion of the tympanic membrane. **p. thoraca'lis esoph'agi** [NA], the part of the esophagus located in the thoracic region, and related anteriorly to the trachea and pericardium and posteriorly to the vertebral column. **p. thoraca'lis medul'lae spina'lis**, p. thoracica medullae spinalis. **p. thoraca'lis oesoph'agi**, p. thoracalis esophagi. **p. thoraca'lis syste'matis autonom'ici** [NA], p. thoraca'lis syste'matis sympath'ici, the parts of the autonomic nervous system contained within the thorax; its sympathetic components are derived from the upper thoracic cord, and its parasympathetic components, from the vagus nerves. It also contains preganglionic sympathetic fibers which reach abdominal viscera by way of thoracic splanchnic nerves. **p. thora'cica medul'lae spina'lis** [NA], the part of the spinal cord contained in the upper three-fourths of the thoracic part of the vertebral canal (in the adult), and giving rise to the twelve pairs of thoracic spinal nerves. **p. thyropharyngea mus'culi constricto'ris pharyng'is inferio'ris** [NA], thyropharyngeal muscle: the part of the constrictor pharyngis inferior muscle arising from the thyroid cartilage; called also *musculus thyropharyngeus*. **p. tibio-calca'nea ligamen'ti media'lis** [NA], the middle portion of the superficial fibers of the medial ligament of the ankle joint; attached superiorly to the medial malleolus of the tibia and inferiorly into nearly the entire length of the sustentaculum tali

of the calcaneus. Called also *ligamentum calcaneotibiale* and *calcaneotibial ligament*. **p. tibionavicula'ris ligamen'ti media'lis** [NA], the anterior portion of the superficial fibers of the medial ligament of the ankle joint; attached superiorly to the anterior surface of the medial malleolus of the tibia and inferiorly to the navicular bone and the margin of the calcaneonavicular ligament. Called also *ligamentum tibionaviculare* and *tibionavicular ligament*. **p. tibiotala'ris ante'rior ligamen'ti media'lis** [NA], the deeper portion of the medial ligament of the ankle joint; attached superiorly to the medial malleolus of the tibia and inferiorly to the medial surface of the talus. Called also *ligamentum talotibiale anterius* and *anterior talotibial ligament*. **p. tibiotala'ris poste'rior ligamen'ti media'lis** [NA], the posterior portion of the superficial fibers of the medial ligament of the ankle joint; attached superiorly to the posterior part of the medial malleolus of the tibia and inferiorly to the medial surface of the talus. Called also *ligamentum talotibiale posterius* and *posterior talotibial ligament*. **p. transver'sa** [NA], the transverse part of the left branch of the hepatic portal vein. **p. transver'sa mus'culi nasa'lis** [NA], the part of the nasal muscle that arises from the canine eminence of the maxilla and joins by common aponeurosis its fellow of the opposite side. **p. triangula'ris**, operculum frontale. **p. triangula'ris gy'ri fronta'lis inferio'ris** [NA], the wedge-shaped part of the inferior frontal lobe that lies between the anterior and ascending branches of the lateral sulcus of the cerebral hemisphere. **p. tubera'lis lo'bi antero'ris hypophys'eos**, former NA term for pars infundibularis lobis anterioris hypophyseos; see *pituitary gland*, under *gland*. **p. tympan'ica os'sis tempora'lis** [NA], the part of the temporal bone that forms the anterior and inferior walls and part of the posterior wall of the external auditory meatus. **p. umbilica'lis** [NA], the part of the left branch of the hepatic portal vein that passes from the hilum of the liver to the umbilicus. **p. uteri'nae placen'tae** [NA], uterine placenta: the maternally contributed part of the placenta, derived from the decidua basalis; called also *maternal placenta* and *placenta uterina*. **p. uteri'na tu'buae uteri'nae** [NA], the proximal part of the uterine tube, located within the wall of the uterus. **p. ventra'lis pon'tis** [NA], the part of the pons connecting the cerebrum, cerebellum, and medulla oblongata. It is a broad, transverse band that arches across the ventral surface of the rostral end of the rhombencephalon and on each side narrows to enter the cerebellum as the middle cerebellar peduncle. It comprises longitudinal fibers originating at the cerebral cortex, transverse fibers, and masses of gray matter, the pontine nuclei. Formerly called *p. basilaris pontis*. **p. verte-bra'lis faci'ei media'lis pulmo'nis** [NA], the part of the medial surface of each lung that is adjacent to the vertebral column. **p. vestibula'ris ner'vi octa'vi** [NA], vestibular nerve: the part of the eighth cranial nerve concerned with equilibration, consisting of fibers that arise from bipolar cells in the vestibular ganglion and divide peripherally into a superior and an inferior part, with receptors in the semicircular canals, utricle, and saccule. Called also *nervus vestibuli*. **p. villo'sa**, a villus-covered zone or area, such as the inner villus-covered zone of the lip appearing early in its embryonic development.

Parsidol (par'si-dol) trademark for a preparation of ethopropazine hydrochloride.

Parsons' disease (par'sunz) [James Parsons, English physician, 1705-1770] Graves' disease.

pars planitis (pars pla-ni'tis) a granulomatous uveitis of the pars plana of the ciliary body.

part (part) [L. *pars* a portion, piece, share] a division or portion. For names of other parts of various anatomical structures, see under *pars*. **broad p. of anterior annular ligament of leg**, retinaculum musculorum extensorum pedis superius. **colic p. of omentum**, omentum majus. **condylar p. of occipital bone**, pars lateralis ossis occipitalis. **exoccipital p. of occipital bone**, pars lateralis ossis occipitalis. **interstitial p. of uterine tube**, intramural p. of uterine tube, pars uterina tubae uterinae. **jugal p. of occipital bone**, pars lateralis ossis occipitalis. **lambdoidal (lower) p. of anterior annular ligament of leg**, retinaculum musculorum extensorum pedis inferius. **lateral p. of occipital bone**, pars lateralis ossis occipitalis. **mamillary p. of temporal bone**, pars mastoidea ossis temporalis. **occipital p. of occipital bone**, squama occipitalis. **parietal p. of pelvic fascia**, fascia diaphragmatis pelvis superior. **pectineal p. of inguinal ligament**, ligamentum lacunare. **presenting p.**, that portion of the fetus which is touched by the examining finger through the uterine cervix and, during labor, is bounded by the girdle of resistance. **squamous p. of occipital bone**, squama occipitalis. **squamous p. of temporal bone**, pars squamosa ossis temporalis. **sternocostal p. of diaphragm**, pars costalis diaphragmatis. **subphrenic p. of esophagus**, pars abdominalis esophagi. **superior p. of anterior annular ligament of leg**, retinaculum musculorum extensorum pedis superius. **tabular p. of occipital bone**, squama occipitalis. **tendinous p. of epicranium muscle**, galea aponeurotica. **third p. of quadriceps femoris muscle**, musculus adductor minimus. **transverse p. of anterior annular ligament of leg**, retinaculum musculo-

rum extensorum pedis superior. **vaginal p. of cervix**, portio vaginalis cervicis. **vertebral p. of diaphragm**, pars lumbalis diaphragmatis. **visceral p. of pelvic fascia**, fascia pelvis visceralis.

Part. aeq. abbreviation for *L. par'tes aequa'les*, equal parts.

partal (par'tal) pertaining to parturition.

partes (par'téz) [L.] plural of *pars*.

parthenocarp (par'thē-no-kar'pe) the reproduction of fruit without fertilization; it may occur naturally or be artificially induced.

parthenogenesis (par'thē-no-jen'ē-sis) [Gr. *parthenos* virgin + *genesis* production] a modified form of sexual reproduction by the development of a gamete without fertilization, as occurs in some plants and invertebrates, especially arthropods, e.g., honey bees and wasps, and in certain lizards. It may occur as a natural phenomenon or be induced by chemical, thermal, or mechanical stimulation (*artificial p.*).

parthenophobia (par'thē-no-fō'be-ah) [Gr. *parthenos* virgin + *phobēin* to be affrighted by] morbid dread of girls.

parthogenesis (par'tho-jen'ē-sis) parthenogenesis.

particle (par'tī-k'l) [L. *particula*, dim. of *partus* part] a tiny mass of material. **alpha p.**, a positively charged particle ejected from the nucleus of a radioactive atom, being a high-speed ionized atom of helium. A stream of these particles constitutes alpha rays. **attraction p.**, a small particle in the center of the centrosome. **beta p.**, an electron emitted from an atomic nucleus during beta decay. **C p.**, a noninfectious RNA virus that is postulated to be a normal inhabitant of all living cells and has been postulated as the single cause of all forms of cancer. **colloid p's**, in colloid chemistry the ultimate particles of a dispersed phase. In lyophilic colloids the particles are larger than a single molecule, being from 1 to 100 micromicrons in diameter, but not large enough to settle out by gravity; in a lyophobic colloid they may consist of one or more large organic molecules, as of starch or protein. **Dane p.**, a particle 42 nm. in diameter, containing hepatitis B antigen on its surface (HB_sAg and e antigen) and in its core (HB_cAg) and consisting of an outer lipoprotein coat surrounding a nucleocapsid which contains DNA. **disperse p's**, the dispersed phase of colloid system; the particles of colloid in a colloid system. **elementary p.**, any of the subatomic particles, including electrons, protons, neutrons, positrons, neutrinos, muons, etc. **elementary p's of mitochondria**, numerous minute, club-shaped granules with spherical heads attached to the inner membrane of a mitochondrion. **high-velocity p's**, nuclear particles, such as electrons, protons, and deuterons, given high speeds in an accelerator. **lens p's**, fine brown points of pigment on the anterior capsule of the lens, being the vestiges of the capsulopupillary membrane of the fetus. **ionizing p.**, one that directly produces ion pairs in its passage through matter. **nuclear p's**, Howell-Jolly bodies. **viral p.**, virion. **X-p.**, a hypothetical particle of matter, believed to arise from the collision of cosmic rays in the upper air. **Zimmermann's elementary p's**, blood platelets.

particulate (par-tik'u-lāt) composed of separate particles.

partigen (par'ti-jen) one of the hypothetical constituents of an antigen, which is considered as a mixture of partigens or partial antigens. See *haptēn*.

partinium (par-tin'e-um) an alloy of aluminum and tungsten.

partition (par-tish'un) something that separates or divides into parts. **oropharyngeal p.**, a protective barrier between the oral cavity and the pharynx made of moistened gauze sponges, useful during general anesthesia when a nasal mask is used.

particrin (par-tri'sin) an antifungal and antiprotozoal produced by *Streptomyces aureofaciens*, consisting of a mixture in a constant ratio (about 1:1) of two polytene substances having very similar structures and biological properties. See also *mepartricin*.

parturient (par-tu're-ent) [L. *parturiens*] giving birth, or pertaining to childbirth; by extension, a woman in labor.

parturifacient (par'tu-re-fa'shent) [L. *parturire* to have the pains of labor + *facere* to cause] 1. inducing or facilitating childbirth. 2. an agent that induces or facilitates childbirth.

parturiometer (par'tu-re-om'ē-ter) [L. *parturitio* childbirth + *metrum* measure] a device used in measuring the expulsive power of the uterus.

parturition (par'tu-rish'un) [L. *parturitio*] the act or process of giving birth to a child; see *labor*.

partus (par'tus) [L.] (*obs.*) labor, or childbirth. **p. agrippinus** (*obs.*), breech delivery. **p. caesar'us** (*obs.*), delivery by cesarean section. **p. immatu'rus** (*obs.*), premature labor. **p. matu'rus** (*obs.*), labor at full term. **p. precipita'tus** (*obs.*), precipitate labor. **p. prematu'rus** (*obs.*), premature labor. **p. seroti'nus** (*obs.*), postmature labor. **p. sic'cus** (*obs.*), dry labor.

Part. vic. abbreviation for *L. parti'tis vi'cibus*, in divided doses.

parulis (pah-roo'lis) [*para-* + Gr. *oulon* gum] a gumboil or subperiosteal abscess of the gum.

parumbilical (par'um-bil'i-kal) alongside the navel.

paruria (par-u're-ah) [*para-* + Gr. *ouron* urine + *-ia*] any dis-

order of the urine or abnormal state of the urine or its discharge.

parvicellular (par'vi-sel'u-lar) [L. *parvus* small + *cellula* cell] composed of small cells.

Parvobacteriaceae (par'vo-bak-te're-a'se-e) a name formerly given the family of schizomycetes later called Brucellaceae.

parvoline (par'vo-lin) an amber-colored liquid poison, C₉H₁₃N, from decaying fish or horse flesh.

parvovirus (par'vo-vi'rus) [L. *parvus* small + *virus*] a group of extremely small, morphologically similar, ether-resistant, DNA viruses; the group includes the osteolytic hamster viruses and adeno-associated viruses. Called also *picodnavirus*.

parvule (par'vül) [L. *parvulus* very small] a very small pill, pellet, or granule.

Paryphostomum (par'e-fos'to-mum) a genus of flukes related to *Echinostoma*.

PAS para-aminosalicylic acid (see under *acid*); periodic acid-Schiff (see under *reaction*).

pascal (pas-kal', pas'kal) [after Blaise *Pascal*] the SI unit of pressure, which corresponds to a force of one newton per square meter; symbol, Pa.

Pascal's law (pas-kahlz') [Blaise *Pascal*, French scientist, 1623-1662] see under *law*.

Paschen's bodies, (**corpuscles**, **granules**) (pahs'kenz) [Enrique *Paschen*, Hamburg pathologist, 1860-1936] see under *body*.

Paschutin's degeneration (pas-ku'tinz') [Viktor Vasil'evich *Paschutin*, Russian pathologist, 1845-1901] see under *degeneration*.

paspalism (pas'pal-izm) poisoning due to the seeds of a grass, *Paspalum scrobiculatum*, of India.

passage (pas'sij) 1. a channel. 2. an evacuation of the bowels. 3. introduction of infectious material into an experimental animal or culture medium, followed by recovery of the infectious agent. 4. the act of moving from one place to another. 5. the introduction of a catheter, probe, sound, or bougie through a natural channel such as the urethra. **blind p.**, successive transfer of infection through experimental animals, chick embryo, or tissue culture, when overt lesions of disease are not apparent, at least in the earlier members of the series. **false p.**, an unnatural channel or meatus in a body structure, created by trauma or by disease. **serial p.**, the successive transfer of infection through a series of experimental animals by the inoculation of tissue, exudate, or other material containing the infectious agent.

Passavant's bar (**cushion**, **pad**, **ridge**) (pas'ah-vants') [Philip Gustav *Passavant*, German surgeon, 1815-1893] see under *bar*.

passenger (pas'en-jer) the fetus or any of the fetal membranes during labor.

Passiflora (pas'i-flo'rah) [L. *passio* passion + *flos* flower] a genus of twining plants of the warmer parts of America; passion flower. Many species, e.g., *P. incarnata* L. (Passifloraceae), were formerly used medicinally for their sedative and anodyne properties.

passive (pas'iv) [L. *passivus*] neither spontaneous nor active; not produced by active efforts.

passivism (pas'i-vizm) in psychiatry, sexual perversion with submission of the will to the partner.

passivity (pas-siv'i-te) 1. in psychiatry, a state of dependency on others and of failure to take initiative or personal responsibility; the individual is more childlike than mature, as in the passive-dependent personality. Also, a state in which psychotic delusions of being influenced by others or by outside forces are experienced. 2. in dentistry, the condition of rest assumed by the teeth, surrounding tissue, and denture when a removable partial denture is in place but not under masticatory pressure.

Past. abbreviation for *Pasteurella*.

pasta (pas'tah), pl. *pas'tae* [L.] paste.

paste (päst) [L. *pasta*] a semisolid preparation, generally for external use, of a fatty base, a viscous or mucilaginous base, or a mixture of starch and petrolatum. **aluminum p.**, a preparation of very finely powdered aluminum, liquid petrolatum, and zinc oxide ointment, used in dressing wounds, and applied topically to the skin around an intestinal stoma to prevent digestion. **arsenical p.**, a caustic paste containing arsenic.

bipp p., see *bipp*. **dextrinated p.**, a preparation of dextrin, glycerin, and distilled water, used as a vehicle. **Ihle's p.**, an ointment containing resorcin, starch, and zinc oxide in soft paraffin. **Lassar's p.**, zinc oxide and salicylic acid p. **Lassar's betanaphthol p.**, a paste containing betanaphthol, precipitated sulfur, soft soap, and petrolatum. **Lassar's plain zinc p.**, zinc oxide p. **Leunbach's p.**, a paste formerly used for injection into the uterus to induce abortion. **Morison's p.**, see under *method*. **Piffard's p.**, a paste made of copper sulfate, tartrated soda, and caustic soda, used in testing the urine for sugar. **triamcinolone acetone dental p.** [USP], a preparation containing 90 to 115 per cent of the labeled amount of triamcinolone acetone in a suitable emollient paste; used in the treatment of steroid-responsive oral inflammatory lesions and ulcerative lesions due to trauma, applied topically. **Vienna**

p., a caustic paste of potash and lime, applied for 10 to 15 minutes to the area to be cauterized. **zinc oxide p.** [USP], a preparation of zinc oxide and starch in white petrolatum, used topically as an astringent and protectant; called also *Lassar's plain zinc paste*. **zinc oxide and salicylic acid p.** [USP], **zinc oxide p. with salicylic acid**, a mixture of zinc oxide paste and salicylic acid, containing 23.5 to 25.5 per cent, by weight, of zinc oxide; used topically as an astringent and local protective. Called also *Lassar's p.* **zipp p.**, see *zipp*.

paster (pās'ter) the portion of a bifocal lens ground for near vision.

pastern (pas'tern) the portion of a horse's foot occupied by the first and second phalanges.

Pasteur's effect (reaction), method, solution (culture medium, fluid, liquid), theory (pas-terz') [Louis Pasteur, French chemist and bacteriologist, 1822-1895, who founded the science of microbiology and developed the technique of vaccination by attenuated virus, and whose discoveries embrace the entire field of microbial activity] see under *effect, method, solution, and theory*.

Pasteur-Chamberland filter (pas-ter'-shahm-ber-lah) [Louis Pasteur; Charles Edouard Chamberland, French bacteriologist, 1851-1908] see under *filter*.

Pasteurella (pas'tē-rel'ah) [Louis Pasteur] a genus of microorganisms of the family Brucellaceae, order Eubacteriales, made up of motile or nonmotile small, coccoid to rod-shaped, gram-negative cells occurring singly or in pairs, short chains, or groups. Many of the species in this genus have been reclassified as serotypes of *P. multocida*. **P. anapestifer**, an organism etiologically associated with septicemia in ducklings. **P. haemolytica**, an etiologic agent of shipping fever in cattle and of mastitis in sheep. It is considered by some to be a separate species distinct from the *P. multocida* group. Called also *P. mastitis*. **P. mastitis**, *P. haemolytica*. **P. multocida**, a species isolated from cattle, rabbits, fowl, sheep, and swine, which is the etiologic agent of the group of diseases known as the hemorrhagic septicemias. It is now considered that many species of *Pasteurella* are merely serotypes of *P. multocida*. Called also *P. septica*. **P. novicida**, *Francisella novicida*. **P. pestis**, *Yersinia pestis*. **P. pfaffii**, the etiologic agent of an epidemic septicemia in canaries, producing a necrotic enteritis. **P. pseudotuberculosis**, former name for *Yersinia pseudotuberculosis*. **P. septic**, *P. multocida*. **P. septic**, *Yersinia septic*. **P. tularensis**, *Francisella tularensis*.

Pasteurella (pas'ter-el'e-e) a name formerly given a tribe of schizomycetes.

pasteurellosis (pas'ter-ē-lo'sis) infection by microorganisms of the genus *Pasteurella*; see individual species, under *Pasteurella*.

Pasteuria (pas-tu're-ah) a genus of microorganisms of the family Pasteuriaceae, order Hyphomicrobiales, made up of pear-shaped, nonmotile cells remaining attached in cauliflower-like masses, which are parasitic on fresh-water crustacea. The type species is *P. ramo'sa*.

Pasteuriaceae (pas-tu're-a'se-e) a family of schizomycetes (order Hyphomicrobiales), made up of spherical or pear-shaped cells, sometimes growing on short stalks in a whorl-like arrangement. It includes two genera, *Blastocaulis* and *Pasteuria*.

pasteurization (pas'ter-i-za'shun) [Louis Pasteur] the process of heating milk or other liquids, e.g., urine, to a moderate temperature for a definite time, often to 60° C. for thirty minutes. This exposure kills most species of pathogenic bacteria and considerably delays other bacterial development.

pasteurizer (pas'ter-iz'er) an instrument used in effecting pasteurization.

Pastia's sign (lines) (pas'te-ahz) [C. Pastia, Rumanian physician] see under *sign*.

pastil (pas'til) pastille.

pastille (pas-tēl') [Fr.] 1. a troche in which the active ingredient is incorporated in a mass of sweetened gum, glycerin, and gelatin base. 2. an aromatic mass to be burnt as a fumigant. 3. a small disk of paper coated with platinocyanide of barium or other substance. The green color changes to brown when exposed to the roentgen ray. It was once used to estimate the amount of x-ray administered and also to test the intensity of ultraviolet radiation. **Sabouraud's p.**, a small disk of barium platinocyanide with acetate of starch and collodion, used to indicate by change of color the strength of roentgen rays.

pasty (pās'te) like paste in consistency and color; puffy, pitting, or slightly edematous.

patch (pach) [L. *pittacium*; Gr. *pittakion*] an area differing from the rest of a surface, in either color or texture, or both, but not elevated above it; a macule more than 3 or 4 cm. in diameter. **Bitot's p's**, see under *spot*. **cottonwool p's**, see under *spot*.

gray p., the lesion of common ringworm (*Microsporum audouinii*) of the scalp. **herald p.**, the initial lesion in pityriasis rosea, consisting of a solitary patch preceding the general eruption. **Hutchinson's p.**, a reddish or salmon-yellow patch of the cornea in syphilitic keratitis. **MacCallum's p.**, a sheet of gran-

ulation tissue in the deeper layers of the endocardium formed by extensive confluence of Aschoff nodules in the myocardium in rheumatic fever. **mucous p.**, a flat, rounded, grayish white erosion covered by a soggy membrane with an erythematous zone, occurring most often on the oral mucosa, and sometimes on the anogenital mucosa, in early active secondary syphilis. It contains vast numbers of treponemata and is therefore highly contagious.

Peyer's p's, oval elevated areas of lymphoid tissue on the mucosa of the small intestine, composed of many lymphoid nodules closely packed together (folliculi lymphatici aggregati [NA]). **salmon p.**, a salmon-colored spot in the cornea in syphilis of that structure. **shagreen p.**, see under *skin*. **smokers' p.**, leukoplakia. **soldiers' p's**, milk spots, def. 1. **white p.**, a white opaque spot on the pericardium or on the capsule of the spleen, due to rubbing against a nodule of a rib in rachitis.

patchouli (pat-shoo'le) a labiate herb of India, *Pogostemon patchouli*, Pellet., used chiefly in perfumery and soaps.

patefaction (pat'ē-fak'shun) [L. *patefacere* to lay open] the act of laying open.

Patein's albumin (pat-anz') [Patein, French physician, died 1928] acetosoluble albumin.

patella (pah-tel'ah) [L., dim of *patra* a shallow dish] [NA] a triangular sesamoid bone, about 5 cm. in diameter, situated at the front of the knee in the tendon of insertion of the quadriceps extensor femoris muscle. Called also *knee cap*. **p. bipartita**, a patella that is divided into two parts. **p. cubiti**, an anomalous sesamoid bone sometimes occurring over the extensor surface of the elbow joint. **floating p.**, a patella that is separated from the condyles by a large effusion in the knee. **p. parti'ta**, a patella that is divided into two or more parts. **slipping p.**, a patella that is easily movable and readily dislocated.

Patella's disease (pah-tel'ahz) [Vincenzo Patella, Italian physician, 1856-1928] see under *disease*.

patellapexy (pah-tel'ah-pek'se) [*patella* + Gr. *pēxis* fixation] the operation of suturing the patella to the lower end of the femur.

patellar (pah-tel'ar) [L. *patellarius*] of or pertaining to the patella.

patellectomy (pat'ē-lek'to-me) [*patella* + Gr. *ektomē* excision] excision or removal of the patella.

patelliform (pah-tel'i-form) shaped like the patella.

patellofemoral (pah-tel'o-fem'o-ral) pertaining to the patella and the femur.

patellometer (pat'e-lom'ē-ter) [*patella* + Gr. *metron* measure] an instrument for measuring the patellar reflex.

patency (pa'ten-se) [L. *patens* open] the condition of being wide open.

patent (pa'tent) [L. *patens*] 1. open, unobstructed, or not closed. 2. apparent, evident.

Paterson's bodies, nodules [Robert Paterson, Scottish physician, 1814-1889] molluscum bodies.

Paterson's syndrome [Donald Rose Paterson, laryngologist in Cardiff (Wales), 1863-1939] Plummer-Vinson syndrome.

path (path) a particular course that is followed, or a route that is ordinarily traversed. In neurology, the set of nerve fibers along which a nervous impulse may move, whether esodic or exodic; particularly the intracranial or intraspinal portion of such a course. See also *pathway*. **condyle p.**, the course followed by the mandibular condyle in the temporomandibular joint during the various movements of the mandible. **copulation p.**, the course taken by the male and female pronuclei as they approach each other in a fertilized ovum. **generated occlusal p.**, a registration of the paths of movement of the occlusal surfaces of mandibular teeth on a plastic or abrasive surface attached to the maxillary arch. **incisor p.**, the course followed by the incisal edges of the lower anterior teeth in movement of the mandible from the position of normal occlusion to that of edge-to-edge contact with opposing incisors. **p. of insertion**, the direction in which a dental prosthesis is inserted in and removed from the mouth, seating and removing its attachments from the abutment teeth. **ionization p.**, the trail of ion pairs produced by ionizing radiation in its passage through matter; called also *ionization track*. **lateral condyle p.**, the path of the condyle in the glenoid fossa when a lateral mandibular movement is made. **milled-in p's**, 1. the contours carved by various mandibular movements into the occluding surface of an occlusion rim by teeth or studs placed in the opposing occlusion rim. The curves or contours may be carved into wax, modeling plastic, or plaster of Paris. 2. gliding movements of occlusion rims which are composed of materials, including abrasives. **occlusal p.**, the course followed by the occlusal surfaces of the lower teeth in movements of the mandible.

pathema (pah-the'mah), pl. *pathemas* or *pathem'ata* [Gr. *pathēma* disease] any disease state or morbid condition.

pathematology (path'ē-mah-to'l-o-je) [*pathema* + -logy] (obs.) pathology, especially psychopathology.

pathergasia (path'er-ga'se-ah) [Gr. *pathos* disease + *ergasia* work] Meyer's term for mental malfunction, implying functional or structural damage and marked by abnormal behavior.

minor p's, minor somatic disorders and nervousness; minor psychoses or neuroses.

pathergia (pah-ther'je-ah) pathergy.

pathergic (path'er-jik) characterized by pathergy.

pathertization (path'er-ji-za'shun) the process of becoming spontaneously or of being made pathergic.

pathergy (path'er-je) [Gr. *pathos* disease + *ergon* work] 1. a condition in which the application of a stimulus leaves the organism in a state in which it is unduly susceptible to subsequent stimuli of a different kind (Rössle). 2. the condition of being allergic to numerous antigens; polyvalent allergy.

pathetic (pah-thet'ik) [L. *patheticus*; Gr. *pathētikos*] pertaining to the trochlear nerve.

pathfinder (path'find-er) 1. an instrument for locating strictures of the urethra. 2. a dental instrument for tracing the course of root canals. See *smooth broach*, under *broach*.

Pathilon trademark for a preparation of tridihexethyl chloride.

patho- [Gr. *pathos* disease] a combining form denoting relationship to disease.

pathoamine (path'o-am'in) an amine causing disease, or formed as the product of a disease process; a ptomaine.

pathoanatomical (path'o-an'ah-tom'ī-kal) pertaining to the anatomy of diseased tissues.

pathoanatomy (path'o-ah-nat'o-me) pathologic anatomy.

pathobiology (path'o-bi-ol'o-je) pathology.

pathobolism (pah-thob'o-lizm) [*patho-* + *metabolism*] a condition of perverted metabolism of a disease nature.

Pathocil (path'o-sil) trademark for a preparation of dicloxacillin sodium.

pathoclis (path'o-kli'sis) a specific elemental sensitivity to specific toxins, or a specific affinity of certain toxins for certain systems of organs.

pathocrine (path'o-krin) pertaining to pathocrinia.

pathocrinia (path'o-krin'e-ah) [*patho-* + *endocrine*] disorder of endocrine function.

pathodontia (path'o-don'she-ah) dental pathology.

pathoformic (path'o-for'mik) [*patho-* + L. *forma* form] pertaining to the beginning of disease; said of symptoms at the beginning of mental disorder.

pathogen (path'o-jen) [*patho-* + Gr. *gennan* to produce] any disease-producing microorganism.

pathogenesis (path'o-jen'ē-sis) [*patho-* + *genesis*] the development of morbid conditions or of disease; more specifically the cellular events and reactions and other pathologic mechanisms occurring in the development of disease. **drug p.**, the production of symptoms of disease by the use of drugs.

pathogenesy (path'o-jen'ē-se) pathogenesis.

pathogenetic (path'o-jē-net'ik) pertaining to pathogenesis.

pathogenic (path-o-jen'ik) giving origin to disease or to morbid symptoms.

pathogenicity (path'o-jē-nis'ī-te) the quality of producing or the ability to produce pathologic changes or disease.

pathogeny (path-oj'ē-ne) pathogenesis.

pathoglycemia (path'o-gli-se'me-ah) [*patho-* + Gr. *glykys* sweet + *haima* blood + *-ia*] sugar in the blood (decreased carbohydrate tolerance) as a result of some disease.

pathognomonic (path'og-no-mon'ik) [*patho-* + Gr. *gnōmonikos* fit to give judgment] specifically distinctive or characteristic of a disease or pathologic condition; a sign or symptom on which a diagnosis can be made.

pathognomy (path-og'no-me) [*patho-* + Gr. *gnōmē* a means of knowing] the science of the signs and symptoms of disease.

pathognostic (path'og-nos'tik) pathognomonic.

pathography (pah-thog'rah-fe) [*patho-* + Gr. *graphein* to write] a history or description of disease.

pathoklisis (path'o-kli'sis) pathoclis.

pathologic (path'o-loj'ik) 1. indicative of or caused by a morbid condition. 2. pertaining to pathology.

pathological (path'o-loj'ī-kal) pertaining to pathology; pathologic.

pathologiccoanatomic (path'o-loj'ī-ko-an-ah-tom'ik) pertaining to pathologic anatomy.

pathologist (pah-thol'o-jist) an expert in pathology. **speech p.**, a person skilled and certified in speech pathology.

pathology (pah-thol'o-je) [*patho-* + *-logy*] 1. that branch of medicine which treats of the essential nature of disease, especially of the structural and functional changes in tissues and organs of the body which cause or are caused by disease. 2. the structural and functional manifestations of disease. **cellular p.**, that which regards the cells as starting points of the phenomena of disease and that every cell descends from some preexisting cell (Virchow). **clinical p.**, pathology applied to the solution of clinical problems, especially the use of laboratory methods in clinical diagnosis. **comparative p.**, that which institutes comparisons between various diseases of the human body and

those of the lower animals. **dental p.**, the science which treats of disease of the teeth. Cf. *oral p.* **experimental p.**, the study of artificially induced disease processes. **functional p.**, the study of the changes of function due to morbid tissue changes. **general p.**, that which takes cognizance of pathologic conditions which may occur in various diseases and in different organs. **geographical p.**, pathology in its geographic and climatic relations. **humoral p.**, the opinion that disease is due to abnormal conditions of the fluids of the body. **internal p.**, medical p. **medical p.**, that which relates to morbid processes which are not accessible to operative intervention. Cf. *surgical p.* **mental p.**, psychopathology. **oral p.**, the science which treats of disease of the structures of the mouth, especially of the structural and functional changes which are caused by or which cause oral disease. **plant p.**, the pathology of diseases of plants. **solidistic p.**, that opinion which attributes disease to rarefaction or condensation of the solid tissues. **special p.**, the study of the pathology of particular diseases or organs. **speech p.**, a field of the health sciences dealing with the evaluation of speech, language, and voice disorders and the rehabilitation of patients with such disorders not amenable to medical or surgical treatment. **surgical p.**, the pathology of disease processes which are surgically accessible for diagnosis or treatment. **vegetable p.**, plant p.

patholysis (pah-thol'ī-sis) [*patho-* + Gr. *lysis* dissolution] the dissolution of disease.

pathomaine (path'o-mān) any of the pathogenic cadaveric alkaloids.

pathomania (path-o-ma'ne-ah) [*patho-* + Gr. *mania* madness] moral insanity, i.e., mania without delirium.

pathometabolism (path'o-me-tab'o-lizm) [*patho-* + *metabolism*] metabolism in disease.

pathometer (pah-thom'ē-ter) an apparatus for recording the incidence of disease in a given locality.

pathometry (pah-thom'ē-tre) [*patho-* + Gr. *metrein* to measure] (*obs.*) Sir Ronald Ross' term for the quantitative study of parasitic invasion and infection in individuals or groups of individuals.

pathomimesis (path'o-mi-me'sis) [*patho-* + Gr. *mimēsis* imitation] malingering.

pathomimia (path'o-mim'e-ah) malingering.

pathomimicry (path'o-mim'ī-kre) malingering.

pathomorphism (path'o-mor'fizm) perverted or abnormal morphology.

pathomorphology (path'o-mor-fol'o-je) pathomorphism.

pathoneurosis (path'o-nu-ro'sis) in psychoanalytic theory, a neurosis in which undue attention is given to a physical disorder; the libido is said to be inverted excessively in the diseased part.

pathonomia (path-o-no'me-ah) [*patho-* + Gr. *nomos* law] the sum of knowledge regarding the laws of disease.

pathonomy (pah-thon'o-me) pathonomia.

patho-occlusion (path'o-ō-kloo'zhun) malocclusion.

pathophilia (path'o-fil'e-ah) [*patho-* + Gr. *philein* to love] the condition in which a patient adapts himself and his mode of life to some chronic affection.

pathophoresis (path'o-fo-re'sis) [*patho-* + Gr. *phoros* bearing] the transmission of disease.

pathophoric (path'o-for'ik) pathophorous.

pathophorous (path-of'o-rus) conveying or transmitting disease.

pathophysiology (path'o-fiz'e-ol'o-je) the physiology of disordered function.

pathopoiesis (path'o-poi-e'sis) [*patho-* + Gr. *poiēsis* production] 1. the causation of disease. 2. the tendency of an individual to become diseased.

pathopsychology (path'o-si-kol'o-je) [*patho-* + *psychology*] the psychology of mental disease.

pathopsychosis (path'o-si-ko'sis) a psychosis arising from organic diseases, such as brain tumors, encephalitis, etc.

pathoradiography (path'o-ra'de-og'rah-fe) pathoroentgenography.

pathoroentgenography (path'o-rent'gen-og'rah-fe) the study of pathologic lesions by the roentgenogram.

pathosis (path-tho'sis) [*patho-* + *-osis*] a condition of disease; a morbid condition.

pathotropism (pah-thot'ro-pizm) [*patho-* + Gr. *tropos* a turning] the tendency of drugs to pass to diseased areas.

pathway (path'wa) a path or course, especially a course followed in the attainment of a specific end. In neurology, the nerve structures through which a sensory impression is conducted to the cerebral cortex (*afferent p.*) or through which an impulse passes from the brain to the skeletal musculature (*efferent p.*). See also *path*. Also used alone to indicate a sequence of reactions which convert one biological material to another (metabolic pathway). **alternative p.**, a pathway by which complement components C3 and C5 through C9 are activated without participation by C1, C2 and C4. Also known as the *properdin pathway*, it may be activated by human IgA, for example. **biosynthetic p.**, the sequence

- of enzymatic steps in the process by which a specific end-product is synthesized in a living organism; called also *anabolic p.*
- Embden-Meyerhof p.** (of glucose metabolism), the series of enzymatic reactions in the anaerobic conversion of glucose to lactic acid, resulting in energy in the form of adenosine triphosphate (ATP). See Plate XLI.
- Embden-Meyerhof-Parnas p.**, Embden-Meyerhof p.
- final common p.**, the motor neurons by which nerve impulses from many central sources pass to a muscle or gland in the periphery.
- internuncial p.**, a correlation tract connecting different centers or neurons within the central nervous system.
- metabolic p.**, a series of enzymatic reactions that converts one biological material to another.
- pentose phosphate p.**, a major branching of the Embden-Meyerhof pathway of carbohydrate metabolism: a pathway of hexose oxidation in which glucose-6-phosphate undergoes two successive oxidations by NADP, the final one being an oxidative decarboxylation to form a pentose phosphate. Called also *phosphogluconate p.*, *hexose monophosphate shunt*, and *pentose shunt*.
- phosphogluconate p.**, pentose phosphate p.
- reentrant p.**, a mechanism by which a premature or ectopic heart beat is coupled to the normal beat; see *reentry*.
- pathy** (path'e) [Gr. *pathos* disease] a word termination denoting a morbid condition, or disease.
- patient** (pa'shent) [L. *patiens*] a person who is ill or who is undergoing treatment for disease.
- Patrick's test (sign)** (pat'riks) [Hugh Talbot Patrick, neurologist in Chicago, 1860-1938] see under *tests*.
- patrilineal** (pat'ri-lin'e-al) [L. *pater* father + *linea* line] descended through the male line.
- patroclinous** (pat'ro-kli'nus) [Gr. *patēr* father + *klinein* to incline] inheriting or inherited from the father; having characters inherited from the father. Cf. *matroclinous*.
- patrogenesis** (pat'ro-jen'ē-sis) [Gr. *patēr* father + *genesis*] androgenesis.
- patten** (pat'n) a metallic support to be worn under the sound foot in hip joint disease.
- pattern** (pat'ern) 1. a design to be followed or a device to be used in the construction or fabrication of something. 2. the particular design or arrangement of figures. 3. a characteristic set of traits or actions, as behavior patterns. **action p.**, the congenital or acquired manner in which certain stimuli produce certain actions in given individuals. **behavior p.**, the general grouping of behavior responses. **fixed action p.**, a sequence of stereotyped acts peculiar to a species, such as a courting dance. **muscle p.**, a number of muscles organized in a definite fashion and responding as a whole to a stimulus. **occlusal p.**, the form or design of the occluding surfaces of a tooth or teeth; these forms may be based upon natural or modified anatomic or nonanatomic concepts of teeth. **startle p.**, the various phenomena evidenced by an individual in reaction to a sudden, unexpected stimulus. **stimulus p.**, a group of stimuli resulting from a particular situation. **wax p.**, a form created in wax which, when invested and burned out, will produce a mold in which a positive reproduction of a structure can be cast; used in construction of dental inlays and crowns.
- patulin** (pat'u-lin) chemical name: 4-hydroxy-4*H*-furo-[3,2-*c*]pyran-2(6*H*)-one. A very toxic antibiotic substance, C₇H₆O₄, from cultures of various fungi, especially *Aspergillus* and *Penicillium*; used as an antimicrobial.
- patulous** (pat'u-lus) [L. *patulus*] spreading widely apart; open; distended.
- paucibacillary** (paw'se-bas'ī-ler-e) [L. *paucus* few] containing only a few bacilli.
- paucine** (paw'sin) a yellow, flaky alkaloid, C₂₇H₃₉N₅O₅·6½H₂O, from the pauc nut, the fruit of *Pentaclethra macrophylla*, an African plant.
- paucisynaptic** (paw'sē-sin-ap'tik) [L. *paucus* few + *synaptic*] oligosynaptic.
- Paul of Aegina** (e-je'nah) (first half of 7th century) a celebrated Greek medical writer who practiced in Alexandria. Of his writings, only a seven-book compilation on medicine survives, the sixth book of which—on surgery—is of particular interest and importance.
- Paul's test, treatment** (pawlz) [Gustav Paul, Austrian physician, 1859-1935] see under *tests* and *treatment*.
- Paul-Bunnell test (reaction)** [John Rodman Paul, American physician, born 1893; Walls Willard Bunnell, American physician, born 1902] see under *tests*.
- Paul-Mixer tube** [Frank Thomas Paul, English surgeon, 1851-1941; Samuel Jason Mixer, Boston surgeon, 1855-1926] see under *tube*.
- Paulus Aegineta** (paw'lus ej'i-ne'tah) see *Paul of Aegina*.
- paunch** (paw'nch) rumen.
- pause** (pawz) an interruption, or rest. **compensatory p.**, the pause after a premature ventricular systole, related to blockage of one beat of the basic pacemaker.
- pavementing** (pāv'ment-ing) adhesion of leukocytes to the lining endothelium of the vessels of an injured part, which occurs as the circulation slows down within the vessels in response to the inflammatory process.
- Paveril** (pav'er-il) trademark for preparations of dioxylene.
- pavilion** (pah-vil'yun) [L. *papilio* butterfly, tent] a dilated or flaring expansion at the end of a passage. **p. of the ear**, the auricle, def. 1. **p. of the oviduct**, the outer, or fimbriated, end of the fallopian or uterine tube. **p. of the pelvis**, the upper, flaring portion of the pelvis.
- Pavlov's method, pouch, stomach** (pahv'lovz) [Ivan Petrovich Pavlov, Russian physiologist, 1849-1936; winner of the Nobel prize for medicine in 1904] see under *method*, *pouch*, and *stomach*.
- pavor** (pa'vor) [L.] terror. **p. diurnus** [L. "day terrors"], attacks of fear in children occurring during the afternoon nap. **p. nocturnus** [L. "night terrors"], a nightmare of children which causes them to cry out in fright and awake in panic.
- Pavulon** (pav'u-lon) trademark for a preparation of pancuronium bromide.
- Pavy's disease** (pa'vēz) [Frederick William Pavy, English physician, 1829-1911] cyclic proteinuria.
- Pawlik's triangle (trigone)** (pahv'liks) [Karel J. Pawlik, gynecologist in Prague, 1849-1914] see under *triangle*.
- pawpaw** (paw'paw) papaw, def. 2.
- Payr's clamp, disease, method** (pirz) [Erwin Payr, German surgeon, 1871-1946] see under *clamp*, *disease*, and *method*.
- pazoxide** (pah-zok'sid) chemical name: 6,7-dichloro-3-(3-cyclopenten-1-yl)-1,2,4-benzothiadiazine 1,1-dioxide; an antihypertensive, C₁₂H₁₀Cl₂N₂O₂S.
- P.B.** abbreviation for *Pharmacopoeia Britannica*, British Pharmacopoeia.
- Pb** chemical symbol for lead [L. *plumbum*].
- Pb(C₂H₃O₂)₂** lead acetate.
- PbCO₃** lead carbonate.
- PbCrO₄** lead chromate.
- PBE** abbreviation for German *Perlsucht Bacillenemulsion*, a form of tuberculin prepared from a culture of bacilli of bovine tuberculosis.
- PBI** protein-bound iodine.
- PbI₂** lead iodide.
- Pb(NO₃)₂** lead nitrate.
- PbO** lead monoxide.
- PbO₂** lead dioxide.
- PbS** lead sulfide.
- PbSO₄** lead sulfate.
- PBZ** pyribenzamine.
- PC** phosphocreatine; sometimes used to designate phosphatidyl choline, or palmitoyl carnitine.
- P.C.** abbreviation for L. *pon'dus civi'le*, avoirdupois weight.
- p.c.** abbreviation for L. *post ci'bum*, after meals.
- pc.** picocurie.
- PCA** passive cutaneous anaphylaxis; see under *anaphylaxis*.
- PCB** polychlorinated biphenyl; see under *biphenyl*.
- PcB** abbreviation for *near point of convergence to the intercentral base line*.
- P.Cc.** periscopic concave.
- PCG** phonocardiogram.
- P.C.M.O.** Principal Colonial Medical Officer.
- PCO₂** symbol for carbon dioxide partial pressure or tension; also written Pco₂, pCO₂, and pCO₂.
- Pcs.** preconscious.
- PCV** packed cell volume; see under *volume*.
- P.Cx.** periscopic convex.
- P.D.** interpupillary distance.
- Pd** chemical symbol for *palladium*.
- p.d.** prism diopter; papilla diameter; pupillary distance.
- peak** (pēk) the top or upper limit of a graphic tracing or of any variable. **Bragg p. of proton beam**, the end of range of a beam of protons aimed from a cyclotron in nearly a straight line.
- kilovolt p.**, the maximum amount of voltage that an x-ray machine is using; abbreviated kvp.
- Péan's forceps, operation** (pa-anz') [Jules Émile Péan, French surgeon, 1830-1898] see under *operation*.
- pearl** (perl) 1. a small calcareous concretion from various species of mollusks, formerly regarded as having curative powers. 2. a small medicated granule, or a glass globule with a single dose of volatile medicine, as amyl nitrite. 3. a rounded mass of tough sputum as seen in the early stages of an attack of bronchial asthma. **Bohn's epithelial p's**, small retention cysts in the mouths of infants. **Elschnig's p's**, see under *body*.
- enamel p.**, enameloma. **epidermic p's**, **epithelial p's**, rounded concentric masses of epithelial cells found in certain papillomas and epitheliomas; called also *pearly bodies*. **Epstein's p's**, small whitish-yellow masses on either side of the raphe of the hard palate of the newborn. **gouty p.**, a sodium

KEY TO ENZYMES (CIRCLED NUMBERS)

1. α -glucan-branching glycosyltransferase
2. UDP-glucose-glycogen glucosyltransferase
3. glycogen phosphorylase
4. amylase-1,6-glucosidase
5. UDP-G pyrophosphorylase
6. phosphoglucumutase
7. glucokinase
8. phosphohexoisomerase
9. phosphofructokinase
10. aldolase
11. triosephosphate isomerase
12. glycerolphosphate dehydrogenase
13. glyceraldehyde phosphate dehydrogenase
14. phosphoglycerate kinase
15. phosphoglyceromutase
16. phosphopyruvate hydratase (enolase)
17. pyruvate kinase
18. pyruvate decarboxylase
19. alcohol dehydrogenase
20. lactate dehydrogenase

EMBDEN-MEYERHOF PATHWAY OF GLUCOSE METABOLISM

(after Mazur and Harrow)

urate concretion on the cartilage of the ear in gouty persons. **Laennec's p's**, soft casts of the smaller bronchial tubes expectorated in bronchial asthma.

pearlash (perl'ash) impure potassium carbonate in crystals.

peat (pēt) carbonized vegetable matter found in bogs; used in peat baths and as a dry absorbent dressing.

peau (po) [Fr.] skin. **p. de chagrin** (po'duh shah-grin') [Fr.], shagreen skin. **p. d'orange** (po'do-rahnj') [Fr. "orange skin"], a dimpled condition of the skin, resembling that of an orange.

pebble (peb'l) a kind of rock crystal from which lenses are sometimes cut.

pébrine (pa-brēn') [Fr.] an infectious disease of silkworms caused by *Nosema bombycis*. Cf. *nosema disease*.

pecazine (pe'kah-zēn) mepazine.

peccant (pek'ant) [L. *peccans* sinning] unhealthy; causing illness or disease.

peccatophobia (pek'kah-ti-fo'be-ah) [L. *peccata*, sins + *phobia*] morbid fear of sinning.

pechyagra (pek'e-a'grah) [Gr. *pēchys* forearm + *agra* seizure] gout of the elbow.

pecilo- for words beginning thus, see those beginning *poikilo-*.

Pecquet's cistern (reservoir), duct (pek-āz') [Jean Pecquet, French anatomist, 1622-1674] see *cisterna chyli* and *ductus thoracicus*.

pectase (pek'tās) pectinesterase.

pecten (pek'ten), pl. *pec'tines* [L.] 1. a comb; applied to certain anatomical structures because of a fancied resemblance to a comb. 2. a name given by Stroud, in 1895, to a narrow zone in the anal canal, bounded above by the pectinate line and possessing a comparatively dense connective tissue matrix with thick muscular and elastic components. 3. a triangular pleated membrane in the eye of birds, extending forward from the optic disk, which it covers, for a variable distance into the vitreous body. **p. os'sis pu'bis** [NA], the anterior border of the superior ramus of the pubis, beginning at the pubic tubercle and continuing to the iliopubic eminence; called also *pectineal line*.

pectenine (pek'tē-nin) a poisonous alkaloidal compound from a Mexican cactus, *Cereus pecten*.

pectenitis (pek'tē-ni'tis) inflammation of the pecten of the anus.

pectenosis (pek'tē-no'sis) stenosis of the anal canal caused by a rigid, inelastic ring of tissue of variable width and thickness, between the anal groove and anal crypts, producing pain on defecation, bleeding, and anal irritation.

pectenotomy (pek'tē-not'o-me) [*pecten* + Gr. *tomē* a cutting] surgical correction of pectenosis by incision of the ring of tissue causing it.

pectic (pek'tik) relating to pectin.

pectin (pek'tin) [Gr. *pēktos* congealed] a homosaccharidic polymer of sugar acids of fruit that forms gels with sugar at the proper pH. A purified form [USP] obtained from the acid extract of the inner portion of the rind of citrus fruits or from apple pomace is used as the protective component of various formulations employed in the treatment of diarrhea and as a suspending agent in pharmaceutical preparations. It is also used in the preparation of certain foods, such as jams and jellies.

pectinase (pek'ti-nās) polygalacturonase.

pectinate (pek'ti-nāt) [L. *pecten* comb] shaped like a comb.

pectineal (pek-tin'e-al) [L. *pecten*, comb, pubes] pertaining to the os pubis.

pectinesterase (pek'tin-es'ter-ās) pectin pectyl-hydrolase: an enzyme that catalyzes the hydrolysis of methyl ester groups of pectic substances, releasing the free acid.

pectiniform (pek-tin'i-form) [L. *pecten* comb + *forma* form] comb-shaped.

pectization (pek'ti-za'shun) [Gr. *pēktikos* curdling] coagulation or gelatinization; a term used in colloidal chemistry.

pectolytic (pek'to-lit'ik) [*pectin* + Gr. *lytikos* dissolving] capable of effecting the digestion of pectin.

pectoral (pek'to-ral) [L. *pectoralis*] 1. of, or pertaining to, the breast or chest. 2. relieving disorders of the respiratory tract, as an expectorant.

pectoralgia (pek'to-ral'je-ah) [L. *pectus* breast + *-algia*] pain in the breast or pectoral muscles.

pectoralis (pek'to-ra'lis) [L.] pertaining to the breast or chest.

pectoriloquy (pek'to-ril'o-kwe) [L. *pectus* breast + *loqui* to speak] transmission of the sound of spoken words through the chest wall.

aphonic p., the sound of the whispered voice transmitted through a serous, but not through a purulent, exudate within the pleura. **whispered p., whispering p.**, the transmission of the sound of whispered words through the walls of the chest.

pectorophony (pek'to-rof'o-ne) [L. *pectus* breast + Gr. *phōnē* voice] exaggeration of the vocal resonance heard on auscultation.

pectose (pek'tōs) a principle in unripe fruits and plants from which pectin is derived.

pectous (pek'tus) pertaining to, composed of, or resembling pectin; having a firm, jelly-like consistence.

pectunculus (pek-tung'ku-lus) [L., dim of *pecten* comb] any one of the series of small longitudinal ridges on the aqueduct of Sylvius.

pectus (pek'tus) [L.] the breast: the chest or thorax. **p. carina'tum** [L. "keeled breast"], undue prominence of the sternum; called also *chicken* or *pigeon breast*. **p. excava'tum** [L. "hollowed breast"], undue depression of the sternum; called also *funnel breast* or *chest*. **p. gallina'tum**, *p. carinatum*. **p. recurva'tum**, *p. excavatum*.

pedal (ped'al) [L. *pedalis*; *pes* foot] pertaining to the foot or feet.

pedarthrocace (pe-dar-throk'ah-se) [Gr. *pais* child + *arthrocace*] caries of the joints in children.

pedatrophia (pe-dah-tro'fe-ah) [Gr. *pais* child + *atrophia*] 1. marasmus. 2. (*obs.*) *tabes mesenterica*.

pederast (ped'er-ast) one who practices pederasty.

pederasty (ped'er-as'te) [Gr. *pais* boy + *erastēs* lover] homosexual anal intercourse between men and boys, the latter as the passive partners.

pederin (ped'er-in) a crystalline toxin, C₂₅H₄₅NO₉, isolated from blister beetles of the genus *Paederus*.

pederosis (pe'der-o'sis) pedophilia.

pedes (pe'dēz) [L.] plural of *pes*.

pedia- [Gr. *pais*, *paidos* child] a combining form denoting relationship to a child. Cf. *pedo*-(1).

pediadontia (pe'de-ah-don'she-ah) pedodontics.

pediadontist (pe'de-ah-don'tist) pedodontist.

pediadontology (pe'de-ah-don-to'l'o-je) pedodontics.

Pediaflor (pe'de-ah-floor) trademark for a preparation of sodium fluoride.

pedialgia (pe'de-al'je-ah) [L. *pes* foot + *-algia*] neuralgic pain in the foot.

Pediamycin (pe'de-ah-mi'sin) trademark for preparations of erythromycin ethylsuccinate.

pediatric (pe'de-at'rik) pertaining to pediatrics.

pediatrician (pe'de-ah-trish'un) a physician who specializes in pediatrics.

pediatrics (pe'de-at'riks) [*pedia-* + Gr. *iatrikē* surgery, medicine] that branch of medicine which treats of the child and its development and care and of the diseases of children and their treatment.

pediatrist (pe'de-at'rist) pediatrician.

pediatry (pe'de-at're) pediatrics.

pedication (ped'i-ka'shun) pederasty.

pedicel (ped'i-sel) a footlike part, especially any of the secondary processes of a podocyte which interdigitate with those of other podocytes in a renal corpuscle.

pedicellate, pedicellated (pē-dis'i-lāt; ped'i-sel-āt'ed) pediculate; pedunculated.

pedicellation (ped'i-sel-la'shun) the development or possession of a pedicle.

pedicle (ped'i-k'l) a footlike, stemlike, or narrow basal part or structure, as the stalk by which a non sessile tumor is attached to normal tissue, or the narrow strip of flap tissue through which it receives its blood supply. **cone p.**, the thick triangular or club-shaped ending of a retinal cone cell, which synapses with the bipolar and horizontal cells in the outer plexiform layer. **p. of vertebral arch**, pediculus arcus vertebrae.

pedicled (ped'i-k'ld) having a pedicle.

pedicterus (pe-dik'ter-us) [*pedo-* + Gr. *ikteros* jaundice] (*obs.*) icterus neonatorum.

pedicular (pe-dik'u-lar) [L. *pedicularis*] pertaining to or caused by lice.

pediculate (pe-dik'u-lāt) [L. *pediculatus*] provided with a pedicle; pedunculated.

pediculation (pe-dik'u-la'shun) [L. *pediculatio*] 1. infestation with lice. 2. the formation of a pedicle.

pediculi (pe-dik'u-li) plural of *pediculus*.

pediculicide (pe-dik'u-li-sid) [*pediculus* + L. *caedere* to kill] 1. destroying lice. 2. an agent that destroys lice.

Pediculidae (ped'i-ku'li-de) a family of lice (order Anoplura) that includes the genera *Pediculus* and *Phthirus*, which feed on human blood.

Pediculoides (pe-dik'u-loi'dēz) former name for *Pyemotes*. **P. ventricosus**, *Pyemotes ventricosus*.

pediculosis (pe-dik'u-lo'sis) [*pediculus* + *-osis*] infestation with lice of the family *Pediculidae*, especially infestation with *Pediculus humanus*. **p. capillit'ii**, **p. cap'itis**, infestation of the hair of the head by lice. **p. cor'poris**, infestation of the body by lice. **p. inguina'lis**, phthiriasis inguinalis. **p. palpebra'rum**, infestation of the eyelashes by lice. **p. pu'bis**, phthiriasis inguinalis. **p. vestimen'ti**, **p. vestimento'rum**, infestation of the clothing by lice.

pediculous (pe-dik'u-lus) infested with lice.

Pediculus (pe-dik/u-lus) a genus of sucking lice of the family Pediculidae, order Anoplura, the sucking lice. **P. huma'nus**, a species that feeds on human blood, is a major vector of epidemic typhus, trench fever, and relapsing fever, and causes skin reactions, especially in sensitized persons. It includes two subspecies, *P. humanus capitis* and *P. humanus corporis*. **P. huma'nus cap'itis**, the head louse, found on the scalp hair. **P. huma'nus cor'poris**, the body or clothes louse, which lives on the clothing when feeding is not taking place; called also *P. humanus humanus*, *P. humanus vestimento'rum*, and *P. vestimenti*. **P. huma'nus huma'nus**, *P. humanus corporis*. **P. huma'nus vestimento'rum**, *P. humanus corporis*. **P. inguina'lis**, *P. pu'bis*, *Phthirus pubis*. **P. vestimen'ti**, *P. humanus corporis*.

Pediculus humanus.

pediculus (pe-dik/u-lus), pl. *pedic'uli* [L.] 1. louse. 2. a footlike or stemlike part; called also *pedicle*. **p. ar'cus ver'tebrae** [NA], pedicle of vertebral arch: one of the paired parts of the vertebral arch that connect a lamina to the vertebral body; called also *radix arcus vertebrae*.

pedicure (ped'i-kūr) [L. *pes* foot + *cura* care] 1. professional care and treatment of the feet. 2. a podiatrist.

pedigree (ped'i-gre') [L. *pedis* foot + *dē* of + *grūs* crane] a table, chart, diagram, or list of an individual's ancestors, used in human genetics in the analysis of mendelian inheritance.

pediluvium (ped'i-lu've-um) [L. *pes* foot + *luere* to wash] a foot bath.

Pediococcus (pe'de-o-kok'us) in some systems of classification, a genus of microaerophilic, saprophytic, gram-positive, nonmotile cocci, usually occurring in pairs or tetrads, found most commonly in fermenting plant products; in other systems of classification, assigned to the family Streptococcaceae. **P. acidilacti'ci**, a species found in sauerkraut and fermenting mash. **P. cerevis'iae**, a species found in spoiled beer and brewer's yeast. **P. pentosa'ceus**, a species occurring commonly in fermenting products, such as pickles, sauerkraut, etc. **P. halophi'lus**, a species found in anchovies and soy mash. **P. uri'nae-equi**, a species originally isolated from horse urine, which is often found in brewer's yeast.

pediodontia (pe'de-o-don/she-ah) pedodontics.

pedionalgia (pe'de-o-nal'je-ah) [Gr. *pedion* metatarsus + *-algia* pain] pain in the sole of the foot.

pediphalanx (ped'i'fa'lanks) [L. *pes* foot + *phalanx*] a phalanx of a digit of the foot.

pedistibulum (ped'i'stib'u-lum) [L.] the stapes.

peditis (pe-di'tis) [L. *pes* foot + *-itis*] pedal osteitis.

pedo- 1. [Gr. *pais*, *paidos* child] a combining form denoting relationship to a child. 2. [L. *pes*, *pedis* foot] a combining form denoting relationship to a foot.

pedodontia (pe'do-don/she-ah) pedodontics.

pedodontics (pe-do-don'tiks) [*pedo*(1) + Gr. *odous* tooth] the branch of dentistry concerned with the diagnosis and treatment of conditions of the teeth and mouth in children.

pedodontist (pe-do-don'tist) a dentist who specializes in pedodontics.

pedodynamometer (ped'o-di-nah-mom'ē-ter) [*pedo*(2) + *dynamometer*] an instrument for measuring the strength of a leg.

pedogamy (pe-dog'ah-me) [*pedo*(1) + Gr. *gamos* marriage] endogamy, def. 1.

pedogenesis (pe'do-jen'ē-sis) [*pedo*(1) + Gr. *genesis* reproduction] the production of offspring by young or larval forms.

pedograph (ped'o-graf) [*pedo*(2) + Gr. *graphein* to write] an imprint on paper of the weight-bearing surface of the foot, surrounded by a pencil-marked contour of the upper foot.

pedologist (pe-dol'o-gist) a specialist in pedology.

pedology (pe-dol'o-je) [*pedo*(1) + *-logy*] the systematic study of the life and development of children.

pedometer (pe-dom'ē-ter) [*pedo* + Gr. *metron* measure] 1. an instrument for recording the number of steps taken in walking. 2. (obs.), an instrument for measuring infants.

pedomorphic (pe'do-mor'fik) pertaining to or characterized by pedomorphism.

pedomorphism (pe'do-mor'fizm) [*pedo*(1) + Gr. *morphē* form + *-ism*] the retention in the adult organism of highly progressive species of bodily characters which at an earlier stage of evolutionary history were actually only infantile.

pedopathy (pe-dop'ah-the) [*pedo*(2) + Gr. *pathos* disease] any disease of the foot.

pedophilia (pe'do-fil'e-ah) [*pedo*(1) + Gr. *philein* to love] abnormal fondness for children; sexual activity of adults with

children as the objects. Called also *p. erotica* and *pederosis*. **p. erot'ica**, pedophilia.

pedophilic (pe'do-fil'ik) 1. fond of children. 2. pertaining to or characterized by pedophilia.

pedophobia (pe'do-fō-be-ah) [*pedo*(1) + Gr. *phobein* to be frightened by] fear or dread of children.

pedorthic (pē-dor'thik) pertaining to pedorthics.

pedorthics (pē-dor'thiks) [L. *pedis* foot + Gr. *orthōsis* making straight] the design, manufacture, fit, and modification of shoes and related foot appliances as prescribed for amelioration of painful and/or disabling conditions of the foot and limb.

pedorthist (pe-dor'thist) a person skilled in pedorthics and practicing its application in individual cases.

peduncle (pē-dung'ku'l) a stemlike connecting part (called also *pedunculus* [NA]); the stalk by which a nonsessile tumor is attached to normal tissue. **cerebellar p., inferior**, *pedunculus cerebellaris inferior*. **cerebellar p., middle**, *pedunculus cerebellaris medius*. **cerebellar p., superior**, *pedunculus cerebellaris superior*. **cerebral p.**, *pedunculus cerebri*. **p. of flocculus**, *pedunculus flocculi*. **p. of hypophysis** (obs.), *infundibulum hypothalami*. **olfactory p.**, in comparative neuroanatomy, the olfactory stalk, especially the region of its attachment to the cerebral hemisphere. **pineal p.**, *p. of pineal body*, *habenula*, def. 2. **p. of thalamus, inferior**, *pedunculus thalami inferior*.

peduncular (pē-dung'ku-lar) pertaining to a peduncle.

pedunculated (pē-dung'ku-lāt-ed) provided with a peduncle; opposed to sessile.

pedunculotomy (pē-dung'ku-lot'o-me) [L. *pedunculus* + Gr. *tomē* a cutting] incision of a cerebral peduncle, with division of both pyramidal and nonpyramidal fibers, for relief of the tremor of parkinsonism.

pedunculus (pē-dung'ku-lus) [L.] a stemlike part; [NA] a general term for collections of nerve fibers coursing between different areas in the central nervous system. Called also *peduncle*. **p. cerebella'ris infe'rior** [NA], inferior cerebellar peduncle: a large bundle of nerve fibers serving to connect the medulla oblongata and spinal cord with the cerebellum (especially the archicerebellum and paleocerebellum); it courses along the lateral border of the fourth ventricle and turns dorsally into the cerebellum. Called also *corpus restiforme* or *restiform body*. **p. cerebella'ris me'dius** [NA], middle cerebellar peduncle: a fiber tract originating in the contralateral pontine nuclei and entering the cerebellum, conveying impulses from the cerebral cortex to the neocerebellum; it is continuous with the pons at the line of attachment of the trigeminal nerve. Called also *brachium pontis*. **p. cerebella'ris supe'rior** [NA], superior cerebellar peduncle: a large fiber bundle arising chiefly in the dentate nucleus of each cerebellar hemisphere (neocerebellum) and ascending to decussate in the mesencephalon; its fibers end mostly in the red nucleus and thalamus. Spinocerebellar fibers to the paleocerebellum lie adjacent to each peduncle. Called also *brachium conjunctivum* [cerebelli]. **p. cer'ebri** [NA], cerebral peduncle: the ventral half of the mesencephalon; it is divisible into the tegmental, or dorsal, part and the crus cerebri, or ventral part, which are separated by the substantia nigra. Called also *caudex cerebri*. **p. cor'poris callo'si** (obs.), gyrus paraterminalis. **p. cor'poris pinea'lis**, *habenula*, def. 2. **p. flocculi** [NA], peduncle of flocculus: the lateral expansion of the inferior medullary velum toward the flocculus. **p. thal'ami infe'rior** [NA], inferior peduncle of thalamus: a bundle of fibers forming one of the principal components of the ansa peduncularis; it curves around the medial margin of the internal capsule and turns dorsally into the thalamus.

peel (pēl) [L. *pilare* to deprive of hair] the outer rind of a fruit. **bitter orange p.** [NF], the dried rind of unripe but fully grown fruit of *Citrus aurantium* Linné, used as a pharmaceutical flavoring agent. **lemon p.**, the outer, yellow rind of the fresh ripe fruit of *Citrus limon*, used in preparing lemon oil and lemon tincture.

peenash (pe'nash) [India] rhinitis due to the presence of insect larvae in the nose.

PEEP positive end-expiratory pressure; see under *pressure*.

PEG pneumoencephalography.

peg (peg) a projecting structure. **rete p's**, the inward projections of the epidermis into the dermis at the dermoepidermal junction, as seen histologically in vertical sections.

Peganone (peg'ah-nōn) trademark for a preparation of etho-tin.

peglicol 5 oleate (pē-gli'kōl) a product obtained by alcoholysis of natural vegetable oils in the presence of polyethylene glycols of molecular weights between 200 and 400, consisting of a mixture of partially mixed esters of glycerin and these polyethylene glycols; the average number of ethylene glycol units is 5. It is used as an emulsifying agent in pharmaceutical preparations. Called also *polyoxyl 5 oleate*.

pegology (pe-gol'o-je) [Gr. *pēgē* fountain + *-logy*] the study of springs, particularly medicinal or mineral springs.

pegoterate (peg'o-ter'āt) a condensation polymer used as a suspending agent in pharmaceutical preparations.

pegoxol 7 stearate (peg-ok'söl) a mixture of mono- and distearic esters of ethylene glycol and of polyoxyethylene glycol, the latter having an average molecular weight of 450; the average number of ethylene glycol units is 7. It is used as an emulsifying agent in pharmaceutical preparations.

peinotherapy (pi'no-ther'ah-pe) [Gr. *peina* hunger + *therapeia* cure] hunger cure.

Pel's crises (pelz) [Pieter Klaases *Pel*, Dutch physician, 1852–1919] see under *crisis*.

Pel-Ebstein disease, fever (pyrexia, symptom) (pel-eb'stin) [Pieter Klaases *Pel*; Wilhelm *Ebstein*, German physician, 1836–1912] see *Hodgkin's disease*, under *disease*, and see under *fever*.

pelade (pel-ad') [Fr.] alopecia areata.

pelage (pel'ij, pē-lahzh') [Fr.] the hairy coat of mammals; the hairs of the body, limbs, and head collectively.

pelagic (pe-laj'ik) [Gr. *pelagios* living in the sea] pertaining to or inhabiting open, offshore waters, as in midocean.

pelagism (pel'ah-jism) seasickness.

Pelamis (pel'ah-mis) a genus of sea snakes. **P. bico'lor**, a poisonous sea snake of the Indian ocean.

Pelecypoda (pel'e-sip'o-dah) [Gr. *pelekys* hatchet + *podos* foot] the bivalves: a class of mollusks which are laterally compressed and have a pair of dorsally hinged lateral shells (valves) and a hatchet-shaped foot for digging; it includes the clams, oysters, and scallops. Called also *Bivalvia*.

Pelger's nuclear anomaly (pel'gerz) [Karel *Pelger*, Dutch physician, 1885–1931] see under *anomaly*.

Pelger-Huët nuclear anomaly (pel'ger-hyoo'et) [Karel *Pelger*; G. J. *Huët*, Dutch physician, born 1879] see under *anomaly*.

pelidisi (pel'i-de'se) [term coined from *L. pondus decies linearis divisus sidentis* (altitude) meaning weight ten line divided sitting height] the unit of Piquet's index for determining the nutritive condition of children. It is obtained by dividing the cube root of ten times the weight (in grams) by the sitting height (in centimeters). A pelidisi of 94 or less indicates undernutrition; of 95–100, good nutrition, and of 101 or above, overnutrition.

peliosis (pel'e-o'sis) [Gr. *peliosis* extravasation of blood] purpura. **p. hep'atis**, **p. of liver**, mottled blue liver, caused by blood-filled lacunae in the parenchyma.

Pelizaeus-Merzbacher disease (pa'le-zi'us-merz'bak-er) [Friedrich *Pelizaeus*, German physician, 1850–1917; Ludwig *Merzbacher*, German physician in Buenos Aires, born 1875] familial centrolobar sclerosis.

pellagra (pē-la'grah, pē-lag'rah) [It. *pelle* skin + *agra* rough] a clinical deficiency syndrome due to deficiency of niacin (or failure to convert tryptophan to niacin) and characterized by dermatitis, inflammation of mucous membranes, diarrhea, and psychic disturbances. The dermatitis occurs on the portions of the body exposed to light or trauma. Mental symptoms include depression, irritability, anxiety, confusion, disorientation, delusions, and hallucinations. **monkey p.**, a condition in caged monkeys manifested by loss of appetite, diarrhea, vomiting, emaciation, and finally death. **p. si'ne pella'gra**, pellagra in which the characteristic dermatitis is not present. **typhoid p.**, pellagra characterized by continued high temperature.

pellagrogenic (pē-lag'rah-jen'ik) causing pellagra.

pellagral (pē-lag'ral) pertaining to or caused by pellagra.

pellagramin (pē-lag'rah-min) niacin.

pellagrazein (pel'ah-gra'ze-in) a poisonous ptomaine from damaged maize, formerly regarded as a probable cause of pellagra.

pellagrin (pē-la'grin, pē-lag'rin) a person affected with pellagra.

pellagrocain (pel'ah-gro'se-in) pellagrazein.

pellagroid (pē-lag'roid) a condition resembling pellagra.

pellagrologist (pel'ah-grol'o-jist) one who makes a special study of pellagra.

pellagrology (pel'ah-grol'o-je) the study of pellagra.

pellagrose (pē-lag'rōs) pellagrous.

pellagrosis (pel'ah-gro'sis) the dermal syndrome of pellagra characterized by skin pigmentation, erythema, and hyperkeratosis.

pellagrous (pē-lag'rus) affected with or of the nature of pellagra.

pellant (pel'ant) [L. *pellere* to drive] depurative.

pellate (pel'āt) to repel or tend to separate.

Pellegrini's disease (pel'a-gre'nēz) [Augusto *Pellegrini*, surgeon in Italy] see under *disease*.

Pellegrini-Stieda disease (pel'a-gre'ne-ste'dah) [A. *Pellegrini*; Alfred *Stieda*, German surgeon, born 1869–1945] see *Pellegrini's disease* under *disease*.

pellet (pel'et) a small pill or granule, such as a small rod- or ovoid-shaped, sterile mass composed of essentially pure steroid hormones, to be implanted under the skin to provide for their slow

absorption, or a small pill made from sucrose and impregnated with a medicine, used in homeopathic practice.

pellicle (pel'i-k'l) [L. *pellicula*] a thin skin or film, such as a thin film on the surface of a liquid. **brown p.**, a brownish gray to black film formed over a period of time on the surfaces of the teeth, resulting from the use of dentifrices that do not contain abrasives.

pellicular, pelliculous (pel-lik'u-lar; pel-lik'u-lus) characterized by a pellicle.

Pellizzi's syndrome (pel-le'zēz) [G. B. *Pellizzi*, Pisa physician] epiphyseal syndrome.

pellote (pa-yo'tah) peyote.

pellucid (pel-lu'sid) [L. *pellucidus*, from *per* through + *lucere* to shine] translucent.

pelo- (pe'lo) [Gr. *pelos* mud] a combining form denoting relationship to mud.

Pelodictyon (pe'lo-dik'te-on) [*pelo-* + Gr. *diktyon* net] a genus of microorganisms of the family Chlorobacteriaceae, suborder Rhodobacteriineae, order Pseudomonadales, occurring as ovoid to rod-shaped cells generally united into large colonies of characteristic shape. It includes three species, *P. aggregatum*, *P. clathratiforme*, and *P. parallelum*.

peloid (pe'loid) [*pelo-* + Gr. *eidos* form] mud used for therapeutic purposes, as in packs and baths.

pelology (pē-lo'l'o-je) [*pelo-* + *-logy*] the science of mud and similar substances.

Pelonema (pe'lo-ne'mah) [*pelo-* + Gr. *nēma* thread] a genus of microorganisms of the family Peloplocaceae, order Chlamydobacteriales, made up of long, straight, or spirally twisted, unbranched trichomes, enclosed in an extremely delicate sheath. It includes four species, *P. hyalinum*, *P. pseudovacualetum*, *P. ten'ue*, and *P. spirale*.

pelopathy (pe-lop'ah-the) pelotherapy.

Peloploca (pē-lop'lo-kah) [*pelo-* + Gr. *plokē* anything twisted] a genus of microorganisms of the family Peloplocaceae, order Chlamydobacteriales, made up of colorless, filamentous, cylindrical cells containing false vacuoles which emit a reddish gleam of light. It includes two species, *P. taenia'ta* and *P. undula'ta*.

Peloplocaceae (pe'lo-plo-ka'se-e) a family of Schizomycetes, order Chlamydobacteriales, made up of long, unbranched filamentous cells usually enclosed in a delicate sheath. It includes two genera, *Pelone'ma* and *Pelo'plo'ca*.

pelosine (pe-lo'sin) bebeerine.

pelotherapy (pe'lo-ther'ah-pe) [*pelo-* + Gr. *therapeia* cure] the therapeutic use of earth or mud.

peltate (pel'tāt) [L. *pelta*; Gr. *peltē* shield] shield-shaped.

peltation (pel-ta'shun) the protective influence of inoculation with an antiserum or a vaccine.

pelves (pel'vēs) [L.] plural of *pelvis*.

pelvic (pel'vik) pertaining to the pelvis.

pelvicaliceal, pelvicalyceal (pel've-kal'i-se-al) pertaining to the renal pelvis and calices.

pelvicellulitis (pel've-sel'u-li'tis) pelvic cellulitis.

pelvicephalography (pel've-sef'ah-log'rah-fe) [*pelvis* + Gr. *kephalē* head + *graphein* to write] roentgenographic measurement of the fetal head and of the birth canal.

pelvicephalometry (pel've-sef'ah-lom'ē-tre) [*pelvis* + Gr. *kephalē* head + *metron* measure] measurement of the diameters of the head of the fetus in relation to those of the mother's pelvis.

pelvifemoral (pel've-fem'o-ral) pertaining to or affecting the pelvis and femur.

pelvifixation (pel've-fik-sa'shun) surgical fixation of a displaced or wandering pelvic organ.

pelvilithotomy (pel've-li-thot'o-me) pyelolithotomy.

pelvimeter (pel-vim'ē-ter) [*pelvis* + Gr. *metron* measure] an instrument for measuring the diameters and capacity of the pelvis.

pelvimetry (pel-vim'ē-tre) the measurement of the dimensions and capacity of the pelvis. **combined p.**, pelvimetry in which measurements are made both within and outside the body. **digital p.**, pelvimetry performed with the hands. **external p.**, that in which the measurements are made outside the body. **instrumental p.**, measurement of the pelvis with the pelvimeter. **internal p.**, that in which the measurements are made within the vagina. **manual p.**, that which is performed with the hands.

pelviography (pel've-og'rah-fe) pelviroentgenography.

pelvioileoneocystostomy (pel've-o-il'e-o-ne'o-sis-tos'to-me) anastomosis of renal pelvis to an isolated segment of the ileum, which is then anastomosed to the urinary bladder.

pelviolithotomy (pel've-o-li-thot'o-me) pyelolithotomy.

pelvioneostomy (pel've-o-ne-os'to-me) ureteroneopelostomy.

pelvioperitonitis (pel've-o-per'i-to-ni'tis) pelvic peritonitis.

pelvioplasty (pel've-o-plas'te) pyeloplasty.

pelvioradiography (pel've-o-ra'de-og'rah-fe) radiography of the organs of the pelvis; pelvioradiography.

pelviscopy (pel've-os/'ko-pe) [*pelvis* + Gr. *skopein* to examine]

1. the inspection or visual examination of the pelvis or pelvic viscera. 2. pyeloscopy.

pelviostomy (pel've-os/'to-me) pyelostomy.

pelviotomy (pel've-ot/'o-me) [*pelvis* + Gr. *tomē* a cutting] 1. the cutting of the pelvic bones. 2. pyelotomy.

pelvipерitonitis (pel've-per/'i-to-ni'tis) pelvic peritonitis.

pelviradiography (pel've-ra/'de-og'rah-fe) pelviroentgenography.

pelvirectal (pel've-rek'tal) pertaining to the pelvis and the rectum.

pelviroentgenography (pel've-rent'gen-og'rah-fe) roentgenography of the organs of the pelvis.

pelvis (pel'vis), pl. *pel'ves* [L.; Gr. *pyelos* an oblong trough] [NA] the lower (caudal) portion of the trunk of the body, bounded anteriorly and laterally by the two hip bones and posteriorly by the sacrum and coccyx. The pelvis is divided by a plane passing through the terminal lines into the *false pelvis* (*p. major* [NA]) above and the *true pelvis* (*p. minor* [NA]) below. The upper boundary of the cavity of the pelvis is known as the *inlet*, *brim*, or *superior strait of the pelvis*. The true pelvis is limited below by the *inferior strait*, or *outlet*, bounded by the coccyx, the symphysis pubis, and the ischium of either side. The outlet of the pelvis is closed by the coccygeus and levator ani muscles and the perineal fascia, which form the *floor of the pelvis*. The inlet and outlet of the pelvis each have three important diameters—an anteroposterior (conjugate), an oblique, and a transverse, the relations of which determine types variously classified by different authors (see entries under *diameter*). The term pelvis is applied also to any basin-like structure, such as the renal pelvis (pelvis renalis [NA]).

android p., a pelvis characterized by a wedge-shaped inlet and narrowness of the anterior segment; used as a general designation of a female pelvis showing characters typical of the pelvis in the male. **anthropoid p.**, a female pelvis characterized by a long anteroposterior diameter of the inlet, which equals or exceeds the transverse diameter. **assimilation p.**, a pelvis in which the transverse processes of the last lumbar vertebra are fused with the sacrum (*high-assimilation p.*—including six vertebral segments), or the last sacral vertebra may fuse with the first coccygeal body (*low-assimilation p.*—including only four vertebral segments).

beaked p., one with the pelvic bones laterally compressed and their anterior junction pushed forward, as in osteomalacia.

bony p., *p. ossea*. **brachypellic p.**, an oval type of pelvis, the transverse diameter of the inlet exceeding the anteroposterior diameter by 1 to 3 cm. **contracted p.**, a pelvis in which there is a diminution of 1.5 to 2 cm. in any important diameter; when all dimensions are proportionately diminished it is a *generally contracted pelvis* (*p. justo minor*).

cordate p., **cordiform p.**, one that is somewhat heart shaped. **coxalgic p.**, one deformed in consequence of hip-joint disease.

dolichopellic p., an elongated pelvis, the anteroposterior diameter of the inlet being greater than the transverse diameter. **dwarf p.**, a small pelvis seen in several types of dwarfism.

extrarenal p., see under *renal p.* **false p.**, *p. major*. **flat p.**, one in which the anteroposterior dimension is abnormally reduced.

frozen p., a condition, due to infection or carcinoma, in which the adnexa and uterus are fixed in the pelvis. **funnel-shaped p.**, a female pelvis with a normal inlet, but a greatly narrowed outlet.

giant p., *p. justo major*. **greater p.**, *p. major*. **gynecoid p.**, a pelvis having a rounded oval shape with a well rounded anterior and posterior segment; it represents the normal female pelvis.

high-assimilation p., see *assimilation p.* **infantile p.**, a generally contracted pelvis characterized by an oval shape, a high sacrum, and marked inclination of the walls.

p. jus'to ma'jor, a pelvis that is unusually large, with all its dimensions equally increased. **p. jus'to mi'nor**, a pelvis that is unusually small, with all its dimensions equally reduced; see also *contracted p.*

juvenile p., infantile *p.* **kyphoscoliotic p.**, an irregularly contracted pelvis due to rachitic kyphoscoliosis. **kyphotic p.**, one characterized by increase of the conjugate diameter at the brim, with decrease of the transverse diameter at the outlet, due to close proximity of the ischial spines and tuberosities.

large p., *p. major*. **lesser p.**, *p. minor*. **lordotic p.**, one in which the vertebral column has an anterior curvature in the lumbar region.

low-assimilation p., see *assimilation p.* **p. ma'jor** [NA], the part of the pelvis superior to a plane passing through the iliopectineal lines.

mesatipellic p., a round type of pelvis, the transverse diameter of the inlet being equal to the anteroposterior diameter or being greater by 1 cm. or less. **p. mi'nor** [NA], the part of the pelvis inferior to a plane passing through the iliopectineal lines; see *pelvis*.

Nägele's p., one so distorted that the conjugate diameter takes an oblique direction. **p. na'na**, dwarf *p.* **oblique p.**, Nägele's *p.* **p. obtect'a**, a kyphotic pelvis in which the vertebral column extends horizontally across the pelvic inlet.

p. os'sea [NA], bony pelvis: the ring of bone forming the skeleton of the pelvis, supporting the vertebral column and resting upon the inferior members, and composed of the two hip bones anteriorly and laterally, and the sacrum and coccyx posteriorly.

osteomalacic p., deformity of the pelvis due to absorption by the bones of their calcium salts, as a result of which the bones

Gynecoid

Android

Anthropoid

Platypelloid

Various types of pelvic inlets (Greenhill and Friedman).

become soft and so flexible that they may be stretched or pushed together and cause narrowing of the pelvic inlet. **Otto p.**, a pelvis in which the acetabulum is depressed, permitting the head of the femur to protrude intrapelvically; see *arthrokatadysis*. **p. ova'lis**, fossula fenestrae vestibuli. **p. pla'na**, flat *p.* **platypellic p.**, **platypeloid p.**, a pelvis characterized by flattening of the pelvic inlet, with a short anteroposterior and a wide transverse diameter. **Prague p.**, spondylolisthetic *p.* **pseudo-osteomalacic p.**, a deformed pelvis simulating one affected with osteomalacia, but resulting from other causes. **pseudospider p.**, a congenitally small, long, thin renal pelvis with calices that may simulate renal tumor urographically. **rachitic p.**, one distorted as a result of rickets. **renal p.**, *p. rena'lis* [NA], the expansion from the upper end of the ureter into which the calices of the kidney open; ordinarily lodged within the renal sinus, under certain conditions, as in a long kidney or obstruction of the ureteropelvic junction, a large part of it may be outside the kidney (*extrarenal p.*). **Robert's p.**, a transversely contracted pelvis caused by osteoarthritis affecting both sacroiliac joints, the inlet becoming a narrow wedge. **Rokitansky's p.**,

spondylolisthetic p. **p. rotund'a**, fossula fenestrae cochleae. **round p.**, one with an inlet of nearly circular outline. **scoliotic p.**, one deformed as a result of scoliosis. **simple flat p.**, one with a shortened anteroposterior diameter. **small p.**, p. minor. **spider p.**, a renal pelvis which in the pyelogram shows the calices as narrow, string-like extensions, resembling the legs of a spider. **p. spino'sa**, a rachitic pelvis with the crest of the pubis very sharp. **split p.**, one with a congenital separation at the symphysis pubis, often associated with exstrophy of the bladder. **spondylolisthetic p.**, one in which the last, or rarely the fourth or third, lumbar vertebra is dislocated in front of the sacrum, more or less occluding the pelvic brim. Called also *Prague p.* and *Rokitansky's p.* **p. spu'ria**, p. major. **triangular p.**, one with a triangular inlet. **true p.**, p. minor. **p. of ureter**, renal p.

pelvisacral (pel've-sa'kral) pertaining to the pelvis and the sacrum.

pelvisacrum (pel-ve-sa'krum) the pelvis and the sacrum together.

pelviscope (pel've-skōp) an apparatus for examining roentgenologically the contours of the pelvis.

pelvissection (pel've-sek'shun) [*pelvis* + L. *sectio* a cutting] a cutting of the pelvis bones, such as pubiotomy and symphysiotomy.

pelvisternum (pel've-ster'num) the cartilage of the symphysis pubis.

pelvitherm (pel've-therm) [*pelvis* + Gr. *thermē* heat] an apparatus for applying heat to the pelvic organs through the vagina.

pelvitomy (pel-vit'o-me) [*pelvis* + Gr. *temnein* to cut] the operation of cutting the pelvis at any point in order to facilitate delivery.

pelvitrochanterian (pel've-tro'kan-te're-an) relating to the pelvis and the great trochanter of the femur.

pelviureteral (pel've-u-re'ter-al) relating to the renal pelvis and the ureter.

pelviureteroradiography (pel've-u-re'ter-o-ra'de-og'rah-fe) roentgenography of the ureter and renal pelvis.

pelvoscopy (pel-vos'ko-pe) [*pelvis* + Gr. *skopein* to examine] examination of a pelvis, particularly of the renal pelvis.

pelvospondylitis (pel'vo-spon'di-lit'is) inflammation of the pelvic portion of the spine. **p. ossif'icans**, rheumatoid spondylitis.

pelyc- [Gr. *pelux* pelvis] for words beginning thus, see those beginning *pelvi-* and *pyelo-*.

pemerid nitrate (pem'ē-rid) chemical name: 4-[3-(dimethylamino)propoxyl]-1,2,2,6,6-pentamethylpiperidine dinitrate; an antitussive, $C_{15}H_{32}N_2O \cdot 2HNO_3$.

pemoline (pem'o-lēn) chemical name: 2-imino-5-phenyl-4-oxazolidinone; a central nervous system stimulant, $C_9H_9N_2O_2$.

pemphigoid (pem'fi-goid) [Gr. *pemphix* blister + *eidos* form] 1. like or resembling pemphigus. 2. a name applied to a group of dermatological syndromes similar to but clearly distinguishable from those of the pemphigus group. Frequently used alone to designate bullous pemphigoid. **benign mucosal p.**, a chronic bullous disease of elderly persons, involving primarily the mucous membranes, particularly the conjunctiva and oral mucosa, with scarring; called also *cicatricial p.* and *ocular pemphigus*. **bullous p.**, a chronic generalized bullous eruption, occurring predominantly in elderly adults, and usually not fatal; the blisters are tense and there is separation at the dermoepidermal junction. IgE antibodies are found at the basement membrane. **cicatricial p.**, benign mucosal p. **localized chronic p.**, a form in which bulla formation is confined for many years to a circumscribed region, as of the face, scalp, limbs, etc., with scarring but without affecting the mucous membranes.

pemphigus (pem'fi-gus) [Gr. *pemphix* blister] a name applied to a distinctive group of diseases characterized by successive crops of bullae, the specific type usually being indicated by a modifying term. Frequently used alone to designate pemphigus vulgaris. **benign p.** (*obs.*), bullous pemphigoid. **benign familial p.**, a rare, hereditary, persistently recurring bullous and vesicular dermatitis most often involving the axillae, groin, and neck, but sometimes widespread. The lesions appear in crops and regress over several weeks or months. The disease is transmitted as an autosomal dominant trait. Called also *Hailey-Hailey disease*. **Brazilian p.**, fogo selvagem. **p. erythematous**, chronic pemphigus in which the lesions, limited to the face and chest, resemble those of disseminated lupus erythematosus. Immunofluorescent studies suggest that, in some cases at least, pemphigus and lupus erythematosus may both be present. Called also *Senear-Usher syndrome*. **p. folia'ceus**, a chronic, generalized, vesicular and scaling skin eruption somewhat resembling dermatitis herpetiformis or, later in its course, exfoliative dermatitis. **p. neonatorum**, impetigo bullosa. **ocular p.**, benign mucosal pemphigoid affecting the conjunctiva. **South American p.**, fogo selvagem. **p. veg'etans**, benign, dermatitis vegetans. **p. veg'etans** (Hallepeau type), dermatitis vegetans. **p. veg'etans** (Neumann type), a variant of pemphigus vulgaris in which the bullous lesions are replaced by verrucoid hypertrophic vegetative masses; called also *pyoderma*

verrucosum or *verrucous pyoderma*. Cf. *dermatitis vegetans*. **p. vulg'aris**, a rare relapsing disease manifested by suprabasal, intraepidermal bullae of the skin and mucous membranes; invariably fatal if untreated, but remission has been obtained by use of corticosteroid hormones and immunosuppressive drugs. **wild-fire p.**, fogo selvagem.

pempidine tartrate (pem'pi-dēn) chemical name: 1,2,2,6,6-pentamethylpiperidine tartrate; a ganglion-blocking agent, $C_{10}H_{21}N$, occurring as a white, crystalline powder, which has been used as an antihypertensive.

penatin (pen'ah-tin) glucose oxidase.

Penbritin (pen-brit'in) trademark for preparations of ampicillin.

penbutolol sulfate (pen-bu'to-lōl) (S)-1-(2-cyclopentylphenoxy)-3-[(1,1-dimethylethylamino)-2-propanol sulfate (2:1) (salt); an antiadrenergic (β -receptor), $(C_{18}H_{29}NO_2)_2 \cdot H_2SO_4$.

Pende's sign (pen'dēz) [Nicola Pende, Italian physician, born 1880] André-Thomas sign.

pendular (pen'du-lar) having a pendulum-like movement.

pendulous (pen'joo-lus, pen'dū-lus) [L. *pendere* to hang] hanging loosely; dependent.

penetrance (pen'ē-trans) [L. *penetrare* to enter into] the extent to which a substance is penetrated, or to which an object enters into a substance. In genetics, the frequency with which a heritable trait is manifested by individuals carrying the principal gene or genes conditioning it.

penetrating (pen'ē-trāt-ing) [L. *penetrans*] piercing; entering deeply.

penetration (pen'ē-tra'shun) [L. *penetratio*] 1. the act of piercing or entering deeply. 2. the focal depth of a lens, or its power of giving a clear definition at various depths.

penetrology (pen'ē-trol'o-je) the study of radiant energy.

penetrometer (pen'ē-trom'ē-ter) 1. an apparatus for measuring the penetrating power and intensity of the roentgen ray. The best known are those of Benoist, Walter, and Wehnelt. 2. an apparatus for registering the resistance of semisolid material to penetration.

penfluridol (pen-floor'i-dōl) chemical name: 1-[4,4-bis(p-fluorophenyl)butyl]-4-(4-chloro- α,α,α -trifluoro-*m*-tolyl)-4-piperidinol; a tranquilizer, $C_{28}H_{27}ClF_5NO$.

-penia [Gr. *penia* poverty, need] a word termination indicating an abnormal reduction in number of the element denoted by the root to which it is affixed, as leukopenia.

penial (pe'ne-al) penile.

penicidin (pen'ī-si'din) patulin.

penicillamine (pen'ī-sil-ah-mēn) [USP] chemical name: 3-mercapto-D-valine. A degradation product of penicillin, $C_5H_{11}NO_2S$, occurring as a white or almost white, crystalline powder, which chelates certain heavy metals; used orally to reduce the blood copper level in the treatment of hepatolenticular degeneration and to promote excretion of cystine by forming a more soluble penicillamine-cystine disulfide. It has been used in the treatment of rheumatoid arthritis.

penicilli (pen'ī-sil'i) [L.] plural of *penicillus*.

penicilliary (pen'ī-sil'e-er'e) [L. *penicillium*, dim. of *peniculus* a brush] resembling a brush or broom.

penicillin (pen'ī-sil'in) any of a large group of natural or semisynthetic antibacterial antibiotics derived directly or indirectly from strains of fungi of the genus *Penicillium* and other soil-inhabiting fungi grown on special culture media, which exert a bacteriocidal as well as a bacteriostatic effect on susceptible bacteria by interfering with the final stages of the synthesis of peptidoglycan, a substance in the bacterial cell wall. The penicillins, despite their relatively low toxicity for the host, are active against many bacteria, especially gram-positive pathogens (streptococci, staphylococci, pneumococci); clostridia; some gram-negative forms (gonococci, meningococci); some spirochetes (*Treponema pallidum* and *T. pertenue*); and some fungi. Certain strains of some target species, e.g., staphylococci, secrete the enzyme penicillinase, which inactivates penicillin and confers resistance to the antibiotic. **aluminum p.**, the aluminum salt of penicillin prepared from extracts of cultures of *Penicillium notatum* or *P. chrysogenum*. **p. B**, glucose oxidase. **benzyl p. potassium**, potassium p. G. **benzyl p. sodium**, p. G. **sodium**. **clemizole p.**, the clemizole salt of penicillin G, $C_{16}H_{18}N_2O_4 \cdot C_{10}H_2OClN_3$, the combination of which produces a respository form of penicillin G with antihistaminic properties. **dimethoxyphenyl p. sodium**, methicillin sodium. **p. G**, the most widely used form and the first of the penicillins developed for medicinal use. It is used in the form of the benzathine, potassium, procaine, and sodium salts, principally in the treatment of infections due to penicillin-susceptible gram-positive bacteria, gram-negative cocci, *Treponema pallidum*, and *Actinomyces israeli*. Called also *benzylpenicillin*. **p. G benzathine** [USP], a salt having a long-sustained action, $C_{16}H_{20}N_2 \cdot 2C_{18}H_{19}N_2O_4 \cdot 4H_2O$, obtained by combining penicillin G with *N,N*-bis(phenylmethyl)-1,2-ethanediamine (2:1), occurring as a white, crystalline powder, and containing 57.9 to 71.6 per cent of penicillin G; administered orally and

intramuscularly. **p. G potassium**, a salt $C_{16}H_{17}KN_2O_4S$, occurring as colorless or white crystals, or white, crystalline powder, and containing 80.8 to 94.3 per cent of penicillin G; administered orally and by intravenous injection or infusion. **p. G procaine** [USP], a salt having a long-sustained action, $C_{16}H_{18}N_2O_4S \cdot C_{13}H_{20}N_2H_2O$, obtained by combining penicillin G with procaine (1:1), occurring as white crystals or white, very fine, microcrystalline powder, and containing 51 to 59.6 per cent penicillin G; administered intramuscularly. **p. G sodium**, a salt, $C_{16}H_{17}N_2NaO_4S$, occurring as colorless or white crystals or as a white to slightly yellow, crystalline powder, containing not less than 85 per cent of penicillin G sodium; administered intramuscularly and intravenously. **Sterile penicillin G sodium** [USP] is suitable for parenteral use. **isoxazolyl p.**, a group of semisynthetic penicillins, including oxacillin, cloxacillin, and dicloxacillin, which combine resistance to penicillinase with acid stability and activity against gram-positive bacteria. **p. N**, adicillin. **p. O**, a penicillin produced biosynthetically by adding a precursor to the culture medium; penicillin O and its potassium and sodium salts have actions similar to those of penicillin G and are said to be hypoallergenic. **p. O chloroprocaine**, a salt of 2-chloroprocaine and penicillin O, having actions similar to penicillins G and O. **p. O potassium**, see **p. O**. **p. O sodium**, see **p. O**. **phenoxymethyl p.**, **p. V potassium phenoxymethyl p.**, **p. V potassium**. **p. V** [USP], a semisynthetic oral penicillin prepared from cultures of the mold *Penicillium* in the presence of 2-phenoxyethanol with an autolysate of yeast as the source of nitrogen. It is a broad-spectrum antibiotic having pharmacologic and toxic properties similar to those of other penicillins, and is less potent than penicillin G. Called also **phenoxymethyl p.** **p. V benzathine** [USP], an oral penicillin, $(C_{18}H_{18}N_2O_4S)_2C_{16}H_{20}N_2$, occurring as practically white powder. **p. V hydrabamine** [USP], an oral penicillin, $(C_{16}H_{18}N_2O_4S)_2 \cdot C_{42}H_{64}N_2$, occurring as a practically white powder. **p. V potassium** [USP], an oral penicillin, $C_{16}H_{17}KN_2O_4S$, occurring as a white crystalline powder.

penicillinase (pen-'i-sil'i-nās) penicillin amido- β -lactamhydrolase; an enzyme produced by certain bacteria which converts penicillin to an inactive product and thus increases resistance to the antibiotic. A purified preparation from cultures of a strain of *Bacillus cereus* is used in treatment of reactions to penicillin.

penicillin-fast (pen-'i-sil'in-fast) resistant to the action of penicillin; said of certain strains of bacteria.

penicilliosis (pen-'i-sil'e-o'sis) infection with *Penicillium*, usually a pulmonary infection.

Penicillium (pen-'i-sil'e-um) [*L. penicillum* brush, roll] a genus of Fungi Imperfecti (family Moniliales, order Moniliales) that develop fruiting organs resembling a broom, or the bones of the hand and fingers. When identified, the perfect (sexual) stage is classified with the ascomycetous fungi in the family Eurotiaceae, order Eurotiales. See also *penicillin*. **P. chrysogenum**, a

Penicillium (de Rivas).

species from which various penicillins are obtained. **P. citrinum**, a species that produces the antibiotic citrinin. **P. crustaceum**, *P. glaucum*. **P. glaucum**, a common bluish green mold. **P. notatum**, a species that is one of the sources of various penicillins. **P. patulum**, *P. uticale*. **P. uticale**, one of the species that produces patulin; called also *P. patulum*.

penicilloyl-polylysine (pen-'i-sil'oil-pol'ē-li'sēn) an agent prepared from polylysine and a penicillic acid; intradermal injection elicits a wheal and erythema response within 20 minutes in those sensitive to penicillin.

penicillus (pen-'i-sil'us), pl. *penicilli* [*L.*] a structure resembling a brush in appearance. **penicilli arteriae lienalis** [NA], brushlike groups of arterial branches in the lobules of the spleen.

penile (pe'nīl) pertaining to or affecting the penis.

penillamine (pen-'il-am'in) chemical name: 2-amino-3-mercaptop-3-methylbutanoic acid or β , β -dimethylcysteine. An amine, $C_6H_{11}O_2NS$, derived from penillic acid by the removal of a molecule of carbon dioxide.

penilloaldehyde (pen-'i-lo-al'de-hīd) an aldehyde derived from penicillin.

penis (pe'nīs) [*L.*] [NA] the male organ of copulation and of urinary excretion, comprising a root, body, and extremity, or glans penis. The root is attached to the descending portions of the pubic bone by the *crura*, the latter being the extremities of the corpora

cavernosa. The body consists of two parallel cylindrical bodies, the *corpora cavernosa*, and beneath them the *corpus spongiosum*, through which the urethra passes. The glans is covered with mucous membrane and ensheathed by the prepuce, or foreskin. The penis is homologous with the clitoris in the female. **clubbed p.**, a condition in which the penis is curved when erect. **concealed p.**, a rudimentary penis concealed beneath the skin of the scrotum, perineum, abdomen, or thigh. **double p.**, an anomaly resulting when the urethral groove completely divides the penile shaft during development of the embryo. **p. mulieb'ris** (*obs.*), clitoris. **p. palma'tus**, webbed p. **p. plas'tica**, Peyronie's disease. **webbed p.**, a penis that is enclosed by the skin of the scrotum; called also *p. palmatus*.

penischisis (pe-nis'hī-sis) [*penis* + *Gr. schisis* splitting] a fissured state of the penis, as epispadias, hypospadias, or paraspadias.

penitis (pe-ni'tis) inflammation of the penis.

Penjdeh sore, ulcer (penj'deh) [*Penjdeh*, a town of Turkestan] cutaneous leishmaniasis.

Penn seroflocculation reaction [Harry Samuel Penn, Russian physician and zoologist in the United States, born 1891] see under *reaction*.

pennate (pen'āt) penniform.

penniform (pen'i-form) [*L. penna* feather + *forma* form] shaped like a feather; looking like a feather.

pennyroyal (pen'ē-roī'al) a popular name for various labiate plants, especially *Mentha pulegium* L. (*European p.*) and *M. canadensis* L. (*American wild mint*); the oil was formerly used as a diaphoretic, aromatic, and emmenagogue.

pennyweight (pen'e-wāt) a unit of weight in the troy system, being 24 grains, or one twentieth of an ounce.

penology (pe-nol'o-je) [*Gr. poînē* penalty + *-logy*] the science of punishment; that branch of criminology which deals with the treatment of criminals.

penoscrotal (pe'no-skro'tal) relating to the penis and the scrotum.

penotherapy (pe'no-ther'ah-pe) the medical examination and regulation of prostitutes in the control of venereal disease.

Penrose drain (pen'rōz) [Charles Bingham Penrose, Philadelphia gynecologist, 1862-1925] see under *drain*.

pent-, penta- [*Gr. pente* five] a combining form meaning five.

pentabasic (pen'tah-ba'sik) having five replaceable atoms of hydrogen in the molecule.

pentachlorin (pen'tah-klo'rin) chlorophenothane.

pentachromic (pen'tah-kro'mik) [*penta-* + *Gr. chrōma* color] 1. pertaining to or exhibiting five colors. 2. able to distinguish only five of the seven colors of the spectrum.

pentacyclic (pen'tah-sik'lik) having a ring of five atoms in the molecule.

pentad (pen'tad) 1. any group of five. 2. a pentavalent element or radical.

pentadactyl (pen'tah-dak'til) [*penta-* + *Gr. daktylos* finger] having five fingers or toes on the hand or foot.

pentaerythritol (pen'tah-ē-rith'rī-tol) chemical name: 2,2-bis(hydroxymethyl)-1,3-propanediol. An alcohol, $(CH_2OH)_4C$, prepared by treating acetaldehyde with formaldehyde in an aqueous solution of calcium hydroxide; used in synthetic resins and in paints and varnishes. **p. chloral**, petrichloral. **p. tetranitrate**, the nitric acid ester of pentaerythritol, $C_5H_8N_4O_{12}$, having vasodilator action similar to nitroglycerin, occurring as a white, crystalline powder that may explode on percussion. Called also *niperyt*, *pentaerythrityl tetranitrate*, *penthrit*, *pentrinitrol*, and *PTEN*. *Diluted p. tetranitrate* [USP], a dry mixture of pentaerythritol tetranitrate with lactose, mannitol, or other inert excipients to render it nonexplosive is administered orally in the treatment of angina pectoris.

pentaerythrityl (pen'tah-ē-rith'rī-til) pentaerythritol. **p. tetranitrate**, pentaerythritol tetranitrate.

pentagastrin (pen'tah-gas'trin) a synthetic pentapeptide consisting of β -alanine and the C-terminal tetrapeptide of gastrin; used as a test of gastric secretory function.

pentalogy (pen-tal'o-je) a combination of five elements or factors, as five concurrent defects or symptoms. **p. of Fallot**, the four defects included in the tetralogy of Fallot, occurring in association with patent foramen ovale or atrial septal defect.

pentamer (pen'tah-mer) a polymer consisting of five monomers; a viral capsomer having five structural units.

pentamethazene (pen'tah-meth'ah-zēn) azamethonium.

pentamethylenediamine (pen'tah-meth'il-ēn-di-am'in) cadaverine.

pentamethylenetetrazol (pen-tah-meth'il-ēn-tet'rah-zol) pentametetrazol.

pentamidine (pen-tam'i-dēn) chemical name: 4,4'-(pentamethylenedioxy)dibenzamidine; an anti-infective used as the isethionate salt and effective against *Pneumocystis carinii*.

pentane (pen'tān) *n*-pentane; an aliphatic hydrocarbon of the methane series, C_5H_{12} , obtained by distillation of petroleum and

occurring as a clear, colorless, flammable liquid. It produces anesthesia when inhaled, ingested, or injected.

pentapeptide (pen'tah-pep'tid) a polypeptide containing five amino acids.

pentapiperide methylsulfate (pen'tah-pi'per-id) chemical name: 1,1-dimethyl-4-[(3-methyl-1-oxo-2-phenylpentyl)oxy]piperidinium. A synthetic quaternary ammonium anticholinergic, $C_{20}H_{33}NO_5S$, used in the treatment of peptic ulcer and other disorders in which gastrointestinal hypermotility and hypersecretion are features, administered orally. Called also *pentapiperium methylsulfate*.

pentapiperium methylsulfate (pen-tah-pi'per'i-um) pentapiperide methylsulfate.

pentaploid (pen'tah-ploid) 1. pertaining to or characterized by pentaploidy. 2. an individual or cell having five sets of chromosomes.

pentaploidy (pen'tah-ploi'de) the state of having five sets of chromosomes (5n).

pentapyrrolidinium bitartrate (pen'tah-pir-ro'li-din'e-um) pentolinium tartrate.

pentasomy (pen'tah-so'me) [*penta* + Gr. *sōma* body] the presence of three additional chromosomes of one type (e.g., 5 X chromosomes) in an otherwise diploid cell (2n + 3).

Pentastoma (pen-tas'to-mah) [*penta* + Gr. *stoma* mouth] a genus of endoparasitic, wormlike arthropods of the class Porocephalidae. *P. denticulatum* (incorrectly assigned to this genus) is the larva of *Linguatulidae serrata*.

pentastomiasis (pen'tah-sto-mi'ah-sis) infection with pentastomids.

pentastomid (pen-tah-sto'mid) any individual of the class Pentastomida.

Pentastomida (pen'tah-sto'mid-ah) a class of Arthropoda, the tongue worms, consisting of degenerate wormlike parasites, without circulatory or respiratory systems. The adults, otherwise without appendages, possess two pairs of hooks near the mouth. The larvae bear two or three pairs of rudimentary legs. Adults live in the respiratory passages and body cavities of reptiles, birds, and mammals. Two genera, *Armillifer* and *Linguatula*, have been reported on several occasions from man as larval host. It includes the order Porocephalida.

pentatonic (pen'tah-tom'ik) [*penta* + *atom*] 1. containing five atoms. 2. containing five replaceable hydrogen atoms.

Pentatrachomonas (pen'tah-tri-kom'o-nas) *Trichomonas*. *P. ar'din delte'ili*, *Trichomonas hominis*.

pentavaccine (pen'tah-vak'sēn) [*penta* + *vaccine*] a vaccine comprised of five microorganisms, as one containing dead cultures of the bacteria of typhoid, paratyphoid A, paratyphoid B, cholera, and brucellosis.

pentavalent (pen'tah-va'lent, pen-tav'ah-lent) having a chemical valency of five; capable of combining with five atoms of hydrogen.

pentazocine (pen-taz'o-sēn) [USP] chemical name: 1,2,3,4,5,6-hexahydro-*cis*-6,11-dimethyl-3-(3-methyl-2-butenyl)-2,6-methano-3-benzazocin-8-ol. A synthetic analgesic, $C_{27}H_{27}NO$, occurring as a white or very pale tan-colored powder; used in the form of the hydrochloride and lactate salts. **p. hydrochloride** [USP], the hydrochloride salt of pentazocine, occurring as a white crystalline powder; administered orally. **p. lactate** [USP], the lactate salt of pentazocine, administered parenterally.

pentdyopent (pent-di'o-pent) [*penta* + Gr. *dyo* two + *pente* five = 525, referring to the spectroscopic line of the substance] a substance derived from blood pigment, occurring in the urine in certain diseases.

pentene (pen'tān) amylene.

pentetate calcium trisodium (pen'tē-tāt) chemical name: [N,N-bis[2-[bis(carboxymethyl)amino]ethyl]glycinato(5-)]calcinate(3-)-trisodium. The calcium trisodium salt of pentetic acid, $C_{14}H_{18}CaN_3Na_3O_{10}$, used as a chelating agent, especially in the treatment of plutonium poisoning. Called also *calcium trisodium pentetate*.

penthienate bromide (pen-thi'ē-nāt) chemical name: 2-[(cyclopentylhydroxy-2-thienylacetyl)oxy]-N,N-diethyl-N-methylethanaminium bromide. A quaternary ammonium anticholinergic, $C_{18}H_{30}BrNO_3S$, used orally, mainly in the treatment of gastric ulcer.

Penthrane (pen'thrān) trademark for a preparation of methoxyflurane.

penthrit (pen'thrit) pentaerythritol tetranitrate.

Pentids (pen'tidz) trademark for preparations of penicillin G potassium.

pentizidone sodium (pen-tiz'i-dōn) chemical name: (R)-4-[(1-methyl-3-oxo-1-butenyl)amino]-3-isoxazolidinone monosodium salt hemihydrate; an antibacterial, $C_8H_{11}N_2NaO_3 \cdot \frac{1}{2}H_2O$.

pentobarbital (pen'to-bar'bi-tal) [USP] chemical name: 5-ethyl-5-(1-methylbutyl)-2,4,6(1*H*,3*H*,5*H*)-pyrimidinetrione. A short- to intermediate-acting barbiturate, $C_{11}H_{17}N_2O_3$, occurring as a white to practically white, fine powder, used as a sedative and

hypnotic, administered orally. Called also *pentobarbitone*. **p. sodium** [USP], the sodium salt of pentobarbital, a hypnotic used as a sedative, anticonvulsant, preanesthetic in surgery, an adjunct to anesthesia, and an amnesic in obstetrics.

pentobarbitone (pen'to-bar'bi-tōn) pentobarbital.

pentolinium tartrate (pen'to-lin'e-um) chemical name: 1,1'-(1,5-pentanediy)bis[1-methylpyrrolidinium]. A ganglionic blocking agent, $C_{23}H_{42}N_2O_{12}$, occurring as a white or slightly cream-colored powder; used as an antihypertensive, administered orally, intramuscularly, and subcutaneously.

pentone (pen'tōn) valylene.

pentosan (pen'to-san) any member of a group of pentose polysaccharides having the composition $(C_5H_8O_4)_n$; found in various foods and plant juices. They yield pentose on hydrolysis.

methyl p., a pentosan which on hydrolysis yields methyl pentoses.

pentosazon (pen'to-sa'zon) a crystalline compound formed by treating a pentose with phenyl hydrazine, sometimes abnormally occurring in the urine.

pentose (pen'tōs) a monosaccharide containing five carbon atoms in a molecule.

pentosemia (pen'to-se'me-ah) the presence of pentose in the blood.

pentosidase (pen-tos'i-dās) an enzyme that catalyzes the conversion of pentoses to some other form.

pentoside (pen'to-sid) a compound of a pentose with some other substance. Compounds of pentoses with purine and pyrimidine bases are found in the nucleic acids.

pentosuria (pen'to-su're-ah) [*pentose* + Gr. *ouron* urine + *-ia*] a benign error of metabolism due to a defect in the activity of the enzyme L-xylulose dehydrogenase, which results in high levels of L-xylulose in the urine. It is transmitted as an autosomal recessive trait. Called also *L-xyluluria*.

pentosuric (pen'to-su'rik) affected with pentosuria.

pentosyl (pen'to-sil) a radical of pentose.

pentosyltransferase (pen'to-sil-trans'fer-ās) an enzyme that catalyzes the transfer of a pentosyl group, as from uridine to orthophosphate to form uracil; called also *transpentosylase*.

Pentothal (pen'to-thol) trademark for preparations of thiopental.

pentoxide (pen-tok'sid) an oxide containing five atoms of oxygen in a molecule.

pentoxifylline (pen-toks-i'ff-lin) chemical name: 2,2-bis[(nitroxy)methyl]-1,3-propanediol mononitrate (ester); a coronary vasodilator, $C_8H_9N_3O_{10}$.

pentritinol (pen-tri-ni'trōl) pentaerythritol trinitrate.

Pentritol (pen'tri-tol) trademark for a preparation of pentaerythritol tetranitrate.

Pentryate (pen-tri'āt) trademark for preparations of pentaerythritol trinitrate.

pentylenetetrazol (pen'ti-lēn-tet'rah-zol) chemical name: 6,7,8,9-tetrahydro-5*H*-tetrazolo[1,5-*a*]azepine. A central nervous system stimulant, $C_6H_{10}N_4$, occurring as white crystals; used mainly to counteract the depressant action of overdoses of depressant drugs, administered orally, intravenously, and subcutaneously. Called also *pentamethylenetetrazol* and *leptazol*. See also *Metrazol shock therapy*, under *therapy*.

Pen-Vee (pen've) trademark for preparations of penicillin V.

Penzoldt's test, reagent (pen'zōldz) [Franz *Penzoldt*, physician in Erlangen, 1849–1927] see under *tests*.

Penzoldt-Fisher test (pen'zōld-fish'er) [Franz *Penzoldt*; Emil *Fisher*, German chemist, 1852–1919] see under *tests*.

peonin chloride (pe'o-nin) chemical name: 4',7-dihydroxy-3,5-di-β-glucoside-3'-methoxyflavylum chloride. A deep purple dye, $C_{28}H_{33}ClO_{16}$, the coloring matter of deep purple peonies; called also *peonin*.

peotillomania (pe'o-til'o-ma'ne-ah) [Gr. *peos* penis + *tillēin* to pull + *mania* madness] a ticlike movement consisting in constant pulling at the penis; called also *pseudomasturbation*.

peotomy (pe-ot'o-me) [Gr. *peos* penis + *temnein* to cut] surgical removal of the penis.

peplomer (pep'lo-mer) a subunit of the peplos, or envelope, of a virion.

peplos (pep'lohs) the lipoprotein envelope possessed by some types of virions, assembled in some cases from subunits called peplomers.

pepo (pe'po) [L. "pumpkin"] pumpkin seed; the dried ripe edible seeds of the pumpkin, *Cucurbita pepo* L. (Cucurbitaceae); used as an anthelmintic.

pepper (pep'er) [*L. piper*] black pepper; the dried unripe fruit of *Piper nigrum* L. (Piperaceae) and other plants of that genus. *White pepper* is the decorticated ripe fruit of black pepper, and is milder. Pepper contains piperine, an aromatic pungent volatile oil (5–9 per cent), minor alkaloids, fat, protein, and resins; used chiefly as a spice, but it also has diaphoretic, carminative, and gastric secretagogue properties. **cayenne p.**, capsicum.

Pepper's syndrome (type) (pep'erz) [William Pepper, Philadelphia physician, 1874-1947] see under *syndrome*.

peppermint (pep'er-mint) [USP] the dried leaves and flowering tops of *Mentha piperita* L. (Labiatae), having carminative, gastric stimulant, and counter-irritant properties; used as an oil, spirit, or water extract as a flavored vehicle for drugs.

pepsic (pep'sik) peptic.

pepsin (pep'sin) [L. *pepsinum*, from Gr. *pepsis* digestion] the proteolytic enzyme of gastric juice which catalyzes the hydrolysis of native or denatured proteins to form a mixture of polypeptides. It has an optimum pH of 1.5 to 2.0 and a specificity for peptide bonds involving aromatic amino acids (phenylalanine, tyrosine, tryptophan), although other bonds are also split. It is formed from pepsinogen in the presence of acid or, autocatalytically, in the presence of pepsin. It is freely soluble in water and has been obtained in pure crystalline form. Crude preparations from swine or beef stomach have been used as a digestive aid. **aromatic p.**, a mixture of 10 per cent of pepsin with tartaric acid, sodium chloride, and milk sugar. **Brücke's protein-free p.**, a purified pepsin that contains less nitrogen than crystalline pepsin and that hydrolyzes casein which has already been digested by crystalline pepsin. **ostrich p.**, a pepsin prepared in Argentina from the gizzard of the ostrich or rhea. **saccharated p.**, pepsin mixed with sugar of milk.

pepsinate (pep'sin-ät) to treat or charge with pepsin.

pepsinia (pep-sin'e-ah) the secretion of pepsin; it may be normal, excessive (hyperpepsinia), deficient (hypo-pepsinia), or totally absent (apepsinia).

pepsiniferous (pep'sin-if'er-us) [*pepsin* + L. *ferre* to bear] producing or secreting pepsin.

pepsinogen (pep-sin'o-jen) [*pepsin* + Gr. *gennan* to produce] a zymogen secreted by chief cells, mucous neck cells, and pyloric gland cells, which is converted into pepsin in the presence of gastric acid or of pepsin itself.

pepsinogenous (pep'sin-oj'ë-nus) producing pepsin.

pepsinum (pep-si'num) pepsin.

pepsinuria (pep'si-nu're-ah) the presence of pepsin in the urine; it may be associated with duodenal ulcer because of the increased volume of gastric secretion.

pepstatin (pep-stat'in) any of the pentapeptide pepsin inhibitors obtained from several species of *Streptomyces*, identified as pepstatin A, B, and C. The A component, $C_{34}H_{63}N_5O_9$, has been used in the treatment of gastric ulcer.

peptase (pep'tās) peptidase.

Peptavlon (pep-tav'lon) trademark for a preparation of pentagastrin.

peptic (pep'tik) [Gr. *peptikos*] pertaining to pepsin or to digestion; related to the action of gastric juices.

peptid (pep'tid) peptide.

peptidase (pep'ti-dās) any of a subclass of proteolytic enzymes that catalyze the hydrolysis of peptide linkages. **procollagen p.**, an enzyme that converts procollagen to collagen.

peptide (pep'tid) any member of a class of compounds of low molecular weight which yield two or more amino acids on hydrolysis. Formed by loss of water from the NH_2 and $COOH$ groups of adjacent amino acids, they are known as di-, tri-, tetra-[etc.] peptides, depending on the number of amino acids in the molecule. Peptides form the constituent parts of proteins. **C p.**, the connecting peptide chain that is removed in the cleavage of proinsulin to form insulin. **vasoactive intestinal p. (VIP)**, a peptide hormone (approximately 3381 daltons, 28 amino acids) first isolated from the small intestine of the pig, which in addition to its vasoactive properties, stimulates intestinal secretion of water and electrolytes, inhibits gastric secretion, promotes glycogenesis, causes hyperglycemia, and stimulates production of pancreatic juice. Its physiologic role as a hormone is not yet known. Called also *vasoactive intestinal polypeptide*.

peptidergic (pep'ti-der'jik) of or pertaining to neurons like those that secrete peptide hormones which have a hypophyseotropic function.

peptidoglycan (pep'ti-do-gli'kan) a glycan (polysaccharide) attached to short cross-linked peptides; peptidoglycans are found in bacterial cell walls.

peptidolytic (pep'ti-do-lit'ik) [*peptide* + Gr. *lytikos* dissolving] capable of splitting peptide bonds.

peptinotoxin (pep'ti-no-tok'sin) a poisonous intestinal product of imperfect stomach digestion.

peptization (pep'ti-za'shun) increase in the degree of dispersion of a colloid solution; the liquefaction of a colloid gel to form a sol.

Peptococcus (pep'to-kok'us) a genus of gram-positive, anaerobic bacteria (cocci) of the family Micrococcaceae, order Eubacteriales, usually occurring singly, in pairs, or as irregular masses, which are chemo-organotrophic and capable of fermenting protein decomposition products. They have been found in the urogenital, respiratory, and intestinal tract in humans, but their pathogenicity is uncertain because they are often found in association with pathogens in such conditions as cystitis, pleurisy, and postpartum

septicemia. **P. anaerobius**, a microaerophilic or obligate anaerobe found in the appendix and the female genital tract, and in cystitis and draining sinus. Called also *Diplococcus magnus*. **P. constellatus**, a microaerophilic or obligate anaerobe found in purulent pleurisy and in the tonsils, appendix, nose, throat, gums, and infrequently the skin and vagina. Called also *Diplococcus constellatus*.

peptogenic (pep'to-jen'ik) [Gr. *peptin* to digest + *gennan* to produce] 1. producing pepsin or peptones. 2. promoting digestion.

peptogenous (pep-toj'ë-nus) peptogenic.

peptolysis (pep-to-l'i-sis) [*peptone* + Gr. *lysis* dissolution] the splitting up of peptone.

peptolytic (pep'to-lit'ik) splitting up peptone.

peptone (pep'tōn) [Gr. *pepton* digesting] a derived protein, or a mixture of cleavage products produced by the partial hydrolysis of a native protein either by an acid or by an enzyme. Peptones are readily soluble in water, and are not precipitable by heat, by alkalis, or by saturation with ammonium sulfate. **beef p.**, a peptone made from beef by treating it with extract of pancreas. **casein p.**, a light-brown powder, soluble in water; a nutrient for convalescents. **gelatin p.**, a peptone formed during the digestion of gelatin with pepsin. **glycerin-gelatin p.**, a bacteriologic culture medium. **Höchst's p.**, peptone obtained from silk, once used as a test for the presence of peptone-splitting enzymes, either by changes in optical activity or by the precipitation of tyrosine. **milk p.**, casein p. **venom p.**, a peptone from snake venom.

peptonic (pep-ton'ik) pertaining to or containing peptone.

peptonize (pep'to-niz) to convert a protein into peptone by the action of an acid or enzyme.

peptonoid (pep'to-noid) a peptone-like substance.

peptonuria (pep'to-nu're-ah) [*peptone* + Gr. *ouron* urine + *-ia*] the presence of peptones in the urine. **enterogenous p.**, that which is due to disease of the intestine. **hepatogenous p.**, that which is due to disease of the liver. **nephrogenic p.**, that which is due to disease of the kidney. **puerperal p.**, that which occurs during the puerperium. **pyogenic p.**, that which is associated with a suppurative process.

Peptostreptococcus (pep'to-strep'to-kok'us) a genus of microorganisms of the tribe Streptococceae, family Lactobacillaceae, order Eubacteriales, made up of obligate anaerobic streptococci occurring as parasitic inhabitants of the intestinal tract, and occasionally found in gangrenous and necrotic lesions probably as secondary invaders. It includes 13 species.

peptotoxin (pep'to-tok'sin) any toxin or poisonous base developed from a peptone; also a poisonous alkaloid or ptomaine occurring in certain peptones and putrefying proteins.

per- [L. *per* through] 1. a prefix meaning throughout, in space or time, or completely or extremely. 2. a prefix used in chemical terms to denote a large amount or to designate combination of an element in its highest valence.

peracephalus (per'ah-sef'ah-lus) [*per-* + *acephalus*] a monster with neither head nor arms, and with a defective thorax.

peracetate (per-as'ë-tāt) a salt or derivative of peracetic acid.

peracid (per-as'id) an acid containing more than the usual quantity of oxygen.

peracidity (per'ah-sid'i-te) excessive acidity.

peracute (per'ah-kūt') [L. *peracutus*] excessively acute or sharp.

Perandren (per-an'dren) trademark for a preparation of testosterone.

per anum (per a'num) [L.] through the anus.

perartication (per'ar-tik'u-la'shun) [*per-* + L. *articulatio* joint] diarthrosis.

peratodynia (per'at-o-din'e-ah) [Gr. *peran* to pierce + *odynē* pain] (*obs.*) cardialgia or heartburn.

Perazil (per'ah-zil) trademark for preparations of chlorcyclizine hydrochloride.

percentile (per-sen'til, per-sen'til) 1. of, pertaining to, or used in percentage. 2. one of 100 equal parts of a series divided in order of their measurable magnitude.

percentual (per-sen'tu-al) pertaining to percentage; figured on the basis of 100.

percept (per'sept) the object perceived; the mental image of an object in space perceived by the senses.

perception (per-sep'shun) [L. *perceptio* a gathering together] the conscious mental registration of a sensory stimulus.

depth p., the proper recognition of depth or the relative distances to different objects in space, with ability to orient one's position in relation to them. **extrasensory p.**, knowledge of, or response to, an external thought or objective event not achieved as the result of stimulation of the sense organs. Abbreviated ESP. **facial p.**, see under *vision*. **stereognostic p.**, the recognition of objects by touch.

perceptive (per-sep'tiv) pertaining to perception.

perceptivity (per'sep-tiv'i-te) ability to receive sense impressions.

perceptorium (per'sep-to're-um) sensorium.

perchloride (per-klo'rid) a chloride that contains more chlorine than the ordinary chloride; an organic compound in which all the hydrogen atoms are substituted by chlorine, as in perchloroethylene (tetrachloroethylene), C_2Cl_4 .

perchlormethane (per'klör-meth'än) carbon tetrachloride.

perchlormethylformate (per'klor-meth'il-for'mät) diphosgene.

percine (per'sin) a protamine from the sperm of yellow perch, *Perca flavescens*.

percipient (per-sip'e-ent) 1. pertaining to perception. 2. an individual who perceives or is capable of perception.

percolate (per'ko-lät) [L. *percolare*] 1. to strain; to submit to percolation. 2. to trickle slowly through a substance. 3. a liquid that has been submitted to percolation.

percolation (per'ko-la'shun) [L. *percolatio*] the extraction of the soluble parts of a drug by causing a liquid solvent to flow slowly through it.

percolator (per'ko-la'tor) a vessel used in percolating drugs.

percomorph (per'ko-morf) pertaining to Percomorphi, an order of fishes whose liver oil is rich in vitamins A and D.

per contiguum (per kon-tig'u-um) [L.] in contiguity: arranged in such a way that the edges touch.

per continuum (per kon-tin'u-um) [L.] in continuity: without separation or break.

Percorten (per-kor'ten) trademark for preparations of desoxycorticosterone.

percuss (per-kus') [L. *percutere*] to subject to percussion.

percussible (per-kus'i-b'l) discoverable on percussion.

percussion (per-kush'un) [L. *percussio*] 1. the act of striking a part with short, sharp blows as an aid in diagnosing the condition of the underlying parts by the sound obtained. 2. a method of massage; see *tapotement*. **auscultatory p.**, auscultation of the sound produced by percussion. **bimanual p.**, the usual manner of percussion in which the middle finger of the left hand is placed against the body wall and its nail is struck a quick blow with the end of the bent right middle finger. **coin p.**, see under *tests*. **comparative p.**, percussion of two or more areas in order to compare the sounds obtained. **deep p.**, percussion in which a firm blow is struck in order to obtain a note from a deep-seated tissue. **direct p.**, immediate percussion. **drop p.**, **drop stroke p.**, instrumental percussion in which the plexor is allowed to fall by its own weight on to the pleximeter, the elements considered in the examination being the sound heard, the vibrations felt in the handle of the plexor, and the rebound of the plexor seen. Called also *Lerch's p.* **finger p.**, that in which the fingers of one hand are used as a plexor, and those of the other as a pleximeter. **fist p.**, percussion in which the fist is brought down with a moderate thump over the area to be tested. **Goldscheider's p.**, 1. threshold percussion. 2. orthopercussion. **immediate p.**, that in which no pleximeter is used. **instrumental p.**, that in which a plexor or hammer is used. **Kora'nyi's p.**, see under *auscultation*. **Krönig's p.**, auscul-

Immediate percussion (Külbs).

tatory percussion over the apexes of the lungs in the diagnosis of tuberculosis. **Lerch's p.**, drop p. **mediate p.**, that in which a pleximeter is employed. **Murphy's p.**, piano p. **palpatory p.**, a combination of palpation and percussion, affording tactile rather than auditory impressions. **paradoxical p.**, resonance of the chest combined with abundant rales as in acute edema of the lungs. **pencil p.**, Plesch's p. **piano p.**, percussion by striking the body by the four fingers one after the other, beginning with the little finger; called also *Murphy's p.* **Plesch's p.**, percussion within the intercostal spaces to avoid

Strong percussion (Külbs).

setting the ribs into vibration, the pleximeter finger with the first interphalangeal joint flexed at a right angle. **pleximetric p.**,

mediate p. **respiratory p.**, percussion during respiration so as to bring out the difference in the percussion notes of inspiration and expiration. **slapping p.**, percussion made by a slapping blow; used in comparing the resonance. **strip p.**, percussion

Weak percussion (Külbs).

which starts from above and progresses downward, thus covering a "strip" of the chest wall. **tangential p.**, percussion with the pleximeter placed vertically on the body, the strokes being applied to the pleximeter in a direction parallel with the surface of the skin. **threshold p.**, percussion performed by tapping lightly with the finger upon a glass rod pleximeter, one end of which, fitted with a rubber cap, rests upon an intercostal space, the rod being held at an angle to the surface of the thorax and parallel to the borders of the organ to be delimited. This method confines the percussion vibrations to a very restricted area. Called also *Goldscheider's p.* **topographic p.**, the demarcation and outlining of a dull area by percussion to determine the boundaries of organs or parts of organs.

percussopunctator (per-kus'o-punk'ta-tor) an instrument for performing multiple acupuncture.

percussor (per-kus'or) [L. "striker"] an instrument for use in performing percussion.

percutaneous (per'ku-ta'ne-us) [*per-* + L. *cutis*] performed through the skin, as injection of radiopaque material in radiological examination, or the removal of tissue for biopsy accomplished by a needle.

per cutem [L.] through the skin.

percuter (per'koo-tür') [Fr.] an instrument for therapeutic or diagnostic percussion.

pereirine (per-e'ir-in) [Port. *pereira* brier] a white alkaloid, $C_{16}H_{24}N_2O$, from the bark of *Geissospermum vellosi* Allem. (Apocynaceae), a tree of tropical America; antiperiodic, antipyretic, and tonic.

perencephaly (per'en-set'ah-le) [Gr. *pēra* pouch + *enkephalos* brain] porencephalia.

perennial (per-en'i-al) [L. *perennis*, from *per* through + *annus* year] lasting through the year or for several years.

perethynol (per-eth'i-nol) (*obs.*) a colloidal suspension prepared from fresh horse heart in chloroethylene and alcohol for Vernes' test for syphilis. See *Vernes' test* (def. 1), under *tests*.

Perez's sign (pa-räths'') [Jorje Perez, Spanish physician, died 1920] see under *sign*.

perfectionism (per-fek'shun-izm) a personality trait characterized by the setting of impossible standards, leading to frustration and self-condemnation.

perfilcon A (per-fil'kon) chemical name: 2-methyl-2-propenoic acid 2-hydroxyethyl ester polymer with 1-ethenyl-2-pyrrolidinone and 2-methyl-2-propenoic acid; a hydrophilic contact lens material, $(C_6H_{10}O_3)_x(C_6H_9NO)_y(C_4H_6O_2)_z$.

perflation (per-fla'shun) [L. *perflatio*] the act of blowing air into a space in order to force out secretions or other substances.

perforans (per'fo-ranz) [L.] penetrating; a term applied to various muscles and nerves. **p. ma'nus**, musculus flexor digitorum profundus.

perforated (per'fo-rät'ed) [L. *perforatus*] pierced with holes.

perforation (per'fo-ra'shun) [L. *perforare* to pierce through] 1. the act of boring or piercing through a part. 2. a hole made through a part or substance. **Bezold's p.**, perforation of the inner surface of the mastoid bone. **mechanical p.**, an artificial opening or hole made by boring, piercing, or cutting through a structure or surface, such as the root of a tooth. **pathologic p.**, an opening or hole produced in a tissue surface or structure by a pathologic process, as may occur in internal resorption of a tooth.

perforator (per'fo-ra'tor) an instrument for piercing the bones, and especially for perforating the fetal head.

perforatorium (per'fo-rah-to're-um) acrosome.

perfrication (per'fri-ka'shun) [L. *perfricare* to rub] rubbing with an ointment or embrocation.

perfrigeration (per-frij'er-a'shun) [*per-* + L. *frigere* to be cold] frostbite.

perfusate (per-fu'zät) a liquid that has been passed over or through the vessels of an organ or tissue.

perfuse (per-füz') to pour over or through.

perfusion (per-fu'zhun) 1. the act of pouring over or through, especially the passage of a fluid through the vessels of a specific organ. 2. a liquid poured over or through an organ or tissue.

perhexiline maleate (per-heks'i-lén) chemical name: 2-(2,2-dicylohexylethyl)piperidine (Z)-2-butenedioate. A coronary vasodilator, $C_{26}H_{48}N \cdot C_4H_4O_4$; used in the prophylaxis of angina of effort and has been used to control certain cardiac arrhythmias.

peri- [Gr. *peri* around] a prefix meaning around.

periacinal (per''e-as''i-nal) [*peri-* + L. *acinus* berry] situated around an acinus.

periacinous (per''e-as''i-nus) around an acinus.

Periactin (per''e-ak''tin) trademark for preparations of cyproheptadine hydrochloride.

periaadenitis (per''e-ad''ē-ni'tis) [*peri-* + Gr. *adēn* gland + *-itis*] inflammation of the tissues around a gland. **p. aph'thae**, *p. mucosa necrotica recurrens*, **p. muco'sa necrot'ica recur'rens**, a disease of the mouth, once considered a distinct entity, but now recognized as the more severe form of aphthous stomatitis (q.v.); it is marked by recurrent attacks of aphtha-like lesions that begin as small, firm nodules, which then enlarge, ulcerate, and heal by scar formation. After repeated attacks, numerous atrophied scars mark the oral mucosa. Called also *chronic intermittent recurrent aphthae*, *Mikulicz's aphthae*, *recurrent scarring aphthae*, *aphthae resistentiae*, *periaadenitis aphthae*, and *Sutton's disease*.

periadventitial (per''e-ad''ven-tish''al) outside the adventitia.

perialienitis (per''e-āl''yen-i'tis) [*peri-* + L. *alienus* foreign + *-itis*] inflammation around a foreign body, as a biliary concretion.

periaampullary (per''e-am''pu-lar''e) situated around an ampulla, as around the hepatopancreatic ampulla.

perianal (per''e-a''nal) [*peri-* + L. *anus* anus] located around the anus.

periangiitis (per''e-an''je-i'tis) [*peri-* + Gr. *angeion* vessel + *-itis*] inflammation of the tissue surrounding a blood or lymph vessel.

periangiocholitis (per''e-an''je-o-ko-li'tis) pericholangitis.

periangioma (per''e-an''je-o'mah) [*peri-* + Gr. *angeion* vessel + *-oma*] a tumor which surrounds a blood vessel.

perianth (per''e-anth) [*peri-* + Gr. *anthos* flower] the floral envelope, including the calyx and corolla.

periaortic (per''e-a-or''tik) around the aorta.

periaortitis (per''e-a''or-ti'tis) inflammation of the tissues around the aorta.

periapex (per''e-a-peks) the tissue which surrounds the root apex of a tooth (the periodontal ligament and alveolar bone).

periapical (per''e-ap''i-kal) [*peri-* + L. *apex* tip] relating to tissues encompassing the apex of a tooth, including periodontal membrane and alveolar bone.

periappendicitis (per''e-ah-pen''dī-si'tis) [*peri-* + *appendix* + *-itis*] inflammation of the tissues around the vermiform appendix. **p. decidua'lis**, a condition in tubal pregnancy in which, on account of adhesions between the appendix and the fallopian tube, decidual cells are present in the peritoneum of the appendix.

periappendicular (per''e-ap''en-dik''u-lar) around the vermiform appendix.

periapt (per''e-apt) [Gr. *periapton* amulet] a substance worn in the belief that it wards off disease.

periaqueductal (per''e-ak''wī-duk''tal) around an aqueduct.

periarterial (per''e-ar-te''re-al) around an artery.

periarteritis (per''e-ar''tē-ri'tis) [*peri-* + Gr. *arteria* artery + *-itis*] inflammation of the external coats of an artery and of the tissues around the artery. **p. gummo'sa**, accumulation of gummas on the blood vessels in syphilis. **p. nodo'sa**, an inflammatory disease of the coats of the small and medium-sized arteries of the body, associated with a variety of systemic symptoms. Called also *polyarteritis* and *panarteritis*. **syphilitic p.**, periarteritis gummosa.

periarthric (per''e-ar''thrik) [*peri-* + Gr. *arthron* joint] around a joint.

periarthritis (per''e-ar-thri'tis) inflammation of the tissues around a joint. **p. of shoulder**, adhesive capsulitis.

periarticular (per''e-ar-tik''u-lar) [*peri-* + L. *articulus* joint] situated around a joint.

periatrinal (per''e-a'tre-al) around the atrium of the heart.

periauricular (per''e-aw-rik''u-lar) 1. around the concha of the ear. 2. periatrinal.

periaxial (per''e-ak''se-al) [*peri-* + Gr. *axōn* axis] situated around an axis.

periaxillary (per''e-ak''sī-ler''e) situated or occurring around the axilla.

periaxonal (per''e-ak''so-nal) [*peri-* + *axon*] occurring around an axon.

periblast (per''i-blast) [*peri-* + Gr. *blastos* germ] the portion of the blastoderm of teleostichal eggs the cells of which lack complete cell membranes.

peribronchial (per''i-brong''ke-al) situated around a bronchus.

peribronchiolar (per''i-brong-ki''o-lar) situated around the bronchioles.

peribronchiolitis (per''i-brong''ke-o-li'tis) inflammation of the tissues around the bronchioles.

peribronchitis (per''i-brong-ki'tis) a form of bronchitis consisting of inflammation and thickening of the peribronchial tissue.

peribulbar (per''i-bul''bar) surrounding the bulb of the eye.

peribursal (per''i-ber''sal) surrounding a bursa.

pericaliceal (per''i-kal''i-se'al) situated near to or around a renal calix.

pericallosal (per''i-kah-lo''sal) situated around the corpus callosum.

pericalyceal (per''i-kal''i-se'al) pericaliceal.

pericanalicular (per''i-kan''ah-lik''u-lar) occurring around canaliculi.

pericapsular (per''i-kap''su-lar) surrounding a capsule.

pericardectomy (per''i-kar-dek''to-me) pericardiectomy.

pericardiac (per''i-kar''de-ak) pericardial.

pericardial (per''i-kar''de-al) pertaining to the pericardium.

pericardicentesis (per''i-kar''de-sen-te'sis) pericardiocentesis.

pericardiectomy (per''i-kar''de-ek''to-me) [*pericardium* + Gr. *ek-tomē* excision] excision of the pericardium.

pericardiocentesis (per''i-kar''de-o-sen-te'sis) [*pericardium* + Gr. *kentēsis* puncture] surgical puncture of the pericardial cavity for the aspiration of fluid.

pericardiolysis (per''i-kar''de-ol''i-sis) [*pericardium* + Gr. *lysis* dissolution] the operation of freeing adhesions between the visceral and parietal pericardium.

pericardiomediastinitis (per''i-kar''de-o-me''de-as-tī-ni'tis) pericarditis with mediastinitis; inflammation of the pericardium and mediastinum.

pericardiophrenic (per''i-kar''de-o-fren''ik) pertaining to the pericardium and the diaphragm.

pericardiopleural (per''i-kar''de-o-plu''ral) pertaining to the pericardium and the pleura.

pericardiorrhaphy (per''i-kar''de-or''ah-fe) [*pericardium* + Gr. *rhaphe* suture] the operation of suturing a wound in the pericardium.

pericardiostomy (per''i-kar''de-os''to-me) [*pericardium* + Gr. *stoma* mouth] the operation of making an opening into the pericardium usually for the drainage of effusions.

pericardiotomy (per''i-kar''de-ot''o-me) [*pericardium* + Gr. *temnein* to cut] surgical incision of the pericardium.

pericarditic (per''i-kar-di'tik) pertaining to pericarditis.

pericarditis (per''i-kar-di'tis) [*pericardium* + *-itis*] inflammation of the pericardium. **acute benign p.**, idiopathic **p. acute fibrinous p.**, inflammation of the pericardium marked by fibrinous exudate on the serous membrane. **adhesive p.**, a condition resulting from the presence of dense fibrous tissue between the parietal and visceral layers of the pericardium. There may be complete obliteration of the pericardial cavity, or there may be adhesions extending from the pericardium to the mediastinum (mediastinopericarditis), diaphragm, and chest wall (accretio cordis, accretio pericardii). **amebic p.**, pericarditis occurring as a result of rupture of an amebic abscess of the liver through the diaphragm. **bacterial p.**, pericarditis produced by bacterial infection. **p. calculo'sa**, pericarditis with a calcareous deposit in the pericardium. **carcinomatous p.**, that which is associated with malignant disease of the pericardium. **constrictive p.**, inflammation of the pericardium leading to thickening and sometimes to calcification with impaired diastolic filling, inflow stasis, or constrictive effect. **dry p.**, pericarditis unattended with effusion. **p. with effusion**, pericarditis associated with the collection of a serous or purulent exudate in the pericardial cavity. **p. episthenocardi'aca**, the symptom complex of stenocardia, fever, pericarditis, and myocardial insufficiency (Sternberg). **p. exter'na et inter'na**, inflammation of the outer and inner surfaces of the pericardium. **external p.**, that which chiefly affects the outer surface of the pericardium. **fibrinous p.**, **fibrous p.**, chronic pericarditis characterized by the formation of fibrous tissue and probably adhesions. **hemorrhagic p.**, that in which there is a bloody exudate. **idiopathic p.**, an acute serofibrinous pericarditis of unknown cause; recurrent attacks are not unusual. Called also *acute benign p. localized p.*, a term usually denoting chronic pericarditis with thickened white or milky epicardial areas. **mediastinal p.**, inflammation of the exterior surface of the pericardium and the mediastinal tissue. **p. oblit'erans, obliterating p.**, an adhesive pericarditis which leads to the obliteration of the pericardial cavity. **purulent p.**, a form characterized by pus formation. **rheumatic p.**, the form associated with active rheumatic heart disease. **serofibrinous p.**, a variety attended with a serous fluid effusion with deposition of fibrin on the pericardial surfaces. **p. sic'ca**, acute fibrinous pericarditis without effusion. **suppurative p.**, purulent **p. tuberculous p.**, a variety caused by tuberculous disease. **uremic p.**, pericarditis occurring as a complication of uremia. **p. villo'sa**, *cor villosum*.

pericardium (per''i-kar''de-um) [L.; *peri-* + Gr. *kardia* heart] [NA] the fibrous sac that surrounds the heart and the roots of the great vessels, comprising an external layer of fibrous tissue (*pericardium fibrosum* [NA]) and an inner serous layer (*pericardium serosum* [NA]). The base of the pericardium is attached to the central tendon of the diaphragm. **adherent p.**, a pericardium that is abnormally connected with the heart by dense fibrous

tissue, as in adhesive pericarditis. **bread-and-butter p.**, a pericardium having a thick fibrinous deposit on its surfaces. **calcified p.**, a pericardium containing deposits of lime salts. **cardiac p.**, visceral p. **p. fibrosum** [NA], **fibrous p.**, the external layer of the pericardium, consisting of fibrous tissue. **parietal p.**, the parietal layer (lamina parietalis) of the serous pericardium, which is in contact with the fibrous pericardium. **p. sero-sum** [NA], **serous p.**, the inner serous portion of the pericardium consisting of two layers, the *lamina parietalis*, apposed to the fibrous pericardium, and another layer, the *lamina visceralis*, or epicardium, which is reflected onto the roots of the great vessels and the heart. The space between the two layers is the *cavum pericardium*. **shaggy p.**, a pericardium coated with a roughened layer of fibrinous exudate. **visceral p.**, the inner layer (lamina visceralis pericardii) of the serous pericardium, which is in contact with the heart and roots of the great vessels; called also *epicardium*.

pericardotomy (per'i-kar-dot/o-me) pericardiotomy.

pericarp (per'i-karp) [peri- + Gr. *karpos* fruit] the seed vessel or ripened ovary of a flower.

pericaryon (per'i-kar'e-on) perikaryon.

pericecal (per'i-se'kal) surrounding the cecum.

pericecitis (per'i-se-si'tis) inflammation of the tissues around the cecum.

pericellular (per'i-sel'u-lar) [peri- + L. *cellula* cell] surrounding a cell.

pericemental (per'i-se-men'tal) pertaining to the pericementum (periodontal ligament).

pericementitis (per'i-se-men'ti'tis) [pericementum + -itis] periodontitis. **apical p.**, apical abscess. **chronic suppurative p.**, compound periodontitis.

pericementoclasia (per'i-se-men'to-kla'ze-ah) [pericementum + Gr. *klasis* breaking] disintegration of the periodontal ligament (pericementum) and alveolar bone without loss of the overlying gingival tissue; it results in pocket formation. Cf. *compound periodontitis*.

pericementum (per'i-se-men'tum) [peri- + L. *caementum* cement] the periodontal ligament.

pericentral (per'i-sen'tral) surrounding a center.

pericentriolar (per'i-sen'tre-o'lar) situated around a centriole.

pericephalic (per'i-se-fal'ik) surrounding the head.

pericholangitis (per'i-ko'lan-ji'tis) [peri- + Gr. *cholē* bile + *angeion* vessel + -itis] inflammation of the tissues that surround the bile ducts.

pericholecystitis (per'i-ko'le-sis-ti'tis) inflammation of the tissues around the gallbladder. **gaseous p.**, emphysematous cholecystitis.

perichondrial (per'i-kon'dre-al) pertaining to or composed of perichondrium.

perichondritis (per'i-kon-dri'tis) inflammation of the perichondrium.

perichondrium (per'i-kon'dre-um) [peri- + Gr. *chondros* cartilage] [NA] the layer of dense fibrous connective tissue which invests all cartilage except the articular cartilage of synovial joints.

perichondroma (per'i-kon-dro'mah) a tumor arising from the perichondrium.

perichord (per'i-kord) the investing sheath of the notochord.

perichordal (per'i-kor'dal) [peri- + Gr. *chordē* cord] situated around the notochord.

perichorioidal (per'i-ko'roi'dal) perichoroidal.

perichoroidal (per'i-ko-roi'dal) surrounding the choroid coat.

perichrome (per'i-krōm) [peri- + Gr. *chrōma* color] a nerve cell in which the Nissl bodies are arranged in rows beneath the cell membrane. Cf. *arkyochrome*, *gyrochrome*, and *stichochrome*.

periclasia (per'i-kla'se-ah) periodontoclasia.

Periclor (pār'i-klōr) trademark for a preparation of petrichloral.

pericolic (per'i-ko'lik) around the colon, as pericolic membrane.

pericolitis (per'i-ko-li'tis) [peri- + Gr. *kolon* colon + -itis] inflammation around the colon, especially of the peritoneal coat of the colon. **p. dex'tra**, pericolicitis affecting the ascending colon. **membranous p.**, a morbid condition resulting from the presence of Jackson's membrane (q.v.). **p. sinis'tra**, inflammation of the surrounding connective tissue and peritoneum of the descending colon.

pericolonitis (per'i-ko'lon-i'tis) pericolicitis.

pericolpitis (per'i-ko-lpi'tis) [peri- + Gr. *kolpos* vagina + -itis] inflammation of the tissues around the vagina.

periconchal (per'i-kong'kal) [peri- + Gr. *konchē* a shell-like cavity] situated around the concha.

periconchitis (per'i-kong-ki'tis) [peri- + Gr. *konchē* a shell-like cavity + -itis] inflammation of the lining of the orbit.

pericorneal (per'i-kor'ne-al) surrounding the cornea.

pericoronal (per'i-kor'o-nal) around the crown of a tooth.

pericoronitis (per'i-kor'o-ni'tis) [peri- + L. *corona* crown + -itis] inflammation of the gingiva surrounding the crown of a partially erupted tooth; called also *operculitis*.

pericoxitis (per'i-kok-si'tis) inflammation of the tissues about the hip joint.

pericranial (per'i-kra'ne-al) pertaining to the pericranium.

pericranitis (per'i-kra-ni'tis) inflammation of the external periosteum of the skull.

pericranium (per'i-kra'ne-um) [peri- + Gr. *kranion* cranium] [NA] the external periosteum of the skull.

pericycle (per'i-si'k'l) [peri- + Gr. *kyklos* circle] a layer of parenchymal cells capable of being transformed into meristem to give rise to the root cambium and cork cambium and to branch roots.

pericystic (per'i-sis'tik) situated about a cyst.

pericystitis (per'i-sis-ti'tis) [peri- + Gr. *kystis* bladder + -itis] inflammation of the tissues around the bladder.

pericystium (per'i-sis'te-um) the vascular envelope of certain cysts.

pericyte (per'i-sit) [peri- + Gr. *kytos* cell] one of the peculiar elongated cells with the power of contraction, found wrapped about precapillary arterioles outside the basement membrane; called also *pericyte* of Zimmermann and Rouget cell.

pericytial (per'i-si'shal) situated around a cell.

pericytoma (per'i-si-to'mah) hemangiopericytoma.

peridectomy (per'i-dek'to-me) peritectomy.

perideferentitis (per'i-def'er-en-ti'tis) inflammation of the tissues surrounding the ductus deferens.

peridendritic (per'i-den-drit'ik) surrounding the dendrites.

peridens (per'i-dens) a supernumerary tooth appearing elsewhere than in the midline of the dental arch.

peridental (per'i-den'tal) periodontal.

peridentium (per'i-den'she-um) periodontium.

periderm (per'i-derm) [peri- + Gr. *derma* skin] 1. the large-celled outer layer of the bilaminar fetal epidermis. In the human it is loosened by the hair which grows beneath it, and generally disappears before birth. Called also *epitrichium*. 2. the cuticle (eponychium and hyponychium), the only part of the periderm which persists after birth.

peridermal (per'i-der'mal) pertaining to the periderm.

peridesmic (per'i-dez'mik) around a ligament; pertaining to the peridesmium.

peridesmitis (per'i-dez-mi'tis) inflammation of the peridesmium.

peridesmium (per'i-dez'me-um) [peri- + Gr. *desmion* band] the areolar membrane which covers the ligaments.

perididymis (per'i-di-did'i-mis) [peri- + Gr. *didymos* testicle] the tunica vaginalis testis.

perididymitis (per'i-di-did'i-mi'tis) inflammation of the perididymis; called also *vaginitis testis*.

peridiverticulitis (per'i-di'ver-tik'u-li'tis) inflammation of structures around a diverticulum of the intestine.

peridontoclasia (per'i-don'to-kla'se-ah) periodontoclasia.

periductal (per'i-duk'tal) surrounding a duct, particularly a duct of the mammary gland.

periductile (per'i-duk'til) periductal.

periduodenitis (per'i-du'o-dē-ni'tis) inflammation around the duodenum, a condition marked by a deformed duodenum surrounded and fixed by peritoneal adhesions.

peridural (per'i-du'ral) around or external to the dura mater.

peridurogram (per'i-du'ro-gram) the film obtained in peridurography.

peridurography (per'i-du-rog'rah-fe) [peri- + *dura* + Gr. *graphein* to write] roentgenography of the spinal canal and interspaces after injection of a contrast medium in the peridural space.

periencephalitis (per'i-en-sef'ah-li'tis) [peri- + Gr. *enkephalos* brain + -itis] inflammation of the surface of the brain; meningitis with cortical encephalitis.

periencephalography (per'i-en-sef'ah-log'rah-fe) roentgenography of the cerebral meninges.

periencephalomeningitis (per'i-en-sef'ah-lo-men'in-ji'tis) [peri- + Gr. *enkephalos* brain + *mēninx* membrane + -itis] chronic inflammation of the cerebral cortex and meninges; paresis or general paralysis of the insane.

perienteric (per'i-en-ter'ik) situated around the intestine.

perienteritis (per'i-en-ter-i'tis) [peri- + Gr. *enteron* intestine + -itis] inflammation of the peritoneal coat of the intestine; visceral peritonitis.

perienteron (per'i-en-ter-on) [peri- + Gr. *enteron* intestine] the primitive perivisceral cavity of the embryo.

periependymal (per'i-e-pen'dī-mal) situated around the ependyma.

periepithelioma (per''e-ep''i-the-le-o'mah) adrenal cortical carcinoma.

periesophageal (per''e-ē-sof''ah-je-al) situated around the esophagus.

periesophagitis (per''e-ē-sof''ah-ji'tis) inflammation of the tissues around the esophagus.

perifascicular (per''e-fah-sik''u-lar) surrounding a fasciculus of nerve or muscle fibers.

perifistular (per''i-fis''tu-lar) around a fistula.

perifocal (per''i-fo'kal) around or surrounding a focus, such as a focus of infection.

perifollicular (per''i-fō-lik''u-lar) surrounding a follicle.

perifolliculitis (per''i-fō-lik''u-li'tis) inflammation around the hair follicles. **p. cap'itis absce'dens et suffo'diens**, a suppurating and cicatrizing disease of the scalp marked by numerous fluctuating abscesses, comedones, and scars. Called also *folliculitis abscedens et suffodiens and dissecting cellulitis of scalp*.

superficial pustular p., Bockhart's impetigo.

perigangliitis (per''i-gang''gle-i'tis) inflammation of tissues around a ganglion.

periganglionic (per''i-gang''gle-on'ik) situated around a ganglion.

perigastric (per''i-gas'trik) situated around the stomach; pertaining to the peritoneal coat of the stomach.

perigastritis (per''i-gas-tri'tis) [*peri* + Gr. *gastēr* stomach + *-itis*] inflammation of the peritoneal coat of the stomach.

perigemmal (per''i-jem'al) surrounding a taste bud or other bud.

periglandular (per''i-glan'du-lar) surrounding a gland or glands.

periglandulitis (per''i-glan''du-li'tis) inflammation of the tissues about a glandule or glandules.

periglial (per''i-gli'al) surrounding the glial cells of the brain.

periglossitis (per''i-glō-si'tis) inflammation of the tissues around the tongue.

periglottic (per''i-glot'ik) situated around the tongue.

periglottis (per''i-glot'is) [*peri* + Gr. *glōtta* tongue] the mucous membrane of the tongue.

perihepatic (per''i-he-pat'ik) [*peri* + Gr. *hēpar* liver] situated or occurring around the liver.

perihepatitis (per''i-hep''ah-ti'tis) [*peri* + Gr. *hēpar* liver + *-itis*] inflammation of the peritoneal capsule of the liver and of the tissues around the liver. **p. chron'ica hyperplas'tica**, a disease in which the peritoneal covering of the liver becomes converted into a white mass resembling the icing of a cake; called also *frosted liver, icing liver, sugar-icing liver, and zuckergussleber*.

gonococcal p., perihepatitis due to extension of gonorrheal infection; see *Fitz-Hugh-Curtis syndrome*, under *syndrome*.

perihernial (per''i-her'ne-al) situated or occurring around a hernia.

perihilar (per''e-hi'lar) around a hilus, e.g., around the pulmonary hilus.

peri-insular (per''e-in'su-lar) surrounding an island, particularly the insula.

peri-islet (per''e-i'let) situated around the islets of Langerhans.

perijejunitis (per''i-je''ju-ni'tis) inflammation around the jejunum.

perikaryon (per''i-kar'e-on) [*peri* + Gr. *karyon* nucleus] the cell body as distinguished from the nucleus and the processes; applied particularly to neurons.

perikeratic (per''i-ker-at'ik) surrounding the cornea.

perikymata (per''i-ki'mah-tah) [pl., *peri* + Gr. *kyma* wave] the numerous small transverse ridges on the exposed surface of the enamel of a permanent tooth.

perilabyrinth (per''i-lab'f-rinth) the tissue surrounding the labyrinth of the ear.

perilabyrinthitis (per''i-lab''f-rin-thi'tis) inflammation of the tissues around the labyrinth of the ear. It may lead to circumscribed labyrinthitis.

perilaryngeal (per''i-lah-rin'je-al) situated around the larynx.

perilaryngitis (per''i-lar'in-ji'tis) [*peri* + Gr. *larynx* larynx + *-itis*] inflammation of the tissues around the larynx.

perilenticular (per''i-len-tik''u-lar) surrounding the lens of the eye.

perilesional (per''i-le'shun-al) located or occurring around a lesion.

periligamentous (per''i-lig''ah-men'tus) situated around a ligament.

perilobar (per''i-lo'bar) surrounding a lobe.

perilobulitis (per''i-lob-u-li'tis) inflammation of the tissues surrounding the lobules of the lung.

perilymph (per''i-limf) [*peri* + L. *lymph* lymph] the fluid contained within the space separating the membranous from the osseous labyrinth of the ear; it is entirely separate from the endolymph. Called also *perilymph* [NA].

perilymph (per''i-lim'fah) [NA] the perilymph.

perilymphadenitis (per''i-lim''fad-ē-ni'tis) inflammation of the tissues around a lymph gland.

perilymphangeal (per''i-lim-fan'je-al) located around a lymphatic vessel.

perilymphangitis (per''i-lim''fan-ji'tis) inflammation of the tissues around a lymphatic vessel.

perilymphatic (per''i-lim-fat'ik) 1. pertaining to the perilymph. 2. around a lymphatic vessel.

perimastitis (per''i-mas-ti'tis) [*peri* + Gr. *mastos* breast + *-itis*] inflammation of the connective tissue around the mammary gland.

primedullary (per''i-med'u-ler''e) surrounding a medulla, as the medulla oblongata or the marrow of a bone.

perimeningitis (per''i-men''in-ji'tis) [*peri* + Gr. *mēnix* membrane + *-itis*] pachymeningitis.

perimeter (pē-rim'ē-ter) [*peri* + Gr. *metron* measure] 1. a line forming the boundary of a plane figure. 2. an apparatus for determining the extent of the peripheral visual field on a curved surface. **bed p.**, an apparatus for determining the limits of peripheral vision in a patient confined to bed. **dental p.**, an instrument for measuring the circumference of a tooth.

perimetric (per''i-met'rik) 1. pertaining to a perimeter. 2. around the uterus. 3. pertaining to the perimetrium.

perimetritic (per''i-me-trit'ik) pertaining to or characterized by perimetritis.

perimetritis (per''i-mē-tri'tis) [*peri* + Gr. *mētra* uterus + *-itis*] inflammation of the perimetrium.

perimetrium (per-i-me'tre-um) [*peri* + Gr. *mētra* uterus] the serous coat of the uterus; NA alternative for *tunica serosa uteri*.

perimetrosalpingitis (per''i-met''ro-sal''pin-ji'tis) inflammation of the uterus and uterine tubes and of surrounding tissues.

encapsulating p., perimetrosalpingitis with formation of a membrane about the organs involved.

perimetry (pē-rim'ē-tre) [*peri* + Gr. *metron* measure] determination of the extent of the peripheral visual field by use of a perimeter.

perimyelis (per''i-mi'ē-lis) [*peri* + Gr. *myelos* marrow] endosteum.

perimyelitis (per''i-mi'ē-li'tis) 1. inflammation of the perimyelis (endosteum). 2. spinal meningitis.

perimyelography (per''i-mi'ē-log'rah-fe) [*peri* + Gr. *myelos* marrow + *graphein* to record] roentgen-ray examination after injecting iodized oil or other contrast fluid into the subarachnoid space of the spinal cord.

perimyocarditis (per''i-mi'o-kar-di'tis) [*peri* + *myocarditis*] combined pericarditis and myocarditis.

perimyoendocarditis (per''i-mi'o-en''do-kar-di'tis) pericarditis associated with myocarditis and endocarditis.

perimysitis (per''i-mi'o-si'tis) inflammation of the connective tissue around muscles.

perimysia (per''i-mis'e-ah) plural of perimysium.

perimysial (per''i-mis'e-al) pertaining to the perimysium.

perimysiitis (per''i-mis'e-i'tis) inflammation of the perimysium; myofibrositis.

perimysitis (per''i-mis-i'tis) perimysiitis.

perimysium (per''i-mis'e-um), pl. *perimys'ia* [*peri* + Gr. *mys* muscle] [NA] the connective tissue demarcating a fascicle of skeletal muscle fibers; called also *internal p.*, or *p. internum*. **external p.**, **p. exter'num**, epimysium. **internal p.**, **p. inter'num**, perimysium.

perinatal (per''i-na'tal) [*peri* + L. *natus* born] pertaining to or occurring in the period shortly before and after birth; variously defined as beginning with completion of the twentieth to twenty-eighth week of gestation and ending 7 to 28 days after birth.

perinatologist (per''i-na-to'l'o-jist) a specialist in perinatology.

perinatology (per''i-na-to'l'o-je) [*perinatal* + *-logy*] the branch of medicine (obstetrics and pediatrics) dealing with the fetus and infant during the perinatal period.

perineal (per''i-ne'al) pertaining to the perineum.

perineocele (per''i-ne'o-sēl) [*perineum* + Gr. *kēlē* hernia] a hernia lying between the rectum and the prostate, or between the rectum and vagina; perineal hernia.

perineometer (per''i-ne-om'ē-ter) an instrument for measuring the strength of contractions of the perivaginal muscles.

perineoplasty (per''i-ne'o-plas'te) [*perineum* + Gr. *plassein* to shape] plastic surgery of the perineum.

perineorrhaphy (per''i-ne-or'ah-fe) [*perineum* + Gr. *rhaphe* suture] saturation of the perineum, performed for the repair of a laceration.

perineoscrotal (per''i-ne-o-skro'tal) pertaining to the perineum and scrotum.

perineosynthesis (per''i-ne'o-sin'the-sis) [*perineum* + Gr. *syn-*

thesis a placing together] (*obs.*) surgical restoration of a completely lacerated perineum.

perineotomy (per'i-ne-o'to-me) [*perineum* + Gr. *temnein* to cut] surgical incision through the perineum.

perineovaginal (per'i-ne'o-vaj'i-nal) pertaining to or communicating with the perineum and vagina, as a perineovaginal fistula.

perineovaginorectal (per'i-ne'o-vaj'i-no-rek'tal) pertaining to the perineum, vagina, and rectum.

perineovulvar (per'i-ne'o-vul'var) pertaining to the perineum and the vulva.

perinephrial (per'i-nef're-al) pertaining to the perinephrium.

perinephric (per'i-nef'rik) around the kidney.

perinephritic (per'i-nē-frit'ik) pertaining to or characterized by perinephritis.

perinephritis (per'i-nē-frit'is) [*peri-* + Gr. *nephros* kidney + *-itis*] inflammation of the perinephrium; it is marked by fever, local pain, and tenderness on pressure.

perinephrium (per'i-nef're-um) [*peri-* + Gr. *nephros* kidney] the peritoneal envelope and other tissues around the kidney.

perineum (per'i-ne'um) [Gr. *perineos* the space between the anus and scrotum] 1. [NA] the pelvic floor and the associated structures occupying the pelvic outlet; it is bounded anteriorly by the pubic symphysis, laterally by the ischial tuberosities, and posteriorly by the coccyx. 2. the region between the thighs, bounded in the male by the scrotum and anus and in the female by the vulva and anus.

perineural (per'i-nu'al) surrounding a nerve or nerves.

perineurial (per'i-nu're-al) pertaining to the perineurium.

perineuritis (per'i-nu-rit'ik) pertaining to or suffering from perineuritis.

perineuritis (per'i-nu-rit'is) inflammation of the perineurium.

perineurium (per'i-nu're-um) [*peri-* + Gr. *neuron* nerve] the connective tissue sheath surrounding each bundle of fibers (fasciculus) in a peripheral nerve.

perinuclear (per'i-nu'kle-ar) situated or occurring around a nucleus.

periocular (per'e-ok'u-lar) situated or occurring around the eye.

period (pe're-od) [*peri-* + Gr. *hodos* way] an interval or division of time; the time for the regular recurrence of a phenomenon.

absolute refractory p., the portion of the refractory period when a nerve or muscle fiber cannot respond to a stimulus, as contrasted with the relative refractory period.

child-bearing p., the duration of the reproductive ability in the human female, roughly from puberty to menopause.

ejection p., sphygmic p.

G₁ p., the period in the mitotic cycle from the end of the previous division to the start of DNA synthesis (S period).

G₂ p., the period of the mitotic cycle from the end of DNA synthesis (S period) to the beginning of mitosis.

gestational p., the duration of pregnancy, which in the human female averages about 266 days.

half-life p., see *half-life*.

incubation p., the interval of time required for development; the period of time between the moment of entrance of the infecting organism into the body and the first symptoms of the consequent disease, or between the moment of entrance into a vector and the time at which the vector is capable of transmitting the disease. Called also *incubative stage*.

isoelectric p., the moment in muscular contraction when the electrodes are so related to the contraction wave that no deflection of the galvanometer is produced.

p. of isometric contraction, presphygmic p.

p. of isometric relaxation, post-sphygmic p.

isovolumic p., presphygmic p.

lag p., the time which elapses between the introduction of a microorganism into a nutrient medium and the initiation of exponential growth.

latency p., 1. see *latent p.* 2. in psychoanalytic theory, the period, usually between 5 years of age and adolescence, of relative quiescence in psychosexual development, with a cessation of interest in persons of the opposite sex and a tendency to associate mainly with persons of one's own sex. 3. see *under stage*.

latent p., a seemingly inactive period, as that between exposure of tissue to an injurious agent and the manifestation of response, or that between the instant of stimulation and the beginning of response.

M p., the period of active mitosis.

menstrual p., monthly p., the time of menstruation.

postsphygmic p., the short interval of ventricular diastole (0.08 second), immediately following the sphygmic period and lasting until the opening of the atrioventricular valves, during which the muscle fibers are relaxing and no blood is entering the ventricles; called also *period of isometric relaxation*.

prefunctional p., the time span during morphological and histological development before physiological activity begins.

presphygmic p., the first phase of ventricular systole, being the short period (0.04–0.06 second) immediately following closure of the atrioventricular valves and lasting until opening of the semilunar valves, during which the muscle fibers are contracting against the incompressible mass of fluid filling the ventricles; called also *period of isometric contraction* and *isovolumic p.*

quarantine p., the length of time, varying with the infection in question, which must elapse before a person exposed to contagion is regarded as incapable of

transmitting or acquiring the disease.

reaction p., 1. the stage of rallying from shock after trauma. 2. reaction time, the time that elapses between stimulation and the consequent reaction.

refractory p., the period of depolarization of the cell membrane after excitation, during which the nerve or muscle fiber cannot respond to a second stimulus.

relative refractory p., the brief period following the absolute refractory period, during which there is repolarization of the cell membrane to the extent that the fiber can respond to a strong stimulus, although the normal resting potential has not been reached.

S p., the period of DNA synthesis in the mitotic cycle.

safe p., the period during the menstrual cycle when conception is considered least likely to occur; it is approximately the ten days after menstruation begins, and the ten days preceding menstruation.

silent p., an interval in the course of a disease in which the symptoms become very mild or disappear for a time.

sphygmic p., the second phase of ventricular systole, being the period (0.21–0.30 second) intervening between the opening and closing of the semilunar valves, during which the blood is being discharged into the aortic and the pulmonary arteries; called also *ejection period*.

Wenckebach p., a form of partial heart block characterized by progressive lengthening of the P-R interval until ventricular response occurs; such a sequence is usually repetitive.

periodate (per-i'o-dāt) a salt of periodic acid.

periodic (pe're-od'ik) [Gr. *periodikos*] recurring at regular intervals of time.

periodicity (pe're-o-dis'i-te) recurrence at regular intervals of time.

filarial p., the periodic increase of microfilariae in the peripheral blood: nocturnal periodicity occurs in *Wuchereria bancrofti* infection, in most endemic areas, and in *Brugia malayi* infection; diurnal periodicity occurs in *Loa loa* infection.

lunar p., recurrence synchronized with phases of the moon, as the reproductive phenomena in some lower animals.

malarial p., the more or less regular recurrence of paroxysms at intervals of one, two, or three days in malaria; see *under malaria*.

periodontal (per'e-o-don'tal) [*peri-* + Gr. *odous* tooth] situated or occurring around a tooth; pertaining to the periodontium.

periodontia (per'e-o-don'she-ah) 1. plural of *periodontium*. 2. periodontics.

periodontics (per'e-o-don'tiks) [*peri-* + Gr. *odous* tooth] that branch of dentistry dealing with the study and treatment of diseases of the periodontium.

periodontist (per'e-o-don'tist) a dentist who specializes in periodontics.

periodontitis (per'e-o-don-ti'tis) [*peri-* + Gr. *odous* tooth + *-itis*] inflammatory reaction of the tissues surrounding a tooth (periodontium), usually resulting from the extension of gingival inflammation (gingivitis) into the periodontium.

apical p., inflammatory reaction of the tissues surrounding the root of a tooth.

chronic apical p., see *apical granuloma*, *under granuloma*.

compound p., periodontitis in which the combination of local irritants and occlusal trauma produces an exacerbation of the clinical manifestations of simple periodontitis: there are more periodontal pockets formed, alveolar bone and cementum are resorbed, destruction of the periodontal ligament is combined with vascular, degenerative, and necrotic changes, and bone destruction is angular rather than horizontal; called also *chronic suppurative pericementitis*, *Riggs' disease*, and *pyorrhea alveolaris*.

simple p., **p. sim'plex**, periodontitis due to a variety of local irritants, such as calculus, impaction of food, and rough edges of fillings, marked by chronic inflammation of the gingiva, formation of periodontal pockets usually with pus formation, horizontal bone resorption, destruction of the periodontal ligament, and loss of teeth.

periodontium (per'e-o-don'she-um), pl. *periodon'tia* [*peri-* + Gr. *odous* tooth] the tissues investing and supporting the teeth, including the cementum, periodontal ligament, alveolar bone, and gingiva. Anatomically [NA], the term is restricted to the connective tissue interposed between the teeth and their bony sockets, i.e., the periodontal ligament; called also *periosteum alveolare*.

periodontoclasia (per'e-o-don'to-kla'se-ah) [*peri-* + Gr. *odous* tooth + *klasis* breaking] a general term sometimes used for any degenerative and destructive disease of the periodontium.

periodontology (per'e-o-don-to'l'o-je) [*peri-* + Gr. *odous* tooth + *-logy*] the scientific study of the periodontium and periodontal diseases.

periodontopathy (per'e-o-don-top'ah-the) a noninflammatory disorder of the periodontium.

periodontosis (per'e-o-don-to'sis) a degenerative, noninflammatory condition of the periodontium, originating in one or more of the periodontal structures and characterized by destruction of the tissues.

periomphalic (per'e-om-fal'ik) [*peri-* + Gr. *omphalos* navel] around the umbilicus.

perionychia (per'e-o-nik'e-ah) paronychia.

perionychium (per'e-o-nik'e-um) [*peri-* + Gr. *onyx* nail] the epidermis bordering a nail.

perionyx (per'e-o-niks) [*peri-* + Gr. *onyx* nail] a relic of the ep-

onychium persisting as a band across the root of the nail, seen in the eighth month of fetal life.

perioophoritis (per'ē-o-of'o-ri'tis) [*peri-* + Gr. *ōnēgg* + *pherein* to bear + *-itis*] inflammation of the tissues around the ovary.

perioophorosalingitis (per'ē-o-of'o-ro-sal'pin-ji'tis) [*peri-* + Gr. *ōnēgg* + *pherein* to bear + *salpinx* tube + *-itis*] inflammation of the tissues around the ovary and oviducts.

perioothecitis (per-e-o'o-the-si'tis) perioophoritis.

perioperative (per'e-op'er-ah-tiv) pertaining to the period extending from the time of hospitalization for surgery to the time of discharge.

periophthalmia (per'ē-of-thal'me-ah) periophthalmitis.

periophthalmic (per'ē-of-thal'mik) situated around the eye.

periophthalmitis (per'ē-o-of'thal-mi'tis) inflammation of the tissues around the eye.

periople (per'e-o'p'l) [*peri-* + Gr. *hoplē* hoof] the layer of soft, light-colored horn covering the outer aspect of the hoof in ungulates.

perioptometry (per'ē-op-tom'ē-tre) [*peri-* + Gr. *optos* visible + *metron* measure] the measurement of the peripheral acuity of vision or of the limits of the visual field.

perioral (per'ē-o'ral) [*peri-* + L. *os* mouth] situated or occurring around the mouth.

periorbit (per'ē-or'bit) periorbita.

periorbita (per'ē-or'bi-tah) [*peri-* + L. *orbita* orbit] [NA] the periorbital covering of the bones forming the orbit, or eye socket.

periorbital (per'ē-or'bi-tal) situated around the orbit, or eye socket.

periorbititis (per'ē-or'bi-ti'tis) inflammation of the periorbita.

periorchitis (per'ē-or-ki'tis) [*peri-* + Gr. *orchis* testis + *-itis*] inflammation of the tunica vaginalis testis. **p. adhaesi'va**, a variety in which the two layers of the tunica vaginalis are more or less adherent. **p. purulen'ta**, periorchitis which goes on to pus formation.

periorchium (per'ē-or'ke-um) the parietal layer of the tunica vaginalis.

periost (per'ē-ost) periosteum.

periosteal (per'ē-os'te-al) pertaining to the periosteum.

periosteitis (per'ē-os'te-i'tis) periostitis.

periosteodema (per'ē-os'te-o-de'mah) periosteodema.

periosteodema (per'ē-os'te-o-de'mah) edema of the periosteum.

periosteoma (per'ē-os-te-o'mah) a morbid bony growth surrounding a bone.

periosteomedullitis (per'ē-os'te-o-med'u-li'tis) inflammation of the periosteum and bone marrow.

periosteomyelitis (per'ē-os'te-o-mi'lē-li'tis) [*peri-* + Gr. *osteon* bone + *myelos* marrow + *-itis*] inflammation of the entire bone, including periosteum and marrow.

periosteophyte (per'ē-os'te-o-fit') [*periosteum* + Gr. *phyton* growth] a bony outgrowth on the periosteum.

periosteorrhaphy (per'ē-os'te-or'ah-fe) [*periosteum* + Gr. *rhaphe* suture] the suturing together of the margins of severed periosteum.

periosteosis (per'ē-os'te-o'sis) periostosis.

periosteotome (per'ē-os'te-o-tōm) an instrument for cutting the periosteum; also an instrument for separating the periosteum from the bone.

periosteotomy (per'ē-os'te-o'to'me) [*peri-* + Gr. *osteon* bone + *tomē* a cutting] surgical incision or slitting of the periosteum.

periosteous (per'ē-os'te-us) pertaining to or of the nature of periosteum.

periosteum (per'ē-os'te-um) [*peri-* + Gr. *osteon* bone] [NA] a specialized connective tissue covering all bones of the body, and possessing bone-forming potentialities; in adults, it consists of two layers that are not sharply defined, the external layer being a network of dense connective tissue containing blood vessels, and the deep layer composed of more loosely arranged collagenous bundles with spindle-shaped connective tissue cells and a network of thin elastic fibers. **alveolar p.**, **p. alveola're**, the periodontal ligament.

periostitis (per'ē-os-ti'tis) inflammation of the periosteum. The condition is generally chronic, and is marked by tenderness and swelling of the bone and an aching pain. Acute periostitis is due to infection, is characterized by diffuse suppuration, severe pain, and constitutional symptoms, and usually results in necrosis.

p. albumino'sa, **albuminous p.**, a form accompanied by the exudation of a clear, albuminous liquid into a flattened cavity beneath the periosteum; called also *serous abscess* and *periosteal ganglion*. **dental p.**, inflammation of the dental periosteum. **diffuse p.**, a noncircumscribed periostitis of the long bones.

hemorrhagic p., a form in which blood is extravasated beneath the periosteum. **p. hyperplas'tica**, hypertrophic pulmonary osteoarthropathy. **p. inter'na cra'nii**, inflammation of the endocranium; external pachymeningitis. **precocious p.**, syphilitic osteoperiostitis occurring as an early symptom.

periostoma (per'ē-os-to'mah) periosteoma.

periosteomedullitis (per'ē-os'to-med'u-li'tis) periosteomedullitis.

periostosis (per'ē-os-to'sis) the abnormal deposition of periosteal bone; the condition manifested by development of periosteomas. Called also *periosteosis*. **hyperplastic p.**, cortical infantile hyperostosis.

periostosteitis (per'ē-os-tos'te-i'tis) osteoperiostitis.

periostotome (per'ē-os'to-tōm) periosteotome.

periostotomy (per'ē-os-tot'o-me) periosteotomy.

periotic (per'ē-o'tik) [*peri-* + Gr. *ous* ear] 1. situated about the ear, especially the internal ear. 2. the petrous and mastoid portions of the temporal bone, at one stage a distinct bone.

periovaritis (per'ē-o'vah-ri'tis) perioophoritis.

periovular (per'ē-o'vu-lar) surrounding an ovum.

peripachymeningitis (per'i-pak'e-men'in-ji'tis) [*peri-* + Gr. *pachys* thick + *mēnix* membrane + *-itis*] inflammation of the substance between the dura and the bony covering of the central nervous system.

peripancratic (per'i-pan'kre-at'ik) surrounding the pancreas.

peripancraticitis (per'i-pan'kre-ah-ti'tis) [*peri-* + Gr. *pankreas* pancreas + *-itis*] inflammation of tissues around the pancreas.

peripapillary (per'i-pap'i-ler'e) located around the optic papilla.

peripartum (per'i-par'tum) occurring during the last month of gestation or the first few months after delivery, with reference to the mother.

peripatellar (per'i-pah-tel'ar) around the patella, or knee cap.

peripatetic (per'i-pah-tet'ik) [Gr. *peripatētikos* given to walking about while teaching or disputing] walking about.

peripenial (per'i-pe'ne-al) around the penis.

peripericarditis (per'i-per'i-kar-di'tis) inflammation around the pericardium producing adhesions of the pericardium to the pleura and chest wall.

periphacitis (per'i-fah-si'tis) [*peri-* + Gr. *phakos* lens + *-itis*] inflammation surrounding the capsule of the lens of the eye.

periphakitis (per'i-fah-ki'tis) periphacitis.

peripharyngeal (per'i-fah-rin'je-al) situated around the pharynx.

peripherad (pē-rif'er-ad) toward the periphery.

peripheral (pē-rif'er-al) pertaining to or situated at or near the periphery; situated away from a center or central structure.

peripheraphose (pē-rif'er-ah-fōs) a subjective sensation of a dark spot in the line of vision, originating in the peripheral ocular mechanism.

peripheric (per'i-fer'ik) peripheral.

peripherocentral (pē-rif'er-o-sen'tral) both peripheral and central.

periphereceptor (pē-rif'er-o-sep'tor) any of the receptors at the peripheral ends of a sensory peripheral neuron which receive the stimulus.

peripheromittor (pē-rif'er-o-mit'or) a terminal mittor placed in connection with the ceptor of a muscle fiber or gland cell which transmits the impulse to the fiber or cell.

peripherophose (pē-rif'er-o-fōz) [*periphery* + *phose*] any phose or subjective sensation of light originating in the peripheral ocular mechanism.

periphery (pē-rif'er-e) [Gr. *periphēreia*, from *peri* around + *pherein* to bear] the outward part or surface or structure; the portion of a system outside the central region.

periphebitic (per'i-flē-bit'ik) pertaining to periphebitis.

periphebitis (per'i-flē-bi'tis) [*peri-* + Gr. *phleps* vein + *-itis*] inflammation of the tissues around a vein, or of the external coat of a vein. **sclerosing p.**, Mondor's disease.

periphoria (per'i-fo're-ah) [*peri-* + Gr. *phoros* bearing + *-ia*] cyclophoria.

periphrastic (per'i-fras'tik) [Gr. *periphrastikos*] marked by the use of superfluous words and roundabout methods in expressing ideas; often seen in schizophrenic speech and writing.

periphrēnitis (per'i-frē-ni'tis) [*peri-* + Gr. *phrēn* diaphragm + *-itis*] inflammation of the diaphragm and structures around it.

Periplaneta (per'i-plah-ne'tah) a genus of roaches. *P. americana* is the American cockroach; *P. australis* is the Australian cockroach.

periplasmic (per'i-plas'mik) around the plasma membrane; between the plasma membrane and the cell wall of a bacterium.

peripleural (per'i-ploo'ral) surrounding the pleura.

peripleuritis (per'i-ploo-ri'tis) [*peri-* + *pleura* + *-itis*] inflammation of the tissues between the pleura and the chest wall.

periplocin (per'i-plo'sin) a crystallizable glycoside, C₃₈H₅₆O₁₃, from a woody vine, *Periploca graeca* L. (Asclepiadaceae); it acts like digitalin as a heart tonic and slower of the pulse.

periplocymarin (per'i-plo-si'mah-rin) a cardiac glycoside,

$C_{30}H_{48}O_8$, from the bark and wood of *Periploca graeca* L. (Asclepiadaceae).

- periplogenin** (per/'i-ploj'e-nin) chemical name: 3 β ,5,14-trihydroxy-5 β -card-20(22)-enolide. An aglycone sterol derivative, $C_{23}H_{34}O_8$, from periplocin and periplocymarin.
- peripneumonia** (per/'i-nu-mo'ne-ah) [*peri-* + Gr. *pneumōn* lung + *-ia*] pneumonia; also pleuropneumonia. **p. no'tha**, a variety of acute bronchitis simulating pneumonia.
- peripneumonitis** (per/'i-nu'mo-ni'tis) peripneumonia.
- peripolar** (per/'i-po'lar) situated about a pole or poles.
- peripolesis** (per/'i-po-le'sis) [Gr. *peripolēsis* a going about] the clustering of lymphocytes around macrophages, a phenomenon occurring in tissue cultures of lymphoid tissue challenged by antigen. The immunological significance, if any, is unknown. Cf. *emperipolesis*.
- periporitis** (per/'i-por-i'tis) a staphylococcal infection complicating miliaria, with inflammation around the sweat pores, usually affecting infants; called also *periporitis staphylogenes*.
- periportal** (per/'i-por'tal) situated around the portal vein.
- periproctic** (per/'i-prok'tik) [*peri-* + Gr. *prōktos* anus] situated around the anus.
- periproctitis** (per/'i-prok-ti'tis) [*peri-* + Gr. *prōktos* anus + *-itis*] inflammation of the tissues surrounding the rectum and anus.
- periprostatic** (per/'i-pros-tat'ik) situated about the prostate.
- periprostatitis** (per/'i-pros'tah-ti'tis) inflammation of the tissues and structures around the prostate gland.
- peripyema** (per/'i-pi-e'mah) suppuration surrounding a part, as a tooth.
- peripylephlebitis** (per/'i-pi'le-flē-bi'tis) [*peri-* + Gr. *pylē* gate + *phleps* vein + *-itis*] inflammation of the tissue about the portal vein.
- peripyloric** (per/'i-pi-lor'ik) around the pylorus or the pyloric part of the stomach (see *pars pylorica ventriculi*).
- periradicular** (per/'i-rah-dik'u-lar) surrounding a root, especially the root of a tooth.
- perirectal** (per/'i-rek'tal) around the rectum.
- perirectitis** (per/'i-rek-ti'tis) periproctitis.
- perirenal** (per/'i-re'nal) [*peri-* + L. *ren* kidney] situated around a kidney.
- perirhinal** (per/'i-ri'nal) [*peri-* + Gr. *rhis* nose] situated about the nose.
- perirhizoclasia** (per/'i-ri'zo-kla'se-ah) [*peri-* + Gr. *rhiza* root + *klasis* destruction] inflammatory destruction of tissues immediately around the root of a tooth, i.e., the pericementum, cementum, and superficial layers of the alveolar process. Cf. *pararhizoclasia*.
- perisalpingitis** (per/'i-sal'pin-jī'tis) [*peri-* + Gr. *salpinx* tube + *-itis*] inflammation of the tissues and peritoneum around a uterine tube.
- perisalpingo-ovaritis** (per/'i-sal-ping'o-o'vah-ri'tis) inflammation involving the ovary and the tissues around the uterine tube.
- perisalpinx** (per/'i-sal'pinks) the peritoneal cover of the upper border of the uterine tube.
- perisclerium** (per/'i-skle're-um) [*peri-* + Gr. *sklēros* hard] fibrous tissue surrounding ossifying cartilage.
- periscopic** (per/'i-skop'ik) [*peri-* + Gr. *skopein* to examine] affording a wide range of vision; said of microscopical and spectacle lenses.
- perisigmoiditis** (per/'i-sig'moi-di'tis) inflammation of the peritoneal covering of the sigmoid flexure.
- perisinuitis** (per/'i-si'nu-i'tis) perisinuitis.
- perisinuous** (per/'i-sin'u-us) situated around a sinus.
- perisinusitis** (per/'i-si'nū-si'tis) inflammation of the tissues around a sinus.
- perispermatis** (per/'i-sper'mah-ti'tis) inflammation of the tissues about the spermatic cord. **p. sero'sa**, encysted hydrocele of the spermatic cord.
- perisplanchnic** (per/'i-splank'nik) [*peri-* + Gr. *splanchnon* viscus] around a viscus or the viscera.
- perisplanchnitis** (per/'i-splank-ni'tis) inflammation around the viscera; perivisceritis.
- perisplenic** (per/'i-splen'ik) occurring around the spleen.
- perisplenitis** (per/'i-splē-ni'tis) [*peri-* + Gr. *splēn* spleen + *-itis*] inflammation of the peritoneal coat of the spleen and of the structures around it. **p. cartilagin'ea**, inflammatory overgrowth of the capsule of the spleen, causing a thickening of cartilaginous hardness.
- perispondylic** (per/'i-spon-dil'ik) around a vertebra.
- perispondylitis** (per/'i-spon-di-li'tis) [*peri-* + Gr. *spondylos* vertebra + *-itis*] inflammation of the parts around a vertebra. **Gibney's p.**, a painful condition of the spinal muscles.
- Perisporiaceae** (per/'i-spo're-a'se-e) Moniliaceae.
- Perissodactyla** (pē-ris'so-dak'tī-lah) [Gr. *perissos* odd + *daktylos*

finger] an order of ungulates having an odd number of toes, including the horse, tapir, and rhinoceros. Cf. *Artiodactyla*.

- perissodactylous** (pē-ris'so-dak'tī-lus) having an odd number of digits on a hand or foot.
- peristalsis** (per/'i-stal'sis) [*peri-* + Gr. *stalsis* contraction] the wormlike movement by which the alimentary canal and other tubular organs provided with both longitudinal and circular muscle fibers propel their contents. It consists of a wave of contraction passing along the tube for variable distances. **mass p.**, strong usually brief bursts of peristaltic movements, which propel intestinal contents through long stretches of the intestine or colon, often resulting in defecation. **retrograde p.**, reversed p. **reversed p.**, that which impels the contents of the intestine cephalad.
- peristaltic** (per/'i-stal'tik) of the nature of peristalsis.
- peristaltin** (per/'i-stal'tin) a glycoside, $C_{14}H_{18}O_8$, of cascara sagrada.
- peristaphyline** (per/'i-staf'i-lin) [*peri-* + Gr. *staphylē* uvula] situated around the uvula.
- peristasis** (pē-ris'tah-sis) environment.
- peristoma** (pē-ris'to-mah) peristome.
- peristomatous** (per/'i-stom'ah-tus) around the mouth.
- peristome** (per/'i-stōm) [*peri-* + Gr. *stoma* mouth] a groove running from the cytostome in certain protozoa.
- peristrumitis** (per/'i-stroo-mi'tis) inflammation extending from an inflamed goiter to the surrounding structures.
- peristromous** (per/'i-stroo'mus) around or near a goiter.
- perisynovial** (per/'i-si-no've-al) around a synovial structure.
- perisyringitis** (per/'i-sir'in-jī'tis) inflammation of tissues around ducts of the sweat glands. **p. chron'ica na'si**, granulosis rubra nasi.
- peritectomy** (per/'i-tek'to-me) [*peri-* + Gr. *ektomē* excision] excision of a ring of conjunctiva behind the limbus, followed by cauterization of the trench thus made.
- peritendineum** (per/'i-ten-din'e-um) [NA] the connective tissue investing larger tendons and extending as septa between the fibers composing them.
- peritendinitis** (per/'i-ten'dī-ni'tis) tenosynovitis. **adhesive p.**, adhesive capsulitis. **p. calca'rea**, a painful condition marked by calcareous deposits in tendons and in peritendinous, capsular, and ligamentous tissues. **p. crep'itans**, tenosynovitis crepitans. **p. sero'sa**, ganglion, def. 2.
- peritendinous** (per/'i-ten'dī-nus) around a tendon.
- peritenon** (per/'i-te'non) [*peri-* + Gr. *tenōn* tendon] the connective tissue structures associated with a tendon.
- peritenoneum** (per/'i-ten'o-ne'um) the loose connective tissue covering the surface of tendons and ligaments and penetrating inside to separate the substance into bundles.
- peritenonitis** (per/'i-ten'o-ni'tis) tenosynovitis.
- peritenontitis** (per/'i-ten'on-ti'tis) tenosynovitis.
- perithecium** (per/'i-the'se-um) [*peri-* + Gr. *thēkē* case] the flask-shaped fruiting body, with a pore for the escape of spores, enclosing the asci and spores of certain ascomycetous fungi and molds. Cf. *apothecium*, *cleistothecium*, and *gymnothecium*.
- perithelial** (per/'i-the'le-al) pertaining to the perithelium.
- perithelioma** (per/'i-the'le-o'mah) hemangiopericytoma.
- perithelium** (per/'i-the'le-um) [*peri-* + Gr. *thēlē* nipple] the layer of connective tissue that surrounds the capillaries and smaller vessels. **Eberth's p.**, a partial layer of cells on the external surface of the capillaries.
- perithoracic** (per/'i-tho-ras'ik) surrounding the thorax.
- perithyroiditis** (per/'i-thi're-oid-i'tis) perithyroiditis.
- perithyroiditis** (per/'i-thi'roi-di'tis) inflammation of the capsule of the thyroid body.
- peritomist** (pē-rit'o-mist) one who performs peritomy (circumcision).
- peritomize** (pē-rit'o-mīz) to subject to peritomy.
- peritomy** (pē-rit'o-me) [*peri-* + Gr. *temnein* to cut] 1. surgical incision of the conjunctiva and subconjunctival tissue about the whole circumference of the cornea; usually done as part of enucleation and retinal detachment procedure. 2. circumcision.
- peritoneal** (per/'i-to-ne'al) pertaining to the peritoneum.
- peritonealgia** (per/'i-to'ne-al'je-ah) pain in the peritoneum.
- peritonealize** (per/'i-to-ne'al-iz) to cover with peritoneum.
- peritoneocentesis** (per/'i-to'ne-o-sen-te'sis) [*peritoneum* + Gr. *kentēsis* puncture] puncture of the peritoneal cavity with a needle for the purpose of obtaining fluid.
- peritoneoclysis** (per/'i-to'ne-o-kli'sis) injection of water or other fluids into the peritoneal cavity.
- peritoneography** (per/'i-to-ne-og'rah-fe) roentgenography of the peritoneum.
- peritoneomuscular** (per/'i-to-ne'o-mus'ku-lar) pertaining to or composed of peritoneum and muscle.
- peritoneopathy** (per/'i-to-ne-op'ah-the) [*peritoneum* + Gr. *pathos* disease] any disease of the peritoneum.

peritoneopericardial (per/'i-to-ne'o-per/'i-kar'de-al) pertaining to the peritoneum and pericardium.

peritoneopexy (per/'i-to-ne-o-pek'se) [*peritoneum* + Gr. *pēxis* fixation] fixation of the uterus by the vaginal route.

peritoneoplasty (per/'i-to-ne-o-plas'te) [*peritoneum* + Gr. *plassein* to form] the operation of covering denuded areas of abdominal viscera or of the abdominal cavity with peritoneum; peritonization.

peritoneoscope (per/'i-to-ne-o-skōp') an instrument for performing peritoneoscopy.

peritoneoscopy (per/'i-to-ne-os'ko-pe) [*peritoneum* + Gr. *skopein* to examine] examination of the peritoneal cavity by an instrument inserted through the abdominal wall.

peritoneotome (per/'i-to-ne'o-tōm) an area of the peritoneum supplied with afferent nerve fibers by a single posterior root.

peritoneotomy (per/'i-to-ne-o'to-me) [*peritoneum* + Gr. *tomē* a cutting] incision into the peritoneal cavity.

peritoneovenous (per/'i-to-ne'o-ve'nus) communicating with the peritoneal cavity and the venous system; see under *shunt*.

peritoneum (per/'i-to-ne'um) [L.; Gr. *peritonaion*, from *peri* around + *teinein* to stretch] [NA] the serous membrane lining the abdominopelvic walls (*parietal p.*) and investing the viscera (*visceral p.*). A strong, colorless membrane with a smooth surface, it forms a closed sac in the male and is continuous with the mucous membrane of the uterine tubes in the female. **abdominal p.**,

Course of the peritoneum (heavy black line) in a median sagittal section of a female.

p. parietale. **p. of cranium** (*obs.*), pericranium. **intestinal p.**, **p. viscerales**. **parietal p.**, **p. parietale** [NA], the peritoneum that lines the abdominal and pelvic walls and the undersurface of the diaphragm. **visceral p.**, **p. viscerales** [NA], a continuation of the parietal peritoneum reflected at various places over the viscera, forming a complete covering for the stomach, spleen, liver, ascending portion of the duodenum, jejunum, ileum, transverse colon, sigmoid flexure, upper end of rectum, uterus, and ovaries; it also partially covers the descending and transverse portions of the duodenum, the cecum, ascending and descending colon, the middle part of the rectum, the posterior wall of the bladder, and the upper portion of the vagina. The peritoneum serves to hold the viscera in position by its folds, some of which form the *mesenteries*, connecting portions of the intestine with the posterior abdominal wall; other folds, the *omenta*, are attached to the stomach; and still others form the *ligaments* of the liver, spleen, stomach, kidneys, bladder, and uterus. The potential space between the visceral and the parietal peritoneum is the peritoneal cavity, which consists of the *pelvic peritoneal cavity* below and the *general peritoneal cavity* above. The general peritoneal cavity communicates by the epiploic foramen with the cavity of the greater omentum, which is also known as the *lesser peritoneal cavity*.

peritonism (per/'i-to-nizm) a condition of shock simulating peritonitis, but without inflammation of the peritoneum.

peritonitis (per/'i-to-ni'tis) inflammation of the peritoneum; a condition marked by exudations in the peritoneum of serum, fibrin, cells, and pus. It is attended by abdominal pain and tenderness, constipation, vomiting, and moderate fever. **adhesive p.**, that which is characterized by adhesions between adjacent serous surfaces. **benign paroxysmal p.**, familial Mediterranean fever. **bile p.**, **biliary p.**, choleperitonism. **chemical p.**, peritonitis due to chemical irritation. **p.**

chronica fibrosa encapsulans, a chronic peritonitis marked by the formation on the intestine of a white coating of fibrous tissue undergoing hyaline degeneration; called also *iced intestine* and *zuckergussdarm*. **circumscribed p.**, that which is limited to a portion of the peritoneum. **p. defor-mans**, chronic peritonitis producing shortening of the mesentery so that the intestines are drawn up in loops toward the spine. **diaphragmatic p.**, that which affects the peritoneal surface of the diaphragm. **diffuse p.**, that which is not limited to a portion of the peritoneum. **p. encapsulans**, **encysted p.**, that in which a collection of pus or serum is enclosed by adhesions; peritoneal abscess. **fibrocaceous p.**, tubercular peritonitis with fibrous and caseous degeneration. **gas p.**, peritonitis with the accumulation of gas within the peritoneum. **general p.**, inflammation of the greater part of the peritoneum. **hemorrhagic p.**, that which is attended with hemorrhagic effusion. **localized p.**, circumscribed p. **meconium p.**, peritonitis resulting from perforation of the bowel into the peritoneal cavity *in utero* or shortly after birth, resulting in escape of meconium into the peritoneal cavity; it occurs most often as a complication of meconium ileus in fibrocystic disease of the pancreas. **pelvic p.**, perimetritis; peritonitis situated in the pelvis. **perforative p.**, that which is due to a perforation in the digestive tract. **periodic p.**, familial Mediterranean fever. **puerperal p.**, that which occurs following childbirth. **purulent p.**, peritonitis with the formation of pus. **septic p.**, that which is due to a pyogenic microorganism. **serous p.**, that which is attended by a copious liquid exudation. **silent p.**, asymptomatic peritonitis. **terminal p.**, primary peritonitis in the late stages of a wasting disease. **traumatic p.**, simple acute peritonitis due to trauma. **tuberculous p.**, peritonitis caused by the tubercle bacillus.

peritonization (per/'i-to-ni-za'shun) the operation of covering a denuded surface of an abdominal organ or the abdominal wall with peritoneum; peritoneoplasty.

peritonize (per/'i-to-niz) to cover with peritoneum.

peritonsillar (per/'i-ton'si-lar) situated around a tonsil.

peritonsillitis (per/'i-ton'si-li'tis) inflammation of the peritonsillar tissues.

peritracheal (per/'i-tra'ke-al) situated around the trachea.

Peritrate (per/'i-trāt) trademark for preparations of pentaerythritol tetranitrate.

peritrichal, **peritrichic** (pe-rit/'ri-kal; per/'e-trik'ik) peritrichous.

Peritrichida (per/'i-trik'i-dah) an order of primarily free-living protozoa of the subphylum Ciliophora, class Euciliatia, in which cilia form a spiral around the cystostome; it includes the genera *Trichodina* and *Vorticella*.

peritrichous (pē-rit/'ri-kus) [*peri* + Gr. *thrix* hair] 1. having flagella over the entire surface; said of a bacterial cell; see *flagellum*. 2. having cilia around the cystostome only; said of Ciliophora.

peritrochanteric (per/'i-tro'kan-ter'ik) situated about a trochanter.

perituberculosis (per/'i-tu-ber'ku-lo'sis) paratuberculosis.

perityphlic (per/'i-tif'lik) [*peri* + Gr. *typhlon* cecum] around the cecum; pericecal.

perityphlitis (per/'i-tif-li'tis) [*peri* + Gr. *typhlon* cecum + *-itis*] inflammation of the peritoneum surrounding the cecum; appendicitis. **p. actinomycotica**, actinomycosis whose principal seat is pericecal.

periumbilical (per/'e-um-bil'i-kal) situated around the umbilicus.

periungual (per/'e-ung'gwal) around the nail.

periuireteral (per/'i-u-re'ter-al) around the ureter.

periuireteric (per/'e-u're-ter'ik) about the ureter.

periuireteritis (per/'e-u're-tē-ri'tis) [*peri* + Gr. *ourēter* ureter + *-itis*] inflammation of the tissues around a ureter.

periuirethral (per/'e-u-re'thral) occurring around the urethra.

periuirethritis (per/'e-u're-thri'tis) [*peri* + Gr. *ourēthra* urethra + *-itis*] inflammation of the tissues around the urethra; spongiitis.

periuirine (per/'e-u'ter-in) around the uterus.

periuvaral (per/'e-u'vu-lar) around the uvula.

perivaginal (per/'i-vaj'i-nal) around the vagina.

perivaginitis (per/'i-vaj'i-ni'tis) pericolicpitis.

perivascular (per/'i-vas'ku-lar) situated around a vessel.

perivascularity (per/'i-vas'ku-lar'i-te) an infiltrate of cellular elements of mesodermal origin (polymorphonuclear leukocytes, lymphocytes, etc.) in the perivascular spaces, as in those of the cerebral parenchyma.

perivascutitis (per/'i-vas'ku-li'tis) inflammation of a perivascular sheath and of the tissues surrounding it.

perivenous (per/'i-ve'nus) around a vein.

periventricular (per/'i-ven-trik'u-lar) around a ventricle; see also under *system*.

perivertebral (per/'i-ver/'tē-bral) around a vertebra.

perivesical (per/'i-ves/'i-kal) [*peri-* + L. *vesica* bladder] occurring around the bladder.

perivesicular (per/'i-vē-sik/'u-lar) around a seminal vesicle.

perivesiculitis (per/'i-vē-sik/'u-li'tis) inflammation of tissue around the seminal vesicle.

perivisceral (per/'i-vis/'er-al) occurring around a viscus or the viscera.

perivisceritis (per/'i-vis/'er-i'tis) inflammation around a viscus or around the viscera.

perivitelline (per/'i-vi-tel/'in) situated around a vitellus or yolk.

perixenitis (per/'i-zē-ni'tis) [*peri-* + Gr. *xenos* strange + *-itis*] inflammation occurring around a foreign body in a tissue or organ.

perkeratosis (per/'ker-ah-to/'sis) hyperkeratosis, def. 3.

perkinism, perkinsism (per/'kin-izm; per/'kin-sizm) [Elisha Perkins, of Norwich, Connecticut, 1741-1799] an obsolete form of metallothrapy, embracing the therapeutic use of metallic appliances, such as Perkins' tractors.

perlapine (per/'lah-pēn) chemical name: 6-(4-methyl-1-piperazinyl)morphanthridine; a hypnotic, C₁₈H₂₁N₃.

perlèche (per-'lesh') [Fr.] superficial erosions and fissuring of the commissures of the lips, the causes and contributing factors of which include candidiasis, streptococcal or staphylococcal infection, overclosure of an edentulous mouth, ariboflavinosis, and excess salivation with drooling at the corners of the lips. Called also *angular cheilitis*, *angular cheilosis*, and *angular stomatitis*.

Perlia's nucleus (per/'le-ahz) [Richard Perlia, German ophthalmologist] see under *nucleus*.

Perls' anemia bodies, test (stain) (perlz) [Max Perls, German pathologist, 1843-1881] see under *body* and *tests*.

perlsucht (perl/'sookt) [Ger.] tuberculosis of the mesentery and peritoneum in cattle.

permanganate (per-man/'gah-nāt) any salt of permanganic acid.

permeability (per/'me-ah-bil/'i-te) the property or state of being permeable; see also *osmosis*.

permeable (per/'me-ah-b'l) [L. *per* through + *meare* to pass] not impassable; pervious; permitting passage of a substance.

permease (per/'me-ās) a collective term for genetically controlled, stereospecific membrane transport systems, e.g., a membrane-bound carrier protein (M protein) of bacteria involved in the transport of β-galactosides across the cell membrane. In *Escherichia coli*, called *M protein*.

permeate (per/'me-āt') 1. to penetrate or pass through, 'as through a filter. 2. the constituents of a solution or suspension that pass through a filter.

permeation (per/'me-a/'shun) the act of spreading through or penetrating a substance, tissue, or organ, as by a disease process, such as cancer.

Permitil (per/'mī-til) trademark for a preparation of fluphenazine hydrochloride.

perna (per/'nah) a chlorinated naphthalin, which may cause a serious acne in persons handling it.

pernasal (per-na/'sal) [L. *per* through + *nasus* nose] performed through the nose.

perneiras (pār-na/'ras) Brazilian name for beriberi.

perniciosis (pēr-nish/'e-o/'sī-form) seemingly pernicious; a term applied to a condition which is apparently, but not actually, pernicious or malignant.

pernicious (per-nish/'us) [L. *perniciosus*] tending to a fatal issue.

pernio (per/'ne-o), pl. *pernio'nes* [L.] chilblain.

pernirosis (per/'ne-o/'sis) (*obs.*) a general term for skin affections caused by cold; the presence of chilblains on various portions of the body.

pero- (per/'ro) [Gr. *pēros* maimed] a combining form meaning maimed or deformed.

perobranchius (per/'ro-bra/'ke-us) [*pero-* + Gr. *brachiōn* arm] a fetus with deformed arms.

perocephalus (per/'ro-seff/'ah-lus) [*pero-* + Gr. *kephalē* head] a fetus with a deformed head.

perochirus (per/'ro-ki/'rus) [*pero-* + Gr. *cheir* hand] a fetus with malformed hands.

perocormus (per/'ro-kor/'mus) [*pero-* + Gr. *kormos* trunk] perosomus.

perodactylus (per/'ro-dak/'ti-lus) [*pero-* + Gr. *daktylos* finger] a fetus with deformity of fingers or toes, or both, especially absence of one or more digits.

peromelia (per/'o-me/'le-ah) congenital deformity of the limbs.

peromelus (pe-rom/'ē-lus) [*pero-* + Gr. *melos* limb] a fetus with malformed limbs.

peronarthrosis (per/'o-nar-'thro/'sis) [Gr. *peronē* anything pointed for piercing or pinning + *arthron* joint] an articulation in which the surfaces are convex in one direction and concave in the other.

perone (per-o/'ne) the fibula.

peroneal (per/'o-ne'al) pertaining to the fibula or to the outer side of the leg; fibular.

peroneotibial (per/'o-ne/'o-tib/'e-al) pertaining to the fibula and tibia.

peronia (pe-ro/'ne-ah) [Gr. *pēros* maimed] a developmental malformation or mutilation.

Per. op. emet. abbreviation for L. *perac'ta operatio'ne emet'ici*, when the action of the emetic is over.

peropus (pe/'ro-pus) [*pero-* + Gr. *pous* foot] a fetus with malformed legs and feet.

peroral (per-o/'ral) [L. *per* through + *os*, *oris* the mouth] performed through or administered through the mouth.

per os (per os) [L.] by mouth.

perosis (pē-ro/'sis) a disease of chicks marked by bone deformities and associated with deficiency of certain dietary factors, such as choline and manganese.

perosomus (pe/'ro-so/'mus) [*pero-* + Gr. *sōma* body] a fetus with greatly deformed body or trunk.

perosplanchnia (pe/'ro-splank/'ne-ah) [*pero-* + Gr. *splanchnon* viscus + *-ia*] a developmental anomaly characterized by malformation of the viscera.

perosseous (per-os/'e-us) [L. *per* through + *os* bone] transmitted through bone.

perotic (pē-rot/'ik) pertaining to or characterized by perosis.

peroxidase (pē-rok/'sī-dās) any of a group of iron-porphyrin enzymes which catalyze the oxidation of some organic substrates in the presence of hydrogen peroxide. They occur widely in plants (e.g., horseradish); in animals there is weak peroxidase activity in the kidney, and leukocytes contain veridoperoxidase, which may explain the peroxidative activity of pus. Substrates which have been reported, in addition to peroxides, include phenols, reduced glutathione, ferrocytochrome C, and NADH.

peroxide (pē-rok/'sīd) that oxide of any element which contains more oxygen than any other. More correctly applied to compounds having such linkage as —O—O—; for instance, hydrogen peroxide, H—O—O—H.

peroxisome (pē-roks/'i-sōm) 1. any of the microbodies present in vertebrate animal cells, especially liver and kidney cells, which are rich in the enzymes peroxidase, catalase, D-amino acid oxidase, and, to a lesser extent, urate oxidase; their functions are not fully understood, but they participate in metabolic oxidations involving hydrogen peroxide, purine metabolism, and gluconeogenesis. Similar structures (*glyoxysomes*), containing the enzymes of the glyoxylate cycle, are found in certain plants and microorganisms. 2. microbody.

peroxydase (pē-rok/'sī-dās) peroxidase.

peroxydol (pē-rok/'sī-dol) sodium perborate.

perphenazine (per-fen/'ah-zēn) [USP] chemical name: 4-[3-(2-chloro-10H-phenothiazin-10-yl)propyl]-1-piperazineethanol. A major tranquilizer, C₂₁H₂₆ClN₃OS, occurring as a white to creamy white powder; used orally and intramuscularly as an antipsychotic agent, and also used as an antiemetic.

per primam (per pri/'mam) [L.] see *per primam intentionem*.

per primam intentionem (per pri/'mam in-ten/'she-o/'nem) [L.] by first intention; see under *healing*.

per rectum (per rek/'tum) [L.] by way of the rectum.

Perrin-Ferraton disease (pēr-an-fer/'ah-ton') [Maurice Perrin, Paris surgeon, 1826-1889; Louis Ferraton, French surgeon, born 1860] snapping hip.

Perroncito's apparatus (spirals) (per/'on-se/'tōz) [Aldo Perroncito, Italian histologist, 1882-1929] see under *apparatus*.

persalt (per/'sawlt) a salt of a peracid; a salt the acid radical of which has a higher valence than the protosalt.

per saltum (per sal/'tum) [L.] by a leap or bound; denoting a sudden evolutionary development without intermediate stages.

Persantine (per-san/'tēn) trademark for preparations of dipyridamole.

per secundam (per se-kun/'dam) [L.] see *per secundam intentionem*.

per secundam intentionem (per se-kun/'dam in-ten/'she-o/'nem) [L.] by second intention; see under *healing*.

perseveration (per-sev/'er-a/'shun) persistent repetition of the same verbal or motor response to varied stimuli; continuance of an activity after cessation of the causative stimulus. **clonic p.**, a condition in which a movement is repeated. **tonic p.**, a condition in which a position is maintained.

persona (per-so/'nah) [L. "mask"] Jung's term for the personality "mask" or facade presented by a person to the outside world, as opposed to the *anima* (def. 3).

personalistics (per/'sun-al-is/'tiks) the study of personality.

personality (per/'sū-nal/'i-te) that which constitutes, distinguishes, and characterizes a person as an entity over a period of time; the total reaction of a person to his environment. **affective p.**, cyclothymic p. **alternating p.**, see *multiple p.* **anankastic p.**, obsessive-compulsive p. **antisocial p.**, a

personality disorder marked by a basic lack of socialization, behavior resulting in repeated conflict with society, and an incapacity to be loyal to individuals, groups, or social codes; it is associated with low tolerance to frustration, impulsiveness, selfishness, inability to feel guilty and to learn from experience and punishment, callousness, and a tendency to blame others for inappropriate behavior or to offer rationalizations for it, and by irresponsibility. Those who exhibit this type of personality have been called psychopaths and sociopaths. Called also *psychopathic p.* and *sociopathic p.* **asthenic p.**, a personality disorder characterized by easy fatigability, low energy level, lack of enthusiasm, marked incapacity for enjoyment, and oversensitivity to physical and emotional stress. **compulsive p.**, see *obsessive-compulsive p.* **cycloid p.**, **cyclothymic p.** **cyclothymic p.**, a personality disorder characterized by alternating moods of elation and sadness, with mood swings out of proportion to apparent stimuli, and by a predisposition to the development of manic-depressive or affective psychoses. Called also *affective p.*, *cycloid p.*, and *cyclothymia*. **double p.**, **dual p.**, see *multiple p.* **dyssocial p.**, a personality disorder in which the individual is not antisocial, but disregards social codes and may come in conflict with them, is predatory, follows more or less criminal activities, and may be loyal to his own socially deviant group; narcotics dealers, racketeers, prostitutes, and dishonest gamblers are those who may exhibit this type of personality. **explosive p.**, a personality disorder characterized by gross outbursts of rage or of verbal or physical aggressiveness, which are strikingly different from the patient's usual behavior, and for which he may be regretful or repentant. **hysterical p.**, a personality disorder characterized by shifting emotional feelings, susceptibility to suggestion, impulsiveness, attention-seeking, and self-absorption. **inadequate p.**, a personality disorder characterized by ineffectual responses to emotional, social, intellectual, and physical demands; while the affected individual seems neither physically nor mentally deficient, he does manifest inadaptability, ineptness, poor judgment, social inability, and lack of physical and emotional stamina. **multiple p.**, a dissociative reaction in which an individual adopts two or more separate and distinct personalities, in none of which is he aware of his experiences in the other. **obsessive p.**, see *obsessive-compulsive p.* **obsessive-compulsive p.**, a personality disorder characterized by excessive concern with conformity and adherence to rigid standards of conscience, typically manifested by overinhibition, overconscientiousness, over-dutifulness, indecisiveness, perfectionism, and inability to relax easily. This disorder may lead to an obsessive-compulsive neurosis (q.v.). Called also *anankastic p.* **paranoid p.**, a personality disorder characterized by hypersensitivity, rigidity, unwarranted suspicion, envy, jealousy, excessive self-importance and a tendency to blame others and ascribe evil motives to them. **passive-aggressive p.**, a personality disorder characterized by aggression exhibited in passive ways, as by pouting, stubbornness, procrastination, and passive obstructionism. **passive-dependent p.**, a personality disorder characterized by lack of self-confidence, indecisiveness, and emotional dependency. **psychopathic p.**, antisocial p. **schizoid p.**, a personality disorder marked by timidity, self-consciousness, introversion, feelings of isolation and loneliness, and failure to form close interpersonal relationships; the individual is frequently ambitious, meticulous, and a perfectionist. **seclusive p.**, **shut-in p.**, **schizoid p.** **sociopathic p.**, antisocial p. **split p.**, a popular and erroneous name for schizophrenia.

perspiratio (per-'spi-ra'she-o) [L.] perspiration. **p. insensibilis**, insensible perspiration.

perspiration (per-'spi-ra'shun) [L. *perspira're* to breathe through] 1. sweating; the functional secretion of sweat. 2. sweat. **insensible p.**, those evaporative losses of water from the moist surfaces of the body (such as the skin and respiratory tree) not due to the secretory activity of glands. **sensible p.**, perspiration due to secretory activity of sweat glands.

persuasion (per-swa'zhun) in psychiatry, a therapeutic approach based on direct suggestion and guidance intended to influence favorably attitudes, behavior, and goals.

persulfate (per-sul'fat) a salt of persulfuric acid.

persulfide (per-sul'fid) a sulfide which contains more sulfur than the ordinary sulfide.

per tertiam (per ter'she-am) [L.] see *per tertiam intentionem*.

Perthes' disease, incision, test (per'tēz) [Georg Clemens Perthes, German surgeon, 1869-1927] see under *osteochondrosis* and *incision*, and see *tourniquet test*, under *tests*.

Pertik's diverticulum (per'tiks) [Otto Pertik, Hungarian physician, 1852-1913] see under *diverticulum*.

Pertofrane (per'to-frān) trademark for a preparation of desipramine hydrochloride.

per tubam (per tu'bam) [L.] through a tube.

pertubation (per'tu-ba'shun) perflation or insufflation of the uterine tubes to render them patent.

pertussis (per-tus'is) [L. *per* intensive + *tussis* cough] whooping cough.

pertussoid (per-tus'oid) [*pertussis* + Gr. *eidos* form] 1. resem-

bling whooping cough; 2. an influenzal cough resembling that of whooping cough.

per vaginam (per vah-jī'nam) through the vagina.

perversion (per-ver'shun) [L. *per* through + *versio* a turning] a turning aside from the normal course; a morbid alteration of function which may occur in emotional, intellectual, or volitional fields. In psychiatry, sexual deviation. **sexual p.**, paraphilia.

pervert (per'vert) a perverted person, especially a person who indulges in unnatural sexual acts (*sexual p.*, or *paraphilia*).

per vias naturales (per vi'as nat'u-ra'lēz) [L.] by the natural ways.

pervigilium (per'vī-jil'e-um) [L.] sleeplessness.

pervious (per've-us) [L. *pervius*] permeable.

pes (pes), pl. *pe'des*, gen. *pe'dis* [L.] [NA] the foot: the terminal organ of the leg, or lower limb. Used also as a general term to designate a footlike part. **p. abduc'tus**, a deformed foot in which the anterior part is displaced so that it lies laterally to the vertical axis of the leg. **p. adduc'tus**, a deformed foot in which the anterior part is displaced so that it lies medially to the vertical axis of the leg. **p. anseri'nus** [L. "goose's foot"], 1.

plexus parotideus nervi facialis. 2. the combined insertion of the tendinous expansions of the sartorius, gracilis, and semitendinosus muscles. **p. ca'vus**, exaggerated height of the longitudinal arch of the foot, present from birth or appearing later because of contractures or disturbed balance of the muscles. **p. cer'ebri**, crus cerebri. **congenital convex p. val'gus**, rocker-bottom foot (def. 1). **p. corvi'nus** [L. "crow's foot"] (*obs.*), a set of wrinkles radiating from the lateral canthus of the eye. **p. equinov'gus**, talipes equinov'gus. **equinov'gus p.**, talipes equinov'gus. **p. febric'itans**, elephantiasis. **p. gi'gas**, macropodia. **p. hippocam'pi** [NA], a formation of two or three elevations on the rostral end of the ventricular surface of the hippocampus; called also *digitationes hippocampi*.

p. hippocam'pi ma'jor, hippocampus. **p. hippocam'pi mi'nor**, calcar avis. **p. pedun'culi**, crus cerebri. **p. planoval'gus**, **p. pla'nus**, flatfoot, a deformed foot in which the position of the bones relative to each other has been altered, with lowering of the longitudinal arch. **p. prona'tus**, a deformed foot in which the outer border of the anterior part is higher than the inner border. **p. supina'tus**, a deformed foot in which the inner border of the anterior part is higher than the outer border. **p. val'gus**, flatfoot. **p. varus**, talipes varus.

pessary (pes'ah-re) [L. *pessarium*] 1. an instrument placed in the vagina to support the uterus or rectum or as a contraceptive device. 2. a medicated vaginal suppository. **cup p.**, a pessary

Smith pessary
in position

Smith pessary (Curtis).

the top of which has a cuplike shape to fit the os uteri. **diaphragm p.**, a diaphragm for insertion into the vagina as an occlusive contraceptive. **doughnut p.**, an inflated soft rubber pessary shaped like a doughnut. **Gehrung p.** (*obs.*), a pessary for cystocele, being a Hodge pessary bent on itself so as to form a double horseshoe, one lever being a little shorter than the other. **Gellhorn p.** (*obs.*), a single stem pessary for use in uterine prolapse. **Hodge's p.**, a pessary for retrodeviations of the uterus. **lever p.**, a pessary which acts on the principle of the lever. **Menge's p.**, a ring pessary with a fixed crossbar holding a detachable stem. **ring p.**, a round or ring-shaped pessary. **Smith's p.**, a pessary for use in retrodisplacement of the uterus. **stem p.**, a pessary with a stem for introduction into the canal of the cervix uteri.

pessimism (pes'i-miz-m) [L. *pes'simus* worst] a morbid disposition to put the worst construction upon everything. **therapeutic p.**, a tendency to undervalue the curative properties of drugs.

pessimum (pes'i-mum) a weakened muscular contraction following a strong initial reaction after the stimulation of the neuromuscular system with high-frequency electric current.

pest (pest) plague. **avian p.**, Newcastle disease. **chicken p.**, fowl p., fowl plague.

pesticemia (pes'ti-se'me-ah) [L. *pestis* plague + Gr. *haima* blood + *-ia*] 1. the presence of plague germs (*Yersinia pestis*) in the blood. 2. septicemic plague.

pesticide (pes'ti-sid) a poison used to destroy pests of any sort; the term includes fungicides, herbicides, insecticides, rodenticides, etc.

pestiferous (pes-tif'er-us) [L. *pestiferus*; *pestis* plague + *ferre* to bear] causing or propagating a pestilence.

pestilence (pes'ti-lens) [L. *pestilentia*] any virulent contagious or infectious epidemic disease; also an epidemic of such a disease.

pestilential (pes'ti-len'shal) of the nature of a pestilence; producing an epidemic disease.

pestis (pes'tis) [L.] plague. **p. am'bulans**, ambulatory plague. **p. bubon'ica**, bubonic plague. **p. equo'rum**, African horse sickness. **p. ful'minans**, **p. ma'jor**, the severe form of bubonic plague. **p. mi'nor**, ambulatory plague. **p. sid'erans**, septicemic plague. **p. variolo'sa**, smallpox.

pestle (pes'tl) [L. *pestillum*] an implement for pounding drugs in a mortar.

pestology (pes-tol'o-je) the branch of science concerned with pests.

-petal [L. *petere* to seek] a word termination meaning directed or moving toward, the point of reference being indicated by the word stem to which it is affixed, as centripetal (toward a center), corticpetal (toward the cortex), etc.

petalo- (pet'ah-lo) [Gr. *petalon* leaf] a combining form denoting relationship to a leaf.

petalobacteria (pet'ah-lo-bak-te're-ah) [*petalo-* + *bacteria*] bacteria which become so aggregated as to form thin pellicles.

petechia (pe-te'ke-ah), pl. *pete'chiae* [L.] a pinpoint, nonraised, perfectly round, purplish red spot caused by intradermal or submucous hemorrhage. Cf. *ecchymosis*.

petechiae (pe-te'ke-e) plural of *petechia*.

petechial (pe-te'ke-al) characterized by or of the nature of petechiae.

Peter of Abano (1250-c. 1316) physician, philosopher, astrologer; an outstanding professor in the University of Padua whose opinions caused him to be tried for heresy during the Inquisition. His works include the *Conciliator differentiarum* (an attempt to reconcile Arabian and Greek medicine) and *De venenis* (a book on poisons). He was also known as Pietro d'Abano and Petrus Apponus.

Peterman test (pe'ter-man) [Mynie Gustav *Peterman*, American physician, born 1896] see under *tests*.

Peters' ovum (pa'terz) [Hubert *Peters*, Budapest gynecologist, 1859-1934] see under *ovum*.

Petersen's bag (pa'ter-senz) [C. F. *Petersen*, surgeon in Kiel, 1845-1908] see under *bag*.

pethidine hydrochloride (peth'i-din hi'dro-klo'rid) meperidine hydrochloride.

petiolate, petiolated (pet'e-o-lāt; pet'e-o-lāt'ed) having a stalk or petiole.

petiole (pet'e-ol) a stem, stalk, or pedicle. **epiglottic p.**, petiolus epiglottidis.

petioled (pet'e-öld) petiolate.

petiolus (pē-ti'o-lus) [L. dim. of *pes* foot] a stem, stalk, or pedicle. **p. epiglot'tidis** [NA], epiglottic petiole: the pointed lower end of the epiglottic cartilage, which is attached to the back of the thyroid cartilage.

Petit's canal, sinus (ptēz) [François Pourfour du *Petit*, French anatomist and surgeon, 1664-1741] see *spatia zonularia* and *sinus aortae*.

Petit's hernia, ligament, triangle (ptēz) [Jean Louis *Petit*, French surgeon, 1674-1750] see under *hernia*, see *uterosacral ligament*, under *ligament*, and see *trigonum lumbale*.

Petit's law (ptēz) [Alexis Therese *Petit*, French physicist, 1791-1820] see *Dulong and Petit's law*, under *law*.

petit mal (pē-te' mahl') [Fr. "little illness"] see under *epilepsy*.

Petrén's diet (treatment) (pa-trenz') [Karl Anders *Petrén*, Swedish physician, 1869-1927] see under *diet*.

Pétrequin's ligament (pātr-kanz') [Joseph Pierre Eléonor *Pétrequin*, Lyons surgeon, 1809-1876] see under *ligament*.

Petri dish, plate, test (reaction) (pa'tre) [Julius Richard *Petri*, German bacteriologist, 1852-1921] see under *dish*, *plate*, and *tests*.

petrichloral (pet'ri-klo'ral) chemical name: pentaerythritol chloral. A derivative, C₁₃H₁₆Cl₂O₈, of chloral with pharmacological properties similar to those of chloral hydrate; used as a hypnotic and sedative.

petrification (pet'ri-fak'shun) [L. *petra* stone + *facere* to make] conversion into a stonelike substance.

pétrissage (pa'tri-sahzh') [Fr.] fouflage.

petroccipital (pet'rok-sip'i-tal) petro-occipital.

petrolate (pet'ro-lāt) petrolatum.

petrolatoma (pet'ro-lah-to'mah) a tumor developing consequent to injection of liquid petrolatum; a discontinued procedure.

petrolatum (pet'ro-la'tum) [L.] [USP] a purified mixture of semisolid hydrocarbons obtained from petroleum; used as an ointment base. It is also used as a protective dressing and soothing application to the skin. Called also *mineral jelly*, *petroleum jelly*, *yellow soft paraffin*, and *petrolate*. **p. al'bum**, white **p. hydrophilic p.** [USP], a mixture of cholesterol, stearyl alcohol, and

white wax, in white petrolatum; used as an absorbent ointment base and topical protectant. **liquid p.**, mineral oil; see under *oil*. **liquid p., heavy**, mineral oil; see under *oil*. **liquid p., light**, light mineral oil; see under *oil*. **p. liq'uidum**, mineral oil; see under *oil*. **p. liq'uidum le'v**, light mineral oil; see under *oil*. **white p.** [USP], a wholly or nearly decolorized, purified mixture of semisolid hydrocarbons obtained from petroleum; used as an oleaginous ointment base and topical protectant.

petroleum (pē-tro'le-um) [L. *petra* stone + *oleum* oil] a thick natural oil obtained from beneath the earth. It consists of a mixture of various hydrocarbons of the paraffin and olefin series. It has been used as an expectorant, diaphoretic, and vermifuge; also in skin diseases, etc.

petrolization (pet'rol-i-za'shun) the spreading of petroleum on water for the purpose of destroying mosquito larvae therein.

petromastoid (pet'ro-mas'toid) 1. pertaining to the petrous portion of the temporal bone and its mastoid process. 2. otocranium (def. 2).

petro-occipital (pet'ro-ok-sip'i-tal) pertaining to the petrous portion of the temporal bone and to the occipital bone.

petropharyngeus (pet'ro-fah-rin'je-us) an occasional muscle arising from the lower surface of the petrous portion of the temporal bone and inserted into the pharynx.

petrosal (pē-tro'sal) pertaining to the petrous portion of the temporal bone.

petrosalpingostaphylinus (pet'ro-sal-ping'go-staf'i-li'nus) [Gr. *petra* stone + *salpinx* tube + *staphylē* uvula] musculus levator veli palatini.

petrosectomy (pet'ro-sek'to-me) [*petrous* + Gr. *ektomē* excision] excision of the cells of the apex of the petrous portion of the temporal bone.

petrositis (pet'ro-si'tis) inflammation of the petrous portion of the temporal bone.

petrosomastoid (pē-tro'so-mas'toid) petromastoid.

petrosphenoid (pet'ro-sfe'noid) pertaining to the sphenoid bone and the petrous portion of the temporal bone.

petrosphere (pet'ro-sfēr) the solid structure of the earth as distinguished from the atmosphere and the aquasphere.

petrosquamosal (pet'ro-skwah-mo'sal) pertaining to the petrous and squamous portions of temporal bone.

petrosquamous (pet'ro-skwa'mus) petrosquamosal.

petrostaphylinus (pet'ro-staf'i-li'nus) musculus levator veli palatini.

petrous (pet'rus) [L. *petrosus*] resembling a rock; hard; stony.

petrositis (pet'rus-i'tis) petrositis.

Petruschky's litmus whey, spinalgia (pē-trush'kēz) [Johannes *Petruschky*, German bacteriologist, born 1863] see *litmus whey*, under *whey*, and see under *spinalgia*.

Pettenkofer's test, theory (pet'en-kof'erz) [Max Josef von *Pettenkofer*, chemist in Munich, 1818-1901] see under *tests* and *theory*.

pettymorrel (pet'e-mor'rel) *Aralia*.

Petzetaki's test (reaction) (pet'za-tah'kēz) see under *tests*.

Peucetia (pu-se'te-ah) a genus of spiders. **P. vir'idans**, a lynx spider that is capable of producing painful burns of the eye by squirting a corrosive spray.

pexia (pek'se-ah) pexis.

pexic (pek'sik) [Gr. *pēxis* fixation] having the power of fixing substances; said of tissues.

pexin (pek'sin) [Gr. *pēxis* fixation] rennet.

pexinogen (pek-sin'o-jen) [*pexin* + Gr. *gennan* to produce] prerennin.

pexis (pek'sis) [Gr. *pēxis*] 1. the fixation of matter by a tissue. 2. surgical fixation, usually by suturing.

-pexy [Gr. *pēxis* a fixing, putting together] a word termination meaning fixation.

Peyer's patches (glands, insulae, plaques) (pi'erz) [Johann Conrad *Peyer*, Swiss anatomist, 1653-1712] folliculi lymphatici aggregati.

peyote (pa-o'te) 1. any of several Mexican cacti of the genus *Lo-phophora*, especially *L. williamsii* or mescal. 2. a stimulant drug from mesal buttons, the flowering heads of *L. williamsii*, used by North American Indians in ceremonies and feasts to produce a state of intoxication marked by feelings of ecstasy. The active euphoric principle is the major alkaloid, mescaline. Called also *peyotl*.

peyotl (pa-o't'l) peyote.

Peyronie's disease (pa-ron-ēz') [François de la *Peyronie*, French surgeon, 1678-1747] see under *disease*.

Peyrot's thorax (pa-rōz') [Jean Joseph *Peyrot*, surgeon in Paris, 1843-1917] see under *thorax*.

Pfannenstiël's incision (pfan'en-stēlz) [Hermann Johann *Pfannenstiël*, gynecologist in Breslau, 1862-1909] see under *incision*.

Pfeiffer's bacillus, law, phenomenon (reaction) (pfi'ferz)

[Richard Friedrich Johann Pfeiffer, bacteriologist in Breslau, 1858–1945] see *Hemophilus influenzae*, and see under *law* and *phenomenon*.

Pfeiffer's disease, glandular fever (pti'ferz) [Emil Pfeiffer, German physician, 1846–1921] infectious mononucleosis.

Pfeifferella (pti'fer-el'ah) [Richard F. J. Pfeiffer] a genus name formerly given certain bacteria now included in the family Brucellaceae. **P. anapestifer**, *Pasteurella anapestifer*. **P. mal'lei**, *Pseudomonas mallei*.

Pflüger's cords, law, tubes (pfle'gerz) [Edward Friedrich Wilhelm Pflüger, physiologist in Bonn, 1829–1910] see under *law*, and see *ovarian* and *salivary tubes*, under *tube*.

pfropfhebeephrenia (pfropf'he-bē-fre'ne-ah) [Ger. *Pfropf* a plug or graft] hebephrenic schizophrenia associated with mental retardation (Kraepelin).

pfropfschizophrenia (pfropf'skiz-o-fre'ne-ah) schizophrenia associated with mental retardation (Kraepelin).

Pfuhl's sign (pfoolz) [Adam Pfuhl, German physician, 1842–1905] see under *sign*.

PG abbreviation for prostaglandin.

P.G. abbreviation of *Pharmacopoeia Germanica*, German pharmacopeia.

pg. picogram.

P.G.A. pteroylglutamic acid (folic acid).

PGH pituitary growth hormone.

Ph chemical symbol for *phenyl*.

Ph. Pharmacopeia.

pH the symbol relating the hydrogen ion (H⁺) concentration or activity of a solution to that of a given standard solution. Numerically the pH is approximately equal to the negative logarithm of H⁺ concentration expressed in molarity. pH 7 is neutral; above it alkalinity increases and below it acidity increases.

phacitis (fah-si'tis) phakitis.

phaco- (fak'o) [Gr. *phakos* a lentil, or lentil-shaped object] a combining form denoting relationship to a lens, as the crystalline lens; see also words beginning *phako-*.

phacoanaphylaxis (fak'o-an'ah-fi-lak'sis) [*phaco-* + *anaphylaxis*] hypersensitivity to the protein of the crystalline lens of the eye, induced by escape of material from the lens capsule.

phacocoele (fak'o-sēl) [*phaco-* + Gr. *kēlē* hernia] the dislocation of the eye lens from its proper place; hernia of the eye lens.

phacocyst (fak'o-sist) [*phaco-* + Gr. *kystis* sac, bladder] the capsule of the lens (capsula lentis [NA]).

phacocystectomy (fak'o-sis-tek'to-me) [*phacocyst* + Gr. *ektomē* excision] excision of a portion of the capsule of the lens for cataract.

phacocystitis (fak'o-sis-ti'tis) [*phacocyst* + *-itis*] inflammation about the capsule of the crystalline lens.

phacoemulsification (fak'o-e-mul'si-fi-ka'shun) a method of cataract extraction in which the lens is fragmented by ultrasonic vibrations and simultaneously irrigated and aspirated.

phacoerysis (fak'o-er-e'sis) [*phaco-* + Gr. *eryein* to drag away] removal of the lens in cataract by means of suction with an instrument known as an erysiphake; called also *Barraquer's method* or *operation*.

phacoglaucoma (fak'o-glaw-ko'mah) [*phaco-* + *glaucoma*] the structural changes in the lens produced by glaucoma.

phacohymenitis (fak'o-hi'men-i'tis) [*phaco-* + Gr. *hymēn* membrane + *-itis*] inflammation about the capsule of the crystalline lens.

phacoid (fak'oid) [*phaco-* + Gr. *eidos* form] shaped like a lens or a lentil.

phacoiditis (fak'oi-di'tis) phakitis.

phacoidoscope (fah-koi'do-skōp) [*phaco-* + Gr. *eidos* form + *skopein* to examine] phacoscope.

phacolysin (fah-kol'i-sin) an albumin from the lens of the eye; used in the treatment of early cataract.

phacolysis (fah-kol'i-sis) [*phaco-* + Gr. *lysis* dissolution] dissolution of the crystalline lens, followed by extraction.

phacolytic (fak'o-lit'ik) pertaining to or causing dissolution of the crystalline lens.

phacoma (fah-ko'mah) phakoma.

phacomalacia (fak'o-mah-la'she-ah) [*phaco-* + Gr. *malakia* softness] softening of the lens; a soft cataract.

phacomatosis (fak'o-mah-to'sis) phakomatosis.

phacometachoresis (fak'o-met'ah-ko-re'sis) [*phaco-* + Gr. *metachōrēsis* displacement] displacement of the eye lens.

phacometecesis (fak'o-met'ē-se'sis) [*phaco-* + Gr. *metoikēsis* migration] phacometachoresis.

phacometer (fah-kom'ē-ter) [*phaco-* + Gr. *metron* measure] an instrument of measuring the refractive power of lenses.

phacopalingenesis (fak'o-pal'in-jen'ē-sis) [*phaco-* + Gr. *palin* again + *genesis* production] re-formation of the crystalline lens.

phacoplanesis (fak'o-plah-ne'sis) [*phaco-* + Gr. *planēsis* wandering] abnormal mobility of the eye lens.

phacosclerosis (fak'o-skle-ro'sis) [*phaco-* + Gr. *sklērōsis* hardening] hardening of the eye lens; a hard cataract.

phacoscope (fak'o-skōp) [*phaco-* + Gr. *skopein* to examine] an instrument for viewing accommodative changes of the eye lens.

phacoscopy (fah-kos'ko-pe) the examination of the eye with a phacoscope.

phacoscotasmus (fak'o-sko-taz'mus) [*phaco-* + Gr. *skotasmōs* a clouding] the clouding of the lens of the eye.

phacotherapy (fak'o-ther'ah-pe) [*phaco-* + Gr. *therapeia* treatment] heliotherapy.

phacotoxic (fak'o-tok'sik) exerting a deleterious effect upon the crystalline lens.

phacozytase (fak'o-zi'mās) an enzyme derived from an aqueous extract of the crystalline lens.

Phaenicia (fen-i-she'ah) a genus of greenbottle flies of the family Calliphoridae that are metallic green or blue. **P. cupri'na**, a sheep maggot fly of worldwide distribution; its larvae cause various forms of myiasis in humans. Called also *Lucilia cuprina*. **P. serica'ta**, a sheep maggot fly of the British Isles which lays its eggs in wounds of sheep and soiled wool; its larvae have been introduced into infected wounds to facilitate healing. Called also *Lucilia sericata*. See also *maggot*.

phaeo- for terms beginning thus, see also terms beginning *pheo-*.

phaeohyphomycosis (fe'o-hi'fo-mi-ko'sis) any opportunistic infection caused by dematiaceous fungi.

phage (fāj) bacteriophage.

phagedena (faj'ē-de'nah) [Gr. *phagedaina*; *phagein* to eat] (*obs.*) rapidly spreading and sloughing ulceration.

phagelysis (faj'li-sis) [*phage* + Gr. *lysis* dissolution] the destruction or solution of phage; the destructive or solvent action of phage.

-phagia, -phagy [Gr. *phagein* to eat] a word termination denoting a perversion of appetite (*pica*), such as *geophagia*, or relationship to eating or swallowing, e.g., *aerophagy*.

phago- (fag'o) [Gr. *phagein* to eat] a combining form denoting relationship to eating or consumption by ingestion or engulfing.

phagocaryosis (fag'o-kar'e-o'sis) phagokaryosis.

phagocytale (fag'o-sit'ah-b'l) capable of being subject to phagocytosis.

phagocyte (fag'o-sit) [*phago-* + *-cyte*] any cell that ingests microorganisms or other cells and foreign particles. In many cases but not always the ingested material is digested within the phagocyte. Fixed phagocytes (fixed macrophages) are potentially phagocytic, and free phagocytes (free macrophages, polymorphonuclear leukocytes) are intensely phagocytic. **alveolar p's**, rounded granular phagocytic cells within the alveoli of the lungs, which ingest inhaled material; called also *alveolar macrophages* and *dust cells*. **endothelial p.**, endotheliocyte. **globuliferous p.**, one which takes up the blood corpuscles. **melaniferous p.**, one which takes up the blood pigment. **mobile p.**, a free phagocyte. **mononuclear p.**, see under *system*. **sessile p.**, a fixed phagocyte.

phagocytic (fag'o-sit'ik) pertaining to or produced by phagocytes.

phagocytin (fag'o-si'tin) a bactericidal heat-stable protein contained in neutrophilic leukocytes.

phagocytize (fag'o-sit'iz) to exert a phagocytic action on.

phagocytoblast (fag'o-si'to-blast) [*phagocyte* + Gr. *blastos* germ] a cell which gives rise to phagocytes.

phagocytolysis (fag'o-si-tol'i-sis) [*phagocyte* + Gr. *lysis* dissolution] solution or destruction of phagocytes.

phagocytolytic (fag'o-si'to-lit'ik) pertaining to phagocytolysis.

phagocytose (fag'o-sit'ōs) to envelop and perhaps destroy bacteria and other foreign bodies.

phagocytosis (fag'o-si-to'sis) the engulfing of microorganisms, other cells, and foreign particles by phagocytes. **induced p.**, phagocytosis aided by subjecting bacteria to the action of opsonins in the blood. **spontaneous p.**, phagocytosis of bacteria taking place in an indifferent medium, or phagocytosis of nonantigenic particles. **surface p.**, phagocytosis of cellular antigens adsorbed on a rough surface, but not of the free-floating antigens; it occurs in the absence of opsonin.

phagocytotic (fag'o-si-tot'ik) pertaining to or characterized by phagocytosis.

phagodynamometer (fag'o-di'nah-mom'ē-ter) [*phago-* + Gr. *dynamis* force + *metron* measure] an apparatus for measuring the force exerted in chewing food.

phagokaryosis (fag'o-kar'e-o'sis) [*phago-* + Gr. *karyon* nucleus + *-osis*] the alleged phagocytic action of the cell nucleus.

phagological (fag'o-loj'ē-kal) pertaining to phage.

phagology (fah-gol'o-je) [*phago-* + *-logy*] the subject of eating or feeding.

phagolysis (fah-gol'i-sis) phagocytolysis.

phagolysosome (fag'o-li'so-sōm) the digestive vacuole formed when the membranes of pre-existent lysosomes within the cytoplasm merge with the phagosome; the lysosomes then discharge their hydrolytic enzymes, resulting in digestion of the phagocytized material.

phagolytic (fag'o-lit'ik) phagocytolytic.

phagomania (fag'o-ma'ne-ah) [*phago-* + Gr. *mania* madness] an insatiable craving for food, or an obsessive preoccupation with the subject of eating.

phagophobia (fag'o-fō-be-ah) [*phago-* + Gr. *phobein* to be frightened by] morbid fear of eating.

phagosome (fag'o-sōm) [*phago* + Gr. *soma* body] the membrane-bounded vesicle in a phagocyte formed by invagination of the cell membrane and the phagocytized material; see also *phagolysosome*.

phagotherapy (fag'o-ther'ah-pe) [*phago-* + Gr. *therapeia* treatment] (*obs.*) treatment by feeding so as to strengthen the body's response to infection.

phagotrophy (fah-got'ro-fe) [*phago-* + Gr. *trophē* nutrition] the uptake of fluid or particulate matter by ciliary movement of the matter into a cytostome, with invagination of the matter by the cell membrane to form a food vacuole, a process of food intake occurring in ciliate protozoa.

phagotype (fag'o-tip) phage type; see under *type*.

phakitis (fa-ki'tis) [Gr. *phakos* lens + *-itis*] inflammation of the crystalline lens.

phako- [Gr. *phakos* a lentil, or lentil-shaped object; a spot on the body, a freckle] for words beginning thus, see also those beginning *phaco-*.

phakoma (fah-ko'mah) [*phaco-* + *-oma*] 1. an occasional small, grayish white tumor seen microscopically in the retina in tuberous sclerosis. 2. a patch of myelinated nerve fibers seen very infrequently in the retina in neurofibromatosis.

phakomatosis (fak'o-mah-to'sis), pl. *phakomato'ses* [Gr. *phakos* mother spot] an ophthalmologic term for any of four hereditary syndromes (neurofibromatosis, tuberous sclerosis, encephalotrigeminal angiomatosis, and cerebretinal angiomatosis) characterized by disseminated hamartomas of the eye, skin, and brain.

phalacrois (fal'ah-kro'sis) [Gr. *phalakrōsis* baldness] alopecia.

phalangeal (fah-lan'je-al) pertaining to a phalanx.

phalangectomy (fal'an-jek'to-me) excision of a phalanx of a finger or toe.

phalanges (fah-lan'jēz) plural of *phalanx*.

phalange (fal'an-jet') the distal phalanx of a digit. **drop p.**, dropping of the distal phalanx of a finger and loss of power to extend it when the hand is prone.

phalangitis (fal'an-ji'tis) inflammation of one or more phalanges.

phalangization (fal'an-ji-zah'shun) surgical separation of the terminal portion of fused digits, without complete extirpation of the connecting web.

phalangophalangeal (fah-lan'go-fah-lan'je-al) pertaining to two adjoining phalanges of a finger or toe.

phalangosis (fal'an-go'sis) a condition in which the eyelashes grow in rows.

phalanx (fa'lanks), pl. *phalan'ges* [Gr. "a line or array of soldiers"]

1. [NA] a general term for any bone of a finger or toe. 2. any one of a set of plates (made up of supporting cells, q.v.) disposed in rows which makes up the reticular membrane of the organ of Corti. **Deiters' phalanges**, modified cuticular plates forming the ends of sustentacular epithelial cells of the reticular membrane of the organ of Corti. **phalan'ges digito'rum ma'nus**, the fourteen bones composing the skeleton of the fingers (ossa digitorum manus [NA]). **phalan'ges digito'rum pe'dis**, the fourteen bones composing the skeleton of the toes (ossa digitorum pedis [NA]). **phalanges of fingers**, ossa digitorum manus. **p. distalis digito'rum ma'nus** [NA], distal phalanx of fingers: any one of the five terminal bones of the fingers, articulating, except in the thumb, with the phalanx media; called also *p. tertia digitorum manus*. **p. distalis digito'rum pe'dis** [NA], distal phalanx of toes: any one of the five terminal bones of the toes, articulating, except in the great toe, with the phalanx media; called also *p. tertia digitorum pedis*. **p. media digito'rum ma'nus** [NA], middle phalanx of fingers: any one of the four bones of the fingers (excluding the thumb) situated between the proximal and distal phalanges; called also *p. secunda digitorum manus*. **p. media digito'rum pe'dis** [NA], middle phalanx of toes: any one of the four bones of the toes (excluding the great toe) situated between the proximal and distal phalanges; called also *p. secunda digitorum pedis*. **p. prima digito'rum ma'nus**, p. proximalis digitorum manus. **p. prima digito'rum pe'dis**, p. proximalis digitorum pedis. **p. proximalis digito'rum ma'nus** [NA], proximal phalanx of fingers: any one of the five bones of the fingers that articulate with the metacarpal bones and, except in the thumb, with the phalanx media; called also *p. prima digitorum manus*. **p. proximalis digito'rum pe'dis** [NA], proximal phalanx of

toes: any one of the five bones of the toes that articulate with the metatarsal bones and, except in the great toe, with the phalanx media; called also *p. prima digitorum pedis*. **p. secunda digito'rum ma'nus**, p. media digitorum manus. **p. secunda digito'rum pe'dis**, p. media digitorum pedis. **p. tertia digito'rum ma'nus**, p. distalis digitorum manus. **p. tertia digito'rum pe'dis**, p. distalis digitorum pedis. **phalanges of toes**, ossa digitorum pedis. **ungual p. of fingers**, p. distalis digitorum manus. **ungual p. of toes**, p. distalis digitorum pedis.

Phallales (fah-la'lēz) an order of basidiomycetes of the Gasteromycetes, characterized by the presence of a fetid mucinous substance around the basidiospores that are exposed by an internal stalk which grows and breaks out of the basidiocarp.

phallalgia (fal-al'je-ah) [*phallus* + *-algia*] pain in the penis.

phallanastrophe (fal'an-as'tro-fe) [*phallus* + Gr. *anastrophē* a turning upward] upward distortion of the penis.

phallaneurysm (fal-an'u-rizm) [*phallus* + Gr. *aneurysma* aneurysm] aneurysm of the penis.

phallectomy (fal-ek'to-me) [*phallos* + Gr. *ektomē* excision] amputation of the penis.

phallic (fal'ik) [Gr. *phallicos*] pertaining to the phallus, or penis.

phalliform (fal'i-form) [*phallus* + L. *forma* form] shaped like the phallus or penis.

phallin (fal'in) a poisonous hemolytic glycoside from *Amanita phalloides*.

phallitis (fal-i'tis) [*phallus* + *-itis*] inflammation of the penis; penitis.

phallo- [Gr. *phallos* penis] combining form denoting relationship to the penis.

phallocampsis (fal'o-kamp'sis) [*phallo-* + Gr. *kampsis* bending] curvature of the penis when erect.

phallocrypsis (fal'o-krip'sis) [*phallo-* + Gr. *krypsis* hiding] retraction of the penis.

phalldynia (fal'o-din'e-ah) [*phallo-* + Gr. *odynē* pain] pain in the penis.

phalloid (fal'oid) [*phallo-* + Gr. *eidos* form] resembling a penis.

phalloidin, **phalloidine** (fah-loid'in) a heat-stable, bicyclic hexapeptide poison from the mushroom *Amanita phalloides*, which causes asthenia, vomiting, diarrhea, convulsions, and death.

phallonecus (fal-ong'kus) [*phallo-* + Gr. *onkos* mass] a morbid swelling or tumor of the penis.

phalloplasty (fal'o-plas'te) [*phallo-* + Gr. *plassein* to shape] plastic surgery of the penis.

phallorrhagia (fal'o-ra'je-ah) [*phallo-* + Gr. *rhēgnynai* to burst forth] hemorrhage from the penis.

phallorrhea (fal'o-re'ah) [*phallo-* + Gr. *rhoia* flow] (*obs.*) gonorrhea in the male.

phallotomy (fal-ot'o-me) [*phallo-* + Gr. *tomē* a cutting] incision of the penis.

Phallus (fal'us) a genus of basidiomycetous fungi of the order Phallales, series Gasteromycetes, including the stinkhorns.

phallus (fal'us) [Gr. *phallos*] 1. the rudiment of embryonic or fetal tissue that develops into the penis or clitoris. 2. the penis or clitoris. 3. the penis or a representation of the penis.

phanero- (fan'er-o) [Gr. *phaneros* visible] a combining form meaning visible or apparent.

phanerogam (fan'er-o-gam) [*phanero-* + Gr. *gamos* marriage] a true seed-bearing plant.

phanerogenetic (fan'er-o-jē-net'ik) phanerogenic.

phanerogenic (fan'er-o-jen'ik) [*phanero-* + Gr. *gennan* to produce] having a known cause. Cf. *cryptogenic*.

phaneroplasm (fan'er-o-plazm) [Gr. *phaneros* visible + *plasm*] membranous organelles and nonmembranous inclusions in the cytoplasm; cf. *cytosol*.

phaneroscope (fan'er-o-skōp) [Gr. *phaneros* visible + *skopein* to examine] (*obs.*) an instrument for illuminating the skin and rendering it translucent for examination.

phanerosis (fan'er-o'sis) [Gr. *phanērōsis*] the act of becoming visible; the setting free of a substance which has previously been undemonstrable owing to its being held in combination. **fat p.**, conversion in the tissues of invisible fatty substances into fat which can be stained and seen.

phanerosterol (fan'er-os'ter-ol) a sterol of one of the higher plants.

Phanodorn (fan'o-dorn) trademark for a preparation of cyclobarbitol.

phantasia (fan-ta'ze-ah) fantasy.

phantasm (fan'tazm) [Gr. *phantasma* appearance] an impression or image not evoked by actual stimuli; called also *phantom*.

phantasmatology (fan'taz-mah-to'l'o-je) [*phantasm* + *-logy*] the sum of what is known regarding apparitions and phantasms.

phantasmatomoria (fan-taz'mah-to-mo're-ah) [*phantasm* +

Gr. *mōria* folly] childishness or dementia with absurd delusions.

phantasmology (fan'taz-mol'o-je) phantasmatology.

phantasy (fan'tah-se) [Gr. *phantasia* imagination; the power by which an object is made apparent to the mind] fantasy.

phantom (fan'tom) [Gr. *phantasma* an appearance] 1. an impression or image not evoked by actual stimuli. 2. a model of the body or of a specific part thereof. 3. in radiology, a device that simulates the conditions encountered when radiation or radioactive material is deposited *in vivo* and permits a quantitative estimation of its effects.

phanurane (fan'u-rān) canrenone.

phao- for words beginning thus, see those beginning *pheo-*.

phar., pharm. pharmacy; pharmaceutical; pharmacopeia.

Phar. B. abbreviation for L. *Pharmaciae Baccalaureus*, Bachelor of Pharmacy.

Phar. C. Pharmaceutical Chemist.

pharcidous (fahr'si-dus) [Gr. *pharkis* wrinkled] wrinkled.

Phar. D. abbreviation for L. *Pharmaciae Doctor*, Doctor of Pharmacy.

Phar. G. Graduate in Pharmacy.

Phar. M. abbreviation for L. *Pharmaciae Magister*, Master of Pharmacy.

pharmaceutical (fahr'mah-kal) pertaining to pharmacy.

pharmaceutic (fahr'mah-su'tik) [Gr. *pharmakeutikos*] pertaining to pharmacy or to drugs.

pharmaceutical (fahr'mah-su'ti-kal) 1. pertaining to pharmacy or to drugs. 2. a medicinal drug.

pharmaceutics (fahr'mah-su'tiks) 1. pharmacy (def. 1). 2. pharmaceutical preparations.

pharmacist (fahr'mah-su'tist) a pharmacist.

pharmacist (fahr'mah-sist) one who is licensed to prepare and sell or dispense drugs and compounds, and to make up prescriptions; an apothecary, druggist, or (British) chemist.

pharmaco- (fahr'mah-ko) [Gr. *pharmakon* medicine] a combining form denoting relationship to a drug or medicine.

pharmacology (fahr'mah-ko-kem'is-tre) pharmaceutical chemistry.

pharmacodiagnosis (fahr'mah-ko-di'ag-no'sis) [*pharmaco-* + *diagnosis*] the employment of drugs in the diagnosis of disease.

pharmacodynamic (fahr'mah-ko-di-nam'ik) [*pharmaco-* + Gr. *dynamis* power] pertaining to pharmacodynamics.

pharmacodynamics (fahr'mah-ko-di-nam'iks) [*pharmaco-* + Gr. *dynamis* power] the study of the biochemical and physiological effects of drugs and the mechanisms of their actions, including the correlation of actions and effects of drugs with their chemical structure; also, such effects on the actions of a particular drug or drugs.

pharmacoendocrinology (fahr'mah-ko-en'do-kri-nol'o-je) the study of the influence of drugs on the activity of the endocrine glands.

pharmacogenetics (fahr'mah-ko-jē-net'iks) the scientific study of the relationship between genetic factors and the nature of responses to drugs.

pharmacognosics (fahr'mah-kog-nos'tiks) pharmacognosy.

pharmacognosy (fahr'mah-kog-no-se) [*pharmaco-* + Gr. *gnōsis* knowledge] that branch of pharmacology which deals with the biological, biochemical, and economic features of natural drugs and their constituents.

pharmacography (fahr'mah-kog'rah-fe) [*pharmaco-* + Gr. *graphein* to write] an account or written description of drugs.

pharmacokinetics (fahr'mah-ko-ki-net'iks) the action of drugs in the body over a period of time, including the processes of absorption, distribution, localization in tissues, biotransformation, and excretion.

pharmacologic (fahr'mah-ko-loj'ik) pertaining to pharmacology or to the properties and reactions of drugs.

pharmacologist (fahr'mah-kol'o-jist) one who makes a study of the actions of drugs.

pharmacology (fahr'mah-kol'o-je) [*pharmaco-* + *-logy*] the science that deals with the origin, nature, chemistry, effects, and uses of drugs; it includes pharmacognosy, pharmacokinetics, pharmacodynamics, pharmacotherapeutics, and toxicology.

pharmacomania (fahr'mah-ko-ma'ne-ah) [*pharmaco-* + Gr. *mania* madness] uncontrollable desire to take or to administer medicines.

pharmacometrics (fahr'mah-ko-met'riks) [*pharmaco-* + Gr. *metron* measure] the comparative evaluation of drug activity, distinguished from bioassay in that substances with different chemical constitutions are compared.

pharmacon (fahr'mah-kon) [Gr. *pharmakon*] a drug.

pharmaco-oryctology (fahr'mah-ko-or'ik-tol'o-je) [*pharmaco-* + Gr. *oryktos* excavated + *-logy*] the study of mineral drugs.

pharmacopedia, pharmacopedics (fahr'mah-ko-pe'de-ah; fahr'mah-ko-pe'diks) [*pharmaco-* + Gr. *paideia* instruction]

the science which deals with the properties and preparations of drugs.

pharmacopeia (fahr'mah-ko-pe'ah) [*pharmaco-* + Gr. *poiein* to make] an authoritative treatise on drugs and their preparations; a book containing a list of products used in medicine, with descriptions, chemical tests for determining identity and purity, and formulas for certain mixtures of these substances. It also generally contains a statement of average dosage. The first United States pharmacopeia was published on December 15, 1820, printed in both Latin and English, and its 272 pages included 217 drugs which were considered worthy of recognition. See *U.S.P.*

pharmacopeial (fahr'mah-ko-pe'al) pertaining to or recognized by the pharmacopeia.

pharmacophilia (fahr'mah-ko-fil'e-ah) [*pharmaco-* + Gr. *philein* to love] morbid fondness for drugs; see *drug addiction*, under *addiction*.

pharmacophobia (fahr'mah-ko-fob'e-ah) [*pharmaco-* + Gr. *phobēin* to be affrighted by] morbid dread of drugs or medicines.

pharmacophore (fahr'mah-ko-för') [*pharmaco-* + Gr. *phoros* bearing] the group of atoms in a drug molecule which is responsible for the action of the compound.

pharmacopoeia (fahr'mah-ko-pe'ah) pharmacopeia.

pharmacopsychosis (fahr'mah-ko-si-ko'sis) [*pharmaco-* + *psychosis*] Southard's term for any one of the group of mental diseases due to alcohol, drugs, or poisons.

pharmacoradiography (fahr'mah-ko-ra'de-og'rah-fe) pharmacoröntgenography.

pharmacoröntgenography (fahr'mah-ko-rent'gen-og'rah-fe) roentgenographic examination of a body organ under the influence of a drug which best facilitates such examination.

pharmacotherapeutics (fahr'mah-ko-ther'ah-pu'tiks) [*pharmaco-* + *therapeutics*] study of the uses of drugs in the treatment of disease.

pharmacotherapy (fahr'mah-ko-ther'ah-pe) [*pharmaco-* + Gr. *therapeia* treatment] the treatment of disease by medicines.

pharmacy (fahr'mah-se) [Gr. *pharmakon* medicine] 1. the branch of the health sciences dealing with the preparation, dispensing, and proper utilization of drugs. 2. a place where drugs are compounded or dispensed. **chemical p.**, pharmaceutical chemistry. **galenic p.**, the pharmacy of vegetable medicines.

Pharm.D. abbreviation for Doctor of Pharmacy.

pharyngalgia (far'in-gal'je-ah) [*pharyngo-* + *-algia*] pain in the pharynx.

pharyngeal (far-rin'je-al) [L. *pharyngeus*] pertaining to the pharynx.

pharyngectasia (far'in-jek-ta'se-ah) pharyngocele.

pharyngectomy (far'in-jek'to-me) [*pharyngo-* + Gr. *ektomē* excision] surgical removal of a part of the pharynx.

pharyngemphraxis (far'in-jem-frak'sis) [*pharyngo-* + Gr. *emphraxis* stoppage] obstruction of the pharynx.

pharyngeus (far-in-je'us) [L.] pharyngeal.

pharyngism (far'in-jism) pharyngismus.

pharyngismus (far'in-jiz'mus) muscular spasm of the pharynx.

pharyngitic (far'in-jit'ik) affected with or of the nature of pharyngitis.

pharyngitid (far-rin'ji-tid) a cutaneous eruption occurring in pharyngitis.

pharyngitis (far'in-ji'tis) [*pharyngo-* + *-itis*] inflammation of the pharynx. **acute p.**, inflammation with pain in the throat, especially on swallowing, dryness, followed by moisture of the pharynx, congestion of the mucous membrane, and fever; called also *catarrhal p.* **atrophic p.**, a chronic pharyngitis which leads to wasting of the submucous tissue accompanied by dryness and thickened secretions. **catarrhal p.**, acute p. **chronic p.**, that which results from repeated acute attacks or is due to tuberculosis or syphilis; it is attended with excessive secretion, and in the severe ulcerated varieties by pain and dysphagia. **croupous p.**, membranous p. **diphtheric p.**, diphtheria of the pharynx. **follicular p.**, sore throat with enlargement of the pharyngeal glands. **gangrenous p.**, a form characterized by gangrenous patches. **glandular p.**, follicular p. **granular p.**, a chronic variety in which the mucous membrane becomes granular. **p. herpetica**, membranous or aphthous sore throat; a form of acute pharyngitis characterized by the formation of vesicles, which give place to excoriations. **hypertrophic p.**, a chronic form which leads to thickening of the submucous tissues. **p. kerato'sa**, pharyngomycosis. **membranous p.**, pharyngitis with a fibrous exudate leading to the formation of a false membrane. **phlegmonous p.**, acute parenchymatous tonsillitis attended with the formation of abscesses. **p. sic'ca**, an atrophic pharyngitis in which the throat becomes dry. **p. ulcero'sa**, the formation of ulcers covered by a yellow, membrane-like deposit in the pharynx, with fever, pain, and prostration.

pharyngo- (fah-ring/'go) [Gr. *pharynx* pharynx] a combining form denoting relationship to the pharynx.

pharyngocele (fah-ring/'go-sēl) [*pharyngo-* + Gr. *kēlē* hernia] hernial protrusion of a part of the pharynx; a hernial pouch or other cystic deformity of the pharynx.

pharyngocercarosis (fah-ring/'go-ser/'ah-to/'sis) pharyngokeratosis.

pharyngoconjunctivitis (fah-ring/'go-kon-junk/'tī-vi/'tis) inflammation involving the pharynx and conjunctiva, the result of a viral infection.

pharyngodynia (fah-ring/'go-din/'e-ah) [*pharyngo-* + Gr. *odynē* pain] pain in the pharynx.

pharyngoepiglottic (fah-ring/'go-ep/'i-glōt/'ik) pertaining to the pharynx and epiglottis.

pharyngoepiglottidean (fah-ring/'go-ep/'i-glō-tid/'e-an) pharyngoepiglottic.

pharyngoesophageal (fah-ring/'go-e-sof/'ah-je/'al) pertaining to the pharynx and esophagus.

pharyngoglossal (fah-ring/'go-glos/'al) pertaining to the pharynx and the tongue.

pharyngoglossus (fah-ring/'go-glos/'us) the muscular fibers from the superior constrictor of the pharynx to the tongue.

pharyngokeratosis (fah-ring/'go-ker/'ah-to/'sis) keratosis of the pharynx.

pharyngolaryngeal (fah-ring/'go-lah-rin/'je-al) pertaining to the pharynx and the larynx.

pharyngolaryngitis (fah-ring/'go-lar/'in-ji/'tis) [*pharyngo-* + Gr. *larynx* larynx + *-itis*] inflammation of the pharynx and the larynx.

pharyngolith (fah-ring/'go-lith) [*pharyngo-* + Gr. *lithos* stone] a concretion in the walls of the pharynx.

pharyngology (far/'ing-gol/'o-je) [*pharyngo-* + *-logy*] the sum of what is known regarding the pharynx.

pharyngolysis (far/'ing-gol/'i-sis) [*pharyngo-* + Gr. *lysis* dissolution] paralysis of the pharynx.

pharyngomaxillary (fah-ring/'go-mak/'sī-ler/'e) pertaining to the pharynx and the maxillae.

pharyngomycosis (fah-ring/'go-mi-ko/'sis) [*pharyngo-* + Gr. *mykēs* fungus + *-osis*] any fungal disease of the pharynx.

pharyngonasal (fah-ring/'go-na/'sal) pertaining to the pharynx and the nose.

pharyngo-oral (fah-ring/'go-o/'ral) pertaining to the pharynx and the mouth.

pharyngopalatine (fah-ring/'go-pal/'ah-tin) pertaining to the pharynx and the palate.

pharyngoparalysis (fah-ring/'go-pah-ral/'i-sis) [*pharyngo-* + *paralysis*] paralysis of the pharyngeal muscles.

pharyngopathy (far/'ing-gop/'ah-the) [*pharyngo-* + Gr. *pathos* disease] disease of the pharynx.

pharyngoperistole (fah-ring/'go-pē-ris/'to-le) [*pharyngo-* + Gr. *peristole* contracture] narrowing of the pharynx.

pharyngoplasty (fah-ring/'go-plas/'te) [*pharyngo-* + Gr. *plassein* to form] plastic operation on the pharynx. **Hynes p.**, a technique of pharyngoplasty accomplished by muscle transposition.

pharyngoplegia (far/'ing-go-ple/'je-ah) [*pharyngo-* + Gr. *plēgē* stroke] paralysis of the muscles of the pharynx.

pharyngorhinitis (fah-ring/'go-ri-ni/'tis) inflammation of the nasopharynx.

pharyngorhinocopy (fah-ring/'go-ri-nos/'ko-pe) examination of the nasopharynx and posterior nares with rhinoscope.

pharyngorrhagia (far/'ing-go-ra/'je-ah) [*pharyngo-* + Gr. *rhēgnynai* to break forth] hemorrhage from the pharynx.

pharyngorrhea (far/'ing-go-re/'ah) [*pharyngo-* + Gr. *rhoia* flow] a discharge of mucus from the pharynx.

pharyngosalpingitis (fah-ring/'go-sal/'pin-je/'tis) inflammation of the pharynx and the eustachian tube.

pharyngoscleroma (fah-ring/'go-skle-ro/'mah) scleroma of the pharynx.

pharyngoscope (fah-ring/'go-skōp) [*pharyngo-* + Gr. *skopein* to examine] an instrument for inspecting the pharynx.

pharyngoscopy (far/'ing-gos/'ko-pe) direct visual examination of the pharynx.

pharyngospasm (fah-ring/'go-spazm) [*pharyngo-* + Gr. *spasmos* spasm] spasm of the pharyngeal muscles.

pharyngostenosis (fah-ring/'go-ste-no/'sis) [*pharyngo-* + Gr. *stenōsis* narrowing] narrowing of the lumen of the pharynx.

pharyngostoma (fah/'ring-gos/'to-mah) [*pharyngo-* + Gr. *stoma* mouth] the opening formed by pharyngostomy.

pharyngostomy (fah/'ring-gos/'to-me) [*pharyngo-* + Gr. *stomoun* to provide with an opening, or mouth] the surgical creation of an artificial opening into the pharynx.

pharyngotherapy (fah-ring/'go-ther/'ah-pe) [*pharyngo-* + *therapy*] the treatment of pharyngeal disorders, and especially the irrigation of the nasopharynx in infectious diseases.

pharyngotome (fah-ring/'go-tōm) a cutting instrument used in pharyngeal surgery.

pharyngotomy (far/'ing-got/'o-me) [*pharyngo-* + Gr. *tomē* a cutting] surgical incision of the pharynx. **external p.**, pharyngotomy done from the outside. **internal p.**, that which is performed from within the pharynx. **lateral p.**, the opening of the pharynx from one side. **subhyoid p.**, section of the pharynx through the thyrohyoid membrane.

pharyngotonsillitis (fah-ring/'go-ton/'sī-li/'tis) inflammation of the pharynx and the tonsil.

pharyngotyphoid (fah-ring/'go-ti/'foid) enteric fever with angina and sore patches on the tonsils.

pharyngoxerosis (fah-ring/'go-ze-ro/'sis) [*pharyngo-* + Gr. *xērōsis* dryness] dryness of the pharynx.

pharynx (far/'inks) [Gr. "the throat"] [NA] the musculomembranous passage between the mouth and posterior nares and the larynx and esophagus. The part above the level of the soft palate is the *nasopharynx*, which communicates with the auditory tube. The lower portion consists of two sections—the *oropharynx*, which lies between the soft palate and the upper edge of the epiglottis, and the *hypopharynx*, which lies below the upper edge of the epiglottis and opens into the larynx and esophagus.

phase (fāz) [Gr. *phasis* an appearance] 1. the view that a thing presents to the eye. 2. any one of the varying aspects or stages through which a disease or process may pass. 3. in physical chemistry, any physically or chemically distinct, homogenous, and mechanically separable part of a system, e.g., the ice and steam phases of water. **alpha p.**, the estrous stage of the ovarian cycle. **anal p.**, see under *stage*. **apophylactic p.**, negative p. **beta p.**, the progestational stage of the ovarian cycle. **cholesteric p.**, a liquid crystal phase that exhibits molecular orientation and arrangement both within and between equispaced planes. **continuous p.**, a phase that is physically continuous; the continuous portion of a colloid system (see *dispersion medium*). **p. of decline**, the stage in the growth of a bacterial culture in which the number of live organisms gradually decreases. **disperse p.**, the internal or discontinuous portion of a colloid system; it is analogous to the solute in a solution. Called also *internal p.* Cf. *dispersion medium*. **erythrocytic p.**, that phase in the life cycle of a malarial plasmodium in which the parasites multiply in the red blood cells. **estrin p.**, proliferative stage. **external p.**, dispersion medium. **genital p.**, see under *stage*. **hematic p.**, a liquid crystal phase that exhibits molecular orientation without periodicity. **inductive p.**, the time that elapses between the administration of antigen and the development of a detectable immune response. **internal p.**, disperse p. **lag p.**, lag, def. 2. **logarithmic p.**, the stage in the growth of a bacterial culture at which, if the logarithms of their members are plotted against the time, a straight upward line will be formed. **meiotic p.**, that stage in meiosis in which the reduction of the chromosomes occurs; called also *reduction p.* **motofacient p.**, see *motofacient*. **negative p.**, the initial lowering of the antibody content of blood following the injection of corresponding antigen. **nonmotofacient p.**, see *motofacient*. **Nonne-Apelt p.**, see under *reaction*. **oral p.**, see under *stage*. **phallic p.**, see under *stage*. **positive p.**, the rise above unity in the opsonic index which follows the negative phase. **postmeiotic p.**, the stage following the reduction of the chromosomes in meiosis. **premeiotic p.**, **pre-reduction p.**, the stage in meiosis which precedes the reduction of the chromosomes. **reduction p.**, meiotic p. **resting p.**, former term for interphase. **smectic p.**, a liquid crystal phase that exhibits molecular orientation and arrangement in equispaced planes, but no periodicity within the planes. **stationary p.**, the stage in the growth of a bacterial culture at which multiplication of organisms gradually decreases, the number of bacteria remaining practically constant. **synaptic p.**, synapsis.

phaseolin (fa-se/'o-lin) a globulin, C₂₀H₁₈O₄, from the kidney-bean, *Phaseolus vulgaris*, which has antifungal properties.

phaseolunatin (fa/'se-o-lu/'nah-tin) linamarin.

phasin, phasein (fa/'sin) any of a group of nitrogenous substances found in seeds, bark, and other plant tissues, which agglutinate red blood corpuscles.

phasmid (faz/'mid) 1. one of a pair of caudal chemoreceptors occurring in certain nematodes. The class Nematoda is sometimes divided into two subclasses, Phasmodia and Aphasmodia, on the basis of the presence or absence of these organs. 2. a nematode belonging to the Phasmodia. Cf. *aphasmodia*.

Phasmodia (faz-'mid/'e-ah) a subclass of Nematoda comprising those organisms possessing phasmodia. The following superfamilies are of medical or veterinary importance. Rhabditoidea, Strongyloidea, Oxyuroidea, Ascarioidea, Spiruroidea, Filarioidea, and Dracunculoidea.

phatnoma (fat-'no/'mah), pl. *phatnomas* or *phatno'mata* [Gr. *phatnōma*] a tooth socket.

phatnorragia (fat/'no-ra/'je-ah) hemorrhage from a tooth socket, or dental alveolus.

Ph.B. British Pharmacopoeia.

Ph.D. Doctor of Philosophy.

Phe phenylalanine.

phellandrene (fě-lan/drēn) chemical name: 5-isopropyl-2-methyl-1,3-cyclohexadiene. A liquid hydrocarbon, $C_{10}H_{16}$, occurring in fennel oil, elemi oil, the oil of water hemlock, and the Australian eucalyptus.

Phelps' operation (felps) [Abel Mix *Phelps*, surgeon in New York, 1851–1902] see under *operation*.

Phe-Mer-Nite (fe/mer-nit) trademark for preparations of phenylmercuric nitrate.

Phemerol (fe/mer-ol) trademark for preparations of benzethonium.

phemfilcon A (fem-fil/kon) chemical name: 2-methyl-2-prope-
noic acid 2-hydroxyethyl ester polymer with 2-ethoxyethyl 2-methyl-2-propenoate; a hydrophilic contact lens material, $(C_6H_{10}O_3)_x(C_8H_{14}O_3)_y$.

phemitone (fem/i-tōn) mephobarbital.

phen- see *pheno-*.

phenacaine hydrochloride (fen/ah-kān) [USP] chemical name: *N,N'*-bis(4-ethoxyphenyl)ethanimidamide monohydrochloride monohydrate. A local anesthetic, $C_{18}H_{22}N_2O_2 \cdot HCl$, occurring as small, white crystals; applied topically to the conjunctiva.

phenacemide (fē-nas/fē-mid) [USP] chemical name: *N*-(amino-carbonyl)-benzeneacetamide. An oral anticonvulsant, $C_9H_{10}N_2O_2$, occurring as a white to almost white, fine crystalline powder; used in the treatment of psychomotor, grand mal, and petit mal epilepsy, and in the management of mixed seizures.

phenacetin (fē-nas/fē-tin) [USP] chemical name: *N*-(4-ethoxy-phenyl)acetamide. An analgesic and antipyretic, $C_{10}H_{13}NO_2$, occurring as white, glistening crystals or fine, white, crystalline powder; administered orally. Called also *acetphenetidin* and *acetphenetidin*.

phenacetolin (fen/ah-set/o-lin) a red powder, $C_{18}H_{12}O_2$, used as an indicator: it has a pH range of 5 to 6, being yellow at 5 and red at 6.

phenacetylurea (fen/ah-set/ah-mid) phenacemide.

phenaglycodol (fen/ah-gli/ko-dol) chemical name: 2-(4-chloro-phenyl)-3-methyl-2,3-butanediol. A tranquilizer, $C_{11}H_{15}ClO_2$, occurring as a white, crystalline powder; administered orally.

phenakistoscope (fe/nah-kis/to-skōp) [Gr. *phenakistēs* deceiver + *skopein* to examine] a device consisting of a revolving disk with figures near the center that appear to be in motion when viewed through slots at the periphery of the disk by means of a mirror.

phenanthrene (fe-nan/thrēn) a colorless, crystalline hydrocarbon, $(C_6H_4 \cdot CH)_2$.

phenanthrolene (fe-nan/thro-lēn) orthophenanthrolene.

phenate (fe/nāt) phenolate.

phenazocine hydrobromide (fē-naz/o-sēn) chemical name: 1,2,3,4,5,6-hexahydro-8-hydroxy-6, 11-dimethyl-3-phenethyl-2,6-methano-3-benzazocine-8-ol hydrobromide. A synthetic narcotic analgesic, $C_{22}H_{27}NO \cdot HBr$, occurring as a white or nearly white, crystalline powder; administered intramuscularly and intravenously.

phenazone (fen/ah-zōn) antipyrine.

phenazopyridine hydrochloride (fen/ah-zo-pēr/i-dēn) [USP] chemical name: 3-(phenylazo)-2,6-pyridinediamine monohydrochloride. A urinary analgesic, $C_{11}H_{11}N_5 \cdot HCl$, occurring as a light or dark red to dark violet, crystalline powder; used orally in cystitis, urethritis, pyelonephritis, and prostatitis. Formerly used as a urinary antiseptic.

phenbutazone sodium glycerate (fen-bu/tah-zōn) chemical name: 4-butyl-3-hydroxy-1,2-diphenyl-3-pyrazolin-5-one sodium salt compound with glycerol (1:1); an anti-inflammatory, $C_{19}H_{19}N_2NaO_3 \cdot C_3H_8O_3$.

phencyclidine hydrochloride (fen-si/klī-dēn) chemical name: 1-(1-phenylcyclohexyl)piperidine hydrochloride; a potent analgesic and anesthetic, $C_{17}H_{25}N \cdot HCl$, used in veterinary medicine. Abuse of this drug may lead to serious psychological disturbances. Abbreviated PCP.

phene (fēn) the characters assigned to certain genes or a configuration of genes, which may or may not be expressed in the phenotype.

phenelzine sulfate (fen/el-zēn) [USP] chemical name: (2-phenylethyl)hydrazine sulfate. A monoamine oxidase inhibitor, $C_8H_{12}N_2 \cdot H_2SO_4$, occurring as a white to yellowish white powder; used as an antidepressant, administered orally.

Phenergan (fen/er-gan) trademark for preparations of promethazine hydrochloride.

phenethicillin (fē-neth/i-sil/in) chemical name: 3,3-dimethyl-7-oxo-6-[(1-oxo-2-phenoxypropyl)amino]-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid. A semisynthetic acid-resistant penicillin, $C_{17}H_{20}N_2O_5S$, which is a methyl analogue of penicillin V. **p. potassium** [USP], the monopotassium salt of phenethicillin, $C_{17}H_{19}KN_2O_5S$, occurring as a white to almost white, fine crystalline powder; used as an antibacterial, especially in certain infections due to susceptible organisms, such streptococcal infections of the upper respiratory tract, pneumococcal infections of the

respiratory tract, staphylococcal infections of skin and soft tissues, and fusospiroketosis. It is administered orally.

phenethylbiguanide (fen-eth'il-bi/gwan-id) phenformin.
